good only of the social relations of his contemporaries. He strews up and down a multitude of moral maxims, in which he contradicts himself, that are generally trite and often entirely false. With all this ostentation of morality, the intention of his pieces, and the impression which, on the whole, they produce, is sometimes extremely immoral. It is related of him, that he made Bellerophon come on the stage with a contemptible panegyric on riches, in which he preferred them before every domestic joy; and said, at last, 'If Venus (who had the epithet of golden) shone like gold, she would indeed deserve the love of men.' (*Seneca, Epist.*, 115.) The audience, enraged at this, raised a great tumult, and were proceeding to stone the orator as well as the poet. Euripides, on this, rushed forward and exclaimed, 'Wait patiently till the end; he will fare accordingly.' Thus also he is said to have excused himself against the accusation, that his Ixion spoke too abominably and blasphemously, by replying, that, in return, he had not concluded the piece without making him revolve on the wheel. But this shift of poetic justice, to atone for the representation of wickedness, does not take place in all his dramas. The bad frequently escape; lies and other knavish tricks are openly taken into protection, especially when he falsely attributes to them noble motives. He has also great command of that treacherous sophistry of the passions which gives things only one appearance. The following verse (*Hippol.*, 608) is notorious for its apology for perjury; indeed, it seems to express what casuists call mental reservation:

'My tongue took an oath, but my mind is unsworn.'

In the connexion in which this verse is spoken, it may indeed be justified, as far as regards the reason for which Aristophanes ridicules it in so many ways; but still the formula is pernicious on account of the turn which may be given it. Another sentiment of Euripides (*Phæniss.*, 534), 'It is worth while committing injustice for the sake of empire, in other things it is proper to be just,' was continually in the mouth of Caesar, in order to make a wrong application of it. (*Sueton., Vit. Cæs.*, 30.—Compare *Cic., de Off.*, 3, 21.)—Seductive enticements to the enjoyment of sensual love were another article of accusation against Euripides among the ancients. Thus, for example, it must excite our indignation when Hecuba, in order to stir up Agamemnon to punish Polymnestor, reminds him of the joys Cassandra had afforded him; who, having been taken in war, was his slave, according to the law of the heroic ages: she is willing to purchase revenge for a murdered son, by consenting to and ratifying the degradation of a daughter who is still alive. This poet was the first to take for the principal subject of a drama the wild passion of a Medea, or the unnatural love of a Phædra; as, otherwise, it may be easily understood, from the manners of the ancients, why love, which among them was far less ennobled by delicate feelings, played merely a subordinate part in their earlier tragedies. Notwithstanding the importance imparted to female characters, he is notorious for his hatred of women; and it cannot be denied, that he brings out a great multitude of sayings concerning the weaknesses of the female sex, and the superiority of men, as well as a great deal drawn from his experience in domestic relations, by which he doubtlessly intended to pay court to the men, who, although they did not compose the whole of the public to which he addressed himself, yet formed the most powerful portion of it. A cutting saying, as well as an epigram, of Sophocles (*Athen.*, 13, p. 558.—*Il. ib.*, p. 605), have been handed down to us, in which he explains the pretended hatred of Euripides for women by supposing that he has the opportunity of learning their frailty through his own unhallowed desires. In the whole of Euripides' method of delineating women, we may perceive indeed.

great susceptibility even for the more lofty charms of womanly virtue, but no real respect.—That independent freedom in the method of treating the story, which was one of the privileges of the tragic art, frequently, in Euripides, degenerates into unbounded caprice. It is well known that the fables of Hyginus, which differ so much from the relations of other writers, are partly extracted from his pieces. As he often overturned what had hitherto been well known and generally received, he was obliged to use prologues, in which he announces the situation of affairs according to his acceptance, and makes known the course of events. (Compare the amusing scene in Aristophanes, *Rana*, 1177, *seqq.*, and Porson's explanation of the employment of such prologues by Euripides, *Prælect. in Eurip.*, p. 8, *seqq.*) These prologues make the beginnings of the plays of Euripides very uniform; it has the appearance of great deficiency of art when somebody comes out and says, 'I am so and so; such and such things have already happened, and this is what is going to happen.' This method may be compared to the labels coming out of the mouths of the figures in old pictures, which can only be excused by the great simplicity of their antique style. But then, all the rest must harmonize with it, which is by no means the case with Euripides, whose personages discourse according to the newest fashion of the manners of his time. In his prologues, as well as in the dénouement of his plots, he is very lavish of unmeaning appearances of gods, who are elevated above men only by being suspended in a machine, and might very easily be spared. He pushes to excess the method which the ancient tragic writers have of treating the action, by throwing everything into large masses, with repose and motion following at stated intervals. At one time he unreasonably prolongs, with too great fondness for vivacity of dialogue, that change of speakers at every verse which was usual even with his predecessors, in which questions and answers, or reproaches and replies, are shot to and fro like darts; and this he sometimes does so arbitrarily, that half of the lines might be dispensed with. At another time he pours forth long, endless speeches; he endeavours to show his skill as an orator in its utmost brilliancy, by ingenious syllogisms, or by exciting pity. Many of his scenes resemble a suit at law, in which two persons, who are the parties opposed to one another, or sometimes in the presence of a third person as judge, do not confine themselves to what their present situation requires; but, beginning their story at the most remote period, accuse their adversary and justify themselves, doing all this with those turns which are familiar to pleaders, and frequently with those which are usual among sycophants. Thus the poet attempted to make his poetry entertaining to the Athenians by its resemblance to their daily and favourite pursuit, carrying on and deciding, or at least listening to, lawsuits. On this account Quintilian particularly recommends him to the young orator, who may learn more by studying him than the older tragedians; an opinion marked with his usual accuracy. But it is easy to see that such a recommendation conveys no high eulogium, since eloquence may indeed find place in the drama when it is suitable to the capacity and object of the person who is speaking; but when rhetoric steps into the place of the immediate expression of the soul, it is no longer poetical.—The style of Euripides is, on the whole, not compressed enough, although it presents us with some very happily-drawn pictures and ingenious turns of language; it has neither the dignity and energy of Æschylus, nor the chaste grace of Sophocles. In his expressions he frequently aims at the extraordinary and strange, and, on the other hand, loses himself in commonplace; and too often the tone of his speeches becomes quite every-day, and descends from the height of the buskin to level ground. For these reasons, as well as on account of

his almost ludicrous delineation of many characteristic peculiarities (such as the clumsy deportment of Pen-theus in a female garb, when befooled by Bacchus (*Baccha*, v. 782, *seqq.*), or the greediness of Hercules (*Alceste*, v. 764, *seqq.*), and his boisterous demands on the hospitality of Admetus), Euripides was a fore-runner of the new comedy; for which he has an evident inclination, since, under the names belonging to the age of heroes, he frequently paints real personages of his own time. Menander also expressed an extraordinary admiration for him, and declared himself to be his scholar; and there is a fragment of Philemon, full of such extravagant admiration of him that it almost seems to be intended as a jest. 'If the dead,' he says, or makes one of his personages say, 'really possessed sensation, as some suppose, I would hang myself in order to see Euripides.' The sentiments of the more ancient Aristophanes, his contemporary, form a striking contrast to the veneration which the later comic writers had for him. Aristophanes reproaches or banters him for his lowering the dignity of tragedy, by exhibiting so many heroes as whining and tattered beggars (*Rana*, v. 841, 1063.—*Acharn.*, 395, *seqq.*—*Pax*, v. 147); by introducing the vulgar affairs of ordinary life (*Rana*, v. 959); by the sonorous unmeaningness of his choral odes, and the feebleness of his verses (*Rana*, v. 1300, *seqq.*—*Pax*, v. 532); and by the loquacity of all his personages, however low their rank or unsuitable their character might be. He charges his dramas with an immoral tendency (*Rana*, v. 850, 1043, 1068.—*Nubes*, v. 1371), and himself with contempt for the gods and fondness for newfangled doctrines. (*Rana*, v. 887, *seqq.*) He laughs at his affectation of philosophy and rhetoric. (*Rana*, v. 815, 826, 966, 970, 1073, 1076.) Aristophanes, indeed, persecutes him indefatigably and inexorably; he was ordained to be, as it were, his perpetual scourge, that none of his vagaries in morals or in art might remain uncensured. Although Aristophanes, as a comic dramatist, is, by means of his parodies, the foe of the tragic poets in general, yet he nowhere attacks Sophocles; and even in the places in which he fastens on the weak side of Æschylus, his reverence for him is manifest, and he everywhere opposes his gigantic proportions to the petty ingenuity of Euripides. He has laid open, with immense understanding and inexhaustible wit, his sophistical subtlety, his rhetorical and philosophical pretensions, his immorality and seductive effeminacy, and the merely sensual emotions he excites. As modern judges of art have for the most part esteemed Aristophanes to be nothing better than an extravagant and slanderous buffoon, and, moreover, have not understood the art of translating the humorous dress he gives subjects into the truths which lie at the bottom, they have attached but little importance to his opinion.—After all that has gone before, we must not lose sight of the fact, that Euripides was yet a Greek, and a contemporary, too, of many of the greatest men that Greece possessed in politics, philosophy, history, and the graphic art. If, when compared with his predecessors, he stands far below them, when compared with many moderns he is far superior to them. He is particularly strong in the representation of a dis-tempered and erring mind, given up to its passions to a degree of perversity. (*Longinus*, 15, 3.) He is excellent when the subject leads principally to emotion, and has no higher claims; and still more on occasions when even moral beauty demands pathos. Few of his pieces are without single passages that are charmingly beautiful. Take him altogether, it is by no means my intention to deny that he possesses extraordinary talents; I only maintain that they were not united to a disposition honouring the rigour of moral principles and the holiness of religious feelings above everything else." (*Theatre of the Greeks*, 2d ed., p. 133, *seqq.*)—Of the 120 dramas which Euripides is said to have composed,

we have remaining at the present day only eighteen tragedies and one satyric piece. The following are the titles and subjects: 1. *Ἑκάβη, Hecuba*. The sacrifice of Polyxena, whom the Greeks immolate to the manes of Achilles, and the vengeance which Hecuba, doubly unfortunate in having been reduced to captivity and deprived of her children, takes upon Polymnestor, the murderer of her son Polydorus, form the subject of this tragedy. The scene is laid in the Grecian camp in the Thracian Chersonese. The shade of Polydorus, whose body remains without the rites of sepulture, has the prologue assigned it. Ennius and L. Accius, and in modern times Erasmus of Rotterdam, have translated this play into Latin verse. Ludovico Dolce has given an Italian version of it; several passages have been rendered into French by La Harpe; Racine owes to it some fine verses in his *Andromache* and *Iphigenia*, and Voltaire has imitated some parts in his *Mérope*.—2. *Ὀρέστης, Orestes*. The scene of this play is laid at Argos, the seventh day after the murder of Clytemnestra. It is on this day that the people, in full assembly, are to sit in judgment upon Orestes and Electra. The only hope of the accused is in Menelaus, who has just arrived; but this prince, who secretly aims at the succession, stirs up the people in private to pronounce sentence of condemnation against the parricides. The sentence is accordingly pronounced, but the execution of it is left to the culprits themselves. They meditate taking vengeance by slaying Helen; but this princess is saved by the intervention of Apollo, who brings about a double marriage, by uniting Orestes with Hermione, the daughter of Helen, and Electra with Pylades. This dénouement is unworthy of the tragedy. The piece, moreover, is full of comic and satiric traits. Some commentators think they recognise the portrait of Socrates in that of the simple and virtuous citizen who, in the assembly of the people, undertakes the defence of Orestes. This play is ascribed by some to Euripides the younger, nephew of the former.—3. *Φοινίσσα, Phænissæ*. The subject of this piece is the death of Eteocles and Polynices. The chorus is composed of young Phænician females, sent, according to the custom established by Agenor, to the city of Thebes, in order to be consecrated to the service of the temple at Delphi. The prologue is assigned to Jocasta. Grotius regards the Phænissæ as the chef-d'œuvre of Euripides: a more elevated and heroic tone prevails throughout it than is to be found in any other of his pieces. The subject of the Phænissæ is that also of the Thebais of Seneca. Statius has likewise imitated it in his epic poem, and Rotrou in the first two acts of his *Antigone*.—4. *Μήδεια, Medea*. The vengeance taken by Medea on the ungrateful Jason, to whom she has sacrificed all, and who, on his arrival at Corinth, abandons her for a royal bride, forms the subject of this tragedy. What constitutes the principal charm of the piece is the simplicity and clearness of the action, and the force and natural cast of the characters. The exposition of the play is made in a monologue by the nurse: the chorus is composed of Corinthian females, a circumstance which does not fail to give an air of great improbability to this portion of the plot. It is said that Euripides gave to the world two editions of this tragedy, and that, in the first, the children of Medea were put to death by the Corinthians, while in the second, which has come down to us, it is their mother herself who slays them. According to this hypothesis, the 1378th verse and those immediately following, in which Medea says that she will impose on Corinth, contemptuously styled by her the land of Sisyphus, an expiatory festival for this crime, have been retained by mistake in the revision in which they should have disappeared. Medea has no expiation to demand of the Corinthians, if they are not guilty of the murder of her sons. (Compare Böttiger, de *Medea Euripidea*, &c.—*Matthiæ, Misc.*, vol. 1, p. 1,

seqq.—Böckh, *Græcæ Tragædiæ Principum num ea quæ supersunt genuina*, &c., p. 165.) Ælian informs us (*V. H.*, 5, 21), that the Corinthians prevailed upon Euripides to alter the tradition in question: he makes no mention, however, of any change in the piece itself. According to others, they purchased this compliance for the sum of five talents. The subject of the *Medea* was a favourite one with the dramatic writers of former times, and has proved no less so with the moderns. Among the former may be mentioned Neophon of Sicyon, Ennius, Pacuvius, Accius, Ovid, and Seneca; among the latter, Ludovico Dolce, Glover, Corneille, &c.—5. *Ἱππόλυτος στεφανοφόρος, Hippolytus Coronifer*, "Hippolytus wearing a crown." The subject of this tragedy is the same with that which Racine has taken for the basis of his *Phèdre*, a subject eminently tragical. It presents to our view a female, a feeble-minded woman, the victim of the resentment of Venus, who has inspired her with a criminal passion. An object of horror to him whom she loves, and not daring to reveal her own shame, she dies, after having engaged Theseus, by her misrepresentations, to become the destroyer of his own son. The title of this tragedy is probably derived from the crown which Hippolytus offers to Diana. Euripides at first gave it the name of *Ἱππόλυτος καλνπτόμενος*. He afterward retouched it, and, changing the catastrophe and the title, reproduced it in the year that Pericles died. It gained the prize over the pieces of Iophon and Ion, which had competed with it in the contest. It is sometimes cited under the title of the *Phædra*, and the celebrated chef-d'œuvre of Racine is an imitation of it, as well as the tragedy of Seneca, which last, however, rather merits the name of a parody. A comparison between the Hippolytus of Euripides and the *Phèdre* of Racine, is given by Louis Racine, in the *Mémoires de l'Académie des Inscriptions et Belles-Lettres*, vol. 8, p. 300; and by the Abbé Batteux in the same collection, vol. 42, p. 452. Consult also the work of Aug. Wilhelm Schlegel, Paris, 1805, 8vo, "*Comparaison entre la Phèdre de Racine et celle d'Euripide*."—6. *Ἀλkestis, Alcestis*. The subject of this tragedy is moral and affecting. It is a wife who dies for the sake of prolonging her husband's existence. Its object is to show, that conjugal affection and an observance of the rites of hospitality are not suffered to go without their reward. Hercules, whom Admetus had kindly received while unfortunate, having learned that Alcestis, the wife of the monarch, had consummated her mournful sacrifice, seeks her in the shades, and restores her to her husband. In this piece, as in some others of Euripides, the introduction of comic traits into a tragic subject is open to just criticism. Although the character of Hercules is interesting and well-drawn, and though the play, in general, offers many beauties, it is, notwithstanding, regarded as one of the most feeble productions of our author.—7. *Ἀνδρομάχη, Andromache*. The death of the son of Achilles, whom Orestes slays, after having carried off from him Hermione, forms the subject of the piece. The scene is laid in Thetidium, a city of Thessaly, near Pharsalus. Some have pretended, that the aim of Euripides in writing this tragedy was to render odious the law of the Athenians which permitted bigamy. (Consult *Reflexions sur l'Andromaque d'Euripide et sur l'Andromaque de Racine*, par Louis Racine, in the *Mém. de l'Acad. des Inscrip.*, &c., vol. 10, p. 311.) Racine, in the preface to his *Andromaque*, holds the following language in relation to the mode of treating the subject which he has adopted in his own piece. "*Andromaque, dans Euripide, craint pour la vie de Molossus, qui est un fils qu'elle a eu de Pyrrhus, et qu'Hermione veut faire mourir avec sa mère. Mais ici il ne s'agit point de Molossus. Andromaque ne connoit pas d'autre mari qu'Hector, ni d'autre fils qu'Ashtanax. J'ai cru en cela me conformer à l'idée*

que nous avons maintenant de cette princesse. La plupart de ceux qui ont entendu parler d'Andromaque ne la connoissent que pour la veuve d'Hector, et pour la mère d'Astyanax. On ne croit pas qu'elle doive aimer un autre mari ni un autre fils; et je doute que les larmes d'Andromaque eussent fait sur l'esprit de mes spectateurs l'impression qu'elles ont faite, si elles avoient coulé pour un autre fils que celui qu'elle avoit d'Hector." It is easy to perceive from this how much the French poet has ennobled by the change the character of his heroine.—8. *Ἰκέτιδες, Supplices*, "The Female Suppliants." The scene of this tragedy is laid in front of the temple of Ceres at Eleusis, whither the Argive females, whose husbands have perished before Thebes, have followed their king Adrastus, in the hope of engaging Theseus to take up arms in their behalf, and obtain the rites of sepulture for their dead, whose bodies were withheld by the Thebans. Theseus yields to their request and promises his assistance. In exhibiting this play the third year of the 90th Olympiad, the fourteenth of the Peloponnesian war, Euripides wished, it is said, to detach the Argives from the Spartan cause. His attempt, however, failed, and the treaty was signed by which Mantinea was sacrificed to the ambition of Lacedæmon. The exposition of this piece has not the same fault as the rest: it is imposing and splendid, and made without the intervention of an actual prologue; for the monologue by which Æthra, the mother of Theseus, makes known the subject of the piece, is a prayer addressed to Ceres, in which the recital naturally finds a place.—9. *Ἰφιγένεια ἢ ἐν Αὐλίδι, Iphigenia in Aulide*, "Iphigenia at Aulis." The subject of this tragedy is the intended sacrifice of Iphigenia, and her rescue by Diana, who substitutes another victim. It is the only one of the plays of Euripides that has no prologue, for it is well known, that the *Rhesus*, which is also deficient in this respect, had one formerly. Hence Musgrave has conjectured that the present play had also once a prologue, in which the exposition of the piece was made by Diana; and *Ælian* (*Hist. An.*, 7, 39) cites a passage of the Iphigenia which we do not now find in it, and which could only have been pronounced by Diana; it announces what she intends to do for the purpose of saving Iphigenia. Eichstädt, however, and Böckh, maintain, that the Iphigenia which we at present have could not have been furnished with a prologue, since, if it had been, this prologue ought to have contained the recital which is put in the mouth of Agamemnon at verse 49, *seqq.* Hence Böckh concludes, that there were two tragedies with this name, one written by Euripides and having a prologue, the other composed by Euripides the younger, and which is also the one that we now possess. (*Eichstädt, de Dram. Græcorum Comico-Satyrico*, p. 99.—*Böckh, Græcæ Tragædiæ Principum*, &c., p. 216.—Consult also *Bremi, Philolog. Beiträge aus der Schweiz*, p. 143, and *Jacobs, Zusätze zu Schæfer*, vol. 5, pt. 2, p. 401.) Racine has made the story of Iphigenia the subject of one of his chefs-d'œuvre. (Consult the *Comparaison de l'Iphigénie d'Euripide avec l'Iphigénie de Racine*, par Louis Racine, in the *Mém. de l'Acad. des Inscrip.*, &c., vol. 8, p. 288.) It has also been treated by Ludovico Dolce and by Rotrou.—10. *Ἰφιγένεια ἢ ἐν Ταύροις, Iphigenia in Tauride*, "Iphigenia in Tauris." The daughter of Agamemnon, rescued by Diana from the knife of the sacrificer, and transported to Tauris, there serves the goddess as a priestess in her temple. Orestes has been cast on the inhospitable shores of this country, along with his friend Pylades, and by the laws of Tauris they must be sacrificed to Diana. Recognised by his sister at the fatal moment, Orestes conducts her back to their common country. A monologue by Iphigenia occupies the place of a prologue and exposition. The scene where Iphigenia and her brother became known to each other is of a deep and

touching interest: nevertheless, Guimond de la Touche is said, in this respect, to have surpassed his model.—11. *Τρώαδες, Troades*, "The Trojan females." The action of this piece is prior to that of the Hecuba. The scene is laid in the Grecian camp, under the walls of Troy, which has fallen into the hands of the foe. A body of female captives have been distributed by lot among the victors. Agamemnon has reserved Cassandra for himself; Polyxena has been immolated to the manes of Achilles; and Andromache has fallen to Neoptolemus, Hecuba to Ulysses. The object of the poet is to show us in Hecuba a mother bowed down by misfortune. The Greeks destroy Astyanax, and his mangled body is brought in to the mother of Hector, his own parent being by this time carried away in the train of Neoptolemus. Ilium is then given as a prey to the flames. This succession of horrors passes in mournful review before the eyes of the spectator; yet there is no unity of action to constitute a subject for the piece, and consequently the play has no dénouement. Neptune appears in the prologue. Seneca and M. de Chateaubrun have imitated this tragedy.—12. *Βάκχαι, Bacchæ*, "The female Bacchanalsians." The arrival of Bacchus at Thebes and the death of Pentheus, who is torn in pieces by his mother and sister—such is the subject of this piece, in which Bacchus opens the scene and makes himself known to the spectators. Brumoy regards this as a satyric drama; in this, however, he is mistaken, as the chorus of satyrs can never be dispensed with in such compositions. The action of the *Bacchæ* is very defective: it is a succession of rich paintings, of tragic situations, of brilliant verses, connected together by a very feeble interest. The spectacle which this tragedy presented must have been at once imposing and well calculated to keep alive curiosity. (Compare the remarks of Prevost, *Examen de la tragédie des Bacchantes*, in the *Theatre des Grecs*, by Raoul-Rochette, vol. 9, p. 376.) There is some probability for supposing that we have this play in a second edition.—13. *Ἡρακλῆϊδα, Heracliidæ*. The descendants of Hercules, persecuted by Eurystheus, flee for refuge to Athens, and implore the protection of that city. The Athenians lend aid, and Eurystheus becomes the victim of the vengeance he was about bringing upon them. Iolas, an old companion of Hercules, explains the subject to the spectators. The poet manages to impart an air of great interest to the piece.—14. *Ἑλένη, Helena*. The scene is laid in Egypt, where Menelaus, after the destruction of Troy, finds Helen, who had been detained there by Proteus, king of that country, when Paris wished to convey her to Ilium. Euripides follows in this the account of Herodotus, to which he adds some particulars of his own that border on romance. The action passes at the isle of Pharos, where Theoclymenus, the son and successor of Proteus, keeps Helen in custody with the view of espousing her. She employs a stratagem in order to escape from his power. The dénouement of this piece resembles that of the Iphigenia in Tauris.—15. *Ἴων, Ion*. Ion, son of Apollo and Cræusa, daughter of Erechtheus, king of Athens, has been brought up among the priests at Delphi. The design of Apollo is to make him pass for the son of Xuthus, who has married Cræusa. The interest of the piece consists in the double danger which Cræusa and Ion run; the former of being slain by Ion, and the latter of perishing by the poison prepared for him by a mother who is ignorant of his being her son. The play, however, is somewhat complicated, and has need of a long exposition, which is assigned to Mercury. The scene is laid at the entrance of Apollo's temple in Delphi, a place expressly chosen in order to give to the spectacle an air of pomp and solemnity. A religious tone, full of gravity and softness, pervades the whole piece. There is much resemblance between this tragedy and the *Athalie* of Racine.—16. *Ἡρακλῆος μανία, Heracles*

Hercules furens. After having killed, in his phrensy, his wife and children, Hercules proceeds to submit himself to certain expiatory ceremonies, and to seek repose at Athens. Amphitryon appears in the prologue: the scene is laid at Thebes.—17. *Ἠλέκτρα*, *Electra*. The subject of this piece has been treated also by Æschylus and Sophocles, but by each in his peculiar way. Euripides transfers the scene from the palace of Ægisthus to the country near Argos: the exposition of the play is made by a cultivator, to whom Electra has been compelled to give her hand, but who has taken no advantage of this, and has respected in her the daughter of a royal line. On comparing Euripides with Sophocles, we will find him inferior to the latter in the manner of treating the subject: he has succeeded, however, in embellishing it with interesting episodes.—18. *Ῥήσος*, *Rhesus*. A subject derived from the tenth book of the Iliad. Some able critics have proved that this piece was never written by Euripides. (Consult *Dissertation sur la tragédie de Rhesus*, par Hardion, in the *Mém. de l'Acad. des Inscri. et Belles-Lettres*, vol. 10, p. 323.—Valckenaer, *Diatribe Euripidea*, c. 9, *seqq.*—Beek's *Euripides*, vol. 3, p. 444, *seqq.*, &c.)—19. *Φαίθων*, *Phaëthon*. Of this play we have about eighty verses remaining. Clymene, the mother of Phaëthon, is the wife of Merops, king of the Ethiopians, and Phaëthon passes for the son of this prince. The young man, having conceived some doubts respecting his origin, addresses himself to the Sun. The catastrophe, which cost him his life, is well known. In the tragedy of Euripides, the body of her son is brought to Clymene, at the very moment when Merops is occupied with the care of procuring for him a bride.—20. *Δανάη*, *Danaë*. Of this play we have the commencement alone, unless the sixty-five verses, which commonly pass for a part of the prologue, are rather to be considered as the production of some imitator, who has proceeded no farther in his attempt to ape the style of Euripides. This last is the hypothesis of Wolf. (*Litt. Anal.*, vol. 2, p. 394.)—The ancient writers cite also a poem of Euripides, to which we have already alluded, under the title of *Επικήδειον*, "Funeral hymn," on the death of Nicias and Demosthenes, as well as of the other Athenians who perished in the disastrous expedition against Syracuse. We possess also two Epigrams of Euripides, each consisting of four verses, one of which has been preserved for us in the Anthology, and the other in Athenæus. There have also come down to us five letters, ascribed to Euripides, and written with sufficient purity and simplicity of style to warrant the belief that they are genuine productions. (Compare the remarks of Beck in his edition of the poet—vol. 7, *ed. Glasg.*, p. 720.)—Of the numerous fragments of Euripides that have reached us, it seems unnecessary here to speak. The only production worth mentioning, after those already noticed, is the satyric drama entitled *Cyclops* (*Κύκλωψ*). The Greek satyric drama must not be confounded with the satire of the Romans, from which it was totally distinct. (*Bentley on Phalaris*, p. 246, *ed. Lond.*, 1816.) It was a novel and mixed kind of play, first exhibited by Pratinas, probably at a period not long subsequent to Olymp. 70, 2, B.C. 499. (*Theatre of the Greeks*, 2d *ed.*, p. 113.) The poet, borrowing from tragedy its external form and mythological materials, added a chorus of satyrs, with their lively songs, gestures, and movements. This species of composition quickly obtained great celebrity. The tragic poets, in compliance with the humour of their auditors, deemed it advisable to combine this ludicrous exhibition with their graver pieces. One satyric drama was added to each tragic trilogy, as long as the custom of contending with a series of plays, and not with single pieces, continued. Æschylus, Sophocles, and Euripides were all distinguished satyric composers; and in the *Cyclops* of the latter we pos-

sess the only extant specimen of this singular exhibition. Notwithstanding, however, its burlesque ingredients, the tragic character was so far preserved in the satyric play, that the subject appears to have been always historical, and the action partly serious, though with a fortunate catastrophe. No less than tragedy and comedy, the satyric drama had its peculiar and appropriate stage decorations, representing woods, caves, mountains, and other diversities of the sylvan landscape. Satyrs old and young, with Silenus in his various ages, were distinguished from one another by the variety of their grotesque masks, crowned with long, shaggy goat's hair; while the Satyrs were negligently clad in skins of beasts, and the Sileni decorated with garlands of flowers skillfully woven. The satyr-parts, too, appear to have been sometimes acted by pantomimic performers, moving on a kind of stilts, to give more completely the appearance of goat's legs. The choral dance, it is hardly necessary to remark, was thoroughly rustic, peculiarly lively, and quite opposite in character to the solemn and impressive movements which accompanied the serious tragedy. (Compare *Casaubon, de Sat. Poes.*, 1, 5.) The fable of the Cyclops of Euripides is drawn from the Odyssey. The subject is Ulysses depriving Polyphemus of his eye, after having intoxicated him with wine. In order to connect with the story a chorus of satyrs, the poet has recourse to the following expedient. He supposes that Silenus, and his sons, the Satyrs, in seeking over every sea for Bacchus, whom pirates have carried away, have been shipwrecked on the coast of Sicily, where they have fallen into the hands of Polyphemus. The Cyclops has made slaves of them, and has compelled them to tend his sheep. Ulysses, having been cast on the same coast, and having been, in like manner, made captive by Polyphemus, finds in these satyrs a willing band of accomplices. They league with him against their master, but their excessive cowardice renders them very useless auxiliaries. They profit, however, by his victory, and embark along with him.—Among the numerous editions of Euripides which have issued from the press, the following are particularly worthy of notice: that of Beck, commenced by Morus, *Lips.*, 1778–88, 3 vols. 4to: that of Musgrave, *Oxon.*, 1778, 4 vols. 4to: that of Matthiæ, *Lips.*, 1813–37, 10 vols. 8vo.; and the variorum Glasgow edition, 1820, 9 vols. 8vo.—Of the separate plays, the best editions are those of Porson, Brunck, Valckenaer, Monk, &c. The *Diatribe* of Valckenaer (*Diatribe in Euripidis perditiorum dramatum reliquis*, *Lugd. Bat.*, 1767, 4to) is a choice piece of criticism, and contains some happy corrections of the text of the fragments. It is an excellent work for those who wish to be acquainted with the philosophical opinions of Euripides, and with the peculiar character of his style, as distinguished from that of Sophocles.—II. A nephew of the preceding (*Suid.*, s. v.—Böckh, *de Trag. Græc.*, xiv. and xviii), commonly styled Euripides Junior. He was a dramatic poet, like his uncle, and exhibited, besides his own compositions, several plays of the latter, then dead; one of these gained the prize. Böckh and others suspect that he reproduced the *Iphigenia in Aulis*, and perhaps the *Palamides*. (*Vid. preceding article.*) To this Euripides is ascribed, by Suidas, an edition of Homer. (*Theatre of the Greeks*, 2d *ed.*, p. 158.)

EURIPUS, a narrow strait, dividing Eubœa from the main land of Greece, and supposed to have been formed by an earthquake, or some other convulsion of nature, which tore Eubœa from the Boeotian coast. (*Eurip.*, *ap. Strab.*, 60.) Several of the ancients have reported, that the tide in this strait ebbed and flowed seven times in the day, and as many times during the night, and that the current was so strong as to arrest the progress of ships in full sail. (*Pomp. Mela*, 2, 7.—*Strabo*, 55.—*Id.*, 403.—*Plin.*, 2, 100.) According to the popular account, Aristotle drowned himself here out of

chagrin, from not being able to account for so unusual a motion of the water. The story, however, is devoid of foundation. (*Vid. Aristoteles.*)—From this rapid movement of the current, the Euripus derived its ancient name (*εὐ, bene, and πίπρω, jacio*). Livy's account of this strait appears the most rational. "A more dangerous station for a fleet," observes this writer, "can hardly be found; besides that the winds rush down suddenly and with great fury from the high mountains on each side, the strait itself of the Euripus does not ebb and flow seven times a day, at stated hours, as report says; but the current changing irregularly, like the wind, from one point to another, is hurried along like a torrent tumbling from a steep mountain; so that, night or day, ships can never lie quiet." (*Liv.*, 28, 6.) The straits are now called, by a corruption of the ancient name, the straits of *Negropont*. Hobhouse visited the Euripus, and the account given by this intelligent traveller of its appearance in our own days is deserving of being cited. "What I witnessed of the Euripus was, that the stream flows with violence, like a mill-race, under the bridges, and that a strong eddy is observable on that side from which it is about to run, about a hundred yards above the bridges; the current, however, not being at all apparent at a greater distance, either to the south or north. Yet the ebbing and flowing are said to be visible at ten or a dozen leagues distance, at each side of the strait, by marks shown of the rising and falling of the water in several small bays on both coasts. The depth of the stream is very inconsiderable, not much more than four feet. The account which Wheler copied from the Jesuit Babin, respecting the changes of the Euripus, and which he collected on the spot, though not from his personal experience, he not being long enough in the place, was, that it was subject to the same laws as the tides of the ocean for eighteen days of every moon, and was irregular, having twelve, thirteen, or fourteen flowings and ebbs for the other eleven days; that is, that it was regular for the three last days of the old moon and the eight first of the new, then irregular for five days, regular again for the next seven, and irregular for the other six. The water seldom rose to two feet, and usually not above one; and, contrary to the ocean, it flowed towards the sea, and ebbed towards the main land of Thessaly, northward. On the irregular days it rose for half an hour, and fell for three quarters; but, when regular, was six hours in each direction, losing an hour a day. It did not appear to be influenced by the wind. A Greek of Athens, who had resided three years at Egripo, told me that he considered the changes to depend chiefly on the wind, which, owing to the high lands in the vicinity of the strait, is particularly variable in this place. The two great gulfs, for so they may be called, at the north and south of the strait, which present a large surface to every storm that blows, and receive the whole force of the Archipelago, communicate with each other at this narrow shallow channel; so that the Euripus may be a sort of barometer, indicative of every change, and of whatever rising and falling of the tide, not visible in the open expanse of waters there may be in these seas. I did not, however, see any marks of the water being ever higher at one time than at another. The Greek had observed also, that, when the wind was north or south, that is, either up or down the strait, the alteration took place only four times in the twenty-four hours; but that, when it was from the east, and blew strongly over the mountains behind Egripo, the refluxes took place more frequently, ten or twelve times; and that, in particular, immediately before the full of the moon, the turbulence and eddies, as well as the rapidity of the stream, were very much increased. There was never, at any season, any certain rule with respect either to the period or the number of changes. Those of the ancients who inquired into this phenomenon

were aware, that the story of the Euripus changing its course always seven times during the day was unfounded; and the account given of it by Livy (28, 6) corresponds, in some measure, with that of my Athenian informant. The bridge which anciently connected the main land and the island was considerably longer than that which at present serves the same purpose. We are informed, that the strait was made more narrow by a dike, which the inhabitants of Chalcis constructed to lessen the passage; and it is by no means improbable, that the whole of the flat on which the fortified part of Egripo now stands, and which is surrounded on the land side by a wide marsh, was formerly covered by the waters of the Euripus." (*Hobhouse's Journey*, vol. 1, *Lett.* 29, p. 372, *seqq.*, *Am. ed.*)

ΕΥΡΩΠΑ, I. one of the three main divisions of the ancient world. With the northern parts of this the ancients were very slightly acquainted, viz., what are now *Prussia, Sweden, Denmark, Norway, and Russia*. They applied to this quarter the general name of *Scandinavia*, and thought it consisted of a number of islands. From the Portuguese cape, denominated by mariners the *Rock of Lisbon*, to the *Uralian Mountains*, the length of modern Europe may be reckoned at about 3300 British miles, and from Cape *Nord*, in Danish Lapland, to Cape *Matapan*, the southern extremity of the *Morea*, it may be about 2350. As regards the limits of Europe, it may be remarked, that the chain of the *Ural Mountains*, the river of the same name, the *Caspian Sea*, and the lowest level of the isthmus between it and the *Sea of Azof* (a level indicated by the course of the *Manytch* and the *Kuma*), are boundaries between Europe and Asia in the part in which they are contiguous. That frontier ends at the *Tanais* or *Don*, which for a short space terminates the two continents. The remaining limits are more easily determined; they are the *Sea of Azof*, the *Black Sea*, the *Bosporus*, the *Propontis*, and the *Hellespont*. The line is taken across the *Archipelago*; *Tenedos*, *Mytilene*, *Chios*, *Samos*, *Nicaria*, *Cos*, and *Rhodes*, belong to Asia; *Naxos*, *Stampalia*, and *Scarpanto*, to Europe. The *Mediterranean* divides Africa and Europe; but it is not ascertained whether *Malta*, *Gozo*, *Comino*, *Lampedosa*, and *Linosa* are African or European islands. The *Canaries*, *Madeira*, and the *Azores* are, in a physical point of view, appendages of Africa, being parts of a submarine continuation from the chain of *Atlas*.—With respect to the name of Europe, it must be confessed that its etymology is altogether uncertain. Bochart derives the word from the Phœnician *Ur-appa*, which he makes equivalent to the Greek *λευκοπρόσωπος*, "of a white or fair aspect;" and considers it as applying not only to the sister of *Cadmus*, but also to the Continent of Europe, from the fairer visages and complexions of its inhabitants: "*qua Europæi Africanos candore faciei multum superant.*" (*Geogr. Sacr.*, 4, 33, col. 298.) M. Court de Gebelin, on the other hand, deduces the name from the Phœnician *Wrab*, i. e., "West," as indicating the country lying in that direction with reference to Asia. His explanation, however, of the mode in which the same appellation came to be applied to the lunar divinity, is far less plausible: "*Ce nom ne convient pas moins à la Lune; car on ne la voit que le soir; et lorsqu'on commence à l'apercevoir à la Néomenie, c'est toujours au couchant; d'ailleurs n'est elle pas la Reine de la Nuit? elle fut donc appelée avec raison Europe.*" (*Monde Primitif*, vol. 1, p. 250.)—As regards the progress of geographical discovery, it may be remarked, that the earliest notices of Europe are in the writings of the Greeks, who inhabited the southeastern corner of the continent. From this country the geographical knowledge of Europe extended by degrees to the west and north. Homer was acquainted with the countries round the *Ægean Sea* or *Archipelago*. He had also a pretty accurate general notion respecting those which lie on the south

coast of the Black Sea; but what he says about the countries west of Greece, on the shores of the Mediterranean, is a mixture of fable and truth, in which the fabulous part prevails. It would seem that, in his age, these seas were not yet visited by his countrymen, and that he obtained his knowledge from the Phœnicians, who had probably for some time sailed to these regions, but who, according to the common policy of trading nations, spread abroad false accounts of these unknown countries, in order to deter other nations from following their track, and participating in the advantages of this distant commerce. It is probable, also, that the Phœnicians long excluded the Greeks from the navigation of the Mediterranean; for when the latter began to form settlements beyond their native country, they first occupied the shores of the *Ægean*, and afterward those of the Black Sea. As the European shores of this last-mentioned sea are not well adapted for agriculture, except a comparatively small tract of the peninsula of Crimea, their early settlements were mostly on the Asiatic coasts, and, consequently, little addition was made by these colonies to the geographical knowledge of Europe. But the navigation of the Phœnicians was checked in the middle of the sixth century before Christ, apparently by their being subjugated by the Persians. About this time, also, the Greeks began to form settlements in the southern parts of Italy and on the island of Sicily, and to navigate the Mediterranean Sea to its full extent. Accordingly, we find that, in the time of Herodotus (450 B.C.), not only the countries on each side of the Mediterranean, and the northern shores of the Black Sea, were pretty well known to the Greeks, but that, following the track of the Phœnicians, they ventured to pass the Columns of Hercules, and to sail as far as the Cassiterides, or Tin Islands, by which name the Scilly Isles and a part of Cornwall must be understood. It is even reported, that some of their navigators sailed through the English Channel and entered the North Sea, and perhaps even the Baltic. It must be observed, however, that Herodotus professes himself totally unacquainted with the islands called Cassiterides (3, 115), and Strabo (p. 104, &c.) expresses a very unfavourable opinion of the alleged northern voyages of Pytheas. Thus a considerable part of the coasts of Europe was discovered, while the interior remained almost unknown. When the Romans began their conquests, this deficiency was partly filled up. The conquest of Italy was followed by that of Spain and the southern parts of Gaul, and, not long afterward, Sicily, Greece, and Macedonia were added. Cæsar conquered Gaul and the countries west of the Rhine, together with the districts lying between the different arms by which that river enters the sea. His two expeditions into Britain made known also, in some measure, the nature of that island and the character of its inhabitants. Thus, in the course of little more than two hundred years, the interior of all those countries was discovered, the shores of which had been previously known. In the mean time, nothing was added to the knowledge of the coasts, the Greeks having lost their spirit of discovery by sea along with their liberty, and the Romans not being inclined to naval enterprise. After the establishment of imperial power at Rome, the conquests of the Romans went on at a much slower rate, and the boundaries of the empire soon became stationary. This circumstance must be chiefly attributed to the nature of the countries which were contiguous to those boundaries. The regions north of the Danube are mostly plains, and at that time were only inhabited by wandering nations, who could not be subjected to a regular government. Such, at least, are the countries extending between the Carpathian mountains and the Black Sea, and therefore the conquest of Dacia by Trajan was of short continuance and speedily abandoned. The countries between the Alps

and the Danube were soon added to the empire; but, as the nations who inhabited the tracts north of that river had not given up a wandering life, they were enabled to elude the Roman yoke. The most important addition to the empire and to geographical knowledge was the conquest of England during the first century after Christ, to which, in the following century, the south of Scotland was added. Nothing seems to have been added afterward. The Geography of Ptolemy contains a considerable number of names of nations, places, and rivers in those countries which were not subjected to the Romans. Probably they were obtained from natives and from Roman traders, who had ventured to penetrate beyond the boundaries of the empire. But these brief notices are very vague, and in most cases it is very difficult to determine what places and persons are indicated. (*Encycl. Us. Knowl.*, vol. 10, p. 79.)—II. A daughter of Agenor (called by some Phœnix) king of Phœnicia. Jupiter, becoming enamoured of her, according to the old legend, changed himself into a beautiful white bull, and approached her, "breathing saffron from his mouth," as she was gathering flowers with her companions in a mead near the seashore. Europa, delighted with the tameness and beauty of the animal, caressed him, crowned him with flowers, and at length ventured to mount on his back. The disguised god immediately made off with his lovely burden, plunged into the sea, and swam with Europa to the Island of Crete, landing not far from Gortyna. Here he resumed his own form, and beneath a plane-tree caressed the trembling maid. The offspring of their union were Minos, Rhadamanthus, and Sarpædon. Asterius, king of Crete, espoused Europa subsequently, and reared her sons. (*Apollod.*, 3, 1.—*Hes.*, *et Bacchyl.*, *ap. Schol. ad Il.*, 12, 292.—*Mosch.*, *Id.*, 2.—*Ovid. Met.*, 2, 833, *seqq.*—*Id.*, *Fast.*, 5, 605—*Keightley's Mythology*, p. 455.) The fable of Europa is made by the mythological expounders of the old school to rest on an historical basis. In this they are decidedly wrong. Instead of perceiving that this and other legends of mythology bear only an analogy to the truth, that they are false when understood literally, but frequently true when interpreted metaphorically, they have taken them as narratives of real facts, embellished by credulity or a poetical imagination, and, having struck out the wonders, they took the *caput mortuum* which remained for real history. Thus, in the present instance, the foundation of the story of Europa is said to have been, that a commander of a Cretan vessel, either himself named Taurus, or whose vessel bore that title, carried off the Phœnician princess Europa, daughter of Agenor, from the city of Tyre: others again make her to have been borne away by some Cretan merchants, whose ship had the emblem of a white bull, and who intended her as a prize for their king Asterius, who had assumed the name of Jupiter! (Consult *Banier's Mythology*, vol. 3, p. 400, *seqq.*) The truth is, however, that Europa was nothing more than the lunar divinity or the moon. In order to make this more apparent, let us review the whole ground of this singular fable. We find the legend of Jupiter and Europa known already to Homer (*Il.*, 14, 321) and Hesiod. (*Schol. ad Il.*, 12, 397.) The old genealogical poet Asius (*Pausan.*, 7, 4), and the Logographers Pherecydes (*ed. Sturz.*, p. 111) and Hellanicus (p. 65), found already, in their time, a rich fund of materials in this fabulous legend. What Apollodorus, in particular, gives (3, 1), appears to have been taken from these writers. Antimachus and Anticlidæ are named as having written on this same subject (*Schol. ad Apoll. Rhod.*, 2, 178), but more especially Eumelus (*Schol. ad Il.*, 6, 130) and Stesichorus. (*Schol. ad Eurip. Phœn.*, v. 674.—*Compare Fragm. Stesich.*, *ed. Suchfort*, p. 13.) Amid such a number of writers, it is no wonder if the topic proved

sufficiently attractive to occupy the attention of many of the later Greek and Roman authors. Hence we find it reappearing, after some lapse of time, in Moschus (*Idyll.* 2), Lucian (*Dial. Mar.—Opp.*, vol. 2, p. 125, *ed. Bip.*), and Achilles Tatius (*de Am. Clit. et Leuc.*, 1, 1.—Compare also *Anacreon*, *Od.*, 35.—*Horat.*, *Od.*, 3, 27.—*Ovid*, *Mét.*, 2, 833.—*Id.*, *Fast.*, 5, 605.—*Germanicus* *Arat. Phæn.*, 533.)—The ancient writers themselves attempt an explanation of the fable, with which the mythological expounders of later days are in full accordance, as we have already observed. Thus Palæphatus (p. 72, *ed. Fisch.*) makes the individual who carried off Europa to have been called Taurus (compare *Tætzes*, *ad Lycophr.*, v. 1299, and *Meursius*, p. 250), and Julius Pollux says (*Onomast.*, 1, 83) the ship in which she was carried away had a bull for its *παρασημον*. If there be any ancient fable which requires, in its explanation, a careful separating of the earlier and original portions from what is of later addition, it is this of Europa. If we follow the narrative of Apollodorus, we will find the legend dividing itself into two distinct parts; the carrying off of Europa, and the search made for her by Cadmus, Cilix, &c. These two portions, however, are not necessarily connected with each other, as evidently appears from the former of the two having alone been handled by many writers.—What, now, were the ideas entertained by the earlier mythologists on the subject of this fable? Homer, in the well-known passage (*Il.*, 14, 315) where he speaks of the reunion of Jupiter and Juno on Mount Ida, merely mentions the daughter of Phœnix as having been one of the objects of Jupiter's love. This, most probably, was the earliest form of the legend; at least the bearing away of Europa by that deity appears to have been a later addition. According to Acusilaus (*ap. Apollod.*, 2, 5, 7), it was a real bull that brought Europa to Crete; and, according to another authority, the animal was selected by Neptune for this purpose, and was sent to Sidon by Jupiter, for the purpose of carrying off the maiden (*Nigidius*, *ap. Schol. ad Germ. Arat. Phæn.*, *ed. Buhle*, 2, p. 55), for which service he was afterward placed among the stars. (*Eurip.*, *Phryx. ap. Eratosth.*, *cat.* 14.—*Theognis*, *Schol. ad Arat.*, p. 48, *ed. Buhle*.—*Hygin.*, *Poet. Astr.*, 21.) It is easy to perceive, that this mythus loses all its meaning the moment this bull becomes the transformed Jupiter. (Compare *Gruber's Lexicon*, 2, p. 9.) We find, it is true, that even as early a writer as Hesiod is acquainted with the metamorphosis of Jupiter into a bull (*Schol. ad Hom.*, *Il.*, 12, 397, *ed. Ald.*, 1521, p. 215), but this only shows at how early a period the addition to which we allude was made to the original fable. The germe of that fable, however, still remained, and was, in effect, simply this, Jove indulged his passion with Europa in Crete. The elucidation of the mythus mainly depends upon the clearing up of another question: what means the term *Europa primitively*, a land or a person? The former of these interpretations can in no way whatever be the true one. Homer and Hesiod, to whom Europa is known as the daughter of Phœnix, have no acquaintance with *Asia* and *Europe* as *parts of the world*. The Asian meadow or field (*Ἀσιας λεμῶν*) in Homer (*Iliad*, 2, 461), is merely a small tract of land in the vicinity of the Cæster. The name of Asia only began to be more extensively applied as the interior of Lower Asia began to be better known to the Greeks. (Compare *Hermann*, *ad Hymn. in Apoll.*, 250.) Europe, as a land, is entirely unknown to Homer: the first traces of the name are found in the Hymn to Apollo (v. 250, *seqq.*, and 290, *seqq.*), where it is used in opposition to the Peloponnesus and the islands, and seems to indicate the remaining portion of what was subsequently called Hellas. It is more than probable that the appellation itself originated in Lower Asia.

Compare the remarks of Buttmann, “*Ueber die my-*

thische Verbindung von Griechenland mit Asien,” in the Memoirs of the Berlin Academy for 1818, p. 219, *seqq.* In Euripides (*Iph. in Taur.*, v. 627), the epithet *εὐρωπαϊός* occurs in the sense of “dark,” and with this the explanation of Hesychius coincides: *Εὐρώπη, χώρα τῆς δύσεως, ἢ σκοτεινῇ*. The name Europe, then, will have been given by the Asiatics to the country which lay west of them, towards the *evening* (Ereb) sun, or the quarter of *darkness*. At what period this appellation was extended to the whole continent cannot now be ascertained (*Ukert's Geogr.*, vol. 2, p. 210); as, however, Pherecydes already divided the earth into two hemispheres (*Schol. ad Apoll. Rhod.*, 4, 1396), placing Europe in the north, and Asia, including Africa, in the south, we may suppose this arrangement to have been generally received about the time of the Logographers. Now it is manifest, from what has just been stated, that the original mythus of Europa had no symbolical reference whatever to the continent of that name. Before, however, proceeding farther in the examination of this fable, it becomes important to consider the lineage assigned to the female in question. Homer (*Il.*, 14, 321) names her as the daughter of Phœnix; so also Hesiod, Bacchylides (*Schol. Dydmi.*, *ed. Ald.*, 1521, p. 215), Asiut (*Pausan.*, 7, 4), and Moschus (*Idyll.*, 2, 40). With the Logographers a discrepancy presents itself. Some regard her as a daughter of Agenor, others still as the offspring of Phœnix (*Schol. ad Apoll. Rhod.*, 3, 1186): that the former of these two accounts, however, is the more commonly-received one, appears in the extracts from the Logographers as made by Apollodorus (3, 1). In the original mythus, therefore, Europa is the daughter of Phœnix, in the later and altered legend she is the child of Agenor. Phœnix now, according to the custom observed in similar fables, of naming a land after its first monarch, becomes the king of Phœnicia, and hence the leading idea involved in the legend, that Europa came from Phœnicia. Let us now turn our attention more immediately to the being and person of Europa. The first passage that arrests our notice is one occurring in the treatise on the “Syrian Goddess,” ascribed to Lucian (*Opp.*, *ed. Bip.*, vol. 9, p. 87.) “There is in Phœnicia,” says the writer, “another large temple also, which is in the possession of the Sidonians, and which, as they say, is the temple of Astarte. Astarte I suppose to be the same with the moon. As, however, one of the priests told me, it was the temple of Europa, the sister of Cadmus. This daughter of King Agenor was honoured with a temple after her disappearance; and they have a sacred tradition (*λόγον ἱερόν*) respecting her, that, being very beautiful, she was beloved by Jupiter, who changed himself into a bull and carried her away into Crete. I heard this also from other Phœnicians; and, moreover, the Sidonian money has represented on it Europa sitting upon the back of a bull, that is, of Jupiter. They do not all agree, however, in making the temple to be that of Europa.” In the case of so early a worship as that connected with the Sidonian temple, it is no wonder if the accounts of later days exhibit some discrepancies. According to the more common statement, the temple was that of Astarte, whom the writer just quoted makes identical with the moon. Creuzer has shown with great ability (*Symbolik*, vol. 2, p. 65), that the greater part of the Syro-Phœnician goddesses conveyed the idea of the humid, receiving, fruit-yielding Earth, and the impregnated and in turn impregnating Moon. This last idea shows itself very clearly in the attributes of the Phœnician Astarte. Not only is she regarded by Lucian and others (*Selden, de Dis Syr.*, p. 244) as identical with Selene, but she is even styled, on that account, the Queen of Heaven (*Jerem.*, 7, 17); and the etymology given by Herodian, though of no value in itself, yet is of importance to the present discussion as showing the union of idea with re-

spect to Selene and Astarte. (Φοῖνικες δὲ Ἀστρούρχην ὀνομάζουσι, σελήνην εἶναι θέλοντες. *Herodian*, 5, 6, 10.) This goddess had the principal seat of her worship in Sidon. (2 *Kings*, 23, 13.) As lunar goddess, Astarte had, among her other symbols, some of the attributes of the bull; she wore, says Sanchoniathon (*ap. Euseb., Præp. Evang.*, 1, 10), the hide of a bull as an ornament for the head when she wandered over the earth. In all the physico-religious systems of Lower Asia there existed a great uniformity in the leading principles (*Creuzer, Symbolik*, vol. 2, p. 11, *seqq.*), and throughout a large portion of this country the worship of the moon was firmly established. Without stopping to discover any traces of this in the Phrygian rites, or in those of the goddess of Comana, it will be sufficient to refer to Artemis Tauropolos, who would seem, in many respects, to have been the same with the Phœnician Astarte. (Compare *Creuzer, Symbolik*, vol. 4, p. 199.—*Millin, Galerie Myth.*, vol. 1, pl. 34, Nr. 121.) It is curious to observe, moreover, that Artemis Tauropolos was worshipped on the shores of the Persian Gulf, the primitive seat of the Phœnician race. (*Eustath. ad Dionys. Perieg.*, 609.—Compare *Dupuis, Memoires de l'instit. nat.*, an. XII., *Litt. et b. arts*, vol. 5, p. 11.) Nor should we omit to notice, that, from the researches of Creuzer, the worship of Diana Luna would appear to have extended not only along the Persian Gulf, but also in various parts of middle Asia; and that the symbolical mode of representing this goddess was a female figure riding on a bull, with a crescent-shaped veil over her head. Such is the way in which she appears on a medal of the Iss and Icaria (*Harduin, de Num. Antig.*, p. 217), where this worship also prevailed. (*Strab.*, 638.) It is extremely probable, that some early statue of Diana Luna, represented in precisely the same posture as the figure on the Icarian medal, gave rise to the mythus of the carrying away of Europa by a bull; and thus Europa belongs, as an imaginary personage, to the cycle of the lunar worship. To place this in a still clearer light, let us turn our attention to the testimony afforded by ancient works of art. Achilles Tatius (p. 10.—Compare *Plin.*, 36, 10) saw, in the Sidonian temple of Astarte, among the sacred offerings, a painting which had for its subject the carrying off of Europa. The description of this differs only in some collateral points from that of a painting preserved to us in the tomb of the Nasonii, of which Belloir makes mention. (*Picturæ Antiquæ sepulchri Nasoniorum in via Flaminia*.—*Græv., Thes. Ant. Rom.*, vol. 12, p. 1059.) The scene is laid on the shore near Sidon: the bull hastens with his lovely burden over the waves, and the playmates of Europa stand lost in astonishment and grief. The bearing away of Europa is the subject also of many sculptured stones that have come down to us. (Consult *Montfaucon, Ant. Expl.*, vol. 1, pl. 19, Nr. 4.—*Gori, Museum Florent.*, vol. 1, tab. 56, Nr. 9.—*Augustini Gemmæ, ed. Gron.*, tab. 185.—*Gemmæ Antiche*, p. 2, tab. 27.—*Winckelmann, Catal. de Stoseh.*, p. 57.—*Thesaurus Brandenb.*, p. 195.)—Even the name Europa itself has reference to this female's identity with the moon. It is derived, most probably, from εὐρώπη, "broad-visaged," and alludes to the appearance of the moon when at its full. Her mother's name, moreover, is Τηλεφάσσα, "she that enlightens from afar." In Crete she subsequently marries Ἀκρίδιος, "the Starry," and gives birth to Minos, which connects her name with that of Pasiphaë (Πασιφάη), "she that enlightens all."—The conclusion, then, to which we would come, is this, that the legend of Europa relates to the introduction of the lunar worship, by Phœnician colonists, into Crete. (*Hock's Kreta*, vol. 1, p. 83, *seqq.*)—The identity of Europa and the Moon is also recognised by Knight. (*Inquiry into the Symb. Lang.*, &c.—*Class. Journ.*, vol. 25, p. 247.) His words are as follows: "It is in the character of

the destroying attribute, that Diana is called ΤΑΥΡΟΠΟΙΑ, and ΒΟΩΝ ΕΛΑΤΕΙΑ, in allusion to her being borne or drawn by bulls; and it is probable that some such symbolical composition gave rise to the fable of Jupiter and Europa; for it appears that, in Phœnicia, Europa and Astarte were only different titles for the same personage, who was the deity of the Moon; comprehending both the Diana and Celestial Venus of the Greeks."—III. A district of Macedonia, in which was situated the town of Europus. Some geographers make it to have been a part of Thrace; but without any good reason. It was also called Europia. (*Id.* Europus.)

ΕΥΡΟΠΕΣ, a town of Macedonia, situate, according to Pliny (4, 10), on the river Axius, and in the district of Emathia. Ptolemy does not ascribe it to this district, however, but to one which he calls Matia (p. 84). But, according to Pliny, there was another Europus, situated on the river Rhœdias (perhaps Ludias), of which Strabo also speaks. (*Strabo*, 327.)

ΕΥΡΩΤΑΣ, I. a river of Laconia, and the largest in the Peloponnesus. It rises in Arcadia, near Asea, a little to the southwest of Tegea, and, after running a short distance, disappears under ground. On the opposite side of the mountains which separate Arcadia from Laconia, it reappears in the latter country, in the district of Belmina. It then traverses that province, and passes by Sparta to Helos, near which town it empties into the sea. (*Strabo*, 342.—*Dionys. Perieg.*, v. 411.) The Eurotas flowed to the east of Sparta, as we are informed by Polybius; its stream was full and rapid, and could seldom be forded. Eurotas, the third king after Lelex, enlarged and regulated its bed, drew a canal from it, drained the neighbouring country, and, from feelings of gratitude on the part of his subjects, had his name given to the stream. (*Pausan.*, 3, 1.) The modern name is *Basilipotamo* (pronounced *Vasilipotamo*), and signifying the royal river, in allusion to certain petty princes, dependant upon the eastern emperors, who possessed a small kingdom in this quarter during the middle ages. (*Mannert, Geogr.*, vol. 8, p. 595.) Dodwell, however, states that the most common appellation for the Eurotas at the present day is *Iri*. (*Class. Tour*, vol. 2, p. 409.)—II. A river of Thessaly, called also Titaresius, rising in Mount Titarus, a branch of Olympus, and falling into the Peneus, a little above the vale of Tempe. Its modern name is the *Saranta Poros*. Its having been called Eurotas as well as Titaresius is stated by various authorities. (Compare *Strabo, Egit.* 7, p. 329, and the author of the Sibylline verses, 3, p. 227.) Although, however, the Titaresius fell into the Peneus, the waters of the two rivers did not mingle; as those of the Peneus were clear and limpid, while those of the Titaresius were impregnated with a thick unctuous substance, which floated like oil on the surface. Hence the fabulous account of its being a branch of the infernal Styx. (*Strabo*, 441.—*Hom.*, *Il.*, 2, 751.—*Cramer's Anc. Greece*, vol. 1, p. 369.)

ΕΥΡΥΣ, a wind blowing from the southeast. It was sometimes called by the Latin writers Vulturinus. (*Senec., Quæst. Nat.*, 5, 16.) Those, however, who recognised only four winds, made Eurus the East wind, and attempted to confirm this opinion by a fictitious derivation of the name, making Εὔρος indicate ἀπὸ τῆς ἐκ πέρου, "blowing from the east," i. e., the point of the heavens where Aurora first appears.

ΕΥΡΥΛΕΥΣ, a Trojan, son of Opheltius, and one of the followers of Æneas. Virgil has immortalized the inseparable friendship between him and Nisus. (*Id.* Nisus.)

ΕΥΡΥΒΑΤΕΣ, I. a herald of Agamemnon, in the Trojan war, who, with Talthybius, took Briseis away from Achilles, under the orders of that monarch. (*Hom.*, *Il.*, 1, 320.)—II. A herald of Ulysses. (*Hom.*, *Il.*, 2, 184.)

EURYBIADÉS, a Spartan, commander of the combined Grecian fleet at the battles of Artemisium and Salamis. He was appointed to this office, although Sparta sent only ten ships, by the desire of the allies, who refused to obey an Athenian. (*Herod.*, 8, 3.—*Bähr*, *ad loc.*) An allusion to the famous scene between Eurybiades and Themistocles will be found under the latter article. (*Vid.* Themistocles.)

EURYDICE, I. the wife of Amyntas, king of Macedonia. She had, by her husband Alexander, Perdicas and Philip, and one daughter called Euryone, who was married to Ptolemy Alorites. A criminal partiality for her daughter's husband, to whom she offered her hand and the kingdom, made her conspire against Amyntas, who must have fallen a victim to her infidelity, had not Euryone discovered it. Amyntas forgave her. Alexander ascended the throne after his father's death, and perished by the ambition of his mother. Perdicas, who succeeded him, shared his fate; but Philip, who was the next in succession, secured himself against all attempts from his mother, and ascended the throne with peace and universal satisfaction. Eurydice fled to Iphicrates, the Athenian general, for protection. The manner of her death is unknown. (*C. Nep.*, *Vit. Iphiel.*, 3.)—II. A daughter of Antipater, and the wife of Ptolemy I. of Egypt, by whom she had several children. After the death of Alexander the Great, she proceeded to Alexandria for the purpose of rejoining her husband, and she brought with her Berenice, her niece, who proved the source of all her misfortunes. For Berenice inspired Ptolemy with so strong a passion, that he took her as his second wife, and allowed himself to be controlled entirely by her influence. Eurydice and her children retired to the court of Seleucus, king of Syria. One of her daughters subsequently married Agathocles, son of Lysimachus; and another, Demetrius Poliorcetes. Ptolemy Ceraunus, the eldest of her sons, seized upon the kingdom of Macedonia. Eurydice followed him to that country, and contributed to conciliate towards him the minds of the Macedonians, through the respect which they entertained for the memory of her father Antipater. Ptolemy Ceraunus having been slain, B.C. 280, in a battle against the Gauls, Macedonia was delivered up to the ravages of these barbarians, and Eurydice fled for protection to the city of Cassandrea. In order to attach the inhabitants more strongly to her interests, she gave them their freedom; and they, through gratitude, established a festival called after her *Eurydicea*. The rest of her history is not known.—III. A daughter of Amyntas and Cynane. Her previous name was Adea, afterward changed to Eurydice. (*Arrian*, *ap. Phot.*, *cod.*, 92—vol. 1, p. 70, *ed. Bekker.*) She married Aridaeus, the half-brother of Alexander, and for some time, through the aid of Cassander, defended Macedonia against Polysperchon and Olympias. Having been forsaken, at length, by her own troops, she fell into the hands of Olympias, together with her husband. Both were put to death by that queen. (*Justin.*, 14, 5.)—IV. Wife of Orpheus. As she fled before Aristæus she was bitten by a serpent in the grass, and died of the wound. Her disconsolate husband determined to descend to the lower world, to endeavour to procure her restoration to life. Pluto and Proserpina listened to his prayer; and Eurydice was allowed to return, on the express condition that Orpheus should not look back upon her till they were arrived in the regions of day. Fearing that she might not be following him, the anxious husband looked back, and thereby lost her. (*Vid.* Orpheus.)

EURYMEDON, a river of Pamphylia, in Asia Minor, rising in the chain of Mount Taurus, and, after passing the city of Aspendus, falling into the Mediterranean below that place. (*Scylax*, p. 40.—*Mela*, 1, 14.—*Mannert*, *Geogr.*, vol. 6, pt. 2, p. 124.) Near it the Persians were defeated by the Athenians under Ci-

mon, B.C. 470, in both a naval and land fight. The Persian ships were drawn up at the mouth of the river, to the number of 350, or, as some affirm, 600; but, on the first attack, they fled to the shore and were stranded. Cimon then landed his forces, and, after a severe engagement, routed the enemy, and took their camp and baggage. (*Plut.*, *Vit. Cim.*—*Thucyd.*, 1, 100.) This signal victory annihilated the Persian navy. The Eurymedon is now the *Capri-sou*, and appears to have undergone considerable changes since ancient times, for the bar at the mouth is now so shallow as to be impassable to boats that draw more than one foot of water. (*Cramer's Asia Minor*, vol. 2, p. 281.)

EURYPHON, a Cnidian physician, a contemporary of Hippocrates, but probably older in years, since he is deemed the author of the Cnidian aphorisms which are quoted by Hippocrates. (*Galen*, *Comment. in Hipp. de victu acut.*, p. 43.)

EURYPON, a king of Sparta, son of Soüs. According to Pausanias (3, 7), his reign was so glorious a one, that his descendants were called from him *Eurypontidae*, although the family belonged to the Proclidae. Plutarch, however (*Vit. Lyeurg.*, c. 2), says that the change of name was owing to Eurypont's having relaxed the strictness of kingly government, and inclined to the interests of the people. (Consult *Valckenaer*, *ad Theocr.* *Adoniaz.*, p. 271.)

EURYSTHENES, a son of Aristodemus, who reigned conjointly with his twin-brother Procles at Sparta. It was not known which of the two was born first; the mother, who wished to see both her sons raised on the throne, refused to declare it; and they were both appointed kings of Sparta by order of the oracle of Delphi, B.C. 1102. After the death of the two brothers, the Lacedæmonians, who knew not to what family the right of seniority and succession belonged, permitted two kings to sit on the throne, one of each family. The descendants of Eurysthenes were called *Eurysthenidae*, and those of Procles, *Proclidae*. It was inconsistent with the laws of Sparta for two kings of the same family to ascend the throne together, yet that law was sometimes violated by oppression and tyranny. Eurysthenes had a son called Agis, who succeeded him. His descendants were called *Agidae*. There sat on the throne of Sparta 31 kings of the family of Eurysthenes, and only 24 of the Proclidae. The former were the more illustrious. (*Herodot.*, 4, 147; 6, 52.—*Pausan.*, 3, 1.—*C. Nep.*, *Vit. Ages.*)

EURYSTHENIDE. *Vid.* Eurysthenes.

EURYSTHEUS, a king of Argos and Mycenæ, son of Sthenelus and Nicippe the daughter of Pelops. Juno hastened his birth by two months, that he might come into the world before Hercules, the son of Alcmena, as the younger of the two was doomed by order of Jupiter to be subservient to the will of the other. (*Vid.* Alcmena.) The right thus obtained was cruelly exercised by Eurystheus, and led to the performance of the twelve celebrated labours of Hercules. The success of the hero in achieving these so alarmed Eurystheus, that he furnished himself with a brazen vessel, where he might secure himself a safe retreat in case of danger. Apollodorus says that it was a vessel of brass (*πίθον χαλκοῦν*, *Apollod.*, 2, 5, 1), which he constructed secretly under ground. It appears, in fact, to have been a subterraneous chamber, covered within with plates of brass. The remains of the treasury of Atreus at Mycenæ indicate a building of a similar description, the nails which probably served to fasten plates of this metal to the walls still appearing. These nails consist of 88 parts of copper and 12 of tin. A similar explanation may be given of the brazen temple of Minerva at Sparta. *Vid.* Chalcicæus. (*Gell's Itinerary*, p. 33.) After Hercules had been translated to the skies, Eurystheus persecuted his children, and threatened with war Ceyx, king of Trachis, at whose court they had taken shelter. They thereupon fled to Ath-

ens, and received protection from the inhabitants, who refused to deliver them up to Eurystheus. A war ensued, in which Eurystheus and his five sons were slain, the former by the hand of Hyllus, son of Hercules. The head of the monarch was sent to Alcmena, who dug out the eyes with a weaving-shuttle. (*Apollod.*, 2, 8, 1, where for *κεκρίσθαι* we are to read *κεκρίδθαι*.) Other accounts of his end, however, are given by other writers. (*Euryp.*, *Heraclid.*, 928, *scqq.*—Compare *Isocr.*, *Paneg.*, 15.)

EURŪTIS (ἴδος), a patronymic of Iole, daughter of Eurystus. (*Ovid, Met.*, 9, 395.)

EURŪTUS, a monarch of Echalia, who taught Hercules the use of the bow. (*Apollod.*, 2, 4, 9.—*Heyne, ad loc.*) He offered his daughter Iole to him who should surpass himself and his sons in archery. Hercules conquered, but Eurystus refused to give his daughter to the hero, who therefore put him and his sons to death, and led away Iole captive. (*Apollod.*, 2, 6, 1.—*Id.*, 2, 7, 7.)

EUSEBIUS PAMPHILI, I. one of the most distinguished among the earlier Christian writers, and the friend of Constantine, was born in Palestine, probably at Cæsarea, about 264 A.D. He pursued his studies at Antioch, and is believed to have received holy orders from Agapius, bishop of Cæsarea. After having been ordained presbyter, he set up a school in his native city, and formed an intimate acquaintance with Pamphilus, bishop of Cæsarea, who suffered martyrdom under Galerius, A.D. 309, and in memory of whose friendship he added to his name the term *Pamphilii*, i. e., “(the friend) of Pamphilus.” After the martyrdom of his friend he removed to Tyre, and thence to Egypt, where he himself was imprisoned. On his return from Egypt, he succeeded Agapius in the see of Cæsarea, A.D. 315. In common with many other bishops of Palestine, he at first espoused the cause of Arius; but at the council of Nice, in 325, where the Emperor Constantine assigned to Eusebius the office of opening the session of the assembly, the opinions of the heresiarch were condemned. He is said, however, to have raised some objections to the words “consubstantial with the Father,” as applied to the Son in the Nicene creed. His intimacy with his namesake Eusebius, bishop of Nicomedia, who openly espoused the cause of Arius, led him also to favour the same, and to use his influence with the emperor for the purpose of reinstating Arius in the church, in defiance of the opposition of Athanasius. The party to which he attached himself were called Eusebians, from their leader Eusebius of Nicomedia, and they seem to have acted in a great degree through hostility towards Athanasius and his supporters, as they did not, as yet, openly advocate the objectionable tenets of Arius, who had himself apparently submitted to the decrees of the council of Nice. Eusebius afterward, in 330, assisted at the council of Antioch, where the Arians triumphed, and he was present at the council of Tyre in 335, and joined those bishops who censured the proceedings of Athanasius, the great champion of orthodoxy. Eusebius was deputed by this council to defend before Constantine the judgment which they had passed against Athanasius; and he appears to have used his influence with the emperor to have Athanasius banished. The part which he took in this unfortunate controversy caused him to be stigmatized as an Arian, though it appears that he fully admitted the divinity of Christ; and all that his accusers can prove is, that he believed there was a certain subordination among the persons of the Trinity. He was much in favour with Constantine, with whom he maintained an epistolary correspondence, many specimens of which he has inserted in his life of that prince. He died soon after his imperial patron, in 339 or 340. Eusebius was one of the most learned men of his time. “It appears from his works,” says Tillemont, “that he had read all sorts of Greek au-

thors, whether philosophers, historians, or divines, of Egypt, Phœnicia, Asia, Europe, and Africa.” Though his industrious researches render his writings valuable, they are defective in judgment and accuracy. All the studies of Eusebius were directed towards the religion which he professed, and if he cultivated chronology, it was with the view of establishing on a solid basis the confidence to which the historical books of the Old Testament present so fair a claim. He displayed the fruits of his researches in a *Chronicle*, or *Universal History* (*Παντοδαπή ἱστορία*), divided into two books. In the first of these, to which he gave the name of *Chronography* (*Χρονογραφία*), he relates the origin and the history of all nations and empires, from the creation of the world down to 325 A.D. He pursues an ethnographic order, devoting a particular section to each people. The duration of the reigns of princes was fixed in it, and the author entered into details on certain events. In this first portion of the work, Eusebius introduced extracts from various historical writers whose productions are lost, such as Alexander Polyhistor, Berosus, Amydenus, Manetho, &c. The second part, entitled “*Chronical Canon*” (*Χρονικός Κανών*), consisted of synchronistic tables, giving, by periods of ten years each, the names of sovereigns, and the principal events which had taken place, from the call of Abraham (B.C. 1917). In compiling this part of his labours Eusebius availed himself of the *Chronography* of Sextus Julius Africanus, which he inserted almost entire in his Canon, completing it by the aid of Manetho, Josephus, and other historians. This he continued also to his own times. We possess a Latin translation of this chronicle, made by St. Jerome: it is not, after all, however, a simple version, since this father continued the dates down to the year 378, and made several changes also in the first part of the work. The Greek text itself is lost; and though George Syncellus has inserted many fragments of it in his *Chronicle*, and Eusebius himself has done the same in his *Præparatio Evangelica*, the remembrance of this original text was so far lost, that doubts began to be entertained whether that of the first book had ever existed, some critics being persuaded that Eusebius had written no other chronological work besides his *Canon*. Joseph Scaliger, however, undertook to reconstruct the first book of the work, by uniting all the fragments scattered throughout the writings of the various authors to whom allusion has been made. The whole subject has at length been cleared up in our own days, and all uncertainty on this point has been put completely to rest. In 1792, an Armenian of Constantinople, named Georgius Johannis, discovered an Armenian translation of the entire work. He made a copy of this, and transmitted it in 1794 to Dr. Zohrab at Venice. The precise date of the manuscript in question is unknown; but as the version is mentioned by Moses of Chorene, it ought to be as old at least as the fifth century. The first book of the *Chronicle* of Eusebius, with which we are made acquainted through the medium of this translation, is preceded by a preface, in which the author gives an account of the plan and difficulty of his undertaking. It is divided into forty-eight chapters, of which the first twenty-two embrace the chronology of the Chaldeans, Assyrians, Medes, Lydians, Persians, Hebrews, and Egyptians, comprehending under the latter head the dynasty of the Ptolemies. Almost all that these chapters contain existed already in Syncellus and in the *Præparatio Evangelica*; and hence we have not been very great gainers by the discovery of the Armenian version, as far as this portion of it is concerned. According to M. Raoul-Rochette (*Journal des Savans*, 1819, p. 545), the remaining chapters, from the twenty-third to the forty-eighth, are devoted to the chronology of the Greeks and Romans, down to the time of Julius Cæsar, and he has promised to communicate to the world whatever he may find there-

in sufficiently novel in its nature to merit such notice. An account of the Armenian version is also given by Saint Martin (*Journal des Savaas*, 1820, p. 106). The conclusion to which the last-mentioned writer arrives, is as follows: that the great advantages expected to have been derived from the version to which we are referring, must be graduated much lower than they originally were; and yet, at the same time, that this discovery is of sufficient importance to merit honourable mention, since it gives a great degree of certainty to many particulars, of which we were before put in possession relative to ancient history, and renders incontestable the authority of the Greek fragments published by Scaliger.—Eusebius was also the author of an Ecclesiastical History (*Ἐκκλησιαστικὴ ἱστορία*), in ten books, from the origin of Christianity down to A.D. 324, a year which immediately preceded the triumph of the Catholic church over Arianism. This work contains no express history of church dogmas. The author proposed to himself a different object, which he specifies in the first book. It was to make known the succession of the apostles, and the individuals who, placed at the head of the different churches, distinguished themselves by their firmness and apostolic virtues, or who defended the word of God by their writings; to make mention of the persons who had endeavoured to propagate false doctrines; to describe the misfortunes and sufferings that had befallen the Jewish nation, as a punishment for their rejection of the Saviour; as well as the persecutions to which the faithful had been exposed, and the triumph procured for Christianity by the Emperor Constantine. A secondary object which Eusebius had in view, although he does not expressly mention it, was to transmit to posterity literary notices of those writers who had treated before him of detached portions of the sacred history. What he proposed to himself, however, was less to instruct and edify the faithful, than to place in the hands of the Gentiles a work which might induce them to renounce the errors of their religious systems and the prejudices of education. One is tempted, at least, to ascribe this intention to him, when we call to mind that his work contains a number of things known to every Christian reader; such as, for example, all that relates to the person of our Saviour, and the authenticity of the sacred writings; and also when we consider the skill he has displayed in placing in a prominent point of view the claims of Christianity, without, at the same time, making any direct attack on the absurdities of paganism. As Eusebius makes no mention of the troubles occasioned in the church by the doctrines of Arianism, it has been concluded that his history was not continued by him during the last sixteen years of his life (for he lived until 340); but that, being brought down by him to an epoch anterior to the council of Nice, it was concluded in 324. In support of this opinion it may be remarked, that Paulinus, the bishop, to whom he addresses himself at the commencement of the tenth book, was dead in 325. (Consult Haake, *de Byzantinorum rerum scriptoribus liber*, Lips., 1677, 4to, pt. 1, c. 1, § 222.) In general, Eusebius may be called a moderate, impartial, and judicious writer. His history was translated into Latin by Rufinus, a priest of Aquileia, in the fourth century: he has made, however, retrenchments as well as additions, and has added a supplement in two books, which extends to the death of Theodosius the Great. This supplement was, in turn, translated into Greek by Gelasius of Cyzicus, about 476. Fabricius (*Bibl. Græc.*, vol. 8, p. 445) says, that the work of Rufinus was translated by St. Cyrill of Jerusalem, and he refers to Photius as his authority for this assertion. The patriarch of Constantinople speaks of this translation from hearsay, for he never saw it: indeed, it never could have existed; since St. Cyrill died in 386, and the supplement of Rufinus appeared subsequent to

395. The Latin translation of Rufinus still exists, but the Greek version of his supplement is lost. Nicephorus Callistus, a compiler of the fourteenth century, has incorporated into his ecclesiastical history the greater part of that of Eusebius.—The other works of Eusebius which have relation to the department of ecclesiastical history are the following: *Περὶ τῶν ἐν Παλαιστίνῃ μαρτυρησάντων*, "Of those who suffered martyrdom in Palestine." The period referred to is the persecution of Dioclesian and Maximin, from 303 to 309.—*Λόγος τριακονταετηρικῆς*, "Thirty-year discourse," i. e., an Eulogy on Constantine, pronounced in the *thirtieth year* of his reign, A.D. 335.—*Περὶ τοῦ κατὰ θεὸν βίου τοῦ μακαρίου Κωνσταντίνου τοῦ Βασιλέως*. A life of Constantine, in four books. It is rather an eulogy than a biographical sketch.—*Τῶν ἀρχαίων μαρτύρων συναγωγή*, "A Collection of Ancient Martyrs." This work is lost, but many fragments have been preserved by the legendary writers of subsequent ages.—A life of Pamphilus, of which there remains a solitary fragment.—*Περὶ τῶν κατὰ διαφόρους καιροὺς ἐν διαφόροις πόλεσιν ἀλλησάντων ἁγίων μαρτύρων*, "Of the holy martyrs that have contended for the faith at various times and in various places."—We now come to another work of Eusebius, which forms the principal one of his theological writings. This is his *Εὐαγγελικὴ ἀποδείξις προπαρασκευῆς*, or "*Præparatio Evangelica*." This work, though its subject is one entirely sacred in its nature, yet contains a great number of valuable notices respecting the mythology of the pagan nations, and the philosophy of the Greeks in particular. We find in it, also, numerous passages taken from more than four hundred profane writers, and in this list are many whose productions are lost for us. The *Præparatio Evangelica* is addressed to Theodotus, bishop of Laodicea, and is divided into fifteen books. To prepare his readers for a demonstration of evangelical truths by reasons purely philosophical, and, by collecting together a crowd of passages drawn from profane authors, to show how far superior Christianity is to all the systems of the pagan world—such is the object of Eusebius in the work we are considering. In the first six books he proves the futility of the heathen doctrines; the nine following ones develop the motives which have induced the followers of Christianity to prefer to them the Jewish system of theology as contained in the Old Testament. In the *first* book Eusebius gives the traditions of the Greeks respecting the origin of the world. He then directs his attention to the Phœnician theology, and it is on this occasion that he gives the celebrated fragment of Sanchoniathon. In the *second* book he examines the religious doctrines of the Egyptians, as given by Manetho; and those of the Greeks after Diodorus Siculus, Euhemerus, and St. Clement of Alexandria. He undertakes to show that the Platonic was as inconsistent and defective as the popular theology, and that even the Romans themselves rejected the allegorical interpretations which the Greeks gave to their own mythological legends. The *third* book shows how vain and nugatory have been the efforts of those writers who have attempted to explain the Egyptian and Grecian fables on physical and moral principles. The *fourth* and *fifth* books continue this demonstration, and seek to prove that the objects of worship and sacrifice among the Greeks were the demons whom our Saviour drove from the world. The *sixth* book refutes the pagan doctrine of destiny, and that relative to the influence supposed to be exercised by the heavenly bodies on human actions. In the *seventh* the excellence of the religious system of the Jews is demonstrated, and the nature of this system explained. In the *eighth* book the sources of this religion are pointed out, and in this part of his work Eusebius gives, after Aristæus, the history of the Septuagint, or Greek version of the Old Testament. In

the following books, down to the thirteenth inclusive, the author undertakes to show, that the Greek writers have derived from the Sacred volume whatever they have taught of valuable or good in matters of philosophy: such, according to him, is the case especially with Plato. The *fourteenth* and *fifteenth* books labour to prove, that in the philosophical opinions of the Greeks there reign evident contradictions; that the majority of these opinions have no better foundation than mere hypothesis, and swarm with errors.—We must not omit another work of our author's, entitled, *Περὶ τῶν τοπικῶν ὀνομάτων ἐν τῇ θείᾳ γραφῇ*, "Of the places mentioned in the sacred writings." It was in two books. The second book, which treats of Palestine, has alone reached us; we have it in Greek, and also in a Latin version by St. Jerome. The version would be preferable to the original, by reason of the corrections which Jerome made in the work, from his intimate acquaintance with the country, if it had not reached us in a very corrupt state.—The best editions of the work on chronology are, that of Scaliger, *Lugd. Bat.*, 1659, fol., and that of Mai and Zohrab, *Mediolan.*, 1818, 4to: the best editions of the Ecclesiastical History are, that of H. Stephens, *Paris*, 1544, fol., reprinted with the Latin version of Christopherson, at *Geneva*, 1612; and that of Heinichen, *Lips.*, 1827, 1 vol. 8vo. The life of Constantine accompanies the first of these.—The best edition of the *Preparatio Evangelica* is that of Vigier, *Paris*, 1628, fol., reprinted at *Leipzig*, 1688, fol.—II. A native of Emesa, surnamed Pittacus, slain in 554 by order of the Emperor Gallus, and to whom Ammianus Marcellinus (14, 7) gives the title of "*concitatus orator*."—III. A native of Myndus, in Caria, a contemporary of the preceding. Eunapius makes mention of him in the life of Maximus; and, according to Wyttenbach (*Eunap.*, ed. Boissonade, p. 171), he is the same with a third Eusebius, of whom Stobæus has left us two fragments.

EUSTATHIUS, I. archbishop of Thessalonica, flourished in the 12th century under the emperors Manuel, Alexius, and Andronicus Comnenus. He is celebrated for his erudition as a grammarian, and is especially known as a commentator on Homer and Dionysius the geographer. It must be confessed, however, that in the former of these commentaries he is largely indebted to the *Deipnosophistæ* of Athenæus, and Schweighæuser holds the following strong language relative to the extent of these obligations (*Præf. ad. Athen.*, p. xix.): "*In Eustathii in Homerum Commentariis Athenæus noster a capite ad calcem (verissime dixeris) utriusque paginam facit: adeoque est incredibilis et pæne infinitus locorum numerus, quibus doctus ille præsul ex uno Athenæi fonte hortulos suos irrigavit, ut sæpe etiam notissimorum nobilissimorumque auctorum, quorum ubiis obvia ipsa scripta sunt, unius ejusdem Athenæi verbis produxerit testimonia; utque, nisi de viri doctrina aliunde satis constaret, subinde propemodum videri ille posset e solo Naucratica Deipnosophista sapuisse.*" (Compare the note of the same editor, and Fabricius, *Bibl. Græc.*, vol. 1, p. 316, *seqq.*) The commentary of Eustathius was united to the edition of Homer which appeared at Rome in 1542, 1548, 1550, in 3 vols. folio; and was reprinted at Bâle in 1560, also in 3 vols. folio. The latest edition is the Leipzig one of 1825–30, 6 vols. 4to; for that of Politus, undertaken in 1730, with a Latin version, was never finished. The three volumes of it which appeared at Florence, 1730–35, in folio, extend only to the end of the fifth book of the *Iliad*. Müller and Baumgarten-Crusius have performed a valuable service for the student, in publishing extracts from Eustathius along with the text of the *Iliad* and *Odyssey*. (Compare the Memoir of Andrés on the Commentary of Eustathius, and the various translations which have been made of it; *Mem. della Reg.*

Academia Ercolanense, vol. 1, p. 97, Naples, 1822.—*Bulletin des Sciences Historiques*, vol. 4, p. 337, *seqq.*) The commentary on Dionysius is less valuable, from the scanty nature, most probably, of the materials employed. A commentary on Pindar is lost. Some unpublished letters of the archbishop's are to be found in the public libraries of Europe.—II. A native of Egypt, called by some Eumathius, and styled in one manuscript *Πρωτονobilίσσιμος καὶ μέγας χαρτοφύλαξ*, "Protonobilissimus and great archivist." He was the author of a romance, entitled, *Τὸ κατ' Ὑσμίνην καὶ Ὑσμινίαν δράμα*, "Hysmine and Hysminias." It is a cold, flat, and lifeless performance. The work has been twice published; first at *Paris*, 1618, in 8vo, with the version, and under the care, of Gaulmin; and again by Teucher, *Lips.*, 1792. This last contains merely the text and the version of Gaulmin, without either preface or notes.—III. An ancient jurist, who has left a work on Prescriptions, entitled, *Περὶ τῶν χρονικῶν διαστημάτων*, "Of intervals of time." It was published by Cujas in the 1st volume of his works, *Bâle*, 1561, 8vo; in Greek and Latin, by Schard, in the collection of Löwenklau, vol. 2, and at *Leipzig*, in 1791, 8vo, by Teucher.

EUTERPE, one of the Muses. She presided over music, and is generally represented as holding two flutes. To her was ascribed by the poets the invention of the tragic chorus. Ausonius says of her, "*Dulci- loquus calamos Euterpe flutibus urget.*" (*Idyll. ult.*, 4.) The name means "the well-delighting one," from *εὖ*, well, and *έρπω*, to delight. (*Vid. Musæ.*)

EUTHYCRATES, a sculptor of Sicyon, son and pupil of Lysippus, flourished in Olymp. 120. He was peculiarly happy in the proportions of his statues. Those of Hercules and Alexander were in general esteem, and particularly that of Medea, which was borne on a chariot by four horses. (*Plin.*, 34, 8.) As regards the last of these subjects, however, consult the remarks of Sillig, where a new reading in the text of Pliny is suggested. (*Sillig, Dict. Art.*, s. v.)

EUTRÆLUS ("the rallier," *εὐτράπελος*), an epithet given to P. Voluminus, a Roman, on account of his wit and pleasantry. (*Horat., Epist.*, 1, 18, 31.) Having forgotten to put his surname or title of Eutrapelus to a letter he wrote to Cicero, the orator tells him he fancied it came from Voluminus the senator, but was undeceived by the *eutrapelia* (*εὐτραπελία*), "the spirit and vivacity," which it displayed. (Compare *Ernes.*, *Clav. Cic. Ind. Hist.*, s. v. Voluminus, and *Iua Græc.*, s. v. *εὐτραπελία*, from which it would appear that the *εὐτραπελία* of Voluminus was rather a "*mimica et scurrilis facies*.")

EUTROPIUS, I. a Latin historian of the 4th century. He bore arms under Julian in his expedition against the Parthians, as he himself informs us (9, 16), and is thought to have risen to senatorian rank. Suidas makes him of Italian origin, while some modern writers, on the other hand, advance the hypothesis that he was a native of Gaul, or, at least, had possessions in the neighbourhood of Auch, and was identical with the Eutropius to whom some of the letters of Symmachus are addressed. (*Scholl, Hist. Lat. Rom.*, vol. 3, p. 161, *seqq.*—Compare the remarks of Tzschucke on the life of Eutropius, prefixed to his edition.) The manuscripts give him the title of *Vir Cl.*, which may stand either for *Vir Clarissimus* or *Vir Consularis*, but which in either sense indicates an advancement to some of the highest offices in the state. He wrote several works, of which the only one remaining is an abridgment of the Roman History in ten books. It is a brief and dry outline, without either elegance or ornament, yet containing certain facts which are nowhere else mentioned. The work commences with the foundation of the city, and is carried on to the death of Jovian, A.D. 364. At the close of this work, Eutropius announces his intention of continuing the narrative in a more ele-

vated style, inasmuch as he will have to treat of great personages still living; "*quia ad inclytos principes venerandosque periculum est.*" It does not appear that he ever carried this plan into execution. The best edition is that of Tzschucke, *Lips.*, 1797, 8vo.—II. A eunuch and minister of the Emperor Arcadius, who rose by base and infamous practices from the vilest condition to the highest pitch of opulence and power. He was probably a native of Asia, was made chamberlain to the emperor in the year 395, and, after the fall of Rufinus, succeeded that minister in the confidence of his master, and rose to unlimited authority. He even was created consul, a disgrace to Rome never before equalled. An insult offered to the empress was the cause of his overthrow; and he was sent into perpetual exile to Cyprus. He was soon afterward, however, brought back on another charge; and, after being condemned, was beheaded A.D. 399. (*Zosim.*, 5, 10.—*Id.*, 5, 18, &c.)

EUXINUS PONTUS. *Vid.* Pontus Euxinus.

EXAMPNEUS, a fountain which, according to Herodotus, flows into the Hypanis, where the river is four days' journey from the sea, and renders its waters bitter, that before were sweet. Herodotus places this fountain in the country of the ploughing Scythians, and of the Alazones. It takes, he adds, the name of the place where it springs, which, in the Scythian tongue, is Exampneus, corresponding in Greek to *ἱερὰ ὁδοί*, or "*the sacred ways.*" (*Herodot.*, 4, 52.)

F.

FABĀRIS, now *Farfa*, a river of Italy, in the territory of the Sabines, called also Farfaris. (*Virg.*, *Æn.*, 7, 715.)

FABĀ GENS, a numerous and powerful patrician house of ancient Rome, which became subdivided into several families or branches, distinguished by their respective cognomina, such as Fabii Maximi, Fabii Ambusti, Fabii Vibulani, &c. Pliny says that the name of this house arose from the circumstance of its founders having excelled in the culture of the bean (*faba*), the early Romans having been remarkable for their attachment to agricultural pursuits. (*Plin.*, 18, 3.) According to Festus, however, the Fabii traced their origin to Hercules (*Fest.*, s. v. *Fabii*), and their name, therefore, is thought to have come rather from the Etrurian term *Fabu* or *Fabinu*, which Passori makes equivalent to "august" or "venerable." (*Tab. Eugubina*, vii., *lin.* 22.) But this etymology is less probable, since the Fabii are said, by the ordinary authorities, to have been of Sabine origin, and to have settled on the Quirinal from the time of the earliest Roman kings. After the expulsion of the Tarquinii, the Fabian, as one of the older houses, exercised considerable influence in the senate. Cæso Fabius, being quæstor with L. Valerius, impeached Spurius Cassius, B.C. 486, A.U.C. 268, and had him executed. It has been noted as a remarkable fact, that, for seven consecutive years from that time, one of the two annual consulships was filled by three brothers Fabii in rotation. Niebuhr has particularly investigated this period of Roman history, and speculated on the causes of this long retention of office by the Fabii, as connected with the struggle then pending between the patricians and plebeians, and the attempt of the former to monopolize the elections. (*Rom. Hist.*, vol. 2, p. 174, *seqq.*) One of the three brothers, Q. Fabius Vibulanus, fell in battle against the Veientes in the year of Rome 274. In the following year, under the consulship of Cæso Fabius and Titus Virginus, the whole house of the Fabii proposed to leave Rome, and settle on the borders of the territory of Veii, in order to take the war against the Veientes entirely into their own hands. After performing solemn sacrifices, they left Rome in a body, mustering 306 patricians, besides their fami-

lies, clients, and freedmen, and encamped on the banks of the Cremera in sight of Veii. There they fortified themselves, and maintained for nearly two years a harassing warfare against the Veientes and other people of Etruria. At last, in one of their predatory incursions, they fell into an ambuscade, and, fighting desperately, were all exterminated. (*Livy*, 2, 48, *seqq.*) Dionysius of Halicarnassus gives also another account of this disaster, which he considers less credible. According to this latter form of the legend, the 306 Fabii set off for Rome, in order to offer up a sacrifice in the chapel of their house. As they went to perform a pious ceremony, they proceeded without arms or warlike array. The Etrurians, however, knowing their road, placed troops in ambush, and, falling on the Fabii, cut them to pieces. (Consult the remarks of Dionysius, 9, 19, and of Niebuhr, *Rom. Hist.*, vol. 2, p. 200.) It is said that one only of the Fabii escaped this massacre, having been left quite young at Rome. (*Liv.*, 2, 50.—*Dion. Hal.*, 9, 22.) His name was Q. Fabius Vibulanus, and he became the parent stock of all the subsequent Fabii. He was repeatedly consul, and was afterward one of the decemviri with Appius Claudius for two consecutive years, in which office he disgraced himself by his connivance at the oppressions of his colleague, which caused the fall of the decemvirate. (*Vid.* Decemviri.)

FABIA LEX, I. *de ambitu*, was to circumscribe the number of *Sectatores* or attendants which were allowed to candidates in canvassing for some high office. It was proposed, but did not pass. (*Cic. pro Muren.*, 34.) The *Sectatores*, who always attended candidates, were distinguished from the *Salutatores*, who only waited on them at their houses in the morning, and then went away; and from the *Deductores*, who went down with them to the Forum and Campus Marcius.—II. There was another law of the same name, enacted against kidnapping, or stealing away and retaining freemen or slaves. The punishment of this offence, at first, was a fine, but afterward to be sent to the mines; and for buying or selling a freeborn citizen, death. (*Cic. pro Rab.*, 5.—*Ep. ad Quint. Fr.*, 1, 2.)

FABĀ, a vestal virgin, sister to Terentia, Cicero's wife. She was accused of criminal intercourse with Catiline, and brought to trial in consequence, but was defended by Cicero and acquitted. (*Middleton's Life of Cicero*, vol. 1, p. 139.)

FABĪ. *Vid.* Fabia Gens.

FABĪUS, I. M. Ambustus, was consul A.U.C. 393, and again several times after. He fought against the Hernici and the Tarquinians, and left several sons.—II. Q. Maximus Rullianus, son of the preceding, attacked and defeated the Samnites, A.U.C. 429, in the absence and against the orders of his commanding officer, the Dictator Papirius, who would have brought him to punishment for disobedience, but was prevented by the intercession of the soldiers and the people. This Fabius was five times consul, and dictator twice. He triumphed over the Samnites, Marsi, Gauls, and Etrurians. His son, Q. Fabius Gurgus, was thrice consul, and was grandfather of Q. Fabius Maximus Verrucosus, one of the most celebrated generals of Rome.—III. Q. Maximus Verrucosus, the celebrated opponent of Hannibal. He is said to have been called Verrucosus from a wart on his lip, *verruca* being the Latin name for "a wart." In his first consulship he triumphed over the Ligurians. After the victory of Hannibal at the Lake Trasymenus, he was named Prodictator by the unanimous voice of the people, and was intrusted with the preservation of the republic. The system which he adopted to check the advance of Hannibal is well known. By a succession of skilful movements, marches, and counter-marches, always choosing good defensive positions, he harassed his antagonist, who could never draw him into ground favourable for his attack, while Fabius watched every op-

portunity of availing himself of any error or neglect on the part of the Carthaginians. This mode of warfare, which was new to the Romans, acquired for Fabius the name of *Cunctator* or "delayer," and was censured by the young, the rash, and the ignorant; but it probably was the means of saving Rome from ruin. Minucius, who shared with Fabius the command of the army, having imprudently engaged Hannibal, was saved from total destruction by the timely assistance of the dictator. In the following year, however, A.U.C. 536, Fabius being recalled to Rome, the command of the army was intrusted to the consul Terentius Varro, who rushed imprudently to battle, and the defeat at Cannæ made manifest the wisdom of the dictator's previous caution. Fabius was chosen consul the next year, and was again employed in keeping Hannibal in check. In A.U.C. 543, being consul for the fifth time, he retook Tarentum by stratagem, after which he narrowly escaped being caught himself in a snare by Hannibal near Metapontum. (*Liv.*, 27, 15, *seq.*) When, some years after, the question was discussed in the senate, of sending Scipio with an army into Africa, Fabius opposed it, saying that Italy ought first to be rid of Hannibal. Fabius died some time after at a very advanced age. His son, called likewise Quintus Fabius Maximus, who had also been consul, died before him. His grandson Quintus Fabius Maximus Servilianus, being proconsul, fought against Viriathus in Spain, and concluded with him an honourable peace. (*Livy, Ept.*, 54.) He was afterward consul repeatedly, and also censor. He wrote Annals, which are quoted by Macrobius. (*Sat.*, 1, 16.) His brother by adoption, Quintus Fabius Maximus Æmilianus, the son of Paulus Æmilius (*Liv.*, 45, 41), was consul A.U.C. 609, and was the father of Fabius, called Allobrogicus, who subdued not only the Allobroges, but also the people of southern Gaul, which he reduced into a Roman province, called from that time Provincia. Quintus Fabius Maximus, a grandson of Fabius Maximus Servilianus, served in Spain under Julius Cæsar, and was made consul A.U.C. 709. Two of his sons or nephews were consuls in succession under Augustus. There was also a Fabius consul under Tiberius. Panvinus and others have reckoned that, during a period of about five centuries, from the time of the first Fabius who is mentioned as consul, to the reign of Tiberius, forty-eight consulships, seven dictatorships, eight censorships, seven augurships, besides the offices of master of the horse and military tribune with consular power, were filled by individuals of the Fabian house. It could also boast of thirteen triumphs and two ovations. (*Augustinus de Familiis Romanorum.—Encycl. Us. Knowl.*, vol. 10, p. 151.)—IV. A loquacious personage alluded to by Horace (*Sat.*, 1, 1, 14).—V. Pictor, the first Roman who wrote an historical account of his country. This historian, called by Livy *scriptorū antiquissimus*, appears to have been wretchedly qualified for the labour he had undertaken, either in point of judgment, fidelity, or research; and to his carelessness and inaccuracy, more than even to the loss of monuments, may be attributed the painful uncertainty which to this day hangs over the early ages of Roman history. Fabius lived in the time of the second Punic war. The family received its *cognomen* from Caius Fabius, who, having resided in Etruria, and there acquired some knowledge of the fine arts, painted with figures the temple of *Salus*, in the year of the city 450. The historian was grandson of the painter. He served in the second Punic war, and was present at the battle of Trasymenus. After the defeat at Cannæ, he was sent by the senate to inquire from the oracle at Delphi what would be the issue of the war, and to learn by what supplications the wrath of the gods might be appeased. His annals commenced with the foundation of the city and the antiquities of Italy, and brought down the se-

ries of Roman affairs to the author's own time, that is, to the end of the second Punic war. We are informed by Dionysius of Halicarnassus, that, for the great proportion of the events which preceded his own age, Fabius Pictor had no better authority than vulgar tradition. He probably found, that, if he had confined himself to what was certain in these early times, his history would have become dry, insipid, and incomplete. This may have induced him to adopt the fables, which the Greek historians had invented concerning the origin of Rome, and to insert whatever he found in family traditions, however contradictory or uncertain. Dionysius has also given us many examples of his improbable narratives, his inconsistencies, his negligence in investigating the truth of what he relates as facts, and his inaccuracy in chronology. In particular, as we are told by Plutarch in his life of Romulus, Fabius followed an obscure Greek author, Diocles the Peparethian, in his account of the foundation of Rome, and from this tainted source have flowed all the stories concerning Mars, the Vestal, the Wolf, Romulus, and Remus. He is even guilty of inaccurate and prejudiced statements in relation to the affairs of his own time; and Polybius, who flourished shortly after those times, and was at pains to inform himself accurately concerning all the events of the second Punic war, apologizes for quoting Fabius on one occasion as an authority, and, at the same time, strongly expresses his opinion of his violations of truth and his gross inconsistencies. The account here given of this writer is rather confirmed by the few fragments that remain of his work, which are trifling and childish in the extreme. (*Dunlop's Hist. Rom. Lit.*, vol. 1, p. 117, *seqq.*)

FABRATERIA, a town of Latium, on the river Liris, and near its junction with the Trerus. The modern name is *Falvaterra*. This town appears at first to have belonged to the Volsci, but as early as 424 A.U.C. it placed itself under the protection of Rome. (*Liv.*, 8, 19.)

FABRICIUS, Caius, surnamed Luscinius, was consul for the first time in the year 471 of Rome, 283 B.C., when he triumphed over the Boii and Etrurians. After the defeat of the Romans, under the consul Lavinus, by Pyrrhus (B.C. 281), Fabricius was sent by the senate as legate to the king, to treat for the ransom of the prisoners, or, according to others, to propose terms of peace. Pyrrhus is said to have endeavoured to bribe him by large offers, which Fabricius, poor as he was, rejected with scorn, to the great admiration of the king. Fabricius being again consul, B.C. 279, was sent against Pyrrhus, who was then encamped near Tarentum. The physician of the king is said to have come secretly to the Roman camp, and to have proposed to Fabricius to poison his master for a bribe. The consul, indignant at this, had him put in fetters, and sent back to Pyrrhus, on whom this instance of Roman integrity made a strong impression. Pyrrhus soon after sailed for Sicily, whither he was called by the Syracusans, then hard pressed by the Carthaginians. Fabricius, having defeated the Samnites, Lucanians, and Brutii, who had joined Pyrrhus against Rome, triumphed over these nations. Pyrrhus afterward returning to Italy, was finally defeated and driven away by M. Curius Dentatus, B.C. 276. Two years after, Fabricius being consul for the third time, with Claudius Cinna for his colleague, ambassadors came from King Ptolemy of Egypt to contract an alliance with Rome.—Several instances are related of the extreme frugality and simplicity which marked the manners of Fabricius. When censor, he dismissed from the senate P. Cornelius Rufinus, who had been twice consul, and had also held the dictatorship, because he had in his possession ten pounds' weight of silver plate. Fabricius died poor, and the senate was obliged to make provision for his daughters. (*Plut., Vit. Pyrrh.—Liv., Ept.*, 13 et 14.—*Enc. Us. Knowl.*, v. 10, p. 153.)

FÆSULÆ, now *Fiesoli*, a town of Italy, in Etruria, southeast of Pistoria, whence it is said the augurs passed to Rome. Catiline made it a place of arms. The Goths, when they entered Italy under the consulate of Stilicho and Aurelian, A. D. 400, were defeated in its vicinity. (*Cic. pro Mur.*, 24.—*Sil. Ital.*, 8, 478. *Sallust. Cat.*, 27.)

FALCIDIA LEX, proposed by the tribune Falcidius, A. U. C. 713, enacted that the testator should leave at least the fourth part of his fortune to the person whom he named his heir. (*Dio Cass.*, 48, 33.)

FALERIA, a town of Picenum, southwest of Firmum, now *Faleroni*. (*Plin.*, 3, 13.)

FALERII (or *ium*), a city of Etruria, southwest of Fescennium, and the capital of the ancient Falisci, so well known from their connexion with the early history of Rome. Much uncertainty seems to have existed respecting the ancient site of this place; but it is now well ascertained that it occupied the position of the present *Civita Castellana*. Cluver, and after him Holstenius (*ad Steph. Byz.*, p. 67), have satisfactorily established this point. The doubt seems to have originated in the notion that there was a city named Faliscum, as well as Falerii. (*Strabo*, 226.) The situation of the ancient Falerii is made to agree with that of *Civita Castellana*, from the language of Plutarch (*Vit. Camill.*) and Zonaras (*Ann.*, 2), who both describe it as placed on a lofty summit; and the latter states that the old town was destroyed, and a new one built at the foot of the hill. This fact is confirmed by the identity of the new Falerii with the church of *St. Maria Falarì*, on the track of the Flaminian way, where the Itineraries place that city. We learn, too, from Pliny (3, 5), that Falerii became a colony under the name of Falisca, a circumstance which sufficiently reconciles the apparent contradiction in the accounts of this city. (*Front.*, *de Col.*, p. 130.) Falerii, according to Dionysius of Halicarnassus (1, 21), belonged at first to the Siculi; but these were succeeded by the Pelasgi, to whom the Greek form of its name is doubtless to be ascribed, as well as the temple and rites of the Argive Juno, and other indications of a Grecian origin which were observed by that historian, and with which Ovid, who had married a lady of this city, seems also to have been struck, though he has followed the less authentic tradition, which ascribed the foundation of Falerii to Iulesus, son of Agamemnon. (*Ann.*, 3, 13.—*Fast.*, 4, 73.) The early wars of the Falisci with Rome are chiefly detailed in the fifth book of Livy, where the celebrated story of Camillus and the schoolmaster of Falerii occurs. When the Roman commander was besieging this place, the schoolmaster of the city (since the higher classes of Falerii had a public one for the common education of their children) committed a most disgraceful and treacherous act. Having led his scholars forth, day after day, under pretence of taking exercise, and each time farther from the city walls, he at last suddenly brought them within reach of the Roman outposts, and surrendered them all to Camillus. Indignant at the baseness of the deed, the Roman general ordered his lictors to strip the delinquent, tie his hands behind him, and supply the boys with rods and scourges to punish the traitor, and whip him into the city. This generous act on the part of Camillus produced so strong an impression on the minds of the inhabitants, that they immediately sent ambassadors to treat of a surrender (*Liv.* 5, 27.—Compare *Val. Max.*, 6, 5.—*Front.*, *Strat.*, 5, 4). It was not, however, till the third year after the first Punic war that this people was finally reduced. (*Polybius*, 1, 65.—*Livy. Epit.*, 19.—*Oros.*, 4, 11.) The waters of the Faliscan territory were supposed, like those of the Clitumnus, to have the peculiar property of communicating a white colour to cattle. (*Plin.*, 2, 103.—*Cramer's Anc. Italy*, vol. 1, p. 226.)

FALERNUS AGER, a part of Italy famed for its wine. Few portions of the Italian peninsula were unfriendly to the vine, but it flourished most in that tract of the southwestern coast to which, from its extraordinary fertility and delightful climate, the name of Campania Felix was given. Some doubt concerning the extent of the appellation seems to exist; but Pliny and Strabo confine it to the level country reaching from Sinuessa to the promontory of *Sorrento*, and including the Campi Laborini, from whence the present name of *Terra di Lavoro* has arisen. In ancient times, indeed, the hills by which the surface is diversified seem to have been one continued vineyard. Falernus is spoken of by Florus as a mountain, and Martial describes it under the same title; but Pliny, Polybius, and others, denominate it a field or territory (*ager*); and, as the best growths were styled indiscriminately *Massicum* and *Falernum* (*vinum*), it is thought that Massicum was the proper appellation of the hills which arose from the Falernian plain. The truth seems to be, that the choicest wines were produced on the southern declivities of the range of hills which commence in the neighbourhood of ancient Sinuessa, and extend to a considerable distance inland, and which may have taken their general name from the town or district of Falernus; but the most conspicuous or the best exposed among them may have been the Massic; and as, in process of time, several inferior growths were confounded under the common denomination of Falernian, correct writers would choose that epithet which most accurately denoted the finest vintage. If we are to judge, however, by the analogy of modern names, the question of locality will be quickly decided, as the mountain which is generally allowed to point to the site of ancient Sinuessa is still known by the name of *Monte Massico*. Pliny's account of the wines of Campania is the most circumstantial. (*Plin.*, 14, 6.) "Augustus, and most of the leading men of his time," observes this writer, "gave the preference to the Setine wine that was grown in the vineyards above Forum Appii, as being of all kinds the least calculated to injure the stomach. Formerly the Cæcuban wine, which came from the poplar marshes of Amyclæ, was most esteemed, but it has lost its repute through the negligence of the growers, and partly from the limited extent of the vineyards, which have been nearly destroyed by the navigable canal begun by Nero from Avernus to Ostia. The second rank used to be assigned to the growths of the Falernian territory, and among them chiefly to the Faustianum. The territory of Falernus begins from the Campanian bridge, on the left hand, as you go to Urbana. The Faustian vineyards are situate about 4 miles from the village, in the vicinity of Cediæ, which village is six miles from Sinuessa. The wines produced on this soil owe their celebrity to the great care and attention bestowed on their manufacture; but latterly they have somewhat degenerated, owing to the rapacity of the farmers, who are usually more intent upon the quantity than the quality of their vintage. They continue, however, in the greatest esteem, and are, perhaps, the strongest of all wines, as they burn when approached by a flame. There are three kinds, the dry, the light, and the sweet Falernian. The grapes of which the wine is made are unpleasant to the taste." From this and other accounts, it appears that the Falernian wine was strong and durable; so rough in its recent state as not to be drunk with pleasure, and requiring to be kept many years before it grew mellow. Horace calls it a fiery wine; Persius, *indomitum*, i. e., possessing very heady qualities. According to Galen, the best was that from 10 to 20 years; after this period it became bitter. Among the wines of the present day, *Xeres* and *Madeira* most closely approximate to the Falernian of old, though the difference is still very considerable, since the ancient wines of Italy and Greece

were usually mixed with certain quantities of pitch, aromatic herbs, sea-water, &c., which must have communicated to them a taste that we, at least, should consider very unpalatable. Among the ancient, and especially the Greek wines, it was no uncommon thing for an age of more than 20 years to leave nothing in the vessel but a thick and bitter mixture, arising, no doubt, from the substances with which the wine had been medicated. We have an exception, however, to this, in the wine made in Italy during the consulship of Opimius, A.U.C. 633, which was to be met with in the time of Pliny, nearly 200 years after. This may have been owing to the peculiar qualities of that vintage, since we are informed that, in consequence of the great warmth of the summer in that year, all the productions of the earth attained an extraordinary degree of perfection. *Vid. Cæcubus Ager. (Henderson's History of ancient and modern Wines, p. 81, seqq.)*

FĂLĪSCI, a people of Etruria. (*Vid. Falerii.*)

FALISCUS GRATIUS. *Vid. Gratius.*

FANNĪA LEX, *de Sumptibus*, enacted A.U.C. 588. It limited the expenses of one day, at festivals, to 100 asses, whence the law is called by Lucilius *Centussis*; on ten other days every month to 30, and on all other days to 10 asses: also, that no other fowl should be served up except one hen, and that not fattened for the purpose. (*Aul. Gell., 2, 24.—Macrob., Sat., 2, 13.*)

FANNIUS, an inferior poet, ridiculed by Horace (*Sat., 1, 4, 21*). It seems the legacy-hunters of the day carried his writings and bust to the library of the Palatine Apollo, a compliment only paid to productions of merit. The satirist remarks, that this was *unasked for* on the part of Fannius (*ultra delatis capsis et imagine*); an expression of double import, since *ultra* may also contain a sly allusion to the absence of all mental exertion on the part of the poet. (*Schol. et Heindorf, ad Horat., l. c.*)

FANUM VACŪNÆ, a temple of Vacuna, in the vicinity of Horace's Sabine villa. (*Hor., Ep., 1, 10, 49.*) It is supposed to have stood on the summit of *Rocca Giovane*.

FARFĀRIS. *Vid. Fabaris.*

FAUNA, a goddess of the Latins. According to the old Roman legends, by which all the Italian deities were originally mortals, she was the daughter of Picus, and the sister and wife of Faunus. One account makes her to have never left her bower, or let herself be seen of men; and to have been deified for this reason, becoming identical with the Bona Dea, and no man being allowed to enter her temple. (*Macrob., 1, 12.*) According to another tradition, she was not only remarkable for her modesty, but also for her extensive and varied knowledge. Having, however, on one occasion, made free with the contents of a jar of wine, she was beaten to death by her husband with myrtle-twigs! Repenting, however, soon after of the deed, he bestowed on her divine honours. Hence, in the celebration of her sacred rites, myrtle boughs were carefully excluded; nor was any wine allowed to be brought, under that name, into her temple; but it was called "honey," and the vessel containing it also was termed *mellicarium* (scil. *vas*), i. e., "a honey-jar." (Consult *Macrob., Sat., 1, 12.* and *Spangenberg, de Vet. Lat. Relig. Domest., p. 64.* where other versions of the story are given.) Fauna is said to have given oracles from her temple after death, which circumstance, according to some, affords an etymology for the name *Fatua* or *Fatuella*, which was often borne by her (from *fari*, "to declare"). A different explanation, however, is given in Macrobius (*Libro, ap. Macrob., Sat., 1, 12.*)—There can be little doubt but that Fauna is identical not only with the Bona Dea, but with Terra, Tellus, and Ops; in other words, with the Earth personified. (*Macrob., l. c.*) The name appears to come from *φῶω*, *φαῖω*, connected with which

are *φαύσκω* and *φαίω*, "to bring forth into the light," "to cause to appear." (*Creuzer, Symbolik, vol. 1, p. 51, not.—Spangenberg, l. c.*)

FAUNALĪA, festivals at Rome in honour of Faunus. They were celebrated on the 13th of February, or the ides of the month. On this same day occurred the slaughter of the Fabii. (*Ovid, Fast., 2, 193, seqq.*) There was another festival of the same name, which was celebrated on the nones (5th) of December. (*Horat., Od., 3, 18.*)

FAUNI, certain deities of the country, represented as having the legs, feet, and ears of goats, and the rest of the body human. The peasants offered them a lamb or a kid with great solemnity. When the spring brought back new life to the fields, the vivid imagination of the ancient poets saw them animated by the presence of these frolic divinities, and hence, no doubt, the origin of their name, from the Greek *φῶω* or *φαῖω* ("to show forth," "to display to the view"), the Fauns being, if the expression be allowed, the rays of the genial spring-light personified. (*Creuzer, Symbolik, vol. 2, p. 921.*)—The Fauns of the Latin mythology are somewhat analogous to the Satyrs of the Greeks. There are points, however, in which the ancient artists made them differ as to appearance. The Fauns are generally represented as young and frolic of mien; their faces are round, expressive of merriment, and not without an occasional mixture of mischief. The Satyrs, on the contrary, bear strong resemblance to different quadrupeds; their faces and figures partake of the ape, the ram, or the goat; they have sometimes goats' legs, but always either goats' or horses' tails. (*Flaxman, Lectures on Sculpture, p. 152.*) According to Lanzi, there is, in general, in the lower limbs of the Faun, more of the goat, in those of the Satyr more of the horse. (*Vasi, p. 98, seqq.—Compare Visconti, Mus. Pio-Clement., vol. 3, p. 54, seq.—Virg., G., 1, 10.—Ovid, Met., 6, 392.*)

FAUNUS, a rural deity of the ancient Latins, resembling the Grecian Pan, to whom he is not very dissimilar in name, and with whom he was often identified. (*Ovid, Fast., 2, 424.—Id. ib., 4, 650.—Horat., Od., 1, 17, 1.*) Indeed, some writers think that his worship was originally Pelagic, and was brought by this race from Arcadia, the well-known centre of the worship of Pan. (Compare *Creuzer, Symbolik, vol. 3, p. 203.*) Faunus was held to have the power of telling the future. (*Ovid, l. c.—Virg., Æn., 7, 81, seq.*) In later times he was mortalized, like all the other Italian gods, and was said to have been a just and brave king, greatly devoted to agriculture, the son of Picus and father of Latinus. (*Virg., Æn., 7, 47.—Probus, Geor., 1, 10.*) Like Pan, too, he was multiplied; and as there were Pans, so we also meet abundant mention of Fauns. (*Vid. Fauni.*) The poets gave to Faunus the same personal attributes as they did to the Fauns, making his shape half human, half that of a goat. As Fauna was nothing more than the Earth (*Vid. Fauna*), so Faunus appears to be the same with Tellumo. (*Spangenberg, de Vet. Lat. Rel. Dom., p. 63.—Heyne, Excurs., 5, ad Æn., 7.—Ruperti, ad Juv., 8, 131.—Anias, ap. Arnob. adv. gent., 5, 1, p. 483.—Creuzer's Symbolik, vol. 3, p. 203.*)

FAVORĪNUS. *Vid. Favonius.*

FAUSTA, I. daughter of Sylla, married Milo the friend of Cicero. She disgraced herself by a criminal affair with the historian Sallust. (*Horat., Sat., 1, 2, 41.—Schol. Crug. et Arr., ad loc.*)—II. Daughter of Maximian, and wife of Constantine the Great. When her father wished her to join him in a plot for assassinating her husband, she discovered the whole affair to the latter. After exercising the most complete ascendancy over the mind of her husband, she was eventually put to death by him, on his discovering the falsity of a charge which she had made against Crispus, the son of Constantine by a previous marriage. (*Amm. Mar-*

cell, 14, 1.—*Crevier, Hist. des Emp. Rom.*, vol. 6, p. 356.)

FAUSTINA, I. Annia Galeria, daughter of Annius Verus, prefect of Rome. She married Antoninus before his adoption by Hadrian, and died in the third year of her husband's reign, 36 years of age. She was notorious for her licentiousness, and yet her husband appeared blind to her frailties, and after her death even accorded unto her divine honours. Her effigy appears on a large number of medals. (*Dio Cass.*, 17, 30.—*Capitol.*, *Vit. Anton. P.*, c. 3.)—II. Annia, or the Younger, daughter of the preceding, married her cousin Marcus Aurelius, and died A.D. 176, in a village of Cappadocia, at the foot of Mount Taurus, on her husband's return from Syria. She is represented by Dio Cassius and Capitolinus as even more profligate in her conduct than her mother; and yet Marcus, in his Meditations (1, 17), extols her obedience, simplicity, and affection. Her daughter Lucilla married Lucius Verus, whom Marcus Aurelius associated with him in the empire, and her son Commodus succeeded his father as emperor. (*Capitol.*, *Vit. Ant. Phil.*, c. 19.) Marchand (*Mercur de France*, 1745) and Wieland have attempted to clear this princess of the unpatents against her character. (*Encyclop. Use. Knowledge*, vol. 10, p. 209.)

FAUSTITAS, a goddess among the Romans, supposed to preside over cattle, and the productions of the seasons generally. *Faustitas* is frequently equivalent to the *Felicitas Temporum* of the Roman medals. (*Horat.*, *Od.*, 4, 5, 17.)

FAUSTULUS, the name of the shepherd who, in the old Roman legend, found Romulus and Remus getting suckled by the she-wolf. He took both the children to his home and brought them up. (*Vid.* Romulus, and Roma.)

FEBRUARIA, a feast at Rome of purification and atonement, in the month of February: it continued for 12 days. The month of February, which, together with January, was added by Numa to the ten months constituting the year of Romulus, derived its name from this general expiatory festival, the people being then purified (*februati*) from the sins of the whole year. (*Ovid, Fast.*, 2, 19.) Some, however, deduce the name *Februarius* from the old Latin word *fiber*, mentioned by Varro (*L. L.*, 4, 13), and meaning the "end" or "extremity" of anything, whence comes the term *finbria*, "the hem or edge of a garment." In this sense, therefore, February will have been so called from its having been the last month in the earlier Roman year. (*Nork, Etymol. Handwört.*, vol. 1, p. 338.)

FELIX, M. ANTONIUS, I. a Roman governor of Judæa, who succeeded in office Cumanus, after the latter had been exiled for malversation. (*Josephus, Ant. Jud.*, 20, 6.) He was the brother of the freedman Pallas, the favourite of Claudius. On reaching his government, A.D. 53, Felix became enamoured of the beautiful Drusilla, daughter of Agrippa, at that time married to Azizus, king of Emesa; and by dint of magnificent promises, and through the intervention of a reputed sorcerer named Simon, he succeeded in detaching her from her husband, and in making her his own wife. Josephus charges this governor (*Ant. Jud.*, 20, 8) with having caused the assassination of the high-priest Jonathan, to whom, in a great measure, he owed his place. Felix, it seems, wished to rid himself of one who was continually remonstrating with him about the oppression of his government. And yet the Roman governor proved in one instance of considerable benefit to those under his charge, by delivering them from the robbers who had previously infested their country. (*Joseph.*, *l. c.*) It was before this Felix that St. Paul appeared at Casarea, on that memorable occasion when the startling subjects discussed by the apostle made the corrupt Roman tremble on his judgment-seat. (*Acts*, 24, 25.) Two years after, this Felix was suc-

ceeded by Porcius Festus, and left Paul still in prison, in order to please the Jews. The latter, however, sent a deputation to Rome to accuse him of various malpractices, but he was screened from punishment by the influence of his brother Pallas with Nero, who had succeeded Claudius on the imperial throne. (*Joseph.*, *Ant. Jud.*, 20, 8.)—II. A native of Rome, who succeeded Dionysius the Calabrian as bishop of that city, A.D. 271, and suffered martyrdom in 275. He was succeeded by Eutychianus, bishop of Luna. There is extant an epistle of Felix to Maximus, bishop of Alexandria, against Paul of Samosata.—III. A bishop of Rome, the second of the name in the list of Popes, though some call him Felix III., on account of an anti-pope who assumed the title of Felix II. in the schism against Liberius (A.D. 355–66). He succeeded Simplicius A.D. 483. Felix had a dispute, upon questions of ecclesiastical supremacy, with Acacius, bishop of Constantinople, who was supported by the emperor and most of the eastern clergy, in consequence of which a schism ensued between the Greek and Latin churches. Felix died A.D. 492, and was succeeded by Gelasius I. He was canonized by the Romish church. (Consult *Moreri, Dict. Hist.*, vol. 2, p. 593.)

FELSINA, an Etrurian city in Gallia Cisalpina, afterward called Bononia, and now Bologna. Pliny (3, 15) makes it to have been the principal seat of the Tuscans; but this must be understood to apply only with reference to the cities founded by that nation north of the Apennines. Bononia received a Roman colony 653 A.U.C. (*Liv.*, 37, 57.—*Vell. Patere.*, 1, 15.) Frequent mention of this city is made in the civil wars. (*Cic.*, *Ep. ad Fam.*, 11, 13.—*Id. ib.*, 12, 5.—*Appian*, 4, 2.) As it had suffered considerably during this period, it was restored and aggrandized by Augustus after the battle of Actium, and continued to rank high among the great cities of Italy. (*Tacit.*, *Hist.*, 2, 53.—*Strabo*, 216.—*Pomp. Mel.*, 2, 4.—*Cramer's Ancient Italy*, vol. 1, p. 88.)

FELTRIA, a town of Italy, now *Feltre*, in the district of Venetia. It was the capital of the small community called Feltrini.

FENESTELLA, a Roman historian, who lived in the time of Augustus. Pliny and Eusebius place his death in the sixth year of the reign of Tiberius, A.D. 21. Fenestella wrote an historical work entitled *Annales*, from which Asconius Pedianus has derived many materials in his Commentaries on Cicero's Orations. Of this work only fragments remain. Another production, "*De Sacerdotiis et Magistratibus Romanorum*," is sometimes attributed to him, but incorrectly. It is from the pen of Fioechi (*Floccus*), a native of Florence, and was written at the commencement of the 14th century. Fenestella was seventy years old at the time of his death. (*Voss.*, *de Hist. Lat.*, 1, 19.—*Funcc. de Viril. æt. L. L.*, p. 2, c. 5, 8.—*Madrig, de Ascon. Pedian.*, p. 64.) The fragments of Fenestella's *Annals* are given, among others, by Havercamp, in his edition of Sallust, vol. 2, p. 385. (*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 412.)

FERALIA, a festival at Rome of the Dii Manes, on the 21st of February, but, according to Ovid, on the 17th. Festus derives the word from *fero*, on account of a repast carried to the sepulchres of relations and friends on that occasion, or from *ferio*, on account of the victims sacrificed. Vossius observes, that the Romans termed death *fera*, *cruel*, and that the word *feralia* might arise thence. (Compare, however, the remarks of *Nork, Etymol. Handwört.*, vol. 1, p. 341, s. v. *feria*.) It continued for 11 days, during which time presents were carried to the graves of the deceased, marriages were forbidden, and the temples of the gods were shut. Friends and relations also kept, after the celebration, a feast of peace and love, for settling differences and quarrels among one another, if any such existed. It was universally believed that

the manes of departed friends came and hovered over their graves, and feasted upon the offerings which the hand of piety and affection had prepared for them. In the case of the poor these offerings were plain and simple, consisting generally of a few grains of salt, flour mixed with wine, scattered violets, &c. The wealthy, however, offered up sumptuous banquets. (*Ocid. Fast.*, 2, 535, *seqq.*—*Kirchmann, de Funeribus*, p. 560.)

FERENTUM, I. a town of Etruria, southeast of Vulturni, now *Ferenti*. From Vitruvius, who speaks of some valuable stone-quarries in its neighbourhood (2, 7), we collect that it was a municipium. The Emperor Otho's family was of this city. (*Suet.*, *Vit. Oth.*, 1.—*Sext.*, *Aur. Viet.*—*Tacit.*, *Hist.*, 2, 50.—Compare *Ann.*, 15, 33.)—II. A town of Latium, about eight miles beyond Anagnina, on the Via Latina, now *Ferentino*. It appears to have belonged originally to the Volsci, but was taken from them by the Romans and given to the Hernici. (*Liv.*, 4, 51.) It subsequently fell into the hands of the Samnites. (*Liv.*, 10, 34.—Compare *Steph. Byz.*, s. v.—*Cramer's Anc. Italy*, vol. 2, p. 80, *seqq.*)

FERENTUM, or, more properly, **FORENTUM**, as Pliny (3, 11) writes it, a town of Apulia, about eight miles to the southeast of Venusia, and on the other side of Mount Vultur. It is now *Forenza*. (*Horat.*, *Od.*, 3, 4, 15.—*Diod. Sic.*, 19, 65)

FERETRĪUS, an appellation of Jupiter among the Romans, who was so called from the *feretrum*, a frame supporting the *spolia opima*, dedicated to him by Romulus, after the defeat of the Cæninenses, and the death of their king. This derivation, however, is opposed by some, who think it better to derive the term from the Latin *ferire*, to *smite*. This is the opinion of Plutarch, and he adds, that Romulus had prayed to Jupiter that he might have power to smite his adversary and kill him. (*Liv.*, 1, 10.—*Plut.*, *Vit. Rom.*)

FERĒ LĀTINÆ, the Latin Holydays. (*Vid. Latium*.)

FERONĪA, a goddess worshipped with great solemnity by both the Sabines and Latins, but more especially the former. She is commonly ranked among the rural divinities. Feronia had a temple at the foot of Mount Soracte, and in her grove around this temple great markets used to be held during the time of her festival. Her priests at this place used to walk unhurt on burning coals. (*Dion. Hal.*, 3, 32.—*Strab.*, 226.—*Hygin.*, *ad Virg.*, *Æn.*, 7, 800.—*Fabretti, Inscript.*, p. 452.) She had also a temple, grove, and fount near Anxur, and in this temple manumitted slaves went through certain formalities to complete their freedom, such as cutting off and consecrating the hair of their head, and putting on a pileus or cap. (*Liv.*, 32, 1.—*Serv.*, *ad Virg.*, *Æn.*, 7, 564.) Flowers and first-fruits were the offerings to her, and the interpretation of her name given in Greek was *Flower-bearing* or *Garland-loving*, while some rendered it *Persephone* (*Proserpina*). Thus Dionysius of Halicarnassus remarks, *ἱερὸν ἔστι . . . θεῶς Φερωνίας ὀνομαζομένης, ἣν οἱ μεταφράζοντες εἰς τὴν Ἑλλάδα γλῶσσαν οἱ μὲν Ἀνθηφόρον, οἱ δὲ Φιλοστέφανον, οἱ δὲ Φερσεφόνην καλοῦσιν.* (*Dion. Hal.*, 3, 32, where for *Φερωνίας* we must evidently read *Φερωνία*, to suit the text in another part of Dionysius, 2, 49, as also the quantity given by the Latin poets.) Feronia was also said to have been called *Juno Virgo* (*Serv.*, *ad Æn.*, 7, 799); but this, according to Spangenberg, is a mere error, arising from the Sabine form of the name (*Heronia*) being confounded with the Greek appellation for *Juno* (*Hera*). (*Spangenberg, de Vet. Lat. Rel. Dom.*, p. 48.) In the vicinity of the temple of Feronia, at Soracte, was another to the god *Solanus*, and the worship of these two divinities was connected, in a measure, by common ceremonies. Hence Müller compares these two divinities with the

Mania and *Mantus* of the Etrurians. (*Müller, Etrusk.*, vol. 2, p. 65.)

FESCENNIA (*iorum*) or **FESCENNĪUM**, a city of Etruria, east of the Ciminian Lake, and near the Tiber. It seems to have occupied the site of the modern *Galsce*. Dionysius of Halicarnassus informs us (1, 21), that this place was first possessed by the Siculi, who were afterward expelled by the Pelasgi; and he adds, that some slight indications of the occupation of this city by the latter people might still be observed in his day. It is on this account, probably, that Solinus (c. 8) says, it was founded by the Argives. Fescennium is quoted in the annals of Latin poetry for the nuptial songs, called *Carmina Fescennina*, to which, according to Festus, it gave its name. (Compare *Pliny*, 15, 22.) The Fescennine verses, however, derive their appellation, according to others, from the obscene deity *Fescinus*, whom it was their object to propitiate. Traces of these gross effusions were to be found at Rome even in the latest periods of the empire, more particularly in the couplets which the young men sang at the nuptials of their friends, and the songs of the soldiers who followed the triumphal car of the general. The origin of the Fescennine verses is to be traced to the rude hilarity attendant upon the celebration of harvest. They were, therefore, in their primitive character, a sort of rustic dialogue spoken extempore, in which the actors exposed before their audience the failings and vices of their adversaries, and, by a satirical humour and merriment, endeavoured to raise the laughter of the company. They would seem to have speedily run into excess, since one of the laws of the Twelve Tables prohibits this license under pain of death; a punishment afterward commuted for beating with sticks. (Consult *Henrichs, Versus ludicri in Romanorum Casares priores olim compositi*, *Hale*, 1810, p. 6.)

FESTUS, I. Sextus Pomponius (or, according to others, Pompeius), a grammarian, supposed to have lived during the latter half of the third century. He made an abridgment, in alphabetical order, of the large work of Verrius Flaccus, on the signification of Words ("*De Verborum Significatione*"). This abridgment has been divided by editors into 20 books, each of which contains a letter. Festus has passed over in silence those words which Verrius had declared obsolete, and he intended, it would seem, to have treated of them in a separate work. Sometimes he does not coincide in the opinions of Verrius, and on these occasions he gives his own views of the subject matter. The abridgment of Festus is one of the most useful books we possess for acquiring an accurate knowledge of the Latin tongue; it has experienced, however, in some respects, an unhappy lot. It existed entire down to the 8th century, when Paul Winifred conceived the idea of making a small and meager extract from it. This compilation henceforward supplanted the original work in the libraries of the day, and the latter was so far lost to modern times that but a single manuscript was found of it, and this an imperfect one, commencing with the letter M. (*Dacier, Pref. ad Fest.*) Aldus Manucius, into whose hands the manuscript fell, amalgamated its contents with the labours of Paul Winifrid, and made one work of them, which he printed in 1513, at the end of the *Cornucopia* de Perotto. Another individual, whose name is unknown, made a similar union, but more complete than that of Aldus: the work of this latter was published in 1560 by Antonio Agostina, bishop of Lerida, who afterward became archbishop of Saragossa. Other fragments of Festus were found in the library of Cardinal Farnese; they were published by Fulvius Ursinus, at Rome, in 1581. The best editions are, that of Dacier (*In Usum Delphini*), Paris, 4to, 1681, that of C. O. Müller, 4to, *Leips.*, 1839, and that of Lindemann, in the *Corpus Grammaticorum*

Latinorum Veterum, vol. 2, 4to, Lips., 1832.—II. Porcius, governor of Judæa after Felix, whom the Jews solicited to condemn St. Paul or to order him up to Jerusalem. The apostle's appeal to Cæsar (the Emperor Nero) frustrated the intentions of both Festus and the Jews. (*Acts*, 25, 1, *seqq.*)

FIBRĒNUS, a small stream of Latium, running into the Liris, and forming before its junction a small island. This island belonged to Cicero, and is the spot where the scene is laid of his dialogues with Atticus and his brother Quintus on legislation. He describes it in the opening of the book as the property and residence of his ancestors, who had lived there for many generations; he himself was born there, A.U.C. 646. The Fibrēnus, in another passage of the second book, is mentioned as remarkable for the coldness of its waters. The river is now called *Fiume della Posta*: the island has taken the name of *S. Domenico Abate*. (*Romanelli*, vol. 3, p. 366, *seqq.*—*Cramer's Ancient Italy*, vol. 2, p. 113.)

FICULĒA or FICULNEA, a town of Latium, beyond Mount Sacer, to the north of Rome. Cicero had a villa there, and the road that led to the town was called *Ficulnensis*, afterward *Nomentana Via*. (*Cic.*, *Att.*, 12, 34.—*Liv.*, 1, 38; 3, 52.) It is supposed by Nibby to have stood at *Monte Gentile*, about nine miles from Rome. (*Delle Vie degli Antichi*, p. 94.)

FIDĒNĒ, a town of the Sabines, between four and five miles from Rome. It was at first a colony of Alba (*Dion. Hal.*, 2, 54), but fell subsequently into the hands of the Etrurians, or more probably the people of Veii. Fidēnæ, according to Dionysius (2, 23), was conquered by Romulus soon after the death of Tatius; he represents it as being at that period a large and populous town. It made several attempts to emancipate itself from the Roman yoke, sometimes with the aid of the Etruscans, at others in conjunction with the Sabines. Its last revolt occurred A.U.C. 329, when the dictator Æmilius Mamercus, after having vanquished the Fidenates in the field, stormed their city, which was abandoned to the licentiousness of his soldiery. (*Liv.*, 4, 9.) From this time we hear only of Fidēnæ as a deserted place, with a few country-seats in its vicinity. (*Strabo*, 226.—*Cic.*, *de Leg. Agr.*, 2, 25.—*Horat.*, *Epist.*, 1, 2, 7.) In the reign of Tiberius a terrible disaster occurred here by the fall of a wooden amphitheatre, during a show of gladiators, by which accident 50,000 persons, as Tacitus reports (*Ann.*, 4, 62), or 20,000, according to Suetonius (*Tib.*, 40), were killed or wounded. From the passage of Tacitus here cited, it appears that Fidēnæ had risen again to the rank of a municipal town. (Compare *Jurnal*, 10, 99.) The distance of five miles, which ancient writers reckon between Rome and Fidēnæ, and the remains of antiquity which are yet to be seen there, fix the site of this place near *Castel Giubileo*. (Nibby, *Viaggio Antiq.*, vol. 1, p. 85.—*Cramer's Anc. Italy*, vol. 1, p. 302.)

FIDŪS DIUS, a Roman deity, whose name often occurs in adjections. The expression *Me dius fidius*, which is found so frequently in the Roman classics, has been variously explained. Festus makes *dius fidius* to be put for *Διὸς φίλιος*, the son of Jupiter, i. e., Hercules; he cites, at the same time, other opinions, as that it is the same with swearing *per divi fidem* or *per diurni temporis* (i. e., *diei*) *fidem*. All these etymologies, however, are decidedly erroneous. A passage in Plautus (*Asin.*, 1, 1, 8) furnishes a safer ground, which is as follows: "*Per dium fidium quæris; jurato mihi iudico necesse esse cloqui, quidquid roges.*" From this passage we may fairly infer, that, in the phrase under consideration, *dius* is the same as *deus* or *divus*, and *fidius* an adjective formed from *fides*. Hence *dius fidius*, "the god of honour," or "of good faith," will be the same as the *Ζεὺς πόριος* of the Greeks; and, if we follow the authority of Varro, identical with the Sabine *Sancus* and Roman *Hercules*. (*Varro*, *L. L.*, 4, 10.)

FIRMUM, a city of Picenum, about five miles from the sea, below the river Tenna. It was called Firmum Picenum, and was so termed probably to distinguish it from some other city of the same name, now unknown. (*Mich. Catalani*, *Orig. e Antich. Fermane*, pt. 2, p. 32.) It was colonized, as Velleius Paterculus informs us (1, 14), towards the beginning of the first Punic war. Ancient inscriptions give it the name of Colonia Augusta Firma. The modern town of *Fermo* is yet a place of some note in the *Marca d'Ancona*; and the *Porto di Fermo* answers to the Castellum Firmianorum of Pliny (3, 13.—*Cramer's Ancient Italy*, vol. 1, p. 283).

FIRMUS or FIRMUS, one of those ephemeral Roman emperors known in history by the name of tyrants, because they were usurpers of empire under legitimate sovereigns. He was born in Seleucia in Syria, and owned extensive possessions in Egypt. Urged on by the impetuosity and love of change peculiar to the Egyptian Greeks, he seized upon Alexandria, and assumed the title of Augustus, one of his objects being to aid the cause of Zenobia, who had already been conquered by Aurelian, but whose power was still not completely overthrown. Aurelian marched against Firmus with his usual rapidity, defeated him, took him prisoner, and inflicted on him the punishment of the cross. Firmus is described as having been of extraordinary stature and strength of body. His aspect was so forbidding that he obtained in derision the surname of Cyclops. (*Vopisc.*, *Vit. Firm.*)

FISCELLUS, that part of the chain of the Apennines which separates the Sabines from Picenum. (*Plin.*, 3, 12.) Mount Fiscellus was reported by Varro to be the only spot in Italy in which wild goats were to be found. (*Varro*, *R. R.*, 2, 1.)

FLACCUS, I. a poet. (*Vid. Valerius*).—II. Verrius, a grammarian, tutor to the two grandsons of Augustus, and author of a work entitled "*De Verborum Significatione*." (*Vid. Festus*, I)—III. One of the names of Ilorace. (*Vid. Horatius*.)

FLAMINIĀ VIA, one of the Roman roads. It was constructed by C. Flaminius when censor (A.U.C. 533, B.C. 221), and was carried, in the first instance, from Rome to Narnia; whence it branched off in two directions, to Mevania and Spoletum, uniting, however, again at Fuglunia. From this place it continued its course to Nuceria, and was there divided a second time, one branch striking off through Picenum to Ancona; whence it followed the coast to Fanum Fortunæ; here it met the other branch, which passed the Apennines more to the north, and descended upon the sea by the pass of Petra Pertusa and Forum Sempronii. These two roads, thus reunited, terminated at Ariminum. (*Cramer's Anc. Italy*, vol. 1, p. 292.)

FLAMINIUS, C. NEPOS, was consul A.U.C. 531 and 537 (B.C. 223 and 217). Having been sent this latter year against Hannibal, his impetuous character urged him to hazard the battle of the Lake Trasymenus, in which conflict he was slain, with the greater part of his army. (*Liv.*, 22, 3.—*Flor.*, 2, 6.—*Val. Max.*, 1, 6.)

FLAMINIUS, TITUS QUINTUS, was consul B.C. 198, before he was thirty years of age, and had the province of Macedonia assigned to him, with the charge of continuing the war against Philip, which had now lasted for two years, without any definite success on the part of the Romans. In his first campaign he drove Philip from the banks of the Aoiis, and, among other important movements, succeeded in detaching the Achæans from the Macedonian alliance. In the following year Flaminius, being confirmed by the senate in his command as proconsul, before commencing hostilities afresh, held a conference with Philip on the coast of the Maliaic Gulf, and allowed him to send ambassadors to Rome to negotiate a peace. These negotiations, however, proving fruitless, Flaminius marched into Thessaly, where Philip had taken up a position,

and totally defeated him in the battle of Cynoscephalæ, in a spot broken by small hills, between Phæræ and Larissa. The Macedonians lost 8000 killed and 5000 prisoners. After granting peace to the Macedonian monarch on severe and humiliating terms, Flaminius was continued in his command for another year, B.C. 196, to see these conditions executed. In that year, at the meeting of the Isthmian Games, where multitudes had assembled from every part of Greece, Flaminius caused a crier to proclaim, "that the senate and people of Rome, and their commander Titus Quintius, having subdued Philip and the Macedonians, restored the Corinthians, Phocians, Locrians, Eubœans, Thessalians, Achæans, &c., to their freedom and independence, and to the enjoyment of their own laws." Bursts of acclamation followed this announcement, and the crowd pressed forward to express their gratitude to Flaminius, whose conduct throughout these memorable transactions was marked by a wisdom, moderation, and liberality seldom found united in a victorious Roman general. He was thus the means of protracting the independence of the Greek states for half a century longer. In the following year, B.C. 195, Flaminius was intrusted with the war against Nabis, tyrant of Lacedæmon, who had treacherously seized on the city of Argos. The Roman commander marched into Iaconia, and laid siege to Sparta, but he met with a brave resistance, and at last agreed to grant peace to Nabis, on condition that he should give up Argos and all the other places which he had usurped, and restore their lands to the descendants of the Messenians. His motives for granting peace to Nabis were, he said, partly to prevent the destruction of one of the most illustrious of the Greek cities, and partly the great preparations which Antiochus, king of Syria, was then making on the coast of Asia. Livy suggests, as another probable reason, that Flaminius wished to terminate the war himself, and not to give time to a new consul to supersede him and reap the honours of the victory. The senate confirmed the peace with Nabis, and in the following year, 194 B.C., Flaminius, having settled the affairs of Greece, prepared to return to Italy. Having repaired to Corinth, where deputations from all the Grecian cities had assembled, he took a friendly leave of them, withdrew his garrisons from all their cities, and left them to the enjoyment of their own freedom. On returning to Italy, both he and his soldiers were received with great demonstrations of joy, and the senate decreed him a triumph for three days. Before the ear of Flaminius, in the celebration of this triumph, appeared, among the hostages, Demetrius son of Philip, and Armines son of Nabis, and in the rear followed the Roman prisoners, who had been sold as slaves to the Greeks by Hannibal during the second Punic war, and whose liberation Flaminius had obtained from the gratitude of the Grecian states. The Achæans alone are said to have liberated 1200, for whom they paid 100 talents as compensation-money to their masters. Altogether, there was never, perhaps, a Roman triumph so satisfactory as this to all parties, and so little offensive to the feelings of humanity. In the year 183 B.C., Flaminius was sent to Prusias, king of Bithynia, upon the ungracious mission of demanding the person of Hannibal, then in his old age, and a refugee at the court of Prusias. The monarch was prevailed upon to violate the claims of hospitality, but the Carthaginian prevented his treachery by destroying himself with poison. In the year 168 B.C., Flaminius was made augur, in the room of C. Claudius deceased. (*Liv.* 45, 44.) After this he is no longer mentioned in history. (*Plut., Vit. Flamin.*)—II. Lucius, brother of the preceding, commanded the Roman fleet during the first campaign of Quintus, and scoured the coasts of Eubœa, Corinth, and other districts at that time allied or subject to the King of Macedonia. He was afterward expelled from the sen-

ate by Cato, when censor, for having put to death a Gallic prisoner to gratify a minion of his. (*Plut., Vit. Flamin.*)

FLANATICUS SINUS, a gulf lying between Istria and Liburnia, in the Adriatic. It was also called Polaticus Sinus, from the town of Pola in its vicinity. The name Flanaticus was derived from the adjacent town of Flano. The modern appellation is the Gulf of Quarnaro. (*Plin.*, 3, 19.)

FLANO, a town on the Illyrian side of the Sinus Flanaticus, and giving name to the gulf. (*Steph. Byz.*, s. v.) The modern name is *Fiannona*.

FLEVUS, a canal intersecting the country of the Frisii, made by Drusus. This in time expanded to such a degree as to form a considerable lake or lagune whose issue to the sea was fortified by a castle bearing the same name. This lagune, having been, in progress of time, much increased by the sea, assumed the name of *Zuyder Zee*, or the Southern Sea; and of several channels which afford entrance to the ocean, that named *Vlic* indicates the genuine egress of the Flevus. (*Tacit., Ann.*, 2, 6; 4, 72.—*Plin.*, 4, 15.—*Mela*, 3, 2.)

FLORA, the goddess of flowers. She was a very ancient Italian deity, being one of those said to have been worshipped by Tatius. Her festival was termed *Floralia*, and was celebrated at the end of April and beginning of May. It greatly degenerated, however, in the course of time, and became so offensive to purity as not to bear the presence of virtuous characters. The story of Cato the Censor in relation to this festival, is well known. (*Val. Max.*, 2, 10.) The Romans, who in general displayed very little elegance of imagination in the origins which they invented for their deities, said that Flora had been a courtesan, who, having acquired immense wealth (at Rome in the early days of the republic!), left it to the Roman people, on condition of their always celebrating her birthday with feasts. (*Plut., Quæst. Rom.*, 35.—*Lactant.*, 1, 24.) Flora being an ancient, original Latin deity, was addressed by the honorific title of *Mater*, "Mother." (*Cic. in Verr.*, 5, 14.—*Lucret.*, 5, 738.—*Keightley, ad Ov.*, *Fast.*, 5, 183, seq.—*Id.*, *Mythology*, p. 540.)—II. A name assumed by a courtesan at Rome. (*Plut., Vit. Pomp.*)

FLORALIA, games in honour of Flora at Rome. (*Vid. Flora.*)

FLORENTIA, a town of Etruria, on the river Arnus, now *Florence*, or, as the Italians call the name, *Firenze*. It has no pretensions to a foundation of great antiquity, as we find no mention made of it before the time of Cæsar, by whom Frontinus says it was colonized; unless we think, with Cluverius, that the town called Fluentia by Florus (1, 2), and mentioned with many other distinguished cities, as having severely suffered in the civil wars of Sylla and Marius, might be identified with it. However that may be, we find distinct mention made of Florentia in the reign of Tiberius; when, as Tacitus informs us, the inhabitants of that city petitioned that the waters of the Clanis, a river which was very injurious from its perpetual inundations, might be carried off into the Arnus. (*Tac., Ann.*, 1, 79.—Compare *Plin.*, 3, 5.) At a later period this city was destroyed by Totila, and rebuilt by Charlemagne. (*Cramer's Anc. Italy*, vol. 1, p. 183.)

FLORUS, I. L. ANNÆUS, a Latin historian, born, according to the common opinion, in Spain, but, as others maintain, in Gaul, and who wrote in the reign of Trajan. He was still living in the time of Hadrian, and is perhaps the same individual to whom, according to Spartianus, this emperor addressed some sportive verses. By some critics also he is regarded as the author of the *Perrigilium Veneris*. A modern philologist, Titzæ, has attempted to prove that the historian Florus lived in the time of Augustus, and that he is identical with the Lucius Junius Florus to whom Hor-

ace has addressed two of his epistles. It is true that some manuscripts give the historian the name of Julius; in order, however, to admit the hypothesis of Titzze, we must regard as interpolated a passage of the Proemium of Florus, where mention is made of Trajan. (Consult the work of Titzze, "*De Epitome rerum Romanarum, quæ sub nomine Lucii Annaei, sive Flori, Senecæ fertur, atate probabilissima, vetæ auctore, operis antiqui forma*," Lincii, 1804, 8vo.) Florus has left us an abridgment of Roman History, entitled "*Epitome de gestis Romanorum*," divided into four books. It commences with the origin of Rome, and extends to A.U.C. 725, when Augustus closed the temple of Janus, a ceremony which had not taken place for 206 years previous. This work is an extract not merely from Livy, but from many other ancient historians, no part of whose works any longer remain. It is less a history than an eulogium on the Roman people, written with elegance, but, at the same time, in an oratorical style, and not without affectation. Oftentimes facts are merely hinted at, events are passed over with a flourish of rhetoric; while the declamatory tone which everywhere prevails, and the concise and sententious phrases in which he is fond of indulging, impart an air of coldness to his writings, and render them monotonous, and sometimes obscure. Florus likewise commits many errors of a geographical nature, and on many occasions is defective in point of chronology. His text has reached us in a very corrupt state, and abounds with interpolations.—Some manuscripts give to the author of this work the name of Seneca: in fact, a branch of the Annæan family bore the name of Seneca; and there is even reason to believe that this family took indiscriminately the surname of Seneca or Florus. (Consult Wernsdorff, *Poët. Lat. Min.*, vol. 3, p. 452.) From this title, as given by certain manuscripts, and from a passage of Lactantius, some critics have concluded that the *Epitome* is the work of Seneca the philosopher. Lactantius (*Inst. divin.*, 7, 15) says, that Seneca divided the history of the Roman people into four periods; that of infancy, youth, manhood, and old age. This division occurs also in Florus, but in no other writer of antiquity, which would tend to strengthen the opinion that Lactantius has cited Florus under the name of Seneca. To this, however, it may be objected, that, though Florus adopts four periods or divisions in his work, his arrangement is not exactly the same with that mentioned by Lactantius; besides, Florus might have borrowed from Seneca. The best edition of Florus is that of Duker, *Lugd. Bat.*, 1722, and 1744, 2 vols. 8vo. The edition of Fischer is also valuable, *Lips.*, 1760, 8vo. (Schöll, *Hist. Lit. Rom.*, vol. 2, p. 389, *seqq.*—Bähr, *Gesch. Röm. Lit.*, vol. 1, p. 452, *seqq.*)—II. A young Roman, the friend of Horace, who accompanied Tiberius in his expedition into Dalmatia (A.U.C. 731), and subsequently into Armenia (A.U.C. 734). Horace addresses two epistles to him (1, 3, and 2, 2). Some make him the same with Florus the historian. (Consult preceding article.)

FONS SOLIS. *Vid.* Ammon.

FONTÉIUS, CAPIŦO, I. an intimate friend of Horace, and who, in the conference at Brundisium, acted for Antony, while Mæcenas had charge of the interests of Octavius. (*Horat.*, *Sat.*, 1, 5, 32.)—II. A Roman who raised commotions in Germany during the reign of Galba. He was put to death by the lieutenants stationed there, before even orders reached them from home. (*Tacit.*, *Hist.*, 1, 7.)

FORMIÆ, a town of Latium, to the northeast of Caïeta. It was a place of great antiquity, and is looked upon by the most ancient writers as the abode and capital of the Læstrygonæ, of which Homer speaks in the *Odyssey*, and where his hero met with so inhospitable a reception. The description of the place, however, is so indefinite, though it may agree in the prin-

cipal features, that, unless the consenting voice of antiquity had fixed upon this spot as the scene of Ulysses' disaster, we could have had no clew for discovering in Formiæ the seat of these savage cannibals. Every one, however, is at liberty to indulge his fancy with the supposition that the harbour which Homer describes was actually that of *Gacta* (the ancient Formiæ), and he may there recognise in it the towering rocks, the prominent shores, and the narrow entrance. (*Odys.*, 10, 80.—*Eustace's Classical Tour*, vol. 2, p. 367.) According to Strabo (233), Formiæ was a Læconian colony, and its first appellation was Hormiæ, in allusion to the excellent anchorage which its port afforded to vessels. (Compare *Plin.*, 3, 5.) This place, however, is chiefly interesting from having been long a favourite residence of Cicero, and finally the scene of the tragical event which terminated his existence. He sometimes talks of his retreat here as his Caietan villa (*Ep. ad Att.*, 1, 2, and 3), but more commonly terms it his Formianum. He appears to have resided there during the most turbulent part of the civil war between Cæsar and Pompey; for, in one of his letters to Atticus (7, 8), he mentions a long conference he held with the latter at this place, and from which he inferred that no alternative was left but that of war. In the reign of Augustus we find Formiæ distinguished as the birth-place and residence of Mamurra, a Roman senator of enormous wealth: hence the appellation by which Horace designates it in the narrative of his journey to Brundisium, "*In Mamurram lassæ deinde urbe manemus*," &c. (*Sat.*, 1, 5, 37.) The retirement and ease which this delightful spot afforded is well described by Martial (*Ep.*, 10, 30). The Formian hills are often extolled for the superior wine which they produced. (*Horat.*, *Od.*, 1, 20.—*Id. ibid.*, 3, 16.) The modern name of Formiæ is *Mola di Gacta*. (*Cramer's Ancient Italy*, vol. 2, p. 125.)

FORMIÂNUM, a villa of Cicero near Formiæ, near which the orator was assassinated. (*Vid.* Formiæ.)

FORMIO, a small river of Venetia, now the *Risano*, considered before the reign of Augustus as the boundary of Italy towards its northeastern extremity; but, when Histria was included in Cisalpine Gaul, this limit was removed to the little river Arsia. (*Plin.*, 3, 18.)

FORTŪNA (in Greek Τύχη), the Goddess of Fortune, or that unseen power which was believed to exercise such arbitrary dominion over human affairs. By Hesiod and by one of the Homeridæ (*Theog.*, 260.—*Hom.*, *Hymn. ad Cer.*, 420) she is classed among the Ocean-nymphs. Pindar in one place (*Ol.*, 13, 1) calls her "the child of Jupiter Eleutherius;" elsewhere he says that she is one of the Destinies. (*Frag.*, *Incert.*, 75.) Alcman called her the sister of Law and Persuasion, and daughter of Forethought (Προψύθεια.—*Ap. Plut. de Fort. Rom.*, 4). In her temple at Thebes Fortune held Wealth (Πλοῦτος) in her arms, whether as mother or nurse was uncertain. (*Pausan.*, 9, 16.) The image of this goddess made by Bupalus for the people of Smyrna had a hemisphere (πόλος) on its head, and a horn of Amalthæa in its hand. (*Pausan.*, 4, 30, 6.—Compare *Siebelis*, ad *Pausan.*, 2, 10, 4.) The Goddess Fortune was, however, of much greater importance in the eyes of the Italians than in those of the Greeks. Under the name of Nortia she was adored in Etruria. She was also worshipped at Antium, where she had a splendid temple, at Præneste, and elsewhere. At Rome there were two temples to her, both ascribed to Servius Tullius, the one of *Bona* or *Virgo Fortuna*, the other of *Fors Fortuna*. (*Ovid.*, *Fast.*, 6, 569, *seqq.*—*Keightley*, ad loc.—*Id.*, *Mythology*, p. 202, 533.)

FORTUNATÆ INSULÆ, islands lying off the western coast of Africa, and deriving their name from their remarkable beauty, and the abundance of all things desirable which they were supposed to contain. Their climate was one continual spring, their soil was covered

with eternal verdure, and bloomed with the richest flowers; while the productions of earth were poured forth spontaneously in the utmost profusion. The legend of the Island of the Blessed in the Western Ocean may possibly have given rise to the tale of the Fortunate Islands. (*Vid.* Elysium.)—Many at the present day regard the Fortunate Islands of antiquity as geographical realities. Some make them identical with the *Canaries*, and this opinion is grounded upon the situation and temperature of those islands, and the delicious fruits which they produce. (*Plin.*, 6, 32.—*Diod. Sic.*, 5, 19.)

FÖRUM ROMÂNUM, *Vetus vel Magnum*, a large open space between the Capitoline and Palatine Hills, called until lately *Campo Vaccino*, or the Cow-field, or market. The Italians, however, have grown ashamed of so vulgar a name, and have restored to the place its ancient appellation of Forum Romanum. It is now a mere open space, strewn for the most part with ruins. It is collected from Livy (1, 12) and Dionysius of Halicarnassus (2, 66), that the Forum was situate between the Capitoline and Palatine Hills; and from Vitruvius we learn that its shape was that of a rectangle, the length of which exceeded the breadth by one third. From these data, which agree with other incidental circumstances, it is generally thought that the four angles of the Roman forum were formed by the arch of Severus at the foot of the Capitol; the Fabian arch, at the termination of the Via Sacra; the church of *St. Theodore*, at the foot of the Palatine; and that of the *Consolazione*, below the Capitol. Here the assemblies of the people used generally to be held, and here also justice was administered, and public business transacted. It was formed by Romulus, and surrounded with porticoes, shops, and buildings by Tarquinius Priscus. (*Liv.*, 1, 35.—*Dion. Hal.*, 3, 67.) Around the Forum were built spacious halls, called *Basilicæ*, where courts of justice might sit, and other public business be transacted. The present surface of the Forum is from fifteen to twenty feet above its ancient level.—There was only one Forum under the republic; Cæsar added another; Augustus a third; a fourth was begun by Domitian, and finished by Nerva, after whom it was named. But the most splendid was that of Trajan, adorned with the spoils he had taken in war. Besides these, there were various *fora* or places where commodities were sold.

FORUM, a name given in Roman geography to many places where there was either a public market, or where the prætor held his court (*Forum sive Convētus*); of these the most important were: I. Forum, a town of Latium, on the Appian Way, about twenty-three miles from Aricia, and sixteen from Tres Tabernæ. It is mentioned by St. Paul in the account of his journey to Rome (*Acts*, 28, 15), and is also well known as Horace's second resting-place in his journey to Brundisium. Holstenius and Corradini agree in fixing the position of Forum Appii at *Casavillo di Santa Maria*. But D'Anville, from an exact computation of distances and relative positions, inclines to place it at *Borgo Lungo*, near *Treponti*, on the present road (*Anal. Geogr. de l'Italie*, p. 186); and he would seem to be correct, especially as it appears clear from Horace, that here it was usual to embark on a canal, which ran parallel to the Via Appia, and which was called *Decennovium*, its length being nineteen miles. (*Procop.*, *Rer. Got.*, 1, 2.) Vestiges of this canal may still be traced a little beyond *Borgo Lungo*. It must be observed, too, that the name of this modern place agrees very well with the idea which Horace gives us of Forum Appii.—II. Allieni, a town of Gallia Cisalpina, mentioned by Tacitus (*Hist.*, 3, 6). Cluverius conceives, with considerable probability, that this ancient town occupied the present site of *Ferrara*, that modern name being evidently a corruption of Forum Allieni, contracted to Forum Arrii.—

III. Aurelii, a town of Etruria, now *Montalto* (*Cic.*, *Cat.*, 1, 9).—IV. Claudii, another in Etruria, now *Oriolo*.—V. Cornelii, another, now *Imola*, in the Pope's dominions. (*Pliny*, 3, 16.—*Cic.*, *Ep. ad Fam.*, 12, 5).—VI. Domitii, a town of Gaul, now *Frontignan*, in Languedoc.—VII. Flamini, a town of Umbria, now *San Gioranc*. (*Plin.*, 3, 14).—VIII. Gallorum, a town of Gallia Togata, now *Castel Franco*, in the Bolognese. (*Cic.*, *Ep. ad Fam.*, 10, 30).—IX. Julii, a town of Venetia, called *Forajuliensis urbs*, now *Friuli*.—X. Julii, a town of Gallia Narbonensis, now *Frejus*, in Provence. (*Cic.*, *Ep. ad Fam.*, 10, 17.)

Fosi, a people of Germany, lying north of the Cherusci, along the Visurgis or *Weser*. They shared the fate of the Cherusci when the Langobardi conquered the latter people. They are supposed to have been a branch of the Cherusci. (*Mannert, Geogr.*, vol. 3, p. 175, 208.)

Fossa, 1. the straits of *Bonifacio*, between Corsica and Sardinia, called also *Taphros*. (*Plin.*, 3, 6).—II. Drusi, a canal eight miles in length, opened by Drusus from the Rhine to the Yssel. (*Vid.* Drusus, 1).—III. Philistina, one of the mouths of the Po, now the *Po grande*. It is spoken of as a very considerable canal, having seven arms or cuts, called *Septem Maria*, or *Fossiones Philistinæ*. These were drawn off from it to the sea. The works in question were undertaken by the Tuscans, for the purpose of draining the marshy grounds about Hadria. Mazocchi sees in the term *Philistina* traces of a reference to Phœnicia. (*Mazocchi, Dissert. Corton.*, vol. 3, diss. 1, diatr. 1, de sette Mari.)

FOSSIONES PHILISTINÆ. *Vid.* Fossa, III.

FRANCI, a confederation of Germanic tribes, which first appeared on the stage of history in the last quarter of the second century of our era. As the Franks are first mentioned during the reign of the philosophic and pacific Antonine, Mannert concludes that their confederation was not the result of hostile aggression from Rome, but of internal wars; and these wars he conceives to have been chiefly of self-defence against the Saxon confederation, which, occupying the north of Germany, sought to extend itself westward to the Rhine. The Germans lying between the Saxons and that river found it necessary to unite in order to resist their northern invaders, and did so successfully under their new name of Franks. (*Geschichte der alten Deutschen, besonders der Franken*, p. 79, seqg.) Various etymologies have been assigned to this appellation: some deduce it from the German term *frank*, meaning "free," and indicating a race of *Freemen*; others from the *franeisca*, a favourite weapon of this people; but Luden, in his *Geschichte des Teutschen Volkes* (Gotha, 1825–30), derives the name from the word *wrangen*, still used in Lower Saxony for "to fight" or "brawl" (compare the English "wrangle"); whence the epithet might mean quarrelsome, or, perhaps, bold warriors. The Franks soon became powerful enough to act on the offensive, and, crossing the Rhine to meet other foes, they spread their devastations from the banks of that river to the foot of the Pyrenees: nor were they stopped by these mountains. Spain, in turn, was overrun; and, when the exhausted country no longer supplied a variety of plunder, the Franks seized on some vessels and transported themselves into Mauritania. They were afterward driven out of Gaul by the Roman arms, and from the reign of Probus (A.D. 277) to that of Honorius, seem to have contented themselves with occasional irruptions. They obtained a permanent footing in Gaul during the last years of the reign of Honorius. About the year 500, Clovis, or Chlodwig (his proper Teutonic name), by reducing the several Frank principalities under his own sceptre, and conquering the last remnant of the western Roman empire in Gaul, is held to have founded the French monarchy. His Frank kingdom

was, nevertheless, by no means commensurate with modern France, consisting of merely the northern German provinces on probably both banks of the Rhine, of the present kingdom of the Netherlands, and of so much of France as lies north of the Loire, with the exception of Brittany, where large bodies of Britons, expelled from their insular home by the Saxons, had established themselves, and long maintained their independence. Of the southern half of France, the larger part, situated to the west of the Rhone, was included in the Visigothic kingdom of Spain; while the provinces to the east of that river were held, together with Savoy and Switzerland, by the Burgundians. Chlodwig attacked both. Against the Burgundians he effected little or nothing, but he was more successful against their western neighbours. Assisted by the hatred which the Catholic natives entertained towards their Arian master, he, before his death, reduced the Visigothic dominions in Gaul to the single province of Languedoc, incorporating all the rest in his Frank realm. His sons and grandsons, in time, not only subdued Burgundy, but brought many German states, as the Thuringians, Allemans, and Bavarians, into complete feudal subjection. (*Foreign Quarterly Review*, No. 13, p. 169, *seqq.*)

FREGELLE, a city of Latium, situate near the Liris, and close to the Via Latina, as appears from the mention of a station called Fregellanum in the Itineraries which describe that route. Fregellæ is stated by Strabo (238) to have been once a place of some consequence, and the capital of a considerable district. It was taken by the Romans A.U.C. 427. After suffering from Pyrrhus, and subsequently from Hannibal, this place attained to so considerable a degree of importance and prosperity as to suppose that it could compete even with Rome; its inhabitants revolted, and probably under circumstances peculiarly offensive to the Romans. L. Opimius was ordered to reduce the Fregellani. Their town was immediately besieged, and, after a vigorous resistance, was taken through the treachery of Numitorius Pullus, one of their own citizens, whose name has been handed down to us by Cicero. (*De Fin.*, 5, 22.—*Phil.*, 3, 6.) Fregellæ was on this occasion destroyed, the discontented state of the allies of Rome at that period probably rendering such severe measures necessary. (*Liv.*, *Epit.*, 60.—*Rhet. ad Her.*, 4, 9.—*Vell. Patere.*, 2, 6.—*Val. Max.*, 2, 8.) In Strabo's time the condition of this city was little better than that of a village, to which the neighbouring population resorted at certain periods for religious purposes. Its ruins, according to Cluverius, are to be seen at *Ceperano*, a small town on the right of the *Garigliano*. (*Ital. Ant.*, vol. 1, p. 1036.—Compare *Holst. ad Steph. Byz.*, p. 220, and *De Chaupy*, vol. 3, p. 474.) A more modern writer, however, fixes this ancient site at *S. Giovanni Incarico*, about three miles farther down the river. (*Pasquale Cayro, Città del Lazio*, vol. 1.—*Romanelli*, vol. 3, p. 380.—*Cramer's Ancient Italy*, vol. 2, p. 111.)

FRENTANI, a people of Italy, on the Adriatic coast, east of Samnium and northwest of Apulia, who received their name from the river Frento, now *Fortore*, which runs through the eastern part of their country, and falls into the Adriatic opposite the islands of Diomedea. The Frentani appear to have possessed a separate political existence, independent of the Samnitic confederacy, though we are assured that they derived their descent from that warlike and populous race. (*Strabo*, 241.) Their history, in other respects, bears a close resemblance to that of the neighbouring tribes, the Vestini, Peligni, and Marrucini. Together with these, the Frentani, as Livy reports, voluntarily submitted to the Romans, and sent deputies to obtain a treaty from that power, which was readily granted. (*Liv.*, 9, 45.) We find the Frentani also numbered with the Marsi, Marrucini, and Vestini, by Polybius,

as the allies of Rome before the invasion of Hannibal (2, 24). From Plutarch we learn, that they distinguished themselves in the war against Pyrrhus (*Vit. Pyrrh.*—Compare *Florus*, 1, 18), and it appears that they faithfully adhered to the Roman cause throughout the whole of the second Punic war. Appian is the only author who has particularly mentioned the Frentani, as having joined the coalition of the petty states of central Italy against Rome (*Civ. Bell.*, 1, 39), but even without the authority of this writer we could not doubt that this people would unite in support of the common cause with the surrounding states, to whom they were bound by consanguinity and other political ties. Whatever may have been their former extent of territory, we find it restricted by the geographers of the Augustan age to the tract of country lying between the mouths of the Aternus and Tifernus, which separated it from the Marrucini to the north, and from Apulia to the south. (*Mela*, 2, 4.—*Plin.*, 3, 11, *seqq.*—*Ptol.*, p. 66.) Though it extended also into the interior towards Samnium, and the sources of the rivers just mentioned, the few cities of the Frentani with which we are acquainted appear to have been situated on the coast. (*Cramer's Ancient Italy*, vol. 2, p. 254, *seqq.*)

FRISI, a people of Germany, having for their boundaries the eastern mouth of the Rhine on the west, the ocean on the north, the Amisia or *Ems* on the east, and the Vechta or *Vecht* on the south. They occupied, consequently, what answers at the present day to *West Friesland*, *Groningen*, and the northern angle of *Ober-Yssel*, together with the islands which lie partly to the north in the ocean, and partly to the eastern mouth of the Rhine. Pliny and Tacitus (*Ann.*, 1, 60.—*Ib.*, 4, 72, &c.) name this people Frisii; Ptolemy and Dio Cassius, *Φρίσιοι* and *Φρείσιοι* (*Ptol.*, 2, 11.—*Dio Cass.*, 54, 32); but by later writers they are styled *Φρίσαρες* (*Procop.*, 4, 20), *Frisiones* (*Chron. Moisiac.*, 797), *Frisones* (*Paul. Warnefr., de Gest. Longob.*, 6, 37), &c. From a very early period the Frisii appear to have been on friendly terms with the Romans. Drusus not only marched unimpeded through their territory and entered their harbour with his fleet, but also received from them the most active assistance, not as from a conquered people, but allies. They aided also Germanicus. Their enmity to the Cherusci would seem to have been the real motive of their friendship with the Romans. At a subsequent period, however, they discovered the true nature of the alliance which the latter had formed with them, and fell an easy prey to their conquering arms. (*Mannert, Geogr.*, vol. 3, p. 272.)

FRONTINUS, SEX. JUL., a Latin writer, born of a plebeian family (*Poleni, Vit. Front.*, 1, *seqq.*), but who attained, by his integrity, valour, and intelligence, to some of the highest offices of the state. In A.D. 70 he was prætor, but abdicated this office to please Domitian, who wished to add it to the dignity of consul, with which he himself was already invested. (Compare *Tacitus, Hist.*, 4, 39.—*Suetonius, Domit.*, 1.) Five years after Frontinus obtained the command of Britain, and was intrusted with the subjugation of the Silures; which would seem to indicate that he had been consul in A.D. 74, though the *Fasti Consulares*, which are not, however, very complete as regards the *consules suffecti*, make no mention of him. He accomplished the object of his mission, notwithstanding the difficulties of the enterprise. Agricola, the father-in-law of Tacitus, was appointed his successor. Under Nerva he received the consulship a second time, A.D. 97, and was appointed the same year *Curator Aquarum*, or general superintendent of the waters and aqueducts of the capital, and in this capacity brought the waters of the Anio to Rome by means of a splendid aqueduct. He died about A.D. 106, and filled, at the time of his death, the office of *augur*, in which

he was succeeded by Pliny. Frontinus wrote a work on the Roman aqueducts, and another on military stratagems. The former of these, to which the copyists of the middle ages have given the barbarous title of "*De aqueductibus urbis Romæ Commentarius*," is written in an easy style, but without the least elegance. It is important, however, for archæology, since we find in it a detailed history of those remarkable monuments, the aqueducts of Rome. As regards the title of the work, it may be remarked, that the term *aqueductus* does not appear in the treatise itself: and an old edition gives as the superscription, "*De Aquis, quæ in Urbem influunt, libellus mirabilis*." The other work, entitled "*Stratagematicon libri IV.*," is partly of a military and partly of an historical character; it is a mere compilation, sometimes written with great negligence, especially in the historical part. Still, even in an historical point of view, the work is not without interest, since it contains some particulars which are not to be found in the other historians that have come down to us. To Frontinus are ascribed other productions, which are, however, of a later age. One is entitled "*De Re Agraria*," or "*De Agrorum Qualitate*," the others, "*De Limitibus*" and "*De Colonis*." The last two are merely fragments, and their authors lived after the time of the Antonines, who are mentioned in them. The best edition of Frontinus is that of Oudendorp, *Lugd. Bat.*, 1779, 8vo. (Bähr, *Gesch. Röm. Lit.*, vol. 1, p. 671, seqq.)

FRONTO, I. a Latin writer, born at Cirta, in Africa, of an Italian family. After studying in his own country, he came to Rome in the reign of Hadrian, and acquired great reputation as a rhetorician and grammarian. Antoninus Pius appointed him preceptor to his two adopted sons Marcus Aurelius and Lucius Verus, whose confidence and affection he gained, as is proved by their letters. After being consul, Fronto was appointed to a government in Asia, which his bad health prevented him from filling. His learning and his instructive conversation are mentioned with praise by Aulus Gellius, the historian Appian, and others of his contemporaries. He died in the reign of Marcus Aurelius, at an advanced age. (Klützing, *Suppl. ad. Harles. Notit. Brev.*, p. 320.—Mai, *Comment. præv.*, § iv., seqq.—Bähr, *Gesch. Röm. Lit.*, vol. 1, p. 595.)—Until of late years we had nothing of Fronto's works, except fragments of his treatise "*De Differentia Verborum*," being a vocabulary of the so-called synonyms. But in 1815, Angelo Mai having discovered in the Ambrosian Library at Milan a palimpsest MS., on which had been originally written some letters of Fronto to his two pupils, deciphered the text wherever the writing was not entirely obliterated, and published it with notes. It happened, by singular good fortune, that Mai, being some years after appointed librarian of the Vatican, discovered in another palimpsest volume another part of Fronto's letters, with the answers of Marcus Aurelius and Verus. Both the volumes came originally from the monastery of St. Columbanus, at Bobbio, the monks having written them over with the Acts of the First Council of Chalcedon. It happened, that one of the volumes was transferred to Milan, and the other to Rome. Mai published the whole in a new edition, entitled, "*M. Cornelii Frontonis et M. Aurelii imperatoris epistolæ; L. Veri et Antonini Pii et Appiani epistularum reliquæ: Fragmenta Frontonis et Scripta Grammatica*, 8vo. Rom., 1823." These letters are very valuable, as throwing additional light on the age of the Antonines, confirming what we know of the excellent character of Marcus Aurelius, and also showing his colleague Verus in a more favourable light than he had been viewed in before. The affectionate manner in which both emperors continue to address their former preceptor is very touching. Two or three short epistles of Antoninus Pius are also interesting. There are, besides, many letters

of Fronto to various friends, a few of which are in Greek. (*Encycl. Us. Knowl.*, vol. 10, p. 498.)—II. A native of Eimesa, a rhetorician, who lived at Rome in the time of Alexander Severus. He taught eloquence also at Athens, and was the rival of the first Philostratus. The critic Longinus was his nephew. He wrote various works, of which only a few fragments remain. (Suid.—Schöll, *Hist. Lit. Gr.*, vol. 7, p. 204.)

FRUSINO, a city of Latium, now *Frosinone*, situate on the river Cosa. (Strabo, 238.) This place was deprived by Rome of its territory for having incited the Hernici to war, A.U.C. 450. Frontinus names it among the colonies, and Festus among the præfecturæ.

FUCINUS, a lake of Italy, in the country of the Marsi, now sometimes called *Lago Fucino*, but more commonly *Lago di Celano*. It is of considerable extent, being not less than forty miles in circumference. As it was subject to inundation (Strabo, 241), Julius Cæsar, it appears, had intended to find a vent for its waters (Sueton., *Vit. Cæs.*, 44), but this design was not carried into execution till the reign of Claudius. After a continued labour of three years, during which 30,000 men were constantly employed, a canal of three miles in length was carried through a mountain from the lake to the river Liris. On its completion, the splendid but sanguinary show of a real *naumachia* was exhibited on the lake in the presence of Claudius and Agrippina, and a numerous retinue, while the surrounding hills were thronged with the population of the neighbouring country. The reader will find these events fully detailed in Suetonius (*Vit. Claud.*, 20), Tacitus (*Annal.*, 12, 56), and Dio Cassius (60, 11). Hadrian afterward is said to have repaired this work of Claudius. (*Æl., Spart., Vit. Hadr.*) Considerable remains of this undertaking of Claudius are yet to be seen between *Avezzano* and *Lugo*. (Consult *Fabretti, Dissert. de Emissario Lacus Fucini*.—Romanelli, vol. 3, p. 194.—Cramer's *Ancient Italy*, vol. 1, p. 328.)

FULVIA GENS, an illustrious family at Rome, the branches of which were those of Curvus, Nobilior, Flaccus, Pætinus, Maximus, Centumalus, &c.

FULVIA, I. a female of good family, but licentious principles. She disclosed to Cicero the details of the conspiracy of Catiline, which she had learned from Quintus Curius. (*Sall., Cat.*, c. 23.)—II. A bold, ambitious woman, at first the wife of Clodius the turbulent tribune, and, after his death, of Marcus Antonius the triumvir. She first came into notice on the assassination of Clodius, when, having caused the corpse to be brought into the vestibule of her dwelling, and having assembled the populace, she caused, by her tears and language, a violent sedition. Some years after this, on having become the spouse of Antony, she took an active part in the proscriptions of her husband, and is said to have even sacrificed to her own vengeance several individuals who had given her offence. After the head of Cicero was brought to Antony, she took it on her knees, broke forth into cowardly insult of the character of the deceased, and then, with fiendish malice, pierced the tongue with her golden bodkin. Having been left at Rome by Antony during the war against Brutus and Cassius, she became all powerful in that city, named the prætors at her own pleasure, sold the government of the provinces, and even decreed a triumph to Lucius, the brother of Antony, who had no claim whatever to one. When, after the battle of Philippi, Antony had passed into the East to regulate affairs in that quarter, Fulvia, irritated by his intercourse with Cleopatra, tried to induce Octavius to take up arms against him. Not succeeding in this, she took them up against Octavius himself, in conjunction with her brother-in-law Lucius, who now professed open opposition to the illegal power of the Triumvirate. After very bold and

spirited efforts, however, on her part, she was besieged with her brother-in-law at Perusia, and compelled to surrender to the power of Octavius. Fulvia, after this, retired to Greece, and rejoined her husband, but was coldly received by him. She died at Sicyon, A.U.C. 712, through chagrin and wounded pride, as was believed, at her husband's attachment to Cleopatra. (*Vell. Patere.*, 2, 74.—*Plut., Vit. Ant.—Id., Vit. Cic.*)

FULVIUS, I. L. CURVUS, was consul A.U.C. 432, B.C. 320, and six years after master of the horse to the dictator L. Æmilius. (*Liv.*, 8, 38.—*Id.*, 9, 21.)—II. M. CURVUS PÆTINUS, was consul in place of T. Minucius, A.U.C. 449, B.C. 305. He took the city of Bovianum, in the country of the Samnites. (*Liv.*, 9, 44.)—III. Cn. PÆTINUS, was consul A.U.C. 454, B.C. 300. He gained a memorable victory over the Samnites near Bovianum, and enjoyed a triumph.

Three years after he carried on successful operations in Etruria in quality of prætor. (*Liv.*, 9, 44.—*Id.*, 15, 91.)—IV. S. PÆTINUS NOBILIOR, was consul A.U.C. 499, B.C. 255, along with Æmilius Paulus Lepidus. These two commanders sailed for Africa after the overthrow of Regulus by the Carthaginians, gained a naval victory, compelled the foe to raise the siege of Clypea, and carried off an immense booty from the Carthaginian territories. They were shipwrecked, however, on their return to Italy, and of 200 vessels only 80 were saved.—V. Q. FLACCUS, was consul A.U.C. 517, 539, 542, and 545 (B.C. 237, 224, 212, and 209.) He defeated Hanno near Bovianum, and laid siege to Capua, which surrendered to him after the lapse of a year. The conquered were treated with great cruelty. (*Vid. Capua.*) Some time subsequent to this, he marched against the Hirpini, Lucanians, and other nations of Italy, who, alarmed at the severities inflicted on Capua, surrendered to him the garrisons which had been placed in their cities by Hannibal. (*Livy*, 23, 21.—*Id.*, 24, 29.—*Id.*, 25, 2.)—VI. M. NOBILIOR, was prætor in Spain A.U.C. 588, B.C. 196, and carried the Roman arms to the Tagus, making himself master also of Toletum (*Toledo*), up to that period deemed impregnable. Having obtained the consulship, A.U.C. 565, he was intrusted with the war in Greece, during which he took Ambracia, traversed Epirus as conqueror, and reduced to submission the island of Cephallenia. Two years after this he was accused before the senate of having maltreated the allies of the Roman people, but was acquitted of the charge, and received the honour of a triumph. In the year 573 he was elected censor along with Æmilius Lepidus, his bitter foe. Apprehending injury to the state from their known enmity, the leading men of the senate adjured both individuals to lay aside their differences for the good of their country. A reconciliation accordingly took place, and nothing occurred to disturb these friendly feelings during the rest of their joint magistracy. Fulvius raised many public structures, a basilica, a forum, &c. He also constructed a port at the mouth of the Tiber. (*Liv.*, 33, 42.—*Id.*, 35, 7.—*Id.*, 20, 22, &c.)—VII. Q. FLACCUS, was prætor A.U.C. 573, B.C. 181. He took, in this capacity, the city of Urbicua in Farther Spain, and defeated the Celtiberi in the battle of Ebura, killing in this and in another encounter 35,000 men. On his return to Rome he received a triumph, and in the same year (575) the consulship. In A.U.C. 580 he was elected censor along with Posthumus Albinus. These two censors were the first that paved the streets of Rome, B.C. 174. The next year he built a temple to Fortune, and, to adorn it, carried off a large portion of the marble tiles from the temple of the Lacinian Juno in Lower Italy. (*Vid. Lacinium.*) The senate compelled him to restore these. The popular account made him to have been deprived of reason for this act of sacrilege. (*Liv.*, 39, 56 et 40.—*Id.*, 40, 16.—*Vell.*

Patere., 1, 10.)—VIII. M. FLACCUS, was consul A.U.C. 629, B.C. 125. He seconded the projects of Tiberius Gracchus to obtain for the states of Italy the rights of citizenship. Being afterward sent against the Gauls, he defeated them, and obtained a triumph. Four years subsequently he became involved in the seditious movements of the Gracchi relative to the agrarian law, and perished in an affray which arose. (*Vid. Gracchus.*)

FUNDANUS, a lake near Fundi in Italy, which discharges itself into the Mediterranean. (*Tacit., Hist.*, 3, 69.) According to Pliny, the Lacus Fundanus was originally called Amyclanus, from the city of Amyclæ in its vicinity. (*Plin.*, 14, 6.)

FUNDI, a town of Latium, on the Appian Way, near the Lacus Fundanus, and not far from Caieta. It is now *Fondi*. The first mention of this place in history occurs at the end of the Latin war, A.U.C. 417, when, with the exception of the right of voting, it obtained the privileges of a Roman city, for having allowed a free passage to the Roman troops in their march into Campania. (*Liv.*, 8, 14.) Not long after, however, the Fundani incurred the displeasure of the senate for having secretly aided the city of Privernum in a hostile incursion into the Roman territory, but, by a timely submission, they escaped the threatened vengeance Fundi received the right of voting A.U.C. 564, and its citizens were enrolled in the Æmilian tribe. (*Liv.*, 38, 36.) It was subsequently colonized by the veteran soldiers of Augustus. Horace's description of the ridiculous importance assumed by the prætor of Fundi will be in the recollection of most readers. (*Sat.*, 1, 5, 34, seq.—*Cramer's Anc. Italy*, vol. 2, p. 122.)

FURIA LEX, de Testamentis, by C. Furius the tribune. It forbade any person to leave as a legacy more than a thousand *asses*, and that he who took more should pay fourfold. By the laws of the twelve tables, one might leave what legacies he pleased. (*Cic., Verr.*, 1, 42.)

FURIE, the Furies, called also *Diræ* and *Eumenides*. These goddesses are frequently named by Homer, but he says nothing of their origin. In the Theogony, they spring from the blood of Uranus, when mutilated by his son Saturn, whose own children they are according to Empedocles; while Æschylus and Sophocles call them the children of Night. (*Æsch., Eumen.*, 317, 413.—*Soph., Œd. Col.*, 40, 106.) The Orphic Hymns assign them the rulers of Erebus for parents. (*Hymn.*, 70.) In the time of the Alexandrian writers, the Furies, like the Fates, were three in number, and were named Alecto (*Unceasing*), Megæra (*Enrifer* or *Denier*), and Tisiphone (*Blood-avenger*). The Furies were worshipped at Athens as the *revered* (*σεβαστὰ*) goddesses; and at Sicyon as the *kind* (*Εὐμενίδες*) deities. It is generally thought that both of these appellations were propitiatory ones, and meant to appease. Müller, however, is of opinion, that the term Eumenides, as applied to the Furies, is connected with old religious ideas, according to which, death and ruin, as well as life and welfare, were supposed to emanate from one and the same source. (*Müller, Eumenid.*, p. 204.)—The external representation of these goddesses, in the play of Æschylus called after them, is founded entirely on the fearful aspect of their ideal nature. In their exterior configuration the poet seems to have drawn a good deal on his own invention; for the earlier bards had no definite image of these goddesses before their eyes; and though there were in their temple at Athens old carved images of the *Scmna*, still their figure could not be adapted to dramatic purposes. From the Gorgons Æschylus borrowed the snaky hair of the Furies. He took, no doubt, from these also the pendent tongue, red with the lapped gore, and the grinning mouth, which regularly characterizes the Gorgon head in ancient works of art. The long pendent tongue, moreover, is most likely the main type

by which their resemblance to hounds was expressed. (*Müller, Eumenid.*, p. 216, *seq.*) According to the more common mode of delineating the Furies, they are represented as brandishing each a torch in one hand, and a scourge of snakes in the other.—For some remarks on the term Erinyes, consult that article. (*Keightley's Mythology*, p. 196.)

FURII, a family which migrated from Medullia in Latium, and came to settle at Rome under Romulus, and was admitted among the patricians. Camillus was of this family, and it was he who first raised it to distinction. (*Plut., Vit. Camill.*)

FURINA, an early Latin goddess, whose name, in the time of Varro, was hardly known to a few. (*Varro, L. L.*, 5, 3.) There was a sacred grove of this goddess beyond the Tiber (in which Caius Gracchus was slain), and this, with the similitude of the name, led Cicero and others to identify Furina with the Furies. (*Cic., N. D.*, 3, 18—*Plut., Vit. C. Gracch.*, c. 17.—*Martian, de Nupt.*, 2, 40.) The Furinalia were celebrated on the 25th July. (*Keightley's Mythology*, p. 540, *seq.*)

FURIUS, M. Bibaculus, a Latin poet of Cremona, who wrote zonalis in Iambic verse. (*Quintil.*, 10, 1, 96.) Horace ridicules him as a turgid and bombastic writer. (*Sat.*, 2, 5, 39, *seqq.*)

FUSCUS, ARISTRUS, a friend of Horace, as conspicuous for integrity as for learning and abilities. The poet addressed to him the 22d Ode of the First Book, and also the 10th Epistle, 1st Book.

FUSIA LEX, I. passed A.U.C. 690, ordained that, in the Comitia Tributa, the different kinds of people in each tribe should vote separately, that thus the sentiments of each rank might be known.—II. Caninia, another, enacted A.U.C. 751, to check the manumission of slaves; limiting this manumission to a certain number, proportioned to the whole amount of slaves which one possessed; from two to ten, the half; from ten to thirty, the third; from thirty to a hundred, the fourth part; but not above a hundred, whatever was the number. (*Heinecc., Antig. Rom.*, 1, 7, 1.—*Blair, on Slavery among the Romans*, p. 174.)

G.

GABÆ, a city of Persia, in the province of Persis, placed by Ptolemy southeast of Pasargada, on the confines of Carmania. Mannert makes it coincide with the modern *Darabgherd*. (*Geogr.*, vol. 5, pt. 2, p. 530, *seqq.*)—II. A city of Sogdiana, southwest of Cyreschata. D'Anville supposes it to be the modern *Kanos*; Mannert, on the contrary, is in favour of the modern *Rabas*, on the river *Kressel*, north of *Samar-cand*. (*Geogr.*, vol. 4, p. 460, 489.) Gabæ was one of the first places to which the exploits of Alexander gave celebrity in this country. It is the same with the Gabaza of Curtius. (*Quint. Curt.*, 8, 4, 1.)

GABII, I. a town of the Sabines, near the Via Salaria, and not far from Cures. Its site is now called *Grotte di Torri*, or simply *Torri*. (*Galletti, Gabio, antica città di Sabina, scoperta or è ora Torri, ovvero le Grotte di Torri, Roma*, 4to, 1757.)—II. An ancient city of Latium, somewhat to the northwest of Tusculum, and beyond the little river Veresis, (*Strabo*, 239.) which corresponds, as is thought, to the modern *l'Osa*. Strabo mentions that it was on the Via Prænestina, and about 100 stadia from Rome. Dionysius of Halicarnassus gives the same distance (4, 53); and Appian places it midway between Rome and Præneste. (*Bell. Civ.*, 5, 23.) The Itineraries reckon twelve miles from Rome to this town. These data enabled Holstenius and Fabretti to fix the position of Gabii with sufficient accuracy at a place called *l'Osteria del Pantano*; and this opinion was satisfactorily confirmed by the discoveries made here in 1792, under the direction of Gavin Ham-

ilton, on an estate of Prince Borghese, known by the name of *Pantano dei Grifi*. (*Visconti, Monumenti Gabini, Roma*, 1792.—*Nobby, Viaggio Antiq.*, vol. 1, p. 235.) Gabii is said to have been one of the numerous colonies founded by Alba (*Dion. Hal.*, 4, 53), and an obscure tradition represented it as the place in which Romulus and Remus were brought up. (*Dion. Hal.*, 1, 84—*Plut., Vit. Rom.*) The artful manner in which Tarquinius Superbus obtained possession of Gabii, after he had failed in the attempt by force of arms, is well known, as recorded by Livy (1, 58, *seqq.*—*Dion. Hal.*, 4, 53). The treachery of Sextus Tarquinius did not remain unpunished; for, after the expulsion of his family from Rome, he fell at Gabii, a victim to his tyranny and oppression. (*Liv.*, 1, 60.) According to the same historian, the Gauls received their final defeat from Camillus near this city (5, 49). This place suffered so much during the civil wars, that it became entirely ruined and deserted. We learn, however, from several monuments discovered in the excavations already referred to, that Gabii was raised from this state of ruin and desolation under Antoninus and Commodus, and that it became a thriving town. (*Visconti, Monumenti Gabini*.) In its more flourishing days, Juno seems to have been held in peculiar honour at Gabii, and the remains of her temple are said to be still visible on the site of that city. (*Nobby, Viaggio Antiquario*, vol. 1, p. 236.) The inhabitants of Gabii had a peculiar mode of folding or girding the toga, in order to give more freedom to the person when in motion. In this mode of wearing the toga, which was called the *Cinctus Gabinus*, or "Gabine Cincture," the lappet was thrown back over the left shoulder, and brought round under the right arm to the breast; so that it girded the individual, and made the toga shorter and closer. According to Servius (*ad Virg.*, *Æn.*, 7, 612), the inhabitants of Gabii, while engaged in sacrificing, were suddenly attacked by the enemy, whereupon, not having time to array themselves in arms, they tucked up their togas in this manner, and advanced to meet the foe. Virgil (*Æn.*, 7, 612) represents the Roman consul thus arrayed when he opens the gates of the temple of Janus; and in this garb the Decii devoted themselves to death. (*Cramer's Anc. Italy*, vol. 2, p. 50.)

GABINA, the name of Juno, worshipped at Gabii. (*Virg.*, *Æn.*, 7, 682.—*Vid. Gabii*, II.)

GABINIA LEX, I. *de Comitibus*, proposed by A. Gabinus, the tribune, A.U.C. 614. It required, that, in the public assemblies for electing magistrates, the votes should be given by ballots, and not *viva voce*. (*Cic., de Leg.*, 3, 16.)—II. Another, brought forward by A. Gabinus the tribune, A.U.C. 685. It granted Pompey the power of carrying on the war against the pirates during three years, and of obliging all kings, governors, and states to supply him with all the necessities he wanted, over all the Mediterranean Sea, and in the maritime provinces as far as 400 stadia from the sea. (*Cic., pro Leg. Man.*, 17.—*Dio Cass.*, 36, 7.)—III. Another, *de Usura*, by Aul. Gabinus the tribune, A.U.C. 685. It ordained that no action should be granted for the recovery of any money borrowed upon small interest to be lent upon larger. This was a usual practice at Rome, which obtained the name of *versuram facere*. Compare the remarks of *Heineccius, Rom. Ant.*, 3, 15, 14, p. 548, *ed. Haubold*.

GABINIUS, I. Aulus, the author of what were termed, from him, the Gabinian Laws, attached himself at first to Sylla, and afterward to Pompey. When tribune of the commons, B.C. 69, he proposed a law giving Pompey almost absolute control over the coasts of the Mediterranean, together with the command of the sea itself, for the purpose of suppressing the Cilician pirates. The leading men in the state endeavoured, but in vain, to prevent the passage of this law. They succeeded, however, in thwarting Gabinus' wish to

go as one of Pompey's lieutenants, although the latter expressly asked for him as such. Gabinus very probably was recompensed by Pompey in some other way, since, according to Cicero, he was so needy at the time, and so corrupt in principle, that, had this law not been passed, he would have turned pirate himself. Having obtained the consulship, B.C. 58, he took part with Clodius against Cicero, and powerfully contributed to the exile of the latter. The next year he obtained the government of Syria. Judæa, which was comprised in this province, was at that period a scene of trouble, owing to the rival claims of Hyrcanus and Aristobulus to the throne. Gabinus defeated Aristobulus in a great battle near Jerusalem, and then wrote home to the senate, and claimed a thanksgiving for his victory. This was refused him, and he was ordered to return. Disobeying the authority of the senate, he continued in command, and acted in the most arbitrary and oppressive manner. He even had the hardihood to march into Egypt, thus violating a positive law by making war beyond the boundaries of his own province. His object in passing into this country was to reinstate Ptolemy, which he successfully effected, after two victories over his rebellious subjects. The senate, highly incensed at his conduct, ordered him at last to return home and defend himself. Having obeyed this mandate, he was immediately accused of high treason. The interest of Cæsar and Pompey, however, obtained his acquittal. He was immediately after accused of extortion, and was less successful, notwithstanding the same powerful influence was exerted in his behalf; and even Cicero himself, yielding to the solicitations of Pompey, actually appeared as his advocate. Gabinus was condemned to perpetual banishment. After an exile of some years he was recalled by Cæsar, and remained thenceforth attached to the party of the latter. Subsequently to the battle of Pharsalia, he was sent into Illyricum with some newly levied-legions, but his army was almost destroyed, in several encounters, by the barbarians, and he was compelled to shut himself up in Salona, where he died of a malady brought on by chagrin at his discomfiture. His death happened about A.U.C. 707. (*Cic., pro Dom., 9.—Id., pro Leg. Man., 17.—Id., Phil., 14, 8.—Plut., Vit. Pomp.—Id., Vit. Cic., &c.*)—II. A Roman general under Claudius, about A.D. 31, who gained some successes over the Germans.

GABINUS CINCTUS. *Vid.* Gabii.

GADES (*num.*) GADIS (*is*), and GADIRA, a flourishing commercial city of Spain, at the mouth of one of the arms of the Batis, now *Cádiz*. It was founded by a Phœnician colony about 1500 B.C., according to some; others, however, make its foundation coeval with that of Utica, and this last to have been 287 years before Carthage. Its name in Phœnician was Gaddir, and signified a hedge or limit, as it was thought that here were the western limits of the world. Thus Pliny (4, 36) remarks, "*Pœni Gaddir, ita Punica lingua septem significante*," and Solinus (c. 23), "*Quam Tyrii, a Rubro profecti mari, Erythream, Pœni lingua sua Gaddir, id est septem, nominant.*"—The Greek name is Γάδερα, and hence we have in Hesychius, Γάδερα τὰ περιόραματα, Φοίνικες. (Compare the Hebrew form *Gedrah*, which Gesenius defines a place surrounded with a wall, into which the shepherds drove their flocks by night, for security against wild animals. Consult also *Gesenius, Geschichte der Hebräischen Sprache und Schrift*, p. 227.) It was situate on a small island of the same name, which was separated from the main land by a strait only one stadium wide. This island is said to have abounded at an early period with wild olive-trees, and to have been hence named *Cotinūsa* (Κοτινοῦσα), not by the early inhabitants of the land, however, as some of the ancient writers thought, but by the Greeks; for the

appellation is a Grecian one. Near it lay the small island Erythea, called by the inhabitants *Juno's island*. (*Vid.* Erythea.) Gades came into the power of the Carthaginians in the first Punic war, and in the second surrendered itself voluntarily to the Romans. From Julius Cæsar it received the name and privileges of a Roman colony; and in a later age it was styled Augusta Julia Gadicana. Hercules, surnamed *Gaditanus*, had here a celebrated temple. (*Plin., l. c.—Flor., 2, 17.—Lic., 28, 37.—Justin., 44, 5.*)

GADITANUS SINUS, now the Bay of Cádiz.

GADITANUM FRETUM, now the Straits of Gibraltar. (*Vid.* Abyla and Calpe.)

GÆTULIA, a country of Africa, south of Numidia, and now answering in some degree to *Biledulgerid*, or the region of locusts. Its situation and limits are not properly ascertained, and, indeed, do not seem to have been always the same. Isidorus (c. 9) gives a curious account of the origin of the Gætuli: "*Gætuli Getæ dicuntur fuisse, qui ingenti agmine a locis suis navibus conscendentes loca Syrtium in Libya occupaverunt: et, quia ex Getis venerant, derivato nomine Gætuli cognominati sunt.*" This statement is very properly refuted by the president Des Brosses; but he himself assigns an etymology just as uncertain, namely, from the Phœnician term *Geth*, "a flock," on the supposition that they were a shepherd-race. (*Flor., 4, 12—Mela, 1, 4.—Plin., 5, 1.—Id., 21, 13, &c.*)

GAIUS (*vid.* remarks under *Caius*), one of the Roman classical jurists, whose works entitle him to a place among the great writers on law, such as Papinian, Paulus, and Ulpian. Nothing is known of the personal history of Gaius beyond the probable fact that he wrote under Antoninus Pius and Aurelius. His works were largely used in the compilation of the "*Digest*" or "*Pandects*," which contain extracts from his writings under various heads. The "*Institutions*" of Gaius were probably the earliest attempt to present a sketch of the Roman law in the form of an elementary text-book. This work continued in general use till the compilation of the *Institutes* of Justinian, which were not only mainly based on the *Institutions* of Gaius, but, like this earlier work, were divided into four books, with the same general distribution of the subject-matter as that adopted by him. The *Institutions* of Gaius appear to have been neglected after the promulgation of Justinian's compilation, and were finally lost. All that remained was the detached pieces collected in the *Digest*, and what could be gathered from the "*Breviarium Alarici-anum*," as the code of the Visigoths is sometimes called. But in 1816, Niebuhr discovered a manuscript in the library of the chapter of Verona, which he ascertained to be a treatise on the Roman law, and which Savigny, founding his opinion on the specimens published by Niebuhr, conjectured to be the *Institutions* of Gaius. This conjecture was soon fully confirmed, though the MS. has no author's name on it. Göschel, Bekker, and Hollweg undertook to examine and copy this MS., an edition of which appeared at Berlin in 1820, by the first of these scholars. To form some idea of the labour necessary to decipher this MS., and of the patient perseverance of those who undertook this formidable task, the reader is referred to the report of Göschel to the Academy of Berlin, Nov. 6th, 1817. A second examination of this MS. was made by Bluhme, and a new edition of the *Institutions* was published by Göschel, at Berlin, in 1824, which presents us with an exact copy of the MS., with all its deficiencies, and contains a most copious list of all the abbreviations used by the copyist of Gaius.—The *Institutions* of Gaius form one of the most valuable additions that have been made in modern times to our knowledge of the Roman law. The fourth book is particularly useful for the information which it contains on actions and the forms of proce-

dure. The style of Gaius, like that of all the classical Roman jurists, is perspicuous and yet concise. One of the most useful editions is that by Klenze and Böcking (Berlin, 1829), which contains the Institutions of Gaius and Justinian, so arranged as to present a parallelism, and to furnish a proof, if any yet were wanting, that the MS. of Verona is the genuine work of Gaius. (*Encycl. Us. Knoel.*, vol. 11, p. 34. — Consult Göschel, on the "*Res Quotidiana*" of Gaius, in the *Zeitschrift für Geschichtliche Rechtswissenschaft*, Berlin, 1815, and Hugo, *Lehrbuch der Gesch. des Röm. Rechts.*)

GALANTHIS, a servant-maid of Alcmena, whose sagacity eased the sufferings of her mistress. When Juno resolved to retard the birth of Hercules, and hasten the labours of the wife of Sthenelus, she solicited the aid of Lucina, who immediately repaired to the dwelling of Alcmena, and, in the form of an aged female, sat near the door with her feet crossed and fingers joined. In this posture she uttered some magical words, which served to prolong the sufferings of Alcmena. Alcmena had already passed some days in the most excruciating torments, when Galanthis began to suspect the jealousy of Juno; and concluded that the female, who continued at the door always in the same posture, was the instrument of the anger of the goddess. Influenced by these suspicions, Galanthis ran out of the house, and with a countenance expressive of joy, she informed the aged stranger that her mistress had just brought forth. Lucina, at these words, rose from her posture, and that instant Alcmena was safely delivered. The laugh which Galanthis raised upon this, made Lucina suspect that she had been deceived. She seized Galanthis by the hair, threw her on the ground, and transformed her into a weasel. (*Ovid, Met.*, 9, 306, *seqq.*)—This whole fable is connected with a legend prevalent among the Thebans, that, when Alcmena was suffering from the pangs of parturition, a weasel (*γαλήνη*) ran by and terrified her by its sudden appearance, and that the terror thus excited eased her throes and produced a happy delivery. (*Ælian, V. II.*, 12, 5.) Hence the weasel was highly revered by the Thebans, and was called by them the nurse of Hercules. (*Clem. Alex., Protr.*, p. 25, 6.)

GALĀTÆ, the inhabitants of Galatia. (*Vid. Galatia.*)

GALĀTÆA and **GALATHÆA**, a sea-nymph, daughter of Nereus and Doris. She was passionately loved by the Cyclops Polyphemus, whom she treated with disdain; while Acis, a shepherd of Sicily, enjoyed her unbounded affection. The union, however, of the two lovers was destroyed by the jealousy of Polyphemus, who crushed his rival with a fragment of rock, which he rolled on him from an overhanging height. Galatæa was inconsolable for the loss of Acis, and as she could not restore him to life, she changed him into a stream. (*Ovid, Met.*, 13, 789.—*Virg., Æn.*, 9, 103.)

GALATIĀ or **GALLOGRÆCIĀ**, a country of Asia Minor, lying south of Paphlagonia, west of Pontus, and northeast of Phrygia. (*Vid. Gallo-Græcia.*)

GALBA, I. Sergius, an orator anterior to Cicero. While holding the government of Spain, he treacherously murdered 30,000 Lusitanians. Having been accused for this by Cato the Censor, he was about to be condemned, when he wrought upon the feelings of the people by embracing before them his two sons, still quite young. This saved him. (*Cic., Orat.*, 1, 53.)—II. Servius Sulpitius, a celebrated Roman lawyer, father of the emperor.—III. Servius Sulpitius, born in the reign of Augustus, of a patrician family, served with distinction in Germany, was afterward proconsul, first in Africa, and subsequently in Hispania Tarraconensis, in which office he gained a reputation for justice and moderation. He was still in

Spain when Julius Vindex, the proconsul of Celtic Gaul, rose against Nero. Galba joined Vindex, and Otho, governor of Lusitania, followed his example. The assembled multitudes saluted Galba as emperor and Augustus; but he declared that he was only acting as the lieutenant of the senate and people of Rome, in order to put an end to the disgraceful tyranny of Nero. The prætorian guards soon after, having revolted against Nero, proclaimed Galba, and the senate acknowledged him as emperor. Galba hastened from Spain to Rome, where he began by calling to account those favourites of Nero who had enriched themselves by proscriptions and confiscations, and by the senseless prodigality of that prince; but it was found that most of them had already dissipated their ill-gotten wealth. Galba, or, rather, his confidants who governed him, then proceeded against the purchasers of their property, and confiscations became again the order of the day. The new emperor, at the same time, exercised great parsimony in his administration, and endeavoured to enforce a strict discipline among the soldiers, who had been used to the prodigality and license of the previous reign. Being past seventy years of age, Galba, on this and other accounts, soon became the object of popular dislike and ridicule, his favourites were hated, and revolts against him broke out in various quarters, several of which were put down and punished severely. Galba thought of strengthening himself by adopting Piso Licinianus, a young patrician of considerable personal merit, as Cæsar and his successor; upon which Otho, who had expected to be the object of his choice, formed a conspiracy among the guards, who proclaimed him emperor. Galba, unable to walk, caused himself to be carried in a litter, hoping to suppress the mutiny; but, at the appearance of Otho's armed partisans, his followers left him, and even the litter-bearers threw the old man down and ran away. Some of the legionaries came up and put Galba to death after a reign of only seven months, counting from the time of Nero's death, A.D. 68. Galba was 72 years old when he was taken off. He was succeeded by Otho, but only for a short time, as Vitellius superseded him, and Vespasian soon after superseded Vitellius. (*Sueton., Vit. Galb.*—*Tacit., Hist.*, 1, 4, *seqq.*—*Dio Cass.*, 63, 29.—*Id.*, 64, 1, *seqq.*)

GALĒNUS, **CLAUDIŪS**, a celebrated physician, born at Pergamus about 131 A.D. His father, an able architect and good mathematician, gave him a liberal education. His anatomical and medical studies were commenced under Satyrus, a celebrated anatomist; Stratoniceus, a disciple of the Hippocratic school; and Æschrius, a follower of the Empirics. After the death of his father he travelled to Alexandria, at that time the most famous school of medicine in the world. His studies were so zealously and successfully pursued, that he was publicly invited to return to his native country. At the age of 34 he settled himself at Rome, when his celebrity became so great from the success of his practice, and more especially from his great knowledge of anatomy, that he quickly drew upon himself the jealousy of all the Roman physicians. He became physician to the Emperor Marcus Aurelius. At the solicitation, also, of many philosophers and men of rank, he commenced a course of lectures on Anatomy; but the jealousy of his rivals quickly compelled him to discontinue them, and eventually to leave Rome entirely. Many particulars of his life may be gathered from his own writings; we are unacquainted, however, with the period of his return home, as well as that of his death. All that we can learn is merely that he was still living in the reign of Septimius Severus.—Galen was a most prolific writer. Though a portion of his works were lost by the conflagration of his dwelling, or have been destroyed by the lapse of time, still we have the following productions of his surviving and in print. 1. Eighty-two treatises, the genuineness of

which is now well established. 2. Eighteen of rather doubtful origin. 3. Nineteen fragments, more or less extensive in size. 4. Eighteen commentaries on the works of Hippocrates.—To these published works must be added thirty or forty treatises or parts of treatises, which still exist in manuscript in the public libraries of Europe. The number of works that are lost, among which were fifty that treated on medical subjects, is supposed to have been one hundred and sixty-eight.—The instruction which Galen had received in the principles of the different sects of medical philosophy, had given him an acquaintance with the various errors of each, and he speaks of them at all times in the language of no measured contempt. The school which was founded by himself may justly merit the title of Eclectic, for its doctrines were a mixture of the philosophy of Plato, of the physics and logic of Aristotle, and of the practical knowledge of Hippocrates. On many occasions he expresses himself strongly on the superiority of theory to mere empiricism; but upon those matters which do not admit of being objects of experience, such as the nature of the soul, he confesses his ignorance, and his inability to give any plausible explanation.—Among the productions of Galen that are of a philosophical character, may be enumerated the following: A treatise “On the best Doctrine” against Plavorius; a dissertation “On the opinions of Hippocrates and Plato;” “a commentary on the *Timæus* of Plato,” and several pieces “On Dialectics.” Galen has been frequently censured for impiety; but his *Demonstration of Divine Wisdom* from the structure of the human body, in his treatise “On the uses of the parts of the human body,” is a sufficient refutation of this calumny.—The following sketch of the professional character of this celebrated physician is given by Dr. Adams. “Galen, to whom medicine, and every science allied to it, are under so great obligations, was a man skilled in all philosophy, a profound reasoner, an ardent admirer of truth, a worthy member of society, and a distinguished ornament of his profession. Though, according to his own account, unambitious of fame, he acquired a name which for fourteen centuries was above every other name in his profession, and even now stands pre-eminently illustrious. We shall give a hasty sketch of his merits in the different branches of medical science to which he directed his attention. Wisely judging that an acquaintance with the minute structure of the human body was an indispensable preparation to a knowledge of its derangements, he devoted himself ardently to the study of anatomy, in which his works evince that he was eminently skilled. In his *Administraciones Anatomica* particularly, almost every bone and process of bone, every twig of nerve, every ramification of bloodvessel, every viscus, muscle, and gland, with which modern anatomists are acquainted, are described by him with a degree of minuteness which will surprise those who entertain a mean opinion of the Galenical anatomy. Vesalius, indeed, a zealot for human dissection in the days of the Emperor Charles the Fifth, strenuously attacks the accuracy of his anatomical descriptions; and as he was constantly on the lookout for mistakes, he is no doubt sometimes successful in attaining the object of his search; but, in other instances, while endeavouring to set Galen right, he only goes wrong himself. For example, he finds fault with Galen for saying that the fourth ventricle of the brain is lined by a membrane; but it is now well ascertained that here Galen was right, while his censurer was wrong. In fact, the justness of Vesalius’ strictures has been too easily acquiesced in, although most of them had been previously rebutted by the learned Eustachius.—Galen’s treatise ‘*De usu Partium*’ is replete with accurate anatomical descriptions, ingenious physiological theory, and sound theology, and in all these respects need not fear a comparison with our Paley’s work on natural theology.

X x x

Throughout, as the learned Mr. Harris has well remarked, he, in imitation of Aristotle, inculcates, with irresistible strength of argument, the great doctrine of *Final Causes*, maintaining, in opposition to the Epicureans, that Means do not lead to Ends, but Ends to Means. As to his Physiology, it is in general founded upon careful dissection, accurate experiment, and philosophical induction; so that, in most instances where it has been departed from, subsequent experience has shown the correctness of its doctrines. Thus the distribution of the nerves into nerves of sensation and nerves of muscular motion, and the distinction between the characters of the cerebral and spinal nerves, although clearly pointed out by him, and acquiesced in by Orribasius, Theophilus, and Nemesius among his countrymen, and by Rhazes, Serapion, Avicenna, Avenzoar, and Averrhoes among the Arabians; nay, though admitted by his modern rival Vesalius, were overlooked or denied by subsequent physiologists, until the doctrine was lately revived by an intelligent lecturer on anatomy in London. In the hands of several English and French experimentalists, this theory has undergone different modifications; but I will venture to predict, that, when time has deprived it of the charm of novelty, the additions and alterations which have been made by modern hands upon the ancient doctrine, will be found to be rather blemishes than improvements. With regard to the functions of the arteries and veins, Galen’s views must be admitted to be not very distinctly defined; but has the celebrated theory of Harvey removed all the difficulties, and cleared away all the obscurity, which hung over this important department of physiology? Let the following declaration, by one of the most distinguished among the present physiologists of France, be taken as a test of the degree of precision which now prevails upon this subject: ‘Il n’existe pas deux ouvrages de Physiologie, deux traités de Médecine, où la circulation soit décrite et considérée dans le même manière.’ (*Magendie, Jour. de Phys.*) At all events, it is clear that Galen had the merit of establishing two important facts regarding the function of the arteries; first, that they contain blood, and not vapour or gas, as mentioned by Erasistratus; and, secondly, that it is the expansion or diastole of the artery which is the cause of the influx of the blood, and not the influx of the blood which is the cause of the expansion of the artery. The former of these facts Harvey himself does him the justice of allowing that he maintained; and a late French physiologist, Dumas, compliments him for having held the latter opinion, although it is at variance with Harvey’s views respecting the circulation. In his work on the *Natural Faculties* he has expressed fully his sentiments upon a subject which is still far from being cleared up; but it is remarkable, that very lately a theory has been advanced, which corresponds, in a great degree, with the doctrine advocated by Galen. I allude to Dutrochet’s famous theory of the Endosmose and Exosmose, which powers, if I mistake not, are but different names for the Attractive and Expulsive Faculties of Galen.—Operative Surgery is the department of his profession which is least indebted to him; and yet even here he has left some monuments of his boldness and ingenuity. He has described minutely an operation performed by him upon the chest of a young man, by which he perforated the breast-bone, and laid bare the heart, in order to give vent to a collection of matter seated in the thorax. The subject of Ulcers is handled by him very scientifically in his book *De Methodo Medendi*. It is to be remarked, that his definitions and divisions of ulcers are the same as those adopted by one of our best English writers on this subject, Mr. Benjamin Bell. His *Commentaries on Hippocrates* show his acquaintance with Fractures and Dislocations.—Of *Hygiene, or the Art of Preserving Health*, he treated at great length in a work consisting of six books.—His treatise *De Fac-*

ultate Alimentorum contains very important observations on the nature of aliments, and furnishes an exposition of his opinion on the subject of Dietetics. It need not fear a comparison with the work lately published on Diet by Dr. Paris. I do not state this in disparagement of the latter, whom I esteem to be a very judicious authority, but to intimate my opinion that we have not advanced much in the knowledge of this branch since the time of Galen.—Of most diseases he has treated either fully or cursorily in some part or other of his works, but upon the whole he has given no comprehensive treatise upon the practice of physic. His most complete treatises are those entitled *De Curatione, ad Glauconem*, and the *Ratio Curandi*.—The *Materia Medica* and *Pharmacy* appear to have been the objects of his particular study, and both are handled by him in several of his works. Though his list of medicinal articles, taken from the vegetable kingdom, be less numerous than that of Dioscorides, he has described more animal and mineral substances. His treatise *De Medicinis secundum locos* contains a copious list of pharmaceutical preparations; and that part of it on Compositions for the Eyes might, I am convinced, be consulted with advantage by the oculists of the present day.—Of all his works, none was long so much studied and commented upon as the one entitled *Ars Medica*, respecting which Kühn remarks: '*Est is in Galeni libris, quem grata erga tantum virum posteritas aestimavit longe maxime quem omnes scholæ explicabant, quem medici diurna nocturna manu versabant, quem legisse debebant cuilibet librum Galeni maxime authenticum omnes, ejusque puncta debebant explicare, specimenis causâ prius, quam licentiam praececos medicæ exercendæ consequerentur.*' Of a treatise long so celebrated, and now so little known, it is scarcely safe to express an opinion, lest we should be reduced to the alternative of either reproaching antiquity for want of sense, or modern times for want of discernment. At all events, however, we may venture to affirm, that, if the Doctrine of the Temperaments have any foundation in nature, no one had ever studied them more attentively, or described them with greater precision, than Galen has done in this treatise.—In several works he gives an elaborate system of the Arterial Pulses, which, as usual with his doctrines, was taken up by all subsequent writers; and abridged expositions of it may be found in Philaretus, Paulus Aegineta, Actuarius, Rhazes, and Avicenna. The reader may find some candid remarks upon it in Borden's *Physiology*, who, although an advocate for a new system, gives not an unfair statement of the system of Galen.—The best edition of Galen is that of Kühn, 19 vols. 8vo, *Lips.*, 1821–1830.

GALERIUS, a Roman emperor. (*Vid.* Maximianus.)

GALĒSUS, 1. now *Galeso*, a river of Calabria, flowing into the bay of Tarentum. The poets have celebrated it for the shady groves in its neighbourhood, and the fine sheep which fed on its fertile banks, whose fleeces were said to be rendered soft by bathing in the stream. (*Martial, Ep.*, 2, 43; 4, 28.—*Virg., G.*, 4, 126.—*Horat., Od.*, 2, 6, 10.)—II. A rich inhabitant of Latium, killed as he attempted to make a reconciliation between the Trojans and Rutulians, when Ascanius had killed the favourite stag of Tyrrheus, which was the prelude of all the enmities between the hostile nations. (*Virg., Æn.*, 7, 535.)

GALILĒA, a celebrated country of Palestine, forming the northern division. Josephus (*Bell. Jud.*, 3, 3) divides it into Upper and Lower, and he states that the limits of Galilee were, on the south, Samaris and Scythopolis to the flood of Jordan. It contained four tribes, Issachar, Zebulon, Naphtali, and Asher; a part also of Dan, and part of Peræa, or the country beyond Jordan. Upper Galilee was mountainous, and was called Galilee of the Gentiles, from the heathen nations established there, who were enabled, by

the mountainous nature of the country, to maintain themselves against all invaders. Strabo enumerates among its inhabitants, Egyptians, Arabians, and Phœnicians. (*Strab.*, 760.) Lower Galilee, which contained the tribes of Zebulon and Asher, was adjacent to the Sea of Tiberias or Lake of Gennesareth. Galilee, according to Josephus, was very populous, contained 204 cities and towns, and paid 200 talents in tribute. Its principal city was Cæsarea Philippi. The inhabitants of Galilee were very industrious, and, being bold and intrepid soldiers, they bravely resisted the nations around them. The Jews of Judæa regarded them with much contempt. Their language was a corrupt and unpolished dialect of Syriac, with a mixture of other languages. It was probably this corrupt dialect that led to the detection of Peter as one of Christ's disciples. (*Mark*, 14, 70.) Our Saviour was called a Galilean (*Matt.*, 26, 69), because he was brought up at Nazareth, a city of Galilee; and as his apostles were mostly, if not all, natives of this province, they also are called Galileans and "men of Galilee." (*Acts*, 1, 11.) This country was most honoured by our Saviour's presence. To this part Joseph and Mary returned with him from Egypt; here he lived till he was thirty years of age, and was baptized by John; hither he returned after his baptism and temptation; and in this province was his place of residence when he commenced his ministry. The population being very great, he had more opportunities of doing good here than in any other portion; on which account, probably, he made it his principal abode. After his resurrection he directed his apostles to come to Galilee to converse with him. (*Matt.*, 28, 7.—Consult, in relation to this country, the following parts of Scripture: *Josh.*, 20, 7, and 21, 32.—*1 Kings*, 9, 11.—*2 Kings*, 15, 29.—*1 Chron.*, 6, 76.—*Isaiah*, 9, 1.—*Matt.*, 2, 22; 3, 13; 4, 12.—*Luke*, 4, 14.—*John*, 7, 41.—*Acts*, 5, 37, and 10, 37.)

GALLI, 1. a warlike race of antiquity. (*Vid.* Gallia.)—II. A name borne by the priests of Cybele. (*Vid.* Cybele.)

GALLIA, an extensive and populous country of Europe, bounded on the west by the Atlantic, on the north by the Insula Batavorum and part of the Rhenus or *Rhine*, on the east by the Rhenus and the Alps, and on the south by the Pyrenees. The greatest breadth was 600 English miles, but much diminished towards each extremity, and its length was from 480 to 620 miles. It was therefore more extensive than modern France before the Revolution, though inferior to the kingdom under Napoleon, which was 650 miles long from east to west, and 560 broad from north to south. Gaul was originally divided among the three great nations of the Belgæ, the Celtæ, and the Aquitani. The Romans called the inhabitants of this country by one general name, Galli, while the Greeks styled them Celtæ. The Greeks called the country itself Galatia, *Celtica* (*Κελτική*), and Celto-Galatia; the last for distinction's sake from Galatia in Asia Minor. Of the three great nations of Gaul, the Celtæ were the most extensive and indigenous, and the Belgæ the bravest. The Celtæ extended from the Sequana or *Seine* in the north, to the Garumna or *Garonne* in the south. Above the Celtæ lay the Belgæ, between the *Seine* and *Lower Rhine*. They were intermixed with Germanic tribes. The Aquitani lay between the *Garonne* and Pyrenees, and were intermingled with Spanish tribes. These three great divisions, however, were subsequently altered by Augustus, B.C. 27, who extended Aquitania into Celtica as far as the Liger or *Loire*; the remainder of Celtica above the Liger was called Gallia Lugdunensis, from the colony of Lugdunum, *Lyons*; and the rest of Celtica towards the Rhine was added to the Belgæ under the title of Belgica; lastly, the south of Gaul, which, from having been the first provinces possessed by the Romans, had

been styled *Gallia Provincia*, was distinguished by the name of *Narbonensis*, from the city of *Narbo* or *Narbonne*. This province was anciently called also *Gallia Braccata*, from the *bracca* or under-garments worn by the inhabitants; while *Gallia Celtica* was styled *Comata*, from the long hair worn by the natives. These four great provinces, in later ages, were called the four Gauls, and subdivided into 17 others.

1. General remarks on the Gallic race.

As far back as we can penetrate into the history of the West, we find the race of the Gauls occupying that part of the continent comprehended between the Rhine, the Alps, the Mediterranean, the Pyrenees, and the Ocean, as well as the two great islands situate to the northwest, opposite the mouths of the Rhine and Seine. Of these two islands, the one nearer the continent was called *Alb-in*, "White Island." (*Alb* signifies "high" and "white;" *inn*, contracted from *innis*, means "island.")—Compare the remark of Pliny, 14, 16, "*Albion insula, sic dicta ab albis rupibus quas mare alluit.*") The other island bore the name of *Er-in*, "Isle of the West" (from *Eir* or *Iar*, "the west"). The continental territory received the special appellation of *Galltacht*, "Land of the Galls." The term *Galltacht*, or, more correctly, *Gaidhealtacht*, is still applied to the highlands of Scotland. From this word the Greeks formed *Γαλατία* (*Galatia*), and from this latter the generic name of *Γαλάται*. The Romans proceeded by an inverse method, and from the generic term *Galli* deduced the geographical denomination *Gallia*. The population of Gaul was divided into families or tribes, forming among themselves many distinct communities or nations. These nations generally assumed names deduced from some feature of the country in which they dwelt, or from some peculiarity in their social state. Oftentimes they united together, in their turn, and formed confederations or leagues. Such were the confederations of the Celts, *Ædui*, *Armorici*, *Arverni*, &c.—The Gaul was robust and of tall stature. His complexion was fair, his eyes blue, his hair of a blond or chestnut colour, to which he endeavoured to give a red or flaming hue by certain applications. (*Plin.*, 28, 12.—*Martial*, 8, 33.) The hair itself was worn long, at one time floating on the shoulders, at another gathered up and confined on the top of the head. (*Diod. Sic.*, 5, 28.) The beard was allowed to grow by the people at large; the nobles, on the other hand, removed it from the face, excepting the upper lip, where they wore thick mustaches. (*Diod. Sic.*, l. c.) The attire common to all the tribes consisted of pantaloons or *bracca* (*braca*, *bracca*, *braga*; *brykan* in *Cymraig*; *bragu* in *Armoric*). These were of striped materials. (In Celtic *brac* means "a stripe.") They wore also a short cloak, having sleeves, likewise formed of striped materials, and descending to the middle of the thigh. (*Strabo*, 196.) Over this was thrown a short cloak or *saguin* (*sac*, *Armoric*.—Compare *Isidor.*, *Origin.*, 19, 24), striped like the shirt, or else adorned with flowers and other ornamental work, and, among the rich, superbly embroidered with silver and gold. (*Virg.*, *Æn.*, 8, 660.—*Sil. Ital.*, 4, 152.—*Diod. Sic.*, 5, 28.) It covered the back and shoulders, and was secured under the chin by a clasp of metal. The lower classes, however, wore in place of it the skin of some animal, or else a thick and coarse woollen covering, called, in the Gallo-Kimric dialects, *lunn* or *lenn*. (In *Armoric* *ten* means "a covering;" and in Gaelic *lein* signifies "a soldier's cloak.")—Compare the Latin *lena* and the Greek *λαῖνα* and *χλαῖνα*.—The Gauls possessed a strong taste for personal decoration: it was customary with the rich and powerful to adorn themselves with a profusion of collars, bracelets, and rings of gold. (*Strabo*, 196.)—The offensive arms of the nation were, at first, hatchets and knives of stone; arrows pointed

with flint or shells; clubs; spears hardened in the fire, and named *gais* (in Latin *gæsum*, in Greek *γαισών* and *γαισός*); and others called *cateies*, which they hurled all on fire against the enemy. (In Gaelic, *gath-teth*, pronounced *ga-tè*, signifies "a fiery dart.") Foreign traffic, however, made them acquainted, in process of time, with arms of iron, as well as with the art of manufacturing them for themselves from the copper and iron of their own mines. Among the arms of metal which thenceforward came into use, may be mentioned the long sabre of iron or copper, and a pike resembling our halberds, the wound inflicted by which was considered mortal. For a long time the Transalpine, as well as the Cisalpine, warriors of the Gallic race had rejected the use of defensive armour as inconsistent with true courage; and, for a long period, an absurd point of honour had induced them even to strip off their vestments, and engage naked with the foe. This prejudice, however, the fruit of an ostentations feeling natural to the race, was almost entirely effaced in the second century. The numerous relations formed between the Gauls and the Massiliots, Italians, and Carthaginians, had at first spread a taste for armour, as a personal decoration, among the Gallic tribes; in a short time the conviction of its utility was superadded; and the military costume of Rome and Greece, adopted on the banks of the Loire, the Rhone, and the Saône, formed a singular combination with the ancient array of the Gaul. To a helmet of metal, of greater or less value according to the fortune of the warrior, were attached the horns of an elk, buffalo, or stag; while for the rich there was a headpiece representing some bird or savage beast; the whole being surmounted by a bunch of plumes, which gave to the warrior a gigantic appearance. (*Diod. Sic.*, 5, 28.) Similar figures were attached to their bucklers, which were long, quadrangular, and painted with the brightest colours. These representations served as devices for the warriors; they were emblems by means of which each one sought to characterize himself or strike terror into the foe. (Compare *Vegetius*, 2, 18.—*Sil. Ital.*, 4, 148.)—A buckler and casque after this model; a cuirass of wrought metal, after the Greek and Roman fashion, or a coat of mail formed of iron rings, after the manner of Gaul (*Varro*, *L. L.*, 4, 20); an enormous sabre hanging on the right thigh, and suspended by chains of iron or brass from a belt glittering with gold and silver, and adorned with coral; a collar, bracelets, rings of gold around the arm and on the middle finger (*Plin.*, 33, 1); pantaloons; a sagum hanging from the shoulders; in fine, long red mustaches; such were the martial equipments and such the appearance of an *Arvernian*, *Æduan*, or *Biturigan* noble.—Hardy, daring, impetuous, born, as it were, for martial enterprises, the Gallic race possessed, at the same time, an ingenious and active turn of mind. They were not slow in equalling their Phœnician and Grecian instructors in the art of miming. The same superiority to which the Spaniards had attained in tempering steel, the Gauls acquired in the preparation of brass. Antiquity assigns to them the honour of various useful inventions, which had hitherto escaped the earlier civilization of the East and of Italy. The process of tinning was discovered by the *Bituriges*; that of vencing by the *Ædui*. (*Plin.*, 34, 17.) The dyes, too, of Gaul were not without reputation. (*Plin.*, 8, 48.) In agriculture, the wheel-plough and boulder were Gallic discoveries. (*Plin.*, 18, 18.—*Id. ibid.*, 18, 11.) With the Gauls, too, originated the employment of marl for enriching the soil. (*Plin.*, 18, 6, *seqq.*) The cheeses of Mount *Lozère*, among the *Gabali*; those of *Nemausus*; and two kinds made among the Alps, became, in time, much sought after by the inhabitants of Italy (*Plin.*, 11, 49); although the Italians generally ascribed to the Gallic cheeses a savour of too acid a nature and somewhat medicinal. (*Plin.*,

I. c.) The Gauls also prepared various kinds of fermented drinks; such as barley-beer, called *cerevisia* (*Plin.*, 22, 15.—In old French, *Cerveoise*; in Cymraig, *Cerv.*); and likewise another kind of beer, made from corn, and in which honey, cumin, and other ingredients were mingled. (*Posidon., ap Athen.*, 4, 13.) The froth of beer was employed as a means for leavening bread: it was used also as a cosmetic, and the Gallic females frequently applied it to the visage, under the belief that it imparted a freshness to the complexion. (*Plin.*, 22, 25.) As regarded wine, it was to foreign traders that the Gauls and Ligurians were indebted for its use; and it was from the Greeks of Massilia that they learned the process of making it, as well as the culture of the vine.—The dwellings of the Gauls, spacious and of a round form, were constructed of posts and hurdles, and covered with clay both within and without; a large roof, composed of oak-shingles and stubble, or of straw cut and kneaded with clay, covered the whole. (*Strabo*, 196.—*Vitruv.*, 1, 1.)—Gaul contained both open villages and cities: the latter, surrounded by walls, were defended by a system of fortification, of which we find no example elsewhere. Cæsar gives the following description of these ramparts (*B. G.*, 7, 23). "Straight beams, placed lengthwise at equal intervals, and two feet distant from each other, are laid along the ground. These are mortised together on the inside, and covered deep with earth; but the intervals are stopped in front with large stones. These being fixed and cemented together, another range is put over, the same distance being preserved, and the beams not touching each other, but intermitting at equal spaces, and each bound close together by a single row of stones. In this manner the whole work is intermixed till the wall is raised to its full height. By this means the work, from its appearance and variety, is not displeasing to the eye: the beams and stones being placed alternate, and keeping their own places in exact right lines: and besides, it is of great advantage in the defence of cities; for it is secured by the stone from fire, and from the battering-ram by the wood, which, consisting of entire beams, forty feet long, for the most part mortised on the inside, could neither be forced in nor torn asunder."—Such would seem to have been the fortifications of the cities in the civilized and populous part of Gaul. To the north and east, among the more savage tribes, there were no cities properly so called; the inhabitants resided for the most part in large enclosures, formed of trunks of trees, and calculated to repel by these rude intrenchments the assaults of a disciplined as well as undisciplined foe.—Besides his habitation in the city, the rich Gaul generally possessed another in the country, amid thick forests and on the banks of some river. (*Cæs.*, *B. G.*, 6, 30.) Here, during the heat of summer, he reposed from the fatigues of war; but he brought along with him, at the same time, all his equipments and retinue, his arms, his horses, his esquires. In the midst of the storms of faction and the civil dissensions, which marked the history of Gaul in the first and second centuries, these precautions were anything else but superfluous.

2. General habits of the Gallic race.

It was, as we have already remarked, in war, and in the arts applicable to war, that the genius of the Gauls displayed itself to most advantage. This people made war a regular profession, while the management of arms became their favourite employment. To have a fine martial mien, to retain for a long period strength and agility of body, was not only a point of honour for individuals, but a duty to the state. At regular intervals, the young men went to measure their size by a girdle deposited with the chief of the village, and those whose corpulence exceeded the official standard were severely reprimanded as idle and

intemperate persons, and were, besides, punished with a heavy fine. (*Strabo*, 196.)—In preparing for foreign expeditions, a chieftain of acknowledged valour generally formed a small army around him, consisting, for the most part, of adventurers and volunteers who had flocked to his standard: these were to share with him whatever booty might be obtained. In internal wars, however, or defensive ones of any importance, levies of men were forcibly made; and severe punishments were inflicted on the refractory, such as the loss of noses, ears, an eye, or some one of the limbs. (*Cæs.*, *B. G.*, 7, 4.) If any dangerous conjuncture occurred; if the honour or safety of the state were about to be compromised, then the supreme chief convened an armed counsel (*Cæs.*, *B. G.*, 5, 66). This was the proclamation of alarm. All persons able to bear arms, from the youth to him advanced in years, were compelled to assemble at the place and day indicated, for the purpose of deliberating on the situation of the country, of electing a chief, and of discussing the plan of the campaign. It was expressly provided by law, that the individual who came last to the place of rendezvous should be cruelly tortured in the presence of the assembled multitude. (*Cæs.*, *B. G.*, 5, 66.) This form of convocation was of rare occurrence; it was only resorted to in the last extremity, and more frequently in the democratic cities than in those where the aristocracy had the preponderance. Neither infirmities nor age freed the Gallic noble from the necessity of accepting or suing for military commands. Oftentimes were seen, at the head of the forces, chieftains hoary and almost enfeebled by age, who could even scarcely retain their seats on the steed which supported them. (*Hirt.*, *B. G.*, 8, 12.) This people would have believed that they dishonoured their aged warriors by making them die elsewhere than on the field of battle.—To the fierce vivacity of the attack and to the violence of the first shock, were reduced nearly all the military tactics of the Gauls, on level ground and in pitched battle. In the mountainous regions, on the other hand, and especially in the vast and thick forests of the north, war had a close resemblance to the chase: it was prosecuted in small parties, by ambuscades and all sorts of stratagems; and dogs, trained up to pursue men, tracked out, and aided in conquering the foe. These dogs, equally serviceable for the chase and for war, were obtained from Belgic Gaul and from Britain. (*Strabo*, 196.—*Sil. Ital.*, 10, 77.—*Ovid, Met.*, 1, 533.—*Martial*, 3, 47.) A Gallic army generally carried along with it a multitude of chariots for the baggage, which embarrassed its march. (*Hirt.*, *B. G.*, 8, 14.—*Cæs.*, *B. G.*, 1, 51.) Each warrior bore a bundle of straw, put up like a sack, on which he was accustomed to sit in the encampment, or even in the line of battle while waiting the signal to engage. (*Hirt.*, *B. G.*, 8, 15.)—The Gauls, like other nations, for a long period were in the habit of killing their prisoners of war, either by crucifixion, or by tying them to trees as a mark for their weapons, or by consigning them to the flames amid horrid rites. Long prior, however, to the second century of our era, these barbarous practices were laid aside, and the captives of transalpine nations had nothing to fear but servitude. Another custom, not less savage, that of cutting off the heads of their slain enemies on the field of battle, was not slower in disappearing. It was long a settled rule in all wars, that the victorious army should possess itself of such trophies as these; the common soldiers fixed them on the points of their spears, the horsemen wore them suspended by the hair from the pottrels of their steeds; and in this way the conquerors returned to their homes, making the air resound with their triumphal acclamations. (*Strabo*, 197.) Each one then hastened to nail up these hideous testimonials of his valour to the gate of his dwelling; and, as the same thing was

done with the trophies of the chase, a Gallic village bore no faint resemblance to a large charnel-house. Carefully embalmed, and saturated with oil of cedar, the heads of hostile chieftains and of famous warriors were deposited in large coffers, and arranged by their possessor according to the date of acquisition. (*Strabo*, 198.) This was the book, in which the young Gallic warrior loved to study the exploits of his forefathers; and each generation, as it passed onward, strove to add to the contents. To part, for money, with the head of a foe, acquired either by one's own exertions or those of his ancestors, was regarded as the height of baseness, and would have fixed a lasting stain on him who should have been guilty of the deed. Many even boasted of having refused, when offered by the relations or countrymen of the deceased, an equal weight of gold for a head thus obtained. (*Diod. Sic.*, 5, 29.) Sometimes the skull, cleansed and set in gold or silver, served as a cup in the temples, or circulated in the festivities of the banquet, and the guests drank out of it to the glory of the victor and the triumphs of their country. These fierce and brutal manners prevailed for a long period over the whole of Gaul. Civilization, in its onward march, abolished them by degrees, until, at the commencement of the second century, they were confined to the savage tribes of the North and West. It was there that Posidonius found them still existing in all their vigour. The sight of so many human heads, disfigured by outrages, and blackened by the air and the rain, at first excited in his bosom the mingled emotions of horror and disgust: "however," adds the stoic traveller, with great naïveté, "my eyes became gradually accustomed to the view." (*Strabo*, 198.)—The Gauls affected, as more manly in its character, a strong and rough tone of voice (*Diod. Sic.*, 5, 31), to which, moreover, their harsh and guttural idioms greatly contributed. They conversed but little, and by means of short and concise phrases, which the constant use of metaphors and hyperboles rendered obscure and almost unintelligible to strangers. (*Diod. Sic.*, l. c.) But, when once animated by dispute, or incited by something that was calculated to interest or arouse, at the head of armies or in political assemblies, they expressed themselves with surprising copiousness and fluency, and the habit in which they indulged, of employing figurative language, furnished them, on such occasions, with a thousand lively and picturesque images, either for exalting their own merit or putting down an opponent.—The Gauls, in general, were accused of drinking to excess; a habit which took its rise both in the grossness of their manners and in the wants of a cold and humid climate. The Massilian and Italian traders were not slow in furnishing the necessary aliment for the indulgence of this baneful vice. Cargoes of wine found their way, by means of the navigable rivers, into the very heart of the country. The tempting beverage was also conveyed over land in wagons (*Diod. Sic.*, 5, 26), and in various quarters regular establishments were opened for vending the article. To these places the Gauls flocked from every part, and gave, in exchange for the wines of the south, their metals, peltries, grain, cattle, and slaves. So lucrative was this traffic to the vendor, that oftentimes a young slave could be procured for a jar of the inebriating liquor. (*Diod. Sic.*, 5, 26.) About the first century, however, of our era, this vice began gradually to disappear from among the higher classes, and to be confined to the lower orders, at least with the nations of the south and east.—Milk and the flesh of animals, especially that of swine, formed the principal aliment of the Gauls. A curious account of their repasts, traced by one who had often sat with them at table, is given by Posidonius (*Ap. Athen.*, 4, 13). After an excessive indulgence in the pleasures of the banquet, they loved to seize their

arms and defy each other to the combat. At first it was a mere sportive encounter; but, if either party chanced to be wounded, passion got so far the better of them, that, unless separated by their friends, they continued to engage till one or the other of them was slain. So far, indeed, did they carry their contempt of death and their ostentatious display of courage, that they might be seen agreeing, for a certain sum of money or for so many measures of wine, to let themselves be slain by others; mounted on some elevated place, they distributed the liquor or gold among their most intimate friends, and then reclining on their bucklers, presented their throats to the steel. (*Posidonius, ap. Athen.*, 4, 13.) Others made it a point of honour not to retire from their dwellings when falling in upon them, nor from the flames, nor from the tides of ocean and the inundations of rivers; and it is to these foolish bravadoes that the Gauls owed their fabulous renown of being an impious race, who lived in open war with nature, who drew the sword against the waves, and discharged the arrow at the tempest.—The working of mines, and certain monopolies enjoyed by the heads of tribes, had placed in the hands of some individuals enormous capitals; hence the reputation for opulence which Gaul enjoyed at the period of the Roman invasion, and even still later. It was the Peru of the ancient world. The riches of Gaul even passed into a proverb. (*Cic., Phil.*, 12.—*Josephus*, 2, 28.—*Plut., Vit. Cæs.*—*Suet., Cæs.*, &c.) The sight of the various articles in use among the people at large, both plated and tinned, whether for domestic use or for war, such as utensils for cooking, arms, harness for horses, yokes for mules, and even sometimes entire chariots (*Florus*, 3, 2), could not fail to inspire the first travellers into this country with an exaggerated idea of its wealth, and contributed, no doubt, to spread a romantic colouring over the accounts that were given of it. To this was added the lavish prodigality of the Gallic chieftains, who freely spent the resources of their families, and also those of their dependants, for the purpose of attaining to office or securing the favour of the multitude. Posidonius makes mention of a certain Luern or Luer (*Λουέρνιος, Posidon., ap. Athen.*, 4, 13.—*Λουέρνιος, Strabo*, 191), king of the Arverni, who caused a shower of gold and silver to descend upon the crowd as often as he appeared in public. He also gave entertainments in a rude style of barbarian magnificence; a large space of ground was enclosed for the purpose, and cisterns were dug in it, which were filled with wine, mead, and beer. (*Posidon., l. c.*)—Properly speaking, there was no domestic union or family intercourse among the Gallic nations; the females were held in that dependance and servitude which denotes a very imperfect condition of the social state. The husband had the power of life and death over his wife as well as over his offspring. When a person of high rank suddenly died, and the cause of his decease was not clearly ascertained, his wife or wives (for polygamy was practised among the rich) were seized and put to the torture; if the least suspicion was excited of their having been privy to his death, the unfortunate victims perished in the midst of the flames, after the most frightful punishments. (*Cæs., B. G.*, 6, 19.) A custom, however, which prevailed in this country about the commencement of our era, shows that even then the condition of females had undergone some degree of melioration: this was the community of goods between husband and wife. Whatever sum the husband received with his wife as a dowry, the same amount he added to it from his own resources; a common stock was thus formed, the interest or profits resulting from which were preserved, and the whole fell to the lot of the survivor. The children remained under the care of their mother until the age of puberty; a father would have blushed to allow his son to appear publicly

in his presence, before the latter could wield a sabre and make a figure on the list of warriors. (*Cæs., B. G.*, 6, 18).—Among some nations of Belgic Gaul, where the Rhine was an object of superstitious adoration, a whimsical custom prevailed; the river was made the means of testing the fidelity of the conjugal state. When a husband had doubts respecting his paternity, he took the new-born infant, placed it on a board, and exposed it to the current of the stream. If the plank and its helpless burden floated safely upon the waters, the result was deemed favourable, and all the father's suspicions were dissipated. If, on the contrary, the plank began to sink, the infant perished, and the parent's suspicions were confirmed. (*Julian, Epist.*, 15, ad *Maxim. philos.*—*Id., Orat.*, 2, in *Constant. imp.*—*Anthol. Gr.*, 1, 43, 1.)

3. Civil and Religious Institutions of the Gauls.

Two privileged orders ruled in Gaul over the rest of the population: the priests and nobles. The people at large were divided into two classes, the inhabitants of the country and the residents of cities. The former of these constituted the tribes or clients appertaining to noble families. The client cultivated his patron's domains, followed his standard in war, and was bound to defend him with his life. To abandon his patron in the hour of peril was regarded as the blackest of crimes. The residents of cities, on the other hand, found themselves beyond the control of this system of clientship, and, consequently, enjoyed greater freedom. Below the mass of the people were the slaves, who do not appear, however, to have been at any time very numerous. The two privileged orders of which we have just made mention, imposed each in its turn a heavy yoke of despotism upon Gaul; and the government of this country may be divided into three distinct forms, prevailing at three distinct intervals of time; that of the priests, or a theocracy; that of the chieftains of tribes, or a military aristocracy; and that, finally, of the popular constitutions, founded on the principle of free choice by a majority of voters.—When we examine attentively the character of the facts relative to the religious belief of Gaul, we are led to acknowledge the existence of two classes of ideas, two systems of symbols and superstitions entirely distinct from each other; in a word, two religions: one, altogether sensible in its character, based on the adoration of natural phenomena, and recalling by its forms much of the polytheism of Greece; the other, founded on a material, metaphysical, mysterious, and sacerdotal pantheism, presenting the most astonishing conformity with the religions of the East. This latter has received the name of Druidism, from the Druids, who were its first founders and priests; the other system has been called the Gallic Polytheism. Even if no other testimony existed to prove the priority of the latter, in point of time, to Druidism, the natural and invariable progress of religious ideas among all the nations of the globe would tend to establish the fact. It is not so, however. The old and valuable traditions of the Cymric race attribute to this people, in the most formal and exclusive manner, the introduction of the Druidical doctrines into Gaul and Britain, as well as the organization of sovereign priesthood. According to these traditions, it was the chief of the first invasion, Hu, Heus, or Hesus, surnamed "the powerful," who implanted in this territory, which had been conquered by his horde, the religious and political system of Druidism. A warrior, a priest, and a legislator during his life, Hesus enjoyed, besides this, a privilege common to all founders of theocracies: he became a god after death. If the question be now put, how Druidism arose among the Cymric race, and from what source originated those striking points of resemblance between its fundamental doctrines and those of the secret religions of the East, between many of its ceremonies and those

practised in Samothrace, in Asia, and in India, we find no light thrown upon this subject by history. Neither the facts collected by foreign writers, nor any national traditions, furnish us with a positive solution of the difficulty. It may be reasonably conjectured, however, that the Cymri, during their long sojourn either in Asia or on the borders of Asia and Europe, were initiated into religious ideas and institutions, which, circulating at that time from one people to another, eventually spread themselves over all the eastern quarter of the world. Druidism, introduced into Gaul by conquest, organized itself in the domains of the conquerors with greater energy than it had ever done elsewhere; and after it had converted to its dogmas the whole Gallic population, and probably a portion of the Ligures, it continued to have, in the midst of the Cymri, in Armorica, and in Britain, its most powerful colleges of priests and its most secret mysteries. The empire of Druidism, however, did not completely stifle that religion of nature which prevailed before its introduction in Britain and Gaul. Every wise and mysterious system of religion tolerates a fetichism more or less gross in its character, and calculated to take hold of and keep alive the superstition of the multitude; and this fetichism it seeks to hold always stationary. Stationary it therefore remained in the island of Britain. In Gaul, therefore, in the eastern and southern sections of the country, where Druidism had not been imposed by arms, although it had become the ruling religion, the early national form of worship preserved more independence, even under the ministry of the Druids who had constituted themselves its priests. It continued, then, to be here cultivated, and, following the progressive march of civilization and intelligence, it gradually elevated itself from the rudeness of mere fetichism to religious conceptions which became more and more elevated in character. Thus the immediate adoration of brute matter, of natural agents and phenomena, such as stones, trees (*Maz. Tyr.*, 38), winds, and, in particular, the terrible blast denominated *Kirk* or *Circius* (*Senec., Quæst. Nat.*, 5, 17), lakes, rivers (*Posidon., ap. Strab.*, 188.—*Oros.*, 4, 16.—*Greg. Turon., de Glor. confess.*, c. 5), thunder, the sun, &c., gave place, in process of time, to the abstract notion of spirits or divinities regulating these phenomena, and imprinting a will on these agents. Hence we have, in a later age, the god *Tarann*, the spirit of the thunder (*Lucan, Pharsal.*, 1, 466.—*Torann* in Gaelic, and *Tarann* in Cymraig and Armorica, mean "thunder"); the god *Pennin*, the deity of the Alps (*Liv.*, 21, 38); the goddess *Arduinna*, presiding divinity over the forest of Ardennes, and numerous others. By a still farther effort of abstraction, the general powers of nature, that of the human soul, and even of civil society, were also deified. *Tarann* became the god of the skies, the mover of the universe, the supreme judge who hurled his angry thunder at mortals. The sun, under the name of *Bel* and *Belen* (*Auson., Carm.*, 2, de *Profess. Burdigal.*—*Tertull., Apoll.*, c. 24—*Herodian.*, 8, 3), became a beneficent deity, causing salutary plants to spring up and presiding over medicine. *Heus* or *Hesus*, notwithstanding his Druidic origin, took a station in the polytheism of Gaul, as the god of war and conquests; this was probably an intercalation of the Druids. In the Cymric traditions *Heus* has the character of chief deity, the supreme being. (*Davies, Welsh Archaeol.*, p. 110.) The genius of commerce also received the adoration of the Gauls under the name of *Tuctates* (*Lactant., Div. Inst.*, 1, 21.—*Min. Felix*, c. 30); he was regarded as the inventor of all arts and the protector of routes. The manual arts had also their particular divinities. In fine, the symbol of the liberal arts, of eloquence, and of poesy, was deified under the form of an old man, armed like the Grecian Hercules with a club and bow, but whom his captives gayly followed, attached by the

ear to chains of gold and amber, which proceeded from his mouth. He was named Ogmios. (*Lucian. Herc.—Opp., ed. Bip., vol. 7, p. 312.—Compare Ritter, Vorhalle, p. 363, seqq.*)—Coincidences of so striking a nature with their own mythology could not fail to surprise Roman observers, nor was it difficult for them to discover, as they thought, all their own gods in the polytheism of Gaul. Cæsar consequently informs us, that they acknowledged among their divinities Mercury, Apollo, Mars, Jupiter, and Minerva. "Mercury," observes this writer, "is the deity whom they chiefly adore: they have many images of him: they account him the inventor of arts; their guide in travelling and journeys; and imagine that he has a very great influence over trade and merchandise. After him they adore Apollo, Mars, Jupiter, and Minerva, of whom they have the same opinion with other nations: that Apollo averts diseases; that Minerva first introduced needlework and manufactures; that Jupiter holds the supreme power of the heavens; that Mars presides over war. To him, whenever they have determined on going to battle, they usually devote the spoil they have taken." (*Cæs., B. G., 6, 17.*)—This resemblance between the two systems of religion changed into identity when Gaul, subjected to the dominion of Rome, had felt for some years the influence of Roman ideas. It was then that the Gallic polytheism, honoured and favoured by the emperors, ended its career by becoming totally merged in the polytheism of Italy; while, on the other hand, Druidism, its mysteries, its doctrine, and its priesthood, were cruelly proscribed, and extinguished amid streams of blood.

4. Origin of the Gauls.

The question to be considered here is this, whether there existed a Gallic family distinct from the other families of nations in the West, and whether it was divided into two races. The proofs which we shall adduce in favour of the affirmative are of three kinds: 1st, philological, deduced from an examination of the primitive languages of the west of Europe: 2d, historical, drawn from the Greek and Roman writers: 3d, likewise historical, deduced from national traditions among the Gauls.

I. Proofs drawn from an examination of languages.

In the countries of Europe, called by the ancients *Transalpine Gaul and Britain*, embracing, at the present day, France, Switzerland, the Low Countries, and the British Isles, various languages are spoken, which all, however, range themselves under two great classes: one, that of the languages of the South, draws its origin from the Latin, and embraces all the dialects of the Romans and French; the other, that of the Northern languages, is descended from the ancient Teutonic or German, and prevails in a part of Switzerland and the Low Countries, in England, and in the lowlands of Scotland. Now we know historically that the Latin language was introduced into Gaul by the Roman arms; we know, also, that the Teutonic languages, spoken in Gaul and in Britain, may be in like manner traced to the conquests of the Teutonic or German tribes: these two main languages, therefore, introduced from without, are strangers to the primitive population, that is to say, to the population which occupied the countries in question anterior to these conquests. But in the midst of so many new-Latin and new-Teutonic dialects, we find in some parts of France and Britain the remains of primitive languages, completely distinct from the two great classes of which we have just made mention. Of these, France contains two, the *Basque*, spoken in the western Pyrenees, and the *Bas-Breton*, more extensively spread not long ago, but at present confined to the extremity of ancient *Armorica*. Britain likewise possesses two, the *Welsh*,

spoken in the principality of Wales, and called by those who speak it the *Cymraig*; and the *Gaelic*, used in the highlands of Scotland and in Ireland. History gives us no information relative to these original languages, whether they were introduced into the countries where they are spoken posterior to the Roman and German conquests; neither does it furnish us with any grounds for surmising by whom they might have been so introduced: we are led, therefore, to regard them as anterior to these conquests, and, consequently, as belonging to the primitive population. The question of antiquity being thus disposed of, two other inquiries present themselves. 1. Did these languages belong to the same people or to different ones? 2. Have we any historical proofs that they were spoken anterior to the establishment of the Romans, and, consequently, of the Germans, and in what portions of territory? We will attempt to solve these two questions by examining each of these languages in succession; and first, we will remark, that the *Bas-Breton* attaching itself very closely to the *Cymraig*, the original idioms, of which we are speaking, are reduced in fact to three. 1. The *Basque*. 2. The *Gaelic* or *Gallie*. 3. The *Cymraig* or *Cymric*.

1. Of the Basque Language.

This language, called *Euscara* by the people who speak it, is used in some cantons in the southeast of France and northeast of Spain, on both sides of the Pyrenees: the singularity of its radicals and its grammatical construction distinguish it no less from the *Cymric* and *Gallie* tongues, than from the derivatives of the Latin and Teutonic. Its antiquity cannot be doubted, when we see that it has furnished the oldest appellations for the rivers, mountains, cities, and tribes of ancient Spain. Its great extension is no less certain. The learned researches of Humboldt have discovered its imprint in the geographical nomenclature of almost the whole of Spain, especially the eastern and southern provinces. (*Humboldt, Prüfung der Untersuchungen über die Urbewohner Hispaniens, vermittelt der Vaskischen Sprache, Berlin, 1821.*) In Gaul, the province called Aquitania by the Romans, and comprehended between the Pyrenees and the course of the Garonne, presents also, in its earliest geography, numerous traces of this language. Similar traces may be found, more altered and of rarer occurrence, it is true, along the Mediterranean, between the Oriental Pyrenees and the Arno, in the region called by the ancients *Liguria, Celto-Liguria, and Ibero-Liguria*. A large number of names of men, dignities, and institutions, mentioned in history as belonging to the Iberians, or else to the Aquitani, are easily explained by the aid of the Basque language. From all this we may deduce the legitimate presumption that the Basque is a remnant of the ancient Spanish or Iberian language, and the population who speak it at the present day are a fragment of the Iberian race. 2. That this race, in language at least, had nothing in common with the nations speaking the Gaelic and Cymric. 3. That they occupied, in Gaul, the two great cantons of Aquitania and Gallie Liguria.

2. Of the Gaelic or Gallie tongue.

The Gaelic or Gallie, according to the mode of pronouncing the name, is spoken in the highlands of Scotland, in Ireland, the Hebrides, and the Isle of Man. There is no trace of any other idiom having been in use previously in these quarters, since most of the denominations of places, communities, and individuals belong exclusively to this language. If we follow its vestiges by means of geographical and historical nomenclatures, we will find that the Gaelic has prevailed in the whole of the lowlands of Scotland and in England, whence it appears to have been driven out by the Cymric tongue: we may recognise it also

in a portion of the south, and in all the east of Gaul, in upper Italy, in Illyria, and in central and western Spain. It is the eastern and southern provinces, however, of Gaul that bear the most evident marks of the passage of this tongue. It is only by the aid of a Gaelic glossary that we can discover the signification of geographical names, dignities, institutions, individuals, &c., belonging to the primitive population of this country. Still farther, the *patois* of the east and south of France at the present day swarms with words that are strangers to the Latin, and which are discovered to be taken from the Gaelic tongue. From these facts we may deduce the following inferences: 1. that the race which spoke Gaelic, in distant ages, occupied the British isles and Gaul, and that from this centre the language spread itself over many cantons of Italy, Spain, and Illyria. 2. That it preceded in Britain the race which spoke the Cymric.

3. Of the Cymric tongue.

That part of Britain which is called the country or principality of Wales, is inhabited, as is well known, by a people who bear in their mother-tongue the name of *Cymri* or *Kymri*; and from the most distant period they have known no other. Authentic literary monuments attest that this language, the *Cymraig* or *Cymric*, was cultivated with great éclat about the sixth century of our era, not only within the actual limits of the principality of Wales, but along the whole western coast of England, while the Anglo-Saxons, a Germanic population, occupied by conquest the centre and the east. An examination of the geographical and historical nomenclatures of Britain, anterior to the arrival of its German invaders, proves also, that, before this epoch, the Cymric prevailed throughout the whole southern part of the island, where it had succeeded to the Gaelic, which had been banished to the north. We have already stated, that the Bas-Breton, or Armorican tongue, spoken in a part of Brittany, was a Cymric dialect. The intermixture of a great number of Latin and French words has altered, it is true, the aspect of this dialect; yet historical monuments bear full testimony to the fact, that, about the fifth century, it was almost identically the same with that of the island of Britain, since the natives of this island, who fled to Armorica to escape from the Anglo-Saxons, found in this latter country, it is said, a people who spoke the same language with themselves. (*Adelung, Mithradates*, vol. 2, p. 157.) The names, moreover, drawn from geography and history, clearly show, that this idiom was spoken anterior to the fifth century in the whole of the west and north of Gaul. This tract of country then, as well as the southern portion of the isle of Britain, must have been anciently peopled by the race that spoke the Cymric tongue. But what is the generic name of this race? Is it the *Armorican*?—Is it the *Breton*?—*Armorican*, which signifies "maritime," is a local, not a generic, appellation; while, on the other hand, *Breton* appears to have been nothing more than the name of a particular tribe. We will adopt then, provisionally, as the true name of this race, that of *Cymri*, which from the sixth century has served to designate it in the isle of Britain.—As regards the two idioms of the Cymric and Gaelic, it may not be amiss to state the following general particulars. The basis of both is undoubtedly the same, and both spring from some common tongue. By the side, however, of this striking similitude in the roots and in the general system of the composition of words, we cannot fail to observe great discrepancies in the grammatical structure, discrepancies essential in their character, and which constitute two distinct languages, two separate tongues, though sisters to each other, and not two dialects of the same tongue. It should also be remarked, that the Gallic and the Cymric belong to that great family of languages, the source of which is

connected by philologists with the Sanscrit, the ancient and sacred idiom of India.

Having completed our examination of the languages in question, we may deduce from this review of them the following historical inferences. 1. An Iberian population, distinct from the Gallic, inhabited several cantons in the south of Gaul, under the names of *Aquitani* and *Ligures*. 2. The Gallic population, properly so called, was divided into Galli and Cymri. 3. The Galli had preceded the Cymri on the soil of Britain, and probably also on that of Gaul. 4. The Galli and the Cymri formed two races, belonging to one and the same human family.

II. Proofs drawn from the Greek and Roman historians.

1. Gallic Nations beyond the Alps.

Cæsar acknowledges throughout the whole extent of Gaul, with the single exception of the province of Narbonne, three nations, "differing in language, institutions, and laws: the Aquitani, dwelling between the Pyrenees and the Garonne; the Belgæ, occupying the northern parts of the country, from the Rhine to the Marne and Seine; and the Galli, called also *Celtæ*, established in the central quarter of the land." He gives to these three communities, taken collectively, the general name of Galli, which in this case is nothing more than a mere geographical designation. Strabo adopts the division of Cæsar, but with an important change. In place of limiting the Belgæ, as Cæsar does, to the course of the Sein, he adds to them, under the name of *parocœanites*, or *maritime* (*παρωκεανίταις*), all the tribes established between the mouth of this river and that of the Loire, and known in Gallic geography by the appellation of *Armoricans*, which equally signifies "maritime," and of which the term *parocœanites* appears to be merely a Greek translation. This arrangement of Strabo's merits the greater attention, not only because that great geographer was well acquainted with the Roman authors who had written upon Gaul, but also derived much information from the travels of Posidonius, and the labours of the learned among the people of Massilia or Marseilles. These two opinions, however, relative to the Belgæ, may be easily reconciled, as we shall see in the sequel. The geographers of a later period, Meila, Pliny, Ptolemy, &c., either conform to the ethnographic division given by Cæsar, or to the one traced by Augustus after the reduction of Gaul to a Roman province. In all this the Narbonnaise is not comprehended: now, we find in the ancient writers that it contained, besides the Celtæ or Galli, Ligurians, *strangers to the Gauls* (*ἐτεροθνήεις*.—*Strab.*, 137), and also Phœcean Greeks, who composed the population of Massilia and its dependencies.—There existed then, in the indigenous population of Gaul, four different branches: 1. The *Aquitani*; 2. The *Ligures*; 3. The *Galli* or *Celtæ*; 4. The *Brigæ*.—We will consider each of these in succession.

1. The Aquitani.

"The Aquitani," observes Strabo (189.—*Id.*, 176), "differ essentially from the Gallic race, not only in language, but also in physical conformation: they resemble the Iberians more than they do the Gauls." He adds, that the contrast afforded by two Gallic nations confined within the limits of Aquitania, made the distinctive features of the race we are considering the more apparent. According to Cæsar, the Aquitani had, besides a peculiar dialect, institutions of a peculiar and separate character. Now, historical facts show that these institutions bore, for the most part, the stamp of the Iberian character: that the national dress was Iberian; that there existed stronger ties of amity and alliance between the Aquitanian and Iberian tribes,

than between the former and the Gauls, who were separated from them merely by the Garonne; in fine, that their virtues and their vices were assimilated in the closest manner to that standard of good and evil qualities which appears to have constituted the moral type of the Iberian race. We find, then, a concordance between the proofs drawn from history and those deduced from an examination of languages: the Aquitani were, beyond doubt, an Iberian population.

2. Ligures.

The Ligures, whom the Greeks call Ligyes, are designated by Strabo as strangers to Gaul. Sextus Avienus, whose labours were based upon documents which had been left by the Carthaginians, and who, consequently, must have been put in possession of much valuable matter connected with the ancient history of Iberia, places the primitive seats of the Iberi in the southwest of Spain, whence, after a long succession of conflicts, the invasion of the conquering Celts had compelled them to remove. (*Avien.*, v. 132, *seqq.*) Stephanus of Byzantium also places in the southwest of Spain, near Tartessus, a city of the Ligures, which he calls *Ligyrtiné* (*Λιγυρτινή*). Thucydides subsequently shows us the Ligures, expelled from the southwestern part of the peninsula, arriving on the eastern borders of the Sicoris or *Sègre*, and driving away in their turn the nation of the Sicani. (*Thucyd.*, 6, 2.) He does not give this as a simple tradition, but as an incontestable fact. Ephorus and Philistus of Syracuse held the same language in their writings, and Strabo believes that the Sicani were originally Iberians. The Sicani, driven from their country, forced their way through the eastern passes of the Pyrenees, traversed the Mediterranean shore of Gaul, and entered Italy. The Ligures must have followed them, since we find the latter nearly at the same time spread over the whole Gallic and Italian coasts, from the Pyrenees as far as the Arno. We know, by the unanimous testimony of the ancient writers, that the west and the centre of Spain had been conquered by the Celtæ or Galli; but we are uninformed as to the period when this took place. The movements of the Sicani and Ligures show us that the invasion was made by the western passes of the Pyrenees, and that the Iberian tribes, driven back on the eastern coast, began to move onward into Gaul and even Italy. They furnish us also with an approximation to the date when this took place: the Sicani, expelled from Italy, as they had been from Spain, seized upon the island of Sicily about the year 1400 B.C. (*Freret, Œuvr. compl.*, vol. 4, p. 200), which places the irruption of the Celtæ into Iberia about the sixteenth century before the Christian era.—Although, after what has been said, the Iberian origin of the Ligures appears to be placed beyond the reach of doubt, it must nevertheless be acknowledged, that their manners did not bear so strong an Iberian stamp as those of the Aquitani: the reason would seem to be, that they did not preserve themselves from foreign intermixture. History tells us of powerful Celtic tribes intermingled with them in Celto-Liguria, between the Alps and the Rhone; at a still later period, Ibero-Liguria, between the Rhone and Spain, was subjugated almost entirely by a people who were total strangers to the Ligures, and who bore the name of Volcæ. The date of this invasion of the Volcæ into Ibero-Liguria (now *Languedoc*) cannot be fixed with any precision. The most ancient recitals, whether mythological or historical, and the periplus down to that of Scylax, which appears to have been written about 350 B.C., make mention only of the Ligures, Elesyes, Bebyrees, and Sodes, in the whole canton; the Elesyes are even represented as a powerful nation, whose capital Narbo (now *Narbonne*) flourished in commerce and in arms. About the year 281, the Volcæ Tectosages, inhabiting what is now

upper Languedoc, are rendered conspicuous all of a sudden, and for the first time, by an expedition which they sent into Greece. (*Justin*, 24, 4.—*Strabo*, 187.) About the year 218, at the time of Hannibal's passage, the Volcæ Arecomici, inhabiting lower Languedoc, are also cited (*Liv.*, 21, 26) as a numerous people, giving the law throughout all the surrounding country. It is, then, between 340 and 281 that we must place the arrival of the Volcæ and the conquest of Ibero-Liguria.—The manuscripts of Cæsar, in speaking of the Volcæ, have indifferently *Volcæ* or *Volgæ*. Ausonius (*Clar. Urb. Narb.*, 9) informs us, that the primitive name of the Tectosages was *Bolgæ*; and Cicero (*Pro M. Fonteio*.—*Dom. Boug.*, *Rec. des Hist.*, &c., p. 656) calls them Belgæ. Saint Jerome relates, that the idiom of their colonies established in Galatia in Asia Minor, was still in his time the same with that of Trèves, the capital of the Belgæ, and Saint Jerome had travelled both in Gaul and the East. (*Hieron.*, l. 2, *Comment. Epist. ad Galat.*, c. 3.) After this, it is hardly permitted us to doubt but that the Volcæ were Belgæ, or, rather, that these two names were one and the same; and the details of their history, for they played an important part in the affairs of Gaul, furnish numerous proofs in support of their Belgic origin. We must therefore separate this people from the Ligurian population, with which they have nothing in common.—In conclusion, we infer, that the Ligures were Iberians; a second concordance of history with philological inductions.—We have therefore remaining only the Galli or Celtæ, and the Belgæ, as containing the elements of the Gallic population properly so called.

3. Celtæ.

There is no necessity whatever for our demonstrating the identity of the Celtæ and Galli; it is given, as fully established, by all the ancient writers. The signification, however, of the term *Celt* is a subject open to inquiry. Cæsar informs us (*B. G.*, 1, 1), that it is drawn from the language of the Gauls: and, in fact, it does indeed belong to the present Gallic idiom, in which *ceilt* and *ceiltach* mean "an inhabitant of the forests." This signification leads to the presumption that the name was a local one, and was applied either to a tribe, or to a confederation of tribes, occupying certain cantons; and that it consequently had a special and restricted meaning. Indeed, the great Gallic confederations were for the most part local. The testimony of Strabo may be cited in support of this hypothesis. The geographer informs us, that the Gauls of the province of Narbonne were formerly called Celtæ; and that the Greeks, particularly the Massiliots, entering into commercial relations with them before becoming acquainted with the other nations of Gaul, erroneously took their name as the common appellation for the whole Gallic race. (*Strab.*, 189.) Some, and Ephorus among the rest, even extended it beyond the limits of Gaul, and made of it a geographical denomination for all the races of the West. (*Strab.*, 34.) Notwithstanding, however, these erroneous ideas, which throw much obscurity over the accounts of the Greek writers, many authors of this nation speak of the Celtæ in the special and limited sense which accords with the opinion of Strabo. Polybius (3, 37) places them "around Narbo;" Diodorus Siculus (5, 32), "above Massilia, in the interior of the country, between the Alps and Pyrenees;" Aristotle (*Gen. Anim.*, 2, 8), "above Iberia;" Dionysius Periegetes, "beyond the sources of the Po" (v. 280). Finally, Eustathius, in his commentary on the last-mentioned writer, revives the vulgar error, which attributes to the whole of Gaul the name of a single canton. Vague though they are, these designations appear clearly to specify the country situate between the Ligurian frontier to the east, the Garonne to the south, the plateau

of the Arvernian Mountains to the west, and the ocean to the north : all this tract, and the coast likewise of the Mediterranean, so unproductive and arid at the present day, were for a long time covered with dense forests. (*Liv.*, 5, 34.) Plutarch places also between the Alps and the Pyrenees, in the earliest ages, a people called Celtorri. (*Vit. Camill.*) This race is thought by some to have formed part of the league or confederation of the Celtæ; for *tor* signifies "elevated," and also "a mountain," and hence *Celtor* is supposed to designate an inhabitant of the woody mountains. Thus it would seem that the Celtic confederation, in the time of its greatest power, was subdivided into Celts of the plain and Celts of the mountain. Historians unanimously inform us, that it was the Celts who conquered the west and the centre of Spain ; and, in fact, we find their name attached to great masses of the Gallo-Iberian population, such as the Celt-Iberi, a mixture of Celts and Iberians, who occupied the centre of the peninsula ; and the Celtici, who had seized upon the northwest. It is easy to perceive that the invasion must have commenced with the Gallic tribes nearest the Pyrenees. The Celtic confederation, however, did not alone accomplish this conquest ; other Gallic tribes either accompanied or followed them : witness, for example, the people established in what is now Gallicia, and was anciently denominated Galloecia, and who, as is well known, belonged to the general Gallic race. Thus much for Spain.—As for upper Italy, though twice inundated by transalpine nations, it presents no trace of the name of Celt : no tribe, no territory, no river, recalls their peculiar appellation. Everywhere and on every occasion we meet merely with the general name of Gauls. The word Celtæ became known to the Romans only at a late period.—As to the assertion of Cæsar, that the Gauls were called in their own language Celtæ, it is possible that the Roman commander, more occupied with combating the Gauls than studying their language and institutions, and finding, in effect, that the word *Celt* was Gallic, and recognised by the Gauls for one of their national denominations, may, without farther investigation, have concluded that the two terms were synonymous. It is possible, too, that the Gauls of the eastern and central sections may have adopted, in their commercial and political relations with the Greeks, a name by which the latter were accustomed to designate them ; just as we see, in our own days, some of the tribes of America and Africa, accepting, under similar circumstances, appellations which are either quite inexact or else totally erroneous.—From what has thus far been remarked, it would seem to follow, 1. That the name *Celt* had, among the Gauls, a limited and local application. 2. That the confederation of the tribes denominated Celtic dwelt in part among the Ligures, in part between the Cevennes and the Garonne, and along the Arvernian plateau and the ocean. 3. That the Celtic confederation exhausted its strength in the invasion and conquest of Spain, and took no share consequently in two successive invasions of Italy.

4. Belgæ.

The Belgæ are unanimously acknowledged by the ancient writers as forming part of the Gallic race. The word Belgæ belongs to the Cymric idiom, in which, under the form *Belgiadil*, the radical of which is *Belg*, it signifies "warlike." It would seem, then, that this was not a generic appellation, but a title of some military expedition, some armed confederation. It is a stranger to the present Gaelic dialect (for *bolg*, "a sack," has nothing to do with the present inquiry), but not to the national traditions of the Gaelic race, as still existing, in which the *Bolg* or *Fir-Bolg* play an important part, as conquerors come from the mouths of the Rhine into ancient Ireland. The name of Belgæ was unknown to the Greek writers ; it appears, indeed,

to have been comparatively recent in Gaul, when contrasted with that of the Celtæ, Ligures, &c. The Belgæ had established themselves in Britain on the southern coast of the island, in the midst of the Breton race, who were not of Gallic origin ; for the Gallic race were by this time driven to the north, beyond the Frith of Forth. Neither Cæsar nor Tacitus has remarked any difference of origin or language between these Bretons and the Belgæ. The names of individuals, moreover, as well as those of a local nature in the cantons occupied by the two races, belong to one and the same language, the Cymric. In Gaul Cæsar has given the Seine and Marne as the southern limits of the Belgæ. Strabo adds to this Belgica another which he calls *Paroceanite* or *Maritime*, and which comprehends the tribes situate to the west, between the mouth of the Seine and that of the Loire, that is to say, the tribes which Cæsar and the other Roman writers call *Armorican*, from a Gaelic term which signifies "*maritime*." The testimony of Cæsar is undoubtedly hard to be contested in what relates to Gaul. On the other hand, however, Strabo was acquainted with the writings of the Massiliots, he had studied the works of Posidonius, that celebrated Greek, who had traversed Gaul, in the time of Marius, as a man of learning and a philosopher. There must, of necessity, have been a great many points of resemblance between the Armorican tribes and the Belgæ to induce Posidonius and Strabo to declare them members of one and the same race ; and, on the other hand, there must have been some very marked differences which could lead Cæsar to make two distinct nations of them. An examination of historical facts shows us the Armorican tribes united in a sort of political and independent confederation, but, in the event of wars and general alliances, uniting themselves more willingly to the Belgæ than to the race of the Gauls. Again, a philological investigation proves that the same language was spoken in Belgica in the time of Cæsar as in that of Strabo. We may hence boldly conclude, that the Armoricans and the Belgæ were two communities or confederations of the same race, which had arrived in Gaul at two different periods : we may also infer still farther : 1. That the north and west of Gaul, and the south of Britain, were peopled by one and the same race, forming the second branch of the Gallic population properly so called : 2. That the language of this race was one, the fragments of which are preserved in two cantons of ancient Armorica and in the island of Britain : 3. That the generic name of the race is entirely unknown to us, as far as history is concerned ; but that philology gives it to us under the form of Cymri.

2. Gallic Nations of Italy.

The most credible of the learned Romans who handled the subject of early Italian history, recognised two distinct conquests of upper Italy by nations which had migrated from ancient Gaul. The first of these inroads they carried back to the earliest periods in the history of the West ; and they designated these first transalpine conquerors by the appellation of "Old Gauls," *Veteres Galli*, to distinguish them from the transalpine invaders who achieved the second conquest. This latter conquest, being the more recent of the two, is the better known. It commenced in the year 587 B.C., under the conduct of the Biturigan Bellovesus, and it was continued by the successive invasions of four other bands, during the space of sixty-six years.—*First conquest.* These Old Gauls, according to the ancient writers, were the ancestors of the Umbrians. Cornelius Bocchus, the freedman of Sylla, is cited by Solinus (c. 8) as having fully established this point. This was also the opinion maintained by Gniphio, the preceptor of Julius Cæsar, and who, born in Cisalpine Gaul, had probably directed his careful attention to the history of his own nation. Isidorus likewise adopted

it (*Orig.*, 9, 2); as did also Solinus and Servius. The Greek writers also followed in the same train, with few exceptions, notwithstanding an etymology very popular in Greece, which made the word Umbrian (Ombrian) to be derived from *ὀμβρος*, "a shower," "rain," because the nation in question had, according to some, escaped from a deluge. The Umbrians were regarded as one of the most ancient nations of Italy. (*Plin.*, 2, 14.—*Florus*, 1, 17.) After long and bloody conflicts, they drove the Siculi from the country around the Po. Now, as the Siculi passed into Sicily about 1364 B.C., the Umbrian invasion may have taken place in the course of the 15th century. They became a very powerful race, and their sway extended from the upper to the lower sea, as far south as the mouths of the Tiber and Trento. The Etrurian power eventually put an end to their wide-spread dominion. The words *Umbri*, *Ombri*, and *Ombriæ*, by which the Romans and the Greeks designated this people, would seem to have been nothing else but the Gaelic *Ambra* or *Amhra*, which signifies "valiant," "noble;" and to have been appropriated to itself as a military title by some invading horde.—The geographical division established by the Umbrians is not only in conformity with the customs of the Gallic race, but belongs to their very language. Umbria was divided into three provinces: *Oll-Ombria*, or "High Umbria," which comprised the mountainous country between the Apennines and the Ionian Sea: *Is-Ombria*, or "Low Umbria," which embraced the country around the Po: and *Vit-Ombria*, or "Umbria along the shore," which last, at a later period, became Etruria. Although the Etrurian influence produced a rapid change in the language, religion, and social order of the Umbrians, there still were preserved among the mountaineers of Oll-Ombria some remarkable traces of the character and customs of the Gauls: for example, the *gæsum* or *gais*, a weapon both in its invention and name pointing to a Gallic origin, was always the national javelin of the Umbrian peasant. (*Liv.*, 9, 36.) The Umbrians, who had been dispersed by the Etrurian conquerors, were received as brothers on the banks of the Saône and among the Helvetian tribes, where they perpetuated their name of Insubres (Isombrès). "*Insubres*," observes Livy, "*pagus Eduaorum*" (5, 23). Others found a hospitable reception among the Ligurians of the Maritime Alps (*Plin.*, 3, 17, *scqq.*), and carried thither their name of Ambrones. This alone can explain a point which has occasioned much perplexity to historians, and has given rise to numerous contradictory theories; how, namely, a tribe of Alpine Ligurians, and another of Helvetii, warring against each other under the respective banners of the Romans and the Cimbri, found, to their great astonishment, that they had each the same name and the same war-cry. (*Plut.*, *Vit. Mar.*)—From what has been said, it would seem to result, that upper Italy was conquered in the 15th century before our era by a confederation of Gallic tribes bearing the name of Ambra or Ambrones.—*Second conquest.* The first invasion had been made *en masse*, with something of order, and by a single confederation; the second was successive and tumultuous. During the space of sixty-six years, Gaul poured her population upon Italy by the Maritime, the Graian, and the Pennine Alps. If we bear in mind that, about the same epoch (B.C. 587), an emigration not less considerable took place from Gaul to Illyria, under the conduct of Sigovesus, we cannot but believe that these great movements were the result of causes far more serious than those mentioned by Livy (5, 34). Gaul, in fact, presents at this period the aspect of a country deeply agitated by some violent commotion.—But of what elements were these bands composed, which descended from the Alps to seize upon upper Italy? Livy makes them to have come from Celtica, that is, from the domains of the Gauls, the forces conducted by Bel-

lovesus and Elitovius; and the enumeration of the tribes which formed this expedition, such as they are given by Polybius, proves, in fact, that the first wave belonged to the Gallic population.—Every one has heard of the famous combat between T. Manlius Torquatus and a Gaul of gigantic stature. True or false, the incident was very popular at Rome: it became a subject for the painter's skill; and the head of the Gaul, making horrible grimaces, figured as a sign for a banker's shop in the Roman forum. This sign, rounded into the form of a buckler, bore the name of *Scutum Cimbrium*. It existed at Rome in the year of the city 586, and 168 before our era. (Compare *Reuvsius*, p. 342.) The word *Cimbrium* is here employed as synonymous with *Gallicum*.—At a later period, when the invasion of the Cimbri from the north renewed in Italy the terror of this name, the victorious commander of Rome caused a buckler to be adorned with this ancient device. The shield of Marius, according to Cicero (*de Or.*, 2, 66), had depicted on it a Gaul, with cheeks hanging down, and projecting tongue.—The term *Cimbri*, then, designated one of the branches of the Gallic population, and this branch had colonies in Gallia Cispadana: we have ascertained, however, the previous existence of Gallic colonies in Gallia Transpadana: the Gallic population, then, of Italy was divided into two distinct branches, the *Galli* and the *Cimbri* or *Kimbrî*.

3. Gauls beyond the Rhine.

First branch.

We have spoken of a double series of emigrations, commenced B.C. 587, under the conduct of Bellovesus and Sigovesus. Livy informs us, that the expedition of Sigovesus set out from Celtica, and that its leader was a nephew of the Biturigan Ambigatus, who reigned over the whole country; which means that Sigovesus and his followers were Gauls. The same historian adds, that they directed their course towards the Hercynian forest (5, 34). This designation is a very vague one; but we know from Trogus Pompeius, who, being born in Gaul, drew his information from more exact and precise traditions, that these Gauls established themselves in Pannonia and Illyria. (*Justin*, 24, 4.) Ancient historians and geographers show us, in fact, a multitude of Gallic or Gallo-Illyrian communities spread between the Danube, the Adriatic, and the frontiers of Epirus, Macedonia, and Thrace. Among the number of these are the *Carni*, inhabiting the *Alpes Carnice*, to the east of the great Alpine chain (compare the Celtic *Carn*, "a rock"); the *Taurisci*, a purely Gallic race (compare the Celtic *Taur* or *Tor*, "elevated," "a mountain."—*Strabo*, 293); the *Iapodes* (*Strabo*, 313), a Gallo-Illyrian race occupying the valleys of Carinthia and Stiria; the *Scordisci*, dwelling around Mount Scordus, whose power was feared even by the Romans. The frequent recurrence of terminations in *dunn*, *mag*, *dur*, &c., the names of mountains, such as *Alpius* and *Albius*; the country called *Albania*; in fine, a great number of Gallic words, found even at the present day in the Albanian tongue, are so many proofs of the Gauls having at one time or other taken up their residence in this country.

Second branch.

Historical testimonies, remounting to the time of Alexander the Great, attest the existence of a people called *Cimmerii* or *Cimbri*, on the borders of the Northern Ocean, in the present peninsula of Jutland. In the first place, critics acknowledge the identity of the names *Cimmerii* and *Cimbri*, conformed as they are, the one to the genius of the Greek, the other to that of the Latin tongue. (*Strabo*, 203.) The most ancient writer that makes mention of the Cimbri is Philémon: according to him, they called their ocean *Morimarsa*, i. e., "Dead Sea," as far as the promontory

Rubcas; beyond this they styled it *Cronium*. (*Plin.*, 4, 13.) These two names are easily explained by the Cymric language: *mar* there signifies "sea;" *maru*, "to die;" *marissis*, "death;" and *crwnn*, "congealed," "frozen;" in Gaelic, *croin* has the same force: *Murchroinn* is "the frozen sea." (*Adelung, älteste Gesch. der Deutschen*, p. 48.—*Toland's several pieces*, pt. 1, p. 150.)—Ephorus, who lived about the same period, knew the Cimbri, and gives them the name of Celts; but in his geographical system, this very vague denomination designates at the same time a Gaul and an inhabitant of Western Europe. (*Strabo*, 203.) When, between the years 113 and 101 before our era, a deluge of Cimbri poured its desolating fury on Gaul, Spain, and Italy, the belief was general, that they came from the extremities of the West, from the frozen regions bordering on the Northern Ocean, from the Cimbric Chersonese, from the shores of the Cimbric Thetis. (*Florus*, 3, 3.—*Polyan.*, 8, 10.—*Ammian. Marcell.*, 31, 5.—*Claudian. Bell. Get.*, v. 638.—*Plut., Vit. Mar.*) In the time of Augustus, the Cimbri occupied a portion of Jutland, and they acknowledged themselves to be the descendants of those who, in a preceding age, had committed so many ravages. Alarmed at the conquests of the Romans beyond the Rhine, and supposing that their object was to inflict vengeance upon them for the inroad of their ancestors, they sent an embassy to the emperor to supplicate for pardon. (*Strabo*, 292.) *Strabo* and *Mela* (3, 3) place these Cimbri to the north of the Elbe. *Tacitus* found them there in his own time. (*Germ.*, c. 37.) *Pliny* gives a much more extensive signification to this name of Cimbri; he would seem to make it a generic term. He not only, for example, recognises the Cimbri of the present Jutland, but he speaks also of the Mediterranean Cimbri (4, 3) in the vicinity of the Rhine, comprehending, under this common appellation, various tribes which in other writers bear widely different names. These Cimbri, inhabiting Jutland and the countries round about, were generally regarded as Gauls, that is to say, as belonging to one of the two races which then held possession of Gaul. *Cicero*, in speaking of the great invasion of Cimbri, says in many places that *Marius* had conquered the Gauls. In like manner, *Sallust* (*Bell. Jug.*, c. 114) makes *Cæpio*, who was defeated by the Cimbri, to have been so by Gauls. Most of the subsequent writers hold the same language: finally, the Cimbric buckler of *Marius* bore the figure of a Gaul. To this we may add, that *Ceso-rix*, *Boio-rix*, &c., names of chieftains in the Cimbric army, are to all appearance Gallic appellations.—When we read the details of this terrible invasion, we are struck with the promptitude and facility with which the Cimbri and Belgæ came to an understanding and arranged matters among themselves, while all the calamities of the inroad appear to have fallen on central and southern Gaul. *Cæsar* informs us, that the Belgæ vigorously sustained the first shock of the invaders, and arrested the torrent on their frontiers. This may all have been so; but we see them almost immediately after entering into an agreement with each other. The Belgæ cede to the invaders one of their fortresses, *Aduaticum*, in which to deposit their baggage; and the Cimbri, on their part, leave as a guard for their baggage, which contained all their riches, a body of only six thousand men, and continue on their way; they must have been well assured, then, of the fidelity of the Belgæ. After the overthrow of the Cimbri in Italy, the garrison of *Aduaticum* still remain in possession of the fortress and its territory, and become a Belgic tribe. When the Cimbri wish to attack the province of *Narbonne*, they make an alliance with the *Volcæ Tectosages*, a Belgic colony, while their proposals are rejected by the other Gallic tribes. These facts, and many others that might be adduced, prove, that if there were a community of origin and language between the

Cimbri and one of the races that dwelt in Gaul, it was more likely the race of which the Belgæ formed a part than any of the Gallic ones. A remark of *Tacitus* sheds a new light on the subject. He states, that the *Æstii*, a community dwelling in the vicinity of the Cimbri, on the shores of the Baltic, and in all probability belonging to the Cimbric race, spoke a language approximating closely to the insular Breton ("linguæ *Britannicæ propior*," *Tac., Germ.*, c. 45). Now we have seen that the language of the Bretons was also that of the Belgæ and of the Armorican tribes.—All the ancient historians attribute to a Gallic army the invasion of Greece, in the years 279 and 280 B.C. *Appian* (*Bell. Illyr.*, 4) calls these Gauls Cimbri.—Again, the Gallic nations, whether pure, or intermingled with Sarmatian and German tribes, were numerous on the northern bank of the lower Danube and in the vicinity: the most famous of all, that of the *Bastarnæ* (*Tac., Germ.*, c. 46.—*Plin.*, 4, 12.—*Liv.*, 34, 26.—*Id.*, 30, 50, *seqq.*—*Polyb., excerpt., leg.* 62), intermingled probably with Sarmatians, dwelt between the Black Sea and the Carpathian Mountains. *Mithradates*, wishing to form a powerful league against Rome, addressed himself to this powerful nation. "He sent," says *Justin* (38, 3), "ambassadors to the Cimbri, Sarmatæ, and Bastarnæ." It is evident, that the Cimbri of Jutland cannot here be meant, separated as they were from the King of Pontus by the whole extent of the Continent of Europe, but those Cimbri who dwelt in the vicinity of the Bastarnæ and Sarmatæ, and on whom had been reflected the glory gained by their brethren in Gaul and in Noricum. The existence of Cimbric nations, extending at various intervals from the lower Danube as far as the Elbe, would seem to establish the fact, that all the country between the Pontus Euxinus and the Ocean, following the courses of the rivers, was possessed by the race of the Cimbri anterior to the increase and development of the Germanic race.

Proofs drawn from National Traditions.

There are few persons at the present day who have not heard of those curious monuments, as well in prose as in verse, which compose the literature of the Welsh or Cymri, and which go back, almost without interruption, from the 16th to the 6th century of our era: a literature not less remarkable for the originality of its forms, than for the light which it throws upon the early history of the Cymri. Contested at first with the greatest obstinacy by a spirit of criticism alike superficial and contemptuous, the authenticity of these ancient records is now established beyond the possibility of doubt. (Consult *Myrgrian, Archaeology of Wales*.—*Turner, Authenticity of the ancient British poems*, &c.) From the national traditions detailed in these early effusions, the following results may be established. 1. The duality of the two races is recognised by the Triads: the *Gryddelad* (Gauls) who inhabit *Alben* are regarded as a stranger and hostile people. (*Trioddynys Prydain*, n. 41.—*Archæol. of Wales*, vol. 2.)—2. The identity of the Armorican Belgæ with the Cymric Britons is also recognised; the Armorican tribes are there designated as deriving their origin from the primitive race of the Cymri, and holding communication with them by the aid of one and the same language. (*Triodd.*, 5.)—3. The Triads make the race of the Cymri to have come from that part of the land of *Haf* (the country of summer or of the south) called *Deffroban*, and where at present is Constantinople. (These words, "and where at present is Constantinople," appear to be the addition of some copyist; still they are not without value, as being founded on the traditions of the country.) "They arrived at the foggy sea" (the German Ocean), "and proceeded thence to Britain and the country of *Lyddau*" (Armorica), "where they settled." (*Triodd.*, n. 4) The bard *Taliessin*

simply says, that the Cymri came from Asia. (*Welsh Archaeol.*, vol. 1, p. 76.) The Triads and Druidic bards agree in many particulars respecting the settlement of the Cymri on their arrival in Western Europe. It was *Hu*, the powerful, who conducted them: a priest, a warrior, a legislator, and, after death, a god, he united in himself all the attributes requisite for the chief of a theocracy. Now we know that a part of the Gallic race was long subject to the theocratic government of the Druids. This name of *Hu* was not unknown to the Greeks and Romans, who give the appellation of *Heus* and *Hesus* to one of the deities of Druidism.—The Irish have also their national traditions, but so confused and evidently fabulous, that it would be improper to employ them on the present occasion. They contain, however, one thing which ought not to be omitted here, the mention of a people termed *Bolg* (*Fir-Bolg*), who came from the borders of the Rhine and conquered the south of Ireland. It is not difficult to recognise in these strangers a colony of the Belgic Cymri, though nothing probable is stated respecting their history or their settlement.—Ammianus Marcellinus (15, 9), or rather Timagenes, whom he appears to be quoting, gives an ancient tradition of the Gallic Druids concerning the origin of the nations of Gaul. This tradition stated, that a part of the Gallic population was indigenous, but that another part had come from far distant islands and countries beyond the Rhine, whence they had been driven by frequent wars and by inundations of the sea.—We find, then, in the traditional history of the Gauls, as well as in the testimony of foreign writers, and in the characters of the languages spoken throughout the country, the fact well established of the division of the Gallic family into two distinct branches or races.

General Conclusions.

1. The Aquitani and Ligures, though inhabitants of Gaul, were not of Gallic blood, but belonged to the Iberian stock.

2. The nations of Gallic blood were divided into two branches, the *Galli* and the *Cymri*. The relationship of these two branches to each other is confirmed by their idioms, their manners and customs, and their national characters in general. It becomes still more apparent, however, when we compare with them the other communities that dwell in their vicinity, namely, the Iberians, the Italians, and the Germans. And yet there exists a sufficient diversity in their respective manners, idioms, and moral characters, to authorize us to trace a line of demarcation between these two branches, which is warranted also as well by their national traditions as by the testimony of history.

3. The origin of the Gallic race belongs to the East. Their language, their traditions, their history, in fine, point to Asia as the cradle of their nation. (*Thierry, Histoire des Gaulois*, vol. 1, *Introd.*, p. xii.—lxviii.) At what period, however, they left their parent-home and commenced their migration to the West, is beyond the reach of positive history. On this point we are left in a great measure to our own conjectures, although Linguistic, or the science of comparative philology, furnishes us with aids to the prosecution of this inquiry, by no means unimportant in their character. One thing, at least, is certain, from an attentive examination of the Celtic language, that the race who spoke this tongue came first into the West, and in all probability was the first too that separated from the parent stock. This circumstance, perhaps, may serve to explain why the Celtic idioms, along with the greatest richness in Indo-European radicals, display a less complete system of grammatical forms than most other branches of the same great family of languages; whether it be that, at the time of the Celtic separation from home, these grammatical forms had not yet reached their full number and de-

velopment, or, what is more probable, that a longer period of separation, than in the case of other races, has exercised a more injurious effect. Whichever of the two be the correct opinion, it is nevertheless apparent, that the analogies between the Celtic and Sanscrit carry us back to a period the earliest that we can reach by the aid of comparative philology, and furnish us hence with most important data for ascertaining, to what degree of development the mother-tongue itself had attained before the separation in question took place. Thus, for example, an examination of the Celtic idioms appears conclusively to show, that, at the time when this separation took place, the mother-tongue possessed already an entire system of euphonic laws, which the Sanscrit has preserved the best of any Indo-European tongue, and which it has, in fact, preserved so well, that certain anomalies of the Celtic still find their explanation in the euphonic rules of the sacred language of India. (*Pictet, de l'Affinité des Langues Celtiques avec le Sanscrit*, p. 172.)

General History of Gaul.

The history of Gaul divides itself naturally into four periods. The first of these comprises the movements of the Gallic tribes while yet in their Nomadic state. None of the races of the West ever passed through a more agitated or brilliant career. Their course embraced Europe, Asia, and Africa; their name is recorded with terror in the annals of almost every nation. They burned Rome; they wrested Macedonia from the veteran legions of Alexander; they forced Thermopylæ and pillaged Delphi; they then proceeded to pitch their tents on the plains of the Troad, in the public places of Miletus, on the borders of the Sangarius, and those of the Nile; they besieged Carthage, menaced Memphis, and numbered among their tributaries the most powerful monarchs of the East; they founded in upper Italy a powerful empire, and in the bosom of Phrygia they reared another empire, that of Galatia, which for a long time exercised its sway over the whole of Lower Asia.—During the second period, that of their sedentary state, we see the gradual development of social, religious, and political institutions, conformable to their peculiar character as a people; institutions original in their nature; a civilization full of movement and of life, of which Transalpine Gaul offers the purest and most complete model. One might say, in following the animated scenes of this picture, that the theocracy of India, the feudal system of the middle ages, and the Athenian democracy, had met on the same soil for the purpose of contending with each other and reigning by turns. Soon this civilization undergoes a change; foreign elements are introduced, brought in by commerce, by the relations of neighbourhood, by reaction from subjugated nations. Hence arose multiplied and often whimsical combinations. In Italy it is the Roman influence that exerts itself on the manners and institutions of the Gauls; in the south of Gaul it is that of the Massiliots; while in Phrygia we have a most singular compound of Gallic, Grecian, and Phrygian civilization.—To this succeeds the third period in the history of the Gallic race, that of national struggles and subjugation. By a singular coincidence, it is always by the Roman sword that the power of the Gallic tribes is destined to fall; in proportion as the Roman dominion extends, that of the Gauls recedes and declines. It would seem, indeed, that the victors and the vanquished, in the battle on the banks of the Alia, followed each other over the whole earth to decide the ancient quarrel of the Capitol. In Italy, the Cisalpine Gauls were reduced, but only after two centuries of obstinate resistance. When the rest of Asia had submitted to the yoke, the Galatæ still defended against Rome the independence of the East. Gaul eventually fell, but through complete exhaustion, after

a century of partial conflicts and nine years of general war under Caesar. In fine, the names of Caractacus and Galgacus shed a splendour on the last and ineffectual efforts of British freedom. It is everywhere an unequal conflict between ardent and undisciplined valour on the one hand, and cool and steady perseverance on the other.—The fourth period comprehends the organization of Gaul into a Roman province, and the gradual assimilation of transalpine manners to the customs and institutions of Italy; a work commenced by Augustus and completed by Claudius. (*Thierry, Histoire des Gaulois*, vol. 1, *Introd.*, p. vi., *seqq.*)

GALLIA CISALPINA, Gaul this side of the Alps, with reference to Rome, a name given to the northern part of Italy, as occupied by the Gallic tribes which had poured over the Alps into this extensive tract of country. Livy assigns to these migrations of the Gauls as early a date as the reign of Tarquinius Priscus, that is, about 600 B.C. Having securely established themselves in their new possessions, they proceeded to make farther inroads into various parts of Italy, and thus came into contact with the forces of Rome. More than two hundred years had elapsed from the time of their first invasion, when they totally defeated the Roman army on the banks of the Allia, and became masters of Rome itself. The defence of the Capitol and the exploits of Camillus (*Liv.* 5, 47, *seqq.*) or, rather, if Polybius be correct (2, 18), the gold of the vanquished, and the dangers which threatened the Gauls at home, preserved the state. From that time, the Gauls, though they continued, by frequent incursions, to threaten, and even ravage, the territory of Rome, could make no impression on that power. Though leagued with the Samnites and Etruscans, they were almost always unsuccessful. Defeated at Sentium in Umbria, near the Lake Vadimonis in Etruria, and in a still more decisive action near the port of Telamo in the same province (*Polyb.* 2, 19, *seqq.*), they soon found themselves forced to contend, not for conquest, but for existence. The same ill success, however, attended their efforts in their own territory. The progress of the Roman arms was irresistible; the Gauls were beaten back from the Adriatic to the Po, from the Po to the Alps, and soon beheld Roman colonies established and flourishing in many of the towns which had so lately been theirs. Notwithstanding these successive disasters, their spirit, though curbed, was still unsubdued; and when the enterprise of Hannibal afforded them an opportunity of retrieving their losses and wreaking their vengeance on the foe, they eagerly embraced it. It is to their zealous co-operation that Polybius ascribes in a great degree the primary success of that expedition. By the efficient aid which they afforded Hannibal, he was enabled to commence operations immediately after he had set foot in Italy, and to follow up his early success with promptitude and vigour. (*Polybius*, 3, 66.) As long as that great commander maintained his ground and gave employment to all the forces of the enemy, the Gauls remained unmolested, and enjoyed their former freedom, without being much burdened by a war which was waged at a considerable distance from their borders. But when the tide of success had again changed in favour of Rome, and the defeat of Hasdrubal, together with other disasters, had paralyzed the efforts of Carthage, they once more saw their frontiers menaced; Gaul still offered some resistance, even after that humbled power had been obliged to sue for peace; but it was weak and unavailing; and about twelve years after the termination of the second Punic war, it was brought under entire subjection, and became a Roman province. (*Carli, Antichità Italiane*, vol. 2, p. 5.) Under this denomination it continued to receive various accessions of territory, as the Romans extended their dominions towards the Alps, till it comprised the whole of that portion of Italy which lies between those mountains

and the rivers Magra and Rubicon. It was sometimes known by the name of Gallia Togata (*Mela*, 2, 4.—*Plin.*, 3, 14), to distinguish it from Transalpine Gaul, to which the name of Gallia Comata was applied. (*Cic.*, *Phil.*, 8, 9.) This latter name refers to the Gallic custom of wearing the *hair long*. The epithet Togata alludes to the circumstance of the rights of citizenship having been conferred on the natives of the country. The towns of Cisalpine Gaul obtained the privileges of Latin cities, and, consequently, the right of wearing the Roman *toga*, by a law of Pompeius Strabo (*Aecon. com. in Or. in Pison.*, p. 490), about 665 A.U.C.—According to Polybius, Cisalpine Gaul was included in the figure of a triangle, which had the Alps and Apennines for two of its sides, and the Adriatic, as far as the city of Sena Gallica, for the base. This is, however, but a rough sketch, which requires a more accurate delineation. The following limits will be found sufficiently correct to answer every purpose. The river Orgus, *Orea*, will define the frontier of Cisalpine Gaul to the northwest, as far as its junction with the *Po*, which river will then serve as a boundary on the side of Liguria, till it receives the *Tidone* on its right bank. Along this small stream we may trace the western limit, up to its source in the Apennines, and the southern along that chain to the river Rubicon. To the north, a line drawn nearly parallel with the Alps across the great Italian lakes will serve to separate Gaul from Rætia and other Alpine districts. The Athesis, *Adige*, from the point where it meets that line, and subsequently the *Po*, will distinguish it on the east and south from Venetia, and the Adriatic will close the last side of this irregular figure. The character which is given us of this portion of Italy by the writers of antiquity is that of the most fertile and productive country imaginable. Polybius describes it as abounding in wine, corn, and every kind of grain. Innumerable herds of swine, both for public and private supply, were bred in its forests; and such was the abundance of provisions of every kind, that travellers when at an inn did not find it necessary to agree on the price of any article which they required, but paid so much for the whole amount of what was furnished them; and this charge, at the highest, did not exceed half a Roman *as*. (*Polyb.*, 2, 15.) As a proof of the richness of this country, Strabo remarks, that it surpassed all the rest of Italy in the number of large and opulent towns which it contained. The wool grown here was of the finest and softest quality; and so abundant was the supply of wine, that the wooden vessels in which it was commonly stowed were of the size of houses. (*Strabo*, 218.) Lastly, Cicero styles it the flower of Italy, the support of the empire of the Roman people, the ornament of its dignity. (*Phil.*, 3, 5.—*Cramer's Ancient Italy*, vol. 1, p. 40, *seqq.*)

GALLIENUS, PUBLIUS LICINIUS, son of the Emperor Valerian, was made Cæsar, and colleague to his father, A.D. 253. He defeated, in a great battle near Mediolanum (*Milan*), the Alemanni and other northern tribes, which had made an irruption into Upper Italy, and gave evidence on that occasion of his personal bravery and abilities. He was also well-informed in literature, and was both an orator and a poet. When Valerian was taken prisoner by the Persians, A.D. 260, Gallienus took the reins of government, and was acknowledged as Augustus. He appears to have given himself up to debauchery and the company of profligate persons, neglecting the interests of the empire, and taking no pains to effect the release of his father from his hard captivity, in which he died. The barbarians attacked the empire on every side, revolts broke out in various provinces, where several commanders assumed the title of emperor, while Gallienus was loitering at Rome with his favourites. Yet now and then he seemed to awaken from his torpor, at the news of the advance of the

invaders; and, putting himself at the head of the legions, he defeated Ingenus, who had usurped the imperial title in Illyricum. But he disgraced his victory by horrible cruelties. Meantime Probus, Aurelianus, and other able commanders, were strenuously supporting the honour of the Roman arms in the East, where Odenatus, prince of Palmyra, acted as a useful ally to the Romans against the Persians. Usurpers arose in Egypt, in the Gauls, in Thrace, in almost every province of the empire, from which circumstance this period has been styled the reign of the thirty tyrants. At last Aureolus, a man of obscure birth, some say a Dacian shepherd originally, but a brave soldier, was proclaimed emperor by the troops in Illyricum, entered Italy, took possession of Mediolanum, and even marched against Rome while Gallienus was absent. Gallienus returned quickly, repulsed Aureolus, and defeated him in a great battle, near the Addua, after which the usurper shut himself up in Mediolanum. Here he was besieged by Gallienus; but, during the siege, the emperor was murdered by some conspirators. (*Aurel. Vict.*, c. 33.—*Eutrop.*, 9, 8.—*Zonaras*, 12, 24, *seqq.*)

GALLINARIA SYLVA, a wood in Campania, near Litternum, that furnished timber for the fleet with which Sextus Pompeius infested the coasts of the Mediterranean. (*Strabo*, 243.) Juvenal mentions the spot as a noted haunt of robbers and assassins. (*Sat.*, 3, 305.) Cicero leads us to suppose that this wood lay on the road from Sinuessa to Naples. (*Ad Fam.*, 9, 23.) It is now called *Pineta di Castel Volturno*. (*Pratelli della Via Appia*, p. 183.)

GALLOGRÆCIA or GALATIA, an extensive country of Asia Minor, occupied by a horde of Gauls. This region being merely a dismembered portion of ancient Phrygia, it will only be necessary here, in inquiring into its former history, to account for its being occupied by the Gauls or Gallo-Græci, from whom its new appellations were derived. We collect from Polybius and Livy (the latter of whom, however, only copies from the former), that this Asiatic colony was, in fact, but a detachment of those vast hordes which had wandered from Gaul under the conduct of Brennus, and with which that leader had invaded Greece. On their arrival in Dardania, a dispute arose between some of the chiefs and the principal commander, when the discontented troops, to the number of 20,000, determined to abandon the main body, and seek their fortunes elsewhere, under the direction of Leonorius and Lutarius. They traversed the plains of Thrace, and, encamping near Byzantium, were for a time the bane and terror of the citizens, by the devastations they committed, and the galling tribute they imposed. At length, however, tempted by the beautiful aspect of the shores of Asia, and the reputed wealth and fertility of that country, they were easily induced to listen to the offers of Nicomedes, king of Bithynia, for entering into his service. They accordingly crossed the Bosphorus, and having joined the troops of Nicomedes, were of great assistance to him in his wars with Zibætes. They now obtained a firm footing in Asia Minor; and, though not more than 20,000 men, and of these not more than one half furnished with arms, they spread alarm and consternation throughout the peninsula, and compelled whole provinces and even empires to pay them tribute. They even proceeded to divide the whole of Asia Minor among their three tribes, allotting to each a portion on which it was to levy impositions. The Hellespont was assigned to the Trocmi, Æolis and Ionia to the Tolistoboi, and the interior of the peninsula to the Tectosages. The settled abode, however, of the three tribes was in the country between the Sangarius and Halys, which they had seized, without resistance or difficulty, from the unwarlike Phrygians. As their numbers increased, they became more formidable, and also more imperious in their exactions; so that at

length even the kings of Syria thought it prudent to comply with their demands. Attalus, king of Pergamus, was the only sovereign who had the resolution to refuse at length to submit to this ignominious extortion. He met the barbarians in the field, and, seconded by the bravery of his troops, obtained a victory over these Gallo-Græci, as they were now called, from their intermixture with the Greeks of Phrygia and Bithynia. (*Liv.*, 38, 16.) Prusias, king of Bithynia, not long after, cut to pieces another body of Gauls, and freed the Hellespont from their depredations. (*Polyb.*, 5, 111.) These, however, were only partial advantages, and the Gauls remained the terror and tyrants of Asia Minor, so says, at least, the Roman historian, till the war with Antiochus brought the Roman armies into Asia. The victory of Magnesia having driven that monarch across the range of Taurus, there remained the Gallo-Græci only between the Romans and the entire possession of the peninsula. There wanted but a slight pretext to justify an invasion of these barbarous hordes in their own fastnesses. It was asserted that they had aided Antiochus in the campaign which had just terminated; and on this pretence war was declared against them, and the consul Manlius was ordered to march into their country, and reduce them by force of arms. That general, being joined by Attalus, brother of Eumenes, king of Pergamus, with a select body of troops, defeated the Tolistoboi and Trocmi with prodigious slaughter, and by a victory over the Tectosages, no less decisive than the former, terminated the war; the small remnant of the Gauls being content to sue for peace on any conditions. The Roman senate, satisfied with having broken the power of the Gallo-Græci, allowed them to retain possession of their country, on condition of giving no offence to Eumenes, king of Pergamum, who might be considered as their lieutenant in Asia, and forsaking their former wandering and marauding habits. Previously, as Strabo informs us, the whole of Galatia had been divided into four parts, each governed by a separate chief named tetrarch. Each tetrarch had under him a judge and military commander, who appointed two lieutenants. These collectively had the power of assembling the general council, which met in a spot called Drynemeton, and consisted of 300 members. This assembly decided only criminal cases: all other business was transacted by the tetrarchs and judges. Subsequently the number of tetrarchs was reduced to three, and finally to one. The latter change was made by the Romans in favour of Deiotarus, who had rendered their arms essential service in the Mithradatic war (*Appian*, *Bell. Mithr.*, 114), and who is so often mentioned by Cicero in terms of the greatest esteem and friendship. (*Vid.* Deiotarus.) On his death, which took place at an advanced age, part of his principality was annexed to Paphlagonia and Pontus under Polemo; and part to the dominions of Amyntas, chief of Lycaonia. On the demise of the latter, the whole of Galatia came into the possession of the Romans, and formed one province of their vast empire. (*Strab.*, 566.—*Plin.*, 5, 32.)—Though intermixed with Greeks, the Galatæans retained throughout their original tongue, since we are assured by St. Jerome that in his day they spoke the same language as the Treviri in Gaul. (*Prolegom. in Epist. ad Galatas.*) Neither did they entirely lose their original simplicity of manners; for Cicero, in his defence of Deiotarus (c. 9), praises him as an extensive cultivator and breeder of cattle. Less effeminate also and debased by superstition than the natives of Phrygia, they were more ready to embrace the tidings of salvation brought to them by the great Apostle of the Gentiles. The ecclesiastical notices assign sixteen bishoprics to Galatia, under two divisions; one called *Galatia Conularis*, the other *Salutaris*. (*Hieroc.*, p. 696.)—No ancient geographer has laid down with accuracy the

limits of Gallo-Græcia. It is known generally, that to the west it bordered upon Phrygia Epictetus; and a portion of Bithynia, north of the Sangarius: on the north it ranged along the Bithynian and Paphlagonian chains, till it met the Halys, which separated it from Cappadocia towards the east: on the south it was contiguous to Lycaonia and part of Pisidia, till it met again the Phrygian frontier, somewhere between the sources of the Sangarius and Alander on the north. (*Cramer's Asia Minor*, vol. 2, p. 79, *seqq.*)

GALLUS, I. Caius or Cnæus Sulpicius, was consul B.C. 166. His name is honourably connected with the history of ancient science, since he may be regarded as the first individual among the Romans that turned his attention to astronomical studies. Livy states, that, when a tribune in the army of Paulus Æmilius in Macedonia, he foretold an eclipse of the moon, first to the consul, and then, with his leave, to the Roman army. The eclipse took place on the evening before the great battle of Pydna, and the Romans, being prepared for it, were under no alarm, while their opponents were terrified, and deemed it an omen of the fall of their king Perses. (*Liv.*, 44, 37.—Compare *Cic., de Senect.*, 16.) The date of this eclipse was 168 B.C. Now as the tables of Hipparchus only began with 162 B.C., Gallus must have availed himself of some (probably Oriental) mode earlier than that of Hipparchus, but which has not come down to us. A passage in Pliny (2, 19) would seem to have reference to a work composed by Gallus, which may have been a treatise on eclipses, and such, indeed, is the opinion of Hardouin (*Ad Plin.*, l. c.). Cicero praises the astronomical knowledge of Gallus (*de Senect.*, 16), and Livy, Valerius Maximus, and Frontinus have not forgotten his name. He is said to have repudiated his wife because she appeared on one occasion in public without a veil. (*Val. Max.*, 6, 3, 10.)—H. Cornelius, a distinguished Roman, ranked among the chief of the Latin elegiac writers, and compared by Quintilian with Tibullus, Propertius, and Ovid. He was born of poor and ignoble parents, A.U.C. 685. Forum Julii is said to have been the place of his birth (*Chron. Euseb.*), but there were two towns of that name within the boundaries of the Roman empire. The one, since called *Friuli*, lay within the district of that name; the other (now *Frejus*, in Provence) was situate on the southern coast of the Roman province of Gallia Narbonensis. Some writers have fixed on the former as the birthplace of Gallus (*Hist. Lit. Aquileiensis*, lib. 1, 8.—*Liruti, Notiz. dell' Vite ed Opere de Let. de Friuli*, vol. 1, p. 2.—*Tiraboschi*, vol. 1, pt. 1, lib. 3, 1), but a greater number have maintained that he was a native of Frejus. (*Hist. Litt. de la France, par les Benedictins.*—*Fuhrmann, Handbuch*, &c., p. 286.—*Harles, Introduct. in Not. Lit. Rom.*, vol. 1, p. 333.—*Müller, Einleitung*, vol. 2, p. 232.) The Eusebian chronicle is the authority which places his birth at Forum Julii; but, owing to a corruption in some of the manuscripts of that chronicle, Forum Livii being substituted in its room, a few writers have supposed that he was born at that town, now *Forlì*, in the Romagna. (*Flavius Blondius, Ital. Illustrata.*—*Morgagni, Opus. Miscell.*) From the obscurity of his birth and of his original situation, little is known concerning the early years of Gallus. He is first mentioned in history as accompanying Octavius when he marched to Rome, after the battle of Modena, to demand the consulship. He had soon so far ingratiated himself with this leader, that we find him among the number of his advisers after the battle of Philippi, and counselling him, along with Mæcenas, to write in gentle terms to the senate, with assurances that he would offer no violence to the city, but would regulate all things with clemency and moderation. On the partition of the lands which followed the defeat of Brutus, Gallus was appointed to collect, from the cantons on the banks of the Po, a tribute

which had been imposed on the inhabitants in place of depriving them of their lands. When the young triumvir became the undisputed master of the western half of the Roman empire, he raised Gallus to the highest honours of the state; and when he meditated the appropriation of the eastern half likewise, he invested him with an important military command. After the battle of Actium, he was opposed to Antony in person on the invasion of Egypt; and while Augustus took possession of Pelusium, its eastern key, Gallus was employed to make himself master of Parætonium, which was considered its western barrier. Gallus proved eminently successful in this enterprise. He thwarted all the attempts of Antony to shake the fidelity of the soldiers, many of whom had at one time served under that leader; and by a skilful stratagem he surprised and destroyed a number of vessels which belonged to his adversary. When Augustus, having at length encamped near Alexandria, received intelligence that Antony had laid violent hands on himself, he despatched Proculeius to the city, in order, if possible, to save the treasures and get Cleopatra alive into his power. But she refused to confer with this emissary otherwise than from within the monument she had constructed, Proculeius standing without the gate, which was strongly barred. Having heard her proposals and observed the situation of the place, Proculeius returned and made his report to Augustus. It was then that Gallus undertook to perform a part still more perfidious and despicable. He advanced to the gate of the monument, and contrived to lengthen out a conference with the queen, till Proculeius, in the mean while, having fixed his scaling-ladders to the walls, entered the tower by one of the windows, and then descended to the gate where Cleopatra was discoursing with his coadjutor. She immediately turned round from Gallus, and, seeing that she was thus surprised, attempted to stab herself, but Proculeius wrested the dagger from her hands.—Egypt having been reduced to complete submission, its conqueror directed his whole attention towards the administration of its internal affairs. Its importance as the granary from which Italy derived the chief supplies of corn, its wealth, its population, and the levity of its inhabitants, all contributed to render this recent acquisition a subject of much care and solicitude to Augustus. He considered it inexpedient to allow any native assembly or council to meet. He even thought it dangerous to permit any authority to be exercised over this realm by the Roman senate; and he accordingly took into his own hands the whole administration, which, on his return to Rome, he determined to devolve on a viceroy, supported by a great military force stationed in different parts of the kingdom. Gallus was the person whom he first invested with this prefecture; and his long-tried fidelity, his attachment to his master, and his talent for conciliation, gave every prospect of a government which would be exercised with advantage to the prince who trusted him, and the people who were confided to his care; and so long as he acted under the direction of Augustus, he manifested no defect either in capacity or zeal. He opened new conduits from the Nile, and caused the old channels to be cleared; he restored the vigour of the laws, protected commerce, and encouraged arts; and he founded another Alexandrian library, the former magnificent collection of books having been in part destroyed by fire in the time of Julius Cæsar. By these means Egypt for a while enjoyed, under the government of Gallus, a prosperity and happiness to which she had long been a stranger during the sway of the Ptolemies. But the termination of the rule of this first prefect of Egypt did not correspond with its auspicious commencement. Elated with power, he soon forgot the respect that was due to his benefactor. He ascribed everything to his own merit, erecting statues to himself

throughout all Egypt, and engraving a record of his exploits on the pyramids. In unguarded hours, and when under the influence of the double intoxication of prosperity and wine, he applied to his master the most opprobrious and insulting expressions. (*Dio Cass.*, 53, 23.) Indiscretion and vanity were quickly followed by acts of misgovernment and rapine. He plundered the ancient city of Thebes, and stripped it of its principal ornaments (*Ammianus Marcell.*, 16, 4), and he is even said, though on no very certain authority, to have filled up the measure of his offences by conspiring against the life of the emperor. In consequence of his misconduct, and of those unguarded expressions, which were probably conveyed to his master, with exaggeration, by some false friend or enemy, he was recalled in the fifth year of his government; and immediately after his return to Rome, one of his most intimate friends, called Largus, stood forth as his accuser. Augustus, in the mean while, forbade him his presence; and the charges, which now multiplied from every quarter, were brought before the senate. Though Gallus had many friends among the poets, he had few among the senators. No one could refuse verses to Gallus, but a fair hearing was probably denied him. He was sentenced to perpetual exile, and his whole property was confiscated. (*Dio Cass.*, 53, 23.) Unable to endure the humiliation, which presented such a contrast to his former brilliant fortune, he terminated his existence by a voluntary death. This sad conclusion to his once prosperous career took place A.U.C. 727, when he was in the forty-third year of his age. Augustus is said to have mourned the death which his severity had thus occasioned; and Suetonius, in the life of that emperor (c. 66), has described the feelings which he expressed on receiving intelligence of his melancholy fate. But his sorrow probably was not sincere; and, if we may believe Donatus, he ungenerously carried his resentment so far beyond the tomb, as to command Virgil to expunge an elegy on Gallus, which he had introduced near the conclusion of the Georgics, and to substitute in its place the story of Aristæus and the bees, which, however beautiful in itself, does not compensate for the loss of the poet's delineation of an eminent friend, by whom he was warmly patronised, and whom, in return, he warmly loved.—The guilt or the misfortunes of Gallus as a statesman have been long since forgotten, and he is now remembered only as a distinguished patron of learning, and as an elegant poet. Gallus was the friend of Pollio and Mæcenas, and rivalled them, through life, as an eminent promoter of the interests of literature. He protected Parthenius Nicerus, a Greek author, who had been brought to Rome during the Mithradatic war, and who inscribed to him his collection of amorous mythological stories, entitled *Περὶ ἑρωτικῶν παθημάτων*, declaring, in his dedication, that he addressed the work to Gallus, as likely to furnish incidents which might be employed by him in the poems he was then writing. But Gallus is best known to posterity as the patron of Virgil, whom he introduced to the notice of Mæcenas, and as also instrumental in obtaining for him restitution of his farm, after the partition of the lands among the soldiery. (*Probus*, *Vit. Virg.*) In gratitude for these and other favours conferred on him, the Mantuan bard has introduced an elegant compliment to Gallus in the sixth eclogue; and has devoted the tenth to the celebration of his passion for Lycoris. The real name of this female is said to have been Cytheris. (*Servius*, *ad Virg.*, *Eclog.*, 10.) She was an actress of Mimes, who to exquisite beauty joined all the accomplishments of her profession. Besides having engaged the affections of Gallus, she had captivated Antony, and is said in her earlier years to have touched the heart of Brutus. The passion of Gallus may be supposed to have been at its height when Virgil wrote his tenth

eclogue, A.U.C. 716, at which period Gallus was about thirty years of age. At this time Cytheris had forsaken him for a rival, who was then engaged in a military expedition on the other side of the Alps, and she had even accompanied her new lover to that inhospitable region.—The elegies of Gallus consisted of four books, but they have now all perished; they were held, however, in high estimation so long as they survived. Ovid speaks of Tibullus as the successor of Gallus, and as his companion in the Elysian fields (*Am.*, 3, 9); and he oftener than once alludes to the extensive celebrity which his verses had procured for him as well as to his mistress. (*Am.*, 1, 15.) Quintilian ranks him as an elegiac poet with Tibullus and Propertius, though he thinks his style was somewhat harsher than that of either. Besides the four books of elegies, Gallus translated or imitated from the Greek of Euphronion a poem on the Grynean grove, written in the manner of Hesiod. He likewise translated from the same Euphronion a number of ancient mythological fables, such as the stories of Scylla and Philomela. Gallus also wrote a number of epigrams.—The four elegies, which were first published in the year 1500 by Pomponius Gauricus, as the work of Cornelius Gallus, are generally supposed to have been written by Maximianus Gallus, who lived in the reign of Anastasius. They are chiefly filled with complaints of the miseries and deprivations of extreme old age, a theme not likely to be chosen by Gallus, who died at the age of forty-two. Aldus Manutius, the son of Panillus, published another elegy, under the name of Asinius Gallus, the son of Pollio, whom he appears to have confounded with Cornelius Gallus. Though superior to the others in point of poetical style, it has no better claims to authenticity. (*Dunlop*, *Hist. Rom. Lit.*, vol. 3, p. 429, *seqq.*) The best edition of the pieces and fragments attributed to Gallus is that of Wernsdorff in the *Poeta Latini Minores*.—III. Ælius, the first and the only Roman that ever penetrated with an army into the interior of Arabia. He was of equestrian rank, and was appointed by Augustus imperial procurator in Egypt. The Arabians of that day had accumulated great riches by the trade with India. This excited the cupidity of the Romans, and Ælius Gallus was sent to subdue them. The expedition, however, signally failed, in consequence of the treachery of Syllaus, the commander of the Arabian auxiliaries who formed part of the Roman force. This leader, influenced by patriotic motives, guided the army of the invaders into sandy deserts, from which they were glad to retreat with considerable loss. The fleet, in like manner, which accompanied the expedition, was led into shoals where a large number of vessels were lost. Syllaus paid for his patriotic treachery with his life. An account of the whole affair is given by Strabo, who was the intimate friend of Gallus. (*Strab.*, 779, *seqq.*) Pliny and Dio Cassius also furnish us with information on this subject which is not contained in the narrative of Strabo. (*Dio Cass.*, 53, 29.) Great difficulty arises, however, in attempting to adopt the accounts which we thus obtain with the state of geographical knowledge at the present day. (Consult *Gossellin*, *Recherches*, vol. 2, p. 116.—*De Sacy*, *Mém. de l'Acad. des Insér.*, &c., vol. 48, p. 514.—*Mannert*, *Geogr.*, vol. 6, p. 116, *seqq.*) Valerius (Valeois), Burmann, and Simson have noticed the error of Casaubon (*ad Strab.*, l. c.), who confounds this Ælius Gallus with Cornelius Gallus the poet.—IV. Flavius Claudius Constantinus, brother of the Emperor Julian, and nephew to Constantine the Great. In 351 A.D., Constantius, the son of Constantine, granted him the dignity of Cæsar, and sent him to Antioch. But the power with which he was invested called forth nothing but vice, and Constantus having recalled him, A.D. 354, caused him to be put to death in prison, at the age of twenty-nine.

GANGARIDÆ, a people near the mouths of the Ganges. Ptolemy assigns them a capital, called *Ganga Regia*, on the western side of the Ganges, which D'Anville places in latitude $24^{\circ} 50'$, and makes the site to coincide with that of *Raji-mohol*. The Gangaridæ were allies of the Prasii, who lay nearer the Indus towards the northwest. The united forces of these two nations awaited the army of Alexander on the other side of the Hyphasis; but report made them so formidable for numbers and valour, that the wearied and alarmed Macedonians refused to cross the stream, in spite of all the efforts and remonstrances of their king. (*Justin*, 12, 8.—*Curt.*, 9, 2.—*Virg.*, *Æn.*, 3, 27.)

GANGES, a famous river of India, which, in the language of Hindustan, is called *Padda*, and is also named *Burra Gonga*, or the Great River, and *Gonga*, or the river, by way of eminence; and hence the European name of the stream is derived. The Sanscrit name of the Ganges (*Padda*) signifies *foot*, because the Brahmins, in their fabulous legends, make the river to flow from the foot of Bescham, who is the same with Vischnou, or the preserving deity. This great stream, together with the *Burrampooter*, whose twin-sister it has not unaptly been denominated, has its source in the vast mountains of Thibet. It seeks the plains of Hindustan by the west, and pursues the early part of its course through rugged valleys and defiles. After wandering about eight hundred miles through these mountainous regions, it issues forth a deity to the superstitious yet gladdened Hindu. This river was unknown to Herodotus, as he does not mention it, though it became famous in a century afterward. Its source was for a long period involved in obscurity. A survey, however, has been recently made by the British-Indian government, and it has been found to issue in a small stream, under the name of *Bhagirathy*, from under a mass of perpetual snow, accumulated on the southern side of the *Himmaleh* Mountains, between 31° and 32° north latitude, and 78° and 79° east longitude. It is computed to be 1500 miles in length, and at five hundred miles from its mouth is, during the rainy season, four miles broad and sixty feet deep. Its principal tributaries are the *Jumna*, the *Gogra*, and the *Burrampooter*. The whole number of streams which flow into it are eleven. About two hundred miles from the sea, the Delta of the Ganges commences by the dividing of the river. Two branches, the *Cossimbazzar* and the *Iellinghy*, are given off to the west. These unite to form the *Hoogly*, or *Bhagirathy*, on which the port of *Calcutta* is situated. It is the only branch commonly navigated by ships, and in some years it is not navigable for two or three months. The only secondary branch which is at all navigable for boats, is the *Chandah* River. That part of the Delta which borders on the sea is composed of a labyrinth of creeks and rivers, called the *Sunderbunds*, with numerous islands, covered with the profuse and rank vegetation called jungle, affording haunts to numerous tigers. These branches occupy an extent of two hundred miles along shore. The Ganges rises fifteen feet by the end of June, owing to the heavy rains. The remainder of its rise, which is in all thirty-two feet, is occasioned by the rains which fall in Bengal. By the end of July, all the lower parts of the country adjoining the Ganges, as well as the *Burrampooter*, are overflowed for a width of one hundred miles, nothing appearing but villages, trees, and the sites of some places that have been deserted. The line of the Ganges which lies between *Gangotree*, or the source of the leading stream, and *Sagor* island, below *Calcutta*, is held particularly sacred. The main body, which goes east to join the *Brahmapootra*, is not regarded with equal veneration. Wherever the river happens to run from south to north, contrary to its usual direction, it is

considered peculiarly holy. The places most superstitiously revered are the junctions of rivers, called *Prayags*, the principal of which is that of the *Jumna* with the Ganges at *Allahabad*. In the British courts of justice, the water of the Ganges is used for swearing Hindus, as the Koran is for Mohammedans, and the Gospel for Christians. (*Malte-Brun*, *Geogr.*, vol. 3, p. 18, *seqq.*)

GANGETICUS SINUS, now the *Bay of Bengal*, into which the Ganges falls.

GANYMÈDES, son of Tros and of Callirhoë daughter of the Scamander. He was remarkable for his beauty, and on this account, according to the legend, was carried off to Olympus by an eagle, to be the cup-bearer of Jove, who gave Tros, as a compensation, some horses of the Olympian breed. (*Hom.*, *Il.*, 5, 265, *seq.*—*Id.* *ib.*, 20, 234, *seq.*—*Hom.*, *Hymn.*, 4, 202.) One of the Cyclic poets (*ap. Schol. ad Eurip.*, *Orest.*, 1390) said, that Jupiter gave Laomedon a golden vine for Ganymede. The son of Tros succeeded Hebe as cup-bearer of the skies. (*Vid.* Hebe.) They who wish to give an historical aspect to this legend, make Ganymedes to have been carried off by Tantalus. The truth is, however, that the fable of Ganymedes, according to Knight, seems to have arisen from some symbolical composition, representing the act of fructifying nature, attended by Power and Wisdom: and this composition would appear to have been at first misunderstood, and afterward misrepresented in poetical fiction. For the lines in the *Iliad* alluding to it are, as Knight maintains, spurious; and, according to Pindar, the most orthodox, perhaps, of all the poets, Ganymede was not the son of Tros, but a mighty genius or deity, who regulated or caused the overflows of the Nile by the motion of his feet. (*Schol. in Arat. Phenom.*, v. 282.) His being, therefore, the cup-bearer of Jupiter, means no more than that he was the distributor of the waters between heaven and earth, and, consequently, a distinct personification of that attribute of Jupiter, which is otherwise signified by the epithet *Pluvius*. Hence he is only another modification of the same personification as *Attis*, *Adonis*, and *Bacchus*; who are all occasionally represented holding the patera or cup; which is also given, with the cornucopiæ, to their subordinate emanations, the local genii: of which many small figures in brass are extant. (*Inquiry into the Symb. Lang.*, &c., § 121.—*Class. Journ.*, vol. 25, p. 42.)

GARAMANTES (sing. *Garamas*), a people of Africa, south of Fozania, deriving their name from the city of Garama, now *Garmes*. They were slightly known to the Romans under Augustus, in whose time some claim was made to a triumph over them, on which account they are mentioned by Virgil. (*Virg.*, *Æn.*, 4, 198; 6, 795.—*Lucan*, 4, 334.—*Plin.*, 5, 8.—*Sil. Ital.*, 1, 142; 11, 181.)

GARAMANTIS, a nymph, mother of Iarbas, by Jupiter. (*Virg.*, *Æn.*, 4, 198.)

GARGĀNUS, a mountain of Apulia, terminating in a bold promontory of the same name (*Garganum Promontorium*), now *Punta di Viesti*. Strabo (284) seems to have considered the whole of that extensive neck of land, lying between the bay of *Rodi* and that of *Manfredonia*, as the Garganum Promontorium, for he describes it as running out to sea for the space of 300 stadia, or 37 miles. Scylax seems to refer to this mountain under the name of Arion. (*Periplus*, p. 5.) Frequent allusion is made to this celebrated ridge and headland by the Latin poets, especially on account of its fine groves of oaks. (*Horat.*, *Od.*, 2, 9.—*Id.*, *Ep.*, 2, 1, 200.—*Sil. Ital.*, 8, 630.—*Lucan*, 5, 378.)

GARGAPHIA, a valley near Plataea, with a fountain of the same name, where Actæon was torn to pieces by his dogs. (*Onid. Met.*, 3, 156.) The fountain of Gargaphia was situate about a mile and a half distant

from Plataea, on Mount Cithæron, towards the Athenian frontier. (*Gell. llin.*, p. 112.)

GARGARUS (plur. *a. orum*), one of the summits of Ida, the roots of which formed the promontory of Lectum. It is generally supposed to have been the highest peak of the range, but this honour must be assigned to the ancient Cotylus. (*Hobhouse's Travels*, Lett. 42.) On Gargarus was a town named Gargara. (*Strabo*, 621.) Dr. Hunt gives an interesting account of his ascent of Gargarus. He found the summit covered with snow, and mentions the following particular relative to its ancient name. "I have ventured to record a circumstance which proves on how fanciful a foundation etymological reasonings are founded. Our guide, when he pointed expressively to the snow on the top of the mountain, repeated the words *Gar, gar*, 'Snow, snow,' in which an enthusiastic topographer of the Iliad would easily have traced the ancient name of Gargarus." (*Walpole's Memoirs*, vol. 1, p. 122.—Compare, in relation to Gargarus, *Clarke's Travels, Greece, Egypt, &c.*, vol. 3, p. 166.)

GARGETTUS, a demus or borough of the tribe Ægeis in Attica, where Eurystheus is said to have been buried. (*Steph. Byz.*, s. v.—*Strabo*, 377.) It was the birthplace of Epicurus. (*Diog. Laert.*, 10, 1.) The modern *Krabo* is supposed to occupy its site. (*Stuart's Ant. of Ath.*, 3, p. 16.—*Spon.*, vol. 2, p. 104.—*Gell's llin.*, p. 75.)

GARUMNA, now the *Garonne*, a river of Gaul, which rises in the valley of *Arran*, to the south of *Bertrand*, among the Pyrenees, and falls into the Oceanus Cantabricus, or *Bay of Biscay*. The general course of this river, which extends to about 250 miles, is north-west. After its junction with the *Duranus* or *Dordogne*, below *Burdegala* or *Bordeaux*, it assumes the name of *Gironde*. According to Julius Cæsar's division of Gallia, the Garumna was the boundary of Aquitania, and separated that district from Gallia Celtica. This river is navigable to Tolosa or *Toulouse*, and communicates with the Mediterranean by means of the canal of Louis XIV., about 180 miles long, made through *Languedoc*. (*Mela*, 3, 2.—*Mannert, Geogr.*, vol. 2, p. 117.)

GAUGAMELA, a village of Assyria, in the district of Aturia, and about 500 stadia from Arbela. (*Arrian*, 6, 1.) The battle between Alexander and Darius took place near this spot; but, as Arbela was a considerable town, the Greeks chose to distinguish the conflict by the name of the latter. Gaugamela is said to have signified, in Persian, "the house of the camel," and to have been so called because Darius, the son of Hystaspes, having escaped upon his camel across the deserts of Scythia, when retreating from the latter country, placed the animal here, and appointed the revenue of certain villages for its maintenance. (*Plut.*, *Vit. Alex.*, c. 31.)

GAULUS, I. a small island adjacent to Melite or Malta, now called *Gozo*. (*Plin.*, 3, 8.)—II. Another below the south shore of Crete, now called *Gozo* of *Candia*, for distinction's sake from *Gozo* of *Malta*.

GAURUS, a ridge of mountains bordering on Lake Avernus, and now called *Monte Barbaro*. It was famous for its wines. (*Lucan*, 2, 665, *seqq*—*Sil. Ital.*, 3, 534.—*Stat. Silv.*, 3, 5, 99.)

GAZA, one of the five Philistine satrapies or principalities, situate towards the southern extremity of Canaan, about 16 miles south of Ascalon (*Ilin. Ant.*, p. 150), and a small distance from the Mediterranean. Its port was called *Gazæorum Portus*. As the name of the city of Gaza appears in the first book of Moses (10, 18), Mela must of course be mistaken, who says it is of Persian origin, and states that Cambyzes made this place his chief magazine in the expedition against Egypt. (*Mela*, 1, 11.) It was, however, an important and strongly-fortified place, as being situate so near the borders of that country. Alexander took

and destroyed it, after it had made a powerful resistance for the space of two months. (*Arrian*, 2, 27.—*Quintus Curtius*, 4, 6.) Antiochus the Great sacked it, and it was several times taken from the Syrians by the Maccabees. (*Polyb.*, *excerpt. Vales.*—*Maccab.*, 1, 11, 61.—*Josephus, Ant. Jud.*, 13, 21.) It was afterward subjected to new losses, so that St. Luke states (*Acts*, 8, 26) that it was, in his time, a desert place. Erasmus Schmid, Beza, and Le Moynes, however, following the Syriac version, refer the word *ἐρηκος*, in the original, not to Gaza, but to the way leading towards it. They are refuted by Reland. Strabo notices "Gaza, the desert," which agrees with the Acts. The place was called *Constantia* afterward. It is now termed by the Arabs *Rassa*, with a strong guttural expression. The ancient name in Hebrew signifies *strong*. (Compare *Mannert, Geogr.*, vol. 6, pt. 1, p. 263.)

GEBENNA or **CEVENNA**, now *Cevennes*, a chain of mountains in Gaul, which separated the Helvii from the Arverni, in that part of the Roman province corresponding to the modern *Languedoc*. The Pyrenees join the Cevennes, these last the Vosges, which in their turn unite with Jura to the south, and form the Ardennes to the north. The name Cebenna appears to contain the Celtic radical *Pen* or *Ben*, "a summit," so that the name probably meant "the lofty range." (*Malte-Brun, Geogr.*, vol. 4, p. 389, *Brussels* ed.)

GEDROSIA, a sandy and barren province of Persia, south and southeast of Carmania, and lying along the Mare Erythræum. It is now called *Mekran*. In passing through this country, the army of Alexander underwent very great hardships, from want of water and provisions, and from columns of moving sand. Its principal city was *Pura*, now *Fohrea*. (*Strabo*, 720.—*Arrian*, 6, 23, *seqq.*) Wahl compares the name Gedrosia with the Persian *dshiaduruseht*, "rough," "stormy," "boisterous," from the boisterous and stormy waves that beat upon its coast. (*Vorder und Mittel-Asien*, p. 585.)

GELA, I. a river of Sicily, to the east of the Himæra, and falling into the sea on the southeastern coast, near the city of the same name. The appellation Gela is said to have been given to it from the icy coldness of its waters, the term *gela* (compare the Latin *gelus*) having the meaning of "ice" in the languages of the Opici and Siculi. (*Steph. Byz.*, s. v.) Virgil applies the epithet *immanis* to Gela, meaning, according to some, the city, or, as others think, the river. The former opinion is the more correct one. The city was termed by the poet "immanis" ("of monster-symbol"), in allusion to the Minotaur on its coins. Those, however, who refer the epithet to the river, make it signify "cruel," i. e., perilous, and consider it as alluding to the numerous whirlpools in this stream, whence Ovid remarks, "*Et te vorticibus non adeunde Gela.*" (*Fast.*, 4, 470.—*Virg.*, *Æn.*, 3, 702.) The modern name of the Gela is, according to Cluverius, the *Ghi-ozzo*, or "Icy river."—II. A city of Sicily, on the southeastern coast, a short distance from the sea and from the mouth of the river of the same name. (*Vid.* Gela, I.) It was founded by a joint colony from Crete and from Lindus in the island of Rhodes, 45 years after the foundation of Syracuse. (*Herod.*, 7, 153.—*Thucyd.*, 6, 4.) Gela became one of the most powerful of the Grecian colonies in Sicily, and, 108 years after its own foundation, it colonized Agrigentum. This state of prosperity continued until the time of Gelon, who removed a large part of its inhabitants to Syracuse. After this it sank in importance, and never recovered its former power, but received another blow at a later period, when Dionysius the elder, being unable to save the place from the Carthaginians, carried off all the people to his capital (*Vid.* Dionysius I.) The Geloans subsequently returned to their city, but only to encounter new mis-

fortunes. Agathocles, suspecting the inhabitants of favouring the Carthaginians, suddenly made himself master of Gela, put to death 4000 of the wealthiest citizens, confiscated their property, and placed a garrison in the city. The final blow was at last received from its own colony Agrigentum. Phintias, tyrant of this latter place, wishing to perpetuate his name, built the small but commodious city of Phintias, called after himself, and transferred to it all the inhabitants of Gela. From this period, therefore, 404 years after its foundation, the city of Gela ceased to exist. On a part of the ancient site stands the modern *Terra Nora*. The plains around Gela (*Campi Geloi*) were famed for their fertility and beauty. (*Diod. Sic.*, 11, 25.—*Id.*, 13, 98.—*Id.*, 19, 108.—*Id.*, 20, 31.—*Id.*, 22, 2.—*Strabo*, 418.—*Mannert, Geogr.*, vol. 9, pt. 2, p. 345.)

GELLIUS, AULUS (or, as some manuscripts give the name, Agellius), a Latin grammarian, born at Rome in the early part of the second century, and who died at the beginning of the reign of Marcus Aurelius. We have but few particulars of his life. We know that he studied rhetoric under Cornelius Fronto at Rome, and philosophy under Phavorinus at Athens, and that, on his return to Rome, while still at an early age, he was made one of the centumviri or judges in civil causes. (*Noct. Att.*, 14, 2.) Gellius has left behind him one work entitled *Noctes Atticæ*, "Attic Nights." It was written, as he informs us in the preface, during the winter evenings in Attica, to amuse his children in their hours of relaxation. It appears, from his own account, that he had been accustomed to keep a commonplace book, in which he entered whatever he heard in conversation, or met with in his private reading, that appeared worthy of remembrance. In composing his "*Noctes Atticæ*" he seems merely to have copied the contents of his commonplace book, with a little alteration in the language, but without any attempt at classification or arrangement. The work contains anecdotes and arguments, scraps of history and pieces of poetry, and dissertations on various points in philosophy, geometry, and grammar. Amid much that is trifling and puerile, we obtain information on many subjects relating to antiquity, of which we must otherwise have been ignorant. It is divided into twenty books, which are still extant, excepting the eighth and the beginning of the seventh. He mentions, in the conclusion of his preface, his intention of continuing the work, which he probably, however, never carried into effect.—The style of Aulus Gellius is in general negligent and incorrect. In his eagerness to imitate the old writers, he is often carried too far, and introduces too many forms of expression from the earlier comic poets, whom he seems most anxious to take for his models in this respect. That he invented, however, any new terms himself seems hardly credible. The best editions of Aulus Gellius are, that of Gronovius, *Lugd. Bat.*, 1706, 4to, and that of Lion, *Götting.*, 1824, 2 vols. 8vo. (*Schöll, Hist. Lit. Rom.*, vol. 3, p. 310.—*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 718.)

GELON, a native of Gela in Sicily, who rose from the station of a private citizen to be supreme ruler of Gela and Syracuse. He was descended from an ancient family, which originally came from Telos, an island off the coast of Caria, and settled at Gela, when it was first colonized by the Rhodians. During the time that Hippocrates reigned at Gela (B.C. 498–491), Gelon was appointed commander of the cavalry, and greatly distinguished himself in the various wars which Hippocrates carried on against the Grecian cities in Sicily. On the death of Hippocrates, who fell in battle against the Siculi, Gelon seized the supreme power, B.C. 491. Soon afterward a more splendid prize fell in his way. The nobles and landholders (*γέροντες*) of Syracuse, who had been driven from the city by an insurrection of their slaves, supported by the rest of the

people, applied to Gelon for assistance. This crafty prince, gladly availing himself of the opportunity of extending his dominions, marched to Syracuse, into which he was admitted by the popular party (B.C. 485), who had not the means of resisting so formidable an opponent. (*Herodot.*, 7, 154, *seq.*) Having thus become master of Syracuse, he appointed his brother Hiero governor of Gela, and exerted all his endeavours to promote the prosperity of his new acquisition. In order to increase the population of Syracuse, he destroyed Camarina, and removed all its inhabitants, together with a great number of the citizens of Gela, to his favourite city. By his various conquests and his great abilities, he became a very powerful monarch; and therefore, when the Greeks expected the invasion of Xerxes, ambassadors were sent by them to Syracuse, to secure, if possible, his assistance in the war. Gelon promised to send to their aid two hundred triremes, twenty thousand heavy-armed troops, two thousand cavalry, and six thousand light-armed troops, provided the supreme command were given to him. This offer being indignantly rejected by the Lacedæmonian and Athenian ambassadors, Gelon sent, according to Herodotus, an individual named Cadmus to Delphi, with great treasures, and with orders to present them to Xerxes if he proved victorious in the coming war. (*Herod.*, 7, 157–164.) This statement, however, was denied by the Syracusans, who said that Gelon would have assisted the Greeks, if he had not been prevented by an invasion of the Carthaginians, with a force amounting to three hundred thousand men, under the command of Hamilcar. This great army was entirely defeated near Himera by Gelon, and Theron monarch of Agrigentum, on the same day, according to Herodotus, on which the battle of Salamis was fought. (*Herod.*, 7, 165, *seqq.*) An account of this expedition is also given by Diodorus Siculus (11, 21), who states, that the battle between Gelon and the Carthaginians was fought on the same day as that at Thermopylæ. There seems, indeed, to have been a regular understanding between Xerxes and the Carthaginians, in accordance with which the latter were to attack the Greeks in Sicily, while the Persian monarch was to move down upon Attica and the Peloponnesus.—Gelon appears to have used with moderation the power which he had acquired by violence, and to have endeared himself to the Syracusans by the equity of his government, and by the encouragement he gave to commerce and the fine arts. We are informed by Plutarch, that posterity remembered with gratitude the virtues and abilities of Gelon, and that the Syracusans would not allow his statues to be destroyed together with those of the other tyrants, when Timoleon became master of the city. (*Plut., Vit. Timol.*) He died B.C. 478, and was succeeded by his brother Hiero. (*Aristot., Polit.*, 5, 12.—*Encycl. Us. Knowl.*, vol. 11, p. 108.)

GELŌI, the inhabitants of Gela. (*Virg., Æn.*, 3, 701.)

GELŌNES and GELŌNI, a people of Scythia, included by Herodotus (4, 108) among the Budini. The historian speaks of their wooden city called Gelonus, and makes them to have been originally a Grecian race, who transplanted themselves from the trading ports of Greece and settled among the Budini, where they used a language partly Scythian and partly Grecian. This account, however, appears very unsatisfactory. It is better to refer the Geloni to that curious chain which connects the earlier history of Grecian civilization with the regions of the remote East, by means of sacerdotal colonies scattered throughout the wilds of Scythia. (Compare the remarks of Ritter, *Vorhalle*, p. 266.)

GEMONÆ SCALÆ, steps at Rome, near the prison called Tullianum, down which the bodies of those who had been executed in prison were thrown into the Fo-

rum, to be exposed to the gaze of the multitude. (*Val. Max.*, 6, 9.—*Liv.*, 33, 59.)

GENĀBUM, a town of the Aureliani, on the Ligeris or Loire, which ran through it. It was afterward called Aureliani, from the name of the people, and is now Orleans. (*Cæs.*, B. C., 7, 3.—*Lucan.*, 1, 440.)

GENAUNI, a people of Vindelicia. (*Vid. Brenni.*)

GENĒVA, a city of the Allobroges, at the western extremity of the lacus Lemanus or Lake of Geneva, on the south bank of the Rhodanus or Rhone. The modern name is the same as the ancient. (*Cæs.*, B. G., 1, 6.)

GENSERIC (more correctly GEISERIC), king of the Vandals, was the illegitimate brother of Gonderic, whom he succeeded A.D. 429. In the same year he left Spain, which had been partly conquered by the Vandals, and crossed over into Africa, at the solicitation of Boniface, governor of that province, who had been induced, by the arts of his rival Aetius, to rebel against Valentinian III., emperor of the West. Boniface soon repented of the step he had taken, and advanced to meet the invader. But his repentance came too late. The Moors joined the standard of Genseric, and the powerful sect of the Donatists, who had been cruelly persecuted by the Catholics, assisted him against their oppressors. Boniface was defeated, and obliged to retire into Hippo Regius, where he remained till he obtained a fresh supply of troops. Having ventured upon a second battle, and being again defeated, he abandoned the province to the barbarians, and sailed away to Italy. A peace was concluded between Genseric and the Emperor of the West, by which all Africa to the west of Carthage was ceded to the Vandals. This, however, did not long continue, and the city of Carthage was taken by the Vandals, by surprise, A.D. 439. The Emperors of the West and East made great preparations for the recovery of the province, but an alliance which Genseric made with Attila, king of the Huns, effectually secured him against their attempts. Genseric's next object was the formation of a naval power: an immense number of ships were built, and his fleets ravaged the shores of Sicily and Italy. Invited by the Empress Eudoxia, he sailed up the Tiber, A.D. 455, and permitted his soldiers, for the space of fourteen days, to pillage Rome. In A.D. 460 he destroyed the fleet which the Emperor Majorian had collected for the invasion of Africa; and, as his power increased, his ravages became more extensive. The island of Sardinia was conquered, and Spain, Italy, Sicily, Greece, Egypt, and Asia Minor were plundered every year by the Vandal pirates. Leo, the emperor of the East, at last resolved to make a vigorous effort for the recovery of Africa. A great army was assembled, and the command was given to Basiliscus. He landed at Bona, and at first met with considerable success, but was at length obliged to retire from the province. After this victory Genseric met with no farther opposition, but remained undisturbed master of the sea till his death, which happened A.D. 477. He was succeeded by his son Hunneric. Genseric was an Arian, and is said to have persecuted the Catholics with great cruelty. (*Procop.*, *de Bell. Vand.*—*Gibbon*, *Decline and Fall*, c. 33–36.)

GENTIUS, king of the Illyrians, sold his services to Perseus, king of Macedonia, for ten talents, and threw into prison the Roman ambassadors. He was addicted to intemperance, and hated by his subjects. The prætor Anicius conquered him in the space of twenty or thirty days, and led Gentius himself, his wife, brother, and children in triumph at Rome. (*Liv.*, 43, 19, seqq.)

GENĒA, now Genoa, a celebrated town of Liguria. In the second Punic war, Genua, then a celebrated emporium, took part with the Romans, and was, in consequence, plundered and burned by Mago the Carthaginian. (*Liv.*, 28, 46.) It was afterward rebuilt by the Romans (*Liv.*, 30, 1), and was made a municipi-

um. A curious fact, illustrative of the history of Genua, was brought to light by the discovery of a brazen tablet, in 1596, near the city. This monument informs us, that a dispute having arisen between the Genuatæ and Veituri, on the subject of their respective boundaries, commissioners were appointed by the Roman senate, A.U.C. 636, to settle the limits of the two territories; and the tablet gives the result of their labours. In the time of Strabo, Genua seems to have been a place of considerable trade, particularly in timber, which was brought from the mountains, where it grew to a great size. Some of it, being richly veined, was used for making tables, which were thought scarcely inferior to those of cedar-wood. Other commodities were cattle, skins, and honey, which the Ligurians exchanged for oil and Italian wine, none being grown on their coast.—In later times we find the name written Janna, from an idea that it was founded by Janus, which Cluver justly rejects as absurd. (*Ital. Ant.*, vol. 1, p. 70.—*Cramer's Ancient Italy*, vol. 1, p. 25, seqq.)

GENUCIA LEX, proposed by the tribune Genucius, A.U.C. 411, that no one should enjoy the same office twice within ten years, nor be invested with two offices in one year. (*Liv.*, 7, 42.)

GENŪSUS, a river of Illyricum. Cellarius places it to the south of the Apus and north of Apollonia; but Kruse and others make it the same with the Panyasus of Ptolemy, to the south of Dyrrhachium. The modern name, if Cellarius be correct, is the *Semno* or *Sio mini*. Kruse, however, makes it the *Iscumi*. (*Bischoff and Möller, Wörterb.*, p. 551.)

ΓΕΩΡΟΝΙΚΑ (*Γεωπονικά*), or “a treatise on Agriculture” (from γῆα, γῆ, “the earth,” and πονέω, “to bestow labour upon”), the title of a compilation, in Greek, of precepts on rural economy, extracted from ancient writers. The compiler, in his proemium, shows that he was living at Constantinople, and dedicated his work to the Emperor Constantine, “a successor of Constantine, the first Christian emperor,” stating that he wrote it in compliance with his desire, and praising him for his zeal for science and philosophy, and also for his philanthropic disposition. The emperor here meant is supposed by some to have been Constantine Porphyrogenitus, and the compilation is generally ascribed to Cassianus Bassus, a native of Bithynia, who, however, is stated by others to have lived some centuries before the time of Porphyrogenitus. The question respecting the authorship of the *Geoponica* has excited much discussion, and Needham, in his edition of the work (*Can-tab.*, 1704), has treated the subject at great length. The work is divided into twenty books, which are subdivided into short chapters, explaining the various processes of cultivation adapted to various soils and crops, and the rural labours suited to the different seasons of the year; together with directions for sowing the various kinds of corn and pulse; for training the vine, and the art of wine-making, upon which the author is very diffuse. He also treats of olive-plantations and oil-making, of orchards and fruit-trees, of evergreens, of kitchen-gardens, of the insects and reptiles that are injurious to plants, of the economy of the poultry-yard, of the horse, the ass, and the camel; of horned cattle, sheep, goats, pigs, &c., and the care they require; of the method of salting meat; and, lastly, of the various kinds of fishes. Every chapter is inscribed with the name of the author from whom it is taken, and the compiler gives, at the beginning of the first book, a list of the principal authorities. Other authors besides these are quoted in the course of the work. Two or three chapters are inscribed with the name of Cassianus, who speaks of himself in them as a native of Maratonymus in Bithynia, where he had an estate. (*Geopon.*, 5, 6, *et* 36.) The work is curious, as giving a course of ancient agriculture, collected from the most approved authorities then extant. The best edi-

tion of the Geoponica is that of Niclas, *Lips.*, 1781, 4 vols. 8vo. (*Encycl. Us. Knowl.*, vol. 11, p. 156.—*Scholl, Gesch. Griech. Litt.*, vol. 3, p. 439.)

GEORGICA, the title of Virgil's poem on husbandry. (*Vid.* Virgilius.)

GERÆSTUS, a promontory of Eubœa, terminating the island to the southwest. It is now Cape *Mantelo*. (*Homer, Od.*, 3, 176.—*Eurip., Orest.*, v. 992.) There was a well-frequented haven near the promontory. (*Plin.*, 4, 12.—*Steph. Byz.*, s. v.)

GERGIS or GERGITHA, a city of Dardania in Troas, a settlement of the ancient Teucri, and, consequently, a town of very great antiquity. (*Herod.*, 5, 122.—*Id.*, 7, 43.) Cephalo, an early historian, who is cited by Dionysius of Halicarnassus, Athenæus, and others as having written a history of Troy, was a native of this place. (*Dion. Hal.*, A. R., 1, p. 180.—*Athen.*, 9, p. 393.—*Strab.*, 589.—*Steph. Byz.*, s. v. *Ἀπίεθς, Γρακίος*) Gergis, according to Xenophon, was a place of strength, having an acropolis and very lofty walls, and one of the chief towns held by Mania, the Dardanian princess. (*Xen., Hist. Gr.*, 3, 1, 12.) It had a temple sacred to Apollo Gergithius, and was said to have given birth to the sibyl, who is sometimes called Erythraea, from Erythræ, a small place on Mount Ida (*Dion. Hal.*, 1, 55), and at others Gergithia. In confirmation of this fact, it was observed that the coins of this city had the effigy of the prophetess impressed upon them. (*Phlegon, ap. Steph. Byz.*, s. v. *Γέρφυς*.) Some of these coins are still extant, and accord with the testimony of Phlegon. They are thus described by numismatic writers: "Caput muliebri adversum laureatum cum stola ad collum R. TEP. Sphinx alata sedens Æ, 3." (*Sestini, Lett. Numism.*, t. 1, p. 88.) It appears from Strabo that Gergitha having been taken by Attalus, king of Pergamus, he removed the inhabitants to the sources of the Caicus, where he founded a new town of the same name. (*Strab.*, 616.) The Romans, according to Livy, made over the territory of the old town to the Ilienses (38, 39). Herodotus, in describing Xerxes' march along the Hellespont, states that he had the town of Dardanus on his left, and Gergitha on the right; it is evident, therefore, that the latter must have been situated inland, and towards Mount Ida. (*Herod.*, 7, 43.—*Cramer's Asia Minor*, vol. 1, p. 84, *seqq.*)

GERGOVIA, a strong town and fortress of Gaul, belonging to the Arverni. It was situate on a very high mountain, and of difficult access on all sides. It is now *Gergovie*. (*Cæs.*, B. G., 7, 9.)

GERMANIA. The word Germania was employed by the Romans to designate a country of greater extent than modern Germany. They included under this name all the nations of Europe east of the Rhine and north of the Danube, bounded on the north by the German Ocean and the Baltic, including Denmark and the neighbouring islands, and on the east by the Sarmatians and Dacians. It is difficult, however, to ascertain how far Germany stretched to the East. According to Strabo (289), Germanic tribes dwelt nearly as far as the mouths of the Borysthenes (or *Dniester*). The northern and northeastern parts of Gaul were also known under the name of Germany in the time of the Roman emperors, after the province of Belgica had been subdivided into *Germania Prima* and *Germania Secunda*.

1. Origin of the Germanic nations.

The origin of the Germanic nations is involved in uncertainty. The inhabitants of the beautiful regions of Italy, who had never known a rougher country, could hardly believe that any nation had deserted its native soil to dwell in the forests of Germany, where severe cold prevailed for the greater part of the year, and where, even in summer, impenetrable forests prevented the genial rays of the sun from reach-

ing the ground. They thought that the Germans must have lived there from the beginning, and therefore called them *indigenæ*, or "natives of the soil." (*Tacit., de Mor. Germ.*, 2.) Modern inquiries, however, have traced the descent of the Germanic race from the inhabitants of Asia; since it is now indisputably established that the Teutonic dialects belong to one great family with the Latin, the Greek, the Sanscrit, and the other languages of the Indo-Germanic chain. Von Hammer calls the Germans a Bactriano-Median nation. He makes the name *Germani* or *Sermuni*, in its primitive import, to have meant those who followed the worship of Buddha, and hence the Germans, according to him, are that ancient and primitive race who came down from the mountains of Upper Asia, the cradle of the human species, and, spreading themselves over the low country more to the south, gave origin to the Persian and other early nations. Hence the name *Dschermania* applied in early times to all that tract of country which lay to the north of the Oxus. The land of Erman, therefore, which was situate beyond this river, and which corresponds to the modern *Chorasin*, is made by Von Hammer the native home of the Germanic race, and the Germans themselves are, as he informs us, called *Dschermani*, their primitive name, by the Oriental writers down to the fourteenth century. (*Von Hammer, Wien. Jahrb.*, vol. 2, p. 319.—Compare vol. 9, p. 39.) Another remarkable circumstance is, that, besides the name referred to, that of the modern *Prussians* may be found under its primitive form in the Persian tongue. We have there the term *Pruschan* or *Peruschan*, in the sense of "a people." In Meninski (1, p. 533) we have *Berussan* and *Beruschian*, in the sense of "community of the same religion," while, in Ferghenghi Schuri, *Peruschan* or *Poruschan* more than once occurs. (Vol. 1, B. 182, V. l. Z. and S. 183, e. Z.) Even the name *Sachsen* or *Saxen* (Saxons) is to be found in the Persian tongue, under the form *Sassan*, as indicating not only the last dynasty of the Persian empire (the Sassanides), but also those acquainted with the doctrines of the Dessatin, the old Persian dialect of which is far more nearly related to the Gothic than the modern Persian to the German. In the Oriental histories, moreover, mention is made of the dynasty of the sons of Boia, in whom we may easily recognise the progenitors of the Boii; while traces of the name of the Catti may be found in that of *Kat*, in Chorasin. (*Fergh. Schuri*, B. 231.) The Getae, too, frequently appear under the appellation of the *Dschete* in the history of Timour; and finally, the name of the *Franks* has been traced to the Persian *Ferheng*, "reason" or "understanding." (*Von Hammer, in Kruse's Archiv. der Germanischen Völkerstamme*, bft. 2, p. 124, *seqq.*) Even as early as the time of Herodotus, the name of the *Tepuivrot* (*Germanii*) appears among the ancient Persian tribes (*Herod.*, 1, 125), while the analogies between the Persian and German are so striking as to have excited the attention of every intelligent scholar. Von Hammer has promised to show remarkable affinities between upward of 4000 German and Persian words. (*Archiv.*, p. 126, *not.*) And, besides all this, an ancient Georgian MS. of laws, recently brought to light, proves conclusively, that the Georgian nation had among them *ordals* precisely similar to those of the early Germans, and also the same judicial forms of proceeding, and the same system of satisfactions to be paid in cases of homicide, according to the rank of the party slain. (*Annal. de legislat. et de Jurisprudence*, Nro. 40, Paris, 1829.—Compare, on the general question of German and Persian affinities, *Adelung, Mithradates*, vol. 1, p. 278, *seqq.*—*Id. ib.*, vol. 2, p. 170, *seqq.*—*Ritter, Erkkunde*, vol. 2, p. 674.—*Id., Vorhale*, p. 307.—*Norberg, de Orig. Germ.*, p. 591.—*Link, Urvelt*, p. 170.—*Pfister, Gesch. der Deutsch.*, vol. 1, p. 24, *seqq.*, p. 519, *seqq.*) Now, if these preun-

ises be true, and they are acknowledged to be so by every scholar who has examined them, the commonly-received derivation of the name *Germani* falls to the ground. The advocates for this etymology maintain, that the appellation in question comes from *wer*, "war," and *mann*, "a man," and that "*Germani*" therefore means "men of war" or "warriors." The Roman alphabet, in consequence of its not having any *w*, converting this letter into a soft *g*. They refer also to Tacitus, who states, that the Tungri first assumed this name on crossing the Rhine, and that it gradually spread over the whole nation. (*De Mor. Germ.*, 2.) Others again assert, that the term is of Celtic origin, and was first applied by the Gauls to their German conquerors, and they deduce it from the Celtic *gerr*, "war," and *mann*, "a man." (*Lemaire, Ind. Geogr., ad Cæs.*, s. v., p. 269.) The true origin of the name, however, as has already been remarked, must be sought in the remote East.—There was also another national name which the Germans applied to themselves, and that was *Teutones*. In this we recognise at once the root of the modern term *Deutsche* or *Teutsche*; and the appellation would seem to have come from the old German word *Diet*, "a people," and to have been used as a name for the whole German race, considered as forming but one people, though divided into many independent tribes. (*Klemm, Germ. Alterthumsk.*, p. 79.)

2. Geographical acquaintance with Ancient Germany.

The Greeks and Romans had very little knowledge of Germany before the time of Julius Cæsar, who met with several Germanic tribes in Gaul, and crossed the Rhine on two occasions, rather with the view of preventing their incursions into Gaul, than of making any permanent conquests. His acquaintance was, however, limited to those tribes which dwelt on the banks of the Rhine. Under the early Roman emperors many of these tribes were subdued, and the country west of the Visurgis (or *Weser*) was frequently traversed by the Roman armies. But at no period had the Romans any accurate knowledge of the country east of this river; and it is therefore difficult to fix with certainty the position of the German tribes, particularly as the Germans were a nomade people. Some parts of Germany were inhabited by the Gauls, who were, according to Cæsar (*B. G.*, 6, 24), the more warlike nation in early times. Tacitus, at a later day, divides the Germans into three great tribes, which were subdivided into many smaller ones: 1. the Ingævones, bordering on the ocean. 2. Hermiones, inhabiting the central parts. 3. Istævones, including all the others. Pliny (4, 14) makes five divisions: 1. Vindili, including the Burgundiones, Varini, Carini, and Gullones. 2. Ingævones, including the Cimbri, Teutones, and Chauci. 3. Istævones, near the Rhine, including the midland Cimbri. 4. Hermiones, inhabiting the central parts, including the Suevi, Hermunduri, Catti, and Cherusci. 5. Peucini and Bastarnæ, bordering on the Dacians.

3. Manners and Customs of the Ancient Germans.

Our principal information on this subject is derived from Tacitus, who wrote a separate treatise on the manners and customs of the Germanic tribes, entitled "*De Situ, Moribus, et Populis Germaniæ*." Occasional notices and scattered hints are also found in the works of other ancient authors, particularly in the Gallic commentaries of Cæsar.—A nation free from any foreign intermixture (say the Roman writers), as is proved by their peculiar national physiognomy, inhabits the countries beyond the Rhine, with fierce blue eyes, deep yellow hair, a robust frame, and a gigantic height; inured to cold and hunger, but not to thirst and heat, warlike, honest, faithful, friendly and unsuspicious towards friends, but towards enemies cunning and dis-

sembling; scorning every restraint, considering independence as the most precious of all things, and therefore ready to give up life rather than liberty. Unacquainted with the arts of civilization, ignorant of agriculture and of the use of metals and letters, the German lives in his forests and pastures, supported by the chase, and the produce of his herds and flocks; his life being divided between inaction, sensual pleasures and great hardships. In time of peace, sleep and idleness, by day and night, are the sole pleasure of the indolent, discontented warrior, who longs for war, and manly, dangerous adventures. Till these arrive, he surrenders himself, with all the passion of unrestrained nature, to drinking and gaming. A beverage, prepared with little art from wheat and barley, indemnifies him for the absence of the juice of the grape, which nature has denied him, and exhilarates his noisy feasts. His personal liberty is not too precious to be staked on the cast of a die; and, faithful to his word, he suffers himself to be fettered, without resistance, by the lucky winner, and sold into distant slavery. The form of government, in the greater part of Germany, is democratic. The German obeys general and positive laws less than the casual ascendancy of birth or valour, or eloquence or superstitious reverence. On the shores of the Baltic there are several tribes which acknowledge the authority of kings, without, however, resigning the natural rights of man. Mutual protection forming the tie which unites the Germans, the necessity was early felt of rendering individual opinion subject to that of the majority; and these few rude outlines of political society are sufficient for a nation destitute of high ambition. The youth, born of free parents and ripened to manhood, is conducted into the general assembly of his countrymen, furnished with the shield and spear, and received as an equal and worthy member of their warlike republic. These assemblies, consisting of men able to bear arms, and belonging to the same tribe, are summoned at fixed periods or on sudden emergencies. The free vote of the members of these councils decides on public offences, the election of magistrates, on war or peace. For though the leaders are allowed to discuss all subjects previously, yet the right of deciding and executing is solely with the people. Impatient of delay, and obeying the impulse of their passions, without regard to justice or policy, the Germans are quick in adopting resolutions. Their applause or dissatisfaction is announced by the clashing of their arms or by a murmur. In times of danger a leader is chosen, to whom several tribes submit. The most valiant is selected for this purpose, to lead his countrymen more by his example than his authority. As soon as the danger is past, his authority, reluctantly borne by his free-minded countrymen, ceases. In times of peace, no other superior is known than the princes, who are chosen in the assemblies to distribute justice, or compose differences in their respective districts. Every prince has a guard and a council of 100 persons. Although the Romans called several German princes *kings*, yet these rulers had not so much as the right of punishing a freeman with death, or imprisonment, or blows. A nation to which every kind of restraint was thus odious, and which acknowledged no authority, respected no obligations but those which they imposed upon themselves. To leaders of approved valour the noblest youths voluntarily devoted their arms and services; and as the former vied with each other in assembling the bravest companions around them, so the latter contended for the favour of their leaders. It was the duty of the leader to be the first in courage in the hour of danger, and the duty of his companions not to be inferior to him. To survive his fall was an indelible disgrace to his companions, for it was their most sacred duty to defend his person, and to heighten his glory by their own deeds. The leader fought for victory, his companions, for their

leader. Valour was the grace of man, chastity the virtue of woman. The primitive nations of German origin attached something of a sacred character to the female sex. Polygamy was only permitted to the princes as a means of extending their connexions; divorce was forbidden rather by a sense of propriety than by law. Adultery was considered an inexcusable crime, and was, therefore, very rare. Seduction was not to be excused on any consideration. The religious notions of this race could not but be rude and imperfect. The sun and moon, fire and earth, were their deities, whom they worshipped, with some imaginary beings to whom they ascribed the direction of the most important circumstances of life, and whose will the priests pretended to divine by secret arts. Their temples were caverns, rendered sacred by the veneration of many generations. The ordeals so famous in the middle ages were considered by them infallible in all dubious cases. Religion afforded the most powerful means for inflaming their courage. The sacred standards, preserved in the dark recesses of consecrated caverns, were raised on the field of battle, and their enemies were devoted, with dreadful imprecations, to the gods of war and thunder. The valiant only enjoyed the favour of the gods; a warlike life, and death in battle, were considered as the surest means of attaining the joys of the other world, where the heroes were rejoiced by the relation of their deeds, while sitting around the festal table, and quaffing beer out of large horns or the skulls of their enemies. But the glory which the priests promised after death was conferred by the bards on earth. They celebrated in the battle and at the triumphal feasts the glorious heroes of past days, the ancestors of the brave who listened to their simple but fiery strains, and were inspired by them with contempt of death, and kindled to glorious deeds.

4. History of Ancient Germany.

The Romans first became acquainted with the ancient Germans in B.C. 113, when they appeared under the name of Teutones and Cimbri, on the confines of the Roman dominion, and then moving south, carried the terror of their arms over Gaul and part of Northern Italy, until overthrown by Marius and Catulus (103 and 101 B.C.). When Julius Cæsar had established himself in Gaul, he became acquainted with a nation then designated by the name of Germans. Ariovistus, the leader of the nation, which had previously inhabited the banks of the Danube, attempted to establish himself in Gaul, but, being defeated by Cæsar, he was obliged to flee beyond the Rhine. Of the fugitives who returned over the Rhine, the nation of the Marcomanni seems to have been formed. Cæsar crossed the Rhine twice; not with the view of making conquests in that wilderness, but to secure Gaul against the destructive irruptions of the barbarians. He even enlisted Germans in his army, first against the Gauls, then against Pompey. He obtained an accurate knowledge of those tribes only that lived nearest to the Rhine, as the Ubii, Sygambri, Usipetes, and Tencteri. The rest of Germany, he was told, was inhabited by the Suevi, who were divided into 100 districts, each of which annually sent 1000 men in quest of booty. They lived more by hunting and pasture than by agriculture, held their fields in common, and prevented the approach of foreign nations by devastating their borders. This account is true, if it is applied to the Germans in general, and if by the 100 districts are understood different tribes.—The civil war diverted the attention of the Romans from Germany. The confederacy of the Sygambri made inroads into Gaul with impunity, and Agrippa transferred the Ubii, who were hard pressed by them, to the west side of the Rhine. But the Sygambri having defeated Lollius, the legate of Augustus (A.U.C. 739), the emperor himself hast-

ened to the Rhine, erected fortifications along the banks of this river to oppose the progress of the enemy, and gave his stepson Drusus the chief command against them. This general was victorious in several expeditions, and advanced as far as the Elbe. He died A.U.C. 745. Tiberius, after him, held the chief command on the Rhine during two years, and exercised more cunning than force against the Germans. He induced them to enter the Roman service. The body-guard of Augustus was composed of Germans, and the Cheruscan Arminius was raised to the dignity of knight. From 740 to 755, different Roman generals commanded in those regions. Tiberius, having received the chief command a second time (A.U.C. 756), advanced to the Elbe; and the Romans would probably have succeeded in making Germany a Roman province, but for the imprudence of his successor, Quintilius Varus, by which all the advantages which had been previously gained were lost. His violent measures for changing the manners and customs of the Germans produced a general conspiracy, headed by the Cheruscan Arminius, who had received his education in Rome. Deceyed with three legions into the forest of Teutoberg, Varus was attacked and destroyed with his army. A few fugitives only were saved by the legate Asprenas, who was stationed with three legions in the vicinity of Cologne. The consequence of this victory, gained by the Germans A.D. 9, was the loss of all the Roman possessions beyond the Rhine; the fortress of Aliso, built by Drusus, was destroyed. The Cherusci then became the principal nation of Germany. Four years after, the Romans, under the command of Germanicus, made a new expedition against the Germans; but, notwithstanding the valour and military skill of the young hero, he did not succeed in re-establishing the Roman dominion. The Romans then renounced the project of subjugating the Germans, whose invasions they easily repelled, and against any serious attacks from whom they were secured by the internal dissensions which had arisen in Germany. Maroboduus, who had been educated at the court of Augustus, had united, partly by persuasion and partly by force, several Suevian tribes into a coalition, which is known under the name of the Marcomannic confederacy. At the head of this powerful league, he attacked the great kingdom of the Boii, in the southern part of Bohemia and Franconia, conquered it, and founded a formidable state, whose authority extended over the Marcomanni, Hermunduri, Quadi, Longobardi, and Semnones, and which was able to send 70,000 fighting men into the field. Augustus had ordered Tiberius, with twelve legions, to attack Maroboduus and destroy his power; but a general rebellion in Dalmatia obliged him to conclude a disadvantageous peace. The disasters which afterward befell the Romans in the west of Germany, prevented them from renewing their attempts against the Marcomanni, who ventured to make frequent incursions into the southern parts of Germany. Two powerful nations, therefore, now existed in Germany, the Marcomanni and the Cherusci, who, however, soon became engaged in disputes. On the one hand, the Longobardi and Semnones, disgusted with the oppressions of Maroboduus, deserted his confederacy and joined the Cherusci; and, on the other, Ingomerus, the uncle of Arminius, having become jealous of his nephew, went over to Maroboduus. After the war between the two rivals had been carried on for a considerable time, according to the rules of the military art, which Arminius and Maroboduus had learned in the school of the Romans, the victory at last remained with the Cherusci. Tiberius, instead of assisting Maroboduus, who had solicited his help, instigated Catualda, king of the Goths, to fall upon him, forced him to leave his country, and to seek refuge with the Romans. Catualda, however, soon experienced the same fate from the Hermunduri, who now

appear as the principal tribe among the Marcomanni. The Cherusci, after the loss of their great leader, Arminius, A.D. 21, fell from their high rank among the German nations. Weakened by internal dissensions, they finally received a king from Rome, by the name of Italicus, who was the last descendant of Arminius. During his reign they quarrelled with their confederates, the Longobardi, and sunk to an insignificant tribe on the south side of the Hercynian forest. On the other hand, the Catti, who lived in the western part of Germany, rose into importance. The Frisians rebelled on account of a tribute imposed upon them by the Romans, and were with difficulty overpowered; while the Catti, on the Upper Rhine, made repeated assaults on the Roman fortresses on the opposite bank. Their pride, however, was humbled by Galba, who compelled them to abandon the country between the Lahn, the Maine, and the Rhine, which was distributed among Roman veterans. Eighteen years later a dispute arose between the Hermunduri and Catti, on account of the salt-springs of the Franconian Saale. Meanwhile the numerous companions of Maroboduus and Catualda, having settled on the north of the Danube, between the rivers Gran and Morava, had founded under Vannius, whom they had received as king from the Romans, a new kingdom, which began to grow oppressive to the neighbouring tribes. Although Vannius had entered into an alliance with the Sarmatian Iazygæ, he was overpowered by the united arms of the Hermunduri, Lygii, and western Quadi (A.D. 50), and was compelled to fly for refuge to the Romans. His son-in-law, Sido, was now at the head of the government. He was a friend of the Romans, and rendered important services to Vespasian. In the West, the power of the Romans was shaken by the Batavi, so that they maintained themselves with the greatest difficulty. A war now broke out, that was terminated only with the downfall of Rome. The Suevi, being attacked by the Lygii, asked for assistance from Domitian, who sent them 100 horsemen. Such paltry succours only offended the Suevi. Entering into an alliance with the Iazygæ, in Dacia, they threatened Pannonia. Domitian was defeated. Nerva checked them, and Trajan gained a complete victory over them. But, from the time of Antoninus the philosopher, the flames of war continued to blaze in those regions. The Roman empire was perpetually harassed, on two sides by the barbarians, on one side by a number of small tribes, who, pressed by the Goths, were forced to invade Dacia in quest of new habitations. The southern regions were assigned to them in order to pacify them. But a war of more moment was carried on against Rome on the other side, by the united forces of the Marcomanni, Hermunduri, and Quadi, which is commonly called the Marcomannic war. Marcus Aurelius fought against them to the end of his life, and Commodus bought a peace, A.D. 180. Meantime the Catti devastated Gaul and Rætia, the Cherusci forced the Longobardi back to the Elbe. A.D. 220, new barbarians appeared in Dacia, the Visigoths, Gepidæ, and Heruli, and waged war against the Romans. At the same time, in the reign of Caracalla, a new confederacy appeared in the southern part of Germany, the Alemanni, consisting of Istævonian tribes. Rome, in order to defend its provinces against them, erected the famous *Vallum Romanorum*, the ruins of which are still visible from Ixthausen to Chringen. But the power of the Romans sank more and more, partly by the incessant struggle against the barbarians, partly by internal agitations. At the time when the Roman power had been weakened by civil wars, in the frequent military revolutions during the government of the emperors, the Franks forced their way as far as Spain, and in the reign of the Emperor Probus they also conquered the island of the Batavi. Thus the Franks and Alemanni were now the most

powerful German nations. Under Julian, the former lost the island of the Batavi, which was conquered by the Saxons, and the latter were humbled by the armies of Rome. But this was Rome's last victory. In the beginning of the 5th century, barbarians assailed the Roman empire on all sides. The Vandals, Suevi, and Alans occupied Gaul and Spain. The Burgundians followed them to Gaul, the Visigoths to Italy and Spain; the Burgundians were followed by the Franks, the Visigoths by the Ostrogoths, and these by the Longobardi. Thus began those migrations of the innumerable hosts, that spread themselves from the North and East over all Europe, subduing everything in their course. This event is called the great migration of the nations. (*Encyclopædia Americana*, vol. 5, p. 452, *seqq.*)

GERMANICUS CÆSAR, the eldest son of Drusus Nero Germanicus, and of Antonia the younger, born B.C. 14. He was the nephew of Tiberius and brother of Claudius, afterward emperor. Augustus, on adopting Tiberius, made the latter adopt his nephew Germanicus. At the age of twenty Germanicus served with distinction in Dalmatia, and afterward in Pannonia, and, on his return to Rome, obtained the honours of a triumph. He married Agrippina the elder, granddaughter of Augustus, by whom he had nine children, among others Caligula, and Agrippina the younger, the mother of Nero. In A.D. 12, Germanicus was made consul, and soon after he was sent by Augustus to command the legions on the Rhine. On the news of the death of Augustus, some of the legions mutinied, while Germanicus was absent collecting the revenue in Gaul. He hastened back to the camp, and found it one scene of tumult and confusion. The young soldiers demanded an increase of pay, the veterans their discharge. They had already driven the centurions out of the camp. Some offered their assistance to raise Germanicus to the supreme power, but he rejected their offers with horror, and left his judgment-seat, heedless of the clamour and threats of the mutineers. Having retired with a few friends to his tent, after some consultation on the danger to the empire if the hostile Germans should take advantage of the confusion caused by this sedition of the troops, he determined upon exhibiting to the soldiers fictitious letters of Tiberius, which granted most of their demands, and, the better to appease them, he disbursed to them immediately a considerable sum by way of bounty. He found still greater difficulty, however, in quelling a second mutiny, which broke out on the arrival of legates from the senate, who brought to Germanicus his promotion to the rank of proconsul. The soldiers suspected that they came with orders for their punishment, and the camp became again a scene of confusion. Germanicus ordered his wife Agrippina, with her son Caius Caligula, attended by other officers' wives and children, to leave the camp, as being no longer a place of safety for them. This sight affected and mortified the soldiers, who begged their commander to revoke the order, to punish the guilty, and to march against the enemy. They then began to inflict summary execution on the ringleaders of the mutiny, without waiting for the sanction of their general. A similar scene took place in the camp of two other legions, which were stationed in another part of the country, under the orders of Cæcina. Availing himself of the state of excitement on the part of the soldiers, Germanicus crossed the Rhine, attacked the Marsi, the Bructeri, and other German tribes, and routed them with great slaughter. The following year he defeated the Catti, and, after having burned their city of Mattium (according to Mannert, *Marpurg*), he victoriously returned over the Rhine. Here some deputies of Segestes appeared before him, soliciting, in the name of their master, his assistance against Arminius, the son-in-law of Segestes, by whom the latter was be-

sieged. Germanicus hastened to his rescue, delivered him, and made Thusnelda, wife of Arminius, prisoner. Arminius then prepared for war, and Germanicus collected his forces on the *Amisia* or *Ems*. A battle ensued. The Roman legions were already receding, when Germanicus renewed the attack with fresh troops, and thus happily averted the rout that threatened him. Arminius retreated, and Germanicus was content to regain the banks of the *Ems*, and retire with honour from a contest which his army could no longer sustain. After having lost another part of his troops during his retreat, by a violent storm, which wrecked the vessels in which they were embarked, he reached the mouths of the Rhine with a feeble remnant of his army, and employed the winter in making new preparations for war against the Germans. He built a fleet of one thousand vessels, in order to avoid the difficult route by land through forests and morasses, and landed at the mouth of the *Ems*. Proceeding thence towards the *Visurgis* or *Weser*, he found the Cherusci assembled on the opposite bank, with the intention of contesting the passage. Nevertheless, he effected it, and fought a battle which began at daybreak, and terminated to the advantage of the Romans. On the succeeding day the Germans renewed the contest with fury, and carried disorder into the ranks of the Romans, but Germanicus maintained possession of the field. The Germans returned into their forests. Germanicus re-embarked, and, after having experienced a terrible storm, by which part of his fleet was dissipated, went into winter-quarters, but not until he had made another incursion into the territory of the Marsi. Meantime Tiberius wrote repeatedly to his nephew, that he had earned enough of glory in Germany, and that he ought to return to Rome to enjoy the triumph which he had merited. Germanicus asked for another year to complete the subjugation of Germany, but Tiberius, who felt jealous of the glory of his nephew, and of his popularity with the troops, remained inflexible, and Germanicus was obliged to return to Rome, where he triumphed in the following year, A.D. 17. The year after, he was consul for the second time with Tiberius himself, and was sent to the East, where serious disturbances had broken out, with most extensive powers. But Tiberius took care to have a watch over him, by placing in the government of Syria Cnæus Piso, a violent and ambitious man, who seems to have been well qualified for his mission, as he annoyed Germanicus in every possible way, and his wife Plancina seconded him in his purpose. The frank and open nature of Germanicus was no match for the wily intrigues of his enemies. After making peace with Artabanus, king of the Parthians, and calming other disturbances in the East, Germanicus fell ill at Antioch, and, after lingering for some time, died, plainly expressing to his wife and friends around him that he was the victim of the wickedness of Piso and Plancina, meaning most probably that some slow poison had been administered to him. His wife Agrippina, with her son Caius and her other children, returned to Rome with the ashes of her husband. Germanicus was generally and deeply regretted. Like his father Drusus, he was, while living, an object of hope to the Romans. He died A.D. 19, in the thirty-fourth year of his age. Germanicus has been praised for his sincerity, his kind nature, his disinterestedness, and his love of information, which he exhibited in his travels in Greece and Egypt. His military talents appear to have been of a high order. And yet, in the midst of warlike operations, he still found leisure for literary pursuits, and favoured the world with two Greek comedies, some epigrams, and a translation of Aratus into Latin verse. The translation has come down to us in part. (*Vid.* Aratus I.—*Tacit., Ann.*, 1, 31, *seqq.*—*Id., Ann.*, 2, 5—*Id. ib.*, 2, 53, *seqq.*—*Dio Cass.*, 57, 5, *seqq.*)

GERMANII, one of the ancient tribes of Persia. (*He-*

rod., 1, 125.) This circumstance forms an important argument in the question respecting the affinity between the early Germanic and Persian races. (Consult remarks under the article *Germania*, § 1.)

GERONTHRÆ, a town of Iaconia, to the north of Helos, founded by the Achæans long before the invasion of the Dorians and the Heraclidæ, and subsequently colonized by the latter. When Pausanias visited Iaconia, he found Geronthræ in possession of the Eleuthero-Lacones. It contained a temple and grove of Mars, and another temple of Apollo. This ancient town is supposed to have been situated near the village of *Hieraki*, where there are some vestiges. (*Pausan.*, 3, 22.—*Cramer's Anc. Greece*, vol. 3, p. 218.)

GERRA, I. a city of Arabia Deserta, on the Sinus Persicus. It was enriched by commerce, and the principal articles of trade were the perfumes brought from the Sabæi, sent up the Euphrates to Thapsacus, and across the desert to Petra. (*Plin.*, 6, 28.—*Schol. ad Nicand., Alexiph.*, v. 107.) This city, for the construction of whose houses and ramparts stones of salt were used, appears to be represented by that now named *El-Katif*—II. A city of Ægyptus Inferior, or lower Egypt, in the eastern quarter, about eight miles from Pelusium. Now probably *Masli*.—III. A city of Syria, in the district of Cyrrhestia, between Bethammara and Arimara, and near the Euphrates. Now *Suruk*.—IV. According to Ptolemy, a city on the Island Meninx, in the Syrtis Minor, west of the city of Meninx. (*Bischoff und Möller, Wörterb. der Geogr.*, s. v.)

GERRHI, a people of Scythia, in whose country the Borysthenes rises. The kings of Scythia were buried in their territories. (*Herodot.*, 4, 71.)

GERRHUS, a river of Scythia, which, according to Herodotus (4, 56), separated from the Borysthenes, near the place as far as which that river was first known. It flowed towards the sea, dividing the territories of the Herdsmen from those of the Royal Scythians, and then fell into the Hypæris. D'Anville makes it the same with the modern *Molosznjawodi*. Rennell, however, inclines in favour of the *Tascezenac*. (*Geogr. of Herodotus*, p. 71.)

GERYON, GERYŌNEUS, and GERYŌNES, a celebrated monster, born from the union of Chrysaor with Callirhoë. He had the bodies of three men united: they cohered above, but below the loins they were divided into three. He lived in the island of Erythea, in the Sinus Gaditanus. Geryon was the possessor of remarkable oxen. They were of a purple hue, and were guarded by a herdsman named Eurytion, and by the two-headed dog Orthos, the progeny of Echidna and Typhon. The tenth labour of Hercules was to bring the oxen of Geryon from the island where they were pastured. Having reached Erythea in the golden cup of the Sun-god, he passed the night on Mount Abas. The dog Orthos, discovering him, flew at him, but Hercules struck him with his club, and killed Eurytion who came up to his aid. Menæti, who kept in the same place the oxen of Hades, having informed Geryon of what had happened, the latter pursued and overtook Hercules as he was driving the cattle along the river Anthemus. Geryon there attacked him, but was slain by his arrows; and Hercules, placing the oxen in the cup, brought them over to the Continent. (*Vid.* Hercules, where an explanation is given of the whole legend respecting the hero, and consult *Apollod.*, 2, 5, 10.)—According to some ancient writers, the oxen of Geryon were brought, not from the island of Erythea, but from Acarnania. Consult on this subject the remarks of Creuzer (*Hist. Græc. Antiquiss. Fragm.*, p. 51, not.).

GESSORIACUM, a town of the Morini, in Gaul; it was afterward named Bononia, or Bologna, and is now *Boulogne*. It appears to be the same with the *Morinorum Portus Britannicus* of Pliny (4, *extr.*). Man-

nert makes it identical with the *Portus Icius* or *Itius*. (*Mela*, 3, 2.—*Sueton.*, *Vit. Claud.*, 17.—*Eutrop.*, 9, 8.—*Zosim.*, 6, 2.)

GETA, Antonius, younger son of the Emperor Septimius Severus, was born A.D. 190, and made Cæsar and colleague with his father and brother, A.D. 208. The most remarkable circumstance recorded of him is the dissimilarity of his disposition to that of his father and brother, who were both cruel, while Geta was distinguished by his mildness and affability. He is said to have several times reproved his brother Caracalla for his proneness to shed blood, in consequence of which he incurred his mortal hatred. When Severus died at Eboracum (*York*), A.D. 211, he named his two sons as his joint successors in the empire. The soldiers, who were much attached to Geta, withstood all the insinuations of Caracalla, who wished to reign alone, and insisted upon swearing allegiance to both emperors together. After a short and unsuccessful campaign, the two brothers, with their mother Julia, proceeded to Rome, where, after performing the funeral rites of their father, they divided the imperial palace between them, and at one time thought of dividing the empire likewise. Geta, who was fond of tranquillity, proposed to take Asia and Egypt, and to reside at Antioch or Alexandria; but the Empress Julia with tears deprecated the partition, saying that she could not bear to part from either of her sons. After repeated attempts of Caracalla to murder Geta, he feigned a wish to be reconciled to his brother, and invited him to a conference in their mother's apartment. Geta unsuspectingly went, and was stabbed by some centurions whom Caracalla had concealed for the purpose. His mother Julia tried to shield him, but they murdered him in her arms, and she was stained by his blood, and wounded in one of her hands. This happened A.D. 212. After the murder Caracalla began a fearful proscription of all the friends of Geta, and also of those who lamented his death on public grounds. (*Spartan.*, *Vit. Get.*—*Herodian*, 4, 1, *seqq.*—*Dio Cass.*, 77, 2, *seqq.*)

GETÆ, the name of a northern tribe mentioned in Roman history, inhabiting the country on both banks of the Danube near its æstuary, and along the western shores of the Euxine. Those who lived south of the Danube were brought into a kind of subjection to Rome in the time of Augustus (*Dio Cass.*, 51); and their country, called Scythia Parva, and also Pontus, is well known, under the latter name, through the poems which Ovid, in his exile, wrote from Tomi, the place of his residence. He gives in many passages a dismal account of the appearance and manners of the Getæ, especially in elegies seventh and tenth of the fifth book of his *Tristitia*. The maritime parts of the country had been in former times colonized by the Greeks, and this may account for the partial civilization of the Getæ south of the Danube, while their brethren north of the same river remained in a state of barbarism and independence. The Getæ are described by Herodotus (4, 93) as living in his time south of the Ister (Danube). He calls them the bravest of the Thracians. The Goths are supposed to have had a common origin with the Getæ. (*Plin.*, 4, 11.—*Mela*, 2, 2.—*Tornaud.*, *de Regn. Success.*, p. 50, *seq.*)

GIGANTES, the sons of Cælus and Terra, who, according to Hesiod, sprang from the blood of the wound which Cælus received from his son Saturn; while Hyginus calls them sons of Tartarus and Terra. They are represented as of uncommon stature, with strength proportioned to their gigantic size. Some of them, as Cottus, Briareus, and Gyes, had fifty heads and one hundred arms. The giants are fabled by the poets to have made war upon the gods. The scene of the conflict is said to have been the peninsula of Pallene; and with the aid of Hercules the gods subdued their formidable foes. The principal champions on the side

of the giants were Porphyryon, Alcioneus, and Enceladus, on the last of whom Minerva flung the island of Sicily, where his motions cause the eruptions of Ætna. (*Pind.*, *Pyth.*, 8, 15.—*Id.*, *Nem.*, 1, 100.—*Apollod.*, 1, 6.)—It is said that Earth, enraged at the destruction of the giants, brought forth the huge Typhon to contend with the gods. The stature of this monster reached the sky; fire flashed from his eyes; he hurled glowing rocks with loud cries and hissing against heaven, and flame and storm rushed from his mouth. The gods, in dismay, fled to Egypt, and concealed themselves under the forms of various animals. Jupiter, however, after a severe conflict, overcame him, and placed him beneath Ætna. (*Pind.*, *Pyth.*, 1, 29, *seqq.*—*Id.*, *frag. Epimic.*, 5.—*Æsch.*, *Prom. V.*, 351, *seqq.*) The flight of the gods into Egypt is a bungling attempt at connecting the Greek mythology with the animal worship of that country. (*Keightley's Mythology*, p. 262, *seq.*) The giants appear to have been nothing more than the energies of nature personified, and the conflict between them and the gods must allude to some tremendous convulsion of nature in very early times. (*Vid.* *Lectonia*, and compare *Hermann und Creuzer, Briefe*, &c., p. 164.)—As regards the general question, respecting the possible existence in former days of a gigantic race, it need only be observed, that, if their structure be supposed to have been similar to that of the rest of our species, they must have been mere creatures of poetic imagination; they could not have existed. It is found that the bones of the human body are invariably hollow, and, consequently, well calculated to resist external violence. Had they been solid, they would have proved too heavy a burden for man to bear. But this hollowness, while it is admirably well fitted for the purpose which has just been mentioned, and likewise subserves many other important ends in the animal economy, is not by any means well adapted for supporting a heavy superincumbent weight; on the contrary, it renders the bone weaker, in this respect, than if the latter had been solid. The inference from all this is very plain. Man never was intended by his Maker for a gigantic being, since his limbs could not, in that event, have supported him; and, if giants ever did exist, they must necessarily have been crushed by their own weight. Or, had their bones been made solid, the weight of their limbs would have been so enormous, that these lofty beings must have remained as immoveable as statues. That many of our species have attained a very large size is indisputable, but the world has never seen giants; and in all those cases where the bones of giants are said to have been dug up from the earth, the remains thus discovered have been found to be merely those of some extinct species of the larger kind of animals. A simple mode of life, abundance of nutritious food, and a salubrious atmosphere, give to all organic beings large and graceful forms. The term giant, as used in scripture, originates in an error of translation. In our version of holy writ six different Hebrew words are rendered by the same term *giants*, whereas they merely mean, in general, persons of great courage, wickedness, &c., and not men of enormous stature, as is commonly supposed. Thus, too, when Nimrod is styled in the Greek version a giant before the Lord, nothing more is meant than that he was a man of extensive power.

GINDES. *Vid.* Gyndes.

GIR, a river of Africa, which Ptolemy delineates as equal in length to the Niger, the course of each being probably about 1000 British miles. It ran from east to west, until lost in the same lake, marsh, or desert as the Niger. The Arabian geographer Edrisi seems to indicate the *Ghir* when he speaks of the Nile of the negroes as running to the west, and being lost in an inland sea, in which was the island Uhl. Some have supposed the Gir of Ptolemy to be the river of *Bornou*,

or *Wad-al-Gazel*, which, joining another considerable river flowing from *Kuku*, discharges itself into the Nubia Palus or *Kangra*, and it is so delineated in Rennell's map; but others, seemingly with better reason, apprehend the Gir of Ptolemy to be the *Bahr-Kulla* of Browne, in his history of Africa.

GLADIATORI LUDI, combats originally exhibited at the grave of deceased persons at Rome. They were first introduced there by the Bruti, upon the death of their father, A.U.C. 490, and they thus formed originally a kind of funeral sacrifice, the shades of the dead being supposed to be propitiated with blood. For some time after this they were exhibited only on such occasions. Subsequently, however, the magistrates, to entertain the people, gave shows of gladiators at the Saturnalia and the festival of Minerva. Incredible numbers of men were destroyed in this manner. After the triumph of Trajan over the Dacians, spectacles of this kind were exhibited for 123 days, in which 10,000 gladiators fought. Gladiators were kept and maintained in schools by persons called *lanista*, who purchased and trained them. The whole number under one *lanista* was called *familia*. Gladiators were at first composed of captives and slaves, or of condemned malefactors. But afterward also freeborn citizens, induced by hire or by inclination, fought on the arena; some even of noble birth; and, what is still more wonderful, women of rank, and dwarfs. When there were to be any shows, handbills were circulated to give notice to the people, and to mention the place, number, time, and every circumstance requisite to be known. When they were first brought upon the arena, they walked round the place with great pomp and solemnity, and after that they were matched in equal pairs with great nicety. They first had a skirmish with wooden blades, called *rudēs* or *arma lutoria*. After this the effective weapons, such as swords, daggers, &c., called *arma decretoria*, were given them, and the signal for the engagement was given by the sound of a trumpet. As they had all previously bound themselves to contend till the last, the fight was bloody and obstinate; and when one signified his submission by surrendering his arms, the victor was not permitted to grant him his life without the leave and approbation of the multitude. This was done by pressing down their thumbs, with the hands clenched. On the contrary, if the people wished him slain, they turned their thumbs upward. The first of these signs was called *pollicem premere*; the second, *pollicem vertere*. The combats of gladiators were sometimes different, either in weapons or dress, whence they were generally distinguished into the following orders. The *secutores* were armed with a sword and buckler, to keep off the net of their antagonists, the *retiarii*. These last endeavoured to throw their net over the head of their opponent, and in that manner to entangle him, and prevent him from striking. If this did not succeed, they took themselves to flight. Their dress was a short coat, with a hat tied under the chin with broad riband. They bore a trident in their left hand. The *Thracees*, originally Thracians, were armed with a falchion and small round shield. The *myrmillones*, called also *Galli*, from their Gallic dress, were much the same as the *secutores*. They were, like them, armed with a sword, and on the top of their headpiece they wore the figure of a fish embossed, called *uōμμυρoς*, whence their name. The *hoplomachi* were completely armed from head to foot, as their name implies. The *Sannites*, armed after the manner of the Sannites, wore a large shield, broad at the top, and growing more narrow at the bottom, more conveniently to defend the upper parts of the body. The *essedarii* generally fought from the *essedum*, or chariot used by the ancient Gauls and Britons. The *andabate*, *ἀναβάται*, fought on horseback, with a helmet that covered and defended their faces and eyes. Hence *andabatarum more pugnare* is to fight blind-

folded. The *meridiani* engaged in the afternoon. The *postulatii* were men of great skill and experience, and such as were generally produced by the emperors. The *fiscales* were maintained out of the emperor's treasury, *fiscus*. The *dimachari* fought with two swords in their hands, whence their name. After these cruel exhibitions had been continued for the amusement of the Roman populace, they were abolished by Constantine the Great, near 600 years from their first institution. They were, however, revived under the reign of Constantius and his two successors, but Honorius for ever put an end to these cruel barbarities.

GLAUCE, I. a daughter of Creon, king of Corinth, called also Creüsa, married to Jason after his separation from Medea.—II. A fountain at Corinth, which was said to have received its name from Glaucus, who threw herself into it in order to be freed from the enchantments of Medea. (*Pausan.*, 2, 3.)

GLAUCUS, I. son of Hippolochus, and grandson of Bellerophon. He was, with Sarpedon, leader of the Lycian auxiliaries of King Priam. Upon the discovery made on the field of battle by him and Diomedes, that their grandfathers, Bellerophon, king of Ephyræ or Corinth, and Ceneus, king of Ætolia, had been remarkable for their friendship, they mutually agreed to exchange their armour, that of Glaucus being of gold, and that of Diomedes of brass. Hence arose the proverb, "It is the exchange of Glaucus and Diomedes," to denote inequality in things presented or exchanged. Glaucus was slain by Ajax. (*Hom.*, *Il.*, 6, 119, *seqq.*—*Virg.*, *Æn.*, 6, 483.)—II. A sea deity, probably only another form of Poseidon or Neptune, whose son he is, according to some accounts. (*Euanthes*, *ap. Athen.*, 7, p. 296.) Like the marine gods in general, he had the gift of prophecy; and we find him appearing to the Argonauts (*Apoll. Rh.*, 1, 1310, *seq.*), and to Menelaus (*Eurip.*, *Orest.*, 356, *seqq.*), and telling them what had happened, or what was to happen. In later times, sailors were continually making reports of his soothsaying. (*Pausan.*, 9, 22.) Some said that he dwelt with the Nereides at Delos, where he gave responses to all who sought them. (*Aristot.*, *ap. Athen.*, *l. c.*) According to others, he visited each year all the isles and coasts, with a train of monsters of the deep (*κῆτεα*), and, unseen, foretold in the Æolic dialect all kinds of evil. The fishermen watched for his approach, and endeavoured by fastings, prayer, and fumigations to avert the ruin with which his prophecy menaced the fruits and cattle. At times he was seen among the waves, and his body appeared covered with muscles, seaweed, and stones. He was heard evermore to lament his fate in not being able to die. (*Plat.*, *Rep.*, 10, 611.—*Schol.*, *ad loc.*)—This last circumstance refers to the common pragmatic history of Glaucus. He was a fisherman, it is said (*Pausan.*, *l. c.*—*Ovid.*, *Met.*, 13, 904, *seqq.*), of Anthedon, in Boeotia. Observing one day the fish which he had caught and thrown on the grass to bite it, and then to jump into the sea, his curiosity excited him to taste it also. Immediately on his doing so he followed their example, and thus became a sea-god. Another account made him to have obtained his immortality by tasting the grass, which had revived a hare he had run down in Ætolia. (*Nicand.*, *ap. Athen.*, *l. c.*) He was also said to have built and steered the Argo, and to have been made a god of the sea by Jupiter during the voyage. (*Possis*, *ap. Athen.*, *l. c.*) An account of the story of his love for Scylla will be found under the latter article. (*Keightley's Mythology*, p. 248, *seqq.*)—III. A son of Sisyphus, king of Corinth, by Merope, the daughter of Atlas, born at Potnie, a village of Boeotia. According to one account, he restrained his mares from having intercourse with the steeds; upon which Venus inspired the former with such fury, that they tore his body to pieces as he re-

turned from the games which Adrastus had celebrated in honour of his father. Another version of the story makes them to have run mad after eating a certain plant at Potniæ. (*Etymol. Mag., s. v. Πορνιάδες* — *Hygin., fab.*, 250. — *Virgil, Georg.*, 3, 268. — *Heyne, ad Virg., l. c.* — *Palaph., de Incred.*, c. 26. — *Schol. ad Eurip., Phæn.*, 1141) — IV. A son of Minos and Pasiphaë, who, pursuing, when a child, a mouse, fell into a vessel of honey and was smothered. His father, ignorant of his fate, consulted the oracle to know where he was, and received for answer that there was a three-coloured cow in his herd, and that he who could best tell what she was like, could restore his son to life. The soothsayers were all assembled, and Polydus, the son of Coiranus, said that her colour was that of the berry of the brier, green, red, and, lastly, black. Minos thereupon desired him to find his son; and Polydus, by his skill in divination, discovered where he was. Minos then ordered him to restore him to life; and, on his declaring his incapacity so to do, shut him up in a chamber with the body of his child. While here, the soothsayer saw a serpent approach the body, and he struck and killed it. Another immediately appeared, and seeing the first one dead, retired, and came back soon after with a plant in its mouth, and laid it on the dead one, which instantly came to life. Polydus, by employing the same herb, recovered the child. Minos, before he let him depart, insisted on his communicating his art to Glaucus. He did so; but, as he was taking leave, he desired his pupil to spit into his mouth. Glaucus obeyed, and lost the memory of all he had learned. (*Apollod.*, 3, 3, 1. — *Tzet., ad Lyc.*, 811.) Hyginus makes him to have been restored to life by Æsculapius. (*Hygin., Poet. Astron.*, 2, 14.)

GLAUCUS SINUS, a gulf of Lycia, at the head of which stood the city of Telmissus or *Macri*, whence in ancient times the gulf was sometimes also called Sinus Telmissius, and whence comes likewise its modern name, Gulf of *Macri*.

GLOTA or CLOTA, a river of Britain, now the *Clyde*, falling into the Glota Æstuarium, or *Firth of Clyde*.

GNATIA, a town of Apulia, the same as Egnatia, the name being merely shortened by dropping the initial vowel. (*Vid. Egnatia.*)

GNIDUS. *Vid. Cnidus.*

GNOSsus. *Vid. Cnosus.*

GOBRYAS, a Persian, one of the seven noblemen who conspired against the usurper Smerdis. (*Vid. Darius*)

GOMPHI, a city of Thessaly, of considerable strength and importance, and the key of the country on the side of Epirus. It was situate on the borders of the Athamans, and was occupied by that people not long before the battle of Cynoscephale. When Cæsar entered Thessaly, after his joining Domitius at Ægition, the inhabitants of Gomphi, aware of his failure at Dyrhachium, closed their gates against him; the walls, however, were presently scaled, notwithstanding their great height, and the town was given up to plunder. In his account of this event, Cæsar describes Gomphi as a large and opulent city. (*Bell. Civ.*, 3, 80. — Compare *Appian, B. C.*, 2, 64.) The Greek geographer Meletius places it on the modern site of *Stagous*, or *Kalabachi* as it is called by the Turks (*Geogr.*, p. 388); but Pouqueville was informed that its ruins were to be seen at a place called *Cleisoura*, not far from *Stagous*. (*Vol. 3*, p. 339.)

GONĀTAS, one of the Antigoni. (*Vid. Gonni.*)

GONNI, a town of Thessaly, twenty miles from Larissa, according to Livy (36, 10), and close to the entrance of the gorge of Tempe. It was strongly fortified by Perses in his first campaign against the Romans, who made no attempt to render themselves masters of this key of Macedonia. (*Liv.*, 42, 54.) Antigonus, surnamed Gonatas, was probably born here,

since Stephanus of Byzantium gives it as the ethnic derivative of Gonni. The scholiast on Lycophron (v. 904), in commenting on a passage of the poet where this town is alluded to, says it was also called Gonussa. (*Cramer's Ancient Greece*, vol. 1, p. 380.)

GORDIÆI, mountains in Armenia, where the Tigris rises.

GORDIĀNUS, I., MARCUS ANTONINUS AFRICANUS, born during the reign of the first Antonine, of one of the most illustrious and wealthy families of Rome, made himself very popular during his quæstorship by his munificence, and the large sums which he spent in providing games and other amusements for the people. He also cultivated literature, and wrote several poems, among others one in which he celebrated the virtues of the two Antonines. Being intrusted with the government of several provinces, he conducted himself in such a manner as to gain universal approbation. He was proconsul of Africa A.D. 237. When an insurrection broke out in that province against Maximinus, on account of his exactions, and the insurgents saluted Gordianus as emperor, he prayed earnestly to be excused, on account of his age, being then past eighty, and to be allowed to die in peace; but the insurgents threatening to kill him if he refused, he accepted the perilous dignity, naming his son Gordianus as his colleague, and both made their solemn entry into Carthage amid universal applause. The senate cheerfully confirmed the election, proclaiming the two Gordians as emperors, and declaring Maximinus and his son to be enemies to their country. Meantime, however, Capellianus, governor of Mauritania, collected troops in favour of Maximinus, and marched against Carthage. The younger Gordianus came out to oppose him, but was defeated and killed, and his aged father, on learning the sad tidings, strangled himself. Their reign had not lasted two months altogether, yet they were greatly regretted, on account of their personal qualities, and the hopes which the people had founded on them. (*Capitol., Vit. Gordian. Tr.*) — II. M. Antoninus Africanus, son of Gordianus, was instructed by Serenus Samonicus, who left him his library, which consisted of 62,000 volumes. He was well informed, and wrote several works, but was intemperate in his pleasures, which latter circumstance seems to have recommended him to the favour of the Emperor Heliogabalus. Alexander Severus advanced him subsequently to the consulship. He afterward passed into Africa as lieutenant to his father, and, when the latter was elevated to the throne, shared that dignity with him. But, after a reign of not quite two months, he fell in battle at the age of forty-six, against Capellianus, a partisan of Maximinus. (*Vid. Gordianus, I.* — *Capitolinus, Vit. Gordian. Tr.*) — III. MARCUS ANTONINUS PIUS, grandson, on the mother's side, of the elder Gordianus, and nephew of Gordianus the younger, was twelve years of age when he was proclaimed Cæsar by general acclamation of the people of Rome, after the news had arrived of the death of the two Gordians in Africa. The senate named him colleague of the two new emperors Maximus and Balbinus, but in the following year (A.D. 238, according to Blair and other chronologers) a mutiny of the prætorian soldiers took place at Rome, Balbinus and Maximus were murdered, and the boy Gordianus was proclaimed emperor. His disposition was kind and amiable, but at the beginning of his reign he trusted to the insinuations of a certain Maurus and other freedmen of the palace, who abused his confidence, and committed many acts of injustice. In the second year of his reign a revolt broke out in Africa, where a certain Sabinianus was proclaimed emperor, but the insurrection was soon put down by the governor of Mauritania. In the following year, Gordianus being consul with Claudius Pompeianus, married Furia Sabina Tranquillina, daughter of Misitheus, a man of the greatest personal merit, who

was then placed at the head of the emperor's guards. Misitheus disclosed to Gordianus the disgraceful conduct of Maurus and his friends, who were immediately deprived of their offices and driven away from court. From that moment Gordianus placed implicit trust in his father-in-law, on whom the senate conferred the title of "Guardian of the Republic." In the next year, news came to Rome that the Persians under Sapor had invaded Mesopotamia, had occupied Nisibis and Carrhæ, entered Syria, and, according to Capitolinus, had taken Antioch. Gordianus, resolving to march in person against this formidable enemy, opened the temple of Janus, according to an ancient custom which had been long disused, and, setting out from Rome at the head of a choice army, took his way by Illyricum and Mœsia, where he defeated the Goths and Sarmatians, and drove them beyond the Danube. In the plains of Thrace, however, he encountered another tribe, the Alani, from whom he experienced a check; but they having also retired towards the north, Gordianus crossed the Hellespont, and landed in Asia, whence he proceeded into Syria, delivered Antioch, defeated the Persians in several battles, retook Nisibis and Carrhæ, and drove Sapor back to his own dominions. The senate voted him a triumph, and also a statue to Misitheus, to whose advice much of the success of Gordianus was attributed. Unfortunately, however, that wise counsellor died the following year, not without suspicions of foul play being raised against Philipppus, an officer of the guards, who succeeded him in the command. In the year after, A.D. 244, Gordianus advanced into the Persian territory, and defeated Sapor on the banks of the Chaboras; but while he was preparing to pursue him, the traitor Philipppus, who had contrived to spread discontent among the soldiers by attributing their privations to the inexperience of a boyish emperor, was proclaimed by the army his colleague in the empire. Gordianus consented, but soon after was murdered by the ambitious Philipppus. A monument was raised to him by the soldiers, with an inscription, at a place called Zaitha, twenty miles east of the town of Circesium, not far from the left bank of the Euphrates, which continued to be seen until it was destroyed by Licinius, who claimed to be a descendant of Philipppus. Gordianus was about twenty years old when he died. His body, according to Eutropius, was carried to Rome, and he was numbered among the gods. His short reign was a prosperous one for Rome. (*Capitol., Vit. Gord. Tert.—Herodian, 7, 10, seqq.—Id., 8, 6, seqq.—Eutrop., 9, 2.*)

GORDIUM, a city of Galatia in Asia Minor, on the river Sangarius, a little to the east of Pessinus. Here was preserved the famous Gordian knot which Alexander cut. (*Vid. Gordius.*) This place changed its name in the reign of Augustus to Juliopolis, which was given it by Cleo, a leader of some predatory bands in this quarter. After the battle of Actium, he declared for Augustus; and being thus left in safe possession of this city, which was his birthplace, changed its name out of compliment to the memory of Cæsar. (*Justin, 11, 7.—Lir., 38, 18.—Curt., 3, 1.—Mannert, Geogr., vol. 6, pt. 3, p. 72.*)

GORDIUS, a Phrygian, who, though originally a peasant, was raised to the throne. During a sedition, the Phrygians consulted the oracle, and were told that all their troubles would cease as soon as they chose for their king the first man they met going to the temple of Jupiter mounted on a chariot. Gordius was the object of their choice, and he immediately consecrated his chariot in the temple of Jupiter. The knot which tied the yoke to the draught-tree was made in such an artful manner, that the ends of the cord could not be perceived. From this circumstance, a report was soon spread that the empire of Asia was promised by the oracle to him that could untie the Gordian knot.

Alexander, in his conquest of Asia, passed by Gordium; and as he wished to leave nothing undone which might inspire his soldiers with courage, and make his enemies believe that he was born to conquer Asia, he cut the knot with his sword, and from that circumstance asserted that the oracle was really fulfilled, and that his claims to universal empire were fully justified. (*Justin, 11, 7.—Curt., 3, 1.*)

GORGIAS, a celebrated statesman, orator, and sophist, born at Leontini in Sicily, whence he was surnamed Leontinus. He flourished in the fifth century before the Christian era, during the most brilliant period of the literary activity of Greece, and has been immortalized by the dialogue of Plato which bears his name. The dates of his birth and death are alike uncertain, but the number of his years far outran the ordinary length of human existence, and, in the different statements, ranges between 100 and 109. Whatever may have been the speculative errors of Gorgias, his long life was remarkable for an undeviating practice of virtue and temperance, which secured to his last days the full possession of his faculties, and imparted cheerfulness and resignation in the hour of death. According to Eusebius, Gorgias flourished in the 86th Olympiad, and came to Athens Olymp. 88, 2, or B.C. 427, to seek assistance for his native city, the independence of which was menaced by its powerful neighbour Syracuse. In this mission he justified the opinion which his townsmen had formed of his talents for business and political sagacity, and, upon its successful termination, withdrew from public life and returned to Athens, which, as the centre of the mental activity of Greece, offered a wide field for the display of his intellectual powers and acquirements. He did not, however, take up his residence permanently in that city, but divided his time between it and Larissa in Thessaly, where he is said to have died shortly before or after the death of Socrates. To the 84th Olympiad is assigned the publication of his philosophical work entitled "*Of the Non-Being, or of Nature*" (*περὶ τοῦ μὴ ὄντος, ἢ περὶ φύσεως*), in which, according to the extracts from it in the pseudo-Aristotelian work "*De Xenophane, Zenone, et Gorgia*," and in Sextus Empiricus, he purposes to show: 1. that absolutely nothing exists: 2. that even if anything subsists, it cannot be known: and, 3. that even if aught subsists and can be known, it cannot be expressed and communicated to others. In the arguments, however, by which he sought to establish these positions, and, generally speaking, in his physical doctrines, Gorgias deferred, in some measure, to the testimony of sense, which the stricter Eleatics rejected absolutely, as inadequate and contradictory. On this account, although the usual statement which directly styles him the disciple of Empedocles is erroneous, it is probable that he drew from the writings of that philosopher his acquaintance with the physiology of the Eleatic school. Subsequently it would appear that Gorgias devoted himself entirely to the practice and teaching of rhetoric, and in this career his professional labours seem to have been attended with both honour and profit. According to Cicero (*de Orat.*, 1, 22 — *Id.*, 3, 32), he was the first who engaged to deliver impromptu a public discourse upon any given subject. These oratorical displays were characterized by the poetical ornament and elegance of the language, and the antithetical structure of the sentences, rather than by the depth and vigour of the thought; and the coldness of his eloquence soon passed into a proverb among the ancients. As a teacher of rhetoric, Gorgias is said to have first introduced numbers into prose, and to have attached much importance to antitheses both in individual words and in the members of a sentence. (*Consult Hardion, Dissert., 11.—Mem. de l'Acad. des. Inscr., &c., vol. 19, p. 204.*) It is said, that after a display of eloquence made by him at the Olympic and Pythian Games, a

golden statue was erected to him at Delphi.—Besides some fragments, there are still extant two entire orations ascribed to him, entitled respectively, "*The Encomium of Helen*," and "*The Apology of Palamedes*," two tasteless and insipid compositions, which may, however, not be the works of Gorgias. On this point consult *Foss*, "*De Gorgia Leontino Commentatio*," Hal., 1828, who denies their authenticity, which is maintained, on the other hand, by *Schonhörn*, "*De Authentica Declamationum quæ Gorgia Leontini nomine exant*," Bresl., 1826. (*Plat., Hipp. Maj.*, p. 282.—*Id.*, *Gorg.*—*Dion. Hal., Jud. de Lys.*, 3, p. 458, *ed. Reiske*.—*Diogenes Laert.*, 8, 58.—*Sext., Emp. adv. Math.*, 7, 65.—*Clinton, Fast. Hell.*, vol. 1, p. 377.—*Preller, Hist. Philos.*, p. 134, *seqq.*—*Schöll, Gesch. Gr. Litt.*, vol. 1, p. 363.)

Gorgo, l. wife of Leonidas, king of Sparta. A fine repartee of hers is given by Plutarch. When a stranger female observed to her, "You Spartan women are the only ones that rule men," she replied, "True, for we are the only ones that give birth to men." (*Plut., Lacon. Apophth.*, p. 227.)—II. The capital of the Chorasmii in Bactriana. It is supposed to correspond to the modern *Urgench*. (*Bischoff und Möller, Wörterb. der Geogr.*, p. 567.)

GORGONES, three celebrated sisters, daughters of Phorcys and Ceto, whose names were Stheno, Euryale, and Medusa, and who were all immortal except Medusa. According to the mythologists, their hairs were entwined with serpents, they had wings of gold, their hands were of brass, their body was covered with impenetrable scales, their teeth were as long as the tusks of a wild boar, and they turned to stone all those on whom they fixed their eyes. (*Apollod.*, 2, 4, 2.—*Tzet., ad Lyc.*, 838.)—Homer speaks of an object of terror which he calls Gorgo, and the Gorgonian head. He places the former on the shield of Agamemnon (*Il.*, 11, 36), and, when describing Hector eager for slaughter, he says that he had "the eyes of Gorgo and of man-destroying Ares." (*Il.*, 8, 348.) The Gorgeian head was on the ægis of Jupiter (*Il.*, 5, 741), and the hero of the Odyssey fears to remain in Erebus, lest Proserpina should send out "the Gorgeian head of the dire monster" against him. (*Od.*, 11, 633.) Æschylus calls the Gorgons the "three sisters of the Graiæ, winged, serpent-fleeced, hateful to man, whom no one can look on and retain the breath of existence." (*Prom. V.*, 804, *seqq.*) The Gorgons and Graiæ are always mentioned together; and it was while the Graiæ were handing to one another their single eye (*Vid. Phorcydes*) that Perseus intercepted it; and, having thus blinded the guards, was enabled to come on the Gorgons unperceived. (For an account of the legend of Perseus and Medusa, consult each of those articles.) According to R. P. Knight, the Gorgon, or Medusa, in the centre of Minerva's ægis, appears to have been a symbol of the Moon (*Orph. in Clem. Alex., Strom.*, lib. 5, p. 675); exhibited sometimes with the character and expression of the destroying, and sometimes with those of the generative or preserving, attribute; the former of which is expressed by the title of Gorgo, and the latter by that of Medusa. It is sometimes represented with serpents, and sometimes with fish, in the hair; and occasionally with almost every symbol of the passive generative or productive power; it being the female personification of the Disk, by which almost all the nations of antiquity represented the sun; and this female personification was the symbol of the Moon. (*Inquiry into the Symb. Lang.*, &c., § 179.—*Class. Journal*, vol. 26, p. 46.)—Hermann, however, with more probability, makes both the Graiæ and Gorgons to be merely personifications of the terrors of the sea, the former denoting the white-crested waves that dash against the rocks on the coast; the latter, the strong billows of the wide open main. (*Herm., Opusc.*, vol. 2, p. 179, *seq.*) He therefore makes Stheno equivalent

to Valeria, "the powerful;" Euryale to *Latrotra*, "the wide-rolling;" and Medusa to *Guberna*, "the directress," from her ruling the course of the billows. And he adds, in farther explanation, "*nam et vis undarum semper manet eadem, et fluctuatio: cursus autem mutatur, ventis, annive tempestatibus mutatis*." Hesiod, therefore, who places the Gorgons in Oceanic isles (*Theog.*, 274, *seqq.*), is more consistent with the early legend than later poets, who almost all assign the Gorgons a dwelling-place in some part or other of Libya. Hence there is great probability in Völeker's reading of *Κρηνην* for *Κιθβήνην* in Æschylus (*Prom. V.*, 799.—*Keighley's Mythology*, p. 252, *seqq.*)

GORTYS or GORTYNIA, I. a city of Crete, next to Cnosus in splendour and importance. Strabo writes, that these two cities had in early times entered into a league, which enabled them to reduce nearly the whole of Crete under their subjection; subsequently, however, dissensions having arisen between them, they were constantly engaged in hostilities. Homer speaks of Gortys as a place of great strength (*Il.*, 2, 646), with a territory extending to the sea. (*Od.*, 3, 293.) From other authors we learn that it stood in a plain, watered by the river Lethæus, and at a distance of ninety stadia from the Libyan Sea, on which were situate its two havens, Lebena and Metallum. Formerly this city was of very considerable size, since Strabo reckons its circuit at fifty stadia; but when he wrote it was very much diminished. He adds, that Ptolemy Philopator had begun to enclose it with fresh walls; but the work was not carried on for more than eight stadia. (*Strabo*, 478.)—According to the Arcadian traditions, it had been founded by Gortys, the son of Tegeates; a fact which was, however, denied by the Cretans, who affirmed that Gortys was the son of Rhadamanthus. (*Pausan.*, 8, 1.—Compare *Steph. Byz.*, s. v.) It was most probably a Pelasgic city, since, according to Stephanus, it once bore the appellation of Larissa. Apollo was especially revered here, whence he is sometimes called Gortynius. (*Anton., Lib.*, 25.) Jupiter was also worshipped in this place under the title of Hecatombæus. The ruins of this ancient city have been visited by Tournefort, Pococke, and still more recently by Mr. Cockerell, who observed the remains of a theatre and other considerable vestiges. He likewise explored some remarkable excavations near the town, consisting of numerous chambers and galleries, which have been supposed to belong to the celebrated Cretan labyrinth, though this is generally stated to have been situated at Cnosus.—As regards the form of the ancient name, consult remarks under the article Cortona. (*Cramer's Ancient Greece*, vol. 3, p. 383.)—II. A town of Arcadia, near the river Gortynius, and southeast of Heræa. It was distinguished for its temple of Pentelic marble dedicated to Æsculapius. The statue of the god, as well as that of Hygieia, were by Scopas. (*Pausan.*, 8, 28.) The site of Gortys is now called *Atchicolo Castro*.

GOTH, a powerful northern nation, who acted an important part in the overthrow of the Roman empire. The name "*Gothi*," or Goths, appears first in history in the third century, and it was then used by the Roman writers as synonymous with the more ancient one of Getæ, a people who lived on the banks of the lower Danube, near the shores of the Euxine. The Greek writers generally considered the Getæ or Goths as a Scythian tribe. There has been much discussion on the question whether the Getæ or Goths came originally from Scandinavia, or migrated thither from Asia. The old Scandinavian tradition in the Edda makes their chief, Odin or Woden, to have come from the banks of the Dniester to the shores of the Baltic many centuries before the Christian era (*vid. Odinus*), and it is to Asia, therefore, that we must look as the native country of the Gothic, or, rather, Teutonic, race. (Consult remarks under the article Germani, § 1.)

About the middle of the third century of our era, the Goths are recorded to have crossed the Dniester, and to have devastated Dacia and Thrace. The Emperor Decius lost his life in opposing them in Mœsia (A.D. 251), after which his successor Gallus induced them by money to withdraw again to their old dwellings on the Dniester. They then seem to have spread eastward, and to have occupied the country about the Cimmerian Bosphorus, whence they sailed across the Euxine, occupied Trebisonde, and ravaged Bithynia. In the year 269 they landed in Macedonia, but were defeated by the Emperor Claudius II. Three years after, Aurelian gave up Dacia to a tribe of Goths, who are believed to have been the Visigoths or Western Goths, while those who ravaged Asia Minor were the Ostrogoths or Eastern Goths. This distinction of the race into two grand divisions appears about this time. Under Constantine I. the Goths from Dacia invaded Illyricum, but were repelled. Constantine II. afterward allowed a part of them to settle in Mœsia, who seem to have soon after embraced Christianity, as it was for them that Ulphilas translated the Scriptures, about the middle of the 4th century, into the dialect called Mæso-Gothic. About the year 375, the Huns, coming from the East, fell upon the Ostrogoths, and drove them upon the Visigoths, who were living north of the Danube. The latter, being hard pressed, implored permission of the Roman commander to be allowed to cross that river, and take shelter on the territory of the empire. The Emperor Valens consented, and a vast multitude of them were allowed to settle in Mœsia, but soon afterward they quarrelled with the Roman authorities, invaded Thrace, and defeated and killed Valens, who came to oppose them. From that time they exercised great influence over the Byzantine court, either as allies and mercenaries, or as formidable enemies. Towards the end of the 4th century, Alaric, being chosen king of the Visigoths, invaded Northern Italy, but was defeated by Stilicho near Verona. He came again, however, about two years after, and took and plundered Rome. His successor Ataulphus made peace with the empire, and repaired to the south of Gaul, where the Visigoths founded a kingdom, from which they afterward passed into Spain, where a Visigothic dynasty reigned for more than two centuries till it was conquered by the Moors. Meanwhile the Ostrogoths or Eastern Goths, who had settled in Pannonia, after the destruction of the kingdom of the Huns, extended their dominion over Noricum, Rætia, and Illyricum, and about the year 489 they invaded Italy, under their king Theodoric, and defeated Odoacer, king of the Heruli, who had assumed the title of King of Italy, a title which Theodoric then took for himself, with the consent of the Eastern emperor. Theodoric was a great prince: his reign was a period of rest for Italy, and his wise administration did much towards healing the wounds of that country. But his successors degenerated, and the Gothic dominion over Italy lasted only till 544, when it was overthrown by Narses, the general of Justinian. From this time the Goths figure no longer as a power in the history of Western Europe, except in Spain. We find, however, their name perpetuated long after in Scandinavia, where a kingdom of Gothia existed until the 12th century, distinct from Sweden Proper, until both crowns were united on the head of Charles Swerker, A.D. 1161, who assumed the title of King of the Swedes and the Goths, which his successors bear to this day.—On the early history of the Goths, consult Jornandes, "*De Getarum sive Gothorum Origine et Rebus Gestis*;" Isidorus, "*Chronicon Gothorum*;" and Procopius, "*De Bello Gothico*." The first two, however, are not to be trusted implicitly when they treat of the remote genealogy and origin of the Gothic race. (*Encycl. Us. Knowl.*, vol. 11, p. 328, seq.)

GRACCHUS, I. Tiberius Sempronius, the father of

the Gracchi, married Cornelia, daughter of Scipio Africanus the Elder. He died while his sons were young, having twice filled the office of consul, and, according to Plutarch, obtained two triumphs. After the death of her husband, Cornelia refused all offers of marriage, and devoted herself to the charge and education of her children, who, as Plutarch tells us, were less the inheritors of manly virtue by being sprung from the noblest blood in Rome, than they were its possessors from the careful nurture of their mother Cornelia. (*Plut., Vit. Gracch.*)—II. Tiberius, elder son of the preceding, was born B.C. 163. His mother was the celebrated Cornelia, daughter of the elder Africanus. Tiberius served his first campaign in Africa under his uncle Scipio, and having obtained the office of consul's quaestor, we find him next under Mancinus, the unfortunate commander in the Numantine war. His name, which the Numantines respected from remembering his father's virtues, is said to have procured the terms under which Mancinus obtained safety for his army; but the senate, on his return, was so much displeased at the unfavourable nature of these conditions, that they resolved on giving up all the principal officers to the Numantines. By the good-will, however, of the popular assembly, influenced, as it would seem, by the soldiers and their connexions in the lower classes, it was decided to send Mancinus as the real criminal, and to spare the other officers for the sake of Gracchus. Treatment of this nature was likely to rouse Gracchus against the senate, and make him the friend of the poor; and accordingly, in three years afterward, we find him beginning his short career as a political agitator. He was elected tribune of the commons B.C. 128, and immediately began to attempt the revival of the Licinian Rogations. (*Vid. Agrarie Leges.*) In so doing he appears to have had in view the two grand principles which that law involved, namely, the employment of freemen in cultivating the soil in preference to slaves, and especially the more generally recognised principle of the equitable division of the public land. Three commissioners were appointed to superintend the working of the new law, which Gracchus had proposed, if we may trust Plutarch, with the approval of some of the most eminent persons of the times, among whom were Mucius Scævola and Crassus the orator. Such general interest was excited by the question, that crowds arrived from all parts of the country to support either side; and there appeared no doubt which way the matter would go when left to the tribes. The aristocracy, however, secured the veto of M. Octavius, one of the tribunes, and thereby quashed the proceedings whenever the law was brought on, which violent mode of opposition led Gracchus to exercise his veto on other questions, stop the supplies, and throw the government into the most complete helplessness. Thus far the contest had been lawful; but at this juncture, Gracchus, irritated by continual opposition, invited Octavius to propose his (Gracchus') ejection from the office of tribune; and on his refusal, pleading the utter uselessness of two men so different in sentiment holding the same office, he put the question to the tribes that Octavius be ejected. When the first seventeen out of the thirty-five tribes had voted for it, Gracchus again implored him to resign; and, on his entreaty proving unsuccessful, polled another tribe, constituting a majority, and sent his officers to drag Octavius from the tribune's chair. The Agrarian law was forthwith passed; and Gracchus himself, his brother Caius, and his father-in-law Appius Claudius, were appointed the commissioners. But the senate, to show their opinion of the whole proceeding, withheld from him the usual allowance of a public officer, giving only about one shilling a day. While things were in this state, the dominions and treasures of Attalus, king of Pergamus, were by him bequeathed to

the Roman people; and, to enhance his own popularity, Gracchus proposed to divide the treasure among the recipients of land under the new law, to enable them to stock their farms; and to commit the management of the kingdom of Pergamus to the popular assembly. This brought matters to a greater pitch of distrust than ever. Gracchus was accused by one senator of aspiring to tyranny, and by another of having violated the sanctity of the tribunitian office in deposing Octavius. On this point Gracchus strove to justify himself before the people, but his opponent seemed to have gained an advantage so great as to induce him to postpone the assembly. When at last he did make his defence, it rested, if Plutarch is correct, on false analogies, and on avoiding the question of the inviolability of a public officer. At this juncture Gracchus seems to have trembled for that popularity which alone preserved him from impeachment; and, lest it should fail, endeavoured to secure his own reflection to the office of tribune. The other party had demurred as to his eligibility to the office two years in succession, and on the day of election this point occupied the assembly till nightfall. Next morning, accompanied by a crowd of partisans, he went to the Capitol; and, on hearing that the senate had determined to oppose him by force, armed his followers with staves, and prepared to clear the Capitol. At this juncture, Scipio Nasica, having in vain called on the consul to take measures for the safety of the state, issued from the temple of Faith, where the senate had assembled, followed by the whole nobility of Rome, awed the mob into flight, seized their weapons, and attacked all who fell in their way. About three hundred fell, and among the slain was Gracchus, who was killed by repeated blows on the head, B.C. 133. (*Plut., Vit. Tib. Gracch.*)—III. Caius, was nine years younger than his brother Tiberius, and at his death was left with Appius Claudius as commissioner for carrying out the Agrarian law. By the death of Appius, and of Tiberius' successor, Licinius Crassus, the commission became composed of Fulvius Flaccus, Papirius Carbo, and himself; but he refrained from taking any part in public affairs for more than ten years after the death of Tiberius. During this time the provisions of his brother's law were being carried out by Carbo and Flaccus; but he does not seem to have begun his career as an independent political leader until the year 123 B.C., when, on his return from Sardinia, where he had been for two years, he was elected tribune of the commons. His first act was to propose two laws, one of which, directed against the degraded tribune Octavius, disqualified all who had been thus degraded from holding any magistracy; and the other, having in view Pompius, a prominent opponent of the popular party, denounced the banishment of a Roman citizen without trial as a violation of the Roman laws. The first was never carried through; to the latter was added a third, by which Pompius was banished from Italy, or, according to technical phraseology, interdicted from fire and water. These measures of offence were followed by others, by which he aimed at establishing his own popularity. One of these was a poor-law, by which a monthly distribution of corn was made to the people at an almost nominal price. The effect of this law was to make the population of Rome paupers, and to attract all Italy to partake of the bounty. Next came organic changes, as they would now be called; and of these the most important was the transference of the judicial power from the senators, wholly or in part, to the equestrian order. This measure, according to Cicero, worked well; but, in taking his opinion, we must remember his partiality to the equites, and add to this the fact that his eulogiums occur in an advocate's speech. (*In Verr. Act.*, l.) Gracchus now possessed unlimited power with the populace; and, at

the end of the year, not more than ten candidates having started for the office of tribune, he was again elected. His second tribuneship was mostly employed in passing laws respecting the colonies, in which matter the aristocratical agent, Livius Drusus, outdid him; and, having won the confidence of the people by his apparent disinterestedness, ventured (being himself a tribune) to interpose his veto on one of Gracchus' measures. The appointment of Gracchus, soon after, to the office of commissioner for planting a colony near Carthage took him away from the scenes of his popularity; and, soon after his return, a proposal was made to repeal the very law which he had been engaged in carrying out, relative to the colony in Africa. This law was not his own measure, but that of one Rubrius, another of the tribunes, and was one of those enactments which had weaned from Gracchus the favour of the people, it having been represented by his opponents as an impious act to build again the walls of Carthage, which Scipio had solemnly devoted to perpetual desolation. Gracchus was now a private man, his second tribuneship having expired; but yet, as such, he opposed the proposition to repeal, and, unfortunately for himself, united with M. Fulvius Flaccus, one of the commissioners of the agrarian law, and a man whose character was respected by no party in the republic. The reputation of Gracchus had already suffered from his connexion with Fulvius; and now he took part with him in designs which can be considered as nothing less than treasonable. Charging the senate with spreading false reports, in order to alarm the religious scruples of the people, the two popular leaders assembled a numerous body of their partisans, armed with daggers, and, being thus prepared for violence, they proceeded to the Capitol, where the people were to meet in order to decide on the repeal of the law of Rubrius. Here, before the business of the day was yet begun, a private citizen, who happened to be engaged in offering a sacrifice, was murdered by the partisans of Fulvius and Gracchus, for some words or gestures which they regarded as insulting. This outrage excited a general alarm; the assembly broke up in consternation; and the popular leaders, after trying in vain to gain a hearing from the people, while they disclaimed the violence committed by their followers, had no other course left than to withdraw to their own homes. There they concerted plans of resistance, which, however they might believe them to be justified on the plea of self-defence, were rightly considered by the bulk of the people as an open rebellion against the government of their country. The consul Opimius, exaggerating, perhaps, the alarm which he felt from the late outrage, hastily summoned the senate together; the body of the murdered man was exposed to the view of the people, and the Capitol was secured by break of day with an armed force. The senate, being informed by Opimius of the state of affairs, proceeded to invest him with absolute power to act in defence of the commonwealth, in the usual form of a resolution, "that the consul should provide for the safety of the republic." At the same time Gracchus and Fulvius were summoned to appear before the senate, to answer for the murder laid to their charge. Instead of obeying, they occupied the Aventine Hill with a body of their partisans in arms, and invited the slaves to join them, promising them their freedom. Opimius, followed by the senators and the members of the equestrian order, who, with their dependants, had armed themselves by his directions, and accompanied by a body of regular soldiers, advanced against the rebels, who had made two fruitless attempts at negotiation, by sending to the consul the son of Fulvius. In the mean time the conduct of Caius Gracchus was that of a man irresolute in the course which he pursued, and with too much regard for his country to engage heartily in the criminal attempt into which he had suffered

himself to be drawn. He had left his house, it is said, in his ordinary dress; he had been urgent with Fulvius to propose terms of accommodation to the senate; and now, when the Aventine was attacked, he took personally no part in the action. The contest, indeed, was soon over; the rebels were presently dispersed; Fulvius was dragged from the place to which he had fled for refuge, and was put to death; while Gracchus, finding himself closely pursued, fled across the Tiber, and, taking shelter in a grove sacred to the Furies more correctly, perhaps, to the goddess Furina, was killed, at his own desire, by a single servant who had accompanied his flight. His head, together with that of Fulvius, was cut off and carried to the consul, in order to obtain the price which had been set upon both by a proclamation issued at the beginning of the engagement; and the bodies, as well as those of all who had perished on the same side, were thrown into the river. In addition to this, the houses of Gracchus and Fulvius were given up to plunder, their property was confiscated, and even the wife of Gracchus was deprived of her own jointure. It is said that in this sedition there perished altogether of the partisans of the popular leaders about 3000, partly in the action, and partly by summary executions afterward, under the consul's orders.—The career of the two Gracchi was, in many respects, so similar, and the circumstances of their death bore so much resemblance to each other, that it is not wonderful if historians should have comprehended both the brothers under one common judgment, and have pronounced in common their acquittal or their condemnation. But the conduct of Caius admits of far less excuse than that of Tiberius; and his death was the deserved punishment of rebellion, while that of his brother was an unjustifiable murder. The character of Caius is by no means as stainless as his brother's; he was more of a popular leader, and much less of a patriot than Tiberius; the one was injured by power, but the other seems from the beginning to have aimed at little else. The elder brother was head of a party which owed its existence to his principles as a politician. The younger took the lead in that party when it had been regularly formed, and, in his eagerness to obtain that post, he regulated his conduct by his wishes. The death of Tiberius may, as we have already remarked, be justly called a murder; that of Caius, or that which he would have suffered had not the slave prevented it, was nothing more than an execution under martial law. (*Plut., Vit. C. Gracch. — Encycl. Metropol.*, div. 3, vol. 2, p. 97, *seqq.*)—IV. Sempronius, a Roman nobleman, banished to Cereina, an island off the coast of Africa, for his adulterous intercourse with Julia, the daughter of Augustus. After an exile of 14 years, he was put to death by a party of soldiers sent for that purpose by Tiberius. (*Tacit., Ann.*, 1, 53.)

GRADIVUS, an appellation for Mars among the Romans, the etymology of which is quite uncertain. The common derivation is from *gradior*, "to advance," i. e., against the foe. There appears to be some anomaly in its formation to that of the Sanscrit *Mahadeva*, i. e., "magnus deus." (*Pott, Etymol. Forsch.*, p. lvii.)

GRÆCIA, the country of Greece. (*Vid.* Hellas.)

GRÆCIA MAGNA. *Vid.* Magna Græcia.

GRALE. *Vid.* Phorceydes.

GRAMPIUS MÖNS, a mountain of Caledonia, forming one of a large range of mountains extending from east to west through almost the whole breadth of modern Scotland, from *Loch Lomond* to *Stonchaven*. The range is now called the *Grampian Hills*, and the name is derived from the Mons Grampius, which is mentioned by Tacitus as the spot where Galgacus waited the approach of Agricola, and where was fought the battle so fatal to the brave Caledonians. To the Grampian chain belong *Ben Lomond*, 3262 feet high;

Ben Ledy, 3009; *Ben More*, 3903; *Ben Laures*, the chief summit, 4015, &c.

GRANICUS, a river of Mysia, in Asia Minor, which, according to Demetrius of Scepsis, had its source in Mount Cotylus, belonging to the chain of Ida. (*Strab.*, 602.) It flowed through the Adrasteian plain, and emptied into the Propontis, to the west of Cyzicus. This stream, or, more correctly speaking, mountain torrent, is celebrated in history on account of the signal victory gained on its banks by Alexander the Great over the Persian army, B.C. 334. (*Arrian, Exp. Al.*, 1, 13.—*Plut., Vit. Alex.*, c. 24.) The Granicus is the river of *Demotiko* mentioned by Chishull (*Travels in Turkey*, p. 60), and not, as some maintain, the *Ousvola*. (*Cramer's Asia Minor*, vol. 1, p. 35, *seq.*)

GRATIAE, in Greek CHARITES (Χάριτες), are represented in classical mythology as three young and beautiful sisters, the attendants of Venus. Their names were Aglaia (*Splendour*), Euphrosyne (*Joy*), and Thalia (*Pleasure*). The Lacedæmonians had only two, whom they called Kleta or Klyta, and Phæneia, and a temple in honour of them existed in the time of Pausanias, between Sparta and Amyclæ (3, 18; 9, 35). Some poets name Pasithea as one of the Graces. Nonnus gives their names as Pasithea, Peitho, and Aglaia. (*Dionys.*, 24, 263.)—The idea of the Graces was, according to some, a symbolical personification: Aglaia represented the harmony and splendour of the creation; Euphrosyne, cheerfulness and mirth; and Thalia, feasts and dances. In short, they were an æsthetic conception of all that is beautiful and attractive in the physical as well as in the social world. According to Hesiod (*Theog.*, 907), the Graces were the offspring of Jupiter and Eurynome the daughter of Ocean. Antimachus, on the other hand, made them the daughters of Helios and Ægle. Some, again, called them the children of Bacchus and Venus. Their worship is said to have originated in Bœotia, and Orchomenus, in this country, was its chief seat. The introduction of this worship was ascribed to Eteocles, the son of the river Cephissus. The Graces were at all times, in the creed of Greece, the goddesses presiding over social enjoyment, the banquet, the dance, and all that tended to inspire gaiety and cheerfulness. (*Pind., Ol.*, 14, 7, *seqq.*) They are represented as dancing together, or else standing with their arms entwined. They were originally depicted as clothed, but afterward the artists represented them as nude. In the ordinary position of the Graces, two face the observer, while the central one has her look averted. This some fancifully explain as follows: on receiving gifts from friends we ought to be thrice thankful; first, when the gift is conferred; secondly, when away from the party who has conferred them; and, thirdly, when returning the favour! (*Müller, Gall. Mythol.*, s. v.—*Keightley's Mythology*, p. 192.)

GRATIANUS, I. eldest son of Valentinian I., succeeded, after his father's death, A.D. 375, to a share of the Western Empire, having for his portion Gaul, Spain, and Britain. His brother, Valentinian II., then an infant under five years of age, had Italy, Illyricum, and Africa, under the guardianship, however, of Gratianus, who was therefore, in reality, ruler of all the West. His uncle Valens had the empire of the East. Gratianus began his reign by punishing severely various prefects and other officers who had committed acts of oppression and cruelty during his father's reign. At the same time, through some insidious charges, Count Theodosius, father of Theodosius the Great, and one of the most illustrious men of his age, was beheaded at Carthage. In the year 378 Valens perished in the battle of Adrianople against the Goths, and Gratianus, who was hastening to his assistance, was hardly able to save Constantinople from falling into the hands of the enemy. In consequence of the death of his uncle, Gratianus, finding himself ruler of the whole Roman

empire during the minority of his brother Valentinian, called to him young Theodosius, who had distinguished himself in the Roman armies, but had retired into Spain after his father's death. Gratianus appointed him his colleague, a choice equally creditable to both and fortunate for the empire, and gave him the provinces of the East. Gratianus returned to Italy, and resided for some time at Mediolanum (*Milan*), where he became intimate with St. Ambrose. He was obliged, however, soon after to hasten to Illyricum, to the assistance of Theodosius, and he repelled the Goths, who were threatening Thrace. Thence he was obliged to hasten to the banks of the Rhine, to fight the Alemanni and other barbarians. Having returned to Mediolanum in the year 381, he had to defend the frontiers of Italy from other tribes, who were advancing on the side of Rhetia. Gratianus enacted several wise laws, by one of which he checked mendicancy, which had spread to an alarming extent in Italy. He also showed himself stern and unyielding towards the remains of the heathen worship. At Rome he overthrew the altar of Victory, which had continued to exist; he confiscated the property attached to it, as well as all that which belonged to the other priests and the vestals. He also refused to assume the title and insignia of Pontifex Maximus, a dignity till then considered as annexed to that of emperor. These measures gave a final blow to the old worship of the empire; and although the senators, who, for the most part, were still attached to it, sent him a deputation, at the head of which was Symmachus, they could not obtain any mitigation of his decrees. In the year 383, a certain Maximus revolted in Britain, and was proclaimed emperor by the soldiers, to whom he promised to re-establish the temples and the old religion of the empire. He invaded Gaul, where he found numerous partisans. Gratianus, who was then, according to some, on the Rhine, advanced to meet him, but was forsaken by most of his troops, and obliged to hasten towards Italy. Orosius and others, however, state that the emperor received the news of the revolt while in Italy, and that he hurried across the Alps with a small retinue as far as Lugdunum (*Lyons*). All, however, agree in saying that he was seized at Lugdunum, and put to death by the partisans of Maximus. He was little more than 24 years of age, and had reigned about eight years. Historians agree in praising him for his justice and kindness, and his zeal for the public good; and Ammianus Marcellinus, who is not liable to the charge of partiality towards the Christians, adds, that, had he lived longer, he would have rivalled the best emperors of ancient Rome. (*Le Beau, Bas-Empire*, vol. 2, p. 492, *seqq.* — *Encycl. Us. Knowl.*, vol. 10, p. 365.)

GRATIUS FALISCUS, a Latin poet, contemporary with Ovid, by whom he is once mentioned (*Ep. ex Ponto*, l. ult. 33). He wrote a poem on hunting, entitled *Cynegetica*, of which we have 540 verses remaining. From the silence, however, preserved respecting him by the writers after his time, we may fairly infer that his poem remained in great obscurity, and was only rarely copied: hence we have but one manuscript of it remaining. The production in question is not without merit; still, however, it is somewhat dry. The style is, in general, pure. The best edition is that of Wernsdorff, in the *Poetæ Latini Minores*. (*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 204.)

GREGORIUS, I. surnamed THAUMATURGUS, or *Wonder-worker*, from the miracles which he pretended to perform. Before his conversion to Christianity, he was known by the name of Theodorus. He was born at Neo-Cæsarea, and was a disciple of Origen, from whom he imbibed the principles of the Christian faith. He was afterward made bishop of his native city, and is said to have left only seventeen idolaters in his diocese, where he had found only seventeen Christians.

Of his works there are extant, a panegyric oration on his master Origen upon leaving his school, a canonical epistle, and some other treatises in Greek, the best edition of which is that of Paris, fol., 1622.—II. Surnamed NAZIANZENUS (of Nazianzus), a celebrated father of the church, was born in the early part of the fourth century, at Arianzus, a village near the town of Nazianzus in Cappadocia, of which his father was bishop. He studied first at Cæsarea in Cappadocia, afterward at Alexandria, and lastly at Athens, where he became the friend and companion of Basilus, and where he also met Julian, afterward emperor. At a subsequent period he joined Basilus, who had retired to a solitude in Pontus during the reign of Julian. When Basilus was made archbishop of Cæsarea, he appointed his friend bishop of Zazime, a place of which Gregory gives a dismal account, and which he soon after left to join his father, and assist him in the administration of the church of Nazianzus. He there made himself known for his eloquence in the orations which he addressed to his father's flock. These compositions are remarkable for a certain poetical turn of imagery, and for their mild, persuasive tone. Above all things, he preaches peace and conciliation; peace to the clergy, agitated by the spirit of controversy; peace to the people of Nazianzus, distracted by sedition; peace to the imperial governor, who had come to chastise the town, and whose wrath he endeavours to disarm by appealing to the God of mercy. In an age of sectarian intolerance he showed himself tolerant. He had suffered with his brethren from Arian persecution under the reign of Valens; and after that emperor had taken by violence all the churches of Constantinople from the orthodox or Nicæans, the inhabitants, who had remained attached to that faith, looking about for a man of superior merit and of tried courage to be their bishop, applied to Gregory, who had left Nazianzus after his father's death and had retired into Isauria. Gregory came to Constantinople and took the direction of a private chapel, which he named Anastasia, and whither his eloquence soon attracted a numerous congregation, to the great mortification of the Arians. Theodosius having assumed the reins of government and triumphed over his enemies, declared himself in favour of the orthodox communion, retook the churches which the Arians had seized, and came himself with soldiers to drive them from Santa Sophia, an act which Gregory says looked like the taking of a citadel by storm. Gregory being now recognised as metropolitan, did not retaliate upon the Arians for the past persecutions, but endeavoured to reclaim them by mildness and persuasion. In the midst of the pomp of the imperial court he retained his former habits of simplicity and frugality. His conduct soon drew upon him the dislike of the courtiers and of the fanatical zealots. Theodosius convoked a council of all the bishops of the East, to regulate matters concerning the vacant or disputed sees, which had been for many years in possession of the Arians. The council at first acknowledged Gregory as archbishop, but soon after factions arose in the bosom of the assembly, which disputed his title to the see, and stigmatized his charity towards the now persecuted Arians as lukewarmness in the faith. Gregory, averse to strife, offered his resignation, which the emperor readily accepted. Having assembled the people and the fathers of the council, to the number of one hundred and fifty, in the church of St. Sophia, he delivered his farewell sermon, which is a fine specimen of pulpit eloquence. After recapitulating the tenour of his past life, his trials, the proofs of attachment he had given to the orthodox faith in the midst of dangers and persecution, he replies to the charge of not having avenged that persecution, upon those who were now persecuted in their turn, by observing, that to forego the opportunity of revenging ourselves upon a fallen enemy is the greatest of all tri-

umphs. He then pleads guilty to the charge of not keeping up the splendour of his office by a luxurious table and a magnificent retinue, saying that he was not aware that the ministers of the sanctuary were to vie in pomp with the consuls and commanders of armies. After rebuking the ambition and rivalry of his colleagues, which he compares to the factions of the circus, he terminates by taking an affectionate leave of all those around him, and of the places dear to his memory. This valedictory address is a touching specimen of the pathetic style, dignified and unmixt with querulousness. The orator salutes for the last time the splendid temple in which he is speaking, and then turns towards his humble but beloved chapel of Anastasia, to the choirs of virgins and matrons, of widows and orphans, so often gathered there to hear his voice; and he mentions the short-hand writers who used to note down his words. He next bids "farewell to kings and their palaces, and to the courtiers and servants of kings; faithful, I trust, to your master, but for the most part faithless towards God; farewell to the sovereign city, the friend of Christ, but yet open to correction and repentance; farewell to the Eastern and Western world, for whose sake I have striven, and for whose sake I am now slighted." He concludes with recommending his flock to the guardian angels of peace, in hopes of hearing from the place of his retirement that it is daily growing in wisdom and virtue. (*S. Gregorii Nazianzeni, Opera, Orat. 32, ed. Billy.*) This oration was delivered in June, A.D. 381, and a few days after Gregory was on his way to his native Cappadocia. Arrived at Cæsarea, he delivered an impressive funeral oration to the memory of his friend Basilus, who had died there some time before, in which he recalls to mind their juvenile studies at Athens, their long intimacy, and the events of their checkered lives (*Orat. 20*). After paying this last tribute to the memory of his friend, he withdrew to his native Ariazus, where he spent the latter years of his life, far from the turmoil of courts and councils, busy in the cultivation of his garden and in writing poetry, a favourite occupation with him from his youth. Gregory died A.D. 389. Most of his poems are religious meditations. Occasionally the poet attempts to dive into the mysterious destiny of man, and sometimes appears lost in uncertainty and doubt as to the object of human existence; but he recovers himself to do homage to the Almighty wisdom whose secrets will become revealed in another sphere. The adept in the philosophy of ancient Greece is here seen striving with the submissive Christian convert. St. Jerome and Suidas say that Gregory wrote no less than thirty thousand lines of poetry. Some of his poems were published in the edition of his works by the Abbé de Billy, Paris, 1609-11, which contains also his orations and epistles; twenty more poems, under the title of "*Carmina Cygnea*," were afterward published by Tullius, in his "*Insignia Itinerarii Italici*," 4to, Utrecht, 1696; and Muratori discovered, and published in his "*Anecdota Græca*," Padua, 1709, a number of Gregory's epigrams. Of his orations some few turn upon dogmas, especially on that of the Trinity, but most of them are upon morality. He is a soberer writer than his successor Chrysostom, and has more of the calm, impressive eloquence of conviction. He and his friend Basilus brought the oratorical arts of ancient Greece into the service of Christian preaching, and one of Gregory's greatest complaints against Julian is, that that emperor had forbidden Christians the study of Greek literature. In his two orations against Julian he somewhat departs from his usual style, and assumed that of a powerful invective in reply to the panegyrics of Libanius, Eunapius, and other admirers of that emperor. Gregory of Nazianzus has been styled the "Theologian of the Eastern Church;" he might, with as much truth, be styled its most poetical writer.

(*Suidas, s. v.—Encycl. Us. Knowl.*, vol. 2, p. 442 *seqq.*)—III. A bishop of Nyssa, in Cappadocia, the brother of Basilus. He distinguished himself in the Arian controversy, and died A.D. 396.—IV. *Corinthius*, archbishop of Corinth in the twelfth century. He is chiefly known by his work on dialects (*Περὶ διαλέκτων*), the best edition of which is that of Schäffer, Lips., 1811, 8vo.

GRUVII, a people of Gallia Belgica, to the northwest of, and tributary to, the Nervii. Traces of their name remain, according to D'Anville, in *la terre de Groude*, above *l'Ecluse*, towards the north, in a part of the country called *Lat-Sand*. Turpin de Crissé is wrong in making the country of the Grudii answer to that of *Bruges*. (*Cæs., B. G., 5, 39.—Lemaire, Ind. Geogr. ad Cæs., p. 272.*)

GRYLLUS, a son of Xenophon, who killed Epaminondas, and was himself slain, at the battle of Mantinea, B.C. 363. His father was offering a sacrifice when he received the news of his death, and he threw down the garland which was on his head, but replaced it when he heard that the enemy's general had fallen by his hands. (*Ælian, V. H., 3, 3.*)—Such is the common account. The variations of tradition, however, as to the hand by which Epaminondas fell, prove the importance which his contemporaries attached to that event. Among the claimants, besides the son of Xenophon, were a Spartan, and a Locrian of Amphissa. The Spartan's descendants became a privileged family. The Locrian received heroic honours from the Phocians. But the Athenians, and the Thebans themselves, assigned the deed to Gryllus, and he was honoured by the Mantineans with a public funeral and statue, and by his fellow-citizens with a conspicuous place in a painting of the battle, representing him in the act of giving the mortal wound. Yet, as he served in the Athenian cavalry, it is difficult to understand how he could have encountered Epaminondas, who was at the head of the Theban infantry. (*Thirlwall's Greece*, vol. 5, p. 151.)

GRYNÆUM or GRYNÆA, one of the twelve cities of Æolis, situate on the coast of Lydia, near the northern confines, and northwest of Cùmæ or Cyne. It was celebrated for the worship of Apollo, who thence derived the surname of *Grynæus*. (*Virg., Eclog., 6, 72.—Æn., 4, 345*) The temple of the god was remarkable for its size, and for the beauty of the white marble of which it was built. (*Strabo, 622.*) Kruse makes the site of the ancient place correspond with the modern *Clisselik*. (*Bischoff und Möller, Wörterb. der Geogr., p. 577.*)

GRYPHES, more correctly GRYPES (Γρυπῆς), griffons, certain animals which, according to Herodotus (3, 116), guarded the gold found in the vicinity of the Arimaspians, a Scythian race, from the attempts of that people to possess themselves of it. (*Vid. Arimaspi.*) Herodotus makes only a passing allusion to the contests between the griffons and Arimaspians, because probably he attached little, if any, belief to it. Ctesias, however, is more diffuse. (*Ind., § 12.—Compare Ælian, N. A., 4, 27.—Plin., 7, 2.*) The question respecting the Arimaspians has already been discussed. (*Vid. Arimaspi.*) With regard to the griffons, much diversity of opinion prevails among modern scholars. Von Veltheim thinks the story refers to the washing of gold in the desert of Cobi. He supposes this to have been done by slaves for the monarchs of northern India, and the spot to have been carefully guarded by armed men and fierce dogs, the most alarming tales having been at the same time spread concerning these regions, in order to keep off adventurers. (*Von den goldgerabenden Ameisen und Greifen der Alten.—Vermischte Aufs.*, vol. 2, p. 267, *seqq.*) Wahl takes the griffons to be a nation in the northeastern part of Upper Asia, and identical with the Rhipæi. He assigns them for a habitation the range of Mount *Alai*,

and regards them as having practised mining in Upper Asia. Hence, according to him, the gold of the griffons is nothing more than the gold obtained from mines. (*Erdbeschr. von Ost.*, p. 488, *seqq.*) Malte-Brun remarks, that in the mountains where the Indus rises, and where there are gold-mines, eagles and vultures of an enormous size are found, which may have given rise to the fable respecting the griffons. (*Novæll.*, *Annal. des Voyag.*, vol. 2, p. 380, *seqq.*) Rhodé seeks to identify the griffons with the *Deus*, or evil geni of Persian mythology (*Heilige Sage*, p. 227, *seq.*), for which he is justly censured by Von Hammer (*Wien. Jahrb.*, vol. 9, p. 53); and Wilford, with as little probability, refers the account of the griffons to that of the fabled bird of Vischnu, named *Garouda*. (*Asiat. Researches*, vol. 14, p. 373.)—As regards the name γρύψ itself, it evidently comes from the Persian *gerefein*, “to seize” (compare the German *greifen*), the root of which, *greif*, has a strong analogy to γρύψ. (*Tychsen*, *ap. Heeren*, *Ideen*, vol. 1, pt. 2, p. 386.—*Bahr*, *ad Herod.*, 3, 116, *Excurs.*, 5.)

GYRUS, a small island of the Archipelago, classed by Stephanus by Byzantium among the Sporades, but belonging rather to the Cyclades. It lay southwest of Andros, off the coast of Attica. So wretched and poor was this barren rock, being inhabited only by a few fishermen, that they deputed one of their number to wait upon Augustus, then at Corinth, after the battle of Actium, to petition that their taxes, which amounted to 150 drachmæ (about 25 dollars), might be diminished, as they were unable to raise more than 100. (*Strab.*, 485.) This island became subsequently notorious, as the spot to which criminals or suspected persons were banished by order of the Roman emperors. (*Juv.*, *Sat.*, 1, 73.—*Id.*, *Sat.*, 10, 70.—*Tacit.*, 3, 68.) The modern name is *Ghioura*. (*Cramer's Anc. Greece*, vol. 3, p. 412.)

GYAS, I. one of the companions of Æneas, who distinguished himself at the games exhibited after the death of Anchises in Sicily. (*Virg. Æn.*, 5, 118.)—II. A Rutulian, son of Melampus, killed by Æneas in Italy. (*Id.*, 10, 318.)

GYGES (Γύγης), more correctly GYES (Γύης), a son of Cælus and Terra, represented as having a hundred hands. He, with his brothers, made war against the gods, and was afterward punished in Tartarus. (*Vid. Cottus*.)

GYGES, a Lydian, to whom Candaules, king of the country, showed his wife with her person exposed. The latter was so incensed, although she concealed her anger at the time, that, calling Gyges afterward into her presence, she gave him his choice either to submit to instant death, or to slay her husband. Gyges chose the latter alternative, married the queen, and ascended the vacant throne, about 718 years before the Christian era. He was the first of the Merminæ who reigned in Lydia. He reigned 38 years, and distinguished himself by the presents which he made to the oracle of Delphi. (*Herodot.*, 1, 8, *seqq.*) The wife of Candaules above mentioned was called Nyssia according to Hephæstion.—The story of Rosamund, queen of the Lombards, as related by Gibbon, bears an exact resemblance to this of Candaules. (Compare *Schlosser*, *Weltgeschichte*, vol. 2, pt. 1, p. 82.)—Plato relates a curious legend respecting this Gyges, which differs essentially from the account given by Herodotus. He makes him to have been originally one of the shepherds of Candaules, and to have descended into a chasm, formed by heavy rains and an earthquake in the quarter where he was pasturing his flocks. In this chasm he discovered many wonderful things, and particularly a brazen horse having doors in it, through which he looked, and saw within a corpse of more than mortal size, having a golden ring on its finger. This ring he took off and reascended to the surface of the earth. Attending, after this, a meeting of

his fellow-shepherds, who used to assemble once a month for the purpose of transmitting an account of their flocks to the king, he accidentally discovered that, when he turned the bezil of the ring inward towards himself, he became invisible, and when he turned it outward, again visible. Upon this, having caused himself to be chosen in the number of those who were sent on this occasion to the king, he murdered the monarch, with the aid of the queen, whom he previously corrupted, and ascended the throne of Lydia. (*Plat., de Repub.*, 2, p. 359, *seq.*—Compare *Cic.*, *de Off.*, 3, 9.)

GYLIPIUS, a Lacedæmonian, sent, B.C. 414, by his countrymen to assist Syracuse against the Athenians, which he effected by the overthrow of Nicias and Demosthenes. He afterward joined Lysander off Athens, and aided him by his advice in the capture of that city. Lysander sent him to Lacedæmon with the money and spoils which had been taken, the former amounting to 1500 talents. But Gylippus, unable to resist the temptation, unsewed the bottom of the bags, thus leaving the seals untouched at the top, and abstracted 300 talents. His theft, however, was discovered by means of the memorandum contained in each bag, and to avoid punishment he went into voluntary exile. (*Plut.*, *Vit. Nic.*—*Diod. Sic.*, 13, 106.)

GYMNEIÆ. *Vid.* Balæares.

GYMNOΣOPHISTÆ (Γυμνοσφοισταί), or “naked wise men,” a name given by the Greek writers to a certain class of Indian ascetics belonging to the caste of the Brahmins, and who, in accordance with the prevalent belief, thought that, by subjecting the body to sufferings and privations, and by withdrawing from all intercourse with mankind, they could effect a reunion of the spiritual nature of man with the divine essence. Most of these ascetics dispensed almost entirely with the use of clothes, and many of them went entirely naked. Hence the name applied to them by the Greeks. It is expressly commanded in the laws of Manu (6, 2, 3), that a Brahmin, when his children have attained maturity, should retire from the world, and take refuge in a forest. He is required to spend his time in studying the Vedas and in performing penances, for the purpose of “uniting his soul with the divine spirit.” (*Manu*, 6, 29.) Many of these hermits appear in former times to have studied the abstract sciences with great success; and they have always been considered by the orthodox Hindus as the wisest and holiest of mankind. (Consult the *Bhagavad Gîtâ*, a philosophical poem, forming an episode to the Mahâbhârata, which has been translated into English by Wilkins, *Lond.*, 1787, and into Latin by *Schlegel*, who also edited the Sanscrit text, *Bonn*, 1823.) The Gymnosophists often burned themselves alive, as Calanus did in the presence of Alexander. (*Arrian*, *Exp. Al.*, 7, 18.—*Plut.*, *Vit. Alex.*, c. 65, *seqq.*—*Diod. Sic.*, 17, 107.)

GYNDES, now *Zeindeh*, a river of Assyria, falling into the Tigris. When Cyrus marched against Babylon, his army was stopped by this river, in which one of the sacred horses was drowned. This so irritated the monarch, that he ordered the river to be divided into 360 different channels by his army, so that after this division it hardly reached the knee. (*Herod.*, 1, 189.) This portrait of Cyrus seems a little overcharged. The hatred which the Greeks bore the Persians is sufficiently known. The motive of Cyrus for thus treating the Gyndes could not be such as is described by Herodotus. That which happened to the sacred horse might make him apprehend a similar fate for the rest of his army, and compel him to divert the river into a great number of canals in order to render it fordable. The Gyndes, at the present day, has resumed its course to the Tigris, and its entrance into that river is called *Foum-el-Saleh*, or the river of peace, in Arabic. The name given it by the Turks in the place whence it issues, is *Kara-Sou*, or the black river.

GYTHÆUM, the port of Sparta, about 40 stadia from Las (*Pausan.*, 3, 24), and 240 from Sparta itself. (*Strabo*, 363.) Pliny says it was the nearest point to embark from for the island of Crete (4, 5). Gytheum was taken by the Athenians under Tolmidas, who burnt the docks before the Peloponnesian war. (*Diodorus Sic.*, 11, 84.) It was also attacked by the Thebans in their first invasion of Laconia, for three days, but without success. (*Xen., Hist. Gr.*, 6, 5, 32.) It was afterward besieged by the Roman army under the command of T. Q. Flaminius and his brother Lucius, and compelled to surrender. Livy says it was a strong and populous town, and well provided with the means of resistance (34, 29). On the renewal of the war, it was, however, retaken by Nabis. (*Liv.*, 35, 26.—Compare *Polyb.*, 2, 69.) The Gytheatæ pretended that their city had been built by Hercules and Apollo, whose statues were placed in the forum. *Polybius* states (5, 19), that the port, distant 30 stadia from the city itself, was both commodious and secure. *Strabo* remarks, that it was an artificial haven. Gytheum stood a little to the north of the present town of *Marathonisi*. The site is now called *Palæopoli*, but no habitation is left upon it. (*Cramer's Anc. Greece*, vol. 3, p. 192, *seqq.*)

H.

HÆDES (ἡδης), the place of departed spirits, according to the Grecian mythology; from *a*, not, and *εἶδω*, to see, as denoting the lower or invisible world. Its divisions were Elysium and Tartarus, the respective abodes of the good and bad. In the Homeric times, however, this arrangement formed no part of the popular creed. The prevalent belief was merely as follows; that the souls of the departed, with the exception of those who had personally offended against the gods, were occupied in the lower world with the unreal performance of the same actions that had formed their chief objects of pursuit in the regions of day. All the other accompaniments of the fable, the judges, the tribunals, the trials of the dead, &c., are merely posthomeric additions. (*Constant, de la Religion*, vol. 3, p. 383.) As regards the analogy between the terms *hades* and our English word *hell*, it may be remarked, that the latter, in its primitive signification, perfectly corresponded to the former. For, at first, it denoted only what was secret or concealed; and it is found, moreover, with little variation of form, and precisely with the same meaning, in all the Teutonic dialects. (Compare *Junius's Gothic Glossary*, subjoined to the *Codex Argenteus*, on the word *herlyan*; and the *Diversions of Purley*, vol. 2, p. 377, ed. 1829.) With regard to the situation of *hades*, it seems always to have been conceived, by both Jews and pagans, as in the lower parts of the earth, near its centre, as we should term it, or its foundation (according to the notion of the Hebrews, who knew nothing of its spherical figure), and answering in depth to the visible heavens in height. (Compare, on this whole subject, *Campbell's Gospels*, vol. 1, p. 272, *seqq.*, *Disc.* 6, pt. 2.)

HADRĀNUM, a town of Sicily, near Mount Ætna, having in its vicinity a river of the name of Hadranus. (*Steph. Byz.*, s. v.) It was founded by Dionysius. (*Diod. Sic.*, 14, 38.—Compare *Silius Italicus*, 14, 250.)

HADRĀNUS (Publius Ælius), I. a Roman emperor, born at Rome A.D. 76. He lost his father when ten years of age, and had for his guardians Trajan, who was his relation, and Cornelius Tatianus, a Roman knight. His parent's name was Ælius Hadrianus Afer, and it is conjectured that the surname of Afer was given the latter because he had been governor of Africa, and that he is the same with the Hadrianus who put the martyr Leontius to death at Tripolis, in the reign of Vespasian. (*Bayle, Hist. Dict.*, s.

v., vol. 5, p. 670.) Hadrian's father was Trajan's first cousin; for he was the son of Ulpia, the sister of Marcus Ulpius Trajanus, the Emperor Trajan's father. (Compare *Tzschucke, ad Eutrop.*, s. 6.) Hadrian began very early to serve in the army, and was tribune of a legion before Domitian's death. The forces in Lower Mœsia chose him to congratulate Trajan upon his being adopted by Nerva, and it was he that acquainted Trajan with the first news of Nerva's death. He regained the emperor's favour, which he had almost entirely lost by his extravagant expenses and the debts which he had in consequence incurred, and married the grand niece of this prince, Sabina, chiefly through the aid of Plotina the empress. His subsequent rise was rapid, and he was the companion of Trajan in most of his expeditions. He particularly distinguished himself in the war against the Dacians, and was successively appointed prætor, governor of Pannonia, and consul. The orations he composed for Trajan increased his credit. (*Spartian., Vit. Hadr.*) After the siege of Atrra, in Arabia, Trajan left him in command of his army, and when he found his death approaching, adopted him, although the reality of this adoption is disputed by some authorities, who attribute his elevation to the intrigues and good offices of Plotina. (*Dio Cass.*, c. 69, vol. 2, p. 1148, ed. *Reimær*.—*Spartian., Vit. Hadr.*, c. 4, p. 45.—*Bayle, Hist. Dict.*, s. v. Plotina, vol. 8, p. 433.) On the death of Trajan he assumed the reins of government, with the concurrence of the Syrian army; and the senate readily ratified the act. The first care of Hadrian was to make a peace with the Persians, and to restore all the provinces just taken from them, making the Euphrates the boundary of the Roman empire. He had then to turn his attention to certain revolts and insurrections in Egypt, Libya, and Palestine; and, after quickly concluding a peace with the Parthians, returned to Rome, A.D. 118. The senate decreed him a triumph, and honoured him with the title of Father of his Country; but he refused both, and required that Trajan's image should triumph. He sought popularity by a repeal of fifteen years accumulation of arrears of public debt, by a vast reduction of taxation generally, and by immense largesses to the people. He was less generous to certain senators accused of a plot against him, four of whom, although of consular rank and intimates of Trajan, he caused to be put to death. A year after his return to Rome, Hadrian marched against the Alani, the Sarmatians, and the Dacians, but showed a greater desire to make peace with these barbarians than to extend the progress of the Roman arms. This policy has been attributed to envy of the fame of his warlike predecessor; but a due consideration of the subsequent history of the empire will amply justify him against the imputation; for it had reached an extent which rendered all increase to its limits a source of weakness rather than of strength. Hadrian was an active prince and a great traveller, visiting every province in the empire, not simply to indulge his curiosity, but to inspect the administration of government, repress abuses, erect and repair public edifices, and exercise all the vigilance of personal examination. In A.D. 120, he passed over from Gaul to Britain, where he caused a wall to be built from the mouth of the Tyne to Solway Frith, in order to secure the Roman provinces from the incursions of the Caledonians. (Consult *Hutton's Roman Wall, Lond.*, 1802.) Like Trajan, he lived familiarly with his friends, but was much more suspicious, and could not repose in them the same confidence. When at Rome he cultivated all kinds of literature, conversing with learned men, and giving and receiving information in their society, but not without occasionally displaying an unbecoming jealousy and caprice. Hadrian had again to visit the East to repress the Parthians, who paid little regard to treaties.

On his return he passed the winter at Athens, and was initiated in the Eleusinian mysteries. He published no edict against the Christians, yet they nevertheless endured considerable persecution, until, upon the remonstrance of Quadratus, bishop of Athens, and Aristides, an eminent Christian, he ordered the persecution to cease; but no credit is due to the unauthorized assertion of Lampridius, that he thought of building a temple to our Saviour. His treatment of the Jews, on the other hand, was extremely severe, though ample provocation had been given by that turbulent nation. They had raised disturbances towards the end of Trajan's reign, which were not completely quelled until the second year of Hadrian. But now a more formidable insurrection broke out under Barcochebas ("Son of a Star"), who, though a robber by profession, had given himself out for the Messiah. It required a war of three years to reduce the revolted Jews to complete subjection, and after this was accomplished, there was scarcely any indignity that was not inflicted on the conquered nation. Jerusalem was rebuilt under the new title of Ælia Capitolina, uniting the family name of the emperor with the Roman surname of Jupiter, and in the execution of his plan Hadrian studiously profaned all the places which had been most revered by both Jews and Christians, whom he seems on this occasion to have purposely confounded together. He built a temple in honour of Jupiter Capitolinus upon the mountain where had stood that of the true God; he placed a hog of marble upon the gate of the city which looked towards Bethlehem; he erected in the place where Jesus was crucified a statue of Venus; and in that where he rose from the dead one of Jupiter; in the grotto of Bethlehem, where our Saviour was born, he established the worship of Adonis. The Jews were also forbidden the very sight of Jerusalem, which they were not permitted to enter but on one day in the year, the anniversary of the destruction of the city. After the conclusion of the Jewish war Hadrian returned to Italy, where a lingering illness put a stop to his unsettled mode of life, and eventually terminated his existence. Having no children of his own, Hadrian first adopted for his successor L. Cæronius Commodus, more generally known by the name of Verus, to which last he prefixed that of Ælius after his adoption by the emperor. Verus, however, who was remarkable for nothing but his excessive effeminacy and debauched mode of life, died soon after, and Hadrian made a second selection in the person of the virtuous Antoninus. (*Vid.* Antoninus Pius.) Hadrian died not long after at Baia, A.D. 136, in the 63d year of his age and 22d of his reign. His disorder was the dropsy, from which disease his sufferings were so great as apparently to affect his reason. The character of this monarch presents a strange mixture of virtues and vices. If he cultivated literature and courted the society of the learned, he yet occasionally displayed towards them a degree of jealousy and caprice altogether unworthy of his station and abilities. If he was, in general, a just and able ruler, yet there were times when he showed himself revengeful, suspicious, and cruel. His treatment of his wife Sabina does no honour to his memory, his disgraceful predilection for Antinous loads it with infamy; nor does his excessive superstition, to which even that favourite fell a victim, entitle him to any other than feelings of contempt. The better portion of the Romans appear to have formed a just estimate of his character long before his death, and it was with difficulty that Antoninus could obtain from the senate the usual compliment of having him ranked among the gods. Their dread of the soldiery, by whom Hadrian was greatly beloved, appears to have conquered their reluctance. Hadrian wrote several works. He was fond of entering the lists against the poets, philosophers, and orators of the day,

and Photius mentions several declamations of the emperor's, written for such occasions, as still existing in his time, and not devoid of elegance. Hadrian composed a history of his own times, which he published under the name of his freedman Phlegon, and Dori-theus the grammarian made at a subsequent period a collection of his decisions and rescripts. All that we have of his productions at the present day are, a fragment of a work on military operations, entitled *Ἐπι-τῆδεμα*, and an epigrammatic address to his soul, written a short time before his death, and as remarkable for its elegance as its scepticism. It is as follows:

*"Animula, vagula, blandula,
Hospes comesque corporis,
Quæ nunc abibis in loca,
Pallidula, rigida, nudula,
Nec, ut soles, dabis jocos!"*

(*Pausanias*, 1, 18. — *Id.*, 8, 9. — *Aurel. Vict.* — *Capitol.*, *Vit. Anton.*, c. 2. — *Euseb.*, *Chron.*, p. 281, *seqq.*, *ed. Maii et Zohrabi.* — *Id.*, *Hist. Eccles.*, 4, 6.) — II. A philosopher of Tyre, who studied under Herodes, and taught eloquence after him at Athens. He was also secretary to the Emperor Commodus. (*Ἀντι-γραφεὺς τῶν ἐπιστολῶν.*) He died at Rome after having attained the age of 80 years. We have only some fragments remaining of the works of this writer, which cause no regret for what are lost. They are found in the *Excerpta* of Allatius, and at the end of Orellius's edition of Philo of Byzantium. (*Scholl.*, *Hist. Litt. Græcæ*, vol. 4, p. 233.)

HADRIATICUM MARE. *Vid.* Adriaticum.

HÆMON, a son of Creon king of Thebes. According to Apollodorus (3, 5, 8), he was devoured by the Sphinx. The tragic writers, however, assigned him a different fate. (*Vid.* Antigone.)

HÆMONIA, one of the earlier appellations of Thessaly, and supposed to be derived from the name of an ancient monarch Hæmon. (*Strabo*, 443.) Other writers give the name less correctly without the initial aspirate. (*Stephanus Byz.*, s. v. — *ed. Berkel*, p. 63.) In Brunck's edition of Apollonius Rhodius, the true form is given in both the text and scholia. It is more than probable, that the name Hæmonia was brought in by the Pelasgi; and to this same race, no doubt, must the appellation of Hæmus, given to the northern boundary of Thrace, be in strictness attributed. (*Vid.* Hæmus.)

HÆMUS, a chain of mountains forming the northern boundary of Thrace, and separating it from Mæsia. The ancients had such an idea of the elevation of this chain, that Pomponius Mela (2, 2) affirms that the Euxine and Adriatic could be seen from it at the same time. Polybius also makes the same assertion, but this Strabo (313) expressly contradicts. The historian, however, is doubtless correct in another remark of his, that the chain of Hæmus is higher than that of the Alps. Livy relates (40, 22), that Philip, king of Macedonia, having heard it reported that from the summit of Hæmus could be seen at once the Euxine, the Adriatic, the Danube, and the Alps, determined to ascend the mountain, in order to take a view, as it were, of the approaching scene of action between himself and the Romans. He was three days in reaching the summit, after a difficult and toilsome march; the weather, however, proved unfavourable for the view. Pliny (4, 2) makes Hæmus six miles high. It is remarkable that Herodotus should have taken no notice of it in his mention of the expedition of Darius against the Scythians, though it must have presented so formidable a barrier to the army of that monarch. He speaks of it, however, on another occasion (4, 49). According to Stephanus of Byzantium (p. 64, *ed. Berk.*), the mountain derived its name from Hæmus, or Æmus, a son of Boreas and Orithyia

Apollodorus, however (6, 3), says the chain was called Hæmus from *αἶμα*, "blood," because Typhon having been chased hither by Jupiter, waged battle in this place against the monarch of the skies, and covered the mountain with his blood. (Compare the remark of Heyne, *ad Apollod.*, l. c., where this etymology is stated to be the offspring of later ages.) The true root is found in the Sanscrit *Hema*, which connects together the names of *Imaus*, *Himala*, *Hæmus*, *Hymettus*, in ancient geography, and the appellation *Himmel*, given to various mountains in Saxony, Jutland, and elsewhere. (*Creuzer, Symbolik*, vol. 1, p. 536 — *Creuzer, Symbolik, par Guignaut*, vol. 1, p. 135. — *Götting. Gel. anz.*, 1815, No. 36, p. 357.) This root *Hema*, otherwise written *Himeras*, *Imos*, *Jenna*, &c., appears to carry with it the idea of height (compare the German *himmel*, "heaven"), and also that of a snowy or wintry elevation. (Compare the Latin *himus* and the Greek *χείμα*. — *Klaproth, Memoires relatifs a l'Asie*, vol. 1, p. 432.) — The length of the chain of Hæmus is not less remarkable than its height, extending for 500 miles; one end resting on the Gulf of Venice, and the other on the Black Sea. The modern name is *Balkan*, which signifies a difficult defile; and it is properly divided into high and low, the latter advancing on each side, like outworks before the great natural rampart. (*Walsh's Journey from Constantinople to England*, p. 104, *Am. ed.*) The passage of the Balkan by the Russian forces, in their conflict with the Mussulman power, has excited great interest and called forth considerable applause. From the remarks, however, of a very recent traveller, it would appear that the undertaking was anything but difficult. (*Keppel's Journey across the Balkan*, vol. 1, p. 301.)

HALESUS, I. an Argive, who, after the murder of Agamemnon by Clytemnestra and Ægisthus, settled in Italy, in the vicinity of Mons Massacus, a mountain of Campania. At the head of the Aurunci and Osci, he assisted Turnus against Æneas, but fell by the hand of Pallas. (*Virg., Æn.*, 7, 724. — *Id. ib.*, 10, 532.) Halesus is said by Virgil to have been the son of a soothsayer, who foretold the fate of his child; and, in order to avert this, if possible, brought him up in the woods. The epithet *Agamemnonius*, therefore, which Virgil applies to him (*Æn.*, 7, 724), and which some suppose has reference to his being the son of Agamemnon, is merely used by the poet to denote the pretended origin of his race. (*Heyne, Excurs.*, 8, *ad Æn.*, 7.) — II. or Hales (*Ἁλῆς*, *-ειτός*), a river of Asia Minor, running near the city of Colophon, and said to have the coldest water of all the streams of Asia. (*Plin.*, 5, 29.) It took its rise in Mount Galleus or Galleium, and fell into the Sinus Ephesus. (*Strab.*, 642. — *Cramer's Asia Minor*, vol. 1, p. 359.)

HALIACMON, a large and rapid stream of Macedonia, flowing into the sea a short distance below Pydna. It rises in the chain of mountains called Cambunii, or by Ptolemy Canalovii, on the northern confines of Thessaly. The modern name of this river is *Inidze-Carason*, or *Jenicara*, according to Dr. Brown, who must have crossed it in its course through Elimæa. (*Travels*, p. 46. So also the editors of the French *Strabo*, vol. 3, p. 124.) Dr. Clarke calls it *Inje-Mauro*. The epitomist of Strabo (7, p. 330) seems to place the Haliacmon soon after Dimn, as does also Ptolemy (p. 82). This is, however, an error, which apparently misled Dr. Holland, who imagined he had forded this stream about two miles beyond *Katima*; but what he speaks of is probably the Baphyrus of Iuvy and Pausanias (vol. 2, p. 31). According to Cæsar (*B. C.*, 3, 36), it formed the line of demarcation between Macedonia and Thessaly. (*Cramer's Ancient Greece*, vol. 1, p. 217.)

HALIARTUS, I. a son of Thersander, said to have founded the city of Haliartus in Boeotia. He was adopted by Athamas, though he did not succeed him,

but gave up the throne willingly to Presbon, grandson of this prince. (*Pausan.*, 9, 34.) — II. A city of Boeotia, situate, according to Strabo, on the lower shore of the Copaic lake, and near the mouth of the Permessus, which flows from Helicon. The epithet of *παῖνεντα* is attached to this city by Homer (*Il.*, 2, 503. — *Hymn. in Apoll.*, 243), from the numerous meadows and marshes in its vicinity, on the side of Orchomenus. (*Strab.*, 407.) Pausanias affirms that Haliartus was the only Boeotian city which did not favour the Persians, for which reason its territory was ravaged with fire and sword by their army (9, 32). Haliartus, having favoured the cause of Perseus, king of Macedonia, was besieged by the Romans, under the command of the prætor Lucretius, and, though obstinately defended, was taken by assault, sacked, and utterly destroyed, the inhabitants being sold and their territory given to the Athenians. (*Liv.*, 42, 53. — *Polyb.*, 30, 18. — *Strab.*, 411.) The remains of Haliartus, according to Dodwell (vol. 1, p. 248), are situated about fifteen miles from Lebadea, and at nearly an equal distance from Thebes. The place is now called *Mikrokouza*. Sir W. Gell says, "The ruins of Haliartus lie just below the village of *Mazi*, on the road from Thebes to Lebadea." (*Itinerary*, p. 124.)

HALIAS, a district of Argolis, so called apparently from the fisheries established along the coast, and lying between Hermione and Cape Scyllæum. Its territory was twice ravaged by the Athenians during the Peloponnesian war. (*Thucyd.*, 2, 56. — *Id.*, 4, 45.) The name of *Aliki* is still attached to a spot situated a little to the east of *Castri*. (*Pouquerille*, vol. 4, p. 255.)

HALICARNASSUS, the principal city of Caria, situate on the northern shore of the Sinus Ceramieus. It was founded by a Doric colony from Træzene, in Argolis, according to Strabo (656). These were joined afterward by some Argives, headed by Melas and Arenanias. (*Vitruv.*, 2, 8. — Compare *Pausan.*, 2, 30.) Herodotus, however, only recognises the former colonists (7, 99). This city, on account of its origin, had naturally been included in the Dorian confederation, which consisted originally of six states. But Agasicles, a citizen of Halicarnassus, having, contrary to prescribed custom, carried off the tripod assigned to him in the games celebrated in honour of the Triopian Apollo, instead of dedicating it to the god, the other five cities, in consequence of this offence, determined to exclude Halicarnassus from any participation in these festivities, which amounted, in fact, to an exclusion from the Dorian confederacy, which thenceforth was named Pentapolis. (*Herod.*, 1, 144.) Not long after this event, Halicarnassus may be supposed to have lost its independence, Lygdamis, one of the principal citizens, having usurped the authority. He was succeeded by his daughter Artemisia, of whom Herodotus has made such honourable mention in his history. (*Vid. Artemisia*, I.) This princess, in all probability, transmitted the sovereign power to her son, named Lygdamis, like his natural grandfather; and it was during his reign that Herodotus, unwilling to see his native city under the denomination of a despot, abandoned it for Samos, where he completed his studies. Subsequent to this period we have little knowledge of what occurred in Halicarnassus; but from Thucydides (2, 9) we learn that Caria and Doris were tributary to Athens, and Halicarnassus itself is mentioned, towards the close of his history, as being in the hands of her troops (8, 42). Somewhat later we find it subject to princes of Carian extraction. The first of these was Hecatomnus, who had three sons, Mausolus, Hydrieus, and Pixodarus; and two daughters, Artemisia and Ada, who married the two elder brothers. Mausolus succeeded his father on the throne of Caria, and, dying without offspring, left the crown to his sister and consort Artemisia. She erected to his memory the splendid mausoleum, or tomb called after his name. (*Vid.*

Mausoleum.) Artemisia, dying of grief for the loss of her husband, was succeeded by Hidrieus, who, having no issue, left the crown to his wife Ada. But Pixodarus, the youngest of Hecatomnus' sons, formed a party against her, and, with the assistance of Orontobates, a Persian satrap, succeeded in expelling her from Halicarnassus. Orontobates, having married the daughter of Pixodarus, remained, on the death of the latter, in possession of Halicarnassus. It was at this period that Alexander arrived with his forces in Caria, and laid siege to the city. It was a long and severe one, owing to the natural strength of the place, and the number and description of the troops which defended it, under the command of Memnon, the best general in the Persian service. Alexander, however, eventually took the place, razed it to the ground, and restored Ada to the sovereignty of Caria. Halicarnassus was afterward rebuilt, and, to compensate for its losses, had six towns annexed to it. (*Plin.*, 6, 29) The citadel of this place was named Salmacis, from the fountain celebrated in Ovid (*Mét.*, 4, 11). According to Scylax, there were two ports at Halicarnassus, protected by the little island Arconessus. Halicarnassus could boast of having produced Herodotus, Dionysius, and Heraclitus the poet. It appears to have suffered in the Mithradatic war, and to have been restored to a great degree of its former prosperity by Cicero's brother Quintus. (*Ep. ad Q. Frat.*, 1, 8.)—The ruins of Halicarnassus exist at *Boudroun*, and Captain Beaufort has given a plan of the harbour and the Turkish town, with the adjacent coast. (*Beaufort's Karamania*, p. 95, *seqq.*)—*Cramer's Asia Minor*, vol. 2, p. 176, *seqq.*) Dr. Clarke, quoting from Walpole's MS. journal, remarks, that *Budrun* is a corruption, through Petrumi, as the Turks write it, from Pietro, referring to the fort or castle of San Pietro (*castellum Sancti Petri*), which corresponds to the ancient citadel. (*Travels*, vol. 3, p. 256, *seqq.*)

HALICÛÆ, (Ἀλικύαι), a town of Sicily, between Entella and Lilybæum. The modern name is *Saleme*. (*Steph. Byz.* s. v.—*Diod. Sic.*, 14, 55.)

HALIKRHOMIUS, a son of Neptune and Euryle, who committed an outrage on Alcippe, daughter of Mars, and was, in consequence, slain by that deity. Neptune summoned Mars to trial for the murder of his son. The cause was heard before the twelve gods, sitting as judges, on the Areopagus at Athens; which hill derived its name (Ἀρειος πάγος, "*Hill of Mars*") from this circumstance. The trial ended in the acquittal of the accused deity. (*Apollod.*, 3, 14.—*Schol. ad Eurip.*, *Orest.*, 1665.) Meier considers Ἀρειος equivalent here to φορτικός. (*Rhein. Mus.*, 2, p. 266.)

HALMYDESSUS. *Vid.* Salinydessus.

HALONNËSUS, a small island at the opening of the Sinus Thermaicus, and northeast of Scopelus. It is celebrated in history as having been a subject of contention between Philip the son of Amyntas, and the Athenians; on which occasion one of their orators composed an harangue, which is to be found in the works of Demosthenes, and has been ascribed by some to that celebrated orator. (*Orat.* 7, *Demosth.*, p. 75.—*Strab.*, 435.—*Pomp. Mcl.*, 2, 7.) It is now called *Chelidromi*. (*Cramer's Anc. Greece*, vol. 1, p. 451.)

HALYS, a celebrated river of Asia Minor, rising on the confines of Pontus and Armenia Minor, and which, after flowing westwardly through Cappadocia to the borders of Phrygia, turns to the northwest, and enters the Euxine some distance to the northwest of Amisus. Herodotus (1, 72) and Strabo (546) both speak of its rising in the region we have mentioned, and pursuing the route described. Pliny (5, 2), however, makes it rise in a far different quarter, viz., in the southern part of Cataonia, near Tyana, at the foot of the chain of Mount Taurus. Larcher (*Hist. d'Herod.*, vol. 8, p. 239.—*Table Geogr.*) and others seek to reconcile these opposite statements, by giving the Halys two

branches, an eastern and a southern one. This, however, merely increases the difficulty; for why should Strabo, a native of Amasea, be ignorant of the course of a river so near his native city! and why does he make no mention of the southern Halys, when he describes the very ground over which it is supposed to have flowed? Mannert (*Geogr.*, vol. 6, pt. 2, p. 455) thinks, that this southern arm is the river which Tavernier calls the *Jekel Ernak*, or green river, which D'Anville, on the contrary, makes the modern name of the ancient Iris. The modern name of the Halys is the *Kizil Ernak*, or red river. According to Strabo (546), the ancient name of the river is owing to its passage in its course by some salt-works. This, however, is a mere arbitrary derivation, and so, in fact, Eustathius evinces, who states that the river was called Halys by those who derived its name from *salt*; by others, however, Alys. (*Eustath.*, *ad Dion. Perieg.*, v. 784.) This river formed the western boundary of the dominions of Cræsus, with which was connected a famous oracle. (*Vid.* Cræsus.)

HAMADRYADES. *Vid.* Nymphæ.

HAMILCAR (for the orthography and derivation of the name, consult remarks at the end of the article), I. a Carthaginian general, son of Mago, or, according to others, of Hanno, conquered by Gelon, in Sicily, the same day that Xerxes was defeated at Salamis. Herodotus (7, 165) states, that he was never seen either living or dead, after the battle in which his army was defeated. According to Polyænus, however (1, 27, 2), Gelon destroyed him by a stratagem while sacrificing.—II. Surnamed Rhodanus, a Carthaginian general of considerable talent. Perceiving his fellow-citizens to be greatly disquieted at the projects of Alexander of Macedon, he betook himself to that prince, in order, if possible, to penetrate his designs, and give his countrymen timely notice of them. After the death of that monarch he returned to Carthage, where he was put to death, on false pretensions of treason, as the recompense of his devotion to his country. (*Justin.*, 21, 5.)—III. A Carthaginian general, in the time of Agathocles, tyrant of Sicily. He came to the succour of Syracuse when besieged by this usurper. Being gained over, however, by the gold of Agathocles, he prevailed on the Syracusans to make peace, and favoured by his inaction the schemes of the tyrant. The Carthaginian senate condemned him to lose his head, but he died at Syracuse, B.C. 311, before the sentence could be made public. (*Justin.*, 22, 2.)—

IV. The son of Giscon, a Carthaginian general, sent into Sicily about 311 B.C., to oppose the progress of Agathocles. On his arrival he gained a victory, which opened to him the gates of several large cities. In attempting to make himself master of Syracuse, during the absence of Agathocles in Africa, he was taken prisoner and put to death, B.C. 309.—V. Surnamed Barcas, the leader of the popular party at Carthage, was appointed in the eighteenth year of the first Punic war (B.C. 247) to the command of the Carthaginian forces. We possess no particulars respecting his early life or the time of his birth; but we learn from Nepos (*Vit. Hamil.*, c. 1) that he was very young when he obtained the command. He ravaged with his fleet the coast of the Brutii and the Epizephyrian Locrians, and afterward seized upon a strong fortress in Sicily, which was situated between Eryx and Panormus. In this place he continued for some years, with very little support from the Carthaginian government; and, although the Romans were masters of almost the whole of the island, they were unable to dislodge him. He frequently ravaged the southern coasts of Italy as far as Cumæ, and defeated the Roman troops in Sicily. On one occasion he took Eryx, which he held till the conclusion of the war. The Romans at length fitted out a fleet to cut off all communication between Hamilcar and Carthage; the Carthaginian fleet sent to his

assistance was defeated by the Roman consul Lutatius Catulus, B.C. 241, and the Carthaginians were obliged to sue for peace. This was granted by the Romans; and Hamilcar led his troops from Eryx to Lilybæum, whence they were conveyed to Africa. But a new danger awaited Carthage. The Carthaginian treasury was exhausted; and it was proposed to the troops that they should relinquish a part of the pay which was due to them. The soldiers rejected the proposal, appointed two of their number, Spendius and Matho, commanders, and proceeded to enforce their demands. Being joined by many of the native tribes of Africa, they defeated Hanno, the Carthaginian general sent against them, and brought Carthage to the brink of ruin. In these desperate circumstances Hamilcar was appointed to the command, and at length succeeded in subduing them after the war had lasted three years and four months. After the end of this war Hamilcar was sent into Spain, B.C. 238. He remained in Spain nearly nine years, during which time he extended the dominion of Carthage over the southern and eastern parts of that country. He fell in a battle against the natives, B.C. 229. The abilities of Hamilcar were of the highest order; and he directed all the energies of his mind to diminish the power of Rome. Polybius states his belief (*lib.* 3), that his administration would soon have produced another war with the Romans, if he had not been prevented by the disorders in which his country was involved through the war of the mercenaries. Hamilcar was succeeded in his command in Spain by his son-in-law Hasdrubal, who must not be confounded with Hasdrubal the brother of Hannibal. He carried on the conquests of Hamilcar, and reduced almost the whole of the country south of the Iberus, which river was fixed by a treaty between the Carthaginians and the Romans, B.C. 226, as the frontier of the Carthaginian dominions. Hasdrubal was murdered in his tent by a Gaul, B.C. 221, after holding the command eight years. (*Polyb.* 1, 2.—*Corn. Nep., vit. Hamilc.*, c. 3.—*Encycl. Useful Knowl.*, vol. 12, p. 25.)—VI. A Carthaginian general, son of Bomilcar, conquered by the Scipios (B.C. 215) when besieging Iltimgis, in Hispania Bætica, along with Hasdrubal and Mago. He is supposed by some to be the same with the Hamilcar who, fifteen years after, at the head of a body of Gauls, took and sacked Placentia, and was defeated and slain before Cremona. Others affirm, that he was taken prisoner three years later in a battle fought near the Mincius, and served to adorn the victory of the conqueror. (*Liv.* 23, 49.—*Id.* 31, 10.—*Id.* 32, 23.—*Plin.* 3, 1.)—The name *Hamilcar* was equivalent in Punic to “(quem) *donavit Mlcar*.” The true orthography is with the initial aspirate. Consult *Heins, ad Sil. Ital.* 1, 39.—*Draakenb., ad Liv.* 21, 1.—*Gesenius, Phœn. Mon.*, p. 407.—The interpretation given by Hamaker (*diatr.* 47) to the name *Hamilcar* is rejected by Gesenius (*l. c.*).

HANNIBAL (equivalent in Punic to “*gratin Baalis*”), son of Hamilcar Barca (*vid.* *Hamilcar V.*), was born B.C. 247. At the age of nine he accompanied his father to Spain, who, previous to his departure, took his son to the altar, and, placing his hand on the victim, made him swear that he would never be a friend to the Romans. It does not appear how long Hannibal remained in Spain, but he was at a very early age associated with Hasdrubal, who succeeded his father in the command of the Carthaginian army in that country. On the death of Hasdrubal, B.C. 221, he obtained the undivided command of the army, and quickly conquered the Olcades, Vaccæans, Carpestians, and the other Spanish tribes that had not been subdued by Hasdrubal. The inhabitants of Saguntum, alarmed at his success, sent messengers to Rome to inform the Romans of their danger. A Roman embassy was accordingly sent to Hannibal, who was passing the winter at New Carthage, to announce to him that the in-

dependence of Saguntum was guaranteed by a treaty between the Carthaginians and Romans (concluded B.C. 226), and that they should consider any injury done to the Saguntines as a declaration of war against themselves. Hannibal, however, paid no regard to this remonstrance. More than twenty years had elapsed since the termination of the first Punic war, during which period the Carthaginians had recovered their strength, and had obtained possession of the greater part of Spain; and the favourable opportunity had arrived for renewing the war with the Romans. In B.C. 219, Hannibal took Saguntum, after a siege of eight months, and employed the winter in making preparations for the invasion of Italy. He first provided for the security of Africa and Spain by leaving an army of about 16,000 men in each country; the army in Africa consisted principally of Spanish troops, and that in Spain of Africans, under the command of his brother Hasdrubal. He had already received promise of support from the Gauls who inhabited the north of Italy, and who were anxious to deliver themselves from the Roman dominion. Having thus made every necessary preparation, he set out from New Carthage late in the spring of B.C. 218, with an army of 80,000 foot and 12,000 horse. In his march from the Iberus to the Pyrenees he was opposed by a great number of the native tribes, but they were quickly defeated, though with loss. Before crossing the Pyrenees, he left Hanno to secure his recent conquests with a detachment from his own army of 11,000 men. He sent back the same number of Spanish troops to their own cities, and with an army now reduced to 50,000 foot and 9000 horse, he advanced to the Rhone. Meantime, two Roman armies had been levied; one, commanded by the consul P. Cornelius Scipio, was intended to oppose Hannibal in Spain; and a second, under the consul T. Sempronius, was designed for the invasion of Africa. The departure of Scipio was delayed by a revolt of the Boian and Insubrian Gauls, against whom the army was sent which had been intended for the invasion of Spain, under the command of one of the prætors. Scipio was therefore obliged to remain in Rome till a new army could be raised. When the forces were ready, he sailed with them to the Rhone, and anchored in the eastern mouth of the river; being persuaded that Hannibal must still be at a considerable distance from him, as the country through which he had to march was difficult, and inhabited by many warlike tribes. Hannibal, however, quickly surmounted all these obstacles, crossed the Rhone, though not without some opposition from the Gauls, and continued his march up the left bank of the river. Scipio did not arrive at the place where the Carthaginians had crossed the river till three days afterward; and, despairing of overtaking them, he sailed back to Italy with the intention of meeting Hannibal when he should descend from the Alps. Scipio sent his brother Cnæus into Spain, with the greater part of the troops, to oppose Hasdrubal. Hannibal continued his march up the Rhone till he came to the Isara. Marching along that river, he crossed the Alps, descended into the valley of the Dora Baltea, and followed the course of the river till he arrived in the territories of the Insubrian Gauls. (The particular route will be given at the close of this article.)—Hannibal completed his march from New Carthage to Italy in five months, during which he lost a great number of men, especially in his passage over the Alps. According to a statement engraved by his order on a column at Lacinium, in the country of the Brutii, which Polybius saw, his army was reduced to 12,000 Africans, 8000 Spaniards, and 6000 cavalry when he arrived in the territories of the Insubrian Gauls. After remaining some time in the territories of the Insubrians to recruit his army, he marched southward, and encountered P. Cornelius Scipio on the right bank of the river Ticinus. In the

battle which ensued the Romans were defeated, and Scipio, with the remainder of the army, retreating along the left bank of the Po, crossed the river before Hannibal could overtake him, and encamped near Placentia. He afterward retreated more to the south, and intrenched himself strongly on the right bank of the Trebia, where he waited for the arrival of the army under the other consul T. Sempronius. Sempronius had already crossed over into Sicily with the intention of sailing to Africa, when he was recalled to join his colleague. After the union of the two armies, Sempronius determined, against the advice of Scipio, to risk another battle. The skill and fortune of Hannibal again prevailed; the Romans were entirely defeated, and the troops which survived took refuge in the fortified cities. In consequence of these victories, the whole of Cisalpine Gaul fell into the hands of Hannibal; and the Gauls, who, on his first arrival, were prevented from joining him by the presence of Scipio's army in their country, now eagerly assisted him with men and supplies. In the following year, B.C. 217, the Romans made great preparations to oppose their formidable enemy. Two new armies were levied; one was posted at Arretium, under the command of the consul Flaminius, and the other at Ariminum, under the consul Servilius. Hannibal determined to attack Flaminius first. In his march southward through the swamps of the basin of the Arnus, his army suffered greatly, and he himself lost the sight of one eye. After resting his troops for a short time in the neighbourhood of Fesulæ, he marched past Arretium, ravaging the country as he went, with the view of drawing out Flaminius to a battle. Flaminius, who appears to have been a rash, headstrong man, hastily followed Hannibal; and, being attacked in the basin of the Lake Trasimenus, was completely defeated by the Carthaginians, who were posted on the mountains which encircled the valley. Three or four days after Hannibal cut off a detachment of Roman cavalry, amounting to 4000 men, which had been sent by Servilius to assist his colleague. Hannibal appears to have entertained hopes of overthrowing the Roman dominion, and to have expected that the other states of Italy would take up arms against Rome, in order to recover their independence. To conciliate the affections of the Italians, he dismissed without ransom all the prisoners whom he took in battle; and, to give them an opportunity of joining his army, he marched slowly along the eastern side of the peninsula, through Umbria and Picenum, into Apulia; but he did not meet with that co-operation which he appears to have expected. After the defeat of Flaminius, Q. Fabius Maximus was appointed dictator, and a defensive system of warfare was adopted by the Romans till the end of the year. In the following year, B.C. 216, the Romans resolved upon another battle. An army of 80,000 foot and 6000 horse was raised, which was commanded by the consuls L. Æmilius Paulus and C. Terentius Varro. The Carthaginian army now amounted to 40,000 foot and 10,000 horse. The armies were encamped in the neighbourhood of Cannæ in Apulia. In the battle which was fought near this place, the Romans were defeated with dreadful carnage, and with a loss which, as stated by Polybius, is quite incredible; the whole of the infantry engaged in battle, amounting to 70,000, was destroyed, with the exception of 3000 men, who escaped to the neighbouring cities, and also all the cavalry, with the exception of 300 belonging to the allies, and 70 that escaped with Varro. A detachment of 10,000 foot, which had been sent to surprise the Carthaginian camp, was obliged to surrender as prisoners. The consul L. Æmilius, and the two consuls of the former year, Servilius and Atilius, were also among the slain. Hannibal lost only 4000 Gauls, 1500 Africans and Spaniards, and 200 horse. This victory placed

the whole of Lower Italy in the power of Hannibal, but it was not followed by such important results as might have been expected. Capua and most of the cities of Campania espoused his cause, but the majority of the Italian states continued firm to Rome. The defensive system was now strictly adopted by the Romans, and Hannibal was unable to make any active exertions for the farther conquest of Italy till he received a reinforcement of troops. He was in hopes of obtaining support from Philip of Macedon and from the Syracusans, with both of whom he formed an alliance; but the Romans found means to keep Philip employed in Greece, and Syracuse was besieged and taken by Marcellus, B.C. 214-12. In addition to this, Capua was taken by the Romans, B.C. 211. Hannibal was therefore obliged to depend upon the Carthaginians for help, and Hasdrubal was accordingly ordered to march from Spain to his assistance. Cnaeus Scipio, as already observed, was left in Spain to oppose Hannibal. He was afterward joined by P. Cornelius Scipio, and the war was carried on with various success for many years, till at length the Roman army was entirely defeated by Hasdrubal, B.C. 212. Both the Scipios fell in the battle. Hasdrubal was now preparing to join his brother, but was prevented by the arrival of young P. Cornelius Scipio in Spain, B.C. 210, who quickly recovered what the Romans had lost. In B.C. 210 he took New Carthage; and it was not till B.C. 207, when the Carthaginians had lost almost all their dominions in Spain, that Hasdrubal set out to join his brother in Italy. He crossed the Alps without meeting with any opposition from the Gauls, and arrived at Placentia before the Romans were aware that he had entered Italy. After besieging this town without success, he continued his march southward; but, before he could effect a junction with Hannibal, he was attacked by the consuls C. Claudius Nero and M. Livius, on the banks of the Metaurus in Umbria; his army was cut to pieces, and he himself fell in the battle. This misfortune obliged Hannibal to act on the defensive; and from this time till his departure from Italy, B.C. 203, he was confined to Bruttium; but, by his superior military skill, he maintained his army in a hostile country without any assistance from his government at home. After effecting the conquest of Spain, Scipio passed over into Africa to carry the war into the enemy's country, B.C. 204. With the assistance of Masinissa, a Numidian prince, he gained two victories over the Carthaginians, who hastily recalled their great commander from Italy to defend his native state. Hannibal landed at Septis, and advanced near Zama, five days' journey from Carthage towards the west. Here he was entirely defeated by Scipio, B.C. 202; 20,000 Carthaginians fell in the battle, and an equal number were taken prisoners. The Carthaginians were obliged to sue for peace, and thus ended the second Punic war, B.C. 201. After the conclusion of the war, Hannibal vigorously applied himself to correct the abuses which existed in the Carthaginian government. He reduced the power of the perpetual judges (as Livy, 23. 46. calls them), and provided for the proper collection of the public revenue, which had been embezzled. He was supported by the people in these reforms; but he incurred the enmity of many powerful men, who represented to the Romans that he was endeavouring to persuade his countrymen to join Antiochus, king of Syria, in a war against them. A Roman embassy was consequently sent to Carthage, to demand the punishment of Hannibal as a disturber of the public peace; but Hannibal, aware that he should not be able to resist his enemies supported by the Roman power, escaped from the city and sailed to Tyre. From Tyre he went to Ephesus to join Antiochus, B.C. 196, and contributed to fix him in his determination to make war against the Romans. If Hannibal's advice as to

the conduct of the war had been followed, the result of the contest might have been different; but he was only employed in a subordinate command, and had no opportunity for the exertion of his great military talents. At the conclusion of this war Hannibal was obliged to seek refuge at the court of Prusias, king of Bithynia, where he remained about five years, and on one occasion obtained a victory over Eumenes, king of Pergamus. But the Romans appear to have been uneasy as long as their once formidable enemy was alive. An embassy was sent to demand him of Prusias, who, being afraid of offending the Romans, agreed to give him up. To avoid falling into the hands of his ungenerous enemies, Hannibal destroyed himself by poison at Nicomedia in Bithynia, B.C. 183, in the sixty-fifth year of his age. The personal character of Hannibal is only known to us from the events of his public life, and even these have not been commemorated by any historian of his own country; but we cannot read the history of these campaigns, of which we have here presented a mere outline, even in the narrative of his enemies, without admiring his great abilities and courage. Polybius remarks (*lib. xi.*), "How wonderful is it, that in a course of sixteen years, during which he maintained the war in Italy, he should never once dismiss his army from the field, and yet be able, like a good governor, to keep in subjection so great a multitude, and to confine them within the bounds of their duty, so that they never mutinied against him nor quarrelled among themselves. Though his army was composed of people of various countries, of Africans, Spaniards, Gauls, Carthaginians, Italians, and Greeks—men who had different laws, different customs, and different language, and, in a word, nothing among them that was common—yet, so dexterous was his management, that, notwithstanding this great diversity, he forced all of them to acknowledge one authority, and to yield obedience to one command. And this, too, he effected in the midst of very various fortune. How high as well as just an opinion must these things convey to us of his ability in war. It may be affirmed with confidence, that if he had first tried his strength in the other parts of the world, and had come last to attack the Romans, he could scarcely have failed in any part of his design." (*Polyb.*, 3.—*Ib.*, 7, 8, 9.—*Ib.*, 14, 16.—*Livy*, 21–39.—*Nepos*, *Vit. Hannib.*—*Encycl. Us. Knoch.*, vol. 12, p. 40, *seq.*)

The passage of the Alps by Hannibal has already been alluded to in the course of the present article. Before concluding the biography of the Carthaginian general, it may not be amiss to direct the student's attention more particularly to this point. "This wonderful undertaking," observes a recent writer, "would naturally have attracted great notice, if considered only with reference to its general consequences, and to its particular effects on the great contest carried on between Rome and Carthage; for this march, which carried the war from a distant province to the very gates of the former, totally changed the character of the struggle, and compelled the Romans to fight for existence instead of territory. These events, however, are not the only causes which have thrown so much interest on the passage of the Alps by Hannibal; for the doubt and uncertainty which have existed, even from very remote times, as to the road by which the passage was effected; the numerous and distinguished writers who have declared themselves on different sides of the question; the variation between the two great historians of the transactions of those times, Polybius and Livy; all these things united have involved the subject in difficulties which have increased its importance, and which have long exercised many able writers in vain attempts to elucidate them. The relation of Polybius, who lived very soon after the transactions which he describes, and who had himself examined the country for the purpose of writing his history, would

naturally appear the most authentic, on account of its early date, as well as of the internal evidence which it bears of the truth. Unfortunately, Polybius was writing to Greeks, and was therefore, as he himself tells them, not anxious to introduce into his narrative names of places and of countries in which they were little interested, and which, if inserted, would rather have injured than assisted the unity of his story. In consequence of this, although he has been remarkably careful in giving us the distances performed by the Carthaginian army in their march from the Pyrenees to the plains of Italy, as well as the time in which they were completed, he has been generally sparing of his proper names, and he has not positively stated in terms the name of that passage of the Alps through which Hannibal marched. Now, though the distances (which are positive), and the general description of the country, and the names of the nations (when these latter are mentioned) which the army passed through, afford sufficient data to prove beyond all doubt that Hannibal passed by the *Alpis Graia*, or Little St. Bernard; yet, as this is not expressly stated, Livy, who, without acknowledgment, has borrowed the greater part of his own narrative from Polybius, has asserted that he went over the *Alpis Cottia*, or Mont Genevre; and as Livy is much more read than Polybius, his account has obtained much more credit than it deserves, and has been considered as almost decisive of the question. It has been particularly adopted by almost all the French writers upon the subject, and though they differ from each other as to the road which the army took to arrive at that passage, and, farther, though the account itself is absolutely inconsistent in many parts, yet the authority of so great a name has almost set criticism at defiance, and his commentators have endeavoured to reconcile his contradictions as well as they were able. It was evident, however, to those who were in the habit of looking a little deeper than the surface, that Livy's account, which, even when taken by itself, was far from satisfactory, was, when compared with that of Polybius, with which it had been generally supposed to agree, very different in its conclusion; and this variation between them was so decided, that it was quite impossible that both could be right. Gibbon was so much struck with this variation, as well as with the respective characters of the two authors as historians, that he would have given up Livy at once, had he not been unable, from his ignorance of the passage alluded to by Polybius, to decide the question in favour of the latter. The opinion of Gibbon appears also to have been very much influenced by that of D'Anville, an authority to be respected above all others for wonderful accuracy and depth of research in matters relating to ancient topography. D'Anville, however, is guided in his opinion by the idea that the guides of Hannibal were Taurini, a mistake which is the more extraordinary as Livy himself (21, 29) states them to be Boii. Mr. Holdsworth, who had devoted much of his time and attention to subjects of this nature (*Spence's Anecdotes of Men and Books*), appears to have detected Livy's inconsistencies as well as Gibbon, and to have been of opinion that the army crossed the Alps to the north of the Mont Genevre; but as he was, as well as Gibbon, unacquainted with the passage of the Little St. Bernard, he was unable to fix upon the exact spot. It is to General Melville that the literary world has been indebted, in later times, for the suggestion of this latter pass; and it is by this suggestion that a question so long doubtful has received a most satisfactory explanation. This gentleman, on his return from the West Indies, where he had held a high military command, turned his whole attention to the investigation of the military antiquities of the Romans, and for this purpose spent some years in travelling over France, Italy, and Germany, and examined with great attention the countries which had been the

scenes of the most celebrated battles and events recorded in Roman history. From his thorough knowledge of Polybius, he was early struck with the great authority that his narrative carried with it, and he determined, if possible, to set at rest the much agitated question of the passage of the Alps by Hannibal. As he perceived that no perusal of the historian, however close and attentive, no critical sagacity and discernment, could alone enable him to arrive at the truth, unless he verified the observations of his author on the same ground, and compared his descriptions with the same scenes as those which that author had himself visited and examined, the general surveyed attentively all the known passages of the Alps, and more particularly those which were best known to the ancients. The result of all these observations was a firm conviction that the passage of the Little St. Bernard was that by which Hannibal had crossed over into Italy, both as being most probable in itself, and also as agreeing beyond all comparison more closely than any other with the description given by Polybius. The general must be looked upon as the first who has solved the problem in history. It is not, indeed, meant that he was absolutely the first who made the Carthaginian army penetrate by that pass into Italy, since the oldest authority on this point, that of Cælius Antipater, represents it as having taken that route; but it is affirmed that he was the first to revive an opinion concerning that passage, which, although existing in full force in the traditions of the country itself, appears to have been long laid aside as forgotten, and to have rested that opinion on arguments the most solid and plausible. General Melville never published any account of his observations, and they would most probably have been lost to the world, had he not found in M. De Luc, of Geneva, nephew of the late distinguished philosopher of that name, a person eminently qualified to undertake the task which he himself declined, and even materially to improve upon his labours. The very able and learned work which that gentleman published at Geneva in 1818, entitled *Histoire du Passage des Alpes par Annibal*, contains a very full and clear report of the observations of General Melville, supported by arguments and by evidence entirely original, and which must be admitted by every candid and judicious inquirer to be clear and conclusive. A second edition of this work was published in 1825, considerably augmented." (*Dissertation on the Passage of Hannibal over the Alps*, by Wickham and Cramer, pref., p. xi., seqq.) In the work here quoted, the route which Hannibal is conceived to have taken is stated as follows: after crossing the Pyrenees at Bellegarde, he went to Nismes, through Perpignan, Narbonne, Beziers, and Montpellier, as nearly as possible in the exact track of the great Roman road. From Nismes he marched to the Rhone, which he crossed at Roquemaure, and then went up the river to Vienne, or possibly a little higher. From thence, marching across the flat country of Dauphiny in order to avoid the angle which the river makes at Lyons, he rejoined it at St. Genis d'Aouste. He then crossed the Mont du Chat to Chambéry, joined the Isere at Montureillan, ascended it as far as Scez, crossed the Little St. Bernard, and descended upon Aosta and Ivrea by the banks of the Doria Baltea. After halting for some time at Ivrea, he marched upon Turin, which he took, and then prepared himself for ulterior operations against the Romans (pref., p. xxii., seq.). The Alps Graia, or Little St. Bernard, forms, it should be remembered, the communication between the valley of the Isere and that of Aosta. It is situated a little to the south of Mont Blanc, and is the most northerly of the passages of that division of the Alps which runs from north to south. In corroboration of the theory which assigns the Little St. Bernard as the route of Hannibal, may be cited a very able article on the subject, which appeared in the Edinburgh

Review for November, 1825. This theory, however, has been attacked in a recent publication (*Hannibal's Passage of the Alps*, by a Member of the University of Cambridge), the author of which contends for the passage over Monte Viso, where the Maritime Alps terminate. His arguments are far from conclusive. The passage by Mont Cenis has also found many advocates, the most distinguished of whom is Mannert. This learned scholar, in the introductory chapter to his *Geography of Ancient Italy*, in which he gives an account of the Alps and the various passes by which they were formerly traversed, expresses his belief that Hannibal crossed the great chain by the route of Mont Cenis. In forming his opinion, he appears to have been solely guided, and no doubt most judiciously, by the narrative of Polybius; and he professes to have found the distances, as given in the best modern maps, accurately agreeing with the statement of the Greek historian. This fact is open to dispute; for, although the route of the Mont Cenis deviates at first very little from that on which the theory respecting the Little St. Bernard is founded, yet the immediate descent upon Turin shortens the total distance very considerably, and it will be impossible to make up 150 miles from the first ascent of the Alps to the descent at Susa, without very much overrating the actual distances. Moreover, it cannot be conceded to the learned professor, that the plains of Italy can be seen from the summit of Mont Cenis, and from thence only. It is most certain that he has been misinformed on this point, though it has also been maintained by others. Even De Saussure, who ascended the Roche Michel far above the Hospice of the Grande Croix, could not perceive the plains from that elevated summit. The Roche Melon is the only point in this vicinity from which it is possible to have a view of Piedmont; but it is not accessible from the Grande Croix, or any point in the road of Mont Cenis. (Wickham and Cramer, p. 173, seqq., 2d ed.)—It remains to say a few words on the opinion of Napoleon on this subject, as stated in his "*Notes sur l'ouvrage intitulé Considérations sur l'Art de la Guerre*," in the second volume of his *Mélanges Historiques*. In these notes he gives a very concise account of the road which he conceives Hannibal to have taken, and which is as follows: he crossed the Rhone a little below Orange, and in four days reached either the confluence of the Rhone and Isere, or that of the Drac and Isere, settled the affairs of the two brothers, and then, after six days' march, arrived, on the former supposition, at Montureillan, and from thence, in nine days, at Susa, by the passage of Mont Cenis; or, in the latter case, if he arrived at Grenoble at the end of the four days, he would reach St. Jean de Maurienne in six days, and Susa in nine days more; from Susa he marched upon Turin, and, after the capture of the city, he advanced to Milan. The reasoning by which Napoleon supports his hypothesis, is principally founded on what the French call "*la raison de la guerre*," that is, Hannibal did this because, as a military man, he ought to have done it; and, if we were discussing prospective operations, there is no doubt that the opinion of so great a general as Napoleon would be almost conclusive; but, in reasoning upon the past, the elements of the discussion are as open to civil as to military writers, and the former are quite as capable of conducting an argument logically as the latter. Napoleon has been guilty of several inaccuracies in his statement, and his argument is conducted in that decided manner which bears down all opposition, and which supposes that whatever he says must be right. He asserts that both Polybius and Livy state the army to have arrived, in the first instance, at Turin, and he loses sight altogether of the detailed narration of Polybius. The author upon whose work he is commenting adopts the passage of the Little St. Bernard, which Napoleon

refuses to believe, because Hannibal must have been early acquainted with the retreat of the Romans towards their fleet, and would not, in that case, have marched to the north. The explanation of all this may be found in Napoleon's own words: "La marche d'Annibal depuis Collioure jusqu'à Turin a été toute simple; elle a été celle d'un voyageur; il a pris la route la plus courte." Hardly so, since the road by Mont Genevre was shorter than that by Mont Cenis, as he himself allows, a few pages before. In a word, if we had no historical details to guide us, Napoleon would probably be right; but as we profess to be guided by those details, and as, from his omitting to notice the greater part of them, he appears either to have been ignorant of them, or to have been unable to make them agree with his hypothesis, we must come to the conclusion, that what he says rests upon no proof, and is to be merely considered as the opinion of a great general upon an hypothetical case. (*Wickham and Cramer*, p. 188, *seqq.*)

HANNO (meaning in Punic "*merciful*" or "*mild*"), I. a commander sent by the Carthaginians on a voyage of colonization and discovery along the Atlantic coast of Africa. This expedition is generally supposed to have taken place about 570 B.C. Gail, however, places it between 633 and 530 B.C. (*Geogr. Gr. Min.*, vol. 1, p. 82.) On his return to Carthage, Hanno deposited an account of his voyage in the temple of Saturn. A translation of this account from the Punic into the Greek tongue, has come down to us; and its authenticity, attacked by Dodwell, has been defended by Bougainville (*Mem. Acad. des Inscri.*, &c., vol. 26), Falconer, and others. Gail also declares in its favour, though he admits that the narrative may, and probably does, contain many wilful deviations from the truth, in accordance with the jealous policy of the Carthaginians in misleading other nations by erroneous statements. The title of the Greek work is as follows: "Ἀννώτος, Καρχηδονίων βασιλέως, Περιπλοῦς τῶν ἐπὲρ τὰς Ἡρακλέους στήλας Λιβυκῶν τῆς γῆς μερῶν, ὅν καὶ ἀνέθηκεν ἐν τῷ τοῦ Κρόνου τεμένει." "The Voyage of Hanno, commander of the Carthaginians, round the parts of Libya beyond the Pillars of Hercules, which he deposited in the temple of Saturn." With regard to the extent of coast actually explored by this expedition, some remarks have been offered in another article (*vid.* Africa, col. 2, p. 80); it remains but to give an English version of the Periplus itself.—"It was decreed by the Carthaginians," begins the narrative, "that Hanno should undertake a voyage beyond the Pillars of Hercules, and found Libyphœnician cities. He sailed accordingly with sixty ships of fifty oars each, and a body of men and women to the number of thirty thousand, and provisions and other necessities. When we had passed the Pillars on our voyage, and had sailed beyond them for two days, we founded the first city, which we named Thymiatærium. Below it lay an extensive plain. Proceeding thence towards the west, we came to Soloëis, a promontory of Libya, a place thickly covered with trees, where we erected a temple to Neptune; and again proceeded for the space of half a day towards the coast, until we arrived at a lake lying not far from the sea, and filled with abundance of large reeds. Here elephants, and a great number of other wild beasts were feeding. Having passed the lake about a day's sail, we founded cities near the sea, called Cariconticos, and Gytte, and Acra, and Melitta, and Arambyss. Thence we came to the great river Lixus, which flows from Libya. On its banks the Lixitæ, a shepherd tribe, were feeding flocks, among whom we continued some time on friendly terms. Beyond the Lixitæ dwell the inhospitable Ethiopians, who pasture a wild country intersected by large mountains, from which they say the river Lixus flows. In the neighbourhood of the mountains lived the Troglodytæ, men of various appearances,

whom the Lixitæ described as swifter in running than horses. Having procured interpreters from them, we coasted along a desert country towards the south two days. Thence we proceeded towards the east the course of a day. Here we found, in a recess of a certain bay, a small island, containing a circle of five stadia, where we settled a colony, and called it Cerne. We judged from our voyage that this place lay in a direct line with Carthage; for the length of our voyage from Carthage to the Pillars was equal to that from the Pillars to Cerne. We then came to a lake, which we reached by sailing up a large river called Chretes. This lake had three islands, larger than Cerne; from which, proceeding a day's sail, we came to the extremity of the lake, that was overhung by large mountains, inhabited by savage men, clothed in skins of wild beasts, who drove us away by throwing stones, and hindered us from landing. Sailing thence, we came to another river, that was large and broad, and full of crocodiles and river horses; whence returning back we came again to Cerne. Thence we sailed towards the south twelve days, coasting the shore, the whole of which is inhabited by Ethiopians, who would not wait our approach, but fled from us. Their language was not intelligible even to the Lixitæ who were with us. Towards the last day we approached some large mountains covered with trees, the wood of which was sweet-scented and variegated. Having sailed by these mountains for two days, we came to an immense opening of the sea; on each side of which, towards the continent, was a plain; from which we saw by night fire arising at intervals in all directions, either more or less. Having taken in water there, we sailed forward five days near the land, until we came to a large bay, which our interpreters informed us was called the Western Horn. In this was a large island, and in the island a salt-water lake, and in this another island, where, when we had landed, we could discover nothing in the daytime except trees; but in the night we saw many fires burning, and heard the sound of pipes, cymbals, drums, and confused shouts. We were then afraid, and our diviners ordered us to abandon the island. Sailing quickly away thence, we passed a country burning with fires and perfumes, and streams of fire supplied from it fell into the sea. The country was impassable on account of the heat. We sailed quickly thence, being much terrified; and passing on for four days, we discovered at night a country full of fire. In the middle was a lofty fire, larger than the rest, which seemed to touch the stars. When day came, we discovered it to be a large hill called the Chariot of the Gods. On the third day after our departure thence, having sailed by those streams of fire, we arrived at a bay called the Southern Horn; at the bottom of which lay an island like the former, having a lake, and in this lake another island, full of savage people, the greater part of whom were women, whose bodies were hairy, and whom our interpreters called Gorillæ. Though we pursued the men, we could not seize any of them; but all fled from us, escaping over the precipices, and defending themselves with stones. Three women were however taken; but they attacked their conductors with their teeth and hands, and could not be prevailed upon to accompany us. Having killed them, we flayed them, and brought their skins with us to Carthage. We did not sail farther on, our provisions having failed us."—The streams of fire alluded to by Hanno are conjectured to have been nothing more than the burning of the dry herbage; a practice which takes place, more or less, in every country situated in the warm climates, and where vegetation is also rank. Its taking the appearance of a *river of fire*, running into the sea, is accounted for from the more abundant herbage of the valleys or ravines; which, as Bruce observes, are shaded by their depth, and remain green the longest. Consequently, being the last burned, the fire

will, at that period, be confined to the hollow parts of the country only ; and, when fired from above, will have the appearance of rivers of fire running towards the sea. The adventure of the hairy women presents much less difficulty than did the others ; since it is well known that a species of ape or baboon, agreeing in description with those of Hanno, is found in the quarter referred to, which appears to have been near Sierra Leone. Nor did the interpreters call them *women*, but *gorille* : meaning no doubt to describe apes, and not human creatures possessing the gift of speech. (Rennell, *Geogr. of Herodotus*, p. 720, *seqq.*)—II. A Carthaginian commander, who aspired to the sovereignty in his native city. His design was discovered, and he thereupon retired to a fortress, with 20,000 armed slaves, but was taken and put to death, with his son and all his relations. (*Justin*, 21, 4.)—III. A commander of the Carthaginian forces in Sicily along with Bomilcar (B.C. 310). He was defeated by Agathocles, although he had 45,000 men under his orders, and his opponent only about 14,000. (*Justin*, 22, 6.)—IV. A Carthaginian commander, defeated by the Romans near the *Ægades Insulæ* (B.C. 242). On his return home he was put to death.—V. A leader of the faction at Carthage, opposed to the Barca family. He voted for surrendering Hannibal to the foe, after the ruin of Saguntum, and also for refusing succours to that commander after the battle of Cannæ. (*Liv.*, 21, 3.—*Id.*, 23, 12.)—VI. A Carthaginian, who, wishing to pass for a god, trained up some birds, who were taught by him to repeat the words, "Hanno is a god." He only succeeded in rendering himself ridiculous. (*Ælian*, *Var. Hist.*, 15, 32.)

HARMODIUS, an Athenian, who, together with Aristogiton, became the cause of the overthrow of the Pisistratidæ. The names of Harmodius and Aristogiton have been immortalized by the ignorant or prejudiced gratitude of the Athenians : in any other history they would perhaps have been consigned to oblivion, and would certainly never have become the themes of panegyric. Aristogiton was a citizen of the middle rank ; Harmodius a youth distinguished by the comeliness of his person. They were both sprung from a house supposed to have been of Phœnician origin, were perhaps remotely allied to one another by blood, and were united by ties of the closest intimacy. The youth had received an outrage from Hipparchus, which, in a better state of society, would have been deemed the grossest that could have been offered him : it roused, however, not so much the resentment as the fears of his friend, lest Hipparchus should abuse his power, to repeat and aggravate the insult. But Hipparchus, whose pride had been wounded by the conduct of Harmodius, contented himself with a less direct mode of revenge ; an affront aimed not at his person, but at the honour of his family. By his orders, the sister of Harmodius was invited to take part in a procession, as bearer of one of the sacred vessels. When, however, she presented herself in her festal dress, she was publicly rejected, and dismissed as unworthy of the honour. This insult stung Harmodius to the quick, and kindled the indignation of Aristogiton. They resolved not only to wash it out with the blood of the offender, but to engage in the desperate enterprise, which had already been suggested by different motives to the thoughts of Aristogiton, of overthrowing the ruling dynasty. They communicated their plan to a few friends, who promised their assistance ; but they hoped that, as soon as the first blow should be struck, they would be joined by numbers, who would joyfully seize the opportunity of recovering their freedom. The conspirators fixed on the festival of the Panathenæa as the most convenient season for effecting their purpose. This festival was celebrated with a procession, in which the citizens marched armed with spears and shields, and was the only occasion on

which, in time of peace, they could assemble under arms without exciting suspicion. It was agreed that Harmodius and Aristogiton should give the signal by stabbing Hippias, while their friends kept off his guards, and that they should trust to the general disposition in favour of liberty for the farther success of their undertaking. When the day came, the conspirators armed themselves with daggers, which they concealed in the myrtle-boughs that were carried on this occasion. But while Hippias, surrounded by his guards, was in the suburb called the Ceramicus, directing the order of the procession, one of the conspirators was observed to go up to him, for he was easy of access to all, and to enter into familiar conversation with him. The two friends, on seeing this, concluded that they were betrayed, and that they had no hope left but of revenge. They instantly rushed into the city, and, meeting Hipparchus, killed him before his guards could come up to his assistance. They however arrived in time to avenge his death on Harmodius : Aristogiton escaped for the moment through the crowd, but was afterward taken. When the news was brought to Hippias, instead of proceeding to the scene of his brother's murder, he advanced with a composed countenance towards the armed procession, which was yet ignorant of the event, and, as if he had some grave discourse to address to them, desired them to lay aside their weapons, and meet him at an appointed place. He then ordered his guards to seize the arms, and to search every one for those which he might have concealed upon his person. All who were found with daggers were arrested, together with those whom, on any other grounds, he suspected of disaffection. The fate of Aristogiton may be easily imagined : he was put to death, according to some authors, after torture had been applied, to wring from him the names of his accomplices. It is said that he avenged himself by accusing the truest friends of Hippias, and that a girl of low condition, named Leænæ, whose only crime was to have been the object of his affection, underwent the like treatment. She was afterward celebrated for the constancy with which she endured the most cruel torments. (*Herod.*, 5, 55.—*Id.*, 7, 123.—*Thucyd.*, 1, 20.—*Schol.*, *ad loc.*—*Id.*, 6, 54, *seqq.*)—After the expulsion of Hippias, the fortunate tyrannicides received almost heroic honours. Statues were erected to them at the public expense. Their names never ceased to be repeated with affectionate admiration in the convivial songs of Athens, which assigned them a place in the islands of the Blessed, by the side of Achilles and Tydides (*Athenæus*, 15, p. 695) ; and when an orator wished to suggest the idea of the highest merit and of the noblest services to the cause of liberty, he never failed to remind his hearers of Harmodius and Aristogiton. No slave was ever called by their names. Plutarch has preserved a smart reply of Antipho, the orator, to Dionysius the elder, of Syracuse. The latter had put the question, which was the finest kind of brass ? "That," replied Antipho, "of which the statues of Harmodius and Aristogiton were made." He lost his life in consequence. (*Plut.*, *Vit. X.*, *Orat.*, p. 833.) It is probable enough, that much of this enthusiasm was spurious and artificial, as well as misplaced. (*Thirlwall's Greece*, vol. 2, p. 67, *seqq.*)

HARMONIÆ, a daughter of Mars and Venus, who married Cadmus. (*Hesiod*, *Theog.*, 937.) The genealogy of Harmonia has evidently all the appearance of a physical myth ; for, from Love and Strife (i. e., attraction and repulsion) arises the order or harmony of the universe. (*Plut.*, *de Is. et Os.*, 48.—*Arist.*, *Pol.*, 2, 6.—*Welcker*, *Kret. Col.*, p. 40.)

HARPÆCUS, a general of Cyrus. He revolted from Astyages, who had cruelly caused him, without his knowing it, to eat the flesh of his son, because he had disobeyed his orders in not putting to death the infant Cyrus. (*Vid.* remarks under the article Cyrus.)

HARPĀLUS, I. an early and favoured friend of Alexander the Great. Having been left at Babylon as satrap of the province, and treasurer of a more considerable portion of the empire, he abused his trust so grossly, that, on the king's return, he was compelled to flee through fear of punishment. He was accompanied by six thousand soldiers, and with these he landed in Laconia, in the hope, it may be supposed, of engaging the Lacedæmonians to renew their opposition to Alexander. Failing there of support, he left his army and went to Athens as a suppliant, but carrying with him money to a large amount. His cause was taken up by many eminent orators hostile to Alexander; and Demosthenes himself, who had at first held back, was prevailed upon to espouse it. It failed, however; the Athenians adhered to the existing treaties; and Harpalus, being obliged to quit Athens, carried his troops into Crete, where he perished by assassination. It was said that his gold had been largely distributed among his Athenian supporters, and a prosecution was instituted against Demosthenes and his associates, as having been bribed to miscounsel the people. They were convicted before the Areopagus; and Demosthenes, being fined in the sum of 50 talents (about 53,000 dollars), withdrew to Ægina. (*Vid.* Demosthenes—*Diocl. Sic.*, 17, 108, *seqq.*)—II. An astronomer of Greece, who flourished about 400 B.C. He corrected the cycle of Cleostratus. This alteration, from a revolution of eight to one of nine years, was, in the fourth year of the eighty-second Olympiad, again improved by Meton, who increased the cycle to a period of nineteen years. (*Vid.* Meton.—*L'Art de vérifier les Dates*, vol. 3, p. 133.)

HARPALYCE, the daughter of Harpalycus, king of Thrace. Her mother died when she was but a child, and her father fed her with the milk of cows and mares, and inured her to martial exercises, intending her for his successor in the kingdom. When her father's kingdom was invaded by Neoptolemus, the son of Achilles, she repelled and defeated the enemy with manly courage. The death of her father, which happened in a sedition, rendered her disconsolate; she fled the society of mankind, and lived in the forests upon plunder and rapine. Every attempt to secure her proved fruitless, till her great swiftness was overcome by intercepting her with a net. After her death the people of the country disputed their respective right to the possessions she had acquired by rapine, and games were subsequently instituted as an expiation for her death. (*Hygin.*, *fab.*, 193.—*Virg.*, *Æn.*, 1, 321.)

HARPOCRĀTES, an Egyptian divinity, represented as holding one finger on the lips, and thence commonly denominated the God of Silence. The name Harpocrates is said to designate the infant Horus, and to mean "Horus with soft or delicate feet" (*Har-pho-krates*, *Har-phoch-rat*, *Har-pokrat*). The god who bore this appellation was confounded, at a later period probably, with another earlier and superior deity, *Phthah-Sokari*, the infant Phthah, equally surnamed *Pokrat*. (Compare *Jablonski*, *Panth.*, 1, p. 245, *seqq.*—*Creuzer's Symbolik*, par *Gaignant*, vol. 1, pt. 2, p. 808.) Porphyry (*de antro Nymph.*) informs us, that the Egyptians worshipped, under the symbol of silence, the source of all things, and that hence came the mysterious statue of Harpocrates, with the finger on the mouth. (*Plut.*, *de Is. et Os.*, p. 378.—*Constant*, *de la Religion*, vol. 3, p. 78.)

HARPOCRATION, Valerius, a grammarian of Alexandria, supposed by some to be the same with the one that instructed L. Verus in Greek; while others take him to be identical with the Harpocrator of whom mention is made in a letter of Libanius to Aristænetus. He was the author of a Lexicon, derived principally from the ten Attic orators, and entitled, on that account, *Λεξικὸν τῶν δέκα ῥητόρων*. It is a very useful

work. Harpocrator composed also another work, entitled "A collection of flowers," or Anthology, *Ἀνθηρῶν συναγωγή*, which has not reached us. The latest edition of the Lexicon is that published at Leipzig in 1824, 2 vols. 8vo, by an anonymous editor. Many places in Harpocrator are corrected by Toup (*Emendationes in Suidam*, etc., vol. 4, *ed. Burgess*), and by Schleusner (*Observe. in Harp. Lex.*—*Friedemann und Seebode's Miscell. Crit.*, vol. 2, pt. 4, p. 744, *seqq.*).

HARPYLÆ, winged monsters, who had female faces, and the bodies, wings, and claws of birds. They were three in number, *Æello*, *Ocyptete*, and *Celæno*, daughters of Neptune and Terra. They were sent by Juno to plunder the tables of Phineus, whence they were driven to the islands called Strophades by Zethes and Calais. (*Vid.* Phineus.) They emitted a noisome stench, and polluted whatever they touched. Virgil introduces them into the *Æneid*, as plundering the table of Æneas and his companions, when that hero touched at the Strophades; and makes Celæno, one of their number, predict to the Trojan leader the calamities that await him. (*Æn.*, 3, 210, *seqq.*)—The Harpies are nothing more, in fact, than personifications of the storm-winds, and they appear clearly as such in the poems of Homer and Hesiod. The former says nothing of their shape or parentage; the latter says that they were sisters of Iris, daughters of Thaumias and Electra, swift as birds or as the blasts of wind. (*Theog.*, 267.) Their names, according to him, are *Æello* and *Ocyptete*. Homer says, that Xanthus and Balus, the steeds of Achilles, were the offspring of Zephyrus by the harpy *Podarge* (Swift-foot). Virgil gives Celæno as the name of the third of these monsters.—To the vivid imagination of the Greeks, the terrors of the storm were intimately associated with the idea of powerful and active demons directing its blasts. Hence the names bestowed on these fabulous creations. Thus we have the Harpies or "Snatchers," from *ῥιπάω*, in allusion to the storm-winds seizing a vessel and hurrying it away from its course; so also the individual appellations of the three, *Æello*, "a tempest;" *Ocyptete*, "swift-flyer;" and *Celæno*, "gloom." The mixed form commonly assigned them was the addition of a later age. (On the subject of the Harpies, compare *Salmas.*, *ad dedic. Stat. Regill.*, p. 96, 241.—*Spanheim*, *de usu et præs.*, num. 1, p. 260, *seqq.*—*Huschke*, *de Vasculo Locris*, invento, p. 17—*Creuzer*, *Comment. Herodot.*, p. 346, *seqq.*) M. Le Clerc has a curious though unfounded theory respecting the Harpies. He supposes them to have been a swarm of locusts, which, after they had laid waste Bithynia and Paphlagonia, produced a famine there. According to him, the word *arba*, of which he maintains that of *harpy* is formed, signifies a locust; and as the north wind rid the country of them, having driven them as far as the Ionian Sea, where they perished, it was fabled that the sons of Boreas had put them to flight. Among many other objections to this explanation, it may suffice to urge but one here, namely, that the scene of the adventure of King Phineus is placed by the poets in Thrace, never in Asia. (*Vid.* Argonautæ.)

HARUSPICES, called also EXTISPICES, a class of priests at Rome, who examined the victims and their entrails (*exta*), and thence derived omens respecting the future. They divined also from the flame, smoke, and other circumstances attending the sacrifice. If the victim came to the altar without resistance, stood there quietly, fell by one stroke, bled freely, &c., these were favourable signs. If, on the other hand, the victim struggled, or broke away from those who were leading it, if any part of the entrails were wanting, or if they fell from the hand of the officiating priest; if the liver were double; if no heart appeared, &c., all these were ominous of evil. It will easily be perceived from this how wide a door was left for imposition; and hence probably one reason why the

haruspices were not esteemed so honourable as the augurs. When Julius Cæsar admitted one of them, Ruspina, into the senate, Cicero represents it as an indignity to that order. Their art was called *Haruspicina*, or *Haruspicum disciplina*, and was derived from Etruria, whence *haruspices* were often sent for to Rome during the earlier periods of her history. They sometimes also came from the East: thus we have in Juvenal, "*Armenius vel Commagenus haruspex*" (6, 549). The college of the *haruspices* was instituted by Romulus, according to the popular belief. Of what number it consisted is uncertain.—The ordinary derivation of the terms *haruspices* and *extispices* makes the former come from *ara*, "an altar," and *specio*, "to examine" or "observe;" and the latter from *exta*, "the entrails" of the victim, and *specio*. Donatus, however (*ad Terent.*, *Phorm.*, 4, 28), gives a different etymology for *Haruspex*, namely, from *haruga* (the name of *hostia*, a victim) and *specio*. That the name itself is not an Etrurian one, appears very evidently from the *Inscriptio Bilinguis*, found at Pisaurum, in which the words *haruspex fulgurator* are rendered into Tuscan by *netmsj trutstj phrutac*. (Müller, *Etrusker*, vol. 2, p. 13, in *notis*.) A critic in the *Halle A/g. Lat. Zeit.*, 1824 (vol. 3, p. 45), condemns the derivation from *haruga*, and deduces the name *haruspex* from a Tuscan word *here*, which he makes equivalent to *Isaera*, or the Greek term *ἱερός*. In inscriptions, *arespex* and *arrespex* also occur. (Compare Crenzer, *Symbolik*, par Guignaut, vol. 2, p. 467, seqq.)

HASDRUBAL (meaning in Punic "(whose) help (is) Baal"), I. a Carthaginian general, son of Mago, who succeeded to the titles and glory of his father. It was under his conduct that the Carthaginians carried the war into Sardinia. He received a wound in that island which caused his death, B.C. 420. (*Justin*, 19, 1.)—II. Son of the preceding, made war upon the Numidians, and freed Carthage from the tribute she had been compelled to pay for being permitted to establish herself on the coast of Africa. (*Justin*, 19, 2.)—III. A son of Hanno, sent into Sicily at the head of a powerful army to oppose the Romans. He was defeated by Metellus, the Roman proconsul, B.C. 251. Hasdrubal fled to Lilybæum, but was condemned to death by his countrymen at home. (*Id. ibid.*)—IV. Son-in-law of Hamilcar, distinguished himself under the orders of that general in the war with Numidia. On the death of his father-in-law he was appointed commander, and carried on military operations in Spain during eight years. He reduced the greater part of this country, and governed it with wisdom and prudence. He founded Carthago Nova (*Carthagena*). The Romans, wishing to put a stop to his successes, made a treaty with Carthage, by which the latter bound herself not to carry her arms beyond the Iberus. Hasdrubal faithfully observed the terms of this compact. He was slain, B.C. 220, by a slave whose master he had put to death. (*Liv.*, 21, 2.—*Polyb.*, 2, 1.—*Id.*, 3, 12.—*Id.*, 2, 13.—*Id.*, 10, 10.)—V. Son of Hamilcar, brought from Spain large reinforcements for his brother Hannibal. He crossed the barrier of the Alps, and arrived in Italy, but the consuls Livius Salinator and Claudius Nero, having intercepted the letters which he had written to Hannibal, apprizing him of his arrival, attacked him near the river Metaurus, and gave him a complete defeat, B.C. 208. Hasdrubal fell in the battle, with 56,000 of his troops. The Romans lost about 8000 men, and made 5400 prisoners. The head of Hasdrubal was severed from his body, and was thrown a few days after into the camp of Hannibal. Before attempting to enter Italy by land, Hasdrubal attempted to cross the sea from Spain, but was defeated by the Roman governor of Sardinia. (*Liv.*, 21, 23.—*Polyb.*, 11, 1.)—VI. A Carthaginian commander,

son of Gisco, who commanded the forces of his country in Spain during the time of Hannibal. Being seconded by Syphax, he afterward carried on the war against the Romans in Africa, but was defeated by Scipio. He died B.C. 206. (*Liv.*, 24, 41.—*Id.*, 29, 35.—*Id.*, 30, 5.)—VII. A Carthaginian, surnamed "Kid" (*Lat.* Hædus), an opponent of the Barca faction. He advised his countrymen to make peace with the Romans, and censured the ironical laugh of Hannibal in the Carthaginian senate, after the peace was concluded.—VIII. A Carthaginian general, who, during the siege of Carthage by the Romans, commanded an army of 20,000 men without the walls, with which he kept constantly harassing the besiegers. Being compelled at last to take refuge with his forces within the city, he took command of the place, and for a long time bravely withstood the attacks of the Romans. After the capture of the city, he retired with the Roman deserters, who had no quarters to expect, into the temple of Æsculapius in the citadel, resolved to bury himself under its ruins, taking with him, at the same time, his wife and two young sons. At length, however, having secretly left the temple, he threw himself at the feet of Scipio, and supplicated for life. Scipio granted his request, and showed him as a suppliant to the deserters in the temple. These desperate men, after venting against him a torrent of reproaches, set fire to the temple, and perished amid the flames. His wife, when the fire was kindling, displayed herself on the walls of the building in the richest attire she was at the moment able to assume, and, having upbraided her husband for his cowardice, slew her two sons, and threw herself, with them, into the burning pile. (*Appian*, *Bell. Pun.*, 131.)

HEBE, the goddess of Youth ("Hêg"), a daughter of Jupiter and Juno. Her parentage is not mentioned in the *Iliad*. Ovid calls her the step-daughter of Jupiter, in allusion to the fable which made Juno to have conceived her after eating of lettuce. (*Ov.*, *Met.*, 9, 416.) In Olympus she appears as a kind of maid-servant; she hands round the nectar at the banquets of the gods (*Il.*, 4, 2.—*Heyne*, *ad loc.*); she makes ready the chariot of Juno (*Il.*, 5, 722), and she bathes and dresses Mars, when his wound has been cured. (*Il.*, 5, 905.) This last, however, was not a servile office, since the daughter of Nestor renders it to Telemachus. (*Od.*, 3, 464.) When Hercules was translated to the skies, Hebe was given to him in marriage; a beautiful fiction, by which the venerated sun-god was united to immortal youth. According to the vulgar fable, Hebe was dismissed from her office of cup-bearer in the skies, and superseded by Ganymedes, because she had fallen in an awkward and unbecoming manner while handing around, on one occasion, the nectar to the gods. Homer, however, merely says that Ganymedes was carried off by the gods to be their cup-bearer (*Il.*, 20, 234), while in another part (4, 2) he represents Hebe as still ministering to the gods. At Philus, in the Peloponnesus, a goddess was worshipped, whom the ancient Philisians, according to Pausanias, call Ganymêdê (*Γανυμήδην*), but in his time she was named Hebe. (*Pausan.*, 2, 13.) Strabo says, that Hebe was worshipped at Philus and Sicyon under the name of Dia. In the arts, Hebe is represented with the cup in which she presents the nectar, under the figure of a charming young girl, her dress adorned with roses, and wearing a wreath of flowers. An eagle often stands by her, as at the side of Ganymedes, which she is caressing. (*Keightley's Mythology*, p. 111.—*Müller*, *Archæol. der Kunst*, p. 625.)

HEBRUS, a large river of Thrace, and one of the most considerable in Europe. It rises in the central chain that separates the plains of Thrace from the great valley of the Danube. Thucydides says (2, 96), that it takes its source in Mount Scomius, and *Plin.*,

(4, 11) in Mount Rhodope. After receiving several tributary streams, it falls into the Ægean, near the city of Ænus. An estuary, which it forms at its mouth, was known to Herodotus by the name of Stentoris Palus (Στεντορίδος Λίμνη—7, 58.—Compare *Plin.*, 4, 11). The Hebrus is now called the *Maritza*. Dr. Clarke found the *Maritza* a broad and muddy stream, much swollen by rains. (*Travels*, vol. 8, p. 94, *Lond. ed.*) Plutarch (*de Flav.*) states, that this river once bore the name of Rhombus; and there grew upon its banks, perhaps the identical plant now constituting a principal part of the commerce of the country; being then used, as it is now, for its intoxicating qualities. It is, moreover, related of the Hebrus by Pliny (33, 4), that its sands were auriferous; and Belon has confirmed this observation, by stating that the inhabitants annually collected the sand for the gold it contained. (*Observat. en Grèce*, p. 63, *Paris*, 1555.) According to the ancient mythologists, after Orpheus had been torn in pieces by the Thracian Bacchantes, his head and lyre were cast into the Hebrus, and, being carried down that river to the sea, were borne by the waves to Methymna, in the island of Lesbos. The Methymnians buried the head of the unfortunate bard, and suspended the lyre in the temple of Apollo. (*Orid. Met.*, 11, 55.—*Philarg. ad Virg., Georg.*, 4, 523.—*Eustath. in Dionys.*, v. 536.—*Huglin., Astron. Poet.*, 2, 7.) Servius adds, that the head was at one time carried to the bank of the river, and that a serpent thereupon sought to devour it, but was changed into stone. (*ad Virg., Georg.*, l. c.) Dr. Clarke thinks, that this part of the old legend may have originated in an appearance presented by one of those extraneous fossils called *Serpent-stones* or *Ammonites*, found near this river. (*Travels*, vol. 8, p. 100, *Lond. ed.*) At the junction of the Hebrus with the Tonsus and Ardiscus, Orestes is said to have purified himself from his mother's blood. (*Vid. Orestias.*)

HECALESTIA, a festival at Athens, in honour of Jupiter Hecalesius. It was instituted by Theseus, in commemoration of the kindness of Hecale towards him, when he was going on his enterprise against the Macedonian bull. This Hecale was an aged female, according to the common account, while others referred the name to one of the borough towns of the Leonian tribe in Attica. (*Steph. Byz.*, s. v.—*Plut., Vit. Thes.*—*Castellanus, de Fest. Græc.*, p. 108.)

HECÆTÆ FANUM, a celebrated temple sacred to Hecate, near Stratonicea in Caria. (*Strabo*, 660.)

HECATÆUS, I. a native of Miletus. We learn from Suidas, s. v. *Ἐκαταῖος*, that his father's name was Hegesander; that he flourished about the sixty-fifth Olympiad, during the reign of Darius, who succeeded Cambyses; that he was a scholar of Protagoras, and the first who composed a history in prose; and that Herodotus was much indebted to his writings. Under the word *Ἑλλάνικος*, Suidas says that Hecateus flourished during the Persian wars. This account is in part confirmed by Herodotus, who tells us that, when Aristagoras planned the revolt of the Ionian cities from Darius (5, 36), Hecateus, in the first instance, condemned the enterprise; and afterward (5, 125), when the unfortunate events of the war had demonstrated the wisdom of his former opinion, he recommended Aristagoras, in case he found himself under the necessity of quitting Ionia, to fortify some strong position in the island of Leros, and there to remain quiet until a favourable opportunity occurred of reoccupying Miletus. We learn also from Herodotus (2, 143), that Hecateus had visited Egypt. According to Diogenes Laertius, Protagoras flourished in the eighty-fourth Olympiad; consequently Hecateus could not have been his scholar, as Suidas supposes. The Abbé Sevin (*Mem. de l'Acad. des Inscr.*, vol. 6, p. 472) has two conjectures on this point; he suggests that we should either read Pythagoras instead of Pro-

tagoras, or that Suidas has, by mistake, said of the Milesian Hecateus what was true of another Hecateus, a native of Teos. Vossius, from misunderstanding a passage in Diogenes, erroneously conceives our Hecateus to have been a scholar of Heraclitus. (*De Hist. Græc.*, p. 439.) As regards the assertion of Suidas, alluded to above, that Hecateus was the first prose-writer, it may be remarked, that the lexicographer is not altogether consistent on this point. He asserts, in another place, that, in the opinion of some persons, Cadmus was the first that wrote in Greek prose. Under the word *Φερεκυδής*, he divides the honour of being the first prose-writer between Cadmus and Pherecydes. Pliny (2, 59), makes Cadmus the first who wrote in prose; but in another passage (7, 56) we find the following: "*Prosa orationem condere Pherecydes Syrius instituit, Cyri regis ætate; historiam Cadmus Milesius.*" Cadmus, after all, appears best entitled to the honour of having been the earliest Grecian prose-writer.—But to return to Hecateus; the references to his works are numerous, and show that he was a very voluminous writer. Suidas tells us that he wrote a history; Strabo (17) mentions it. It is also referred to by Stephanus under the words *Δίηγη* and *Φάλαγγα*, and by the scholiast on Apollonius Rhodius (1, 551). Hecateus also wrote a genealogical work; it contained several books, the first and second of which are mentioned by Stephanus (s. v. *Μέλια*.—s. v. *Ἀμρανάι*.—s. v. *Χαδιστία*); the second by Harpocration (s. v. *ἀδελφίζειν*); the third by Athenæus (2, p. 148); the fourth by Stephanus (s. v. *Μύησοι*.—s. v. *Τρεμύλη*). We have the testimony of Strabo, that Hecateus was one of the earliest writers on geographical subjects. Agathemerus (p. 2, *ed. Huds.*) says, that Hecateus corrected a map of the world which had been delineated by Anaximander. Ammianus Marcellinus also (22, 8) mentions him as a writer on geographical subjects. (*Mus. Crit.*, vol. 1, p. 88, *seqq.*) Whether the treatises which we find quoted in various writers, under the titles of *Εἰρώπης περίοδος*, *Ἀσίας περιήγησις*, *Λιβύης περιήγησις*, *Αἰγύπτου περιήγησις*, were distinct works, or parts of his larger geographical work, cannot now be ascertained. The remark of Suidas has already been cited at the commencement of this article, that Herodotus was much indebted to the writings of Hecateus, and it has been supposed that the very particular account which the latter gave, in his work on Egypt, of the history of Thebes, was the reason that Herodotus says comparatively so little on this interesting topic. (*Crenzer, Symbolik*, vol. 1, p. 240.) Diogenes of Halicarnassus praises the simplicity and clearness which distinguished the style of Hecateus. The fragments of this writer that have reached our times were collected by Crenzer, and published in his *Historicorum Græcorum Antiquiss. Fragmenta*, 8vo, *Heidelberg*, 1806. A separate edition of them, to which is appended the Periplus of Scylax, was given in 1831, 8vo, by Klausen, from the Berlin press. (*Hoffmann, Lex. Bibliogr.*, vol. 2, p. 334.)—II. A native of Abdera, who accompanied Alexander the Great into Asia. He was a disciple of Pyrrho, the head of the Sceptic school. He wrote a work on the Antiquities of the Jews, cited, under the title *Ἱστορίων βιβλίων*, by Origen (*Contra Cels.*, 1, p. 13), and under that of *Ἱστορίων ἱστορία* by Eusebius. (*Præp. Ev.*, lib. 3, p. 239, *ed. R. Steph.*) It is from this work that Photius has preserved for us an interesting extract, with which, however, he credits Hecateus of Miletus. Clemens Alexandrinus (*Strom.*, 5, p. 717, *ed. Potter*) speaks of a work of Hecateus's on Abraham and Egypt, which is probably the same with the one just mentioned. Scaliger (*Epist.* 115), Eichhorn (*Bibl. der Biblischen Lit.*, vol. 5, pt. 3, p. 431), and others, have thought that this work or those works, of which Josephus and Photius (after Diodorus) have preserved an extract

must be referred to the Hellenistic Jews, as a fabrication of theirs. Sainte-Croix, on the other hand, undertakes to support their authenticity. (*Examen des Historiens d'Alexandre-le-Grand*, p. 558.) It appears, however, that Hecataeus of Abdera actually wrote a work on Egypt, for Diodorus Siculus (I, 47) and Plutarch (*De Is. et Os.*, p. 143, ed. Wytténb.—ed. Reiske, vol. 7, p. 392) both cite it. The fragments of Hecataeus of Abdera were published by Zorn, Altona, 1730, 8vo, and are given in part also by Creuzer, in his *Hist. Græc. Antiquiss. Fragm.*, p. 28, seqq.—III. A native of Teos, supposed to have flourished about the ninetieth Olympiad. Compare the remarks of Creuzer, (*Hist. Gr. Ant. Fragm.*, p. 6, seqq.)—IV. A native of Eretria, who wrote *Περὶ Νόστων*, "On the wanderings of the Grecian chieftains returning from Troy." He is mentioned also by Plutarch among the historians of Alexander. (*Schöll, Hist. Litt. Gr.*, vol. 4, p. 133.)

ΗΕΚΑΤΗ (*Ἑκάτη*), the name of a goddess in the Grecian mythology. In the Theogony of Hesiod (v. 411), this deity is made the daughter of Perses and Asteria. Bacchylides speaks of her as the daughter of Night, while Musæus gave her Jupiter as a sire in place of Perses. (*Schol. ad Apoll. Rh.*, 3, 467.) Others again made her the offspring of the Olympian king by Phœbe, the daughter of Æolus (*Tzet., ad Lyc.*, 1180), or by Ceres (*Schol. ad Theocr.*, 2, 12). According to Pherecydes, her sire was Aristæus. (*Schol. ad Apoll. Rh.*, l. c.) It is said in the Theogony (412, seqq.), that Hecate was highly honoured by Jupiter, who allowed her to exercise extensive power over land and sea, and to share in all the honours enjoyed by the children of Heaven and Earth. She rewards sacrifice and prayer to her with prosperity. She presides over the deliberations of the popular assembly, over war, and the administration of justice. She gives success in wrestling and horse-racing. The fisherman prays to her and Neptune; the herdsman to her and Hermes; for she can increase and diminish at her will. Though an only child (in contrast to Apollo and Diana, who have similar power), she is honoured with all power among the immortals, and is, by the appointment of Jupiter, the rearer of children, whom she has brought to see the light of day.—This passage, however, is plainly an interpolation in the Theogony, with which it is not in harmony. It has all the appearance of being an Orphic composition, and is, perhaps, the work of the notorious forger Onomacritus. (*Götting, ad loc.*—*Thiersch, über Hesiodus*, p. 24.—*Keightley's Mythology*, p. 66.)—Hecate is evidently a stranger-divinity in the mythology of the Greeks. It would appear that she was one of the hurtful class of deities, transported by Hesiod, or his interpolator, into the Grecian mythology, and placed behind the popular divinities of the day, as a being of earlier existence. Hence the remark of the bard, that Jupiter respected all the prerogatives which Hecate had enjoyed previous to his ascending the throne of his father. Indeed, the sphere which the poet assigns her, places her out of the reach of all contact with the acting divinities of the day. She is mentioned neither in the Iliad nor Odyssey, and the attributes assigned her in the more recent poem of the Argonauts are the same with those of Proserpina in Homer. (*Creuzer, Symbolik*, vol. 1, p. 158.—*Id.*, 2, 120.—*Goerres, Mytheng.*, vol. 1, p. 254.—*Hermann, Handb. der Myth.*, vol. 2, p. 45.) Jablonski (*Panth. Ægypt.*) regards Hecate as the same with the Egyptian Tithrambo. Her action upon nature, her diversified attributes, her innumerable functions, are a mixture of physical, allegorical, and philosophical traditions respecting the fusion of the elements and the generation of beings. Hecate was the night, and, by an extension of this idea, the primitive night, the primary cause or parent of all things. She was the moon, and

hence were connected with her all those accessory ideas which are grouped around that of the moon: she is the goddess that troubles the reason of men, the goddess that presides over nocturnal ceremonies, and, consequently, over magic; hence her identity with Diana for the Grecian mythology, with Isis for the Egyptian; and hence also all her cosmogonical attributes, assigned to Isis in Egypt. (*Constant, de la Religion*, vol. 4, p. 139, in notis.)—As regards the etymology of her name, it may be remarked, that the most probable one seems to be that which deduces it from the Greek *ἑκάτη*, the feminine of *ἑκατος*, denoting either "her that operates from afar," or "her that removes or drives off." (*Creuzer, Symbolik*, vol. 2, p. 124.) Expiatory sacrifices were offered to this goddess on the thirtieth of every month, in which eggs and young dogs formed the principal objects. The remains of these animals and of the other offerings, together with a large quantity of all sorts of comestibles, were exposed in the cross-roads, and called the "Supper of Hecate" (*Ἑκάτης δειπνον*). The poorer class and the Cynics seized upon these viands with an eagerness that passed among the ancients as a mark of extreme indigence, or the lowest degree of baseness. (Compare the note of Hemsterhuis, *ad Lucian. Dial. Mort.*, 1.—*Op.*, ed. Bip., vol. 2, p. 397, seqq.) Her statues were in general dog-headed, and were set up at Athens and elsewhere, in the market-places and at cross-roads. It is probable, indeed, that the dog-headed form was the ancient and mystic one of Hecate, and that under which she was worshipped in the mysteries of Samothrace, where dogs were immolated in her honour. Hecate had also her mysteries, celebrated at Ægina, and the establishment of which was ascribed to Orpheus. Another name of this goddess was *Brimo* (from *βρῆμα*, "to roar"). This seems to have been chiefly employed to denote her terrific appearance, especially when she came summoned by magic arts. Apollonius of Rhodes (*Arg.*, 3, 1214, seqq.) describes her as having her head surrounded by serpents, twining through branches of oak, while torches flamed in her hands, and the infernal dogs howled around. Lucian's "liar of the first magnitude," Eucrates, gives a most terrific description of her appearance. (*Philopseud.*, 22, seqq.) In this character she was also sometimes called Empusa. (*Eudocia*, 147.) These, however, were evidently late ideas and fictions. (*Keightley's Mythology*, p. 67.)

ΗΕΚΑΤΟΜΒΟΙΑ, a festival celebrated in honour of Juno by the Argives and people of Ægina. It received its name from *ἑκατόν* and *βοῦς*, being a sacrifice of a hundred oxen, which were always offered to the goddess, and the flesh distributed among the poorest citizens. There were also public games, first instituted by Archinus, a king of Argos, in which the prize was a shield of brass with a crown of myrtle.—There was also an anniversary sacrifice called by this name in Laconia, and offered for the preservation of the 100 cities which once flourished in that country.

ΗΕΚΑΤΟΜΦΩΝΙΑ (from *ἑκατόν*, "a hundred," and *φονεύω*, "to kill"), a solemn sacrifice offered by the Messenians to Jupiter when any of them had killed a hundred enemies. Aristomenes is said to have offered up this sacrifice three times in the course of the Messenian war against Sparta. (*Pausan.*, 4, 19.)

ΗΕΚΑΤΟΜΠΟΛΙΣ, an epithet given to Cretë, from the hundred cities which it once contained. (*Hom.*, *Il.*, 2, 649.) The same epithet was also applied to Laconia. (*Strabo*, 362.—*Steph. Byz.*, s. v. *Ἀνωκλαί*.) The greater part of these, however, were probably, like the demi of Attica, not larger than villages. (*Vid.* Laconia.)

ΗΕΚΑΤΟΜΠΥΛΟΣ, I. an epithet applied to Thebes in Egypt, on account of its hundred gates. (*Vid.* remarks under the article Thebe, I.)—II. The metropolis of Parthia, and royal residence of the Arsacidae, situate

in the district of Comisene, and southwest part of the province of Parthene. The name is of Grecian origin, probably a translation of the native term, and has a figurative allusion to the numerous routes which diverge from this place to the adjacent country. D'Anville makes it correspond with the modern *Demegan*. (*Pin.*, 6, 15.—*Curt.*, 6, 2.—*Amman. Marcell.*, 23, 24.—*Polyb.*, 10, 25.—*Diod. Sic.*, 17, 25.)

HECATONNĒSI, small islands between Lesbos and Asia. They derived their names, according to Strabo (13), from *ēkaros*, an epithet of Apollo, that deity being particularly worshipped along the continent of Asia, off which they lay. It seems more probable, however, that they had their name from *ēkarōn*, a hundred, and were called so from their great number, which is about forty or over. And Herodotus, in fact, writes the name *Ἐκατὸν Νῆσοι* (1, 151). The modern appellation is *Musco-Nisi*. (*Cramer's Asia Minor*, vol. 1, p. 165.)

HECTOR, son of Priam and Hecuba, was the most valiant of all the Trojan chiefs that fought against the Greeks. He married Andromache, daughter of Ectōn, by whom he became the father of Astyanax. Hector was appointed commander of all the Trojan forces, and for a long period proved the bulwark of his native city. He was not only the bravest and most powerful, but also the most amiable, of his countrymen, and particularly distinguished himself in his conflicts with Ajax, Diomedes, and many other of the most formidable leaders. The fates had decreed that Troy should never be destroyed as long as Hector lived. The Greeks, therefore, after the death of Patroclus, who had fallen by Hector's hand, made a powerful effort under the command of Achilles; and, by the intervention of Minerva, who assumed the form of Deiphobus, and urged Hector to encounter the Grecian chief, contrary to the remonstrances of Priam and Hecuba, their effort was crowned with success. Hector fell, and his death accomplished the overthrow of his father's kingdom. The dead body of the Trojan warrior was attached to the chariot of Achilles, and insultingly dragged away to the Grecian fleet; and thrice every day, for the space of twelve days, was it also dragged by the victor around the tomb of Patroclus. (*Il.*, 22, 399, *seqq.*—*Ib.*, 24, 14, *seqq.*) During all this time, the corpse of Hector was shielded from dogs and birds, and preserved from corruption, by the united care of Venus and Apollo. (*Il.*, 23, 185, *seqq.*) The body was at last ransomed by Priam, who went in person, for this purpose, to the tent of Achilles. Splendid obsequies were rendered to the deceased, and with these the action of the Iliad terminates.—Virgil makes Achilles to have dragged the corpse of Hector thrice round the walls of Troy. (*Æn.*, 1, 483) Homer, however, is silent on this point. According to the latter, Hector fled thrice round the city-walls before engaging with Achilles; and, after he was slain, his body was immediately attached to the car of the victor, and dragged away to the ships. (*Il.*, 22, 399.) The incident, therefore, alluded to by Virgil must have been borrowed from some one of the Cyclic bards, or some tragic poet, for these, it is well known, allowed themselves great license in diversifying and altering the features of the ancient heroic legends. (*Heyne, Excurs.*, 18, *ad Virg.*, *Æn.*, 1.—*Wernsdorff, ad Epit. Il. in Poet. Lat. Min.*, vol. 4, p. 742.)

HECUBA (*Ἑκάβη*), daughter of Dymas, a Phrygian prince, or, according to others, of Cisseus, a Thracian king, while others, again, made her the daughter of the river-god Sangarius and Metope, was the second wife of Priam, king of Troy. (*Apollod.*, 3, 12, 6.) She bore him nineteen children (*Il.*, 24, 496), of whom the chief were Hector, Paris, Deiphobus, Helenus, Troilus, Polites, Polydorus, Cassandra, Cræusa, and Polyxena. When she was pregnant of Paris, she dreamed that she brought into the world a burning torch, which re-

duced her husband's palace and all Troy to ashes. On her telling this dream to Priam, he sent for his son Æsacus, by a former wife Arisbe, the daughter of Merops, who had been reared and taught to interpret dreams by his grandfather. Æsacus declared, that the child would be the ruin of his country, and recommended to expose it. As soon as born, the babe was given to a servant to be left on Ida to perish; but the attempt proved a fruitless one, and the prediction of the soothsayer was fulfilled. (*Vid. Paris*.) After the ruin of Troy and the death of Priam, Hecuba fell to the lot of Ulysses, and she embarked with the conquerors for Greece. The fleet, however, was detained off the coast of the Thracian Chersonese by the appearance of the spectre of Achilles on the summit of his tomb, demanding to be honoured with a new offering. Polyxena was, in consequence, torn from Hecuba and immolated by Neoptolemus on the grave of his sire. The grief of the mother was increased by the sight of the dead body of her son Polydorus, washed upon the shore, who had been cruelly slain by Polymestor, king of Thrace, to whose care Priam had consigned him. Bent on revenge, Hecuba managed, by artifice, to get Polymestor and his two children in her power, and, by the aid of her fellow-captives, she effected the murder of his sons, and then put out the eyes of the father. (*Vid. Polydorus, Polymestor*.) This act drew upon her the vengeance of the Thracians: they assailed her with darts and showers of stones; and, in the act of biting a stone with impotent rage, she was suddenly metamorphosed into a dog. (*Ovid, Met.*, 13, 429, *seqq.*)—Hyginus says, that she threw herself into the sea (*fab. 111*), while Servius states, that she was changed into a dog when on the point of casting herself into the waters. (*ad Æn.*, 3, 6.—*Consult Schol. ad Eurip. Hec.*, 1259.—*Tzetz.*, *Chil.*, 111, 74.—*Schol. ad Juv.*, *Sat.*, 10, 271.—*Plaut.*, *Menech.*, 1.—*Heyne, ad Apollod.*, 3, 12, 5.)

HEGEMON, a native of Thasos, and author of satyric dramas in the age of Alcibiades. This distinguished individual was his friend, and managed to get him freed from an accusation that had been brought against him. A piece of this poet, entitled *Gigantomachia*, was getting represented when the news arrived of the defeat of Nicias in Sicily. This Hegemon bore the appellation of *Phæce* (*φακῆ*, "a lentil"), conferred on him as a nickname. He wrote also a comedy entitled *Philinna*. (*Böckh, Staatsh. der Athener*, vol. 1, p. 435.—*Schöll, Gesch. Griech. Lit.*, vol. 1, p. 269, 290.)

HEGESIANAX, a Greek writer, a native of Alexandria-Troas, and contemporary with Antiochus the Great, by whom he was patronised. He was the author of an historical work; and indulged also in poetic composition, having written a poem entitled *τὰ Τρωικά*, "*Trojan Affairs*." Some ascribed to him the "Cyprian Epic." He was likewise a writer of tragedies; and, according to Athenæus, from whom all these particulars are obtained, was also a tragic actor, having improved and strengthened his voice, which was naturally weak, by abstaining for eighteen years from eating figs. (*Athen.*, 3, p. 80, *d.*—*Id.*, 4, p. 155, *b.*—*Id.*, 9, p. 393, *d.*)

HEGESIAS, I. a Cyclic poet, born at Salamis, in the island of Cyprus, and, according to some, the author of the Cyprian Epic. (*Vid. Stasinus*.)—II. A native of Magnesia, who wrote an historical work on the companions in arms of Alexander the Great. His style was loaded with puerile ornaments, and betrayed a total want of taste. (*Dion. Hal., de Struct. Orat.*, c. 18.) He wrote also some discourses, which are lost. The ancients regarded him as the parent of that species of eloquence denominated the Asiatic, which had taken the place of the simple and elegant Attic. (*Compare Quintil., Inst. Or.*, 12, 10.)—III. A philosopher, surnamed *Προβάτωρ*, or "Advocate of Death." He pushed the principles of the Cyrenaic sect, to

which he belonged, even to absurdity, and, by the force of consequences, came to a result directly opposite to that of the founder of the school. From the position that pleasure is the sovereign good, he deduced the inference that man cannot be truly happy, since, as his body is exposed to too many evils, of which the soul also partakes, he cannot attain to the sovereign good: hence it follows that death is more desirable than life. Hegesias upheld this doctrine with so much ability and success, that many of his auditors, on leaving his lectures, put an end to their existence. Ptolemy I. judged it necessary to send him into exile. (Schöll, *Hist. Litt. Gr.*, vol. 3, p. 249.)

HEGESIPPUS, I. an historian, mentioned by Dionysius of Halicarnassus (*Ant. Rom.*, 1, 49 et 72). He wrote on the antiquities of Pallene, a peninsula of Thrace, where Æneæ was supposed to have taken refuge after the capture of Troy. He made the Trojan chief to have ended his days here.—II. A comic poet, a native of Tarentum, surnamed Crobylus (Κροβύλος), or "Toupee," from his peculiar manner of wearing his hair. His pieces have not reached us: we have eight epigrams ascribed to him, which are remarkable for their simplicity.—III. An ecclesiastical historian, by birth a Jew, and educated in the religion of his fathers. He was afterward converted to Christianity, and became bishop of Rome about the year 177, where he died in the reign of the Emperor Commodus, about the year 180. He was the author of an ecclesiastical history, from the period of our Saviour's death down to his own time, which, according to Eusebius, contained a faithful relation of the apostolic preaching, written in a very simple style. The principal value of the existing fragments, which have been preserved for us by Eusebius and Photius, arises from the testimony that may be deduced from scriptural passages quoted in them in favour of the genuineness of the books of the New Testament. There has been ascribed to Hegesippus a history of the destruction of Jerusalem, written in Latin, under the title of "*De Bello Judaico et urbis Hierosolymitanæ excidio historia.*" It is not, however, by Hegesippus; and appears, indeed, to be nothing more than a somewhat enlarged translation of Josephus. A Milan manuscript ascribes it to St. Ambrose, and perhaps correctly, since there is a great conformity between its style and that of the prelate just mentioned. The fragments of the ecclesiastical history of Hegesippus were published at Oxford in 1698, in the 2d volume of Grabe's *Spicilegium Patrum*, p. 205; in the 2d volume of Halloix's work "*De Scriptorum Orientalium vitis.*" p. 703; and in Galland's *Biblioth. Gr. Lat. Vct. Patr., Venet.*, 1788, fol., vol. 2, p. 59.

HELENA, the most beautiful woman of her age. There are different accounts of her birth and parentage. The common, and probably the most ancient, one is, that she was the daughter of Leda by Jupiter, who took the form of a white swan. According to the Cyprian Epic, she was the offspring of Jupiter and Nemesis, who had long fled the pursuit of the god, and, to elude him, had taken the form of all kinds of animals. (*Athen.*, 8, p. 334.) At length, while she was under that of a goose, the god became a swan, and she laid an egg, which was found by a shepherd in the woods. He brought it to Leda, who laid it up in a coffer, and in due time Helena was produced from it. (*Apollod.*, 3, 10, 4.) Hesiod, on the other hand, calls Helena the daughter of Oceanus and Tethys. (*Schol. ad Pind., Nere.*, 10, 150.) In the *Iliad*, Helena is termed "begotten of Jupiter" (*Il.*, 3, 418); and she calls Castor and Pollux "her own brothers, whom one mother bore with her." (*Il.*, 3, 238.) In the *Odyssey* these are expressly called the sons of Tyndarus. This, however, does not prove that Helena was held to be his daughter.—The beauty of Helena was proverbial. She was so renowned, indeed, for her per-

sonal attractions, even in her infancy, that Theseus, in company with his friend Pirithoüs, carried her off, when only a child, from a festival at which they saw her dancing in the temple of Diana Orthia. It was agreed, during their flight, that he who should, by lot, become possessor of the prize, should assist in procuring a wife for the other. The lot fell to Theseus, and he accordingly conveyed Helen to Aphidnæ, and there placed her under the care of his mother Æthra till she should have attained to years of maturity. From this retreat, however, her brothers, Castor and Pollux, recovered her by force of arms, and restored her to her family. According to Pausanias, however, she was of nubile years when carried off by Theseus, and became by him the mother of a daughter, who was given to Clytemnestra to rear. (*Pausan.*, 2, 22.)—Among the most celebrated of the young princes of Greece, who, from the reputation of her personal charms, subsequently became her suitors, were, Ulysses, son of Laertes; Antilochus, son of Nestor; Stenelus, son of Capaneus; Diomedes, son of Tydeus; Amphiloehus, son of Cteatus; Megees, son of Phileus; Agapenor, son of Ancæus; Thaliplus, son of Eurypylus; Mnestheus, son of Peteus; Schedius, son of Epistrophus; Polyxenus, son of Agasthenes; Amphiloehus, son of Amphiaræus; Ascalaphus and Ialmus, sons of the god Mars; Ajax, son of Oïleus; Eumelus, son of Admetus; Polyætæes, son of Pirithoüs; Elpenor, son of Chalcodon; Podalirius and Machaon, sons of Æsculapius; Leontus, son of Coronus; Philoctetes, son of Pæan; Protesilaus, son of Iphiclus; Eurypylus, son of Evemon; Ajax and Teucer, sons of Telamon; Patroclus, son of Menætiæus; Menelaüs, son of Atreus; Thoas, Idomeneus, and Merion. Tyndarus was rather alarmed than pleased at the sight of so great a number of illustrious princes, who eagerly solicited each to become his son-in-law. He knew that he could not prefer one without displeasing all the rest, and from this perplexity he was at last extricated by the artifice of Ulysses, who began to be already known in Greece by his prudence and sagacity. This prince, who clearly saw that his pretensions to Helen would not probably meet with success in opposition to so many rivals, proposed to free Tyndarus from all his difficulties if he would promise him his niece Penelope in marriage. Tyndarus consented, and Ulysses advised the king to bind, by a solemn oath, all the suitors, that they would approve of the uninfluenced choice which Helen should make of one among them, and engage to unite together to defend her person and character, if ever any attempts were made to carry her off from her husband. The advice of Ulysses was followed, the princes consented, and Helen fixed her choice upon Menelaüs, and married him. Hermione was the early fruit of this union, which continued for three years with mutual happiness. After this, Paris, son of Priam, king of Troy, came to Lacedæmon on pretence of sacrificing to Apollo. He was kindly received by Menelaüs; but, taking advantage of the temporary absence of the latter in Crete, corrupted the fidelity of Helen, and persuaded her to flee with him to Troy. Menelaüs, returning from Crete, assembled the Grecian princes, and reminded them of their solemn promises. They resolved to make war against the Trojans; but they previously sent ambassadors to Priam to demand the restitution of Helen. The influence of Paris at his father's court prevented her restoration, and the Greeks returned home without receiving the satisfaction they required. Soon after their return, their combined forces assembled and sailed for the coast of Asia.—When Paris had been slain, in the ninth year of the war, Helen married Deiphobus, son of Priam; but, on the capture of the city, betrayed him into the hands of Menelaüs, through a wish of ingratiating herself into the favour of her former husband. On her return to Greece, Helen lived many

years with Menelaüs, who forgave her infidelity; but, upon his death, she was driven from the Peloponnesus by Megapenthes and Nicostatus, the illegitimate sons of her husband, and she retired to Rhodes, where at that time Polyxo, a native of Argos, reigned over the country. Polyxo remembered that her widowhood originated in Helen, and that her husband, Tlepolemus, had been killed in the Trojan war, and she therefore resolved upon revenge. While Helen one day retired to bathe in the river, Polyxo disguised her attendants in the habits of Furies, and sent them with orders to murder her enemy. Helen was tied to a tree and strangled, and her misfortunes were afterward commemorated, and the crime of Polyxo expiated, by the temple which the Rhodians raised to Helena Dendritis, or Helena "tied to a tree."—There is a tradition mentioned by Herodotus, which says that Paris was driven, as he returned from Sparta, upon the coast of Egypt, where Proteus, king of the country, expelled him from his dominions for his ingratitude to Menelaüs, and confined Helen. From that circumstance, therefore, Priam informed the Grecian ambassadors that neither Helen nor her possessions were in Troy, but in the hands of the King of Egypt. In spite of this assertion, the Greeks besieged the city, and took it after ten years' siege; and Menelaüs, visiting Egypt as he returned home, recovered Helen at the court of Proteus, and was convinced that the Trojan war had been undertaken upon unjust grounds. Herodotus adds, that, in his opinion, Homer was acquainted with these circumstances, but did not think them so well calculated as the popular legend for the basis of an epic poem. (*Herod.*, 2, 112, 116, *seqq.*)—It was fabled, that, after death, Helen was united in marriage with Achilles, in the island of Leuce, in the Euxine, where she bore him a son named Euphorion. (*Pausanias*, 3, 19.—*Conon*, 18.—*Ptol.*, *Hephæst.*, 4.) Nothing, however, can be more uncertain than the whole history of Helen. The account of Herodotus has been already given in the course of this article. According to Euripides (*Helena*, 25, *seqq.*), Juno, piqued at beholding Venus bear away the prize of beauty, caused Mercury to carry away the true Helen from Greece to Egypt, and gave Paris a phantom in her stead. After the destruction of Troy, the phantom bears witness to the innocence of Helen, a storm carries Menelaüs to the coast of Egypt, and he there regains possession of his bride. Others pretend that Helen never married Menelaüs; that she preferred Paris to all the princes that sought her in marriage; and that Menelaüs, irritated at this, raised an army against Troy. Some writers think they see, in these conflicting and varying statements, a confirmation of the opinion entertained by many, that the ancient quarrel of Hercules and Laomedon, and the violence offered to Hesione, the daughter of that monarch, and not the carrying off of Helen, were the causes of the Trojan war. Others treat the story of the oath exacted from the suitors with very little ceremony, and make the Grecian princes to have followed Agamemnon to the field as their liege lord, and as standing at the head of the Achæan race, to whom therefore they, as commanding the several divisions and tribes of that race, were bound to render service. But the more we consider the history of Helen, the greater will be the difficulties that arise. It seems strange indeed, supposing the common account to be true, that so many cities and states should combine to regain her when she went away voluntarily with Paris, and that not a single hamlet should rise in her favour when she was forcibly carried away by Theseus. Again, the beauty of Helen is often mentioned by the poet. The very elders of Troy, when they saw her pass by, could not help expressing their admiration. (*Il.*, 3, 158.) Agamemnon promises to Achilles the choice of twenty female captives, the fairest after Helen. (*Il.*, 9, 140.) By this he strongly intimates the superiority of her

charms. But if there were the least truth in the history of this personage and in the chronology of the times, she must have been at this period a very old woman. For her brothers were in the Argonautic expedition, and in a state of complete manhood. One of them is mentioned as contending in fight with Amycus, the Bebrycian, a person of uncommon stature and strength: his opponent, therefore, could not have been a stripling. We cannot well allow less than twenty-five years for his time of life. Now, from the Argonautic expedition to the taking of Troy, there were, according to Scaliger (*Animado. in Euseb.*, p. 46), seventy-nine years. If, then, we add to these her age at the time of the Argonauts, which we have presumed to have been twenty-five years, it makes her no less than a hundred and four in the last year of the siege. Or if we allow her to have been only twenty at the time of the expedition, still she will prove sufficiently old to have been Hecuba's mother. Hence Seneca says very truly (*Epist.*, 384), when he is treating of the priority of Hesiod and Homer, "*Utrum major ætate fuerit Homerus an Hesiodus, non magis ad rem pertinet quam scire, an minor Hecuba fuerit quam Helena; et quare tam male tulerit ætatem.*" Petavius makes the interval between this celebrated expedition and the fall of Troy of the same extent as Scaliger. (*Rationale Temp.*, p. 290, *seqq.*) The former he places in the year 3451 of the Julian period, and the latter in 3530. The difference in both is 79. To these, if we add 25 for her age at that era, it will amount to 104. After the seduction of Helen by Paris, the Grecians are said to have been ten years in preparing for the war, and ten years in carrying it on. This agrees with the account given by Helen of herself in the last year of the siege, which was the twentieth from her first arrival from Sparta. (*Il.*, 24, 75.) If we then add these twenty years to the seventy-nine, and likewise twenty-five for her age at the time of the Argonautic expedition, it will make her still older than she was estimated above, and increase her years to 124. Telemachus, the son of Ulysses, is said to have seen her at Sparta ten years afterward, and she is represented even then to have been as beautiful as Diana (*Od.*, 4, 122), though at that time, if these computations are true, she must have been 134 years old. These things are past all belief. Another difficulty will be found in the history of those princes, who, according to the common account, formed the grand confederacy in order to recover her, if she should at any time be stolen away. They are said to have been for the most part her suitors, who bound themselves by an oath to unite for that purpose whenever they should be called upon. At what time of life may we suppose Helen to have been, when these engagements were made in her favour, in consequence of her superior beauty? We may reasonably conclude she was about her twentieth or twenty-fifth year; and her suitors could not well be younger. But, at this rate, the principal leaders of the Grecians at the siege of Troy must have been 100 years old. But the contrary is evinced in every part of the poem, wherever these heroes are introduced. Still farther; it has been mentioned, that, before the seduction of Helen by Paris, she was said to have been stolen from her father's house by Theseus; and we are told by some writers that she was then but seven years old. This has been said in order to lower the time of her birth, that she may not appear so old in the last year of the war. But this is a poor expedient, which in some degree remedies one evil, but, at the same time, creates another. How can it be conceived that a king of Athens should betake himself to Sparta, in order to run away with a child seven years old? and how could she, at that age, have been officiating at the altar of Diana Orthia? This leads to another circumstance equally incredible. For if she were so young, her brothers must have been precisely

of the same age; for one, if not both, was hatched from the same egg. Yet these children, so little past their infant state, are said to have pursued Theseus, and to have regained their sister. They must have been sturdy urchins, and little short of the sons of Aloeus. (Consult, on this whole subject, *Bryant, Dissertation on the War of Troy*, p. 9, *seqq.*)—It is more than probable, indeed, that the whole legend relative to Helen was originally a religious and allegorical myth. The remarkable circumstance of her two brothers living and dying alternately, leads at once to a suspicion of their being personifications of natural powers and objects. This is confirmed by the names in the myth, all of which seem to refer to light or its opposite. Thus Leda differs little from Leto, and may therefore be regarded as *darkness*. She is married to Tyndarus, a name which seems to belong to a family of words relating to *light, flame, or heat* (*Vid.* Tyndarus); her children by him or Jupiter, that is, by Jupiter-Tyndarus, the *bright god*, are Helena, *Brightness* (Ἑλένα, "light"); Castor, *Adornor*, (κίσσω, "to adorn"); and Polydeukes, *Deaf* (δέω, δεινός). In Helen, therefore, we have only another form of *Selene*; the *Adornor* is a very appropriate term for the day, the light of which adorns all nature; and nothing can be more apparent than the suitability of *Deaf* to the night. (*Keightley's Mythology*, p. 432.)—II. (commonly known in ecclesiastical history by the name of St. Helena), the first wife of Constantius Chlorus, was born of obscure parents, in a village called Drepanum, in Bithynia, which was afterward raised by her son Constantine to the rank of a city, under the name of Helenopolis. Her husband Constantius, on being made Cæsar by Dioclesian and Maximian (A.D. 292), repudiated Helena, and married Theodora, daughter of Maximian. Helena withdrew into retirement until her son Constantine, having become emperor, called his mother to court, and gave her the title of Augusta. He also supplied her with large sums of money, which she employed in building and endowing churches, and in relieving the poor. About A.D. 325 she set out on a pilgrimage to Palestine, and, having explored the site of Jerusalem, she thought that she had discovered the sepulchre of Jesus, and also the cross on which he died. The identity of the cross which she found has been, of course, much doubted; she, however, built a church on the spot, supposed to be that of the Sepulchre, which has continued to be venerated by that name to the present day. She also built a church at Bethlehem, in honour of the nativity of our Saviour. From Palestine she rejoined her son at Nicomedia, in Bithynia, where she expired, in the year 327, at a very advanced age. She is numbered by the Roman church among the saints. (*Euseb., Vit. Const.*—*Hübner, de Crucis Dominicæ per Helenam inventionem*, Helmstädt, 1724.)—III. A deserted and rugged island in the Ægean, opposite to Thorikos, and extending from that parallel to Sunium. It received its name from the circumstance of Paris's having landed on it, as was said, in company with Helena, when they were fleeing from Sparta. (*Plin.*, 4, 12.—*Mela*, 2, 7.) Strabo, who follows Artemidorus, conceived it to be the Cranaë of Homer. (*Il.*, 3, 444.) Pliny calls it Macris. The modern name is *Macronisi*.

HELENUS, an eminent soothsayer, son of Priam and Hecuba, and the only one of their sons who survived the siege of Troy. He was so chagrined, according to some, at having failed to obtain Helen in marriage after the death of Paris, that he retired to Mount Ida, and was there, by the advice of Calchas, surprised and carried away to the Grecian camp by Ulysses. Among other predictions, Helenus declared that Troy could not be taken unless Philoctetes could be prevailed on to quit his retreat and repair to the siege. After the destruction of Troy, he, together with Andromache, fell to the share of Pyrrhus, whose favour he concili-

ated by deterring him from sailing with the rest of the Greeks, who (he foretold) would be exposed to a severe tempest on leaving the Trojan shore. Pyrrhus not only manifested his gratitude by giving him Andromache in marriage, but nominated him his successor in the kingdom of Epirus, to the exclusion of his son Molossus, who did not ascend the throne until after the death of Helenus. A son named Cestrinus was the offspring of the union of Helenus with Andromache. (*Virg., Æn.*, 3, 294, *seqq.*—Consult the authorities quoted by Heyne, *Excurs.* 10, *ad Æn.*, 3.)

HELIÆNES, I. the daughters of the Sun and Clymene. They were three in number, Lampetie, Phæton, and Lampethusa; or seven, according to Hyginus, Merope, Helie, Ægle, Lampetie, Phæbe, Æthæria, and Dioxippe. They were so afflicted at the death of their brother Phæthon (*Vid.* Phæthon), that they were changed by the gods into poplars, and their tears into amber, on the banks of the river Po. (*Ovid, Met.*, 2, 340.—*Hygin., fab.*, 154.)—II. Children of the Sun and the nymph Rhodus. They were seven in number, and were fabled to have been the first inhabitants of the island of Rhodes. (*Vid.* Rhodus.)

HELIASTÆ, a name given to the judges of the most numerous tribunal at Athens. (*Harpoer.*, p. 138.—*Bekk., Anecd. Gr.*, p. 310, 32.) Of all the courts which took cognizance of civil affairs, the *Heliastæ* was the most celebrated and frequented. It derived its name, ἀπὸ τοῦ ἡλίσσθαι, from the *thronging* of the people; or, according to others, ἀπὸ τοῦ ἡλίου, from the *sun*, because it was in an open place, and exposed to the sun's rays. (*Dorr., ad Charit.*, p. 242.) The judges, or, rather, jurymen of the Heliastæ, amounted in all to 6000, being citizens of above thirty years of age, selected annually by the nine archons and their secretary; probably 600 from each tribe. The Heliastæ, however, seldom all met, being formed into ten divisions, the complement of each of which was strictly 500, although it varied according to circumstances; sometimes diminishing to 200 or 400, while on other occasions it appears to have been raised to 1000 or 1500, by the union of two or three divisions. The 1000, therefore, to make up the full 6000, must have acted as supernumeraries. (*Wachsmuth, Hellen. Alterthumsk.*, vol. 2, pt. 1, p. 314.) Every one to whose lot it fell to serve as jurymen, received, after taking the oath, a tablet inscribed with his name, and the number of the division to which he was to belong during the year. On the morning of every court day, recourse was again had to lots, to decide in which court the divisions should respectively sit for that day.—For other particulars, consult *Hermann, Polit. Antig.*, p. 265.—*Tittmann, Darstell. der Gr. Staatsverf.*, p. 213, *seqq.*

HELICE, I. another name for the *Ursa Major*, or "Greater Bear." (*Vid.* Arctos.)—II. One of the chief cities of Achaia, situate on the shore of the Sinus Corinthiacus, near Bura. (*Herod.*, 1, 46.) It was celebrated for the temple and worship of Neptune, thence called Heliconius. Here also the general meeting of the Ionians was convened, while yet in the possession of Ægialus, and the festival which then took place is supposed to have resembled that of the Panionia, which they instituted afterward in Asia Minor. (*Pausan.*, 7, 24.—*Strab.*, 384.) A prodigious influx of the sea, caused by a violent earthquake, overwhelmed and completely destroyed Helice two years before the battle of Leuctra, B.C. 373. The details of this catastrophe will be found in Pausanias (7, 24) and Elian (*Hist. Anim.*, 11, 19). It was said, that some vestiges of the submerged city were to be seen long after the terrible event had taken place. (*Ovid, Met.*, 15, 293.) Eratosthenes, as Strabo reports, beheld the site of this ancient city, and he was assured by mariners that the bronze statue of Neptune was still visible beneath the waters, holding an hippocampe, or sea-horse

in his hand, and that it formed a dangerous shoal for their vessels. Heracles, of Pontus, relates that this disaster, which took place in his time, occurred during the night; the town, and all that lay between it and the sea, a distance of twelve stadia, being inundated in an instant. Two thousand workmen were afterward sent by the Achæans to recover the dead bodies, but without success. The same writer affirmed, that this inundation was commonly attributed to divine vengeance, in consequence of the inhabitants of Helice having obstinately refused to deliver up the statue of Neptune and a model of the Temple to the Ionians after they had settled in Asia Minor. (*ap. Strab.*, 385.—Compare the remarks of *Bernhardy*, *Eratosthenica*, p. 81.—*Diod. Sic.*, 15, 49.—*Pausan.*, 7, 24.—*Ælian*, H. A., 11, 19.) Seneca affirms, that Callisthenes the philosopher, who was put to death by Alexander the Great, wrote a voluminous work on the destruction of Helice (9, 23.—Compare *Aristot.*, *de Mund.*, c. 4.—*Polyb.*, 2, 41). Pausanias informs us, that there was still a small village of the same name close to the sea, and forty stadia from Ægium. (*Cramer's Ancient Greece*, vol. 3, p. 61.)

HELICON, a famous mountain in Bœotia, near the Gulf of Corinth. It was sacred to Apollo and the Muses, who were thence called Heliconiades. This mountain was famed for the purity of its air, the abundance of its waters, its fertile valleys, the goodness of its shades, and the beauty of the venerable trees which clothed its sides. Strabo (409) affirms, that Helicon nearly equals in height Mount Parnassus, and retains its snow during a great part of the year. Pausanias observes (9, 28), that no mountain of Greece produces such a variety of plants and shrubs, though none of a poisonous nature; on the contrary, several have the property of counteracting the effects produced by the sting or bite of venomous reptiles. On the summit was the grove of the Muses, where these divinities had their statues, and where also were statues of Apollo and Mercury, of Bacchus by Lysippus, of Orpheus, and of famous poets and musicians. (*Pausan.*, 9, 30.) A little below the grove was the fountain of Aganippe. The source Hippocrène was about twenty stadia above the grove; it is said to have burst forth when Pegasus struck his foot into the ground. (*Pausan.*, 9, 31.—*Strab.*, 9, 410.) These two springs supplied two small rivers named Olmus and Pernesus, and, after uniting their waters, flowed into the lake Copais, near Haliartus. Hesiod makes mention of these his favourite haunts in the opening of his Theogonia. The modern name of Helicon is *Palæovouni* or *Zagora*. The latter is the more general appellation; the name of Palæovouni is more correctly applied to that part of the mountain which is near the modern village Kakosia, that stands on the site of ancient Thisbe. (*Cramer's Ancient Greece*, vol. 2, p. 204.—Compare *Dodwell*, *Tour*, vol. 1, p. 260.)—II. A river of Macedonia, near Diem, the same, according to Pausanias (9, 30), with the Baphyrus. The same author informs us, that, after flowing for a distance of seventy-five stadia, it loses itself under ground for the space of twenty-two stadia; it is navigable on its reappearance, and is then called Baphyrus. According to Dr. Clarke, it is now known as the *Mauvo nero*. (*Cramer's Anc. Greece*, vol. 1, p. 209.)

HELICONIADES, a name given to the Muses, from their fabled residence on Mount Helicon, which was sacred to them. (*Lucret.*, 3, 1050)

HELIONÖRUS, I. a Greek poet, sixteen hexameters of whose are cited by Stobæus (*Serm.*, 98), containing a description of that part of Campania situate between the Lucrine Lake and Puteoli, and where Cicero had a country residence. The verses in question make particular mention of certain mineral waters at the foot of Mount Gyarus, reputed to have a salutary effect in cases of ophthalmia. Now, as these waters were

discovered a short time after the death of Cicero, when the villa of the orator had come into the possession of Antistius Vetus (*Plin.*, 31, 1), the poet Heliodorus must have been subsequent to Cicero's time, while, on the other hand, the elegance of his description forbids his being placed lower than the first or second century of our era. Some suppose him to have been the same with the rhetorician Heliodorus mentioned by Horace (*Sat.*, 1, 5, 2), as one of the companions of his journey to Brundisium. (*Schöll*, *Hist. Lit. Gr.*, vol. 4, p. 65, *seqq.*)—II. An Athenian physician, of whom Galen makes mention (*De Antid.*, 2, p. 77, *ed. Ald.*), and who also wrote a didactic poem, under the title of *Ἀπολκτικά*, "justification," of which Galen cites seven hexameters. The fragment preserved by Stobæus, and alluded to in the preceding article, might have belonged, perhaps, to this Heliodorus, and not to the individual mentioned under No. I. (Compare *Meineke*, *Comment. misc. fasc.*, 1, *Hale*, 1822, p. 36, and also the addenda to that work.)—III. A native of Larissa, who has left us a treatise on optics, under the title of *Κεφάλαια τῶν Ὀπτικῶν*, which is scarcely anything more than an abridgment of the optical work ascribed to Euclid. He cites the optics of Ptolemy. The time when he flourished is uncertain; from the manner, however, in which he speaks of Tiberius, it is probable that he lived a long time after that emperor. Oribasius has preserved for us a fragment of another work of Heliodorus's, entitled *Περὶ διαφορᾶς καταρτισμῶν*. This fragment treats of the *κοχλίας*, a machine for drawing water furnished with a screw. Some MSS. call this writer Damianus Heliodorus. The best edition is that of Bartholini, *Paris*, 1657, 4to. The work also appears in the *Opuscula Mythologica, Ethica et Physica*, of Gale, *Cantabr.*, 1670, 12mo.—IV. A Greek romance-writer, who was born at Emesa in Phœnicia, and flourished under the Emperors Theodosius and Arcadius at the close of the fourth century. He was raised to the dignity of a bishop of Tricea in Thessaly (*Socrates*, *Hist. Eccles.*), and is supposed to have written an Iambic poem on Alehymy, entitled, *Περὶ τῆς τῶν φιλοσόφων μυστικῆς τέχνης*, "On the occult science of the philosophers." It contains 169 verses. The authorship of this poem is assigned to Heliodorus by Georgius Cedrenus (compare Anyot's remarks in his French translation of the *Æthiopica*); but, notwithstanding the testimony of Cedrenus, this point has never been clearly ascertained. Heliodorus is better known as the author of a Greek romance, entitled, *Ἀιθιοπικά*, being the history of Theagenes and Chariclea, the latter a daughter of a king of Æthiopia. It is in ten books. This work was unknown in the West until a soldier of Anspach, under the Margrave Casimir of Brandenburg, assisting at the pillage of the library of Matthias Corvinus, at Buda, in 1526, being attracted by the rich binding of a manuscript, carried it off. He sold the prize afterward to Vincent Obsopæus, who published it at Basle in 1534. This was the celebrated romance of Heliodorus. "Until this period," observes Huet, in his treatise on the origin of romances, "nothing had been seen better conceived, or better executed, than these adventures of Theagenes and Chariclea. Nothing can be more chaste than their loves, in which the author's own virtuous mind assists the religion of Christianity, which he professed, in diffusing over the whole work that air of *honnêteté*, in which almost all the earlier romances are deficient. The incidents are numerous, novel, probable, and skilfully unfolded. The denouement is admirable; it is natural; it grows out of the subject, and is in the highest degree touching and pathetic." *Schöll* (*Hist. Litt. Gr.*, vol. 6, p. 229) remarks, that "the romance of Heliodorus is well conceived, and wrought up with great power; the episodes are to the purpose, and the characters and manners of the personages skilfully sustained." "No one can doubt."

observes Villemain, "that Heliodorus, when he wrote the work, was at least initiated in Christian sentiments. This is felt by a kind of moral purity which contrasts strongly with the habitual license of the Greek fables; and the style even, as the learned Coray remarks, contains many expressions familiar to the ecclesiastical writers. This style is pure, polished, symmetrical; and the language of love receives a character of delicacy and reserve, which is very rare among the writers of antiquity." It must not be disguised, however, that Huet, a courtier of Louis XIV., and the contemporary and admirer of Mademoiselle de Scudéry, judged after the models of romance which were fashionable in his own century. Poetry, battles, captivities, and recognitions fill up the piece; there is no picture of the mind, no history of the character carried on with the development of the action. The incidents point to no particular era of society, although the learned in history may perceive, from the tone of sentiment throughout, that the struggle had commenced between the pure and lofty spirit of Christianity and the grossness of pagan idolatry. Egypt, as Villemain remarks, is neither ancient Egypt, nor the Egypt of the Ptolemies, nor the Egypt of the Romans. Athens is neither Athens free nor Athens conquered: in short, there is no individuality either in the places or persons; and the vague pictures of the French romances of the seventeenth century give scarcely a caricatured idea of the model from which they were drawn.—It may not be amiss to mention here an incident relative to the poet Racine and the work of Heliodorus which we have been considering. When Racine was at Port Royal learning Greek, his imagination almost smothered to death by the dry erudition of the pious fathers, he laid hold instinctively on the romance of Heliodorus, as the only prop by which he might be preserved for his high destiny, even then, perhaps, shadowed dimly forth in his youthful mind. A tale of love, however, surprised in the hands of a Christian boy, filled his instructors with horror, and the book was seized and thrown into the fire. Another and another copy met the same fate; and poor Racine, thus excluded from the benefits of the common typographical art, printed the romance on his memory. A first love, wooed by stealth, and won in difficulty and danger, is always among the last to loose her hold on the affections; and Racine, in riper age, often fondly recurred to his forbidden studies at Port Royal. From early youth, his son tells us, he had conceived an extraordinary passion for Heliodorus; he admired both his style and the wonderful art with which the fable is conducted.—In the ecclesiastical history of Nicephorus Calistus, a story is told of Heliodorus, which, if true, would exhibit, on the part of the Thessalian church, somewhat of the fanatical spirit which in Scotland expelled Home from the administration of the altar. Some young persons having fallen into peril through the reading of such works, it was ordered by the provincial council, that all books whose tendency it might be to incite the rising generation to love, should be burned, and their authors, if ecclesiastics, deprived of their dignities. Heliodorus, rejecting the alternative which was offered him of suppressing his romance, lost his bishopric. This story, however, is nothing more than a mere romance itself, as Bayle has shown, by proving that the requisition to suppress it could neither have been given nor refused at a time when the work was spread over all Greece. (*Foreign Quarterly Review*, No. 9, p. 125, *seqq.*)—Various editions have been published of the romance of Heliodorus. The best is that of Coray, Paris, 1804, 2 vols. 8vo. The edition of Mitscherlich, Argent., 1798, 2 vols. 8vo, forming part of his *Erotici Græci*, is not held in much estimation.

HELIOGABALUS or ELAGABALUS, I. a deity among the Phœnicians. This deity, according to Capitolinus (*Vit. Macrin.*, c. 9) and Aurelius Victor, was the

Sun. Lampridius, however (*Vit. Heliog.*, c. 1), fluctuates between the Sun and Jupiter, while Spartianus (*Vit. Caracall.*, c. 11) leaves it uncertain. The orthography of the name is also disputed, some writing it Elagabalus, others Elagabalus and Alagabalus. Scaliger (*ad Euseb.*, p. 212) makes the name of this divinity equivalent to the Hebrew *Elah-Gebal.*, i. e., "*Gebalitarum Deus.*" (Consult, for other etymologies of the term, the remarks of *Hamaker, Miscell. Phœnic.*, p. 119, *seqq.*) Herodian gives us an accurate description of the form under which this deity was worshipped (5, 3, 10, *seqq.*); he also informs us that by this appellation the Sun was meant, and that the deity in question was revered not only by the Syrians, but that the native satraps and barbarian kings were accustomed to send splendid presents to his shrine. According to Herodian, the god Helio-gabalus was worshipped under the form of a large black stone, round below, and terminating above in a point; in other words, of a conical shape. This description is confirmed by the medals of Emesa, the principal seat of his worship, on which the conical stone is represented. So also, on the medals of Antoninus Pius, struck in this same city, an eagle appears perched on a cone. (*Mionnet, Rec. de Méd.*, vol 5, p. 227, *seqq.*) The same thing appears on medals of Caracalla (*Id.*, p. 229, n. 608), and on one (n. 607), an eagle with expanded wings stands before a conical stone in the middle of a hexastyle temple.—II M. Aurelius Antoninus, a Roman emperor. He was the grandson of Mæsa, sister to the Empress Julia, the wife of Septimius Severus. Mæsa had two daughters, Sœmis or Semiamira, the mother of the subject of this article, and Mammæa, mother of Alexander Severus. The true name of Helio-gabalus was Varius Avitus Bassianus, and he was reported to have been the illegitimate son of Caracalla. He was born at Antioch, A.D. 204. Mæsa took care of his infancy, and placed him, when five years of age, in the temple of the Sun at Emesa, to be educated as a priest; and through her influence he was made, while yet a boy, high-priest of the Sun. That divinity was called in Syria Helagabal or Elagabal, whence the young Varius assumed the name of Helio-gabalus or Elagabalus. After the death of Caracalla and the elevation of Macrinus, the latter having incurred by his severity the dislike of the soldiers, Mæsa availed herself of this feeling to induce the officers to rise in favour of her grandson, whom she presented to them as the son of the murdered Caracalla. Helio-gabalus, who was then in his fifteenth year, was proclaimed emperor by the legion stationed at Emesa. Having put himself at their head, he was attacked by Macrinus, who at first had the advantage; but he and his mother Sœmis, with great spirit, brought the soldiers again to the charge, and defeated Macrinus, who was overtaken in his flight and put to death, A.D. 218. Helio-gabalus, having entered Antioch, wrote a letter to the senate, professing to take for his model Marcus Aurelius Antoninus, a name revered at Rome; and he also assumed that emperor's name. The senate acknowledged him, and he set out for Rome, but tarried several months on his way amid festivities and amusements, and at last stopped at Nicomedia for the winter. In the following year he arrived at Rome, and began a career of debauchery, extravagance, and cruelty, which lasted the remaining three years of his reign, and the disgusting details of which are given by Lampridius, Herodian, and Dio Cassius. Some critics have imagined, especially from the shortness of his reign, that there must be some exaggeration in these accounts, for he could hardly have done, in so short a time, all the mischief that is attributed to him. That he was extremely dissolute, and totally unfit for reigning, is certain; and this is not to be wondered at, from his previous Eastern education, his extreme youth, the corrupt example of his mother, his

sudden elevation, and the general profligacy of the times. He surrounded himself with gladiators, actors, and other base favourites, who made an unworthy use of their influence. He married several wives, among others a Vestal. The imperial palace became a scene of debauch and open prostitution. Helio-gabalus, being attached to the superstitions of the East, raised a temple on the Palatine Hill to the Syrian god whose name he bore, and plundered the temples of the Roman gods to enrich his own. He put to death many senators; he established a senate of women, under the presidency of his mother Soëmis, which body decided all questions relative to female dresses, visits, precedences, amusements, &c. He wore his pontifical vest as high-priest of the Sun, with a rich tiara on his head. His grandmother Mæsa, seeing his folly, thought of conciliating the Romans by associating with him, as Cæsar, his younger cousin, Alexander Severus, who soon became a favourite with the people. Helio-gabalus, who had consented to the association, became afterward jealous of his cousin, and wished to deprive him of his honours, but he could not obtain the consent of the senate. His next measure was to spread the report of Alexander's death, which produced an insurrection among the prætorians. And Helio-gabalus, having repaired to the camp to quell the mutiny, was murdered, together with his mother and favourites, and his body was thrown into the Tiber, A.D. 222. He was succeeded by Alexander Severus. Helio-gabalus was eighteen years of age at the time of his death, and had reigned three years, nine months, and four days. (*Lamprid., Vit. Helio-gab.*—*Herodian*, 5, 3, *seqq.*—*Dio Cass.*, 78, 30, *seqq.*—*Id.*, 79, 1, *seqq.*)

HELIOÏPOLIS, a famous city of Egypt, situate a little to the east of the apex of the Delta, not far from modern Cairo. (*Strab.*, 805.) In Hebrew it is styled On or Ann. (*Well's Sacred Geography*, s. v.—*Ex-curs.*, 560.—Compare the remarks of *Cellarius, Geog. Antiq.*, vol. 1, p. 802.) In the Septuagint it is called Heliopolis (Ἡλιούπολις), or the city of the Sun. (*Schleusner, Lex. Vet. Test.*, vol. 2, p. 20, *ed. Glasg.*—In *Jeremiah*, xliii., 13, “*Beth Shemim*,” i. e., *Domus Solis*.) Herodotus also mentions it by this name, and speaks of its inhabitants as being the wisest and most ingenious of all the Egyptians (2, 3.—Compare *Nic. Damascenus*, in *Euseb., Prap. Evang.*, 9, 16). According to Berossus, this was the city of Moses. It was, in fact, a place of resort for all the Greeks who visited Egypt for instruction. Hither came Herodotus, Plato, Eudoxus, and others, and imbibed much of the learning which they afterward disseminated among their own countrymen. Plato, in particular, resided here three years. The city was built, according to Strabo (*l. c.*), on a long, artificial mound of earth, so as to be out of the reach of the inundations of the Nile. It had an oracle of Apollo, and a famous temple of the Sun. In this temple was fed and adored the sacred ox Mnevis, as Apis was at Memphis. This city was laid waste with fire and sword by Cambyzes, and its college of priests all slaughtered. Strabo saw it in a deserted state, and shorn of all its splendour. Heliopolis was famed also for its fountain of excellent water, which still remains, and gave rise to the subsequent Arabic name of the place, *Ain Shems*, or the fountain of the sun. The modern name is *Matarca*, or cool water. For some valuable remarks on the site of the ancient Heliopolis, in opposition to Larcher and Bryant, consult *Clarke's Travels*, vol. 5, *pref.*, xv., *seqq.*, and p. 140, in *notis*. Larcher erroneously pretends, that Heliopolis was situate within the Delta, and that *Matarca* stands on the site of an insignificant town of the same name, which has been confounded with the more ancient city. A solitary obelisk is all that remains at the present day of this once celebrated place. Other monuments, however, exist no doubt around this pillar, concealed only by a thin superficies

of soil. For a description of this obelisk, consult the work of the learned traveller just mentioned, vol. 5, p. 143.—H. A celebrated city of Syria, southwest of Emesa, on the opposite side of the Orontes. Its Grecian name, Heliopolis (Ἡλιούπολις), “City of the Sun,” is merely a translation of the native term *Baal-beek*, which appellation the ruins at the present day retain. Heliopolis was famed for its temple of the Sun, erected by Antoninus Pius (*Malala, Chron.*, 11, p. 119), and the ruins of this celebrated pile still attest its former magnificence. Venus was also revered in this city, and its maidens were therefore said to be the fairest in the land. (*Expositio Mundi*, &c., *Gener.*, p. 14.)

HELÏUM, a name given to the mouth of the Mæse in Germany. (*Plin.*, 4, 15.)

HELÏUS (Ἡλιος), the Greek name of the Sun or Apollo.

HELLANÏCUS, a Greek historian, a native of Mytilene, who flourished about 460 B.C. He wrote an account of various countries, both Grecian and Barbarian, in which he availed himself of the labours of Hecataeus and Hippias. Various productions of his are referred to by the ancient writers, under the titles of *Αἰγυπτιακά*, *Αἰολικά*, *Ἀργολικά*, &c. In order to arrange his narratives in chronological order, he made use of the catalogue of the priestesses of Juno at Argos, deposited in the temple at Sicyon. This is the first attempt that we find of the employment of chronology in history.—According to the ordinary derivation of this name, from *Ἑλλάς*, “Greece,” and *νίκη*, “victory,” the penult ought to be long. As, however, Hellanicus was of Æolic origin, it is more than probable, as Sturz remarks, that his name is the Æolic form merely of *Ἑλληνικός*, and hence has the penult short. Iobcock (*ad Phryg.*, p. 670) opposes this, however, and derives the name from *Ἑλλάς* and *νίκη*, as above, citing at the same time Tzetzes (*Posthom.*, 778), with whom it occurs as a fourth Epitrite (— — —). And hence Passow (*Lex. Gr.*) considers the penult doubtful. The opinion of Sturz, however, seems more deserving of being followed.—The fragments which remain of the writings of Hellanicus were published by Sturz in 1787, *Lips.*, 8vo; and a second edition in 1826. They are given also in the *Museum Criticum*, vol. 2, p. 90, *seqq.*, *Cambr.*, 1826.

HELLAS, a term first applied to a city and region of Thessaly, in the district of Phthiotis, but afterward extended to all Thessaly, and finally made a general appellation for the whole of Greece. “It is universally acknowledged,” observes Cramer, “that the name of Hellas, which afterward served to designate the whole of what we now call Greece, was originally applied to a particular district of Thessaly. At that early period, as we are assured by Thucydides, the common denomination of Hellenes had not yet been received in that wide acceptance which was afterward attached to it, but each separate district enjoyed its distinctive appellation, derived mostly from the clan by which it was held, or from the chieftain who was regarded as the parent of the race. In proof of this assertion, the historian appeals to Homer, who, though much later than the siege of Troy, never applies a common term to the Greeks in general, but calls them Danaï, Argivî, and Achæi. The opinion thus advanced by Thucydides finds support in Apollodorus, who states, that when Homer mentions the Hellenes, we must understand him as referring to a people who occupied a particular district in Thessaly. The same writer observes, that it is only from the time of Hesiod and Archilochus that we hear of the Panhellenes. (*Apollod., ap. Strab.*, 370.) It is true that the word occurs in our present copies of Homer, as in *Il.*, 2, 530, but Aristarchus and other critics rejected it as spurious. (*Schol. ad Il.*, *l. c.*) From Strabo, however, we learn that this was a disputed point; and he himself seems

inclined to imagine that Homer did not assign to the word *Ἑλλάς* so limited a signification as Thucydides supposed. But, whatever may be thought of the testimony of Homer in regard to this question, we can have no doubt as to the extension which the terms *Ἑλλάς* and *Ἑλλήνες* acquired in the time of Herodotus, Scylax, and Thucydides. Scylax, whose age is disputed, but of whom we may safely affirm that he wrote about the time of the Peloponnesian war, includes under Hellas all the country situated south of the Ambracian gulf and the Peneus. (*Peripl.*, p. 12, et 25.) Herodotus extends its limits still farther north, by taking in Thesprotia (2, 56), or, at least, that part of it which is south of the river Acheron (8, 47). But it is more usual to exclude Epirus from Græcia Propria, and to place its northwestern extremity at Ambracia, on the Ionian Sea, while Mount Homole, near the mouth of the Peneus, was looked upon as forming its boundary on the opposite side. This coincides with the statement of Scylax, and also with that of Dicaearchus in his descriptions of Greece (v. 31, *seqq.*) The name Græcia, whence that of Greece has descended unto us, was given to this country by the Romans. It comes from the Græci, one of the ancient tribes of Epirus (*Aristot., Meteor.*, 1, 14), who never became of any historical importance, but whose name must at some period have been extensively spread on the western coast, since the inhabitants of Italy appear to have known the country at first under this name.

1. History of Greece from the earliest times to the Trojan War.

The people whom we call Greeks (the Hellenes) were not the earliest inhabitants of the country. Among the names of the many tribes which are said to have occupied the land previous to the Hellenes, the most celebrated is that of the *Pelasgi*, who appear to have been settled in most parts of Greece, and from whom a considerable part of the Greek population was probably descended. The Caucones, Leleges, and other barbarous tribes, who also inhabited Greece, are all regarded by a modern writer (*Thirlwall, History of Greece*, vol. 1, p. 32-61) as parts of the Pelasgic nation. He remarks, "that the name Pelasgians was a general one, like that of Saxons, Franks, or Alemanni, and that each of the Pelasgian tribes had also one peculiar to itself." All these tribes, however, were obliged to submit to the power of the Hellenes, who eventually spread over the greater part of Greece. Their original seat was, according to Aristotle (*Meteor.*, 1, 14), near Dodona, in Epirus, but they first appeared in the south of Thessaly about B.C. 1384, according to the received chronology. In accordance with the common method of the Greeks, of inventing names to account for the origin of nations, the Hellenes are represented as descended from Hellen, who had three sons, Dorus, Xuthus, and Æolus. Achæus and Ion are represented as the sons of Xuthus; and from these four, Dorus, Æolus, Achæus, and Ion, the *Dorians*, *Æolians*, *Achæans*, and *Ionians* were descended, who formed the four tribes into which the Hellenic nation was for many centuries divided, and who were distinguished from each other by many peculiarities in language and institutions. At the same time that the Hellenic race was spreading itself over the whole land, numerous colonies from the East are said to have settled in Greece, and to their influence many writers have attributed the civilization of the inhabitants. Thus we read of Egyptian colonies in Argos and Attica, of a Phœnician colony at Thebes in Bœotia, and of a Mysian colony led by Pelops, from whom the southern part of Greece derived its name of Peloponnesus. The very existence of these colonies has been doubted by some writers; but, though the evidence of each one individually is perhaps not sufficient to satis-

fy a critical inquirer, yet the uniform tradition of the Greeks authorizes us in the belief, that Greece did in early times receive colonies from the East; a supposition which is not in itself improbable, considering the proximity of the Asiatic coast. The time which elapsed from the appearance of the Hellenes in Thessaly to the siege of Troy is usually known by the name of the *Heroic Age*. Whatever opinion we may form of the Homeric poems, it can hardly be doubted that they present a correct picture of the manners and customs of the age in which the poet lived, which, in all probability, differed little from the manners and customs of the Heroic Age. The state of society described by Homer very much resembled that which existed in Europe during the feudal ages. No great power had yet arisen in Greece; it was divided into a number of small states, governed by hereditary chiefs, whose power was limited by a martial aristocracy. Piracy was an honorable occupation, and war the delight of noble souls. Thucydides informs us (1, 4), that the commencement of Grecian civilization is to be dated from the reign of Minos of Crete, who acquired a naval power and cleared the Ægean Sea of pirates. Among the most celebrated heroes of this period were Bellerophon and Perseus, whose adventures were laid in the East; Theseus, the king of Athens, and Hercules. Tradition also preserved the account of expeditions undertaken by several chiefs united together, such as that of the *Argonauts*, of the *Seren against Thebes*, and of the *Siege of Troy*, B.C. 1184.

2. From the Siege of Troy to the Commencement of the Persian wars, B.C. 500.

We learn from Thucydides (1, 12), that the population of Greece was in a very unsettled state for some time after the Trojan war. Of the various migration which appear to have taken place, the most important in their consequences were those of the Bœotians from Thessaly into the country afterward called Bœotia and of the Dorians into Peloponnesus, the former in the sixtieth and the latter in the eightieth year after the Trojan war. About the same period the western coast of Asia Minor was colonized by the Greeks. The ancient inhabitants of Bœotia, who had been driven out of their homes by the invasion of the Bœotians, together with some Æolians, whence it has acquired the name of the Æolian migration, left Bœotia B.C. 1124, and settled in Lesbos and the northwestern corner of Asia Minor. They were followed by the Ionians in B.C. 1040, who, having been driven from their abode on the Corinthian Gulf, had taken refuge in Attica, whence they emigrated to Asia Minor and settled on the Lydian coast. The southwestern part of the coast of Asia Minor was also colonized about the same period by Dorians. The number of Greek colonies, considering the extent of the mother country, was very great; and the readiness with which the Greeks left their homes to settle in foreign parts forms a characteristic feature in their national character. In the seventh century before Christ the Greek colonies took another direction: Cyrene, in Africa, was founded by the inhabitants of Thera, and the coasts of Sicily and the southern part of Italy became studded with so many Greek cities, that it acquired the surname of the Great, or Greater, Greece.—The two states of Greece which attained the greatest historical celebrity were Sparta and Athens. The power of Athens was of later growth; but Sparta had, from the time of the Dorian conquest, taken the lead among the Peloponnesian states, a position which she maintained by the conquest of the fertile country of Messenia, B.C. 688. Her superiority was probably owing to the nature of her political institutions, which are said to have been fixed on a firm basis by her celebrated lawgiver Lycurgus, B.C. 884. At the head of the polity were two hereditary chiefs, but their power was greatly lim-

ated by a jealous aristocracy. Her territories were also increased by the conquest of Tegea in Arcadia. Athens only rose to importance in the century preceding the Persian wars; but even in this period her power was not more than a match for the little states of Megaris and Ægina. The city was long harassed by intestine commotions till the time of Solon, B.C. 594, who was chosen by his fellow-citizens to frame a new constitution and a new code of laws, to which much of the future greatness of Athens must be ascribed. We have already seen that the kingly form of government was prevalent in the Heroic Age. But, during the period that elapsed between the Trojan war and the Persian invasion, hereditary political power was abolished in almost all the Greek states, with the exception of Sparta, and a republican form of government established in its stead. In studying the history of the Greeks, we must bear in mind that almost every city formed an independent state, and that, with the exception of Athens and Sparta, which exacted obedience from the other towns of Attica and Laconia respectively, there was hardly any state which possessed more than a few miles of territory. Frequent wars between each other were the almost unavoidable consequence of the existence of so many small states nearly equal in power. The evils which arose from this state of things were partly remedied by the influence of the Amphictyonic council, and by the religious games and festivals which were held at stated periods in different parts of Greece, and during the celebration of which no wars were carried on. In the sixth century before the Christian era Greece rapidly advanced in knowledge and civilization. Literature and the fine arts were already cultivated in Athens under the auspices of Pisistratus and his sons; and the products of remote countries were introduced into Greece by the merchants of Corinth and Ægina.

3. *From the Commencement of the Persian Wars to the Death of Philip of Macedon, B.C. 336.*

This was the most splendid period of Grecian history. The Greeks, in their resistance to the Persians, and the part they took in the burning of Sardis, B.C. 499, drew upon them the vengeance of Darius. After the reduction of the Asiatic Greeks, a Persian army was sent into Attica, but was entirely defeated at Marathon, B.C. 490, by the Athenians under Miltiades. Ten years afterward the whole power of the Persian empire was directed against Greece; an immense army, led in person by Xerxes, advanced as far as Attica, and received the submission of almost all the Grecian states, with the exception of Athens and Sparta. But this expedition also failed; the Persian fleet was destroyed in the battles of Artemisium and Salamis; and the land forces were entirely defeated in the following year, B.C. 479, at Platæa in Beotia. Sparta had, previous to the Persian invasion, been regarded by the other Greeks as the first power in Greece, and accordingly she obtained the supreme command of the army and fleet in the Persian war. But, during the course of this war, the Athenians had made greater sacrifices and had shown a greater degree of courage and patriotism. After the battle of Platæa a confederacy was formed by the Grecian states for carrying on the war against the Persians. Sparta was at first placed at the head of it; but the allies, disgusted with the tyranny of Pausanias, the Spartan commander, gave the supremacy to Athens. The allies, who consisted of the inhabitants of the islands and coasts of the Ægean Sea, were to furnish contributions in money and ships, and the delicate task of assessing the amount which each state was to pay was assigned to Aristides. The yearly contribution was settled at 460 talents, about \$485,500, and Delos was chosen as the common treasury. The Athenians, un-

der the command of Cimon, carried on the war vigorously, defeated the Persian fleets, and plundered the maritime provinces of the Persian empire. During this period the power of Athens rapidly increased; she possessed a succession of distinguished statesmen, Themistocles, Aristides, Cimon, and Pericles, who all contributed to the advancement of her power, though differing in their political views. Her maritime greatness was founded by Themistocles, her revenues were increased by Pericles, and her general prosperity, in connexion with other causes, tended to produce a greater degree of refinement than existed in any other part of Greece. Literature was cultivated, and the arts of architecture and sculpture, which were employed to ornament the city, were carried to a degree of excellence that has never since been surpassed. While Athens was advancing in power, Sparta had to maintain a war against the Messenians, who again revolted, and were joined by a great number of the Spartan slaves (B.C. 464-455). But, though Sparta made no efforts during this period to restrain the Athenian power, it was not because she wanted the will, but the means. These, however, were soon furnished by the Athenians themselves, who began to treat the allied states with great tyranny, and to regard them as subjects, not as independent states in alliance. The tribute was raised from 460 to 600 talents, the treasury was removed from Delos to Athens, and the decision of all important suits was referred to the Athenian courts. When any state withdrew from the alliance, its citizens were considered by the Athenians as rebels, and immediately reduced to subjection. The dependant states, anxious to throw off the Athenian dominion, entreated the assistance of Sparta, and thus, in conjunction with other causes, arose the war between Sparta and Athens, which lasted for twenty-seven years (B.C. 431-404), and is usually known as the Peloponnesian war. It terminated by again placing Sparta at the head of the Grecian states. Soon after the conclusion of this war, Sparta engaged in a contest with the Persian empire, which lasted from B.C. 400 to 394. The splendid successes which Agesilaus, the Spartan king, obtained over the Persian troops in Asia Minor, and the manifest weakness of the Persian empire, which had been already shown by the retreat of the ten thousand Greeks from the heart of the Persian empire, appear to have induced Agesilaus to entertain the design of overthrowing the Persian monarchy; but he was obliged to return to his native country to defend it against a powerful confederacy, which had been formed by the Corinthians, Thebans, Argives, Athenians, and Thessalians, for the purpose of throwing off the Spartan dominion. The confederates were not, however, successful in their attempt; and the Spartan supremacy was again secured for a brief period by a general peace, made B.C. 387, usually known by the name of the peace of Antalcidas. Ten years afterward the rupture between Thebes and Sparta began, which led to a general war in Greece, and for a short time placed Thebes at the head of the Grecian states. The greatness of Thebes was principally owing to the wisdom and valour of two of her citizens, *Pelopidas* and *Epaminondas*. After the death of Epaminondas at the battle of Mantinea, B.C. 362, Thebes again sunk to its former obscurity. The Spartan supremacy was however destroyed by this war, and her power still more humbled by the restoration of Messenia to independence, B.C. 369. From the conclusion of this war to the reign of Philip of Macedon Greece remained without any ruling power. It is only necessary here to mention the part which Philip took in the *sacred war*, which lasted ten years (B.C. 356-346), in which he appeared as the defender of the Amphictyonic council, and which terminated by the conquest of the Phocians. The Athenians, urged on by Demosthenes, made an al-

hance with the Thebans for the purpose of resisting Philip; but their defeat at Charonea, B.C. 388, secured for the Macedonian king the supremacy of Greece. In the same year a congress of Grecian states was held at Corinth, in which Philip was chosen generalissimo of the Greeks in a projected war against the Persian empire; but his assassination in B.C. 336 caused this enterprise to devolve on his son Alexander.

4. *From the Accession of Alexander the Great to the Roman Conquest*, B.C. 146.

The conquests of Alexander extended the Grecian influence over the greater part of Asia west of the Indus. After his death the dominion of the East was contested by his generals, and two powerful empires were permanently established; that of the Ptolemies in Egypt and the Seleucidæ in Syria. The dominions of the early Syrian kings embraced the greater part of western Asia; but their empire was soon divided into various independent kingdoms, such as that of Bactria, Pergamus, &c., in all of which the Greek language was spoken, not merely at court, but to a considerable extent in the cities. From the death of Alexander to the Roman conquest, Macedon remained the ruling power in Greece. The Ætolian and Achæan leagues were formed, the former B.C. 284, the latter B.C. 281, for the purpose of resisting the Macedonian kings. Macedonia was conquered by the Romans B.C. 197, and the Greek states declared independent. This, however, was merely nominal; they only exchanged the rule of the Macedonian kings for that of the Roman people; and in B.C. 146, Greece was reduced to the form of a Roman province, called Achaia, though certain cities, such as Athens, Delphi, &c., were allowed to have the rank of free towns. The history of Greece, from this period, forms part of the Roman empire. It was overrun by the Goths in A.D. 267, and again in A.D. 398, under Alaric; and, after being occupied by the Crusaders and Venetians, at last fell into the hands of the Turks, on the conquest of Constantinople; from whom, with the exception of Macedonia, Thessaly, and Epirus, it is now again liberated. (*Encycl. Us. Knowl.*, vol. 12, p. 426, *seqq.*)

HELLE, a daughter of Athamas and Nephele, sister to Phrixus. She and her brother Phrixus, in order to avoid the cruel persecution of their stepmother Ino, fled from Thessaly on the back of a golden fleeced ram, which transported them through the air. They proceeded safely till they came to the sea between the promontory of Sigæum and the Chersonese, into which Helle fell, and it was named from her Hellespontus (*Helle's Sea*). Phrixus proceeded on his way to Colchis. (*Vid.* Athamas, Argonautæ, Phrixus.) The tomb of Helle was placed, according to Herodotus, on the shores of the Chersonese, near Cardia. (*Herod.*, 7, 58.)

HELLEN, the fabled son of Deucalion and Pyrrha, and progenitor of the Hellenic race. (*Vid.* Hellas, § 1, *History of Greece, from the earliest times to the Trojan war*.)

HELLENES (Ἕλληνες), the general name of the Grecian race. It was first borne by the tribes that came in from the north, at an early period, and eventually spread themselves over the whole of Greece. Their original seat was, according to Aristotle (*Meteor.*, 1, 14), near Dodona, in Epirus; but they first appeared in the south of Thessaly, about B.C. 1384, according to the common chronology. (*Vid.* Hellas, § 1, *History of Greece, from the earliest times to the Trojan war*.)

HELLESPONTUS, now the *Dardanelles*, a narrow strait between Asia and Europe, near the Propontis, which received its name, it is said, from Helle, who was drowned there in her voyage to Colchis. (*Vid.* Helle.) Its modern name of Dardanelles is supposed to come from

the ancient Dardania in its vicinity. Homer's epithet of πλάτεις, "broad," applied to so narrow a strait (*Il.*, 7, 86.—Compare *Il.*, 17, 432.—*Od.*, 24, 82.—*Æschyl.*, *Pers.*, 880), has given rise to much discussion, and is one of those points which have a bearing on the long-agitated question respecting the site of Troy. Hobhouse undertakes to explain the seeming inconsistency of Homer's term, by showing that the Hellespont should be considered as extending down to the promontory of Lectum, the northern boundary of Æolia, and that the whole line of coast to this point from Abydus, was considered by Strabo as being the shores of the Hellespont, not of the Ægean. (*Journey, Let.* 42.—Vol. 2, p. 206, *seqq.*, *Am. ed.*) The same writer observes, with regard to the breadth of the Hellespont, that it nowhere seems to be less than a mile across; and yet the ancient measurements give only seven stadia, or eight hundred and seventy-five paces. Walpole, on the other hand, as cited by Clarke (*Travels*, vol. 3, p. 91, in *notis*, *Eng. ed.*), assigns to the epithet πλάτεις the meaning of "salt," or "brackish," referring, in support of this conjecture, to Aristotle (*Meteorol.*, 2, 3.—*Op.*, ed. Duval, vol. 1, p. 556, *D. et E.*), who uses it three times in this sense, and to Hesychius. (Compare *Herod.*, 2, 108, and *Schweigh.*, *ad loc.*) This, however, is at best a very forced explanation. Homer appears to consider the Hellespont rather as a mighty river than a winding arm of the sea; and hence πλάτεις, "broad," becomes no inappropriate term, more especially if we take into the connexion the analogous epithets of ἀγῆρρος ("rapidly flowing"), and ἀπειρῶν ("boundless"), which are elsewhere applied by him to the same Hellespont. (*Il.*, 2, 845.—*Il.*, 24, 545.) Casaubon, in his commentary on Athenæus, adduces the passage quoted above by Walpole, together with one or two others, likewise from Aristotle, in favour of πλάτεις meaning "salt;" and a critic in the Edinburgh Review (vol. 21, p. 136), whom Blomfield quaintly designates as "censor quidam semidoctus," seeks to advocate the same opinion. It has few if any advocates, however, at the present day. (Consult *Blomf.*, *Gloss. ad Æsch.*, *Pers.*, 880.)—Some scholars suppose, that when Homer speaks of the "broad Hellespont," he actually means the northern part of the Ægean. Thus, Heyne observes, "Homer always places the camp on the Hellespont, in the more extensive signification of that term, as meaning the northern part of the Ægean Sea (*Il.*, 18, 150; 24, 346.—*Od.*, 24, 82.—*Il.*, 7, 86, &c.), and hence should be derived the explanation of the epithets πλάτεις and ἀπειρῶν." (*Beschreib.*, *der Eb. von Troja*, p. 250.)—Whether the denomination Hellespont was derived from Ἑλλάς, Greece at large (*Pind.*, *Pyth.*, 7, 7.—*Id. ibid.*, 10, 29), or from Ἑλλάς, the province or city (*Strab.*, 431), or from Helle, according to the popular legend, cannot now be ascertained.—Stephanus of Byzantium (p. 232, *ed. Berkel*) says the earlier name of the Hellespont was the Borysthenes (Βορυσθένης). (Compare *Ritter, Vorhalle*, p. 174.) Perhaps a careful investigation of the subject would lead to the conclusion, that Homer gives the name of Hellespont to the whole Propontis. (*Classical Journal*, vol. 16, p. 64.)—The Hellespont is celebrated for the love and death of Leander. (*Vid.* Hero, and Leander, and the remarks under the latter article.) It is famed also for the bridge of boats which Xerxes built over it when he invaded Greece. (*Vid.* remarks under the article Abydus, I.)

HELLOPIA, a district of Eubœa, in which Histiaæ was situated. (*Strab.*, 445.—Compare *Herodot.*, 8, 23.)

HELÖRUS, I. a river of Sicily, near the southern extremity of the island, now the *Abiso*. It is mentioned by several of the ancient poets, on account of the remarkably fertile country through which it flows. (*Virg.*, *Æn.*, 3, 659.—*Ovid.*, *Fast.*, 4, 487, &c.) Sil-
589

referring either to the noise of its waters in the numerous caverns found along its banks, or to the laments occasioned by its inundations of the neighbourhood. (*Mannert, Geogr.*, vol. 10, pt. 2, p. 340.)—11. A town of Sicily, near the mouth of the river Helorus. (*Steph. Byz.*, s. v. Ἑλωρος.) Pliny speaks of it, however, as a mere castle or fortified post, with a good fishery attached to it. But it was, in truth, a very ancient city, and very probably a place of some importance before the arrival of the Greeks. The adjacent country was very fertile and beautiful. Hence Ovid (*l. c.*) speaks of the "Helorian Tempe," and Diodorus Siculus (13, 19) of the Ἑλώριον πεδῖον, "Helorian plain." Compare also Virgil (*l. c.*), "Præpingue solum stagnantis Helori." The remains of this city are called *Muri Ucci*.

Ἡελος, I. a town of Laconia, on the left bank of the Eurotas, and not far from the mouth of that river. It was said to have owed its origin to Helios, the son of Perseus. The inhabitants of this town, having revolted against the Dorians and Heraclidæ, were reduced to slavery, and called Helots, which name was afterward extended to the various people who were held in bondage by the Spartans. (*Pausan.*, 3, 20.) Ephorus, as cited by Strabo (364), makes Agis to have reduced the Helots to subjection; but Pausanias (3, 2) speaks of a much later reduction of the place. To reconcile the statements of these two writers, we must suppose, that, at the subjugation of Helos by Agis, about 200 years before, some of the inhabitants had been suffered to remain, and that, at the time mentioned by Pausanias, they were finally destroyed or removed. Helos itself remained to the time of Thucydides (4, 54) and of Xenophon (*Hist. Gr.*, 6, 5, 32); perhaps a fortress on the coast. (*Clinton, Fasti Hellenici*, 2d ed., p. 405, note 2.) Polybius says (5, 19, 8; 20, 12), that the district of Helos was the most extensive and fertile part of Laconia; but the coast was marshy. In Strabo's time Helos was only a village, and some years later Pausanias informs us it was in ruins. In Lapie's map the vestiges of Helos are placed at *Tsyli*, about five miles from the Eurotas, and Sir W. Gell observes that the marsh of Helos is to the east of the mouth of that river. (*Gell's Itin. of the Morea*, p. 233.—*Cramer's Ancient Greece*, vol. 3, p. 193, seqq.)

Ἡελωτæ (Ἡελῶται), and Ἡελῶτες (Ἡελῶτες), the Helots or bondsmen of the Spartans. The common account, observes Müller (*Dorians*, vol. 2, p. 30, *Eng. trans.*—Vol. 2, p. 33, *German work*), of the origin of this class is, that the inhabitants of the maritime town of Helos were reduced by Sparta to this state of degradation, after an insurrection against the Dorians already established in power. This explanation, however, rests merely on an etymology, and that by no means probable, since such a Gentile name as Ἡελος (which seems to be the more ancient form) cannot by any method of formation have been derived from Ἑλος. The word Ἡελος is probably a derivative from Ἑλω in a passive sense, and consequently means "a prisoner." This derivation was known in ancient times. (Compare *Schol. Plat., Alcib.*, 1, p. 78, and *Lennep, Etymol.*, p. 257.) Perhaps the word signifies those who were taken after having resisted to the uttermost. It appears to me, however, that they were an aboriginal race, which was subdued at a very early period, and which immediately passed over as slaves to the Doric conquerors. In speaking of the condition of the Helots, we will consider their political rights and their personal treatment under different heads, though in fact the two subjects are very nearly connected. The first were doubtless exactly defined by law and custom, though the expressions made use of by ancient authors are frequently vague and ambiguous. "They were," says Ephorus (*ap. Strab.*, 365), "in a certain point of view, public slaves. Their possessor could neither

liberate them, nor sell them beyond the borders." From this it is evident that they were considered as belonging properly to the state, which to a certain degree permitted them to be possessed by, and apportioned them out to, individuals, reserving to itself the power of enfranchising them. But to sell them out of the country was not in the power even of the state; and, to the best of our knowledge, such an event never occurred. It is, upon the whole, most probable, that individuals had no power to sell them at all, as they belonged chiefly to the landed property, and this was unalienable. On these lands they had certain fixed dwellings of their own, and particular services and payments were prescribed to them. They paid as rent a fixed measure of corn; not, however, like the Peræci, to the state, but to their masters. As this quantity had been definitively settled at a very early period (to raise the amount being forbidden under heavy imprecations), the Helots were the persons who profited by a good, and lost by a bad, harvest, which must have been to them an encouragement to industry and good husbandry; a motive which would have been wanting if the profit and loss had merely affected the landlords. And by this means, as is proved by the accounts respecting the Spartan agriculture, a careful management of the cultivation of the soil was kept up. By means of the rich produce of the lands, and in part by plunder obtained in war, they collected a considerable property, to the attainment of which almost every access was closed to the Spartans. The cultivation of the land, however, was not the only duty of the Helots; they also attended upon their masters at the public meals, who, according to the Lacedæmonian principle of a community of property, mutually lent them to one another. (*Xen., Rep. Lac.*, 6, 3.—*Aristot., Pol.*, 2, 2, 5.) A large number of them was also employed by the state in public works. In the field the Helots never served as Hoplitæ, except in extraordinary cases; and then it was the general practice afterward to give them their liberty. (Compare *Thucyd.*, 7, 19, and 4, 80.) On other occasions they attended the regular army as light-armed troops (*ψιλοὶ*); and that their numbers were very considerable may be seen from the battle of Platæa, in which 5000 Spartans were attended by 35,000 Helots. Although they did not share the honour of the heavy-armed soldiers, they were in turn exposed to a less degree of danger. For, while the former, in close rank, received the onset of the enemy with spear and shield, the Helots, armed only with their sling and javelin, were in a moment either before or behind the ranks, as Tyrtæus accurately describes the relative duties of the light-armed soldier (*γύμνης*) and the Hoplite. Sparta, in her better days, is never recorded to have unnecessarily sacrificed the lives of her Helots. A certain number of them was allotted to each Spartan (*Herodot.*, 9, 28.—*Thucyd.*, 3, 8); at the battle of Platæa this number was seven. Those who were assigned to a single master were probably called *ἀμειψιτάρεις*. Of these, however, one in particular was the *servant* (*θεράπων*) of his master, as in the story of the blind Spartan, who was conducted by his Helot into the thickest of the battle of Thermopylæ, and, while the latter fled, fell with the other heroes. (*Herod.*, 7, 229.) It appears that the other Helots were in the field placed more immediately under the command of the king than the rest of the army. (*Herod.*, 6, 80 *et* 81.) In the fleet they composed the large mass of the sailors (*Xen., Hist. Gr.*, 7, 1, 12), in which service at Athens the inferior citizens and slaves were employed. It is a matter of much greater difficulty to form a clear notion of the treatment of the Helots, and of their manner of life; for the rhetorical spirit with which later historians have embellished their philanthropic views, joined to our own ignorance, has been productive of much confusion and misconception. Myron of Priene, in his romance

on the Messenian war, drew a very dark picture of Sparta, and endeavoured at the end to rouse the feelings of his readers by a description of the fate which the conquered underwent. "The Helots," says he (*ap. Athen.*, 14, p. 657, D.), "perform for the Spartans every ignominious service. They are compelled to wear a cap of dog's skin (*κυνῆ*), to have a covering of sheep's skin (*δισθέρα*), and are severely beaten every year without having committed any fault, in order that they may never forget they are slaves. In addition to this, those among them who, either by their stature or their beauty, raise themselves above the condition of a slave, are condemned to death, and the masters who do not destroy the most manly of them are liable to punishment." The partiality and ignorance of this writer are evident from his very first statement. The Helots wore the leathern cap with a broad band, and the covering of sheep's skin, simply because it was the original dress of the natives, which, moreover, the Arcadians had retained from ancient usage. (*Sophocles, Inachus, ap. Schol., Aristoph., av. 1203.—Valck., ad Theocrit. Adoniaz., p. 345.*) Laertes, the father of Ulysses, when he assumed the character of a peasant, is also represented as wearing a cap of goat's skin. (*Od.*, 24, 230.) The truth is, that the ancients made a distinction between town and country costume. Hence, when the tyrants of Sicily wished to accustom the unemployed people, whose numbers they dreaded, to a country life, they forced them to wear the *καρώνικη*, which had underneath a lining of fur. (*Pollux*, 7, 4, 68.) Thus also Theognis describes the countrymen of Megara as clothed with dressed skins, and dwelling around the town like frightened deer. The diphthera of the Helots, therefore, signified nothing more humiliating and degrading than their employment in agricultural labour. Now, since Myron purposely misrepresented this circumstance, it is very probable that his other objections are founded in error; nor can misrepresentations of this political state, which was unknown to the later Greeks, and particularly to writers, have been uncommon. Plutarch, for example, relates that the Helots were compelled to intoxicate themselves, and to perform indecent dances, as a warning to the Spartan youth; but common sense is opposed to so absurd a mode of education. Is it possible that the Spartans should have so degraded the men whom they appointed as tutors over their children? Female Helots also discharged the office of nurse in the royal palaces, and doubtless obtained all the affection with which the attendants of early youth were honoured in ancient times. It is, however, certain that the Doric laws did not bind servants to strict temperance; and hence examples of drunkenness among them might have served as a means of recommending sobriety. It was also an established regulation, that the national songs and dances of Sparta were forbidden to the Helots, who, on the other hand, had some extravagant and lascivious dances peculiar to themselves, which may have given rise to the above report. But are we not labouring in vain to soften the bad impression of Myron's account, since the fearful word *crypteia* is of itself sufficient to show the unhappy fate of the Helots and the cruelty of their masters? By this word is generally understood a chase of the Helots, annually undertaken at a fixed time by the youth of Sparta, who either assassinated them by night, or massacred them formally in open day, in order to lessen their numbers and weaken their power. Isocrates speaks of this institution in a very confused manner, and from mere report. Aristotle, however, as well as Hieracides of Pontus, attribute it to Lycurgus, and represent it as a war which the Ephori themselves, on entering upon their yearly office, proclaimed against the Helots. Thus it was a regularly legalized massacre, and the more barbarous as its periodical renewal could be foreseen by its unhappy victims. And

yet were not these Helots, who in many districts lived entirely alone, united by despair for the sake of common protection, and did they not every year kindle a most bloody and determined war throughout the whole of Laconia! Such are the inextricable difficulties in which we are involved by giving credit to the received accounts: the solution of which is, in my opinion, to be found in the speech of Megillus the Spartan, in the laws of Plato, who is there celebrating the manner of inuring his countrymen to hardships. "There is also among us," he says, "what is called the *crypteia* (*κρυπτεία*), the pain of undergoing which is scarcely credible. It consists in going barefoot on stones, in enduring the privations of the camp, performing menial offices without a servant, and wandering night and day throughout the whole country." The same is more clearly expressed in another passage (6, p. 763, B.), where the philosopher settles, that in his state sixty agronomi or phylarchs should each choose twelve young men from the age of twenty-five to thirty, and send them as guards in succession through the several districts, in order to inspect the fortresses, roads, and public buildings in the country; for which purpose they should have power to make free use of the slaves. During this time they were to live sparingly, to minister to their own wants, and range through the whole country in arms without intermission, both in winter and summer. These persons were to be called *κρυπτοί* or *ἀγοράνεμοι*. Can it be supposed that Plato would have here used the name of *crypteia*, if it signified a secret murder of the Helots, or, rather, if there were not an exact agreement in essentials between the institution which he proposed and that in existence at Sparta, although the latter was perhaps one of greater hardship and severity? The youth of Sparta were also sent out under certain officers, partly for the purpose of training them to hardships, partly of inspecting the territory of Sparta, which was of considerable extent, and who kept, we may suppose, a strict watch upon the Helots, who, living by themselves, and entirely separated from their masters, must have been for that reason more formidable to Sparta. We must allow that oppression and severity were not sufficiently provided against; only the aim of the custom was wholly different; though perhaps it was reckoned by Thucydides (4, 80) among those institutions which, as he says, were established for the purpose of keeping a watch over the Helots. It is hardly necessary to remark, that this established institution of the *crypteia* was in no way connected with those measures to which Sparta thought herself compelled in hazardous circumstances to resort. Thucydides leaves us to guess the fate of the 2000 Helots, who, after having been destined for the field, suddenly disappeared. It was the curse of this bondage (which Plato terms the hardest in Greece), that the slaves abandoned their masters when they stood in greatest need of their assistance; and hence the Spartans were even compelled to stipulate in treaties for aid against their own subjects. (*Thucyd.*, 1, 118.—*Id.*, 5, 14.—Compare *Aristot., Pol.*, 2, 6, 2).—A more favourable side of the Spartan system of bondage is, that a legal way to liberty and citizenship stood open to the Helots. The many intermediate steps seem to prove the existence of a regular mode of transition from the one rank to the other. The Helots who were esteemed worthy of an especial confidence were called *ἀγροί*; the *ἀγροί* were probably released from all service. The *δεσποιοῦνται*, who served in the fleets, resembled probably the freedmen of Attica, who were called the *out-dwellers* (οἱ ἑξωτικὸν οἰκοῦντες). When they received their liberty, they also obtained permission to dwell where they wished (*Thucyd.*, 5, 34.—*Id.*, 4, 80), and probably, at the same time, a portion of land was granted them without the lot of their former masters. After they had been in possession of liberty for some

time, they appear to have been called *Neodamodes* (*Thucyd.*, 7, 58), the number of whom soon came near to that of the citizens. (*Plut.*, *Vit. Ages.*, 6.) The *Mothones* or *Mothaces* were Helots, who, being brought up together with the young Spartans, obtained freedom without the rights of citizenship. (*Athenaeus*, 6, p. 271 E.)—The number of the Helots may be determined with sufficient accuracy from the account of the army at Plataea. We find that there were present in this battle 5000 Spartans, 35,000 Helots, and 10,000 Perioeci. The whole number of Spartans that bore arms amounted on another occasion to 8000, which, according to the same proportion, would give 56,000 for the number of Helots capable of bearing arms, and for the whole population about 224,000. If, then, the state of Sparta possessed 9000 lots (*κλῆροι*), there were twenty male Helots to each, and there remained 44,000 for the service of the state and of individuals. (*Müller, Dorians*, vol. 2, p. 30, *seqq.*, *Eng. trans.*—vol. 2, p. 33, German work.)

HELVETII, a nation of Gaul, conquered by Cæsar. Their country is generally supposed to have answered to modern *Suizterland*; but ancient Helvetia was of less extent than modern *Suizterland*, being bounded on the north by the Rhenus and Lacus Brigantinus, or *Lake of Constance*; on the south by the Rhodanus and the Lacus Lemanus, or *Lake of Geneva*; and on the west by Mons Jura. (*Cæs.*, *B. G.*, 1, &c.—*Tacit.*, *Hist.*, 1, 67 et 69.)

HELVI, a people of Gaul, north of the *Arecomici*, on the western bank of the Rhodanus. The mountain range of Cebenna (*Cevennes*) separated them from the *Arverni*. Their territory answers to what is now the Diocese of *Viviers*, and some traces of their capital, *Alba Augusta*, exist at the present day in the village of *Alps*. (*Cæs.*, *B. G.*, 7, 7, *seqq.*—*Lemaire, Ind. Geogr.*, ad *Cæs.*, s. v.)

HENETI, a people of Paphlagonia, along the coast of the Euxine, of whom there was an old tradition that they had migrated to the north of Italy, near the mouths of the Padus or *Po*, where they became the forefathers of the *Veneti*. (*Scymn.*, *Ch.*, v. 388, *seq.*—*Strab.*, 543—*Id.*, 608.) Virgil makes Antenor to have led the colony from Asia, after the destruction of Troy, and to have settled near the little river *Timavus*, which flows into the head waters of the Adriatic. The whole legend, however, is purely fabulous. The *Heneti* never came to Italy, and the *Veneti* in the latter country were of northern, perhaps German, descent. (*Vid. Veneti*.) The whole question respecting the *Heneti* is discussed by Heyne. (*Excurs.*, ad *Æn.*, 1, 242—*Excurs.*, vii., de *Timav. fluv.*)

HENIOCHI, a people of Asiatic Sarmatia, near Colchis, who were said to have been descended from Amphytus and Telchius, the charioteers (*ἡνίοχοι*) of Castor and Pollux. (*Mela*, 1, 19.—*Id.*, 6, 5.—*Strab.*, 490.) This account is, of course, a mere fable, arising out of some accidental resemblance between the true name of this people and the Greek term *ἡνίοχοι*. The *Heniochi* are mentioned by the ancient writers as bold and skilful pirates. (*Plin.*, 6, 4.—*Mela*, l. c.—*Vell. Patere.*, 2, 40.—*Amm. Marcell.*, 22, 15.—*Solin.*, c. 15.)

HEPHÆSTIA, I. one of the two principal towns in the island of Lemnos, the other being *Myrina*. (*Herod.*, 7, 140.—*Steph. Byz.*, s. v. *Ἡφαίστρία*).—II. A festival at Athens, celebrated annually, in honour of Vulcan (*Ἡφαιστος*). On this occasion there was a race with torches, called *ἀγὼν λαμπραδούχος*, from the altar of Prometheus in the Academia to the city gates. The competitors were young men, three in number, one of whom being chosen by lot to take his turn first, took a lighted torch in his hand and began his course. If the torch was extinguished before he arrived at the goal, he made way for the second competitor, and gave up the torch to him. If the second in like manner

failed, he made way for the third. If none performed the feat, a new race on the part of new competitors took place. If any of the contending parties, through fear of extinguishing the torch by too violent a motion, relaxed his pace, the spectators used to strike him with the palms of their hands, in order to urge him on. (*Pausan.*, 1, 30.—*Schol. ad Aristoph.*, *Ran.*, 131.) There are several beautiful allusions to this torch-race in the ancient writers, who usually compare it to the changing scenes and vicissitudes of life, the generations of men succeeding one another, and the passage from life to death. The most striking of these occurs in Lucretius (2, 75, *seqq.*—Compare *Plato*, *Leg.*, 6, p. 776.)

HEPHÆSTIÆDES, a name applied to the Lipari Islands, from the Volcanic character of the group. The appellation is a Greek one, and comes from *Ἡφαιστος* (*Hephæstus*), the Greek name for Vulcan, the god of fire. (*Plin.*, 3, 9.—*Vid. Lipara*, *Strongyle*, and *Æolice Insulæ*.)

HEPHÆSTION, I. a grammarian of Alexandria, one of the preceptors of the Emperor Verus (*Capitol.*, *Vit. Ver.*, c. 2), and who consequently flourished about the middle of the second century. He has left us a Treatise on Greek metres, entitled *Ἐγχειρίδιον περὶ μέτρων*, containing a large portion of all that we are acquainted with on this subject. The best edition is that of Gaisford, *Oxon.*, 1810, 8vo. The English edition has joined to it the *Chrestomathia* of Proclus.—II. A native of Thebes, whose age is uncertain. He wrote on astrological subjects. We have some parts of a work of his on the names and powers of the signs of the Zodiac (*Ἀποτελεσματικά περὶ τῆς ἐν μορίων ὀνομασίας καὶ δυνάμεως*). We have also some hexameters by him on the signs under which certain countries or certain cities are situated. They are part of a work entitled *Περὶ τῶν καταρχῶν*. The fragments on the signs of the zodiac are given by Camerarius in his astrological collection; the hexameters by Iriarte, *Cat. Cod. MSS. Gr. Bibl. Matrit.*, vol. 1, p. 244. (*Schöll, Hist. Lit. Gr.*, vol. 7, p. 47, *seqq.*)—III. A native of Macedonia, and intimate friend of Alexander the Great. He accompanied the latter in his eastern expedition, and held an important command under him. Alexander, in speaking of the intimacy that subsisted between them, used to say that Craterus was the friend of the king, but Hephæstion the friend of Alexander. After a long succession of faithful and arduous services, Hephæstion was seized with a fever at Echabana, B.C. 324, and died on the seventh day of his illness. His malady has been ascribed by some writers to excessive drinking; but the hardships which he had undergone only a short time previous, and the continual change of climate, would be sufficient of themselves to break down his strength. Alexander was presiding at the games on the seventh day of Hephæstion's illness, and the stadium was full of spectators, when a messenger brought intelligence that Hephæstion's malady had assumed a very alarming character. The monarch hurried away, but his friend was dead before he arrived.—The following passage from Arrian affords some curious information on this subject, and shows also from what a mass of contradictory matter the historian had to select his facts.—“Various writers have given various accounts of Alexander's sorrow on the occasion of Hephæstion's death. All agree that it was excessive; but his actions are differently described, as the writers were biased by affection or hostility to Hephæstion, or even to Alexander. Some, who have described his conduct as frantic and outrageous, regard all his extravagant deeds and words on the loss of his dearest friend as honourable to his feelings, while others deem them degrading, and unworthy of a king and of Alexander. Some write, that for the remainder of that day he lay lamenting upon the body of his friend, which he would not quit until he was

turned away by his companions; others, that he remained there for a day and a night. Others, again, write, that he hanged the physician Glaucias; because, according to one statement, he gave him wrong medicine; according to another, because he stood by, and allowed his patient to fill himself with wine. I think it probable, that he cut off his hair in memory of the dead, both for other reasons, and from emulation of Achilles, whom from his childhood he had chosen for his model. But those who write that Alexander drove the hearse which conveyed the body, state what is incredible. Nor are they more entitled to belief who say that he destroyed the temple of Æsculapius at Ecbatana. Almost all agree, however, that he ordered Hephæstion to be honoured with the minor religious ceremonies due to deified heroes. Some say that he consulted Ammon, whether he might not sacrifice to Hephæstion as to a god, and that the answer forbade him. All agree in the following facts: that for three days he tasted no food, nor permitted any attention to his person, but lay down either lamenting or mournfully silent; that he ordered a funeral pile to be constructed at an expense of 10,000 talents (some say more); that all his barbarian subjects were ordered to go into mourning; and that several of the king's companions, in order to pay their court, dedicated themselves and their arms to the deceased." (*Arrian, Exp. Al.*, 7, 14.—*Williams's Life of Alexander*, p. 324.)

HERPHÆSTIUM, a name given to a region in the extremity of Lycia, near Phaselis, from which fire issued when a burning torch was applied to the surface. This was owing to the naphtha with which the soil was impregnated. (*Seneca, Epist.*, 79.—*Plin.*, 2, 106.—*Comper Photius, Cod.*, 73, p. 146.—*Vid.* Chimæra, and remarks under that article.)

HEPTAPYLOS, a surname of Thebes in Bœotia, from its seven gates.

HERA (*Ἥρα*), the name of Juno among the Greeks. (*Vid.* Juno)

HERACLĒA, a name given to more than forty towns in Europe, Asia, Africa, and the islands of the Mediterranean. They are supposed to have derived this appellation from the Greek name of Hercules, *Ἡρακλῆς*, and to have either been built in honour of him, or placed under his protection. The most famous of these places were:

1. In Greece.

I. A city of Elis, near the centre of the province, to the southeast of Pisa, near the confluence of the Cytherus and Alpheus.—II. A city of Acarnania, on the shore of the Ionian Sea, and opposite the island of Carus.—III. A city of Epirus, on the confines of Athamania and Molossis, and near the sources of the Aras.—IV. Lyncestis, a town of Macedonia, at the foot of the Candavian Mountains, on the confines of Illyria. Its ruins still retain the name of *Ereklî*. (*French Strabo*, vol. 3, p. 102.) Mention is made of this town in Cæsar. (*B. Cæ.*, 3, 79.—Compare *Ptol.*, p. 83.—*Strabo*, 322.)—V. Sintica, the principal town of the Sinti in Thrace. (*Livy*, 45, 29.) We are informed by Livy (40, 24), that Demetrius, the son of Philip, was here imprisoned and murdered. Mannert thinks it the same with the Heraclea built by Amyntas, the brother of Philip. The Table Itinerary assigns a distance of fifty miles between Philippi and Heraclea Sintica: we know also from Hierocles (p. 639), that it was situated near the Strymon, as he terms it Heraclea Strymonis.—VI. Trachinæ, a town of Thessaly, founded by the Lacedæmonians, and a colony from Trachis, about 426 B.C., in the sixth year of the Peloponnesian war. (*Thucyd.*, 3, 92.) It was distant about sixty stadia from Thermopylæ, and twenty from the sea. Jason, tyrant of Pheræ, took possession of this city at one period, and caused the walls to be pulled down. (*Xen., Hist. Gr.*, 6, 4, 27.) Her-

aclea, however, again arose from its ruins, and became a flourishing city under the Ætolians, who sometimes held their general council within its walls. (*Liv.*, 25, 5.) It was taken by the Roman consul, Acilius Glabrio, after a long and obstinate siege. (*Liv.*, 37, 24.—*Polyb.*, 10, 42.—*Plin.*, 4, 7.) Sir W. Gell observed the vestiges of this city on a high flat, on the roots of Mount Ceta. (*Itin.*, p. 211.)

2. In Italy, Gaul, &c.

VII. A city of Lucania in Italy, and situate between the Aciris and Siris. It was founded by the Tarentini after the destruction of the ancient city of Siris, which stood at the mouth of the latter river (B.C. 428). This city is rendered remarkable in history, as having been the seat of the general council of the Greek states. Antiquaries seem agreed in fixing its site at *Policoro*. (*Strabo*, 263.—*Diod. Sic.*, 12, 36.)—VIII. A city of Campania, more commonly known by the name of Herclaneum.—IX. Caccabana, a city on the confines of Italy and Gaul, in Narbonensis Secunda. It was situate on the coast, to the south of Forum Julii.—X. Minoa, a city of Sicily on the southern coast, northeast of Agrigentum, at the mouth of the river Camicus. It was founded by Minos when he pursued Dædalus hither, and was subsequently called Heraclea from Hercules, after his victory over Eryx: so at least said the fables of the day. Some authorities make the original name to have been Macara, and Minos to have been, not the founder, but the conqueror of the place. (*Mela*, 2, 7.—*Liv.*, 34, 35.—*Cic.*, *de Jur. Sic.*, c. 50.—*Polyb.*, 1, 25.—*Diod. Sic.*, 16, 11.) Among the ruins of the present day stands a tower called *Torre de Capo Bianco*, a portion of which fell recently into the sea.

3. In Asia, Egypt, &c.

XI. Pontica (*Ἡράκλεια Πόντου, Ptol.*), a city on the coast of Bithynia, about twelve stadia from the river Lycus. It was founded by a colony of Megareans, strengthened by some Tanagrans from Bœotia: the numbers of the former, however, so predominated, that the city was in general considered as Doric. (*Arrian, Peripl.*, p. 14.—*Müller, Dorians*, vol. 1, p. 140, *Eng. transl.*) This place was famed for its naval power and its consequence among the Asiatic states, and a sketch of its history is presented to us in the Fragments of Memnon, collected by Photius. (*Cod.*, 214.) Memnon composed a history of the tyrants who reigned at Heraclea during a space of eighty-four years; but we have only now the abridgment of Photius, which is confirmed by incidental notices contained in Aristotle. (*Polit.*, 6, 5.)—Some traces of the ancient name are still apparent in the modern *Ereklî*. (*Cramer's Asia Minor*, vol. 1, p. 205.)—XII. A city of Æolis, at the entrance of the Gulf of Adramyttium, opposite Mytilene.—XIII. A city in southern Æolis, on the seacoast, near Cumæ.—XIV. A city of Caria, on the seacoast, near the mouth of the river Latmus, between Miletus and Priene. (*Ptol.*, 5, 10.) It was called, for distinction's sake from other places of the same name, Heraclea Latini. The site corresponds nearly with the village of *Onfa Bafî*. (*Cramer's Asia Minor*, vol. 1, p. 393.)—XV. A city of Syria, in the district of Cyrrhæstia, northwest of Hierapolis, and northeast of Berea, near the confines of Comagene.—XVI. A city of Lower Egypt, situate in the Delta, to the northeast of the Canopic mouth of the Nile.—XVII. or Heracleopolis Magna, a city of Egypt, in the Heracleotic nome, of which it was the capital. The ichneumon was worshipped here. (*Strab.*, 812.)—XVIII. or Heracleopolis Parva, a city of Egypt, southwest of Pelusium, within the limits of the Delta. The ruins are now called *Delbon*. (*Bischoff und Müller, Wörterb. der Geogr.*, s. v.)

HERACLĒUM, I. a town of Macedonia, half way between Dium and Tempe. (*Liv.*, 44, 8.) It corro-

sponds to the modern *Litochi*. (*Cramer's Ancient Greece*, vol. 1, p. 206.)—II. A promontory of Pontus, now *Tscherschambi*. There was a harbour near it, called also Heracleum. (*Arrian, Peripl.*, p. 16.)—III. A place on the coast of Colchis, near the mouth of the river Ciansus. (*Plin.*, 6, 5.)—IV. A city on the northern coast of Crete; north of Cnosus, and properly its harbour. The modern *Cartero* seems to correspond to it. (*Strabo*, 476.—*Plin.*, 4, 12.)—V. A city of Pontus, 360 stadia from the mouth of the Iris, and forty stadia west of the Thermodon. (*Arrian, Peripl.*)—VI. A city on the eastern coast of the Chersonesus Taurica, now *Arabat*. (*Ptolemy*.)—VII. Promontorium, a promontory of Sarmatia Asiatica, on the Pontus Euxinus, near the country of the Heniochi.

HERACLIDÆ, a name given in ancient history to a powerful Achæan race or family, the fabled descendants of Hercules. According to the unanimous account of the ancient writers, the children of Hercules, after the death of that hero, being persecuted by Eurystheus, took refuge in Attica, and there defeated and slew the tyrant. When their enemy had fallen, they resumed possession of their birthright in the Peloponnesus; but they had not long enjoyed the fruits of their victory, before a pestilence, in which they recognised the finger of Heaven, drove them again into exile. Attica again afforded them a retreat. When their hopes had revived, an ambiguous oracle encouraged them to believe, that, after they had reaped their third harvest, they should find a prosperous passage through the isthmus into the land of their fathers. But, at the entrance of the Peloponnesus, they were met by the united forces of the Achæans, Ionians, and Arcadians. Their leader Hyllus, the eldest son of Hercules, proposed to decide the quarrel by single combat; and Echemus, king of Tegea, was selected by the Peloponnesian confederates as their champion. Hyllus fell; and the Heraclidæ were bound by the terms of the agreement to abandon their enterprise for a hundred years. Yet both Cleodæus, son of Hyllus, and his grandson Aristomachus, renewed his attempt with no better fortune. After Aristomachus had fallen in battle, the ambiguous oracle was explained to his sons Aristodemus, Temenus, and Cresphontes; and they were assured, that the time, the third generation, had now come, when they should accomplish their return; not, however, as they had expected, over the guarded isthmus, but across the mouth of the western gulf, where the opposite shores are parted by a channel only a few furlongs broad. Thus encouraged, with the aid of the Dorians, Ætolians, and Locrians, they crossed the straits, vanquished Tisamenus, son of Orestes, and divided the fairest portion of the Peloponnesus among them. (*Vid.* Doris.)—The belief that the Dorians were led to the conquest of the Peloponnesus by princes of Achæan blood, the rightful heirs of its ancient kings, has the authority of all antiquity on its side. It had become current so early as the days of Hesiod; and it was received not only among the Dorians themselves, but among foreign nations. The protection afforded by the Athenians to the Heraclidæ against Eurystheus, continued to the latest times to be one of the favourite themes of the Attic poets and orators; and the precise district that had been assigned for the abode of the exiles was pointed out by tradition. The weak and unsettled state of the Dorians, in the earliest periods of their history, renders it probable that they were always willing to receive foreigners among them, who came recommended by illustrious birth, wealth, or merit. Nevertheless, possible as this is, the truth of the story has been questioned, on grounds that are certainly not light or arbitrary, if they do not outweigh all that has been alleged in its support. What is said to have happened might have been invented, and the occasion

and motives for the fabrication may be conceived still more easily than the truth of the fact; for such facts in the early history of Greece were undoubtedly much less common than such fictions. It is much less probable, that the origin of the Dorian tribes, as of all similar political forms which a nation has assumed in the earliest period of existence, should have been distinctly remembered, than that it should have been forgotten, and have been then attributed to imaginary persons. (*Thirlwall's History of Greece*, vol. 1, p. 255, *seqq.*)—The theory of Müller, which is referred to in the preceding remarks, makes the Heraclidæ to have been hereditary princes of the Doric race, descended from a Dorian Hercules; and it attempts to show, that the story of the Heraclidæ being descended from the Argive Hercules, who performed the commands of Eurystheus, was not invented until after the conquest of the Peloponnesus. (*Müller's Dorians* vol. 1, p. 57, *Eng. transl.*—But consult remarks under the article Doris.)

HERACLIDES, a name common to numerous individuals:

1. Magistrates, &c.

I. A Greek, minister of Seuthes, king of Thrace, who promised, and afterward refused, succours to the ten thousand during their retreat. (*Xen., Anab.*, 7, 3, 15.)—II. A governor of Delphi, B.C. 360. The temple was pillaged by the Phocians during his magistracy. (*Pausan.*, 10, 2.)—III. A Syracusan of high birth, who united himself to Dion for the purpose of overthrowing the younger Dionysius. He was appointed admiral through the influence of Dion, but abused his power in corrupting the people, and in encouraging a spirit of mutiny and dissatisfaction. After various instances of lenity and forgiveness on the part of Dion towards this individual, the friends of the former, finding that, as long as Heraclides existed, his turbulent and factious spirit would produce disorder in the state, broke into his house and put him to death. (*Plut., Vit. Dion.*)—IV. An individual who governed Syracuse along with Agathocles and Sosicrates, B.C. 317.—V. A son of Agathocles, slain by his father's soldiers. (*Justin*, 22, 5.)—VI. The murderer of Cotys, I. (*Demosth., contr. Arist.*)—VII. Commander of the garrison sent to Athens by Demetrius, after his capture of that city.—VIII. A native of Tarentum, minister of Philip V. of Macedon. He drew down upon himself the hatred of the people by his wicked conduct, and was finally disgraced.—IX. A young Syracusan of high birth, who brought on the naval conflict in which the Syracusans were completely victorious over the Athenians, B.C. 414. (*Plut., Vit. Nic.*)

2. Philosophers, Authors, &c.

X. Surnamed Ponticus, a native of Heraclea Pontica, and not, as some maintain, of Sinope, was of rich parentage. Having travelled into Greece for the purpose of devoting himself to the study of philosophy, he became one of the auditors of Speusippus; or, according to Suidas, of Plato himself. He afterward attached himself to Aristotle, and Diogenes Laertius ranks him among the Peripatetics. Following the example of this last-mentioned school, he piqued himself on a great variety of knowledge; he wrote on subjects of all kinds, and even composed a tragedy, which he published under the name of Thespiis. He was always attired with much elegance, which made the Athenians change his name, in sport, from *Ποικίλος* to *Πομπικός* ("Ostentatious"). Diogenes Laertius informs us, that he had reared a domestic serpent in secret, and, when about to die, besought his friends to conceal his body, and let the serpent occupy its place. The artifice, however, was discovered; the serpent, having become alarmed at some noise made in the house, fled from it before the philosopher had breathed his last

This story, however, is entitled to little, if any credit, as well as another related by the same Suidas, of the Pythia's having been bribed by Heracles, and having, in consequence, directed the people of Heraclea, during a period of famine, to present a crown of gold to him, and to decree him funeral honours after death. We have remaining of this writer some portions of a work of his on the constitutions of various states (*περὶ Πολιτειῶν*), which Coray thinks is an abridgment of Aristotle's larger work on this subject. These extracts, which have several times been appended to editions of various history and to other collections, were given separately with a Latin translation, another in German, and with notes, by Köhler, *Hals*, 1804, 8vo. The best edition, however, is that of Coray, which follows Ælian in the first volume of the *Bibliotheca Græca*, Paris, 1805, 8vo. We have also, under the name of Heracles, a treatise on the Allegories of Homer (*Ἀλληγορικαὶ Ὅμηρικαὶ*). It is not, however, by the individual of whom we have just been speaking; but is merely an extract from the Stoic doctrines on this subject. The latest edition of this work is that of Schow, *Götting.*, 1782, 8vo. A new and more correct edition was expected from Hase, based on a MS. more complete than any preceding one, and which he had discovered in the Royal Library at Paris; but none has ever appeared. (*Biogr. Univ.*, vol. 20, p. 214.)—XI. A native of Tarentum, celebrated for his medical knowledge. He wrote on the *Materia Medica*, on poisons, and on the virtues of plants. His works are lost. (*Fabr., Bibl. Gr.*, vol. 13, p. 77.—Compare *Schweigh.*, *ad Athen. Ind. Auct.*, vol. 9, p. 121, *seqq.*) He appears to have flourished about the 126th Olympiad, or B.C. 276. We have a dissertation on this writer by Kühn (*Opusc. Acad.*, Lips., 8vo, vol. 2, p. 150, *seqq.*).—XII. A native of Cyme in Æolis, whose work on the Persians (*Περσικά*) is mentioned in Athenæus (2, p. 48, c.—*Id.*, 4, p. 145, a.—Consult *Schweigh.*, *ad Athen. Ind. Auct.*, vol. 9, p. 120.)—XIII. Surnamed Ponticus Junior, a writer who flourished during the first century of our era. (*Athen.*, 14, p. 649, c.—*Schweigh.*, *ad loc.*)—XIV. A Macedonian painter, who lived at the time of the overthrow of the Macedonian empire. He at first painted ships. On the defeat and captivity of Perses he retired to Athens, according to Pliny, which would be 168 B.C. The same writer also states, that he attained to a degree of reputation, but was yet entitled to only a cursory mention. (*Plin.*, 35, 11.)—XV. An Ephesian sculptor, son of Agasias, who made, in conjunction with Harnias, the statue of Mars now in the Paris Museum. His age is uncertain. (*Claraz. Deser. des Antiques du Muséum Royal*, nr. 411, p. 173.)

HERACLITUS, a native of Ephesus, was surnamed "the Naturalist" (*ὁ φυσικός*), and belongs to the dynamical school of the Ionian philosophy. He is said to have been born about 500 B.C., and, according to Aristotle, died in the sixtieth year of his age. The title he assumed of "self-taught" (*αὐτοδίδακτος*), refutes at once the claims of the various masters whom he is said to have had, and the distinguished position that he held in political life attests the wealth and lustre of his descent. The gloomy haughtiness and melancholy of his temperament led him to despise all human pursuits, and he expressed unqualified contempt as well for the political sagacity of his fellow-citizens as for the speculations of all other philosophers, which had mere learning, and not wisdom, for their object. It is utterly untrue, therefore, though commonly related of him, that he was continually shedding tears on account of the vices and follies of mankind, and the story is as little entitled to sober belief as that of the perpetually-laughing Democritus. Of the work of Heraclitus "On Nature" (*περὶ φύσεως*), the difficulty of which obtained for him the surname of *σκοτεινός*, or "the obscure," many fragments are still extant, and

exhibit a broken and concise style, hinting at rather than explaining his opinions, which are often conveyed in mythical and half-oracular images. On this account he well compares himself to the Sibyl, "who," he says, "speaking with inspired mouth, senseless, inornate, and unperumed, pierces through centuries by the power of the gods." According to Heraclitus, the end of wisdom is to discover the ground and principle of all things. This principle, which is an eternal, ever-living unity, and pervades and is in all phenomena, he called *fire*. By this term, however, Heraclitus understood, not the elemental fire or flame, which he held to be the very excess of fire, but a warm and dry vapour; which, therefore, as air, is not distinct from the soul or vital energy, and which, as guiding and directing the mundane development, is endued with wisdom and intelligence. This supreme and perfect force of life is obviously without limit to its activity; consequently, nothing that it forms can remain fixed; all is constantly in a process of formation. This he has thus figuratively expressed: "No one has ever been twice on the same stream." Nay, the passenger himself is without identity: "On the same stream we do and we do not embark; for we are and we are not."—The vitality of the rational fire has in it a tendency to contraries, whereby it is made to pass from gratification to want, and from want to gratification, and in fixed periods it alternates between a swifter and a slower flux. Now these opposite tendencies meet together in determinate order, and, by the inequality or equality of the forces, occasion the phenomena of life and death. The quietude of death, however, is a mere semblance, which exists only for the senses of man. For man, in his folly, forms a truth of his own, whereas it is only the universal reason that is really cognizant of the truth. Lastly, the rational principle, which governs the whole moral and physical world, is also the law of the individual; whatever, therefore, is, is the wisest and the best—and "it is not for man's welfare that his wishes should be fulfilled—sickness makes health pleasant, as hunger does gratification, and labour rest."—The physical doctrines of Heraclitus form no inconsiderable portion of the eclectic system of the later Stoics; and, in times still more recent, there is much in the theories of Schelling and Hegel that presents a striking though general resemblance thereto.—According to the ancient writers, neither critics nor philosophers were able to explain his productions, on account of their extreme obscurity; and they remained in the temple of Diana at Ephesus, where he himself had deposited them, for the use of the learned, until they were made public by Crates, or, as Tatian relates the matter (*adv. Græc.*, p. 143), till the poet Euripides, who frequented the temple of Diana, committing the doctrines and precepts of Heraclitus to memory, accurately repeated them. From the fragments of this work, as preserved by Sextus Empiricus, it appears to have been written in prose, which makes Tatian's account less credible. Heraclitus is said to have eventually shunned intercourse with the world, and devoted himself to retirement and meditation. His place of residence was a mountainous retreat, and his food the produce of the earth. This diet and mode of life at length occasioned a dropsy, for which he could obtain no relief by medical advice. It seems that the philosopher, who was always fond of enigmatical language, proposed the following question to the physicians: "Is it possible to bring dryness out of moisture?" and upon their answering in the negative, in place of stating his case more plainly to them, he turned his own physician, and attempted to effect a cure by placing himself in the sun, and causing a slave to cover his body with the dung of cattle. The experiment proved, as may easily be imagined, to be anything but a successful one.—The fragments of Heraclitus have been collected from Plutarch, Sto-

æus, Clemens of Alexandria, and Sextus Empiricus, and explained by Schleiermacher, in Wolf and Buttmann's *Museum der Alterthumswissenschaft*, vol. 1, p. 313-533. — Consult also Brandis, *Handbuch der Geschichte der Griechisch. und Röm. Philos.*, Berlin, 1835. — Ritter's *History of Ancient Philosophy*, vol. 1, p. 230, *seqq.*, Eng. transl. — *Encycl. Us. Knowl.*, vol. 12, p. 137.)

HERÆA, I. a city of Arcadia, on the slope of a hill rising gently above the right bank of the Alpheus, and near the frontiers of Elis, which frequently disputed its possession with Arcadia. (*Xen., Hist. Gr.*, 6, 5, 22.) Before the Cleomeneic war, this town had joined the Achaean league, but was then taken by the Ætolians, and recaptured by Antigonus Doson, who restored it to the Achæans. (*Polyb.*, 2, 54. — *Id.*, 4, 77. — *Liv.*, 28, 7.) In Strabo's time Heræa was greatly reduced; but when Pausanias visited Arcadia it appears to have recovered from this state of decay (*Pausan.*, 8, 26. — Compare *Thucyd.*, 5, 67.) Stephanus remarks, that this place was also known by the name of Sologorgus (s. v. Ἡραία). Its site is now occupied by the village of *Agiani*. (*Gell. Att.*, p. 113.) — II. A festival at Argos in honour of Juno, who was the patroness of that city. It was also observed by the colonies of the Argives, which had been planted at Samos and Ægina. There were always two processions to the temple of the goddess without the city walls. The first was of the men in armour, the second of the women, among whom the priestess, a woman of the first rank, was drawn in a chariot by white oxen. The Argives always reckoned their year from her priesthood, as the Athenians from their archons, or the Romans from their consuls. When they came to the temple of the goddess, they offered a hecatomb of oxen. Hence the sacrifice is often called *ἑκατόμβοια*, and sometimes *λέγεσθαι*, from *λέχος*, a bed, because Juno presided over marriage, births, &c. There was a festival of the same name in Elis, celebrated every fifth year, at which sixteen matrons wove a garment for the goddess.

HERÆUM, I. a temple and grove of Juno, situate about forty stadia from Argos, and ten from Mycenæ. The structure was embellished with a lofty statue of Juno, made of ivory and gold; a golden peacock, enriched with precious stones, and other equally splendid ornaments. — II. A large and magnificent temple of Juno in the island of Samos, built by the architect Rhæcus, who is said to have invented the art of casting in brass. (*Pausan.*, 8, 14. — *Herod.*, 3, 60. — *Plin.*, 35, 12.)

HERCULANÆUM, a city of Campania, on the coast, and not far from Neapolis. Cicero writes the name *Herculanum* (*ad Att.*, 7, 3). The situation of this place is no longer doubtful since the discovery of its ruins. Cluverius was right in his correction of the *Tabula Theodosiana*, which reckoned twelve miles between this place and Neapolis instead of six, though he removed it too far from *Portici* when he assigned to it the position of *Torre del Greco*. Nothing is known respecting the origin of Herculaneum, except that fabulous accounts ascribed its foundation to Hercules on his return from Spain. (*Dion. Hal.*, 1, 44.) It may be inferred, however, from a passage in Strabo, that this town was of great antiquity. It may be reasonably conjectured, too, that Herculaneum was a Greek city, but that its name was altered to suit the Latin or Oscan pronunciation. At first it was only a fortress, which was successively occupied by the Osci, Tyrreni, Pelasgi, Samnites, and lastly by the Romans. Being situated close to the sea, on elevated ground, it was exposed to the southwest wind, and from that circumstance was reckoned particularly healthy. (*Strabo*, 247.) We learn from Velleius Paterculus, that Herculaneum suffered considerably during the civil wars. (Compare *Florus*, 1, 16.) This

place is mentioned also by Mela (2, 4), and by Sisenus, a more ancient writer than any of the former; he is quoted by Nonius Marcellus (*De Indisc. Gen.*, v. *Fluvius*). Ovid likewise notices it under the name of "*Urben Herculeam*." (*Met.*, 15, 711.) Herculaneum, according to the common account, was overwhelmed by an eruption of Vesuvius in the first year of the reign of Titus, A.D. 79. Pompeii, which stood near, shared the same fate. It is probable, however, that the subversion of Herculaneum was not sudden, but progressive, since Seneca mentions a partial demolition which it sustained from an earthquake. (*Nat. Quæst.*, 6, 1.) After being buried for more than sixteen hundred years, these cities were accidentally discovered: Herculaneum in 1713, by labourers digging for a well; and Pompeii forty years after. It appears that Herculaneum is in no part less than seventy feet, and in some parts one hundred and twelve feet below the surface of the ground, while Pompeii is buried ten or twelve feet deep, more or less. Sir W. Hamilton thinks, that the matter which covers the city of Herculaneum is not the produce of a single eruption, but that the matter of six eruptions has taken its course over that with which the town is covered, and which was the cause of its destruction. Many valuable remains of antiquity, such as busts, manuscripts, &c., have been recovered from the ruins of this ancient city, and form the most curious museum in the world. They are all preserved at *Portici*, and the engravings taken from them have been munificently presented to the different learned bodies of Europe. The plan also of many of the public buildings has been laid out, and especially that of the theatre. Sir W. Hamilton thinks, that the matter which first issued from Vesuvius and covered Herculaneum was in the state of liquid mud, and that this has been the means of preserving the pictures, busts, and other relics, which otherwise must have been either entirely destroyed by the red-hot lava, or else have become one solid body along with it when cooled. In illustration of this remark, we may cite the following from a periodical work (*Edinburgh Review*, vol. 45, p. 304.) "An enormous quantity of aqueous vapour is exhaled in every volcanic eruption, which, being condensed by the cold in the regions of the atmosphere beyond the reach of the volcano's heat, falls down again in the form of rain, and, when it mixes with the clouds of ashes, it forms that compound which has been sometimes mistaken for an actual eruption of mud from the crater. It was such a compound as this that overwhelmed Herculaneum, and it is found to consolidate very speedily into a hard, compact substance." Among the excavations at Herculaneum, in the remains of a house supposed to have belonged to L. Piso, was found a great number of volumes of buried *papyrus*. Many of these papyri, as they have since been generally termed, were destroyed by the workmen; but as soon as it was known that they were the remnants of ancient manuscripts, their development became an object of no common interest to the learned world. Father Piaggi invented a machine for unrolling them, which has been described by several writers. When we reflect on the number of valuable works which have been lost since the period when Herculaneum was destroyed, we ought not to be surprised at the sanguine expectations which, upon the first discovery of the MSS., were entertained, of adding some important acquisitions to the treasures of ancient literature which we already possess. The lost books of Livy, and the comedies of Menander, presented themselves to the imagination of almost every scholar. Each, indeed, anticipated, according to his taste, the mental pleasures and the literary labours which awaited him. These enthusiastic hopes were perhaps too suddenly repressed, as they had been too easily excited. The first papyrus which was opened contained a treatise

upon music, by Philodemus the Epicurean. It was in vain that Mazoechi and Rosini wrote their learned comments on this dull performance: the sedative was too strong; and the curiosity which had been so suddenly awakened, was as quickly lulled to repose. A few men of letters, indeed, lamented that no farther search was made for some happier subjects, on which learned industry might have been employed; but the time, the difficulty, and the expense which such an enterprise required, and the uncertainty of producing anything valuable, had apparently discouraged and disgusted the academicians of Portici. Things were in this state when the Prince of Wales, afterward George IV., proposed to the Neapolitan government to delay the expenses of unrolling, deciphering, and publishing the manuscripts. This offer was accepted by the court of Naples; and it was consequently judged necessary by his royal highness to select a proper person to superintend the undertaking. The reputation of Mr. Hayter as a classical scholar justified his appointment to the place which the munificence of the prince, and his taste for literature, had created. This gentleman arrived at Naples in the beginning of the year 1802, and was nominated one of the directors for the development of the manuscripts. During a period of several years, the workmen continued to open a great number of the papyri. Many, indeed, of these frail substances were destroyed, and had crumbled into dust under the slightest touch of the operator. When the French invaded the kingdom of Naples in the year 1806, Mr. Hayter was compelled to retire to Sicily. It is to be deeply regretted that all the papyri were left behind. (*Quarterly Review*, vol. 3, p. 2.) An account of more recent operations, including the interesting experiments of Sir Humphrey Davy, will be found in the latest edition of the *Encyclopedia Britannica*, under the article *Herculeanum*.

HERCULES, a celebrated hero, son of Jupiter and Alcmena, who, after death, was ranked among the gods, and received divine honours. His reputed father was Amphitryon, son of Alcæus, who, having accidentally killed his father-in-law Electryon, was compelled to leave Mycenæ and take refuge in Thebes, where Hercules was born. While yet a mere infant, or, according to others, before he had completed his eighth month, the jealousy of Juno, intent upon his destruction, sent two snakes to devour him. The child, not terrified at the sight of the serpents, boldly seized them in both his hands, and squeezed them to death, while his brother Iphiclus alarmed the house with his shrieks. (*Vid.* Iphiclus.) He was early instructed in the liberal arts, and Castor, the son of Tyndarus, taught him the use of arms, Eurystus how to shoot with a bow and arrows, Autolycus to drive a chariot, Linus to play on the lyre, and Eumolpus to sing. Like the rest of his illustrious contemporaries, he soon after became the pupil of the centaur Chiron. In the 18th year of his age, he resolved to deliver the neighbourhood of Mount Cithæron from a huge lion which preyed on the flocks of Amphitryon, his supposed father, and which laid waste the adjacent country. After he had destroyed the lion, he delivered his country from the annual tribute of a hundred oxen which it paid to Erginus. (*Vid.* Erginus.) Such public services became universally known; and Creon, who then sat on the throne of Thebes, rewarded the patriotic deeds of Hercules by giving him his daughter in marriage, and intrusting him with the government of his kingdom. As Hercules, by the will of Jupiter, was subjected to the power of Eurystheus (*vid.* Eurystheus), and obliged to obey him in every respect, Eurystheus, acquainted with his successes and rising power, ordered him to appear at Mycenæ and perform the labours which, by priority of birth, he was empowered to impose upon him. Hercules refused; and Juno, to punish his disobedience,

rendered him delirious, so that he killed his own children by Megara, supposing them to be the offspring of Eurystheus. (*Vid.* Megara.) When he recovered his senses, he was so struck with the misfortunes which had proceeded from his insanity, that he concealed himself and retired for some time from the society of men. He afterward consulted the oracle of Apollo, and was told that he must be subservient for twelve years to the will of Eurystheus, in compliance with the commands of Jupiter; and that, after he had achieved the most celebrated labours, he should be translated to the gods. So plain and expressive an answer determined him to go to Mycenæ, and to bear with fortitude whatever gods or men imposed upon him. Eurystheus, seeing the hero totally subjected to him, and apprehensive of so powerful an enemy, commanded him to achieve a number of enterprises the most difficult and arduous ever known, generally called the twelve labours of Hercules. The favour of the gods had completely armed him when he undertook his labours. He had received a sword from Mercury, a bow from Apollo, a golden breastplate from Vulcan, horses from Neptune, a robe from Minerva. He himself cut his club in the Nemean wood. The first labour imposed upon Hercules by Eurystheus was to kill the lion of Nemea, which ravaged the country near Mycenæ. The hero, unable to destroy him with his arrows, boldly attacked him with his club, pursued him to his den, and, after a close and sharp engagement, choked him to death. He carried the dead beast on his shoulders to Mycenæ, and ever after clothed himself with the skin. Eurystheus was so astonished at the sight of the beast and at the courage of Hercules, that he ordered him never to enter the gates of the city when he returned from his expeditions, but to wait for his orders without the walls. He even made himself a brazen subterranean apartment, into which he retired whenever Hercules returned. (*Vid.* Chalciceus and Eurystheus.)—The second labour of Hercules was to destroy the Lernaean hydra, which abode in the marsh of Lerna, whence it used to come out on the land, and kill the cattle and ravage the country. This hydra had a huge body, with nine heads, eight of them mortal, and one in the middle immortal. Hercules mounted his chariot, which was driven by Iolaus, son of Iphiclus, and, on coming to Lerna, he stopped the horses and went in quest of the hydra, which he found on a rising ground, near the springs of Anymone, where its hole was. He shot at the animal with fiery darts till he made it come out; and he then grasped and held it, while it twisted itself about his legs. The hero crushed its heads with his club, but to no purpose; for, when one was crushed, two sprang up in its stead. A huge crab also aided the hydra, and bit the feet of Hercules. He killed the crab, and then called upon Iolaus to come to his assistance. Iolaus immediately set fire to the neighbouring wood, and with the flaming brands searing the necks of the hydra as the heads were cut off, effectually checked their growth. Having thus got rid of the mortal heads, Hercules cut off the immortal one and buried it, setting a heavy stone on the top of it, in the road leading from Lerna to Eleus. He cut the body of the hydra into pieces, and dipped his arrows in its gall, which made their wounds incurable. Eurystheus, however, denied that this was to be reckoned among the twelve labours, since he had not destroyed the hydra alone, but with the assistance of Iolaus.—He was ordered, in his third labour, to bring alive and unhurt, into the presence of Eurystheus, a stag, famous for its incredible swiftness and golden horns. This celebrated animal frequented the neighbourhood of Cnœ, and Hercules was employed for a whole year continually pursuing it. When at last the animal was tired with the chase, she took refuge in Mount Artemisium, then tied to the river Ladon, and, as she was about to cross the stream, Hercules struck

her with an arrow, caught her, put her on his shoulder, and was going with his burden through Aradia, when he met Diana and Apollo. The goddess took the hind from him, and reproached him for violating her sacred animal. But the hero excusing himself on the plea of necessity, and laying the blame on Eurystheus, Diana was mollified, and allowed him to take the hind alive to Mycenæ.—The fourth labour was to bring alive to Eurystheus a wild boar which ravaged the neighbourhood of Erymanthus. In this expedition he destroyed the Centaurs (*vid.* Centaurs and Chiron), and then caught the boar by driving him from his lair with loud cries, and chasing him into a snow-drift, where he seized and bound him, and then took him to Mycenæ. Eurystheus was so frightened at the sight of the boar, that, according to Diodorus, he hid himself in his brazen apartment for several days.—In his fifth labour Hercules was ordered to cleanse the stables of Augeas, where numerous oxen had been confined for many years. (*Vid.* Augeas.)—For his sixth labour he was ordered to kill the carnivorous birds which ravaged the country near the Lake Stymphalus in Arcadia. While Hercules was deliberating how he should scare them, Minerva brought him brazen rattles from Vulcan. He took his station on a neighbouring hill, and sounded the rattles: the birds, terrified, rose in the air, and he then shot them with his arrows.—In his seventh labour he brought alive into Peloponnesus a prodigious wild bull, which laid waste the island of Crete.—He then let him go, and the bull roved over Sparta and Arcadia, and, crossing the isthmus, came to Marathon in Attica, where he did infinite mischief to the inhabitants.—In his eighth labour he was employed in obtaining the mares of Diomedes, the Thracian king, which fed on human flesh. (*Vid.* Diomedes II.)—For his ninth labour he was commanded to obtain the girdle of the queen of the Amazons. (*Vid.* Hippolyta.)—In his tenth labour he killed the monster Geryon, king of Erythea, and brought his oxen to Eurystheus, who sacrificed them to Juno. (*Vid.* Geryon.)—The eleventh labour was to obtain the apples from the garden of the Hesperides. (*Vid.* Hesperides.)—The twelfth, and last, and most dangerous of his labours, was to bring upon earth the three-headed dog Cerberus. When preparing for this expedition, Hercules went to Eumolpus at Eleusis, desirous of being initiated; but he could not be admitted, as he had not been purified of the blood of the centaurs. Eumolpus, however, purified him, and he then saw the mysteries; after which he proceeded to the Tænarian promontory in Iaconia, where was the entrance to the lower world, and went down to it, accompanied by Mercury and Minerva. The moment the shades saw him they fled away in terror, all but Meleager and Medusa the Gorgon. (*Od.*, 11, 633.) He was drawing his sword on the latter, when Mercury reminded him that she was a mere phantom. Near the gates of the palace of Hades he found Theseus and Pirithoüs, who had attempted to carry off Proserpina, and had, in consequence, been fixed on an enchanted rock by the offended monarch of Erebus. When they saw Hercules, they stretched forth their hands, hoping to be relieved by his might. He took Theseus by the hand and raised him up; but when he would do the same for Pirithoüs, the earth quaked, and he left him. He then, after several other acts of prowess, asked Pluto to give him Cerberus; and the god consented, provided he would take him without using any weapons. He found him at the gates of Acheron; and protected only by his corslet and lion's skin, he flung his arms about his head, and, grasping him by the neck, made him submit, though the dragon in his tail bit him severely. He brought him through Trezene to Eurystheus, and, when he had shown him, took him back to the lower world.—Besides these arduous labours, which the jealousy of Eurystheus imposed upon him, he also achieved

others of his own accord, equally great and celebrated (*Vid.* Cacus, Antaus, Busiris, Eryx, &c.), and he had also, according to some, accompanied the Argonauts to Colchis before he delivered himself up to the King of Mycenæ. Wishing after this to marry again, having given Megara to Iolaus, and hearing that Eurystus, king of Cechaha, had declared, that he would give his daughter Iole to him who should overcome himself and his sons in shooting with the bow, he went thither and won the victory, but did not obtain the promised prize. Iphitus, the eldest son, was for giving his sister to Hercules, but Eurystus and his other sons refused, lest he should destroy her children, if she had any, as he had done those of Megara. Shortly afterward, the oxen of Eurystus being stolen by Antolycus, his suspicions fell on Hercules. Iphitus, who gave no credit to the charge, betook himself to that hero, and besought him to join in the search for the lost oxen. Hercules promised to do so, and entertained him; but, falling into madness, he precipitated Iphitus from the walls of Tiryns. In order to be purified of this murder, he went to Neleus, who, being a friend of Eurystus, refused to comply with his desire. Hercules then proceeded to Amyclæ, where he was purified by Deiphobus, the son of Hippolytus. But he fell, notwithstanding, into a severe malady on account of the murder of Iphitus; and, going to Delphi to seek relief, he was refused a response by the Pythia. In his rage at her denial he went to plunder the temple, and, taking the tripod, was about establishing an oracle for himself, when Apollo came to oppose him; but Jupiter hurled a thunderbolt between the combatants, and put an end to the contest. Hercules now received a response, that his malady would be removed if he let himself be sold for three years as a slave, and gave the purchase-money to Eurystus as a compensation for the loss of his son. Accordingly, in obedience to the oracle, he was conducted by Mercury to Lydia, and there sold to Omphale, the queen of the country. (*Vid.* Omphale.) The purchase-money (three talents, it is said) was offered to Eurystus, but he refused to accept it. When the term of this servitude had expired, he prepared, being now relieved of his disease, to take vengeance on Laomedon, for having refused the promised reward for delivering Hesione. (*Vid.* Hippolyta and Laomedon.) After succeeding in this enterprise, and slaying Laomedon, he collected an army and marched against and slew Augeas and his sons. Elis was the scene of this warfare, and here, when victory had declared for him, he established the Olympic games, raised an altar to Pelops, and built altars also to the twelve great deities. After the conquest of Elis he marched against Pylos, took the city, and killed Neleus and all his sons, except Nestor, who was living with the Gerenians. (*Il.*, 11, 689.) He is said also to have wounded Pluto and Juno, as they were aiding the Pylians. Some time after this, Hercules went to Calydon, where he sought the hand of Deianira, the daughter of Enceus. He had to contend for her with the river-god Achelous, who turned himself into a bull, in which form one of his horns was broken off by the victorious hero. (*Vid.* Achelous.)—One day, at the table of Enceus, as Eubomus, son of Architeles, was, according to custom, pouring water on the hands of the guests, Hercules happening unawares to swing his hand suddenly, struck the boy and killed him. As it was evidently an accident, the father forgave the death of his son; but Hercules resolved to banish himself, agreeably to the law in such cases, and he set out with his wife for Trachis, the realm of his friend Ceyx. On his journey to this quarter the affair of Nessus took place. (*Vid.* Deianira and Nessus.) While residing with Ceyx, he aided Ægineus, king of the Dorians, against whom the Lapithæ, under the command of Coronus, had made war, on account of a dispute respecting boundaries. As he was passing, on a subsequent occasion, by

the temple of Apollo at Pagasæ, he was opposed by Cycnus, the son of Mars, who was in the habit of plundering those that brought the sacrifices to Delphi. Cycnus fell in the combat; and when Mars, who had witnessed the fate of his son, would avenge him, he received a wound in the thigh from the spear of the hero. Returning to Trachis, Hercules collected an army, and made war on Eurystus, king of Œchalia, whom he killed, together with his sons, and, plundering the town, led away Iole as a captive. At the Eubœan promontory Cænæum he raised an altar to Jupiter, and, wishing to offer a sacrifice, sent to Ceyx for a splendid robe to wear. Deianira, hearing about Iole from the messenger, and fearing the effect of her charms on the heart of her husband, resolved to try the efficacy of the philtre of Nessus (*vid.* Deianira), and tinged with it the tunic that was sent. Hercules, suspecting nothing, put on the fatal garment, and prepared to offer sacrifice. At first he felt no effect from it; but when it warmed, the venom of the hydra began to consume his flesh. In his fury, he caught Lichas, the ill-fated bearer of the tunic, by the foot, and hurled him into the sea. He attempted to tear off the tunic, but it adhered closely to his skin, and the flesh came away with it. In this wretched state he got on ship-board, where Deianira, on hearing the consequences of what she had done, hanged herself; and Hercules, charging Hyllus, his eldest son by her, to marry Iole when he was of sufficient age, had himself carried to the summit of Mount Œta, and there causing a pyre to be erected, ascended it, and directed his followers to set it on fire. But no one would venture to obey; till Peas, happening to arrive there in search of his stray cattle, complied with the desire of the hero, and received his bow and arrows as his reward. While the pyre was blazing, a thunder-cloud conveyed the sufferer to heaven, where he was endowed with immortality; and, being reconciled to Juno, he espoused her daughter Hebe, by whom he had two children, Alexiæres (*Aider-in-ear*) and Anicetus (*Unsubdued*). The legend of Hercules is given in full detail by Apollodorus (2, 4, *seqq.*). Other authorities on the subject are as follows: *Diod. Sic.*, 4, 9, *seqq.*—*Theocrit.*, *Idyll.*, 25.—*Pind.*, *Ol.*, 3, 55.—*Theocrit.*, *Idyll.*, 7, 149.—*Phæcydes*, *ap. Schol. ad Apoll. Rhod.*, 2, 1054.—*Il.*, 8, 867.—*Phæcydes*, *ap. Schol. ad Od.*, 21, 23.—*Hesiod.*, *Scut. Herc.*—*Orvid. Met.*, 9, 165, et 217.—*Soph.*, *Trachin.*—Homer arms Hercules with a bow and arrows. (*Il.*, 5, 393.—*Od.*, 8, 224.) Hesiod describes him with shield and spear. Pisander and Stesichorus were the first who gave him the club and lion's skin. (*Athenæus*, 12, p. 513.)—The mythology of Hercules is of a very mixed character in the form in which it has come down to us. There is in it the identification of one or more Grecian heroes with Melcarth, the sun-god of the Phœnicians. Hence we find Hercules so frequently represented as the sun-god, and his twelve labours regarded as the passage of the sun through the twelve signs of the zodiac. He is the powerful planet which animates and imparts fecundity to the universe, whose divinity has been honoured in every quarter by temples and altars, and consecrated in the religious strains of all nations. From Meroë in Ethiopia, and Thebes in Upper Egypt, even to Britain, and the icy regions of Scythia; from the ancient Taprobana and Palibothra in India, to Cadiz and the shores of the Atlantic; from the forests of Germany to the burning sands of Africa; everywhere, in short, where the benefits of the luminary of day are experienced, there we find established the name and worship of a Hercules. Many ages before the period when Alcmena is said to have lived, and the pretended Tyrrhian hero to have performed his wonderful exploits, Egypt and Phœnicia, which certainly did not borrow their divinities from Greece, had raised temples to the Sun, under a name analogous to that of

Hercules, and had carried his worship to the isle of Thasus and to Gades. Here was consecrated a temple to the year, and to the months which divided it into twelve parts, that is, to the twelve labours or victories which conducted Hercules to immortality. It is under the name of Hercules Astrochyton (Ἰστροχυτὼν), or the god clothed with a mantle of stars, that the poet Nonnus designates the Sun, adored by the Tyrians. (*Dionys.*, 40, 415.—*Ibid.*, 375.) "He is the same god," observes the poet, "whom different nations adore under a multitude of different names: Belus on the banks of the Euphrates, Ammon in Libya, Apis at Memphis, Saturn in Arabia, Jupiter in Assyria, Serapis in Egypt, Helios among the Babylonians, Apollo at Delphi, Æsculapius throughout Greece," &c. Martianus Capella, in his hymn to the Sun, as also Ausonius (*Epigr.*, 2, 4) and Macrobius (*Sat.*, 1, 20), confirm the fact of this multiplicity of names given to a single star. The Egyptians, according to Plutarch (*De Is. et Os.*, p. 367.—*Op.*, ed. Reiske, vol. 7, p. 449), thought that Hercules had his seat in the Sun, and that he travelled with it around the moon. The author of the hymns ascribed to Orpheus, fixes still more strongly the identity of Hercules with the Sun. He calls Hercules "the god who produced time, whose forms vary, the father of all things, and destroyer of all. He is the god who brings back by turns Aurora and the night, and who, moving onward from east to west, runs through the career of his twelve labours, the valiant Titan, who chases away maladies, and delivers man from the evils which afflict him." (*Orph. Hymn.*, 12.—ed. Herm., p. 272, *seq.*) The Phœnicians, it is said, preserved a tradition among them, that Hercules was the Sun, and that his twelve labours indicated the sun's passage through the twelve signs. Porphyry, who was born in Phœnicia, assures us that they there gave the name of Hercules to the sun, and that the fable of the twelve labours represents the sun's annual path in the heavens (*ap. Euseb., Præp. Ev.*, 3, 11). In like manner the scholast on Hesiod remarks, "the zodiac, in which the sun performs his annual course, is the true career which Hercules traverses in the fable of the twelve labours; and his marriage with Hebe, the goddess of youth, whom he espoused after he had ended his labours, denotes the renewal of the year at the end of each solar revolution." (*J. Diaconus, Schol. ad Hes., Theog.*, p. 165.) Among the different epochs at which the year in ancient times commenced among different nations, that of the summer solstice was one of the most remarkable. It was at this period that the Greeks fixed the celebration of their Olympic game, the establishment of which is attributed to Hercules. (*Corsini, Fast. Att.*, vol. 2, p. 235.) It was the origin of the most ancient era of the Greeks.—If we fix from this point the departure of the sun on his annual career, and compare the progress of that luminary through the signs of the zodiac with the twelve labours of Hercules, altering somewhat the order in which they are handed down to us, a very striking coincidence is instantly observed. A few examples will be adduced. In the first month the sun passes into the sign *Leo*; and in his first labour Hercules slew the Nemean lion. Hence, too, the legend, that the Nemean lion had fallen from the skies, and that it was produced in the regions bordering on the sphere of the moon (*Tatian, Contr. Gent.*, p. 164.) In the second month the sun enters the sign *Virgo*, when the constellation of the Hydra sets; and in his second labour Hercules destroyed the Lærmian hydra. It should also be remarked, that the head of the celestial hydra rises with the constellation Cancer, or the Crab, and hence the fable that Hercules was annoyed by a crab in his conflict with the hydra. (*Cynæus Calv.*, p. 64.) The hydra, moreover, is remarkable among the constellations for its great length; its head rising, as has just been remarked, with Cancer; its body be-

ing extended under the sign Leo, and only ending at the later degrees of the sign Virgo. On this is based the fable of the continual reappearance of the monster's heads; the constellation being of so great a length, that the stars of one part reappear after the sun has passed onward to another part, and while the stars of this latter part are merged in the solar fires. In the third month the sun enters the sign *Libra*, at the beginning of autumn, when the constellation of the centaur rises, represented as bearing a wine-skin full of liquor, and a thyrsus adorned with vine-leaves and grapes. Bayer represents him in his tables with a thyrsus in one hand and a flask of wine in the other. (*Üran., tabl.*, 41.) The Alphonsine tables depict him with a cup or goblet in his hand. (*Tab., Alph.*, p. 209.) At this same period, what is termed by some astronomers the constellation of the boar rises in the evening; and in his third labour Hercules, after being hospitably entertained by a centaur, encountered and slew the other centaurs who fought for a cask of wine: he slew also in this labour the Erymanthian boar. In the fourth month the sun enters the sign of *Scorpio*, when Cassiopeia rises, a constellation in which anciently a stag was represented; and in his fourth labour Hercules caught the famous stag with golden horns and brazen feet. It is said also to have breathed fire from its nostrils. (*Quint. Smyrn.*, 6, 226.) The horns of gold and the breathing of flames are traits that harmonize well with a constellation studded with blazing stars, and which, in the summer season, unites itself to the solstitial fires of the sun, by rising in the evening with its spouse Cepheus. In the fifth month the sun enters the sign *Sagittarius*, consecrated to Diana, who had a temple at Stymphalus, in which were seen the birds called Stymphalides. At this same time rise the three birds; namely, the constellations of the vulture, swan, and eagle pierced with the arrows of Hercules; and in his fifth labour Hercules destroyed the birds near Lake Stymphalus, which are represented as three in number on the medals of Perinthus. (*Méd. du Cardin. Alban.*, vol. 2, p. 70, n. 1.) In the sixth month the sun passes into the sign *Capricornus*, who was, according to some, a grandson of the luminary. At this period the stream which flows from Aquarius sets; its source is between the hands of Aristæus, son of the river Peneus. In his sixth labour Hercules cleansed, by means of the Peneus, the stables of Augeas, son of Phœbus. Augeas is made by some to have been a son of Nycteus, a name which bears an evident reference to the night (*νύξ*), and which contains, therefore, in the present instance, an allusion to the long nights of the winter solstice. In the seventh month the sun passes into the sign *Aquarius*. The constellation of the Lyre, or celestial vulture, now sets, which is placed by the side of the constellation called Prometheus, and at this same period the celestial bull, called the bull of Pasiphaë, the bull of Marathon, in fine, the bull of Europa, passes the meridian. In his seventh labour, Hercules brings alive into the Peloponnesus a wild bull, which laid waste the island of Crete. He slays also the vulture that preyed upon the liver of Prometheus. It is to be remarked that, as the constellation sets at this period, Hercules is said to have killed that bird; whereas the bull, which crosses the meridian merely, is made to have been brought alive into Greece. The bull in question was also fabled to have vomited flames (*An. Gell.*, 1, 1), an evident allusion to the celestial bull which glitters with a thousand fires. It is at the close of this seventh labour, and under the same title with it, that Hercules is supposed to have arrived in Elis, mounted on the steed Arion, and to have established there the Olympic games on the banks of the Alpheus. Now, when the sun passes into the sign Aquarius, he comes into that quarter of the heavens which is marked by the full moon from year to year.

The full moon of the summer-solstice was the period for celebrating the Olympic Games; and hence the poets, observing the phenomenon of the full moon during every year in the sign of Aquarius, ascribed to Hercules the institution of these games, of which Aquarius, by its union with the full moon, was every year the symbol. In the immediate vicinity of Aquarius, moreover, we find the constellation Pegasus identical with the fabled steed Arion. Hence the fate of Hercules having come on this latter animal to the land of Elis. In the eighth month the sun enters into the sign *Pisces*, when the celestial horse rises in the morning, known by the name of Pegasus and Arion, as we have just remarked; and in his eighth labour Hercules overcame and carried off the horses of Diomedes. Eurystheus consecrated these steeds to Juno, to whom, in the division of the zodiac among the twelve great gods, the sign Aquarius was given as her peculiar domain; and it is worthy of remark, that the Thracian Diomedes is fabled to have been the son of Cyrene, who was also the mother of Aristæus, and that this last personage is supposed by many to have been the same with Aquarius. In the ninth month the sun passes into the sign *Aries*, sacred to Mars, which all the ancient authors who have written on astronomy make to be the same with the ram of the golden fleece. When the sun enters into this sign, the celestial ship, called Argo, rises in the evening. At this same period Cassiopeia and Andromeda set. Andromeda is remarkable for many beautiful stars, one of which is called her girdle. Hyginus makes this girdle consist of three stars. Aratus designates it particularly by the name of *ζώνη*. Now, in his ninth labour, Hercules, according to one version of the legend, embarked on board the Argo in quest of the golden fleece; he contends with the female warriors, and takes from Hippolyta, their queen, the daughter of Mars, a famous girdle. He also rescues Hesione from a sea-monster, as Perseus did Andromeda. In the tenth month the sun enters into the sign *Taurus*. The constellation of Orion, who was fabled to have pursued, through love, the Pleiades, or daughters of Atlas, now sets: the herdsman, or conductor of the oxen of Icarus, also sets, as does likewise the river Eridanus. At this period, too, the Pleiades rise, and the she-goat fabled to have been the spouse of Faunus. Now, in his tenth labour, Hercules restores to their father the seven Pleiades, whose beauty and wisdom had inspired with love Busiris, king of Egypt, and who, wishing to become master of their persons, had sent pirates to carry them off. He slew also Busiris, who is here identical with Orion. In this same labour he bore away from Spain the oxen of Geryon, and arrived in Italy, where he overcame Cacus, and was hospitably received by Faunus. In the eleventh month the sun passes into the sign of *Gemini*. This period is marked by the setting of Procyon, and the cosmical rising of the dog-star. The constellation of the Swan also rises in the evening. In his eleventh labour, Hercules conquers Cerberus, the dog of Hades. He triumphs also over Cycnus (Swan), and at the very time, too, according to Hesiod (*Scut. Herc.*, 393), when the dog-star begins to parch the fields, and the cicada announces the summer by its song. It is to be remarked, moreover, that the constellation of the Swan gave rise, in a different legend, to the fable of the amour of Leda and Jove, and the birth of the twin-brothers Castor and Pollux. (*Eratosth.*, c. 25) In the twelfth month the sun enters the sign *Cancer*, the last of the twelve commencing with Leo. The constellations of the river and the centaur set, that of Hercules Ingeniculus also descends towards the western regions, or those of *Hesperia*, followed by the dragon of the pole, the guardian of the golden apples of the Hesperides, whose head he crushes with his foot. In his twelfth labour, Hercules travelled to Hesperia in quest of the golden fruit, guarded by the dragon. After this he prepares

to offer up a solemn sacrifice, and clothes himself in a robe dipped in the blood of the *Centaur*, whom he had slain in crossing a *river*. The robe takes fire, and the hero perishes amid the flames, but only to resume his youth in the heavens, and become a partaker of immortality. The Centaur thus terminates the mortal career of Hercules; and in like manner the new annual period commences with the passage of the sun into Leo, marked by a group of stars in the morning, which glitter like the flames that issued from the vestment of Nessus.—If Hercules be regarded as having actually existed, nothing can be more monstrous, nothing more at variance with every principle of chronology, nothing more replete with contradictions, than the adventures of such an individual as poetry makes him to have been. But, considered as the luminary that gives light and life to the world, as the god who impreguates all nature with his fertilizing rays, every part of the legend teems with animation and beauty, and is marked by a pleasing and perfect harmony. The sun of the summer solstice is here represented with all the attributes of that strength which he has acquired at this season of the year. He enters proudly on his course, in obedience to the eternal order of nature. It is no longer the sign Leo that he traverses; he combats a fearful lion which ravages the plains. The Hydra is the second monster that opposes the hero, and the constellation in the heavens becomes a fearful animal on earth, to which the language of poetry assigns a hundred heads, with the power of reproducing them as they are crushed by the weapon of the hero. All the obstacles that array themselves against the illustrious champion are gifted with some quality or attribute that exceeds the bounds of nature: the horses of Diomedee feed on human flesh; the females rise above the timidity of their sex, and become formidable heroines; the apples of the Hesperides are of gold; the stag has brazen hoofs; the dog of Hades bristles with serpents; everything, even down to the very crab, is formidable; for everything is great in nature, and must, therefore, be equally so in the various symbols that are used to designate her various powers. (Consult, on this whole subject, the remarks of *Dupuis, Origine de tous les Cultes*, vol. 2, p. 168, *seqq.*—*Abrégé*, p. 116, *seqq.*) The conclusion to which we have here arrived, will appear still plainer if we take a hasty sketch of the Oriental origin of the fable of Hercules, and its passage from the East into the countries of the West. And it will be seen that the Greeks, in conformity with their national character, appropriated to themselves, and gave a human form to, an Oriental deity; and that, metamorphosing the stranger-god into a Grecian hero, they took delight in making him an ideal type of that heroic courage and might which triumphs over every obstacle. Hercules, the invincible Hercules, has strong analogies with the Persian Mithras, the type of the unconquered sun. (*Creuzer, Symbolik, par Guignaut*, vol. 1, p. 376, &c.) Mithras, Perseus, and Hercules the descendant of Perseus, connect together the two families of Belus, that of Asia and that of Egypt. According to the Greek genealogies, the son of Amphitryon and Alcmena was of Egyptian blood both on the father's and mother's side, while he was descended by Perseus from Belus, the solar god. (Consult the tables of genealogy, *X*, *Xa*, and *Xb*, at the end of Heyne's *Apollodorus*.) But, added the tradition, the figure of Amphitryon only served as a mask to the king of gods and men when he wished to give birth to Hercules. The origin of the latter, then, was mediately and immediately divine, and we have a son of Jupiter in the Hellenic Hercules, as well as in the Sem-Hercules of Egypt. But, in every other respect, what a difference between the two. Herodotus, full of the ideas imbibed from the national poems on Hercules, the illustrious chief of the heroic races of Greece, arrives in Egypt. There he finds a Hercules quite different from the one with

which he is familiar. In vain does he endeavour to reconcile the mythic legends of Greece with the foreign dogmas that he encounters. After a scrupulous examination, and imploring the favour of the gods of his country, he declares that the name *Herakles* is originally from Egypt, not from Greece. Hercules with the Egyptians was the sun of the spring in all his force, an idea to which his very name alluded, which was in the Egyptian tongue *Sem*, *Som*, or *Djom*, "the Strong." Sem-Herakles passed for a god of the second class in Egypt. He was the type of the divine power, appearing with glory at the period of the spring, after having conquered the gloomy winter. He was the sun traversing his celestial career, contending against the numerous obstacles with which his path is supposed to be strewed, and obtaining by his immortal vigour a prize worthy of his numerous triumphs. On the monuments of Egypt he was seen traversing the fields of air in the bark of the star of day (*Plut., de Is. et Os.*, p. 506, *ed. Wyttenb.*); at other times the phoenix was placed in his hand, as a pledge of eternal victory, and a symbol of the great year, to which the renewal of each solar year was supposed to allude.—From the Egyptian let us pass to the Phœnician Hercules. Here he was denominated Melkarth, and belonged to the line of Bel or Baal, called Cronos by the Greeks. (*Creuzer, Symbolik, par Guignaut*, vol. 3, p. 15.) Melkarth was the tutelary divinity of the powerful city of Tyre, and the Tyrian navigators spread his worship from island to island, and from shore to shore, even to the farthest west, even to Gades, where a flame burned continually in his temple, as at Olympia on the altar of Jupiter. (*Heeren, Ideen*, vol. 1, p. 2, *seqq.*) His name signified, according to some, "the king of the city;" according to others, and with greater probability, "the powerful king" (*Bochart, Geogr. Sacr.*, 2, 2.—*Selden, de D. S.*, 1, 6), an idea closely analogous to that intended to be conveyed by the Egyptian appellation Sem. The King of the City, or the powerful King, was a true incarnation of the sun. He was the sun of spring, growing gradually more and more powerful as it mounts to the skies, sending rains upon the earth, and causing the seed to shoot forth from the ground. Hence the Phœnicians regarded him as the god of harvests and of the table, the god who brings joy in his train. (*Nonnus, Dionys.*, 40, 418.) A mercantile and commercial people, they also made him (in a still more special sense, perhaps) the protector of commerce and colonies. It is to this idea that many seek to refer the etymology of the Greek and Latin names Herakles and Hercules. Thus, some assign as the root the Phœnician or Hebrew term *Harkel*, "circuitor," "mercator" (*Münter, Relig. der Carthag.*, p. 41, *ed.* 2), but which applies equally well to the sun moving along in his celestial career (*ἡ περιήγησις*). Others write the name *Arehles*, which recalls the old Latin or Etrurian *Erele*, *Hercule*. (*Belermann*, 1, 22.) The perilous and fertilizing course of the sun in the heavens may, in fact, have passed for a natural type of those adventurous courses by land and sea which enriched the hardy navigators of Phœnicia; and beyond a doubt the mythus of Hercules borrowed more than one incident from their distant expeditions. The ancient nations had a custom of loading with chains the statues of their gods, when the state was menaced with danger, in order to prevent their flight. Among the Phœnicians, the idol Melkarth was almost constantly chained. In the same manner, the nations of Italy chained their Saturn every year until the tenth month, and at his festival in December they gave him his freedom. (*Macrob., Sat.*, 1, 8.) The fundamental idea of this symbolical usage was originally the same among all these nations, though afterward differently expressed, and variously modified in various systems of religion. In the infantine conceptions of the earliest times, it was believed that the course of the

sun could be retarded by chaining his image, and accelerated by removing the fetters. Hence, in this way, they wished to represent his strength and his weakness.—The worship of Hercules prevailed also in Phrygia. Hercules, according to Eusebius (*Chron.*, 1, p. 26.—*Bochart, Geogr. Sacr.*, p. 472), here bore the name of *Diodas*, or, as the Latin version gives it, *Desanaüs*, which last Vossius makes equivalent to "strong," "powerful," an idea conveyed also by the Tyrian appellation of *Melkarth*. (*Voss, de Idolol.*, 1, 22.)—As a colony from Tyre had carried the worship of Hercules into Boeotia by the way of Thasus, so another colony conveyed it to the Ionians of lower Asia. At Erythræ, on the coast of Ionia, was to be seen a statue of Hercules, of an aspect completely Egyptian. The worship of the god was here celebrated by certain Thracian females, because the females of the country were said to have refused to make to the god an offering of their locks on his arrival at Erythræ. (*Pausan.*, 7, 5.) The females of Byblos sacrificed to Adonis their locks and their chastity at one and the same time, and it is probable that the worship of Hercules was not more exempt, in various parts of the ancient world, from the same dissolute offerings. In Lydia, particularly, it seems to have been marked by an almost delirious sensuality. Married and unmarried females prostituted themselves at the festival of the god. (*Herodot.*, 1, 93.—Compare *Clearch.*, *ap. Athen.*, 12, p. 416, ed. *Schweigh.*) The two sexes changed their respective characters; and tradition reported that Hercules himself had given an example of this, when, assuming the vestments and occupation of a female, he subjected himself to the service of the voluptuous Omphale. (*Creuzer, Fragm. Hist. Antiq.*, p. 187.) The Lydian Hercules was named Sardon, after the robe dyed with sandyx, in which Omphale had arrayed him, and which the females of the country imitated in celebrating his licentious worship. (*I. Laurent. Lydus, de Mag. Rom.*, 3, 64, p. 268.) This Sardon reappears in the Cilician Sandacus, subjected to his male companion Pharnaces, as the Lydian Hercules was to Omphale. (*Creuzer, Symbolik, par Guigniaut*, vol. 3, p. 179.) We find here, as in the religion of Phœnicia, the same opposition, the same alternation of strength and weakness, of voluptuousness and courage. Hercules with Omphale, is the solar god descended into the *omphalos*, or "navel" of the world, amid the signs of the southern hemisphere; and it was the festival of this powerful star, enervated in some degree at the period of the winter solstice, which the Lydian people celebrated by the changing of the vestments of the weaker and the stronger sex.—The fable of Hercules Melampyges and the Cercopes has a similar reference. According to Diodorus Siculus (4, 31), the Cercopes dwelt in the vicinity of Ephesus, and ravaged the country far and wide, while Hercules led a life of pleasure and servitude in the arms of Omphale. In vain had their mother warned them to beware of the powerful hero: they contemned her exhortations, and Melampyges, in consequence, was sent to chastise them. He soon brought them to the queen, loaded with chains. A different tradition places the Cercopes in the islands that face the coast of Campania. Jupiter, says the legend, being involved in war with the Titans, came to these islands to demand aid from the people called Arimi. But the Arimi, after having promised him assistance, refused to fulfil that promise, and trifled with the god. As a punishment for this conduct, Jove changed them into monkeys, or, according to others, into stones, and from this period the isles of Inarime and Prochyta have taken the name of *Pithecuse*, or "Monkey Islands." (*Πιθηκῶσαι, from πίθηκος*, "a monkey.") We have here the Cercopes, both in Asia Minor and in the volcanic islands of Campania. The meaning of the fable is evident. The Lydian Hercules is the sun, pale and

feeble at the period of the winter solstice, which in some sense turns his back upon the earth, and shows his obscurer parts. (Compare the *literal* meaning of *Μελάμπυγος*, and the note of Guigniaut, vol. 3, p. 182.) As long as the solar god abandons himself to an inglorious life, and divides his attention between the pleasures and the servile employments of women, that is, during the entire winter solstice, the Cercopes, who are the divisions of this period of languor, crowd around and insult him with impunity. But no sooner does the approach of the vernal equinox reinvigorate the solar luminary, than Hercules, coming forth from degrading repose, attacks and subjugates his revilers. Jupiter, placed in opposition to the same creatures, so full of artifice and so fair a symbol of it, may equally be explained in an astronomical and calendary sense. This god was the sun of suns; the supreme force that combats, subdues, and dissipates whatever tends to obscure the light and disturb the harmony of the universe. The Cercopes are here opposed to him in the same manner as in other legends the Titans.—It may be as well, before leaving this part of the subject, to remark, that the monkey, and also various other animals or natural objects, consecrated in public worship both among the Egyptians and elsewhere, were regarded as having a direct and permanent relation to the stars, their revolutions, and the periods of the year. Apes appear to have been honoured with a species of worship, not only in India and Egypt, but also along the northern coast of Africa, perhaps even at Carthage itself. (*Guigniaut*, vol. 3, p. 183.)—Hercules, according to the traditions of Lydia, became the father, in this country, by a female slave, perhaps the same with Omphale, of the chief of a new dynasty of kings. The dynasty preceding this had in like manner for its founder a chieftain of the name of Atys, homonymous with the solar god of Phrygia and Lydia. The second royal race was that of the Heraclidæ, or rather: of the Candauidæ; for, according to some, the Lydian Hercules was named Candaules. (*Hesych.*, s. v. *Κανδανίλης*.) This name recalls to mind the last monarch of the race, who, like his divine progenitor, fell into the snare laid for him by an artful woman, and, still more unfortunate than he, lost at one and the same time his throne and his life. (*Herodot.*, 1, 12.) Without speaking of the marvellous incidents with which the later accounts of this work are adorned, such, for example, as the magic ring of Gyges, the narrative of Herodotus alone evidently shows a mythic side in the whole history of the kings of Lydia: the very fall of the monarchy is related with accompanying circumstances that bear the imprint of old religious symbols. If King Meles, said the legend, had carried the lion, which one of his concubines brought forth, all around the walls of Sardis, that city never would have fallen into the hands of Cyrus. (*Herodot.*, 1, 84.) We have here a royal lion, born of a young female, in the family of the Heraclidæ; and the lion was always a symbol of the valiant and victorious Hercules, an emblem of the sun in its protecting force. It remained the sacred attribute of the monarchs of Lydia. Among the rich offerings which Cræsus sent to the temple of Apollo at Delphi, the principal one was a golden lion. (*Herodot.*, 1, 50.) Even Sardis itself was, as the very name denoted, the city of the year, and, under this appellation, consecrated to the god who directed the movements of the year. (*Xanthus, ap. I. Lyd. de Mens.*, p. 42.) It was the city of Hercules, as the Egyptian Thebes was the city of Ammon; Babylon, the city of Belus; Ecbatana, with its walls of seven different colours, the city of the planets.—India had also her Hercules, if we credit the ancient writers, though their accounts are of a date comparatively recent. He was named *Dorsanes* or *Dosanes* (*Hesychius*, s. v. *Δορσ.*—*Alberti, ad loc.*), an appellation which recalls the *Desanaus* of Phrygia. The account

given by Megasthenes (*ap. Arrian, Ind., c. 8, seqq.*), is in many respects so very similar to that which has already been stated with regard to the Lydian Hercules, as to lead to the belief that the legends of Lower Asia had emanated in some degree from the plains of the Indian peninsula. The Rama of Hindustan, with his warlike apes, reminds us, under various striking aspects, of Hercules and the Ceropees.—The religion of Hercules, passing from the East like the god whom it was intended to commemorate, made its way to the farthest limits of the then known West. The Phœnicians, and after them the Carthaginians, extended on every side the worship of Melkarth, the divine protector of their colonies. It was from them that the nations of Spain, after those of Africa, learned to revere his name; and, not content with placing his columns at the entrance of the Atlantic, the Phœnician Hercules undertook, on this vast extent of ocean, long and perilous expeditions. Pursuing also another direction, he crossed the barriers of the Pyrenees and the Alps: he and his descendants founded numerous cities, both in Gaul and in the countries adjacent to it. He was here styled *Deusomnisus*, an appellation which again recalls that of *Desonaius*. Indeed, the occidental mythology seems here to correspond in every particular with that of the East. The cup of the sun, in which Hercules traverses the ocean for the purpose of reaching the isle of Erythea, represents the marvellous cup of the Persian Dschemschid. Under the empire of the latter, no corruption or decay of any kind prevailed; and the columns of wood in the temple of Hercules at Gades were never carious. The Dschemschid of Persia and the Sem of Egypt gave health to their votaries; the Romans recognised the same power in their victorious Hercules. (*I. Lyd. de Mens., p. 92.*) Rome herself counted among her citizens certain individuals who claimed to be his descendants. The heroic family of the Fabii, for example, traced their origin to the son of Alcmena. (*Plut., Vit. Fab. Max., c. 1.*) The Latins, as well as the Lydians, assigned various concubines to this powerful deity, among whom are mentioned Fauna, and Acca Larentia, the nurse of Romulus. (*Macrob., ap. Macrob., Sat., 1, 10.—August., de Civ. Dei, 6, 7.*) Thus, then, at the same time that we find even in the West the traces of a sensual worship rendered to Hercules, we see reproduced that peculiar tendency, so prevalent in the East, of making heroes and kings the descendants of the divine sun; the children of that victorious and beneficent star, which continually brings us both the day and the year as the prizes of his glorious combats. And, indeed, what idea can be more natural than this? Is not the sun himself a powerful king, a hero, placed in a situation of continual combat with the shades of darkness and with the evil spirits to which they give birth? His numerous adversaries, in the career of the zodiac which he traverses, are principally the signs of winter. The solemn rites offered to him, such as the games celebrated at Chemmis and Olympia; the chains with which the statue of the Tyrian Hercules was loaded; the circle of female figures surrounding his statue at Sardis, were intended to represent the alternations of strength and weakness, of victory and defeat, which mark the course of this courageous wrestler of the year, whose very death is a triumph. Hence, among the numerous incarnations of the star of day, the warlike spirit of the earlier nations of antiquity would, in order to propose it as an example to chiefs and monarchs, give a preference to that one which represented the sun under the character that we have just been considering. Nor could the heads of communities have a nobler model. If their origin was regarded as divine, it imposed upon them the obligation of a continual struggle, in order to render manifest to all eyes the principle of light, of strength, and of goodness, which they were supposed to have within

them. Besides, it was on the solar year, and its several subdivisions and periods, that the ordinances of the earliest social state were based. In maintaining this sacred order, they only imitated the god of the year, at once the author of it and of their race. It is for these reasons that we find, throughout all antiquity, a solar hero at the head of royal dynasties. This solar hero is Hercules, who is everywhere found to be the same personage, though under different appellations.—In *Greece*, the painful and protracted delivery of Alcmena, the mother of Hercules, already announces the god of light, destined to struggle painfully against the powers of darkness. Ilthya herself, the light coming forth from the bosom of night, sits with folded arms before the door of Amphitryon, and the courageous mother is a prey to cruel pangs until the cause of her anguish is removed by the artifice of Galanthis. (*Vid. Alcmena.*) Long did Juno, according to the early traditions, put every obstacle in the way of the birth of the hero. (*Il., 19, 119.*) This hostile power persecutes the son after the mother, and her obstinate hatred becomes the means that enable him to develop in all its splendour the divine power with which he is endowed. Thus the oracle gave him the name of *Herakles* (*Ἡρακλῆς*), because by means of *Juno* (*Ἥρα*) he was destined to gain immortal glory (*κλέος*), and live in the praises of posterity. (*Diod. Sic., 4, 10.—Schol. ad Pind., Ol., 6, 115.—Compare Macrob., Sat., 1, 20, who makes Hercules the glory of Hera, or the lower air, the native darkness of which is illumined by the sun*) False as this etymology undoubtedly is, it still proves that the Greeks themselves attached to their Hercules the fundamental idea of a hero constantly at variance with a contrary power. As regards the name itself, it may be remarked, that it is most probably of Oriental origin, though various attempts have been made by different scholars to trace it to a Grecian source. The Latin *Hercules*, (*Hercole, Ercole*) is, to all appearance, a more ancient form than the Greek *Ἡρακλῆς*. (*Lenep, Etymol. L. G., p. 245.—Lanzi, Saggio di Ling. Etrusca, vol. 2, p. 206, seqq.*) Hermann considers Hercules as virtue personified, and carrying off glory and praise (*Ἡρακλῆς, ὁς ἥρατο κλέος. Briefe über Homer und Hesiod, p. 20*), while Knight gives to the fable of the hero a physical basis, borrowed from the worship of the sun ("the glorifier of the earth," from *ἥρα* and *κλέος*.—*Enquiry into Symb. Lang., § 130*). For other theories relative to Hercules, consult *Müller, Dorians, b. 2, c. 11, seqq.*, and *Büttmann, Mythologus, vol. 1, p. 246, seqq.*

HERCULĒUM, I. Promontorium, a promontory in the Bruttiorum Ager, forming the most southern angle of Italy to the east, now *Capo Spartivento*. (*Strabo, 259.—Churer., Ital. Antiq., 2, p. 1300.—Romanelli, vol. 1, p. 140*)—II. Fretum, the strait which forms the communication between the Atlantic and Mediterranean. (*Vid. Abila, Calpe, and Herculis Columnæ.*)

HERCŪLIS, I. Columnæ, or Columns of Hercules, a name given to Calpe and Abila, or *Gibraltar* on the Spanish, and Cape *Serra* on the African, shore of the straits. Hercules was fabled to have placed them there as monuments of his progress westward, and beyond which no mortal could pass. (*Vid. Calpe, Abila, and Mediterraneum Mare.*)—II. Monæci Portus, or Arx Herculis Monæci, a town and harbour of Liguria, near Nicea. The surname of Monæcus, given to Hercules, who was worshipped here, shows, as Strabo observes, the Greek origin of this place. Fabulous accounts attributed its foundation to Hercules himself. (*Ann. Marcell., 15.*) The harbour is well described by Lucan (1, 405). It is now *Monaco*.—III. Liburni Portus, now *Livorno* or *Leghorn*, a call of Etruria, below the mouth of the Arnus. Cicero calls it Portus Herculis Labronis (*ad Quint. Frat., 2, 6*).—IV. Portus, a harbour of Etruria, now *Porto d'Ercole*. It was situated

between Arminia and Incitaria, and served as a port to the city of Cosa. It was one of the principal stations for the Roman fleets on the lower sea. (*Liv.*, 22, 11.—*Id.*, 30, 39.)

HERCYNIA, a very extensive forest of Germany, the breadth of which, according to Cæsar, was nine days' journey, while its length exceeded sixty. It extended from the territories of the Helvetii, Nemetes, and Rauraci, along the Danube to the country of the Daci and Anartes. Then turning to the north, it spread over many large tracts of land, and is said to have contained many animals unknown in other countries, of which Cæsar describes two or three kinds. Cæsar, following the Greek geographers (*Arist.*, *Meteor.*, 1, 13.—Compare *Apoll. Rhod.*, 4, 140), confounds all the forests and all the mountains of Central Germany under the name of *Hercynia Silva*. This vague tradition was propagated among the Roman geographical writers, nor could either Pliny or Tacitus form a more exact idea of its extent. (*Plin.*, 4, 12.—*Tac.*, *German.*, 28 and 30.) Ptolemy had obtained more positive information on the subject: besides his Mount Abnoba, he distinguished the Hartz Forest under the name of *Melibocus*, &c. On the country's becoming more inhabited, the grounds were gradually cleared, and but few vestiges of the ancient forest remain in modern times. These now go by particular names, as the *Black Forest*, which separates Alsace from Swabia; the *Steiger* in Franconia; the *Spissard* on the Mayn; the *Thuringer* in Thuringia; *Hessevald* in the duchy of Cleves; the *Bohemerwald*, which encompasses Bohemia, and was in the middle ages called *Hercynia Silva*; and the *Hartz Forest* in Lunenburg. Some of the German writers at the present day derive the ancient name from the term *hart*, *high*: others suppose it to come from *hartz*, *resin*, and consider the old name as remaining in the present *Hartz Forest*. (*Malte-Brun*, *Precis.*, &c., vol. 1, p. 108, *Brussels ed.*—*Manner*, *Geogr.*, vol. 3, p. 410.)

HERENNUS, I. Senecio, a native of Spain, and a senator and quæstor at Rome under Domitian. His contempt for public honours, his virtuous character, and his admiration of Helvidius Priscus, whose life he wrote, rendered him odious to the emperor, and caused him to be accused of high treason. He was condemned to death, and his work burned by the public executioner. (*Tac.*, *Vit. Agric.*, c. 3.—*Plin.*, *Ep.*, 3, 33.)—II. The father of Pontius the Samnite commander, who advised his son either to give freedom to the Romans ensnared at the Caudine Pass, or to exterminate them all. (*Livy*, 9, 1, *seqq.*)—III. Caius, a Roman, to whom the treatise on rhetoric, ascribed by some to Cicero, is addressed. The treatise in question is generally regarded as not having been written by the Roman orator, but either by Antonius Gniphro or Q. Cornificius. (Consult on this point the remarks of Schutz, in his edition of Cicero, vol. 1, p. lv., *seqq.*, and those of Le Clerc, in his more recent edition, *Paris*, 1827, vol. 1, pt. 2, p. 1, *seqq.*)

HERMÆ, statues of Mercury, which the Athenians had in the vestibules of their dwellings. They were made like terminal figures of stones, of a cubical form, and surmounted with a head of Mercury. (*Vid.* *Mercurius*.)

HERMÆA, a festival celebrated at Cydonia, in the island of Crete, at which the slaves enjoyed complete freedom, and were waited upon by their masters. (*Ephorus*, *ap. Athen.*, 6, p. 263, f.—*Carystius*, *ap. eund.*, 14, p. 639.—*Hœck*, *Kreta*, vol. 3, p. 39.)

HERMÆUM, I. Promontorium, or Promontory of Mercury (*Ἐρμῆς*, *Mercurius*), on the southern shore of Crete, between the Promontory Cnri Metopon and Phoenix.—II. A promontory of Sardinia, on the western shore, a little to the north of Bosa, now *Capo della Caccia*.—III. A promontory of Africa, in the district Zeugitana, now *Cape Bon*. (*Polyb.*, 1, 29.—*Plin.*, 5, 4.—*Mela*, 1, 7.—*Liv.*, 29, 27.)

HERMAPHRODITUS, a son of Mercury (*Ἐρμῆς*) and Venus (*Ἀφροδίτη*), the fable relative to whom and the nymph Salmacis may be found in Ovid (*Met.*, 4, 285, *seqq.*). It is evidently copied after some Eastern legend, although the Grecian spirit has moulded it into a more pleasing form, perhaps, than was possessed by its original. The doctrine of androgynous divinities lies at the very foundation of the earliest pagan worship. The union of the two sexes was regarded by the early priesthoods as a symbol of the generation of the universe, and hence originated those strange types and still stranger ceremonies, which, conceived at first in a pure and simple spirit, became eventually the source of so much licentiousness and indecency. The early believer was taught by his religious instructor, that, before the creation, the productive power existed alone in the immensity of space. When the process of creation commenced, this power divided itself into two portions, and discharged the functions of an active and a passive being, a male and a female. Hence arose the beauteous frame of the universe. This is the doctrine, in particular, of the Hindu Vedas, and it is explicitly established in the Manara-Dharma-Sastra, and also in the laws of Menou. The Adonis of Syria (*Creuzer*, *Symbolik*, vol. 2, p. 12); the Adagōis of Phrygia (*Herodotus*, 1, 105.—*Creuzer*, 1, 150); the Phtha and Neith of Egypt; the Mithras of Persia (*Jul. Firmicus*, p. 1, *seqq.*—*Goerres*, vol. 1, p. 254); the Freya of Scandinavia (*Goerres*, vol. 2, p. 574); the Cenrezi of Thibet (*Wagner*, p. 199); the Brama, Schiva, Vishnou, and Krisina, of India (*Roger*, *Pagan. In.*, 2, 2.—*Paulin.*, *Syst. Brahman.*, p. 195.—*Porphyr.*, in *Stob. Eclog. Phys.*, 1, 4.—*Bagavadam*, *Wagner*, p. 167.—*Bhagavat Geta*, &c.); the Moon among various nations of Asia (*Spartian.*, *Vit. Caracall.*, c. 7.—*Casaubon*, *ad loc.*); all these objects of adoration reunited the two sexes, and, by a consequence of this symbolical idea, the priests changed their ordinary vestments, and assumed those of the other sex in the ceremonies instituted in honour of these gods, for the purpose of expressing their double nature. How different from all this is the Grecian legend! and yet its origin is one and the same.

HERMATHENÆ, a sort of statue, raised on a square pedestal, in which the attributes of Mercury (*Ἐρμῆς*) and Minerva (*Ἀθήνη*) were blended. (Consult the remarks under the preceding article; and *Creuzer*, *Symbolik*, vol. 2, p. 750.) M. Spon gives various figures of Hermathenæ. (*Recherch. Curieuses de l'Antiq.*, p. 93.)

HERMES (*Ἐρμῆς*), I. the name of Mercury among the Greeks. (*Vid.* *Mercurius* I.)—II. Trismegistus. (*Vid.* *Mercurius* II.)

HERMESIANAX, a poet of Colophon, who flourished in the time of Philip and his son Alexander. He composed three books of elegies, and entitled the collection *Leontium* (*Λεόντιον*), in honour of his mistress, who is the same, perhaps, with the one connected with the history of Epicurus and his disciple Metrodorus. Athenæus has preserved for us a fragment of nearly a hundred verses of this poet, which makes us regret what we have lost. This fragment was published in 1782, by Ruhnken, in an appendix to his *Epistola Critica*, 2, p. 283. It was also edited by Weston, *London*, 1784, 8vo. and by Ilgen, in his *Opuscula Varia*, *Erford.*, 1797, 8vo, vol. 1, p. 248, *seqq.* The best edition, however, is that of Hermann, 1828, 4to, in his *Program. Acad. in memoriam I. A. Ernesti*, *Lips* (Consult *Hoffmann*, *Lex. Bibliogr.*, vol. 2, p. 353.)

HERMIAS, a Christian writer towards the close of the second century, and a native of Galatia, who has left us a short but elegant discourse in ridicule of the pagan philosophers, entitled *Διασερμῆς τῶν ἔξω φιλοσόφων*. It appears to be an imitation of a discourse of Tatian's, but it is an imitation by a man of spirit and ability. He ridicules the want of harmony that prevails among the systems of the Greek philosophers, which is the

cause of all their speculations being crowned with no positive result. He is accused by some critics of putting nothing in the place of the edifice which he has destroyed by his sarcasms. Such, however, was not the end he had proposed to himself. It was sufficient for him to show that the systems of ancient philosophy were untenable. The one which was to occupy its place they had only to seek for, and Hermas points it out to them without naming it. This treatise was published by Seiber, *Basel*, 1533, 8vo, and with the notes of Wolf in Morell's *Compend. de Orig. Vet. Phil.*, *Basel*, 1580, 8vo. It is found also in the *Auctor. Biblioth. Patrum, Paris*, 1624; and in the Oxford edition of Tatian, 8vo, 1700. The best edition, however, is that of Dommerich, *Hal.*, 1774, 8vo. (Schöll, *Hist. Lit. Gr.*, vol. 5, p. 213.—Lardner, *Credibility of Gospel History*, pt. 2, vol. 2, p. 555.)

HERMIONE, I. more correctly Harmonia, daughter of Mars and Venus, and wife of Cadmus. (*Vid.* Harmonia.)—II. Daughter of Menelaus and Helen. She was privately engaged to her cousin Orestes, the son of Agamemnon; but her father, on his return from Troy, being ignorant of this, gave her in marriage to Pyrrhus, otherwise called Neoptolemus. After the murder of that prince (*vid.* Pyrrhus), she married Orestes, and received the kingdom of Sparta as her dowry. (*Virg., Æn.* 3, 327, *seqq.*—*Heyne, Excurs.*, 12, *ad Virg., Æn.* 3.—*Eurip., Androm.*)—III. A city of Argolis, on the southern coast, opposite Hydra. It was founded, according to Herodotus (8, 43), by the Dryopes, whom Hercules and the Melians had expelled from the banks of the Sperchius and the valley of Ceta. Pausanias describes this city as situate on a hill of moderate height, and surrounded by walls. It contained, among others, a temple of Ceres, the sanctuary of which afforded an inviolable refuge to supplicants, whence arose the proverb ἀπὸ Ἑρμιῶνης, "as safe an asylum as that of Hermione." Not far from this structure was a cave, supposed to communicate with the infernal regions. It was probably owing to this speedy descent to Orcus, that the Hermonians, as Strabo informs us, omitted to put a piece of money in the mouths of their dead. (*Strab.*, 373.—*Callim., ap. Etym. Mag.*, s. v. Ἀντίκως.) Lasus, an early poet of some note, said to have been the instructor of Pindar, was a native of Hermione. We are informed by Sir W. Gell, that the ruins of this place are to be seen on the promontory below Kastri, a town inhabited by Albanians, nearly opposite to the island of Hydra. (*Ilin. of the Morea*, p. 199.) Pausanias affirms (2, 34), that Hermione originally stood at the distance of four stadia from the site it occupied in his day, and, though the inhabitants had long removed to the new city, there yet remained several edifices to mark the spot. (*Cramer's Anc. Greece*, vol. 3, p. 258, *seqq.*)

HERMIÖNES, one of the three great divisions of the Germanic tribes, according to Tacitus (*Germ.*, c. 2), and occupying the central parts of the country. Mannert is of opinion, that a tribe or division of the name Hermonies never in fact existed, but that this appellation originated from the early legend of Greece respecting the fabulous land Hermonia, remarkable for its productions, and placed by the early writers in the distant regions of the north. The Romans, borrowing this fable from the Greeks, imagined that they had found Hermonia in the regions of Germany. (Compare *Mela*, 3, 3.—*Mannert, Geog.*, vol. 3, p. 146.)

HERMONIÖUS SIKUS, a bay on the coast of Argolis, near Hermione. (*Strab.*, 335.) It is now the Gulf of Castri.

HERMODÖRUS, a philosopher of Ephesus, who is said to have assisted, as interpreter, the Roman decemvirs in the composition of the ten tables of laws which had been collected in Greece. (*Cic., Tusc.*, 5, 36.) "An ancient tradition mentions," observes Niebuhr, "as an auxiliary to the Decemviri, in this code, Her-

modorus, an Ephesian, the friend of the sage Heraclitus, whom his fellow-citizens had banished because he filled them with shame, and they desired to be all on an equality in profligacy of conduct. (*Menag., ad Diog. Laert.*, 9, c. 2.) It cannot, indeed, be well explained, how this story could have been invented, for which nothing but a celebrated name could have given occasion, while that of Hermodorus appears to have been known to the Greeks themselves only by the saying of his friend. On this ground, the naming of the statue, which was inscribed as his at Rome, may pass for genuine. But if ever he lived there, honoured by, and useful to, his contemporaries, the legislators, it does not therefore follow, that, by his council, many of the Greek laws were transferred to the Twelve Tables, which are lost to us. The Romans adhered too tenaciously to their own hereditary laws, to exchange them for any foreign institution; and the difference between them and the Grecians was so great, that the sage Hermodorus could not have suggested an imitation." (*Niebuhr's Roman History*, vol. 2, p. 111, *Walter's transl.*)

HERMOGÈNES, a celebrated sophist, a native of Tarsus, who flourished under M. Aurelius Antoninus. He was remarkable for the precocity of his intellect. At the age of fifteen he openly professed his art in the presence of the emperor, and excited his astonishment by the ability and eloquence which he displayed. This rapid growth, however, of the mental powers, was succeeded by as rapid a decline, and, at the age of twenty-five, he lost his memory to such a degree as to be incapable of pursuing his usual avocations. In this sad condition he lingered to an advanced age. It is said that, on opening his body after death, his heart was found of an enormous size, and covered with hair. He left a work on Rhetoric, which was introduced into the Grecian schools, and continued to be a *text-book* in the rhetorical art until the decline of the latter. Two editions of the entire work were published, one in 1614, 8vo, by Laurentius, *Colon. Allobrog.*; the other in 1799, 4to, by an anonymous editor (Σ. B. Δ.). There have been several editions of parts of the work, for which consult Hoffmann (*Lex. Bibliogr.*, vol. 2, p. 355, *seqq.*)—II. A lawyer in the age of Constantine, who, together with Gregorius or Gregorianus, made a collection of the constitutions or edicts of the emperor. Gregorius comprehended in his collection the laws published from Hadrian to Constantine; Hermogenes compiled a supplement to the work. This collection, though made without public authority, was yet cited in courts of law. (Schöll, *Hist. Lit. Gr.*, vol. 7, p. 215, *seqq.*)

HERMOLÄUS, a young Macedonian nobleman, and one of the royal pages of Alexander the Great. In the heat of a boar-hunt on one occasion, he forgot his duty, and slew the animal, perhaps unfairly (for the laws of the chase have in all ages and climes been very arbitrary), certainly in such a way as to interfere with the royal sport. The page was, in consequence, deprived of his horse, and ordered to be flogged. Incensed at the indignity thus offered him, he resolved to efface it in the blood of his sovereign, and for this purpose formed a conspiracy with some of his brother-pages, as well as other individuals. The plot, however, was discovered, and the culprits were stoned to death. Hermolaus, in his defence, insisted that the tyranny and drunken revelries of Alexander were more than could be tolerated by freemen. (*Arrian, Exp. Al.*, 4, 13, *seqq.*)

HERMOÜLIS, or the city of Hermes (Mercury), the name of two towns of Egypt. The first was in the Delta, east of the Canopic branch of the Nile, and northeast of Andropolis. For distinction's sake, the epithet Μικρά (Parva) was added to its name. Ptolemy makes it the chief city of the nome in which Alexandria was situate. (*Mannert, Geog.*, vol. 10, pt. 1, p.

598.' Its position corresponds with that of the modern *Demenhur*. The second was termed *Μεγάλη* (*Magna*), or the great, and was situate in the Heptanomis, on the western bank of the Nile, opposite Antinopolis. It is spoken of as a large city by Ammianus Marcellinus (22, 16). The inhabitants worshipped the Cynocephalus, or dog-headed deity Anubis. (*Manuert, Geogr.*, vol. 10, pt. 2, p. 397.) The name of the place is now *Ashmuneim*.

HERMUNDURI, the first of the Hermionic tribes in Germany. They were a great and powerful nation, and lay to the east and northeast of the Allemanni. Tacitus says, that in process of time they became allies to the Romans, who distinguished them above the other Germans by peculiar privileges. (*Germ.*, c. 41.) Mannert makes them a branch of the great Suevic race. (*Geogr.*, vol. 3, p. 201.)

HERMUS, a considerable river of Asia Minor, rising, according to Strabo (626), in Mount Dindymus, in Phrygia, and flowing through the northern part of Lydia until it falls into the *Ægæan*. Pliny, however, makes its source to have been near Dorylæum in Phrygia. (*Plin.*, 5, 31.) It received in its course the rivers Pactolus, Hyllus, called also Phrygius, and other less celebrated streams, and discharged itself into the sea between Phocæa and Smyrna. (*Strab.*, l. c.—*Herod.*, 1, 80.—*Arrian, Exp. Al.*, 5, 5.) The plains which this river watered were termed the plains of Hermus, and the gulf into which it discharged itself was anciently called the Hermæan Gulf; but when Theseus, according to some accounts, a person of distinction in Thessaly, migrated hither, and founded a town on this gulf called Smyrna after his wife (*Vit. Hom.*, c. 2), the gulf was termed Smyrnæus Sinus, or Gulf of Smyrna, a name which it still retains. The sands of the Hermus were said to be auriferous, a circumstance for which it was probably indebted to the Pactolus. (*Virg., Georg.*, 2, 136.)—The modern name of this fine river is the *Sarabat*. (*Cramer's Asia Minor*, vol. 1, p. 336.)

HERNICI, a people of New Latium, bordering on the *Æqui* and *Marsi*. (*Strabo*, 231.) It was maintained by some authors, that they derived their name from the rocky nature of their country; *hernia*, in the Sabine language, signifying a rock. (*Serv., ad Æn.*, 7, 682.) Others were of opinion, that they were so called from *Hernicus*, a Pelasgic chief; and Macrobius (*Sat.*, 5, 18) thinks that Virgil alluded to that origin when he described this people as going to battle with one leg bare. The former etymology, however, is more probable, and would also lead us to infer that the *Hernici*, as well as the *Æqui* and *Marsi*, were descended from the Sabines, or generally from the *Oscan* race. There is nothing in the history of this petty nation which possesses any peculiar interest, or distinguishes them from their equally hardy and warlike neighbours. It is merely an account of the same ineffectual struggle to resist the systematic and overwhelming preponderance of Rome, and of the same final submission to her transcendent genius and fortune. It may be remarked, that it was upon the occasion of a debate on the division of some lands conquered from the *Hernici*, that the celebrated agrarian law was first brought forward (A.U.C. 268.—*Liv.*, 2, 41.—*Dion. Hal.*, 8, 69). The last effort made by this people to assert their independence was about the year 447 A.U.C.; but it was neither long nor vigorous, though resolved upon unanimously by a general council of all their cities. (*Liv.*, 9, 43.—*Cramer's Ancient Italy*, vol. 2, p. 78, *seqq.*)

HERO, I. a beautiful priestess of Venus at Sestus, attached to Leander, a youth of Abydos, who every night escaped from the vigilance of his family, and swam across the Hellespont, while Hero, in Sestus, directed his course by holding a burning torch on the top of a high tower. Leander, however, was at last drowned in a tempestuous night, as he attempted his

usual course, and Hero, in despair, threw herself down from her tower and perished in the sea. Musæus, a Greek poet of the fifth century of our era, made this story the subject of a pleasing little poem that has come down to us. (*Vid.* Musæus III.) Ovid devotes two of his *Heroides* to this same theme. (*Her.*, *Ep.*, 18 et 19.) As regards the feat of Leander in swimming across the Hellespont nightly, consult remarks under the article *Leander*.—II. The name of two writers on mechanical subjects. (*Vid.* Heron.)

HERŌDES, I. surnamed the *Great* and *Ascalonita*, second son of Antipater the Idumæan, was born B.C. 71, at Ascalon, in Judæa. At the age of twenty-five he was made by his father governor of Galilee, and distinguished himself by the suppression of a band of robbers, and the execution of their leader, with several of his comrades. He was summoned before the Sanhedrim for having done this by his own authority, and having put these men to death without a trial; but, through the strength of his party and the zeal of his friends, he escaped censure. He at first embraced the party of Brutus and Cassius; but, after their death, reconciled himself to Antony, who appointed him and Phasaël tetrarchs of Judæa. In B.C. 40 the Parthians invaded Judæa, and placed Antigonus on the throne, making Hyrcanus and Phasaël prisoners. Herod escaped to Rome, where, by the influence of Antony, he was appointed King of the Jews. But the Roman generals in Syria assisted him very feebly, and it was not till the end of the year 38 B.C. that Jerusalem was taken by Sossius. The commencement of Herod's reign dates from the following year. In the year 38 he had married Mariamne, the granddaughter of Hyrcanus, hoping to strengthen his power by this match with the Asmonæan family, which was very popular in Judæa. On ascending the throne Herod appointed Ananel of Babylon high-priest, to the exclusion of Aristobulus, the brother of Mariamne. But he soon found himself compelled, by the entreaties of Mariamne and the artifices of her mother Alexandra, to depose Ananel, and appoint Aristobulus in his place. Not long after, however, Aristobulus was secretly put to death by the command of Herod. Alexandra having informed Cleopatra of the murder, Herod was summoned to answer the accusation before Antony, whom he pacified by liberal bribes. When setting out to meet Antony, he had commanded his brother Joseph to put Mariamne to death in case he should be condemned, that she might not fall into Antony's power. Finding, on his return, that his brother had revealed this order to Mariamne, Herod put him to death. In the civil war between Octavius and Antony, Herod joined the latter, and undertook, at his command, a campaign against the Arabians, whom he defeated. After the battle of Actium, he went to meet Octavius at Rhodes; having first put to death Hyrcanus, who had been released by the Parthians, and had placed himself under Herod's protection some years before. He also imprisoned Mariamne and Alexandra, commanding their keepers to kill them upon receiving intelligence of his death. Octavius, however, received him kindly, and reinstated him in his kingdom. On his return, Mariamne reproached him with his intentions towards her, which she had again discovered. This led to an estrangement between Herod and his queen, which was artfully increased by his sister Salome; till, on one occasion, enraged at a new affront he had received from Mariamne, Herod assembled some of his friends and accused her of adultery. She was condemned and executed. After her death Herod suffered the deepest remorse, and shut himself up in Samaria, where he was seized with a sickness which nearly proved fatal. In the year 26 B.C. he put to death the sons of Babas, the last princes of the Asmonæan family. He now openly disregarded the Jewish law, and introduced Roman cus-

toms, a conduct which increased the hatred of the people towards him, and he particularly shocked their prejudices by erecting a stately theatre and an amphitheatre in Jerusalem, in the latter of which he celebrated games in honour of Augustus. Ten men conspired against his life, but were detected and executed with the greatest cruelty. To secure himself against rebellion, he fortified Samaria, which he named Sebaste (equivalent to the Latin Augusta), and he built Cæsarea and other cities and fortresses. In the year 17 B.C. he began to rebuild the temple at Jerusalem. The work was completed in eight years, but the decorations were not finished for many years after. (*John*, 2, 20.) Herod's power and territories continued to increase, but the latter part of his reign was disturbed by the most violent dissensions in his family, of which a minute account is given by Josephus. He died in March, B.C. 4, in the thirty-fourth year of his reign, and the seventieth of his age. Josephus relates, that, shortly before his death, he shut up many of the principal men of the Jewish nation in the Hippodrome, commanding his sister Salome to put them to death as soon as he expired, that he might not want mourners. They were released, however, by Salome upon Herod's death.—The birth of our Saviour took place in the last year of Herod's reign, four years earlier than the era from which the common system of chronology dates the years A.D. (*Joseph.*, *Ant. Jud.*, 14, 17, *seqq.*—*Id. ib.*, 15, 1, *seqq.*—*Id. ib.*, 16, 1, *seqq.*—*Id.*, *Bell. Jud.*, 1, 17, &c.—*Noldius*, *de Vita et Gestis Herodum*, § 7.) It was Herod of whom Augustus said, after he had heard of the former's having put to death his own sons, Alexander and Aristobulus, that he would rather be Herod's hog (*ἔν*) than his son (*υἱόν*), punning upon the similarity of the two terms, and alluding at the same time to the aversion with which the hog was regarded by the Jews. (*Macrob.*, *Sat.*, 2, 4.)—II. Antipas, a son of Herod the Great, whom his father, in his first will, declared his successor in the kingdom, but to whom he afterward gave merely the office of tetrarch over Galilee and Perea, while he appointed his other son Archelaus king of Judæa. Antipas, after being confined in these territories by Augustus, married the daughter of Aretas, king of Arabia. He divorced her, however, A.D. 33, that he might marry his sister-in-law Herodias, the wife of his brother Philip, who was still living. John the Baptist, exclaiming against this incest, was seized, and subsequently beheaded. Afterward, A.D. 39, Herodias, being jealous of the prosperity of her brother Agrippa, who, from a private person, had become King of Judæa, persuaded her husband Herod Antipas to visit Rome, and to desire the same dignity from Tiberius. Agrippa, being apprized of his design, wrote to the emperor, accusing Antipas of being implicated in the affair of Sejanus, upon which he was banished to Lugdunum, in Gaul. This is that Antipas who, being at Jerusalem at the time of our Saviour's suffering, ridiculed Jesus, whom Pilate had sent to him, dressed him in mock attire, and sent him back to the Roman governor as a king whose ambition gave him no umbrage. The year of his death is unknown, though it is certain that he and Herodias ended their days in exile, according to Josephus, in Spain. (*Noldius*, *de Vita et Gestis Herodum*, § 37.)—III. Agrippa, I. son of Aristobulus, and grandson of Herod the Great. (*Vid.* Agrippa V.)—IV. Agrippa, II. son of the preceding. (*Vid.* Agrippa VI.)—V. Atticus. (*Vid.* Atticus II.)

HERODIANUS, I. a Greek historian, who flourished during the first part of the third century of our era, and died about A.D. 240, at the age of seventy years. Few particulars of his life are known, and even his native place has not been clearly ascertained, though generally supposed to have been Alexandria. He filled various honourable stations, both in the service

of the emperors and in that of the state. (Compare b. 1, c. 4 of his history.) The tone of moderation which everywhere shows itself in his writings, would seem to indicate that his life had been as peaceful as his character; and we may conjecture, from a remark which he makes at the commencement of his work, that it was at an advanced age, and in the bosom of a pleasing retreat, that, collecting together the reminiscences of a long life, and the valuable fruits of his experience, he wrote the history of those emperors whose reigns he had seen and whose persons he had approached. This history, divided into eight books, commences with the death of Marcus Aurelius, and is carried down to the accession of Gordian III., embracing, from A.D. 180 to 238, a period of fifty-eight years, under seventeen princes who reigned either successively or conjointly. This period, though short, was a most eventful one in the annals of the empire, on account of the numerous and violent changes in the persons who held the sovereign power, and also with respect to the domestic and foreign wars, the depravity of manners, and the public calamities which characterized the age. The series of emperors which the history of Herodian embraces, comprises Commodus, Pertinax, Julian, Niger and Albinus, Severus, Caracalla and Geta, Macrinus, Heliogabalus, Alexander Severus, Maximinus, the two Gordiani, and Balbinus. We perceive from this the importance of Herodian's work, forming, as it does, a grave and almost solitary chronicle of this portion of Roman history; for the writers of the Augustan history, who lived long after him, hardly do more than copy his narrative, and, when they deviate from him, merit, in general, a far less degree of confidence. This is a testimony rendered in his favour even by Julius Capitolinus himself, who (*Vit. Albin.*, c. 12) invites his readers, if desirous of more lengthened details, to seek for them in Marius Maximus or Herodian, who, adds he, are equally distinguished by their accuracy and fidelity. And yet it is on the authority of the same Capitolinus that many modern critics have grounded their charge against Herodian, of having been too partial to Maximinus, and too severe on Alexander Severus. (*Jul. Cap. Vit. Max.*, c. 13.) From this charge, however, Herodian has been successfully defended by Isaac Casaubon and the Abbé de Mongault.—The style of Herodian is plain and unaffected, and his narrative in general seems written in a spirit of sincerity, but it has no claims to philosophy or critical art. The harangues which he has inserted in his narrative are elegant, but they want simplicity. His greatest fault is having neglected chronology.—Among the editions of Herodian may be mentioned that of Irmsch, *Lips.*, 1789, 5 vols. 8vo, and that of Bekker, *Berol.*, 1826, 8vo. The former is remarkable for its excessive load of commentary; the latter, which contains merely the text and various readings, presents the latest and best text of the historian.—Politian gave to the world in 1490 a Latin version of Herodian, remarkable for its elegance rather than fidelity, and dedicated it to Innocent VIII. He was liberally rewarded by the pontiff. (*Politian, Epist.*, 8, 1-5.) It is ascertained, however, now, that he merely corrected the version of Omnibonus Vincentius. (Consult *Tiraboschi*, vol. 6, pt. 2, p. 339.—*Heeren, Gesch. der Class. Lit. in Mittelalter*, vol. 2, p. 301, *seq.*, *Götting.*, 1822.—*Schöll, Hist. Lit. Gr.*, vol. 4, p. 192.—*Biogr. Univ.*, vol. 20, p. 273, *seqq.*)—II. A grammarian of Alexandria, often confounded with the historian above mentioned. He was a son of the celebrated Apollonius Dyscolus, and flourished in the second century of the Christian era. He dedicated to the Emperor Marcus Aurelius his general grammar, of which we have only some unpublished and abridged extracts remaining. We have also some fragments of other works; and Pierson has given in his edition of Morris a treatise of the same writer on the choice of

words, entitled *Philetærus*. The treatise published by Valckenær, at the end of his *Ammonius*, on barbarisms and solecisms, and the name of the author of which that scholar did not know, was discovered by Villoison to have been written by this same Herodian. Other minor productions of his are given by the last-mentioned scholar, in his *Anecdota*, and by Hermann in his treatise *De Emendanda ratione G. G.*—Consult the remarks of Hase, as given by Schöll (*Hist. Lit. Gr.*, vol. 5, p. 25).

HERODOTUS, I. a celebrated Greek historian, born at Halicarnassus, B.C. 481. (*Larcher, Vie d'Herod.*, p. 1.—*Clinton's Fasti Hellenici*, vol. 1, p. 29, 2d ed.) He was of Dorian extraction, and of a distinguished family. (*Suidas*, s. v. Ἡρόδοτος.) Panyasis, an eminent poet, whom some ranked next to Homer (*Suidas*, s. v. Ἡρώδης), while others place him after Hesiod and Antimachus, was his uncle either by the mother's or father's side. Herodotus is regarded by many as the father of profane history, and Cicero (*Leg.*, 1, 1) calls him "*historie patrem*:" by this, however, nothing more must be meant, than that he is the first profane historian whose work is distinguished for its finished form, and has come down to us entire. Thus Cicero himself, on another occasion, speaks of him as the first "*qui princeps genus hoc (scribendi) ornauit*" (*De Orat.*, 2, 13); while Dionysius of Halicarnassus has given us a list of many historical writers who preceded him. (Consult *Cruizer, Fragm. Hist. Antig. Heidelberg*, 1826, 8vo.) The facts of his life are few and doubtful, except so far as we can collect them from his own works. Not liking the government of Lygdamis, who was tyrant of Halicarnassus, Herodotus retired for a season to the island of Samos, where he is said to have cultivated the Ionic dialect of the Greek, which was the language there prevalent. Before he was thirty years of age he joined in an attempt, which proved successful, to expel Lygdamis. But the banishment of the tyrant did not give tranquillity to Halicarnassus, and Herodotus, who himself had become an object of dislike, again left his native country, and joined, as it is said, a colony which the Athenians sent to Thurium in Southern Italy, B.C. 443. He is said to have died in Thurium, and to have been buried in the Agora.—Herodotus presents himself to our consideration in two points; as a traveller and observer, and as an historian. The extent of his travels may be ascertained pretty clearly from his History; but the order in which he visited each place, and the time of visiting, cannot be determined. The story of his reading his work at the Olympic games, on which occasion he is said to have received universal applause, and to have had the names of the nine Muses given to the nine books of his History, has been well discussed by Dahlmann, and we may perhaps say disproved. (*Herodot., aus seinem Buche, sein Leben*, Altona, 1823.) The story is founded upon a small piece by Lucian, entitled "*Herodotus or Aëtion*," which apparently was not intended by the writer himself as an historical truth; and, in addition to this, Herodotus was only about twenty-eight years old (*Suid.*, s. v. Οὐκὲν ὄντως) when he is said to have read to the assembled Greeks at Olympia a work which was the result of most extensive travelling and research, and which bears in every part of it evident marks of the hand of a man of mature age. The Olympic recitation is not even alluded to by Plutarch, in his treatise on the "Malignity of Herodotus." At a later period Herodotus read his History, as we are informed by Plutarch and Eusebius, at the Panathenæan festival at Athens, and the Athenians are said to have presented him with the sum of ten talents for the manner in which he had spoken of the deeds of their nation. The account of this second recitation may be true.—With a simplicity which characterizes his whole work, Herodotus makes no display of the great extent of his travels. He frequently

avoids saying in express terms that he was at a place, but he uses words which are as conclusive as any positive statement. He describes a thing as standing behind the door (2, 182), or on the right hand as you enter a temple (1, 51); or he was told something by a person in a particular place (2, 28); or he uses other words equally significant. In Africa he visited Egypt, from the coast of the Mediterranean to Elephantine, the southern extremity of the country (2, 29); and he travelled westward as far as Cyrene (2, 32, 181), and probably farther. In Asia he visited Tyre, Babylon, Ecbatana (1, 98), and probably Susa (5, 52, *seqq.*; 6, 119). He also travelled to various parts of Asia Minor, and probably went as far as Colchis (2, 104). In Europe he visited a large part of the country along the Black Sea, between the mouths of the Danube and the Crimea, and went some distance into the interior. He seems to have examined the line of the march of Xerxes from the Hellespont to Attica, and certainly had seen numerous places on this route. He was well acquainted with Athens (1, 98; 5, 77), and also with Delphi, Dodona, Olympia, Delos, and many other places in Greece. That he had visited some parts of Southern Italy is clear from his work (4, 99; 5, 44). The mention of these places is sufficient to show that he must have seen many more. So wide and varied a field of observation has rarely been presented to a traveller, and still more rarely to any historian, either of ancient or modern times; and, if we cannot affirm that the author undertook his travels with a view to collect materials for his great work, a supposition which is far from improbable, it is certain that, without such advantages, he could never have written it, and that his travels must have suggested much inquiry, and supplied many valuable facts, which afterwards found a place in his History. The nine books of Herodotus contain a great variety of matter, the unity of which is not perceived till the whole work has been thoroughly examined; and for this reason, on a first perusal, the History is seldom well understood. But the subject of his History was conceived by the author both clearly and comprehensively. His aim was to combine a general history of the Greeks and the barbarians (that is, those not Greeks) with the history of the wars between the Greeks and Persians. Accordingly, in the execution of his main task, he traces the course of events from the time when the Lydian kingdom of Croesus fell before the arms of Cyrus, the founder of the Persian monarchy (B.C. 546), to the capture of Sestos (B.C. 478), an event which crowned the triumph of the Greeks over the Persians. The great subject of his work, which is comprised within the space of 68 years, not more than the ordinary term of human life, advances, with a regular progress and truly dramatic development, from the first weak and divided efforts of the Greeks to resist Asiatic numbers, to their union as a nation, and their final triumph in the memorable battles of Thermopylæ, Salamis, and Platæa. But with this subject, which has a complete unity, well maintained from its commencement to its close, the author has interwoven, conformably to his general purpose, and by way of occasional digression, sketches of the various people and countries which he had visited in his wide-extended travels. The more we contemplate the difficulty of thus combining a kind of universal history with a substantial and distinct narrative, the more we admire, not the art of the historian (for such, in the proper sense of the term, he could not well possess), but that happy power of bringing together and arranging his materials, which was the result of the fulness of his information, the distinctness of his knowledge, and the clear conception of his subject. These numerous digressions are among the most valuable parts of his work; and, if they had been omitted or lost, barren indeed would have been our investigation into the field of ancient history, over which the labour

of one man now throws a clear and steady light.—The style of Herodotus is simple, pleasing, and generally perspicuous; often highly poetical both in expression and sentiment. But it bears evident marks of belonging to a period when prose composition had not yet become a subject of art. His sentences are often ill-constructed and hang loosely together; but his clear comprehension of his own meaning, and the sterling worth of his matter, have saved him from the reproach of diffuseness and incoherence. His acquirements were apparently the result of his own experience. In physical knowledge he was certainly behind the science of his day. He had, no doubt, reflected on political questions; but he seems to have formed his opinions mainly from what he himself had observed. To pure philosophical speculations he had no inclination, and there is not a trace of such in his writings. He had a strong religious feeling bordering on superstition, though even here he could clearly distinguish the gross and absurd from that which was decorous. He seems to have viewed the manners and customs of all nations in a more truly philosophical way than many so-called philosophers, considering them as various forms of social existence under which happiness might be found. He treats with decent respect the religious observances of every nation; a decisive proof, if any were wanting, of his great good sense.—That Herodotus was not duly appreciated by all his countrymen, and that in modern times his wonderful stories have been the subject of merriment to the half-learned, who measure his experience by their own ignorance, we merely notice, without thinking it necessary to say more. The incidental confirmations of his veracity, which have been accumulating of late years on all sides, and our more exact knowledge of the countries which he visited, enable us to appreciate him better than many of the Greeks themselves could do; and it cannot now be denied, that a sound and comprehensive study of antiquity must be based upon a thorough knowledge of the work of Herodotus.—Plutarch accused Herodotus of partiality, and composed a treatise on what he termed the "malignity" of this writer (*περὶ τῆς Ἡρόδοτου κακότητος*), taxing him with injustice towards the Thebans, Corinthians, and Greeks in general; but the whole affair is a weak and frivolous one. The historian has also found two new antagonists in more recent times. MM. Chahan de Ciribied and F. Martin, authors of a work entitled "*Recherches Curieuses sur l'histoire ancienne de l'Asie*," drawn from Oriental manuscripts in the "*Bibliothèque du Roi*" (*Paris*, 1806), oppose to him the testimony of Mar-Ibas-Cadina, a Syrian, and the secretary of Valarsaces, king of Armenia. This writer pretends to have found in the archives of Nineveh a Greek translation, made by order of Alexander the Great, of a Chaldean work of very remote antiquity. The history of Mar-Ibas-Cadina no longer exists, but it was the source whence Moses of Chorene in the fifth century, and John Catholicos in the tenth, drew the materials for their respective works. This attack, however, on the credibility of the Greek writer, is undeserving of any serious consideration, more especially as the French editors themselves, just mentioned, confess that Mar-Ibas-Cadina deals largely in fable.—A life of Homer is commonly ascribed to Herodotus, and appears in most editions of his history; but it is now deemed supposititious. The three best editions of Herodotus are, that of Wesseling, *Amst.*, 1763, fol.; that of Schweighauser, *Argent.*, 1816, 6 vols. 8vo; and that of Bähr, *Lips.*, 1830–35, 4 vols. 8vo. The edition of Schweighauser has a "Lexicon Herodoteum," forming a seventh volume, which is a useful aid to students, though far from being complete. Some time after the appearance of Schweighauser's Herodotus, Gaisford collated anew the Sanroft MS. (one of the best manuscripts of the historian), and published an

edition from the Oxford press, in 1824; but the result of the collation has added nothing of any value to Schweighauser's text. The edition of Bähr is, perhaps, the most useful of the three. It contains an excellent body of notes, many of them selected from the writings of Creuzer, especially from his "*Commentationes Herodoteae*," and refers constantly to the most recent speculations of the German scholars on the different topics discussed by Herodotus. There is also a French translation of the history by Larcher, *Paris*, 1802, 9 vols. 8vo, of great fidelity, and highly esteemed for its very valuable commentary. Very important aid may likewise be obtained by the student from Rennell's and Niebuhr's respective dissertations on the geography of Herodotus. A reprint of the former appeared from the London press in 1830, 2 vols. 8vo; and a translation of the latter from the German was published at Oxford, 1830, 8vo. (*Encycl. Us. Knowl.*, vol. 12, p. 163, *seqq.*—*Schöll, Hist. Lit. Gr.*, vol. 2, p. 140, *seqq.*)—II. The author of an ancient glossary on Hippocrates, supposed by some to have been the same with Herodotus of Tarsus (No. III.). Others think that the glossary in question is merely intended as a collection of words found in the history of Herodotus of Halicarnassus, and that it has been incorporated with the works of Hippocrates for no other reason than because this physician wrote in the Ionic dialect, and many terms occur both in his works and in the history of Herodotus. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 6.)—III. A physician of Tarsus, of the empiric school, and successor to Menodotus of Nicomedia. A work of his, entitled "*The Physician*," is mentioned by Galen (*Sect. 2, Comment. in vi. Epid. Hippocr. text.*, 42).

HERÔES (*Ἡρώες*), the plural of HEROS (*Ἥρως*), a name given by the Greeks to a class of persons supposed to be intermediate between gods and men, and usually of divine descent on at least one side. Such were worshipped with divine honours by those cities and races of men which claimed them as their fathers or ancestors. This divine origin, however, was not essential: thus Philippos of Crotona, who fell in the battle against the Phœnicians and Egæstæans, was made a hero for his beauty; a herōum or shrine was built on the spot where he was buried, and sacrifices were offered to him. (*Herod.*, 5, 47.) At a later age, Aratus and Brasidas were worshipped as heroes at Sicyon and Amphipolis respectively; and the Athenians slain at Marathon received similar honours. Concerning these last, legends were current, which show that a supernatural and mythological character was really ascribed to them, and they, probably, were the latest of the Greeks to whom such a character was attributed. The Heroic Age, properly so called, appears, however, to have terminated with the immediate descendants of the Greeks who returned from Troy, and to have extended backward for an uncertain length of time, estimated by Thirlwall at six generations, or about 200 years. This is the fourth or Heroic Age of Hesiod, in which Jupiter "made the divine brood of heroes, better and braver than the third or brazen race." (*Op.*, *et D.*, 157.) These were the princes and warriors of mythological history, such as Theseus, Perseus, and those who fought at the sieges of Thebes and Troy. In Homer, the word Hero occurs frequently, but in quite a different sense: it is applied collectively to the whole body of fighters, Argæi, Danaï, and Achæi, without reference to individuals of peculiar merit; and, indeed, often appears to be used for little more than an expletive, when *he*, or *the man*, or *the warrior*, would have done equally well. Indeed, the application of the word is not even limited to warriors, but is extended to heralds, wise counsellors, kings, &c. It has been suggested, with considerable plausibility, that the word originally denoted the members of those roving bands who in the earliest times overran Greece, issuing from

the south of Thessaly, and giving extension to the name, first of Achæans, and afterward of Hellenes, as we learn from the legends in Pausanias and Thucydides; so that in the same sense the Normans who colonized Italy, or the Saxons who settled in England, might justly be called heroes. The root of the word seems to be *her*, whence come the Latin and German forms of *herus* and *herr* ("master"); *vir*, *virtus*, &c. The Sanscrit word *śūra* appears to contain the same element as "*heros*."—The promiscuous (or Homeric) use of the word "*hero*" disappeared in the age succeeding the Homeric poems. It seems probable that the Hellenic invasion, commonly called the return of the Heracidae, put an end to it. The new conquerors of Southern Greece do not seem themselves to have borne or used the title; and afterward, when they or their descendants looked back to the warlike legends of the earlier race who had borne the title, the lays, exploits, and legends were called heroic; and from the combined effect of poetical exaggeration, reverence for antiquity, and traditions of national descent, the more modern use of the word arose, carrying with it notions of mythical dignity, and of superiority to the later races of mankind. The custom of showing respect or affection by making precious offerings, and celebrating costly sacrifices at the tombs of the dead; the imaginative temper of the Greeks, which, as it loved to ascribe a divine genealogy to the great, was equally willing to admit them to a share of the divine nature and enjoyments after death; and the love of magnifying past ages, common to all nations, will sufficiently explain the change of earthly leaders into protecting genii or dæmons, who were believed to be immortal, invisible, though frequenting the earth, powerful to bestow good or evil, and therefore to be appeased or propitiated like the gods themselves. In the age of Hesiod, as is evident from the passage above referred to, the day of heroes was past, and they were already invested with their mythological character, which appears to furnish one among other reasons for believing him to have lived after the Homeric age. (*Thirhall's Greece*, vol. 1, p. 123, *seqq.*—*Philological Museum*, No. 4, p. 72, *seqq.*—*Encycl. Us. Knowl.*, vol. 12, p. 160, *seq.*)

HERON or HERO, I. a native of Alexandria, and disciple of Ctesibius flourished about 217 B.C. He was celebrated as a mechanician, and invented the hydraulic clock, and the machine called "the fountain of Hero." He must have enjoyed a high reputation, since he is mentioned by Gregory Nazianzen with Euclid and Ptolemy. He is now, however, principally known by some fragments of his writings on mechanics, which are to be found in the "*Mathematici Veteres*," published at Paris in 1693. His extant writings are, 1. "On the Machine called the *Chiroballistra*" (*Χειροβλήστρας κατασκευή και συμμετρία*). This is found in the "*Mathematici Veteres*" already cited. —2. *Baruleus* (*Βαροῦλλκος*), a treatise on the raising of heavy weights, which is mentioned by Pappus, and was found by Golius in Arabic. A translation of it into German, by Burgunan, was published in the *Comment. Goett.*, 7, 77.—3. *Belopoeica* (*Βελοποιικά*), a treatise on the manufacture of darts, published by Baldi, with an account of Hero, at *Augsburg*, in 1616, and also in the *Math. Vet.*—4. *On Pneumatic Machines* (*Πνευματικά*). In this work is the first and only notice among the ancient writers of the application of steam as a moving power. (*Stuart's History of the Steam-Engine*, 4to.) It was published by Commandine at Urbino in 1575, and at Amsterdam in 1680, and also in the *Math. Vet.*, with the additions of Aleotti, who had previously published an Italian version at Bologna in 1542, and at Ferrara in 1539.—5. *On the Construction of Automata* (*περί Αὐτοματοποιητικῶν*), contained in the *Math. Vet.*—6. *On Dioptrics*, from which Heliodorus, a mathematician who flourished after the commencement of the

Christian era, has left an extract, and of which a MS. exists in the Strasburg library. Other works of Hero, now lost, are mentioned by Pappus, Eutocius, Heliodorus, &c. (*Schmidt, Hieronymi Alexandrini Vita Scripta et quadam inventa, Helmstadt*, 1714, 4to.)—II. Commonly called the Younger, is supposed to have flourished during the reign of the Emperor Heraclius, which commenced A.D. 610. He also wrote on mechanical and mathematical subjects. His native country is uncertain. In a work attributed to him (*On Geodesy*), he states, that the precession of the equinoxes had produced seven degrees of effect since the time of Ptolemy, so that he must have been about 500 years later than Ptolemy. He is generally placed, however, as already remarked, under the reign of Heraclius. The writings of Hero the Younger are, 1. A book "*On Machines of War*" (*Πολιορκητικά*), edited in Latin by Barocius, *Venice*, 1572, together with, 2. A book of "*Geodesy*," a term then meaning practical geometry.—3. "*On the Attack and Defence of Towns*," printed in the *Math. Vet.*—4. A book "*On Military Tactics*," said by Lambecius to exist in MS. in the library at Vienna.—5. *On the Terms in Geometry*, printed at *Strasburg*, 1571, and also edited by Hasenbalg, *Stralsund*, 1826, 4to, with notes.—6. *Geometrical Extracts*, printed by the Benedictines, in the first volume of the *Analecta Græca, Paris*, 1688, from a copious MS. in the royal library at Paris.—7. A geometrical manuscript, stated by Lambecius to be in the library at Vienna.—III. A mathematician, who flourished about the middle of the 5th century, and was the teacher of Proclus. None of his works have reached us.

HEROÏPOLIS, a city of Egypt, about equidistant from Pelusium, the apex of the Delta, and the city of Arsinoë, on the extremity of the western branch of the Sinus Arabicus. It gave to that branch the name of Sinus Heroopolites, now *Bahr-Assuez*. It was a city of comparatively recent origin, founded by the Greeks for commercial purposes; and its very name, which Pliny translates by *Heroum Oppidum*, shows the Grecian origin of the place. Stephanus of Byzantium, however, asserts that the previous name of the city was Hæmos (*Αἷμος*), because Typhon was here wounded by lightning, and his blood gushed forth upon the ground. Hæmos is a Grecian name as well as Heroëpolis, and the Egyptian fable must therefore have been invented after the foundation of the place by the Greeks. Heroëpolis remained a place of importance as long as the canal of Ptolemy formed one of the channels of communication in this quarter. It belonged, however, to no nome, but, like Arsinoë, was a separate establishment. It sunk with the canal, and the ruins are said to be no longer visible, being buried probably beneath the sand. (*Mannert, Geogr.*, vol. 10, pt. 2, p. 516, *seqq.*)

HEROPHILUS, a celebrated physician, a native of Chalcædon, of the family of the Asclepiades, and a disciple of Praxagoras. Galen, indeed, has called him a Carthaginian; but in the book entitled "Introduction," which is ascribed to Galen, he is said to be of Chalcædon. Herophilus lived under Ptolemy Soter, and was contemporary with the philosopher Diodorus, and with the celebrated physician Erasistratus, with whose name his own is commonly associated in the history of anatomical science. As a physician, Herophilus is mentioned with praise by both the ancient and the early modern writers. Cicero, Plutarch, and Pliny, in particular, praise him. Galen says that he carried anatomy to the highest degree of perfection. (*De dissec. matric.*, p. 211.—*De dogm. Hipp.* et *Plat.*, lib. 8, p. 318.) With such zeal, indeed, did Herophilus pursue this science, that he is said to have dissected 700 subjects, and it was against him and Erasistratus that the very improbable charge was first made, of having frequently opened living criminals, that they

might discover the secret springs of life. (*Celsus, Pref.*) From the peculiar advantages which the school of Alexandria presented by this authorized dissection of the human body, it gained, and for many centuries preserved, the first reputation for medical education, so that Ammianus Marcellinus, who lived about 650 years after its establishment, says, that it was sufficient to secure credit to any physician if he could say that he had studied at Alexandria. (*Amm. Marc.*, 22, 16.) Herophilus made great discoveries in anatomy, and Fallopius calls him the evangelist of anatomists. (*Fallop., Observ.*, p. 395.) He is to be regarded as the inventor of pathological anatomy, having been the first that thought of opening the bodies of men after death, in order to ascertain the nature of the malady which had caused their dissolution. His principal discoveries have reference to the nervous system, which he acknowledged as the seat of the sensations. (*Galen, de loc. affect.*, lib. 3, p. 282.—*Rufus, de appellat. part. corp. hum.*, lib. 2, p. 65.) He first determined that the nerves are not connected with the membranes that cover the brain, but with the brain itself, though as yet the distinction of the nerves from the tendons and other white tissues had not been made out. The description which Herophilus gave of the brain itself was far superior to those of previous authors. He discovered the arachnoid membrane, and showed that it lined the ventricles, which he supposed were the seat of the soul; and the chief meeting of the sinuses, into which the veins of the brain pour their blood, still bears the name of *toreular Herophili*. He noticed the lacteals, though he was not aware of their use. He pointed out that the first division of the intestinal canal is never more than the breadth of twelve fingers in length, and from this fact proposed for it a name, the Latin form of which (*duodenum*) is still applied to it. He described with great exactness the organ of sight, and gave to its various membranes the names which have still, in a great measure, remained to them. He operated on the cataract by extracting the crystalline humour. The ancient physicians praise his descriptions of the *os hyoïdes*, which he called *παραστήτης*, of the liver, and of the parts of generation. (*Rufus, l. c.*, p. 37.—*Galen, de Administr. Anat.*, lib. 6, p. 172.) Herophilus was the first, also, that had just notions respecting the pulse, of which his master, Praxagoras, had taught him some of the value, as a means of discriminating diseases. (*Galen, de diff. puls.*, lib. 2, p. 24.—*Plin.*, 11, 37.—*Id.*, 29, 1.) He does not appear to have drawn many pathological conclusions from his knowledge of the healthy structure. It was he, however, who first showed that paralysis is the result, not of a vitiated state of the humours, as was previously imagined, but of an affection of the nervous system. Herophilus seems to have founded a school which took its name from him. He is supposed to have been the first that commented on the aphorisms of Hippocrates. His commentary exists in manuscript in the Ambrosian library at Milan. All his other works, among which was one on respiration, are lost. (*Sprengel, Hist. de la Med.*, vol. 1, p. 433, seqq.)

HEROSTRATUS, less correctly EROSTRATUS, the incendiary who set fire to the famous temple of Diana at Ephesus. When put to the torture, he confessed that his only object was to gain himself a name among posterity. The states-general of Asia endeavoured, very foolishly, to prevent this, by ordering that his name should never be mentioned; but the natural consequence was, that it is mentioned by all contemporary historians, and has reached even our own time, in full accordance with the wishes of the man who bore it. (*Plut., Alex.*, c. 3.—*Cic.*, *N. D.*, 2, 27.—*Val. Max.*, 8, 14.—*Strab.*, 640.—*Vid. Ephesus.*)

HERSE, a daughter of Cecrops, king of Athens, beloved by Mercury. The god disclosed his love to Ag-

lauros, Herse's sister, and entreated her good offices in his suit. These she promised on condition of receiving a large quantity of gold, and drove him out of the palace until he should have given it. Minerva, incensed at her cupidity, and provoked with her also for other causes, sent Envy to fill her bosom with that baneful passion. Unable thereupon to endure the idea of her sister's felicity, she sat down at the door, determined not to permit the god to enter. Mercury, provoked by her obstinacy, changed her into a black stone. Herse became the mother of Cephalus. (*Ovid, Met.*, 2, 708, seqq.—*Apollod.*, 3, 14.—*Vid. Cecrops.*)

HERSILIA, one of the Sabine females carried away by the Romans at the celebration of the Consualia. She was given to Romulus as a spouse, and, after his death, became herself a divinity, under the name of Hora (*Youth*). The common reading, Ora, is wrong. (*Consult Gierig, ad Ovid, Met.*, 14, 851.)

HERTHA, a goddess worshipped by the ancient Germans, and, according to Tacitus (*Germ.*, c. 40), the same with the earth. ("Hertham, id est, Terram matrem, colunt.") She was supposed to take part in human affairs, and even sometimes to come among mortals. She had a sacred grove in an island of the ocean, and a chariot, covered with a veil, standing in the grove and consecrated to her service. Whenever it was known that the goddess had descended into this her sanctuary, her car was got ready, cows were yoked to it, and the deity was carried around in the covered vehicle. Festivity reigned in every place which the goddess honoured with her presence: wars ceased, arms were laid aside, and peace and harmony prevailed, until the priest declared that the goddess was sated with human converse, and once more enclosed her within the temple. (*Tacit., ibid.*) The very name Hertha, and its close resemblance to our English word *Earth*, proves Tacitus to be right in making Hertha and the Earth identical. (Compare the Anglo-Saxon *Hearth*, i. e., "Earth.") The island mentioned by Tacitus is supposed by many to have been that of Rugen, in the Baltic, while others have sought for it in the Northern Ocean. Certain traditions in the island of Rugen seem to favour the former opinion. (*Consult Voyage dans l'isle de Rugen, par Zollner, and Panckoucke's Germany of Tacitus*, p. 204, in notis.)

HERULI, a barbarian race, who attacked the Roman empire on its decline. Their first appearance was on the shores of the Black Sea. They were subsequently defeated by the Ostrogoths; but, after the death of Attila, they founded a powerful empire on the Danube. According to Jornandes (*De Reb. Get.*), they first dwelt in Scandinavia, and, being driven thence by the Danes, wandered eastward as far as the Palus Mæotis, and settled in that neighbourhood. They continued making frequent incursions into the empire until the reign of Anastasius, when great numbers of them were cut off by the Lombards, and the rest migrated to the West. They began to invade the empire about A.D. 526. (*Paul. Warnef., de Gest. Longob.*, 1, 20.—*Procop., Bell. Goth.*, 2, 11.) The Heruli made themselves masters, at one time, of Rome itself, under their king Odoacer, and from this period, A.D. 476, is dated the fall of the Western Empire.

HESIODUS (Ἡσιόδος), a celebrated Grecian poet, commonly supposed to have been born at Cumæ or Cyme, in Æolis, and to have been brought, at an early age, to Ascræ in Bœotia. (*Schöll, Gesch. Griech. Lit.*, vol. 1, p. 130.—*Lil. Gyrard., Vit. Hes.*) Götting, however, has shown very clearly, from the poet's own words (*Op. et D.*, 648, seqq.), that he must have been born at Ascræ. His father, it seems, had migrated from Cyme to Ascræ in consequence of his poverty, and resided at the latter place for some time, though without obtaining the rights of a citizen. Still, however, he left at his death a considerable property to his two sons, Hesiod, and a younger brother named Per-

ses. The brothers divided the inheritance ; but Perseus, by means of bribes to the judges, contrived to defraud his elder brother. Hesiod thereupon migrated to Orchomenus, as Götting supposes, and the harsh epithets which he applies to his native village (*Op. et D.*, 637, *seq.*) were, in all probability, prompted by resentment at the wrong which he had suffered from the Ascrean judges, in relation to the division of his patrimony. (Götting, *Pref. ad Hes.*, p. iv.) From a passage in the proem to the *Theogony*, it has been inferred that Hesiod was literally a shepherd, and tended his flocks on the side of Helicon ; and this supposition, though directly at variance with the statement of Pausanias, who makes him a priest of the Muses on Mount Helicon, seems decidedly the most rational one. He was evidently born in an humble station, and was himself engaged in rural pursuits ; and this perfectly accords with the subject of the poem which was unanimously ascribed to him, namely, the *Works and Days*, which is a collection of reflections and precepts relating to husbandry, and the regulation of a rural household. The only additional fact that can be gathered from Hesiod's writings is, that he passed into the island of Eubœa, on occasion of a poetical contest at Chalcis, which formed part of the funeral games instituted in honour of Amphidamas : that he obtained a tripod as the prize, and consecrated it to the Muses of Helicon. This latter passage, however, is suspected by Guëtus and Wolf ; but it seems to have formed a part of the poem from time immemorial ; and it may not be unreasonable to infer its authenticity from the tradition respecting an imaginary contest between Homer and Hesiod. That the passage should have been raised on the basis of the tradition is impossible, because, in that case, it is obvious that the name of Homer would have appeared in the verses ; but it is highly probable that the tradition was built on the passage. If the passage be a forgery, it is a forgery without any ostensible purpose ; it is a mere gratuitous imposture which tends to nothing ; and it seems impossible that any person should take the trouble of foisting supposititious lines into Hesiod's poem, for the barren object of inducing a belief that he had won a poetical prize from *somebody*. This nullity of purpose could not but strike those who, being themselves willing to believe that Homer was the competitor at Chalcis, were anxious for proofs to convince others : and hence an interpolation of this very passage has been practised ; which alone shows that, if a forgery, it was an unmeaning and useless forgery. For the verse, "Victor in song a tripod bore away," has been attempted to substitute, "Victor in song o'er Homer the divine." Connected with the same design of making Homer and Hesiod contemporaries, is an imposture on a large scale, which professes to be an historical account of the contest between Homer and Hesiod, and which appears to be erected on the above tradition as related by Plutarch ; for it is evident, from a passage in the work itself, that it was not composed till the time of the Emperor Hadrian. As to the tradition of this imaginary meeting, for which not a shadow of evidence appears in Hesiod's own writings, Robinson offers a very probable conjecture : that it originated in a coincidence between this passage of the work and a passage in one of Homer's hymns, where the writer supplicates Venus to grant him the victory in *some* approaching contest.—The following account is given as to the manner of Hesiod's death. Hesiod is said to have consulted the oracle of Delphi as to his future destinies, and the Pythia directed him, in reply, to shun the grove of Nemean Jupiter, since there death awaited him. There were at Argos a temple and a brazen statue of Nemean Jove ; and Hesiod, believing this to be the fatal spot, directed his course to Cnoë, a town of the Locri ; but the ambiguity of the oracle had deceived him, for this place also, by obscure report, was

sacred to Nemean Jupiter. He was here the guest of two brothers. It happened that their sister Ctemene was violated in the night time by the person who had accompanied Hesiod, and hung herself in consequence of the outrage. This man they accordingly slew ; and, suspecting the connivance of Hesiod, killed him also, and threw his body into the sea. The murder is said to have been detected by the sagacity of Hesiod's dog ; by some it is related that his corpse was brought to the shore by a company of dolphins, at the moment that the people were celebrating the festival of Neptune. The body of Hesiod was recognised, the houses of the murderers were razed to the foundation, and the murderers themselves cast into the sea. Another account states them to have been consumed by lightning ; a third, to have been overtaken by a tempest while escaping to Crete in a fishing-boat, and to have perished in the wreck. In truth, the summary justice which these brothers executed on the man whom they honestly supposed to be the accomplice of their sister's dishonour, was not of a nature to call for miraculous interference ; but the fable displays the sacredness attached by Grecian enthusiasm to the poet's character.—The only works that remain under the name of Hesiod are, 1. *Ἔργα καὶ Ἡμέραι* (" *Works and Days* ") ; 2. *Θεογονία* (A " *Theogony* ") ; 3. *Ἀσπίς Ἡρακλέους* (" *The Shield of Hercules* ").—The " *Works and Days* " (which, according to Pausanias, the Boeotians regarded as the only genuine production of Hesiod), is so entirely occupied with the events of common life, that the author would not seem to have been a poet by profession, as Homer was described by the ancients, but some Boeotian husbandman, whose mind had been so forcibly moved by peculiar circumstances as to give a poetical tone to the whole course of his thoughts and feelings. The poem consists of advice given by Hesiod to his brother Perseus, on subjects relating for the most part to agriculture and the general conduct of life. The object of the first portion of the poem is to improve the character and habits of Perseus, to deter him from seeking riches by litigation, and to incite him to a life of labour, as the only source of permanent prosperity. Mythical narratives, fables, descriptions, and moral apophthegms, partly of a proverbial kind, are ingeniously chosen and combined, so as to illustrate and enforce the principal idea.—In the second part Hesiod shows Perseus the succession in which his labours must follow, if he determines to lead a life of industry. But as the poet's object was not to describe the charms of a country life, but to teach all the means of honest gain which were then open to the Ascrean countryman, he next proceeds, after having completed the subject of husbandry, to treat with equal detail that of *navigation*. Here we perceive how, in the time of Hesiod, the Boeotian farmer himself shipped the surplus of his corn and wine, and transported it to countries where these products were less abundant. All these precepts relating to the works of industry interrupt somewhat suddenly the succession of economical rules for the management of a family. The poet now speaks of the time of life when a man should marry, and how he should look out for a wife. He then especially recommends to all to bear in mind that the immortal gods watch over the actions of men ; in all intercourse with others to keep the tongue from idle and provoking words, and to preserve a certain purity and care in the commonest occurrences of every-day life. At the same time, he gives many curious precepts, which resemble sacerdotal rules, with respect to the decorum to be observed in acts of worship, and which, moreover, have much in common with the symbolic rules of the Pythagoreans, that ascribed a deep and spiritual import to many unimportant acts of ordinary life. Of a very similar nature is the last part of the poem, which treats of the days on which it is expedient or inexpedient to do this or that

business. These precepts, which do not relate to particular seasons of the year, but to the course of each lunar month, are exclusively of a superstitious character, and are in great part connected with the different worship which were celebrated upon these days: but our knowledge is far too insufficient to explain them all.—One thing must be very evident to all who read the “Works and Days,” that in its present state it shows a want of purpose and of unity too great to be accounted for otherwise than on the supposition of its fragmentary nature. Ulrici considers the moral and the agricultural instruction as genuine; the story of Prometheus, and that of the Five Ages, as much altered from their original Hesiodic form; and the description of Winter as latest of all. (*Ulrici, Geschichte der Hellen. Dichtkunst*, vol. 1, p. 360.)—The “Theogony” is perhaps the work which, whether genuine or not, most emphatically expresses the feeling which is supposed to have given rise to the Hieratic school. It consists, as its name expresses, of an account of the origin of the world, including the birth of the gods, and makes use of numerous personifications. This has given rise to a theory, that the old histories of creation, from which Hesiod drew without understanding them, were in fact philosophical, and not mythological, speculations; so that the names which in after times were applied to persons, had originally belonged only to qualities, attributes, &c., and that the inventor had carefully excluded all personal agency from his system. Thus much we may safely assert respecting the “Theogony,” that it points out one important feature in the Greek character, and one which, when that character arrived at maturity, produced results, of which the Theogony is at best but a feeble promise; we mean that speculative tendency which lies at the root of Greek philosophy.—Even as early as the time of Pausanias (8, 18, and 9, 31), it was doubted whether Hesiod was actually the author of this poem. According to a learned German critic, it is a species of *mélange*, formed by the union of several poems on the same subject, and which has been effected by the same copyists or grammarians. Such is the theory of Hermann, who has advanced this hypothesis in a letter addressed to Ilgen, and which the latter has placed at the head of his edition of Homer’s Hymns. Hermann thinks that he has discovered seven different exordia, composed of the following verses: the *first*, of verses 1, 22–24, 26–52; the *second*, of verses 1–4, 11–21; the *third*, of verses 1, 2, 5–21, 75–93; the *fourth*, of verses 1, 53–64, 68–74; the *fifth*, of verses 1, 53–61, 65, 66; in the *sixth*, the 60th and 61st verses were immediately followed by the 67th; the *seventh*, of verses 1, 94–103.—The Theogony is interesting as being the most ancient monument that we have of the Greek mythology. When we consider it as a poem, we find no composition of ancient times so stamped with a rude simplicity of character. It is without luminous order of arrangement, abounds with dry and insipid details, and only by snatches, as it were, rises to any extraordinary elevation of fancy. It exhibits that crude irregularity, and that mixture of meanness and grandeur, which characterize a strong but uncultivated genius. The censure of Quintilian, that “Hesiod rarely rises, and a great part of him is occupied in mere names,” is confessedly merited. Considered, however, as a general critique, the judgment which Quintilian pronounces on Hesiod is liable to objection. The sentence just quoted refers plainly to the Theogony alone: while the following seems exclusively applicable to the Works and Days: “yet he is distinguished by useful sentences of morality, and a commendable sweetness of diction and expression, and he deserves the palm in the middle style of writing.” The Battle of the Gods, however, cannot surely be classed among the specimens of the middle style. This passage, together with the combat of Ju-

piter and Typhoeus, astonishes the reader by sudden bursts of enthusiasm, for which the prolix and nerveless narrative of the general poem had little prepared him. Milton has borrowed some images from these descriptions; and the arming of the Messiah for battle is obviously imitated from the magnificent picture of Jupiter summoning all the terrors of his omnipotence for the extirpation of the Titans. (*Elton’s Hesiod*, p. 16.)—We have also, under the name of Hesiod, a fragment of a poem entitled the Heroogony, or the genealogy and history of the demi-gods. To this poem some unknown rhapsodist has attached a piece on the combat between Hercules and Cynus, containing a description of the hero’s shield. It is from this part that the fragment in question bears the title of the “Shield of Hercules” (Ἀσπίς Ἡρακλέους). Modern critics think that to the Heroogony of Hesiod belonged two works which are cited by the ancients, the one under the title of “Catalogue of Women” (Κατάλογος γυναικῶν), giving the history of those mortal females who had become the mothers of demi-gods; and the other under the title of the “Great Eoëa” (Μεγάλη Ἠοία), so named because the history of each female or heroine mentioned therein commenced with the words ἦ, οἷη (or, such as). Any inquiry into the character and extent of the Eoëa is rendered very difficult by the obscurity which rests upon the relation of this poem to the Catalogue of Women. For this latter poem is sometimes stated to be the same with the Eoëa; and, for example, the fragment on Alcmena, which, from its beginning, manifestly belongs to the Eoëa, is in the scholia to Hesiod placed in the fourth book of the Catalogue: sometimes, again, the two poems are distinguished, and the statements of the Eoëa and the Catalogue are opposed to each other. (*Schol. ad Apoll. Rhod.*, 2, 181.) We are compelled to suppose, therefore, that originally the Eoëa and Catalogue were different in plan and subject, only that both were especially dedicated to the celebration of women of the heroic age, and that this then caused the compilation of a version, in which both poems were moulded together into one whole.—Hesiod wrote in the Ionic dialect, with some Æolisms intermingled. We have scholia on his poems by Proclus, John Tzetzes, Moschopolus, and John Protospatharius. We have to regret the loss of the commentary upon him by Aristophanes of Byzantium.—The latest and best editions of Hesiod are, that of Dindorf, *Lips.*, 1825, 8vo, and that of Götting (in the Bibliotheca Græca, *Gothæ et Erford.*, 1831, 8vo. (*Müller’s Hist. Lit. Gr.—Libr. Us. Knowl.*, p. 77, seq.))

HESIÖNE, a daughter of Laomedon, king of Troy, by Strymno (called also Placia or Leucippe), daughter of the river-god Scamander. When Apollo and Neptune, after having crested the walls of Troy, had been refused by Laomedon the stipulated remuneration, Apollo wreaked his vengeance by the infliction of a pestilence; and Neptune sent a sea-monster which ravaged the coasts of the country, making its appearance with every full tide. The oracle being consulted, declared that there would be no deliverance from these calamities, until Laomedon should expose his own daughter Hesiöne as a prey to the monster. The monarch accordingly exposed her, having attached her person to the rocks on the seashore. Hercules, while returning in his vessel from the Euxine, with the girdle of the Amazon, saw the princess in this situation, and offered to deliver her if Laomedon would give him the mares which Jupiter had presented to Tros in exchange for his son Ganymedes. Laomedon assented, and Hercules slew the monster and delivered Hesiöne; but the faithless Trojan refused to keep his word, and the hero sailed away, threatening to return and make war on Troy. Some time after this, when Hercules had accomplished all his labours, and had also completed the term of his servitude with Omphale, he resolved to

take his long-threatened vengeance on Laomedon. He accordingly collected a fleet of eighteen fifty-oared vessels (Homer, *Il.*, 5, 641, says six), manned by a valiant band of volunteer warriors, and, sailing to Ilium, took the city, having been powerfully aided by his friend and follower Telamon. Hercules slew with his arrows Laomedon and all his sons except Podarces, who had advised his father to give the stipulated reward to the hero for the destruction of the monster. He then gave Hesione to Telamon as a reward of his valour, and allowed her to choose one among the captives to be set at liberty. When she had fixed upon her brother Podarces, Hercules replied that he must first be made a slave, and then she might give something for him and redeem him. She took her golden veil off her head, and with it bought him, and hence he was afterwards named Priamus (*Purchased*) instead of Podarces (*Swift-foot*). Hesione was taken to Greece by Telamon, where she became the mother of Teucer. (*Apollod.*, 2, 5, 9, *seqq.*—*Id.*, 2, 6, 4.—*Keightley's Mythology*, p. 359, 365.)

HESPERIA, a name applied by the poets to Italy, as lying to the west of Greece. It is of Greek origin (*Ἑσπεία*), and is derived from *ἑσπέρα*, "evening," so that *Hesperia* properly means "the evening-land," i. e., the western region. (*Virg.*, *Æn.*, 1, 530.—*Id.*, *ib.*, 569.—*Ovid*, *Met.*, 2, 458.—*Lucan*, 1, 224.) It is also, though less frequently, applied to Spain, as lying west of Italy. (*Horat.*, *Od.*, 1, 36, 4.—*Lucan*, 4, 14.)

HESPERIDES, or "the Western Maidens," three celebrated nymphs, whose genealogy is differently given by various writers. According to Hesiod (*Theog.*, 215), they were the daughters of Night, without a father. Diodorus, on the other hand, makes them to have had for their parents Atlas and Hesperis daughter of Hesperus (*Diod. Sic.*, 4, 27), an account which is followed by Milton in his *Comus* (v. 981). Others, however, to assimilate them to their neighbours the Graie and Gorgons, call the Hesperides the offspring of Phorcus and Ceto. (*Schol. ad Apoll. Rh.*, 4, 1399.) Apollonius gives their names as Ægle, Hespera, and Erytheis (4, 1427), while Apollodorus, who increases the number to four, calls them Ægle, Erythea, Hestia, and Arethusa. (*Apollod.*, 2, 5, 11.) Hesiod makes them to have dwelt "beyond the bright ocean," opposite to where Atlas stood supporting the heavens (*Theog.*, 518), and when Atlas had been fixed as a mountain in the extremity of Libya, the dwelling of the Hesperides was usually placed in his vicinity, though some set it in the country of the Hyperboreans. (*Apollod.*, l. c.)—According to the legend, when the bridal of Jupiter and Juno took place, the different deities came with nuptial presents for the latter, and among them the goddess of Earth, with branches having golden apples growing on them (" *Terram venisse ferentem aurea mala cum raris.*" *Hygin.*, *Poet. Astron.*, 2, 3.) Juno, greatly admiring these, begged of Earth to plant them in her gardens, which extended as far as Mount Atlas (" *qui erant usque ad Atlante montem.*" *Hygin.*, l. c.) The Hesperides, or daughters of Atlas, were directed to watch these trees; but, as they were somewhat remiss in discharging this duty, and frequently plucked off the apples themselves, Juno sent thither a large serpent to guard the precious fruit. This monster was the offspring of Typhon and Echidna, and had a hundred heads, so that it never slept. (*Hygin.*, l. c.) According to Pisander, the name of the reptile was Ladon. (*Schol. ad Apoll. Rh.*, 4, 1396.)—One of the tasks imposed upon Hercules by Eurystheus was to bring him some of this golden fruit. On his way in quest of it, Hercules came to the river Eridanus, and to the nymphs, the daughters of Jupiter and Themis, and inquired of them where the apples were to be obtained. They directed him to Nereus, whom he found asleep; and,

in spite of his numerous changes of form, he bound and held him fast until he had mentioned where the golden apples were. Having obtained this information, Hercules went on to Tartessus, and, crossing over to Libya, proceeded on his way until he came to Irassa, near the lake Tritonis, where Antæus reigned. After destroying this opponent (*vid.* Antæus) he visited Egypt, and slew Busiris, the monarch of that land. (*Virg.* Busiris.) He then roamed through Arabia, and after this over the mountains of Libya, which he cleared of savage beasts. Reaching then the eastern course of the ocean, he was accommodated, as in the adventure against Geryon, with the radiant cup of the Sun-god, in which he crossed to the opposite side. He now came to where Prometheus lay chained, and, moved by his entreaties, shot the bird that preyed upon his liver. Prometheus, out of gratitude, warned him not to go himself to take the golden apples, but to send Atlas for them, and, in the mean time, to support the heavens in his stead. The hero did as desired, and Atlas, at his request, went and obtained three apples from the Hesperides; but he said he would take them himself to Eurystheus, and that Hercules might continue to support the heavens. At the suggestion of Prometheus, the hero feigned assent, but begged Atlas to hold the heavens again until he had made a pad (*σπείραν*) to put on his head. Atlas threw down the apples and resumed his burden, and Hercules picked them up and went his way. (*Pherecyd.*, *ap Schol.*, l. c.—*Apollod.*, l. c.) Another account, however, made Hercules to have killed the serpent, and to have taken the apples himself. (*Eurip.*, *Herc. Fur.*, 394, *seqq.*—*Apollod.*, l. c.) The hero brought the apples to Eurystheus, who returned them to him, and he then gave them to Minerva. The goddess carried them back to the garden of the Hesperides. (*Apollod.*, l. c.—*Keightley's Mythology*, p. 251, 361, *seqq.*)—The explanation given to this fable by some of the pragmatists is dull enough: the Hesperides, say they, were the daughters of Hesperus, a Milesian, who dwelt in Caria. This Hesperus had sheep with very fine fleeces, and so remarkably beautiful in every respect that they were called, by a figure of speech, "golden." Hercules, having chanced to spy these valuable animals, as they were feeding on one occasion near the shore, under the care of a shepherd named Draco (*δράκων*, "snake"), drove them on board of his ship, along with their keeper, Hesperus being dead at the time, and his daughters inheriting his possessions. Now, continue these expounders, since the same word in Greek (*μῦθα*) means both "sheep" and "apples," the fable of the golden fruit eventually took its rise! (*Palaeph.*, c. 19.—Compare *Varro*, *R. R.*, 2, 1, 6.—*Diod. Sic.*, 4, 27.)—Dupuis, who makes Hercules to have been the Sun, and refers his twelve labours to the passage of that luminary through the signs of the zodiac, explains the fable of the Hesperides as follows. In the twelfth month, making the first coincide with Leo, the sun enters the sign Cancer. At this period the constellation of Hercules Ingenuculus descends towards the western regions, called Hesperia, followed by the polar dragon, the guardian of the apples of the Hesperides. On the celestial sphere Hercules tramples the dragon under foot, which falls towards him as it sets. Hence the fable. (Compare remarks under the article Hercules.)—The gardens of the Hesperides are placed by those geographical writers who seek to convert a fable into reality, in the neighbourhood of the ancient Berenice, now *Bengazi*, in Cyrenaica, on the Mediterranean coast of Africa. A modern traveller, Captain Beechey, has given us some curious information on this point. He remarks (p. 316, *seqq.*) that some very singular pits or chasms, of natural formation, were discovered by him in the neighbourhood of *Bengazi*. "They consist of a level surface of excellent soil, several hundred feet in ex-

tent, enclosed within steep, and, for the most part, perpendicular, sides of solid rock, rising sometimes to a height of sixty or seventy feet, or more, before they reach the level of the plain in which they are situated. The soil at the bottom of these chasms appears to have been washed down from the plain above by the heavy rains, and is frequently cultivated by the Arabs; so that a person, in walking over the country where they exist, comes suddenly upon a beautiful orchard or garden, blooming in secret, and in the greatest luxuriance, at a considerable depth beneath his feet, and defended on all sides by walls of solid rock, so as to be at first sight apparently inaccessible. The effect of these secluded little spots, protected, as it were, from the intrusion of mankind, by the steepness and depth of the barriers which enclose them, is singular and pleasing in the extreme; they reminded us of some of those secluded retreats which we read of in fairy legends or tales. It was impossible to walk along the edge of these precipices, looking everywhere for some part less abrupt than the rest, by which we might descend into the gardens beneath, without calling to mind the description given by Scylax of the far-famed gardens of the Hesperides."—It has been supposed by many, and among the rest by Gosselin and Pacho, that the Hesperian gardens of the ancients were nothing more than some of those verdant caves which stud the Libyan desert, and which, from their concealed and inaccessible position, their unknown origin, and their striking contrast to the surrounding waste, might well suggest the idea of a terrestrial paradise, and become the types of the still fairer creations of poetic fable. Possibly, therefore, supposing the fable to rest on a real basis, the first of these Elysian groves may have been at the extremity of Cyrenaica mentioned by Beechey, and the original idea of the legend may have been taken from a subterranean garden of the above description.—The garden of the Hesperides is stated by Scylax (p. 46) to have been an enclosed spot of ten stadia each way, filled with thickly-planted fruit-trees of various kinds, and inaccessible on all sides. It was situated at six hundred and twenty stadia (fifty geographical miles) from the port of Barce; and this agrees precisely with that of the place described by Captain Beechey from Ptolemaea. The testimony of Pliny (5, 5) is very decided in fixing the site of the Hesperides in the neighbourhood of Berenice. "Not far from the city" (Berenice), "is the river Letlion, and the sacred grove where the gardens of the Hesperides are said to be situated. We do not mean," remarks Captain B., "to point out any one of these subterranean gardens as that which is described in the passage above quoted from Scylax; for we know of no one which will correspond, in point of extent, to the garden which that author has mentioned. All those which we saw were considerably less than the fifth of a mile in diameter (the measurement given by Scylax); and the places of this nature which would best agree with the dimensions, are now filled with water sufficiently fresh to be drinkable, and take the form of romantic little lakes. Scarcely any two of the gardens we met with were, however, of the same depth or extent; and we have no reason to conclude that, because we saw none which were large enough to be fixed upon for the garden of the Hesperides, there is therefore no place of the dimensions required; particularly as the singular formation alluded to continues to the foot of the Cyrenaic chain, which is fourteen miles distant in the nearest parts from Berenice." (Compare *Edinb. Rev.*, n. 95, p. 228.)

HESPERIDUM INSULÆ, are generally thought to correspond with the *Cape de Verd* islands; but, as these are too far from the coast, they possibly may have been rather the small islands called *Bisagos*, lying a little above *Sierra Leone*. In these, some place the gardens of the Hesperides, which others will have to be

on the Continent. Consult remarks under the preceding article.

HESPERIS, I. daughter of Hesperus. She married Atlas, her father's brother, and became mother of the Hesperides, according to one legend. (*Diod. Sic.*, 4, 27.)—II. A city of Cyrenaica. (*Vid.* Berenice IX.)

HESPERIUM CORNU (*Ἑσπερίον κέρας*), a promontory on the western coast of Africa; according to Mannert, the present Cape *Ferd*. It is mentioned in the periplus of Hanno. Rennell, however, makes the Western Horn to have been a bay and not a promontory, and identifies it with the modern bay or gulf of *Bissago*. (*Mannert, Geogr.*, vol. 10, pt. 2, p. 531.—*Rennell, Geogr. of Herod.*, vol. 2, p. 424.)

HESPERIUS SINUS, a bay on the western coast of Africa, and now the bay or gulf of *Bissago*. Consult preceding article.

HESPERUS, I. son of Iapetus and Asia, and brother of Atlas. He became the father of Hesperis, who married her uncle Atlas, from which union, according to one account, sprang the Hesperides. Hesperus, like Atlas, was fabled by some to have been a great astronomer, and when ascending Mount Atlas, on one occasion, for the purpose of making his observations, was blown away by a tempest and no more seen. Divine honours were accordingly rendered to him, and the evening star was called after his name. (*Diod. Sic.*, 3, 59.) By some he is termed the son of Atlas, as, for example, by Diodorus in the passage just cited; and yet the same writer, with the contradiction that usually marks ancient fables, elsewhere calls him the brother of Atlas (4, 27.—Consult *Wesseling, ad Diod. Sic.*, 3, 59).—Another version of the story makes Hesperus to have been the son of Aurora and Cephalus, and so remarkable for beauty as to have contested the palm with Venus, from which circumstance the beautiful star of eve was called after him, and the name of Venus was also given to the same planet. (*Hygin., Poet. Astron.*, 2, 42.—*Eratoth., Catalog.*, c. 44.)—II. A name given to the star of evening. (Consult preceding article.) The same planet, when it appeared as the morning star, was called *Phosphorus* (*Φωσφόρος*) and *Lucifer*, both appellations meaning "the bearer of light." (*Hygin., l. c.*—*Call.,* 62, 34, seqq.—*Sere., ad Virg., Georg.*, 1, 250.—*Id., ad Virg., Æn.*, 8, 590.—*Muncker, ad Hygin., fab.*, 65.—*Van Staeeren, ad eund. loc.*) Pythagoras is said to have first pointed out the identity of Hesperus and Lucifer. (*Menag., ad Diog. Laert.*, 8, 14.)—Radloff has written a curious work on the planets Hesperus and Phaethon, and on their having been respectively shattered by coming in collision with some comet or other heavenly body. He makes the present planet Venus to be but a portion of the original star, and among other learned and curious arguments in support of his singular position, refers to the well-known passage of Scripture as illustrating the tradition of the great event: "How art thou fallen, Lucifer, star of the morning!" (*Radloff, Zertrümmerung der grossen Planeten Hesperus und Phaëthön, Berlin, 1823*)

HESUS, a deity among the Gauls, the same as the Mars of the Romans. (*Lucan.*, 1, 445.) Lactantius (*Div. Inst.*, 1, 21) writes the name *Hesusus*. Compare the *Hu-Cadarn* ("Hu the powerful") in the traditions and ballads of the Welsh. The god Hesus or Hesusus, in the polytheism of Gaul, was probably an intercalation of the Druids. (Consult remarks under the article *Gallia*, p. 534, col. 2.)

HESVENIUS, I. an Egyptian bishop, mentioned by St. Jerome as having published a critical edition of the Septuagint in the third century. It was introduced into the churches of this country; and Jerome usually cites it under the title of *Exemplar Alexandrinum*.—II. A lexicographer of Alexandria, who lived, according to the common opinion, towards the close of the fourth century. The question still remains undecided

whether the glossary which has reached us under the name of this writer be really his, or whether it be not merely an abridgment of his work. What has inclined some to favour the latter opinion is the circumstance of the citations being omitted. Others think, and with some appearance of reason, that this lexicon was originally a small volume, and that the numerous biblical glosses which are at present found in it have been interpolated by the copyists, who have taken the remarks made in the margin by the possessors of manuscripts for portions of the text itself. However this may be, the work of Hesychius is very important towards acquiring a full knowledge of the Greek language. It has preserved for us a large number of passages from poets, orators, historians, and physicians, whose works are lost. Hesychius explains, moreover, various words that depart from the ordinary usage of the Greek tongue, as well as terms used in sacrifices, gymnastic encounters, &c. And yet it must be acknowledged that his text is in a most corrupt state, and that when he is a solitary witness his testimony ought to be received with caution. (*Mus. Crit.*, vol. 1, p. 503.) The work, in fact, has all the appearance of rough notes, put down in the course of reading, rather than of a finished production. It was not known until the sixteenth century. Only one MS., in the library of St. Mark, at Venice, is said to be preserved, and that is full of abbreviations, and has many erasures; which accounts for the great corruption of the text, in spite of the labours of many able editors. It appears, however, that in the seventeenth century there existed a second manuscript in the Florence library. (*Ebert's Bibliogr. Lexicon*, vol. 1, p. 772.)—The best edition of Hesychius is that of Alberti, completed by Ruhnken, *Lugd. Bat.*, 1746–1776, 2 vols. fol. It is to be regretted, however, that Alberti could not avail himself of the valuable MS. notes of Bentley on this lexicographer.—The *editio princeps* of Hesychius was published by the elder Aldus, Venice, 1514, fol., under the care of Marcus Musurus. The manuscript followed was the Venice one. This, however, being, as we have already remarked, very difficult to decipher, and in other respects extremely inaccurate, Musurus took great pains to correct and restore it. This is often done with intelligence and success; but often also he deceives himself in his corrections, and in general treats his original in too arbitrary a manner. Schow, of Copenhagen, being at Venice, collated the manuscript with the edition of Alberti, and took note of all the variations. He published this collation at Leipsic, 1792, 8vo, under the title, "*Hesychii Lexicon ex cod. Ms. bibliothecæ S. Marci restitutum, et ab omnibus Musuri correctionibus repurgatum.*" By the help of this volume, the possessor of any edition of Hesychius, for they are all based upon this manuscript, can make the necessary corrections. The glosses, taken from the Scriptures, that are found in Hesychius, were collected and published by J. C. G. Ernesti, *Lips.*, 1785, 8vo. We may regard as the second volume of this production the work published by Ernesti in 1786, 8vo, under the title, "*Suida et Phavorini Glossæ sacrae,*" in which are found two hundred and twenty-nine glosses of Hesychius, forgotten in the first volume. To this may be joined the work of Schleusner, *Observat. in Suid. et Hesych.*, Wittemb., 1819, 4to. Among the subsidiary works that illustrate Hesychius, may be mentioned Toup's *Emendations (Toupi Emendationes in Suidam et Hesychium, Oxon.*, 1790, 4 vols. 8vo), and the Dissertation of Ranke (*De Lexici Hesychiani vera origine et genuina forma commentatio*, *Lips.*, 1831, 8vo).—III. A native of Miletus, surnamed, by reason of the office with which he was invested, *Illustris* ("Illustrious"). He is supposed to have lived under the emperors Justin and Justinian, and was the author of a chronicle (*ἱστορικὸν ὡς ἐν ἀνόψει κοσμητικῆς ἱστορίας*), from Belus king of Assyria to the

end of the reign of Anastasius I. This work, embracing the history of 1190 years, was divided into six sections or epochs (*τμήματα*), viz., 1. Events anterior to the Trojan war. 2. From this latter period to the building of Rome. 3. From the building of Rome to the abolition of royalty in that city. 4. From the latter period to the death of Julius Cæsar. 5. From the death of Cæsar to the reign of Constantine the Great. 6. From the latter period to the death of Anastasius I. The last section, of which we have a valuable fragment remaining, entitled *Ἱστορία Κωνσταντινουπόλεως* ("Of the origin of Constantinople"), served as an aid to George Codinus in his description of this city. Hesychius also composed Memoirs on the reign of Justinian the elder (*Ἐτέρα βίβλος, ἐν ᾗ περιέχεται τὰ ἱουστινιανῶν πράγματα*). This work has entirely perished. The fragment of Hesychius, mentioned above, has been published under the name of Codinus by Douza, *Heidelb.*, 1596, 8vo. Hesychius also wrote an *Onomasticon*, or Table of Men distinguished in the various branches of knowledge (*Πίναξ τῶν ἐν παιδείᾳ ὀνομαστῶν*), of which Suidas professes to have availed himself. We have likewise, under the name of Hesychius, a small work entitled *Περὶ τῶν παιδείᾳ διαλαμπάντων σοφῶν*, "Of Philosophers celebrated for their learning." It is nothing more than a very careless compilation either from Diogenes Laertius, or from the lost *Onomasticon* of the writer whom we are at present considering. It contains, however, some things which are not found elsewhere, and this serves to stamp a certain value on the work. The latest and best edition of these two works is that of Orellius, *Lips.*, 1820, 8vo.—IV. A native of Jerusalem, who died about 428 A.D. He was a priest, and wrote an ecclesiastical history, which is lost.—V. This name was also borne by many other ecclesiastics, among whom are reckoned several martyrs. (Consult *Fabricius, Bibl. Græc.* lib. 5, c. 5, and the *Prolegomena* to Alberti's edition of the *Lexicon* of Hesychius.)

ETRURIA (more commonly **ETRURIA**), a celebrated country of Italy, lying to the west and north of the Tiber. Of all the nations of Italy, none appear to have such claims on our notice as that of the Etrurians. The origin of this nation, however, was involved in a degree of uncertainty at the time when the earliest of our ancient historians wrote, which was hardly to have been expected, considering their extended dominion, their immemorial possession of an alphabet, the existence among them of a sacerdotal caste, and their acknowledged superiority in civilization to all their European contemporaries except the Greeks. Their subsequent history is chiefly known from their connexion with other nations; for, never having cultivated their language so as to attain to the possession of a literature, their writings have long since perished; and what they recorded on brass or marble is far less intelligible than the hieroglyphics of Egypt. Even in ancient times it was a disputed question whether the Etrurians were Pelasgi from Greece, or Lydians from Asia, or indigenous in Italy. According to Herodotus (1, 94), the Lydians ought to be considered as the parent stock of the Etrurian nation. The former had a tradition among them, that a great famine arose in Lydia during the reign of Atys, one of their earliest kings. When it had lasted for several years, it was at length determined that the nation should divide itself into two parts, under the respective command of Lydus and Tyrrhenus, the two sons of Atys, one of which was to migrate, and the other to remain in Lydia. It fell to the lot of Tyrrhenus to abandon Lydia with the people under his charge. He accordingly equipped a fleet at Smyrna, and set sail in quest of a country to settle in; when, after passing by various countries and nations, he finally arrived among the Umbri, in Italy, where he founded several cities, which the people, who, from

him, were called Tyrrhenians, occupied up to the time of Herodotus. If we divest the Lydian tradition of some marvellous circumstances which are attached to it, particularly those that relate to the famine, which may be fairly charged to Oriental hyperbole, there still remains the record of an important event, which, considering the character of the historian who has handed it down to us, and the geographical information he possessed, is certainly entitled to our attention if it does not recommend itself to our belief. The greatest argument, however, in favour of this tradition, must be allowed to consist in the weight of testimony which can be collected in support of it from the writers of antiquity, especially those of Rome, who, with few exceptions, seem to concur in admitting the fact of the Lydian colony. (Consult *Virg., Æn.*, 8, 479, *et pass.*—*Catull.*, 31, 13.—*Horat., Sat.*, 1, 6.—*Stat. Silv.*, 1, 2.—*Id.*, 4, 4.—*Senec., ad Helv.*—*Justin.*, 20, 1.—*Val. Max.*, 2, 4.—*Plut., Vit. Rom.*—*Pliny*, 3, 5.)—Strabo, who has entered more fully into the discussion of the Tyrrhenian origin, does not seem to entertain any doubt of the event which we are now considering, and he quotes Anticleides, an historian of some authority, who reports that the first Pelasgi settled in the islands of Imbros and Lemnos, and that some of them sailed with Tyrrhenus, the son of Atys, to Italy. (*Strabo*, 219.) In short, the presumption would appear so strong in favour of this popular account of the origin of the Tyrrheni, that we might consider the question to be decided, were not our attention called to the opposite side by some weighty objections, advanced long since by Dionysius of Halicarnassus, and farther strongly urged by some modern critics of great reputation and learning. Dionysius seems to stand alone among the writers of antiquity as invalidating the facts recorded by Herodotus; and though his own explanation of the origin of the Tyrrhenians is evidently inconsistent and unsatisfactory, still it must be owned that his arguments tend greatly to discredit the colony of the Lydian Tyrrhenus. He maintains, in the first place, that it is fabulous, from the silence on so important an event of Xanthus the historian of Lydia, a writer of great research and authority, and more ancient than Herodotus. Xanthus acknowledges no Lydian prince of the name of Tyrrhenus; the sons of Atys, according to him, were Lydus and Torkybus, who both remained in Asia. Again, Dionysius asserts that there was no resemblance to be discovered either in the religion, customs, or language of the Lydians and Tuscans; and, lastly, from the discrepancy to be observed in the various statements of the genealogy of Tyrrhenus and the period of his migration, he feels justified in rejecting that event as a mere fiction. (*Ant. Rom.*, 1, 30.) The advocates of Herodotus, however, have not been intimidated by these arguments, but have endeavoured to prove their insufficiency. Among these may be reckoned Ryckius (*de primis Italia colonis*, c. 6); Bishop Cumberland (*Connexion of the Greek and Roman Antiquities. Tract. 7, c. 2*); Dempster (*Etrur. Regal.*, 1, 4); Larcher (*Hist. d'Herod.*, vol. 1, p.); and Lanzi (*Saggio*, &c., vol. 2, p. 102). On the other hand, the reasons advanced by the Greek historian have appeared convincing to some eminent critics, such as Cluverius (*Ital. Antiq.*, vol. 1, lib. 1, c. 1); Freret (*Mém. de l'Acad.*, vol. 18, p. 97); and Heyne (*Comment., &c., Nov. Soc. Gott.*, vol. 3, p. 39); who have, besides, added other objections to those already started. At length, in 1826, the Academy of Sciences at Berlin, by proposing the Etruscans as the subject of a prize essay, showed their opinion that the time was come when the scattered notices of the ancient writers should be combined with the discoveries in Etruscan antiquities which the last century brought to light, and the historical truth separated from the mass of contradictory theories beneath which successive writers had

buried it. Professor K. O. Müller, whose essay obtained the prize, had already distinguished himself by his *Orchomenus und die Minyer* ("Orchomenus and the Minyans"), and *Dorier* ("The Dorians"), two works in which an extraordinary extent of reading in archaeology and ancient literature is united to great sagacity in reconstructing from its fragments the ruined edifice of early Greek history. The dissertation on the Etruscans forms in every respect a suitable accompaniment to these.—We have already remarked, that even in ancient times it was a disputed question, whether the Etruscans were Pelasgi from Greece, or Lydians from Asia, or indigenous in Italy; and that the moderns had added more than an equal number to the hypotheses of the ancients. Thus some have supposed that the Etruscans might be descended from the Egyptians (*Bonarotti, ad Monum.*); others, from the Canaanites (*Maffei, Ragion. dell' Itali primitivi*, p. 218, *seqq.*—*Mazocchi, Comment. in Tab. Heracl.*, p. 15, &c.); others, from the Phenicians (*Sicinton, de Ling. Etruria regalis Vernacula, Ozon.*, 1738); others again contended for their Celtic origin (*Pelloutier, Hist. des Celtes*, lib. 1, p. 178.—*Bardetti, dei primi abit. d'Ital.*, vol. 1). Freret ascribed it to the Racti (*Mém. de l'Acad.*, &c., vol. 18); Hervas to the ancient Cantabri (*Idea del Universo*, vol. 17, c. 4); while some again gave up all hope of arriving at any certain conclusion in this puzzling question, and seemed to consider it as one of those historical problems which may for ever remain without a solution. Müller's theory appears ingenious and plausible. He admits a primitive population of Etruria, whom he calls, after Dionysius, the *Rasæne*, on whose origin he does not decide, but thinks there are grounds for assuming, that these were mingled with a body of Pelasgian colonists from the coast of Lydia. We find in Greece a people bearing the name of Pelasgian Tyrrheni, driven from Bœotia by the Dorian migration, appearing as fugitives in Athens, and thence betaking themselves to Lemnos, Imbros, and Samothrace, where, as well as on Mount Athos, they remained in the historic times. The name Tyrrhenian is applied to the Etruscans in Hesiod (*Theog.*, 1015), and, in the Homeric hymn to Bacchus, to this people of the Ægean. That they were not the Tyrrhenians of Italy by whom the god was carried off is evident; the pirates intended to carry him to Egypt or to Cyprus, not to Italy; and from other sources it appears that the mythus was a Naxian legend. Ovid (*Mét.*, 3, 577, *seqq.*) relates it at great length, and represents the Tyrrhenians as Mæonians. Now, on the coast of Mæonia or Lydia there was a place named Τύρρηα, from which Müller deduces the name Tyrrhenian; in all probability radically the same with Torrhæbian, the name borne by the southern district of Lydia. He is inclined, however, to consider the people, to whom, from their occupation of Τύρρηα, the name Tyrrhenian was given, not as Lydians, but as Pelasgians, who settled for a time on this part of the coast, and having thence acquired their name, and made it notorious by their piracies in the Ægean, migrated first to the Malean promontory, and then to Etruria. In deriving them, however, immediately from the Pelasgians who came from Attica to Lemnos and Imbros, and thence to Lydia, he seems to embarrass his hypothesis with an unnecessary difficulty. He himself makes the worship of the phallic Heracles to be characteristic of the Pelasgi in Attica and the islands; yet of this he admits that hardly a trace is to be found in the Etrurian religion. It is remarkable how late is the application of the name Pelasgian to the Tyrrhenians. Herodotus not only never calls them so, but even by referring to the Crestonians, who live *above the Tyrrhenians*, for a proof of what the Pelasgi language was, he seems to imply that the Tyrrhenians themselves were, in his view, not Pelasgians; else why not take them at once for his illustration? No

ancient author describes the Tyrrhenians of Lydia as Pelasgians from Attica and the islands. The genealogy of Herodotus from the Lydian authors makes Tyrrhenus a son of Atys, king of Lydia; in that given in Dionysius without the author's name, Lydus and Tyrrhenus are brothers; in that of Xanthus the brothers are called Lydus and Torybus or Torrhubus, i. e., according to Müller, Tyrrhenus. Whichever of these we argue from, it appears very improbable that the lineage of a band of Pelasgian pirates, who had settled on the coasts of Lydia, should have been carried up to the ancient kings or gods of the country; and that, too, not by the Greeks, but by the Lydians themselves. We cannot, therefore, avoid the conclusion, that the Tyrrhenians were much more intimately connected with the Lydian population than Müller's account of them supposes. Niebuhr makes the Mæonians (the Homeric name for the Lydians) to be Pelasgians, arguing from the name of their stronghold, Larissa, which is found in all countries occupied by Pelasgians; Müller represents them as wholly different, alleging that no ancient author calls the Mæonians Pelasgians. This is true; but they make the Tyrrhenians Mæonians and also Pelasgians, and therefore imply, though they do not assert, the identity of the people who bore these three names. The whole coast of Asia Minor appears to have been occupied by the Pelasgi, or nations differing from them only in name. Meneceates (*ap. Strab.*, 571) related, that the Pelasgi had occupied the whole of Ionia, from Mycale northward, and the adjacent islands; the Carians, the Leleges, and the Caucones, the Trojans, and Mysians, were of the same race, and also allied to the Lydians, as appears from the genealogy given by Herodotus (1, 171). The Greeks themselves attribute the Pelasgic population of Asia Minor to colonies sent from Greece or from the islands; but their accounts of colonies before the Homeric age, being founded on no contemporary authority, must generally be regarded as historical hypotheses, chiefly grounded upon similarity of names, which may often be more rationally explained from other causes. It is, however, by no means probable that the Lydians were wholly a Pelasgic people. The phenomena of the history of Asia Minor are most easily solved by the supposition that a nation of Syrian origin was mingled in its two principal districts, Lydia and Phrygia, with another nearly allied to the Greeks. The Mosaic genealogy of nations (*Gen.*, 10, 22) assigns a Semitic origin to the Lydians; while it refers most of the tribes of Asia Minor, along with the Greeks, to the stock of Japheth. The mythology of Lydia, the basis, as usual, of its dynasties of kings, betrays its Syrian as well as Grecian affinities. Their deities Ἀττης or Ἀττης (the same as Πάρις, *Hes.*), and Mā, father and mother, have probably given their name to the Attyades and the Mæonians; and their worship is clearly the same with that of the Syrian goddess, who was variously denominated Atargatis, Derceto, Semiramis, Rhea, Juno, and Venus. The chief seat of her worship at Hierapolis, was the resort of the people of Asia Minor; and Ascalon, in Phœnicia, appears to have been considered as a colony of the Lydians (*Steph. Byz.*, s. v) for no other reason than that the traditions of the great goddess were in a peculiar manner connected with this place. In the list of the kings of Troy, whose names are generally of Grecian etymology, the Oriental name of Assaracus points to a mixture of Oriental mythology; and this remark is still more applicable to the genealogy of the Heraclid kings of Lydia, in which Greek and Assyrian personages are so strongly mixed, Hercules, Alcæus, Belus, Ninus, Agron. (*Herod.*, 1, 7.) If, then, the Lydians were a people partly Asiatic, partly allied to the Greeks, there is really no contradiction between those historians who call the Tyrrhenians Lydians, and those who speak of Tyrrhenian Pelas-

gians. The settlement of the Tyrrhenians at Malea, on their progress from Lydia to Italy, rests on very slight grounds. A passage, namely, in the commentator Lactantius or Lutatius on Statius (*Theb.*, 4, 224), who calls the inventor of the Tyrrhenian trumpet Maleus; but the resemblance between the Tuscan and the Lydian or Phrygian music, really adds considerable weight to the other arguments in favour of the Oriental colonization of Etruria. The musical instrument of the Greeks, in the heroic and Homeric age, was the lyre; the flute was unknown, or, at least, not in use. It has been long since remarked that Homer mentions the αὐλός only in two passages (*Il.*, 10, 13; 18, 495). In the first of these he is describing the nightly noise of the Trojan camp, and the Villosian scholiast observes, that these instruments were known only to the Barbarians. This observation, though limited, is not contradicted by the other passage, in which youths are represented as dancing at a wedding to the sound of *lyres and flutes*. To say nothing of the suspicions which have been entertained, that the description of the shield of Achilles, of which this is a part, is not of the same age with the rest of the Iliad, it is very possible that the Greeks of Ionia may have employed the flute-players of Lydia or Phrygia at their festivities; or, should it be supposed that in the days of Homer the use of the flute was familiar to the Ionians themselves, the entire absence of all mention of it in the Odyssey shows that in Greece itself it had not yet been introduced. It came in there along with the worship of Bacchus, which, whatever may have been its remoter origin, certainly passed from Lydia and Phrygia to Thrace, and thence into southern Greece, devouring with its stormy music the feebler notes of the lyre. The double flute, of which the left hand played a treble to the bass of the right hand, is mentioned by Herodotus (1, 7) under the name of αὐλὸς ἀνδρείος and γυναικείος, as used by the Lydians in war. Now the double flute, as we know both from ancient authors and from monuments (*Inghirami, Monumenti Etruschi*, pt. 3, pl. 20; pt. 2, pl. 96), was in use among the Etrurians; and the Romans not only borrowed their flute-music from them, but generally employed at sacrifices and festive dances a Tuscan flute-player. (Compare *Virg.*, *Georg.*, 2, 193. — *Ovid*, *A. A.*, 1, 111.) It is very improbable that such a coincidence between the Etruscan and Asiatic customs should be accidental; and no more probable explanation of it can be given than that the Tyrrhenians were really a colony of Pelasgi from Lydia. They were probably not numerous, compared with the Rasenæ, whom they found in possession of the country; and hence, though some of their arts were communicated to the nation among whom they settled, they were soon so completely absorbed in it, that the language of Etruria bore no traces either of a Greek or a Lydian mixture. The adoption of a story of a Lydian origin by no means requires that we should reject the accounts of migrations of Pelasgi from Thessaly, and from the opposite shore of the Adriatic to the mouths of the Po, which we find in other writers on Etrurian history. Professor Müller thus sums up this part of his researches: "It remains, then, that we regard the Tuscan nation as an original and peculiar people of Italy; their language is widely different from the Greek; the names of their gods are not those which we find among the earliest Greeks whom we call Pelasgi, and which passed from them to the Hellenes; there is much, too, in the doctrine of their priests entirely foreign to the Greek theology. But it appears to have been the fate of this nation, which never displayed any independent civilization, but only adopted that of the Greeks, to have been indebted for its first impulse towards improvement to a Greek, or, at best, half-Greek tribe. The Tuscans themselves, in their native legends, referred their polity and civil-

zation to the maritime town Tarquinii, and the hero Tarchon, both probably only variations of the name Tyrrhæni. Here it was that the much-dreaded Pelasgians of Lydia landed and settled, bringing with them the arts they had acquired at home or on their way. For the first time the barbarous land saw men covered with brass array themselves for battle to the sound of the trumpet; here first they heard the loud sound of the Lydo-Phrygian flute accompanying the sacrifice, and perhaps witnessed for the first time the rapid course of the fifty-oared ship. As the legend, in its propagation from mouth to mouth, swells beyond all bounds, the whole glory of the Tuscan name, even that which did not properly belong to the colonists, attached itself to the name of Tarchon, the disciple of Tages, as the author of a new and better era in the history of Etruria. The neighbouring Umbrians and Latins named the nation, which from this time began to increase and diffuse itself, not from the primitive inhabitants, but from these new settlers. For since, in the Eugubine tables, *Trusce* occurs along with *Tuscom* and *Tuscer*, it is impossible not to conclude, that from the root TUR have been formed *Truscius*, *Truscus*, *Tuscus*; as from the root OP, *Opseus* and *Oscus*; so that *Τυρρηνίοι* or *Τυρρανίοι*, and *Tusci*, are only the Asiatic and Italic forms of one and the same name." (*Etrusker*, vol. 1, p. 100.) The time of such a colonization can, of course, only be fixed by approximation. Müller supposes it to have coincided with the Ionic migration, and to have been occasioned by it. The Umbrians were powerful in the land of which the new colonists took possession, and long wars must have been carried on with them before they were dispossessed of the three hundred towns which Pliny (3, 19) says they once held in the country afterward called Etruria. To the south the Etrurians extended themselves to the banks of the Tiber, and even beyond it into Latium, as the name of Tusculum proves. According to their own traditions, the same Tarchon who founded the twelve cities of Etruria led a colony across the Apennines and founded twelve other cities. Of such a tradition, the historian can receive no more than the fact, that Etruria, in the valley of the Po, was colonized from the southern Etruria. Bologna, anciently Felsina, which stands where the Apennines descend into the fertile plains which border the Po, was probably the first of these colonies, as it is called by Pliny (3, 20), "*princeps quondam Etruria*:" the names of most of the others are uncertain. A stone, with an Etruscan inscription, has been found (*Lanzi*, vol. 2, p. 649) as far to the westward as Alessandria. Atria and Spina, near the mouth of the Po, were certainly Tuscan cities, and very important from their commerce with the Adriatic; but the foundation of both was claimed for the Pelasgians of Thessaly or the followers of Diomedes. The same story of twelve colonies is repeated in reference to the settlement of the Etruscans in Campania. Müller supposes these to be really colonies from Etruria, in opposition to the opinion of Niebuhr, who thinks they were founded by Pelasgian Tyrrhenians, confounded with the Etruscans from identity of name. At all events, the amount of Etruscan population in Campania cannot have been great, since the Oscan language, not the Etruscan, prevailed there; and not a single Etruscan inscription has been found in this whole district. This land of luxurious indulgence appears to have exerted its usual influence on the Etruscans, and they yielded the possession of it with little resistance to the Samnites, who poured down from the hills on the fertile plains of Campania. In their Italian settlement, the Tyrrhenians appear to have retained long the practice of piracy, which had made their name notorious in the Grecian seas; indeed, it is sometimes difficult to decide whether the imputation falls on the Etruscans or the Tyrrhenians of

the Ægean. Possessing harbours on both seas, they maintained the command of both, and made themselves formidable not only to merchant ships by their corsairs, but to the naval powers by their armaments. To their predominance in the lower sea, Müller attributes the circumstance, that the Greeks, while they had numerous colonies on the eastern and southern coasts of Sicily, had only one, Himera, on the north, as late as the age of Thucydides. Indeed, the dread of the Etruscans long prevented the Greeks from passing the straits of Rhegium with their ships; and it was not till the rise of the naval power of the Phocians that either the Adriatic or Tyrrhene seas were well explored by them. Rivalry soon followed; both nations endeavoured to possess themselves of Corsica; and the Etruscans, being joined by the Carthaginians, fought a desperate battle with their Phocian antagonists, in which victory ultimately sided with the latter. They were equally unfortunate in their naval wars with the Dorians of Cnidos and Rhodes, who had made a settlement on the island of Lipara. In the time of Pausanias, a consecrated offering of the Lipareans was seen at Delphi, made from the spoils of the Tyrrhenians. Another trophy of the victory of the Greeks over them has been brought to light in our own times. In the year 474 B.C., the people of Cumæ, in Campania, being engaged in war with the Tyrrhenians, called in the aid of Hiero, tyrant of Syracuse, by whom they were totally defeated; and Greece, as Pindar says (*Pyth.* 1, 72), was delivered from slavery. In 1817, a brazen helmet was discovered among the ruins of Olympia, with an inscription to the following effect: "Hiero, son of Dinomeus, and the Syracusans (consecrate) to Jupiter, Tyrrhenian (arms) from Cumæ." Two other helmets without inscriptions, but no doubt part of the same votive offering, were found at the same time. (*Bœckh, Corp. Inscript.*, 1, 34.—*Id. ad Pind.*, vol. 1, p. 224.)—In opposition to the theory of Müller, however, another one has been advocated, with his usual ability and learning, by the celebrated Niebuhr. He makes the name Tyrseni or Tyrrheni, in Italy, to have belonged originally and properly to the Pelasgian population, and the Etruscans to have come in from the Rhetian Alps, and to have conquered the previous inhabitants. These new-comers he makes to have been the *Rasæ* of Dionysius, whereas Müller, it will be remembered, considers the *Rasæ* to have formed the primitive population of the land, and to have been conquered by the Tyrrheni. In reply to the question that very naturally presents itself, why, if the Etruscans were a foreign and distinct race, the Greek writers, nevertheless, invariably called them *Tyrseni*, and Etruria *Tyrsenia*, Niebuhr remarks, that the Etruscans had no more title to the name of Tyrsenians, than the English to that of Britons, or the Spanish Creoles to that of Mexicans or Peruvians: the strange name was acquired in all these cases, according to him, in precisely the same way. The whole theory is undoubtedly a very plausible one; but the difficulties with which it is encumbered are so numerous, that we cannot hesitate to yield an assent to the more rational view taken by Müller of this interesting but difficult subject. (Consult *Niebuhr, Rom. Hist.*, vol. 1, p. 82, *seqq.*, and 89, ed. 2, p. 38 and 108, ed. 3.—*Hist. of Rome*, p. 78, *Libr. Us. Knowl.*)

Domestic Manners, National Character, &c., of the Etrurians.

It is not an easy task to paint the domestic manners and national character of a people who have transmitted no living image of themselves to posterity in literary compositions. The basis of the national prosperity of the Etrurians was agriculture, to which their soil and climate were well adapted, and which has always flourished in Tuscany, when the beneficence of

nature has not been counteracted by misgovernment and absurd legislation. But Etruria was not, like Campania, a land of spontaneous fertility; the industry and ingenuity of man were required to adapt cultivation to the various qualities of the land, and to curb the inundations of the Po in the provinces on the Adriatic. Their primitive manners were simple; the distaff of Tanquil was long preserved in the temple of Sancus at Rome; and a passage of Juvenal (6, 288) seems to imply, that in domestic industry and virtue there was a close resemblance between the Tuscan and the Roman nations in early times. Their extensive conquests, and bold and skilful navigation, are a sufficient proof of the energy of their national character. But when commerce and conquests in Southern Italy had placed in their reach the means of indulgence, they seized upon them with the avidity of a half-barbarous people: and luxury, instead of being the handmaid of refinement and elegance, ministered to vain splendour and sensual voluptuousness. Diodorus (5, 40) describes, from Posidonius, their tables loaded twice a day (which, to abstemious Greeks, seemed the excess of gluttony), their embroidered draperies, their drinking-vessels of gold and silver, and their hosts of slaves. Athenæus gives much darker shades to his picture of the corruption of manners produced by wealth expended wholly in the gratification of the senses. That the epithets of *pinguis* and *obesus*, which the Romans applied to the Etruscans, were not wholly suggested by national malice, is evident from the recumbent figures on the covers of the sarcophagi. From the Etruscans the Romans borrowed their combats of gladiators. It should seem, however, that the horrible practice of introducing them at banquets belonged chiefly to the Etruscans of Campania, and especially to Capua; the focus of all the vices which sprang from luxury, neither softened by humanity nor refined by taste. Of the Etrurian music we have spoken in mentioning the proofs of their Lydian origin. It was almost the only branch of art in which invention is attributed to them by the ancients; and even here the invention related only to the instrument; we read of no *mood* ascribed to them. Their celebrity, both in this and the plastic art, was owing, in a great measure, to their being the neighbours of a people whose genius was so decidedly averse from both as that of the Romans; who, till they became acquainted with the Greeks, derived all the decorative part of their system of public and private life from the Etruscans. We have no historical means of determining whether the Etruscans borrowed from the Greeks their successive improvements in sculpture and statuary, or proceeded in an independent track: the fact which we shall have to produce respecting their alphabet, renders the former supposition more probable. If this communication existed, it was only to a certain point: the Tuscan style in art always bore a resemblance to that of Egypt, and their most perfect works had that rigidity, and want of varied and living expression, which characterized Grecian sculpture before Phidias had fired his imagination with Homer's description of Jupiter and Minerva, or Praxiteles had embodied in marble his vision of the Queen of Beauty. In all that department of art, or the contrary, in which mechanism without mind may attain perfection, the Etruscans were little inferior to the Greeks themselves. An Athenian poet (*ap. Athen.*, 1, 28) celebrated their works in metal as the best of their kind; alluding probably to their drinking-vessels and lamps, candelabra and tripods. The religion of the Greeks lent a powerful aid in perfecting the plastic art; that of the Etruscans, as far as it was peculiar to them, had nothing to impregnate the native fancy of the artist, or to exalt his conceptions to sublimity. They appear to have held an opinion, which we find both in the Northern and Hindu theology, that the gods themselves were like the system over which they presided, the effects

of a power exerted only at long intervals in the production of being, and absorbing into itself all that it had produced, to create again. The symbols of this power were the *Di involuti* of Etrurian theology, whose names were unknown, and who were not objects of popular worship; of them Jupiter himself asked counsel: the *Di Consantes*, twelve in number, six of either sex, presided over the existing order of things, and received homage and sacrifice. Their intervention in human affairs was chiefly manifested in omens of impending evil, to be averted by gloomy, and often cruel expiations. If morality may have gained something by the Etrurian religion's having furnished nothing answering to the sportive, but licentious mythology of the Greeks, poetry and art undoubtedly suffered. The same want of lively and cheerful imagination characterized their doctrine of the immortality of the soul: their subterranean world was a Tartarus without an Elysium. Nowhere was superstition reduced so completely to system. The regions of the heavens were divided and subdivided according to the Etrurian discipline, that every portent might have its accurate interpretation; the phenomena of the atmosphere, especially thunder and lightning, were observed and classed with a minuteness which might have furnished the rudiments of a science, had the observers been philosophers instead of priests; but which, in fact, only augmented the subservience of the multitude to those who claimed the exclusive knowledge of the methods by which the gods might be propitiated. It is unnecessary to say that philosophy, in the Grecian sense of the word, free speculation on man, nature, and providence, combining its results into a system, was unknown in Etruria. Some practical knowledge of the laws of nature cannot be denied to a people who executed such works in architecture and hydraulics as the Etruscans; but we are not aware that the discovery or demonstration of a single scientific truth can be claimed for them. The form of the Etrurian government, in which the same order were both aristocracy and priesthood, effectually prevented the mind of the nation from expending itself in its natural growth. To the *Lucumones*, an hereditary nobility, Tages revealed the religious usages which the people were to observe; and they kept to themselves the knowledge of this system, with the power of applying it as they thought best for perpetuating their own monopoly. In their civil capacity, the *Lucumones* formed the ruling body in all the cities of Etruria. In earlier times we read of kings, not of the whole country, but of separate states, whose power, no doubt, was greatly narrowed by that of the aristocracy; but they disappear after a time altogether, as from the Grecian and Roman history; while no body corresponding to the *plebs* arose to represent the popular element of the constitution. It is difficult to fix the exact relation of the great body of the ruling caste. Müller inclines to the opinion, that the cultivators of the soil were chiefly bondsmen to the land-owners, as the *Peonæ* in Thessaly, and the *Helots* in Sparta. That such a class existed in Etruria is certain; that it includes so large a proportion of the people is not probable; and the only argument adduced in support of it is the very doubtful assumption that the clients at Rome were bondsmen of the patricians. Unquestionably the Etrurian aristocracy kept the lower orders in political subjection, and the nation was thus prevented from rising to that eminence to which it might have attained; but its general prosperity is a proof that the government was not tyrannically exercised. The spirit of democracy appears not even to have stirred, so as to awaken the fears of the ruling caste, and lead them to severity. The insurrections of which we read are especially attributed to the slaves. Etruria was fertile in corn, especially in *spelt*, the *far* or *adw* of the Romans; of which the meal furnished the *pats*.

which was the ancient food of the inhabitants of all this part of Italy; and agriculture formed the most honourable occupation. The iron-mines of Ilva, now Elba, and others on the mainland of Etruria connected with them, furnished a richer supply, and of a purer quality than any other in the ancient world; the same island produced the copper for their coinage, and for their works in brass.

Works of Art, Antiquities, &c., of the Etrurians.

Enough remains of Etruscan art to justify what ancient authors have said of the population, wealth, and luxury of this people. The walls of their cities rarely exhibit that gigantic species of dike-building which has been called the Cyclopean architecture, and which is found in Asia Minor, in the Peloponnesus, and the remains of the ancient towns of Latium and Samnium. Micali considers the walls of Cosa as the only specimen in Etruria of the Cyclopean manner; but if the criterion be the use of polygonal masses of stone without cement, instead of parallelopipedal, the plate (*pl.* 12) which he has given of the gate and wall of Signum (Segni) shows that it partakes of the character of this class. But, in general, they built their walls, as may be seen at Volterra, Populonia, and Rusellæ, of vast blocks of parallelopipedal form, which their own weight retained in their places, without the use of mortar. The gate of Segni, before mentioned, shows something of the earliest attempt at constructing an arch, by the gradual approximation of the stones which form the sides. Etruria does not exhibit any specimens of the mode of building practised in the treasuries of Atreus and Minyas, in which the walls of a circular building converge so as to meet at the top in the form of a beehive. A recent traveller, Della Marmora, has discovered several of this kind in the island of Sardinia. We are indebted for by far the most numerous of our Etruscan antiquities to the care with which this people provided themselves with durable places of sepulture, and their custom of interring with the body various articles of metal and of clay. To the opening of the *hypogæa* of Volterra, we owe the revival of this branch of antiquarian lore. Some of these repositories belonged to ancient towns, whose existence might have been unknown but for the necropolis which marks their vicinity. Inghirami has given an interesting account (*Ser.* 4) of two of these; one at Castellaccio, not far from Viterbo, the other at Orchia, about fourteen miles to the southwest of that city. Castellaccio was the Castellum Axium mentioned by Cicero in his oration for Cæcina (c. 7), the site of which Cluverius declared to be unknown. The traces of the walls themselves are very visible in the large oblong blocks of peperino joined without cement, and convex outward, in the usual style of the old Etruscan fortifications. The steep banks of the stream, being composed of a tufa easily wrought, have been hewn out for nearly a mile into grotto-sepulchres, the face of the rock being cut into the representation of a doorway, while the real entrance to the hypogeum is below, and closed with large stones. Examples of this kind of sepulchre are found in Persia, in Palestine, and in Asia Minor (*Walpole's Memoirs*, vol. 1, p. 231; vol. 2, p. 206, 524); but in these the entrance is by the sculptured portal, which in the Etrurian sepulchres served only as an ornament. The architecture of these tombs is evidently of an age when the Greek embellishments had become known in Etruria; but the shortness of the pillars, the length of the intercolumniation, and the heaviness of the upper parts, agree very well with the character which Vitruvius (3, 3) gives to the Tuscan buildings, "*Varieæ, bariæcephalæ et humiles et latæ.*" As time has not spared a single public edifice of the Etrurians, it is only by means of their sepulchres, or the representations of their buildings in paintings and bas-reliefs, that we can

judge what their architecture really was; and even here we find very few traces of it. (*Muller, Etrusker*, vol. 2, p. 24.) It is nearly allied to the Doric, and not properly a distinct order; whether so allied in consequence of the affinity of the Etrurians and Greeks, or borrowed by the former, and varied to adapt it to edifices of wood, as theirs commonly were, appears doubtful. Within these sepulchral chambers were disposed cinerary urns of stone, sometimes ranged around the sides on the ground; sometimes on an amphitheatre of steps; and sometimes in niches, like the Roman columbaria. Instances of bodies interred without burning are very rare. The urns themselves are commonly of tufa or alabaster, and of an oblong form, about two feet in length, and of the same height, including the cover, on which the recumbent figure of the deceased is often carved. In the sepulchres of Volterra, urns of baked earth are very rare, stone being there abundant; in those of Chusium and Montepulciano they are common. The urns of baked clay were meant to contain ashes, and must not be confounded with the *fictile vases* which are very commonly found in the Etrurian sepulchres. As they were first discovered in Etruria, the name of Etruscan was given to them, and continued to be used after it was known that they were found more abundantly in the sepulchres of Magna Græcia, and even in Attica and the islands of the Ægean. That the custom of depositing them in sepulchres, for whatever purpose, was common to Etruria and to the south of Italy, is certain; but there is no reason to suppose that it originated in Etruria, or that those which are found in Campanian or Sicilian sepulchres are of Etrurian manufacture. On the contrary, it is probable that those found in Etruria are the production of Greek artists; their subject, their style of painting and design, are completely Greek; and though the Etruscans have inscribed every other work of art with their own characters, no painted vase has yet been found with any other than a Greek inscription. The single exception found probably at Volterra, and mentioned by Inghirami (*Ser.* 5, *Tab.* 55, *N.* 8), is Greek both in its style and its words. The ancients frequently celebrate the pottery of the Etrurians, but do not attribute to them any particular skill in painting them. The vases of Arretium, so frequently mentioned in the classics, are of quite a different kind from those found in sepulchres; fragments of them abound in the neighbourhood of Arezzo, and Inghirami has engraved some of them. They are of very fine clay, of a bright red colour, and with figures in relief, modelled after Greek patterns probably, but with Latin inscriptions. Statues of the gods in clay, of Tuscan fabric, were the chief ornaments of the Roman temples in the earliest times. (*Juv.* 11, 115.) Every collection of antiquities contains specimens of what are called Etruscan *patæra*, very generally found with the urns and vases in the sepulchral chambers. They are shallow disks of brass, frequently without any concavity, but bordered by a rim slightly raised, and having a handle of the same metal. On the disk are generally engraved scenes of mythological and heroic history, with legends in the heroic character; a circumstance which has rendered them peculiarly important to the antiquary for comparing the Etruscan mythology with the Greek. It seems singular that the name of *patæra* should ever have been applied to them; far from being suitable for drinking-vessels, they could not even hold the small quantity of wine necessary for a libation; and, wherever a libation is represented on ancient monuments, it is performed with a vessel, comparatively shallow, indeed, as its name implies, but very different from an Etruscan *patæra*, and always without a handle, except in some unskilful restorations. Inghirami, who has published two series of these antiquities, contends at great length against the common name, and calls them *specehi mis-*

tici. That they were really mirrors we have little doubt; Inghirami easily finds a mystical meaning for everything belonging to them. The metal of which they are invariably composed, brass, alludes to the firmament, conceived by the ancients to be a *χαλκοβατὴς δῶ*, "spread out like a molten mirror" (*Job*, xxvii., 18); their circular form to the perfection of which this figure is an emblem. If they had happened to be oval, he would still have been at no loss, for he explains the usually elliptical forms of the fiddle vases as alluding to that deterioration of its nature which the soul undergoes when it enters into union with the body. As many articles of female ornament have been found in sepulchres—fibulae, hair-bodkins, collars, bracelets—it is an obvious conjecture, that the mirrors were a real part of the toilet of the deceased, consigned to the same grave with her; on the principle that what was most used and valued in life should be the companion in death. Yet to this supposition it is an objection, that the slight convexity which some of them have is on the polished side, a circumstance which, as it would interfere with their use as real mirrors, suggests that they may have been emblematical of the sacerdotal office borne by the female with whom they were interred.

Etrurian Language and Literature.

The literature of the Etrurians presents the singular phenomenon of an alphabet perfectly deciphered, along with a language completely unintelligible. Such a combination is so strange, that we find more than one writer alleging that the language is Greek, and appealing in proof to the alphabet, without suspecting the want of connexion between premises and conclusions. When the Eugubine tables were discovered in 1444, they were supposed to be in the Egyptian character; Reinesius suspected them to be Punic; and, though they gradually acquired the name of Etruscan, the real force of the letters was not discovered till 1732, when Bourguet ascertained it by comparing the two tables which are in the Latin character with one in the Etruscan, which he had happily divined to be nearly equivalent in sense. Gori, a few years later, published his alphabet, which, in all important points, has been confirmed by subsequent inquiries: the great improvement made in it by Lanzi was, that he detected a Σ in the letter M, which till then had been taken for an *m*. The principles of Greek paleography have been lately established, on a more solid basis than before, by Böckh; and by the help of these and the labours of his predecessors, Müller has arrived at the conclusion, that the Etruscan alphabet has not been derived immediately from the Phœnicians, but from the Greeks. Very few forms occur in it which are not found in the early Greek inscriptions: while, on the other hand, it does not contain some of those which the Greeks retained a considerable time after they received them from the Phœnicians; and, again, the Etruscans have some letters which the Greeks added to their Phœnician alphabet. Other Etruscan letters have never yet been found in any Greek inscription, so that it is impossible to point out any specific age or form of the Greek alphabet which the Etruscans may be supposed to have adopted once for all. The Phrygian inscription from the tomb of Midas (*Walpole*, vol. 2, p. 207) bears no closer resemblance to the Etruscan than other very old Greek inscriptions: in the Carian inscription (*ib.*, p. 530) there are many letters which differ from the Etruscan. The letters B, T, Δ do not appear to have had any corresponding sounds in the Etruscan language, and the first and last never occur. Γ is found in the form C, in which it appears on the coins of Magna Græcia. The digamma F occurs both in this form and in that of β , which is found in Greek inscriptions and on coins; they had also for the same sound the character S, for which a circular square with crossing lines is also used, as in the oldest Greek in-

scriptions. It is remarkable that the Etruscan F, in proper names, always answers to the Latin V, as *Fiji* to *Vibius*, *Felethri* to *Volaterra*, *Menarfe* to *Minerva*; whence Müller (vol. 2, p. 300) takes occasion to dispute the opinion of Bishop Marsh, that the Latin F represented the digamma, observing that it is only before R that the digamma becomes F. The same character was also used for H and Th. So that there seems in fact to have been one letter for the labial, dental, and guttural aspirate. The vowel O appears to have been unknown to the Tuscan language; for Q they used *chf* and *cf*. Of the Greek forms V and Y, which both occur on early monuments, they have chiefly used the former, but not exclusively. For X they have the form which is frequent in Boeotian inscriptions, resembling an inverted anchor; for Ξ a double cross; Ψ , Z, and the long vowels Ω and Ω , are unknown to their alphabet. With very few exceptions, their writing is from right to left; and as this mode had been departed from by the Greeks in their earliest extant inscriptions, which may, perhaps, ascend to the fortieth Olympiad (620 B.C.), it seems reasonable to admit that the introduction of writing into Etruria was something earlier. Demaratus, who is said to have brought both painting and letters from Corinth, if really expelled by Cypselus, must have lived about the thirtieth Olympiad. A more recent character, which is commonly found in sepulchral inscriptions, seems to have been introduced about the end of the third century after the building of Rome; at which time, according to Müller (vol. 2, p. 301), the Latin alphabet was also formed; but from the Greek, not from the Etruscan. The Umbrians appear to have adopted the Etruscan alphabet, though their language was essentially different, and more resembling the Oscan than the Latin. The Oscan alphabet also appears to have been borrowed from the Etruscan, not immediately from the Greek. It is difficult to say when the Etruscan character fell into entire disuse; the style of ornament on some of the urns on which it is found refers them to the times of the Roman empire. The language of Etruria never having been polished by the influence of literature (for its histories were probably mere chronicles, and its theological writings, liturgies and manuals of a gloomy superstition), remained harsh to the ear and uncouth to the eye. Such combinations of letters as *aple*, *srancxl*, *thunchulthl* (Müller, vol. 2, p. 288), can scarcely have been pronounced at all without the intervention of a short vowel, after the manner of the Oriental languages. In regard to the interpretation of the language, it must be acknowledged, that all the labour which has hitherto been bestowed upon it, though valuable for its collateral results, has been nearly fruitless in respect to its direct object. When Lanzi, abandoning the former method of Oriental and Northern etymology, endeavoured to explain the Etruscan from the Pelægic, it was natural to expect a more favourable issue: a close affinity, if not identity, of the two nations, was maintained by many of the ancients, and the alphabets were visibly the same. For many years after the appearance of his *Saggio di Lingua Etrusca* (3 vols. 8vo, 1789), his explanations were generally acquiesced in, and made the basis of other etymological speculations. But, when time had been given for examination, it could not but be perceived that his modes of proceeding were too arbitrary to warrant confidence; that he could produce no evidence of the actual existence of many of the words and forms which he supposed to be Greek, in order to identify them with the Etruscan; and that other monuments, discovered since his time, could not be in any way explained by his system. Niebuhr, in his Roman history, avers that, among all the Etruscan words of which explanations have been pretended, only two, *avil ril* ("vixit annos"), seem to have been really explained; and of these Müller assures us (vol. 1, p. 64), and apparently with good rea-

son, that *avil* ("ærum") signifies, not *vixit*, but *ætatis*. Müller's observations on this subject are particularly deserving of attention at the present moment, when extravagant expectations appear to be entertained of the enlargement of our historical knowledge by the comparison of languages. "We might give much ampler information, if, after Lanzi's method, we sought in the monuments of the Etruscan language for single sounds resembling the Greek and Latin; and, persuaded that similar sounds must have a similar meaning, endeavoured to explain all that could not be brought to agree by an arbitrary prosthesis, epenthesis, paragoge, and similar cheap expedients. Without blaming the learned Italian, in whose time the most eminent literati had very confused ideas of the formation of language, we may maintain that his leading principle, that analogy is the character only of cultivated languages, and that the ruder any language is, the greater liberty might be taken in the use of it, is entirely false. This may justify us for having paid so little regard to etymologies, which, as they are arbitrary in themselves, suppose an arbitrary character in the language to which they are applied. If we use only genuine monuments, and require a certain evidence for every explanation of a root or a grammatical form, our apparent knowledge of the Etruscan language shrinks almost to nothing. It is not probable that the application of the still existing remains of the languages of the north and northwest of Europe should have those beneficial results for our knowledge of the Etruscan which some appear to anticipate. The Germans and Celts are originally divided from the nations on the Mediterranean by their locality in a very marked manner; they only gradually approach these and come into collision with them; and, even though the languages of both nations may belong to that great family which, from time immemorial, has diffused itself through Europe and Asia, yet they have distinct peculiarities, which we have no reason to believe are found in those of Italy. The fundamental and indelible characteristic of the Celtic languages seems to be, that they mark grammatical forms by aspirations and other changes of the *initial* consonants; a thing not practised in any other European language, but found in all branches of the Celtic, Welsh, Cornish, Gaelic, Irish, and *Bas Breton*. This mutability of the consonants is a circumstance which must be perceptible, even in a small number of written remains, and which could not well have escaped us had the Etruscan been the Celtic. The Iberian family, once widely diffused on the shores of the Mediterranean, may have dwelt in close vicinity to the Etruscans; but the remains of its language in the Basque are completely different from those of the rest of Europe, and its grammar shows so little affinity with what we know of the Etruscan as to afford very slight support to the opinion of the affinity of the two nations. What may have been the relation of the Tuscan to the extinct Ligurian, or to the language of those Alpine tribes whose names alone are preserved in history, is a question respecting which we have not even a glimmering of knowledge." (*Müller, Etrusker*, vol. 1, p. 64, *seq.*—*Edinburgh Review*, vol. 50, p. 372–396.)

HIRBERTIA. *Virid. Ierne.*

HIRAPOLIS, I. a city of Syria near the Euphrates, south of Zeugma. It derived its Greek name (*Holy City*) from the circumstance of the Syrian goddess Atergatis being worshipped there. By the Syrians it was called Bambyce or Mabog. With the introduction of Christianity, its reputation and prosperity of course declined. Constantine, it is true, made it the capital of the newly-erected province of Euphratesia; but this proved of little avail. It suffered much during subsequent reigns from the inroads of the Persians. It is now *Mambedsch* or *Bambig*, a deserted place, with many parts of the ancient wall standing.

(*Mannert, Geogr.*, vol. 3, pt. 1, p. 510.)—II. A city in the southwestern angle of Phrygia, near the confines of Lydia, and northwest of Laodicea. This city was celebrated for its warm springs. (*Strabo*, 629.—*Dio Cass.*, 68, 27.—*Pliny*, 5, 32.) The waters of Hierapolis were remarkable for their petrifying or stalactital properties, and Chandler affirms, that a cliff near the ancient town was one entire incrustation. (*Travels in Asia Minor*, p. 287.) Besides this singular property, the waters of this town possessed, in a remarkable degree, that of serving for the purposes of the dyer. (*Strabo*, 630.) It is now called by the Turks *Pambuk-Kalassi*, or the Castle of Cotton, because the neighbouring rocks resemble that substance in their whiteness, a colour produced by the stalactital incrustations already alluded to. (*Chandler*, p. 290.—*Cramer's Asia Minor*, vol. 2, p. 37, *seq.*)

HERICHTUS (gen. -*untis*; in Greek *ἱερικὸς*, gen. -*οντος*.) *Virid. Jericho.*

HIERO, I. succeeded his brother Gelon, as tyrant or ruler of Syracuse, B.C. 478. He committed many acts of violence, encouraged spies, and kept a mercenary guard around his person. He was ambitious of extending his dominion, and his attempts proved successful. After the death of Theron, prince of Agrigentum, Hiero defeated his son Thrasydæus, who was soon after expelled by his countrymen. He took Naxos and Catana, and, having driven away the inhabitants from both towns, he replaced them by Syracusan and Peloponnesian colonists. He changed the name of Catana to Ætna, and he himself assumed the title of Ætneus (*Ἀἰτναῖος*). Having joined his fleet to that of the people of Cumæ, he succeeded in clearing the Tyrrhenian Sea of the Etruscan and other pirates who infested it. His chariots repeatedly won the prize at the Olympic games, and his success on those occasions formed the theme of some of the odes of Pindar, who was his guest and friend. Æschylus, Simonides, Bacchylides, and Epicharmus were also well received at the court of Hiero, who was fond of the society of learned men. Hiero died at Catana, B.C. 476, and was succeeded by his brother Thrasylbulus, who had all his faults without any of his good qualities, and was at last driven away by the Syracusans, who restored the government to the commonwealth. (*Diod. Sic.*, 11, 48, *seq.*) Ælian gives Hiero credit for a much better character than Diodorus; probably because the latter part of his reign, after he had firmly established his authority, was better than the commencement. (*Ælian*, 9, 1.)—II. The second of the name, son of Hierocles, a wealthy citizen of Syracuse, and a descendant of Gelon, distinguished himself in early life by his brilliant qualities, and served with distinction also under Pyrrhus in his Sicilian campaigns. After Pyrrhus had suddenly abandoned Sicily, the Syracusans found themselves threatened on one side by the Carthaginians, and on the other by the Mamertines, a band of Campanian mercenaries, who had treacherously taken possession of Messina. The Syracusan troops, being in want of a trusty leader, chose Hiero by acclamation, and the senate and citizens, after some demur, ratified the choice, B.C. 275. After various successful operations against the Mamertines, Hiero returned to Syracuse, where, through the influence of Leptines, his father-in-law, a leading man among the aristocratic party, he was proclaimed king, B.C. 270. Shortly after, the Mamertines at Messina quarrelled with the Carthaginians, who had managed to introduce a garrison into the citadel, and drove them out, upon which the Carthaginians invited Hiero to join his forces to theirs, in order to drive the Mamertines out of Sicily. Hiero having assented, encamped under the walls of Messina on one side, and the Carthaginians fixed their camp on the other, while their squadron guarded the strait. The Mamertines, meanwhile, had applied to the Romans

for assistance, claiming a common origin with them, as being descended from Mars, called Mamers or Mamertus in the Oscan language; and Rome eagerly seized this opportunity of obtaining a footing in Sicily. The consul Appius Claudius marched to Rhegium, and, having contrived to pass the strait in the night unobserved by the Carthaginian cruisers, he surprised Hiero's camp, routed the soldiers, and obliged the monarch himself to seek safety in flight. The consul next attacked the Carthaginian camp with the same success, and this was the beginning of the first Punic War, 265 B.C. In the following year the Romans took Tauromenium and Catania, and advanced to the walls of Syracuse, when Hiero sued for peace, which he obtained on condition of paying 100 talents of silver, and supplying the Roman army with provisions. He punctually fulfilled his engagements, remaining faithful to Rome during the whole of the war, and by his supplies was of great service to the Roman armies, especially during the long sieges of Agrigentum and Lilybæum. Hiero was included in the peace between Rome and Carthage, by which his territories were secured to him, and he remained in friendship with both states. He even assisted Carthage at a very critical moment, by sending her supplies of provisions during the war which she had to sustain against her mercenaries. The period of peace which elapsed between the end of the first and the beginning of the second Punic wars, from 241 to 218 B.C., was most glorious for Hiero, and most prosperous for Syracuse. Commerce and agriculture flourished, and wealth and population increased to an extraordinary degree. Hiero paid particular attention to the administration of the finances, and made wise regulations for the collection of the tithe or tax on land, which remained in force throughout Sicily long after his time, and are mentioned with praise by Cicero as the *Lex Hieronica*. (*Cic. in Verr.*, 2 et 3.) Hiero introduced the custom of letting the tax to farm every year by auction. He embellished and strengthened Syracuse, and built large ships, one of which, if we are to trust the account given of it by Athenæus (5, p. 206), was of most extraordinary dimensions and magnificence. This ship he sent as a present to Ptolemy Philadelphus. Archimedes lived under Hiero's reign. When the second Punic war broke out, Hiero continued true to his Roman alliance, and, after the Trasymenian defeat, he sent a fleet to Ostia with provisions and other gifts, and a body of light troops to the assistance of Rome. He lived to see the battle of Cannæ, after which his son Gelon embraced the part of the Carthaginians. Gelon, however, died, not without suspicion of violence, and Hiero himself, being past ninety years of age, ended his days soon after (B.C. 216), leaving the crown to his grandson Hieronymus. With Hiero the prosperity and independence of Syracuse may be said to have expired. (*Liv.*, lib. 22 et 23.—*Polyb.*, lib. 7.—*Encycl. Us. Knowl.*, vol. 12, p. 195.)

HIEROCLES, I. a rhetorician of Alabanda, in Caria, who lived in the beginning of the first century before the Christian era. He excelled in what Cicero termed the Asiatic style of eloquence. (*Cic., de Orat.*, 2, 23.—*Id., Brut.*, c. 95.)—II. A lawyer, who wrote a work on veterinary medicine, addressed to Cassianus Bassus, of which three chapters are preserved in the sixteenth book of the "Geoponica." (*Vid. Geoponica.*)—III. Surnamed the grammarian, for distinction's sake from the philosopher of the same name, a Greek writer supposed to have been contemporary with Justinian, but of whom one thing at least is certain, that he was anterior to the tenth century. He composed, under the title of *Συνέκδημος* ("Travelling Companion"), a description of the sixty-four provinces that formed the Byzantine empire, and of the nine hundred and thirty-five cities situate in them. The best edition is that of Wesseling, in the *Itineraria Veterum*

Rom., *Amst.*, 1735, 4to.—IV. A new Platonist, who flourished at Alexandria about the middle of the fifth century. He has left us a commentary "on the Golden Verses of Pythagoras," and a treatise "on Providence, Destiny, and Free-will." The end of Hierocles is to show the agreement which exists in respect of these doctrines between Plato and Aristotle; to refute the systems of Epicurus and the Stoics; to confound those who pretend to read the decrees of destiny in the natiivities of men, or who believe that the determinations of Providence may be influenced by enchantments or mystic ceremonies; those, in fine, who have the misfortune to deny an existing Providence. We have only extracts from this latter work made by Photius, and an abridgement by an unknown hand. Stobæus has preserved for us some fragments of a work of Hierocles on the worship of the gods (*Πᾶς τοῖς Θεοῖς χρηστέρων*), or, rather, a chapter belonging to some large work which treated of various points of ethics. The same Stobæus has preserved fragments of other productions of Hierocles, "On Justice," "On the Conduct due towards Parents," "On Marriage," "On Fraternal Love," &c. There exists also, under the name of Hierocles, a collection of insipid Facetiæ (*Ἀστεία*), containing an account of the ridiculous actions and sayings of book-learned men and pedants. In all likelihood, however, it was written by some other individual of the same name, and not by the philosopher.—The best edition of the Commentary on the Golden Verses, and of the Fragments, &c., is that of Needham, *Lond.*, 1709, 8vo. The editor, however, has made some rash emendations, which diminish the value of the work. The edition of Pearson, *Lond.*, 1654, 8vo, is also a very good one. The best separate edition of the Commentary is that of Ashton and Warren, *Lond.*, 1742, 8vo, and of the *Facetiæ*, that of Schier, *Lips.*, 1750–1768, 8vo.—V. A prefect of Bithynia, and afterward of Alexandria, who is said by Lactantius to have been the principal adviser of the persecution of the Christians in the reign of Diocletian. (*Lactant., Inst. Div.*, 5, 2.—*Id. de Morte Persec.*, c. 17.) He also wrote two works against Christianity, entitled *Λόγοι φιλάληθεῖς πρὸς τοὺς Χριστιανούς* ("Truth-loving words to the Christians"), in which, according to Lactantius, he endeavoured to show that the Scriptures overthrow themselves by the contradictions with which they abound. He also reviled Paul, and Peter, and the other disciples, as propagators of falsehood. He endeavoured to destroy the effect of our Saviour's miracles, though he did not deny the truth of them; and he aimed to show, that like things, or even greater, had been done by Apollonius of Tyana. (*Lactant., Inst. Div.*, 5, 2, seq.)

HIERONICA LEX. *Vid. Hiero II.*

HIERONYMUS, I. grandson of Hiero II., monarch of Syracuse, succeeded him on the throne at the age of fifteen (B.C. 216). He was left by Hiero under the guardianship of several individuals, among whom was Andronorus, his aunt's husband, who, seconded by other courtiers, and with the view of monopolizing the confidence of the young king, indulged him in all his caprices and follies. The court of Syracuse, which, under Hiero, was orderly and respectable, soon became as profligate as it had been under the younger Dionysius. Andronorus persuaded Hieronymus, against the dying injunctions of his grandfather, to forsake the Roman alliance for that of Carthage, and messengers for that purpose were sent to Hannibal in Italy, and also to the senate of Carthage, which gladly agreed to an alliance with Syracuse, in order to effect a diversion against the Romans. War being at length declared by Rome, Hieronymus took the field with 15,000 men; but a conspiracy broke out among the soldiers, and he was murdered after a reign of about thirteen months. On the news of this, a popular insurrection took place at Syracuse; the daughters and

grand-daughters of Hiero were murdered, and royalty was abolished. But the people were distracted by factions, and by the mercenaries in their pay, and revolution succeeded revolution, until two adventurers of Syracusan extraction, but natives of Carthage, who had been sent by Hannibal to keep in countenance the Carthaginian party in Syracuse, became possessed of the chief power, and so provoked the Roman commander Marcellus that he laid siege to and took Syracuse. (*Vid. Syracuse:—Diod. Sic., fragm., lib. 26, vol. 9, p. 369, ed. Bip.—Liv., 24, 4.—Id., 24, 7, seqq.*)—II. A native of Cardia, in the Thracian Chersonese. He was one of the companions of Alexander the Great, and after his death attached himself to Eumenes. Made prisoner in the battle in which that chieftain was betrayed by his own followers, he was kindly treated by Antigonus, and entered into his service. This prince intrusted him with the government of Cœlesyria and Phœnicia, and charged him with an expedition, the object of which was to seize upon the country around the Lake Aspalitites. The expedition did not succeed, owing to the opposition of the neighbouring Arabs, who supported themselves by vending the bitumen obtained from the lake. After the defeat of Antigonus at the battle of Ipsus, and his death, Hieronymus remained faithful to his son Demetrius. At a later period he entered into the service of Pyrrhus, king of Epirus, and accompanied him in his Italian campaign. He survived this prince, and attained the age of 104 years. The principal work of Hieronymus, and that on which his reputation was founded, was entitled *ἱστορικὰ ὑπομνήματα* ("Historic Memoirs"). In this production he developed the movements which followed the death of Alexander, the cabals and jealousies of the principal officers, the bloody wars to which their ambitious views gave rise, the destruction of the royal house of Macedonia, and the birth of the new monarchies which dismembered the empire of Alexander. The ancients, however, accused him of having been influenced too much by the hatred he bore to Seleucus, Cassander, Ptolemy, but above all to Lysimachus, by whose orders Cardia, his native city, had been destroyed. They charge him also with partiality towards Eumenes, Antigonus, and Pyrrhus. A particular worthy of remark, and one which makes us regret more earnestly the loss of Hieronymus's work, is, that he is the first Greek writer who entered into any details on the origin and antiquities of Rome; the war of Pyrrhus with the republic afforded him probably an occasion for this. Diodorus Siculus derived considerable aid from the commentaries of Hieronymus, as did Plutarch also in his life of Eumenes (*Consult Recherches sur l'arie et sur les ouvrages de Jerome de Cardie, par l'Abbé Sevin.—Mém. de l'Acad. des Inscri., &c., vol. 18, p. 20.—Schöll, Hist. Lit. Gr., vol. 3, p. 204, seqq.*)—III. A peripatetic philosopher, born in the island of Rhodes, towards the close of the third century B.C. Cicero praises his ability, but doubts the propriety of his being ranked under the peripatetic sect, since he placed the *summum bonum* in freedom from painful emotion, a doctrine belonging to the Epicurean school. (*Cic., de Fin., 5, 5.*)—IV. A celebrated father of the church, better known by the English form of his name, St. Jerome, and accounted the most learned of all the Latin fathers. He was born of Christian parents, A.D. 331, on the confines of Pannonia and Dalmatia, at the town of Stridon or Stridonium. His father, who was a man of rank and property, sent him to Rome for education, where he was placed under the grammarian Donatus, known for his commentaries upon Virgil and Terence. He had also masters in rhetoric, Hebrew, and divinity, in which he made a great progress. After travelling through France and Italy, he gave up friends and worldly pursuits to seek retirement in the East, and eventually reached Jerusalem, whence

he proceeded to Antioch. Here he endured a severe attack of illness, on his recovery from which he wandered through several towns and districts in search of a retreat to his mind, which he found in a frightful desert of Syria, scarcely inhabited by anything but wild beasts, and a few human beings little less ferocious. He was in his thirty-first year when he entered on this life, in which he spent four years, occupied in an intense study of the Scriptures, until his health began to be affected by this application and ascetic discipline. He then repaired to Antioch, where he was ordained a presbyter in 373 by Paulinus. He soon after visited Constantinople, in order to avail himself of the advice and instruction of Gregory Nazianzen; and, on his return, accompanied Paulinus to Rome, where his merit and learning soon made him known to Pope Damasus, who appointed him his secretary, and also director to the Roman ladies who had devoted themselves to a religious life. During his residence at Rome he lodged at the house of a matron of the name of Paula, a woman of rank and fortune, who afterward followed him with her daughters into the East. This event exposed him to some scandal from his opponents the Origenists, and to more merited censure from the relations and friends of the many weak females whom he thus encouraged in their desertion of their proper duties, and in the misapplication of their wealth to the support of useless or pernicious institutions. On the death of Damasus, finding his situation at Rome an uneasy one, Sericius, the successor of Damasus, not having the same esteem for him that Damasus had, he determined to return to the East, and accordingly embarked, in 385, with a great number of monks and females whom he had induced to embrace the monastic life. He touched at Cyprus, where he visited Epiphanius, and, arriving at Antioch, proceeded thence to Jerusalem, and afterward to Egypt, where, to his great grief, he found the tenets of Origen almost universally prevalent. He at length settled at Bethlehem, where the wealthy and devout Paula founded four monasteries, three for females, and one for males under Jerome. Here he pursued his studies with great ardour, and wrote many of his best treatises; and in these occupations he might have peaceably closed his days, but for his detestation of the opinions of Origen, which involved him in the most acrimonious controversy for many years with John, bishop of Jerusalem, his former friend Rufinus of Aquileia, and Jovinian an Italian monk. In the year 410, when Rome was besieged by the Goths, he afforded an asylum to many who fled from that city to Jerusalem, but was very careful to exclude all whom he deemed tainted with heresy. He died A.D. 422, in the ninety-first year of his age.—Many of the writings of Jerome have come down to us. Several of them are merely controversial; but there are others of a more sterling and lasting value. These are, his Treatise on the Lives and Writings of the elder Christian Fathers, and his Commentaries on the Prophetic Books of the Old Testament, on the Gospel of St. Matthew, and several of St. Paul's Epistles. But what may be regarded as his greatest work is a translation of the Books of both the Old and New Testament into Latin, which translation has been always highly valued in the Latin Church, and is that known by the name of the Vulgate. It is a question among the learned, how far, and whether at all, he embodied an older Italian version in his translation. It was the first effort at bringing the Scriptures within the reach of the great multitude, who knew no other language but the Latin. It was a great and noble work, which ought to place its author high among the benefactors of mankind. Bishop Warburton says of Jerome, that "he is the only Father who can be called a critic on the sacred writings, or who followed a just or reasonable method of criticising."—The first printed edition of the entire works of Jerome, as far as these have

reached us, appeared at Basle, from the press of Froben, under the care of Erasmus, 1516, 9 vols. fol. Many subsequent editions have been published at Lyons, Rome, Paris, and Antwerp, but the best is that of Vallarsi, *Verona*, 1734-1742, 11 vols. fol, and *Venet.*, 1766, *seqq.*, *ann.*, 11 vols. 4to. (*Bähr, Gesch. Röm. Lit.*—*Die Christlich-Römische Theologie*, p. 165, *seqq.*)

HIEROSOLYMA (neut. plur.) (Jerusalem), a celebrated city of Palestine, the capital of Judaea. The history of Abraham mentions, that Melchizedek, king of Salem, came forth to meet him when he returned from the slaughter of the kings (*Gen.*, 14, 18), and it has been generally supposed, that this Salem was the original of the city which we are now considering. It is more certain, however, that, when the Israelites entered Canaan, they found the place in the occupation of the Jebusites, a tribe descended from Jebus, a son of Canaan, and the city then bore the name of Jebus or Jebusi. (*Josh.* 15, 63.—*Id.*, 18, 28.—Consult *Reland, Palæst.*, p. 834.) The lower city was taken and burned by the children of Judah (*Jud.* 1, 8) after the death of Joshua; but the Jebusites had so strongly fortified themselves in the upper city, on Mount Zion, that they maintained themselves in possession of it till the time of David. That monarch, after his seven years' rule over Judah in Hebron, became king of all Israel, on which he expelled the Jebusites from Mount Zion, and established here the metropolis of his kingdom. The city now took the name of Jerusalem, a term which denotes the *abode*, or (according to another derivation), the *people*, of *peace*. (Consult *Reland*, p. 833.—*Gesenius, Hebr. Lex.*, s. v.) The Septuagint version gives Ἱερουσαλὴμ as the form of the name, while by the Greek and Roman writers the place is called Hierosolyma. At present this city is known throughout Western Asia by the Arabic name of *El-Kads*, which signifies "*holiness*." (*Vid.* Cadytis.)—Jerusalem was built on several hills, the largest of which was Mount Zion, which formed the southern part of the city. A valley towards the north separated this from Acra, the second or lower city, on the east of which was Mount Moriah, the site of the temple of Solomon. Northeast of Mount Moriah was the Mount of Olives, on the south was the valley of Hinnom, and at the north Mount Calvary, the scene of our Lord's crucifixion. Passing over the history of this celebrated city, so fully detailed in the sacred volume, we come to the memorable period of its capture and destruction by Titus. The date of this event was the 8th of September, A.D. 70. During this siege and capture 1,100,000 persons are said to have perished, and 97,000 to have been made prisoners, and afterward either sold for slaves, or wantonly exposed for the sport of their insolent victors to the fury of wild beasts. In fact, the population, not of Jerusalem alone, but that of the adjacent districts, many who had taken refuge in the city, more who had assembled for the feast of unleavened bread, had been shut up by the sudden formation of the siege. The ardent zeal of the Jewish nation for their holy city and temple soon caused both to be again rebuilt; but fresh commotions compelled the Emperor Hadrian to interfere, and ordain that no Jew should remain in, or even approach near Jerusalem, on pain of death. On the ruins of their temple the same emperor caused a temple in honour of Jupiter Capitolinus to be erected, and the image of a hog to be cut in stone over the gate leading to Bethlehem, as a standing insult to the religious feelings of this unfortunate people. The name of the city was also changed to *Ælia Capitolina*, the first part of the name alluding to the family of the Roman emperor. The more peaceful Christians were permitted, however, to establish themselves within the walls, and *Ælia* became the seat of a flourishing church and bishopric. This latter name became afterward

the ordinary name of the city, and Jerusalem became nearly obsolete. Upon the ascension to the throne, however, of the Christian emperors, the name revived. Jerusalem, thus restored, was much less in compass than the ancient city, Mount Zion and Bezetha being excluded.—The following description of Jerusalem, as it appeared just before the siege by Titus, is given by Millman. (*History of the Jews*, vol. 3, p. 17, *seqq.*) "Jerusalem, at this period, was fortified by three walls, in all those parts where it was not surrounded by abrupt and impassable ravines; there it had but one. Not that these walls stood one within the other, each in a narrower circle running round the whole city; but each of the inner walls defended one of the several quarters into which the city was divided, or, it might be almost said, one of the separate cities. Since the days in which David had built his capital on the rugged heights of Zion, great alterations had taken place at Jerusalem. That eminence was still occupied by the upper city; but, in addition, first the hill of Moriah was taken in, on which the temple stood; then Acra, which was originally, although a part of the same ridge, separated by a deep chasm from Moriah. This chasm was almost entirely filled up, and the top of Acra levelled by the Asmonean princes, so that Acra and Moriah were united, though on the side of Acra the temple presented a formidable front, connected by several bridges or causeways with the lower city. To the south the height of Zion, the upper city, was separated from the lower by a ravine, which ran right through Jerusalem, called the Tyropæon, or the valley of the cheesemongers; at the edge of this ravine, on both sides, the streets suddenly broke off, though the walls in some places must have crossed it, and it was bridged in more than one place. To the north extended a considerable suburb called Bezetha, or the new city. The first or outer wall encompassed Bezetha. Agrippa the First had intended to make this wall of extraordinary strength; but he had desisted from the work on the interference of the Romans, who seem to have foreseen that this refractory city would hereafter force them to take up arms against it. Had this wall been built according to the plan of Agrippa, the city, in the opinion of Josephus, would have been impregnable. This wall began at the tower of Hippicos, which stood, it seems, on a point at the extreme corner of Mount Zion: it must have crossed the western mouth of the valley of Tyropæon, and run directly north to the tower of Psephina, proved clearly by D'Anville to have been what was called during the crusades Castel Pisano. The wall then bore towards the monument of Helena, ran by the royal caverns to the Fuller's monument, and was carried into the valley of Kedron or Jehoshaphat, where it joined the old or inner wall under the temple. The wall, however it fell short of Agrippa's design, was of considerable strength. The stones were thirty-five feet long, so solid as not easily to be shaken by battering engines, or undermined. The wall was seventeen and a half feet broad. It had only been carried to the same height by Agrippa, but it had been hastily run up by the Jews to thirty-five feet; on its top stood battlements three and a half feet high, and pinnacles five and three fourths; so the whole was nearly forty five feet high. The second wall began at a gate in the old or inner one, called Gennath, the gate of the gardens; it intersected the lower city, and, having struck northward for some distance, turned to the east and joined the northwest corner of the tower of Antonia. The Antonia stood at the northwest corner of the temple, and was separated from Bezetha by a deep ditch, which probably protected the whole northern front of the temple as well as of the Antonia. The old or inner wall was that of Zion. Starting from the southwestern porticoes of the temple to which it was united, it ran along the ridge of the Tyropæon, passed first the Xys-

tas, then the council house, and abutted on the tower Hippicus, whence the northern wall sprang. The old wall then ran southward through Bethso to the gate of the Essenes, all along the ridge of the Valley of Hinnom, above the pool of Siloam, then eastward again to the Pool of Solomon, so on through Opha, probably a deep glen : it then joined the eastern portico of the temple. Thus there were, it might seem, four distinct towns, each requiring a separate siege. The capture of the first wall only opened Bezetha; the fortifications of the northern part of the temple, the Antonia, and the second wall, still defended the other quarters. The second wall forced, only a part of the lower city was won; the strong rock-built citadel of Antonia and the temple on one hand, and Sion on the other, were not the least weakened. The whole circuit of these walls was guarded with towers, built of the same solid masonry with the rest of the walls. They were thirty-five feet broad and thirty-five high; but above this height were lofty chambers, and above those again upper rooms, and large tanks to receive the rain-water. Broad flights of steps led up to them. Ninety of these towers stood in the first wall, fourteen in the second, and sixty in the third. The intervals between the towers were about three hundred and fifty feet. The whole circuit of the city, according to Josephus, was thirty-three stadia, rather more than four miles. The most magnificent of all these towers was that of Psephina, opposite to which Titus encamped. It was one hundred and twenty-two and a half feet high, and commanded a noble view of the whole country of Judæa, to the border of Arabia, and to the sea : it was an octagon. Answering to this was the tower Hippicus, and following the old wall stood those of Phasælis and Mariamne, built by Herod, and named after his wife, and his brother, and friend. These were stupendous even as works of Herod. Hippicus was square; forty-three and three fourths feet each way. The whole height of the tower was one hundred and forty feet; the tower itself fifty-two and a half, a deep tank or reservoir thirty-five, two stories of chambers forty-three and three fourths, battlements and pinnacles eight and three fourths. Phasælis was a solid square of seventy feet. It was surrounded by a portico seventeen and a half feet high, defended by breastworks and bulwarks, and above the portico was another tower, divided into lofty chambers and baths. It was more richly ornamented than the rest with battlements and pinnacles, so that its whole height was above one hundred and sixty-seven feet. It looked from a distance like the tall pharos of Alexandria. Mariamne, though not equal in elevation, was more luxuriously fitted up; it was built of solid wall thirty-five feet high, and of the same width : on the whole, with the upper chambers, it was about seventy-six and three fourths feet high. These lofty towers appeared still higher from their situation. They were built on the old wall, which ran along the steep brow of Sion. The masonry was perfect : they were built of white marble, cut in blocks thirty-five feet long, seventeen and a half wide, eight and one fourth high, so fitted that the towers seemed hewn out of the solid quarry." A description of the fortress Antonia is given under that article. "High above the whole city rose the temple, uniting the commanding strength of a citadel with the splendour of a sacred edifice. According to Josephus, the esplanade on which it stood had been considerably enlarged by the accumulation of fresh soil since the days of Solomon, particularly on the north side. It now covered a square of a furlong on each side. Solomon had faced the precipitous sides of the rock on the east, and perhaps the south, with huge blocks of stone; the other sides likewise had been built up with perpendicular walls to an equal height. These walls in no part were lower than three hundred cubits, five hundred and twenty-five feet, but their whole height was

not seen excepting on the eastern and perhaps the southern sides, as the earth was heaped up to the level of the streets of the city. Some of the stones employed in this work were seventy feet square. On this gigantic foundation ran, on each front, a strong and lofty wall without, within a spacious double portico or cloister 52½ feet broad, supported by 162 columns, which upheld a ceiling of cedar, of the most exquisite workmanship. The pillars were entire blocks hewn out of solid marble, of dazzling whiteness, 43½ feet high. On the south side the portico or cloister was triple. This quadrangle had but one gate to the east, one to the north, two to the south, four to the west; one of these led to the palace, one to the city, one at the corner to the Antonia, one down towards the gardens. The open courts were paved with various inlaid marbles. Between this outer court of the Gentiles and the second court of the Israelites ran rails of stone, but of beautiful workmanship, rather more than five feet high. Along these, at regular intervals, stood pillars, with inscriptions in Hebrew, Greek, and Latin, warning all strangers, and Jews who were unclean, from entering into the Holy Court beyond. An ascent of fourteen steps led to a terrace 17½ feet wide, beyond which rose the wall of the inner court. This wall appeared on the outside 70 feet, or the inside 43½; for, besides the ascent of 14 steps to the terrace, there were five more up to the gates. The inner court had no gate or opening to the west, but four on the north, and four on the south, two to the east, one of which was for the women, for whom a portion of the inner court was set apart, and beyond which they might not advance; to this they had access likewise by one of the northern and one of the southern gates, which were set apart for their use. Around this court ran another splendid range of porticoes or cloisters; the columns were quite equal in beauty and workmanship, though not in size, to those of the outer portico. Nine of these gates, or, rather, gateway towers, were richly adorned with gold and silver, on the doors, the door-posts, and the lintels. The doors of each of the nine gates were 52½ feet high, and half that breadth. Within, the gateways were 52½ feet wide and deep, with rooms on each side, so that the whole looked like lofty towers : the height from the base to the summit was 70 feet. Each gateway had two lofty pillars 21 feet in circumference. But what excited the greatest admiration was the tenth, usually called the beautiful, gate of the temple. It was of Corinthian brass of the finest workmanship. The height of the beautiful gate was 87½, its doors 70 feet. The father of Tiberius Alexander had sheathed these gates with gold and silver; his apostate son was to witness their ruin by the plundering hands and fiery torches of his Roman friends. Within this quadrangle there was a farther separation, a low wall which divided the priests from the Israelites : near this stood the great brazen altar. Beyond, the temple itself reared its glittering front. The great porch or propylon, according to the design of the last, or Herod's temple, extended to a much greater width than the temple itself : in addition to the former width of 105 feet, it had two wings of 35 each, making in the whole 175. The great gate of this last quadrangle, to which there was an ascent of twelve steps, was called that of Nicanor. The gateway tower was 132½ high, 43½ wide; it had no doors, but the frontispiece was covered with gold, and through its spacious arch was seen the golden gate of the temple, glittering with the same precious metal, with large plates of which it was sheathed all over. Over this gate hung the celebrated golden vine. This extraordinary piece of workmanship had bunches, according to Josephus, as large as a man. The Rabbins add, that, 'like a true natural vine, it grew greater and greater; men would be offering; some, gold to make a leaf; some, a grape; some,

a bunch : and these were hung up upon it ; and so it was increasing continually." The temple itself, excepting in the extension of the wings of the propylon, was probably the same in its dimensions and distribution with that of Solomon. It contained the same holy treasures, if not of equal magnificence, yet, by the zeal of successive ages, the frequent plunder to which it had been exposed was constantly replaced ; and within, the golden candlestick spread out its flowering branches, the golden table supported the shew-bread, and the altar of incense flamed with its costly perfume. The roof of the temple had been set all over, on the outside, with sharp golden spikes, to prevent the birds from settling on and defiling the roof" (vid., however, remarks under the article *Elcains*), "and the gates were still sheeted with plates of the same splendid metal. At a distance the whole temple looked literally like a mount of snow, fretted with golden pinnacles." (*Milman, History of the Jews*, vol. 3, p. 22, seqq.)—Jerusalem, in more modern times, has not ceased to be an object of inviting interest to the traveller. About the year 705 of our era, it was visited by Arculfus, from whose report Adamnan composed a narrative, which was received with considerable approbation. Eighty years later, Willibald, a Saxon, undertook the same journey. In Jerusalem he saw all that Arculfus had seen ; but he previously visited the tomb of the seven sleepers, and the cave in which St. John wrote the Apocalypse. Bernard proceeded to Palestine in the year 878. The crusades, however, threw open the holy places to the eyes of all Europe ; and, accordingly, so long as a Christian king swayed the sceptre in the capital of Judea, the merit of individual pilgrimage was greatly diminished. But no sooner had the warlike Saracens recovered possession of Jerusalem, than the wonted difficulty and danger returned. In 1331, William de Bouldesell ventured on an expedition into Arabia and Palestine, of which some account has been published. A hundred years afterward, Bertrandon de la Broquiere sailed from Venice to Jaffa. At Jerusalem he found the Christians reduced to a state of the most cruel thralldom. At Damascus they were treated with equal severity. The beginning of the 17th century witnessed a higher order of travellers, who, from such a mixture of motives as might actuate either a pilgrim or an antiquary, undertook the perilous tour of the Holy Land. Among these, one of the most distinguished was George Sandys, who commenced his peregrinations in the year 1610. He was succeeded by Doubdan, Cheron, Thevenot, Gonzales, Morison, Maundrell, and Pococke. Of the more recent travellers, however, the most interesting and intelligent is Dr. Clarke. "We had not been prepared," remarks this writer, describing his approach to the ancient capital of Judea, "for the grandeur of the spectacle which the city alone exhibited. Instead of a wretched and ruined town, by some described as the desolated remnant of Jerusalem, we beheld, as it were, a flourishing and stately metropolis ; presenting a magnificent assemblage of domes, towers, palaces, churches, and monasteries ; all of which, glittering in the sun's rays, shone with inconceivable splendour." Dr. Clarke entered, however, by the Damascus gate. He confesses that there is no other point of view in which the city is seen to so much advantage, as the one from which he beheld it, the summit of a hill at about an hour's distance. In the celebrated prospect from the Mount of Olives, the city lies too low, and has too much the character of a bird's-eye view, with the formality of a topographical plan. Travellers of a still later date consider Dr. Clarke's description as overcharged. But it must be remembered that he was fortunate in catching his first view of Jerusalem under the illusion of a brilliant evening sunshine. Jerusalem is said to be of an irregular shape, approaching to a square ; and to be

surrounded by a high, embattled wall, built, for the most part, of the common stone of the country, which is a compact limestone. The site of the ancient city is so unequivocally marked by its natural boundaries on the three sides, where there are ravines, that there can be no difficulty, except with regard to its extent in a northern direction ; and this may be ascertained with sufficient accuracy from the minute description given by Josephus. (*Bell. Jud.*, 5, 4.)

HILLEVIÖNES, a people of Scandinavia. According to Pliny (4, 13), they occupied the only known part of this country. Among the various names of countries and people reported by Jornandes, we still find, observes D'Anville, *Hallin* ; and that which is contiguous to the province of Skane is still called *Halland*. Some erroneously place the Hilleviönes in the country answering, at the present day, to *Blekingen* and *Schonen*. (*Bischoff und Möller, Wörterb. der Geogr.*, p. 615.)

HIMERA, I. a river of Sicily, falling into the upper or Tuscan Sea, to the east of Panormus ; now, according to Mannert, *Fiume di S. Leonardo* ; but, according to others, *Fiume Grande*. The city of Himera stood a short distance to the west of its mouth.—II. Another river of Sicily, larger than the former. It rises in the same quarter with it, but pursues an opposite course, to the south, and falls into the Mediterranean near Phintia, and to the west of Gela. The modern name is *Fiume Salso*. This river separated, at one time, the Carthaginian from the Syracusan dependencies in Sicily.—III. A city of Sicily, near the mouth of a river of the same name, on the northern coast. It was founded, according to Thucydides (6, 5) and Scymnus of Chios (v. 288, seqq.), by a colony of Chalcidians from Zankle. Strabo, however, ascribes its origin to the Zankleans at Mylæ. (*Strab.*, 272.) In this he is wrong, as Mylæ was not an independent place, but entirely under the control of Zankle as its parent city, and therefore not allowed to trade and colonize at pleasure. Strabo's error appears to have arisen from a misconception of a passage in Thucydides. That historian informs us (6, 5) that Himera had some Dorian inhabitants also from Syracuse, consisting of some of the expelled party of the Myletidæ (*Μυλητίδαι*) : Strabo, very probably, mistakes these, from their name, for inhabitants of Mylæ.—Himera came, we know not under what circumstances, into the power of Theron of Agrigentum. Subsequently, however, it attempted to shake off this yoke, and offered to surrender itself to Hiero of Syracuse. This latter apprized Theron of the fact, and the enraged tyrant caused many of the citizens to be executed. To prevent, however, the city's suffering from this loss of the inhabitants, he established in it a number of Dorians and other Greeks, and from this time the remark of Thucydides applies, who informs us that the inhabitants of Himera spoke a middle dialect between the Dorian and Chalcidian, but that the written institutions were in the Chalcidian dialect. Himera was destroyed by the Carthaginians, 240 years after its founding, and never recovered from the blow. (*Diod. Sic.*, 11, 48.) The Carthaginians subsequently established a number of the old inhabitants in the new city of Thermæ, in the immediate vicinity of Himera. This spot was remarkable for its warm baths. The ruins of Thermæ are now called *Termini*. (*Mannert, Geogr.*, vol. 9, p. 403, seqq.)

HIMILCO (equivalent in Punic to *gratia Milcaris*, "the favour of Milcar"), the name of several Carthaginians. I. A Carthaginian commander, who is said by Pliny (2, 67) to have been contemporary with Hanno the navigator. He was sent by his government to explore the northwestern coast of Europe. A few fragments of this voyage are preserved by Avienus (*Ora Marit.*, 1, 90), in which the Hiberni and Albioni are mentioned, and also a promontory, Oestrymnis,

and islands called Oestrymnides, which are usually considered to be Cornwall and the Scilly Islands. (*Gosselin, Recherches*, vol. 4, p. 162, *seqq.*)—II. A Carthaginian, who commanded in the wars with Dionysius I., tyrant of Syracuse, B.C. 405–368. Himilco was an able and successful general. He took Gela, Messina, and many other cities in Sicily, and at length besieged Syracuse by sea and land, but he was defeated by Dionysius, who burned most of the Carthaginian vessels. (*Diod. Sic.*, lib. 13 et 14.)—III. A supporter of the Barca party at Carthage. (*Liv.*, 13, 12.)—He was sent by the Carthaginian government to oppose Marcellus in Sicily. (*Liv.*, 24, 35, *seqq.*—*Id.*, 25, 23, *seqq.*)

HIPPARCHUS, I. a son of Pisistratus, who, together with his brother Hippias, succeeded his father as tyrant of Athens. An account of their government will be found under the article Hippias. Hipparchus was assassinated by Harmodius and Aristogiton, for an account of which affair, consult remarks under the article Harmodius.—II. The first astronomer on record who really made systematic observations, and left behind him a digested body of astronomical science. He was a native of Nicaea in Bithynia, and flourished between the 154th and 163d Olympiads, or between 160 and 125 B.C., as appears from his having made astronomical observations during that interval. He resided some time in the island of Rhodes, where he continued the astronomical observations which he had probably commenced in Bithynia; and hence he has been called by some authors the Bithynian, and by others the Rhodian, and some even suppose two astronomers of the same name, which is certainly incorrect. Hipparchus is also supposed to have made observations at Alexandria; but Delambre, comparing together such passages as Ptolemy has preserved on the subject, is of opinion that Hipparchus never speaks of Alexandria as of the place in which he resided, and this conclusion of the French astronomer is probably correct. The period of his death is not known. He was the author of a commentary on the *Phænomena* of Aratus, published by Peter Victorius at Florence, in 1567; and also by Petavius, with a Latin version and notes, in his *Uranologia*. He also wrote treatises on the nature of the fixed stars; on the motion of the moon; and others no longer extant. Hipparchus has been highly praised both by the ancients and moderns. Pliny the Elder styles him “the confidant of nature,” on account of the importance of his discoveries; and M. Bailly has bestowed on him the title of the “patriarch of astronomy.” He treated that science with a philosophical spirit, of which there are no traces before his time. He considered the subject in a general point of view; examined the received opinions; passed in review the truths previously ascertained, and exhibited the method of reducing them so far into a system as to connect them with each other. He was the first who noticed the precession of the equinoxes, or that very slow motion of the fixed stars from west to east, by which they perform an apparent revolution in a great number of years. He observed and calculated eclipses; discovered the equation of time, the parallax, and the geometrical mensuration of distances; and he thus laid the solid foundations of geographical and trigonometrical science. The result of his labours in the observation of the fixed stars, has been preserved by Ptolemy, who has inserted the catalogue of Hipparchus in his *Almagest*. As regards the general merits of Hipparchus, consult the work of Marozz, *Astronomie Solaire d'Hipparque*, Paris, 1828, 8vo; the account given by Delambre, in the *Biographie Universelle* (vol. 20, p. 398, *seqq.*), and the preface of the same writer to his “History of Ancient Astronomy,” in which work will be found the most complete account of the labours of Hipparchus. (*Histoire de l'Astronomie Ancienne*, par M. Delambre, Paris,

1817, 2 tom. 4to.) The bias of Delambre appears to be, to add to Hipparchus some of the fame which has been generally considered due to Ptolemy, and in support of this opinion he advances some forcible arguments.—The titles of the writings attributed to Hipparchus, on whom Ptolemy has fixed the epithets of φιλόπονος καὶ φιλαλήθης (“a lover of labour and of truth”), have been collected by Fabricius, and are to be found in Weidler, as follows: 1. περὶ τῶν ἀπλανῶν ἀναγραφαί; 2. περὶ μεγέθων καὶ ἀποστημάτων; 3. *De XII. signorum ascensionibus*; 4. περὶ τῆς κατὰ πλάτος μηνιαίας τῆς σελήνης κινήσεως; 5. περὶ μηνιαίου χρόνου; 6. περὶ ἐναντίων μεγέθων; 7. περὶ τῆς μεταπτώσεως τῶν τροπικῶν καὶ ἰσημερινῶν σημείων; 8. *Adversus Eratosthenis Geographiam*; 9. Τὸν Ἀράτου καὶ Εὐδόξου φαινόμενων ἐξηγήσεων βιβλία γ'.—The only one of these which has come down to us, is the last and least important, of which we have already spoken. Hipparchus also wrote a work, according to Achilles Tattius, on eclipses of the sun; and there is also recorded a work with the following title: Ἡ τῶν συνανατολῶν πραγματεία. (*Encycl. Us. Knowl.*, vol. 12, p. 240, *seqq.*—Schöll, *Hist. Lit. Gr.*, vol. 3, p. 376, *seqq.*)—III. A Pythagorean philosopher, an extract from a work of whose on “Tranquillity of Soul” (περὶ εὐθυμίας) has been preserved for us by Stobæus. It may be found in the *Opuscula Mythologica, Ethica, et Physica*, edited by Gale, Cantab., 1670, 12mo.

HIPPASUS, a native of Metapontum, and follower of the Pythagorean doctrine. He is said to have excelled in the application of mathematical principles to music, statics, and mensuration. In common with others of the same sect, he held that fire was the originating cause of all things. He taught also that the universe is finite, is always changing, and undergoes a periodical conflagration. (*Diog. Laert.*, 8.)

HIPPIAS, a son of Pisistratus, who, together with his two brothers, Hipparchus and Thessalus, succeeded their father, without any opposition, in the government of Athens. The authority of Thucydides (6, 54) seems sufficient to prove, that Hippias was the eldest, though his reasons are not of themselves convincing, and the current opinion, in his own day, gave the priority to Hipparchus. As the eldest, Hippias would take his father's place at the head of affairs; but the three brothers appear to have lived in great unanimity together, and to have co-operated with little outward distinction in the administration of the state. Their characters are described as very different from each other. Hippias seems to have possessed the largest share of the qualities of a statesman. Hipparchus inherited his father's literary taste; but he was addicted to pleasure, and perhaps to amusements not becoming the dignity of his station. (*Athenæus*, 12, p. 533.) Indeed, Hippias also would seem to have been open to the same charge. (*Athen.*, l. c.) Thessalus, the youngest brother, is said to have been a high-spirited youth, which is all the information that we possess concerning him. The successors of Pisistratus for some years trod in his steps and prosecuted his plans. They seem to have directed their attention to promote the internal prosperity of the country, and the cultivation of letters and the arts. One of their expedients for the latter purpose, the credit of which seems to have belonged principally to Hipparchus, was to erect a number of Hermæ, or stone busts of Mercury, along the side of the roads leading from the capital, inscribed on one side with an account of the distance which it marked, on the other with a moral sentence in verse, probably the composition of Hipparchus himself, though he often received the first poets of the age under his roof. To him also is ascribed the establishment of the order in which the Homeric poems continued in after times to be publicly recited at the Panathenæic festival. The brothers imitated the sage policy of their father, in dropping the show of power as much as was

consistent with a prudent regard to securing the substance. They kept up a standing force of foreign mercenaries, but they made no change in the laws or the forms of the constitution, only taking care to fill the most important offices with their own friends. They even reduced the tax imposed by Pisistratus to a twentieth, and, without laying on any fresh burdens, provided for the exigencies of the state, and continued the great works which their father had begun. The language of a later writer (the author of the *Hippiarchus*, p. 229), who speaks of their dominion as having recalled the happiness of the golden age, seems almost justified by the sober praise of Thucydides, when he says that these tyrants most diligently cultivated virtue and wisdom. The country was flourishing, the people, if not perfectly contented, were certainly not impatient of the yoke, and their rule seemed likely to last for at least another generation, when an event occurred which changed at once the whole aspect of the government, and led to its premature overthrow. This was the affair of Harmodius and Aristogiton, in which Hippiarchus lost his life, and the particulars of which have been given under a different article. (*Vid.* Harmodius.) Previous to this occurrence, Hippias had shown himself a mild, affable, and beneficent ruler, but he now became a suspicious, stern, and cruel tyrant, who regarded all his subjects as secret enemies, and, instead of attempting to conciliate them, aimed only at cowing them by rigour. He was now threatened not only by the discontent of the people at home, but by the machinations of powerful enemies from without. The banished Alcmaeonidae, with the aid of the oracle at Delphi, induced the Lacedaemonians to espouse their cause, and Hippias was compelled to leave Attica in the fourth year after his brother's death. Having set sail for Asia, he fixed his residence for a time in his hereditary principality of Sigeum. The Spartans, subsequently repenting of what they had done, sent for Hippias, and, on his arrival, summoned a congress of deputies from their Peloponnesian allies, and proposed, as the only means of curbing the growing insolence of the Athenian people, to unite their forces and compel Athens to receive her former ruler. All, however, with one accord, loudly exclaimed against the proposition of Sparta, and Hippias soon after returned to Sigeum, whence he proceeded to the court of Darius Hystaspis. Here he remained for many years; and when the expedition of Datis and Artaphernes took place, an expedition which he himself had strenuously urged, he guided the barbarian armament against his country, and the Persian fleet, by his advice, came to anchor in the bay of Marathon.—The subsequent history of Hippias is involved in uncertainty. Thucydides (6, 59) merely says that he was present at the battle of Marathon, without informing us whether he lost his life there or not. (Compare *Herodotus*, 6, 107.) Justin (2, 9) states that he was killed in the fight, and Cicero (*Ep. ad Att.*, 9, 10) confirms this. Suidas, however, informs us, that Hippias fled to Lemnos, where, falling sick, he died, the blood issuing from his eyes. (Consult *Larcher*, *ad Herod.*, 6, 117.)

HIPPO, I. REGIUS (Ἰππὼν Βασιλικός), a city of Africa, in that part of Numidia called the western province. It was situate near the sea, on a bay in the vicinity of the promontory of Hippo. It was called Hippo Regius, not only in opposition to Hippo Zarytus mentioned below, but also from its having been one of the royal cities of the Numidian kings. The place was of Tyrian origin. Of this city St. Augustine was bishop. The ruins are spread at the present day over the neck of land that lies between the rivers *Boujemah* and *Seibouse*. Near the ancient site is a town named *Bona*.—II. ZARYTUS, a town of Africa, on the coast to the west of Utica. It was thus termed to distinguish it from the one above mentioned, and the name is said

to have reference to its situation among artificial canals, which afforded the sea an entrance to a navigable lagune adjacent. Some of the Greek writers corrupted the appellation Zarytus into Δαῦρῶτες, in which the same idea is endeavoured to be expressed. The modern name is *Beni-Zert*, which, according to Shaw, signifies "the son of the canal." (*Mannert, Geogr.*, vol. 10, pt. 2, p. 298.)

HIPPOCENTAURI (Ἰπποκένταυροι), fabulous animals, partly human, partly resembling the horse. They are the same with the Centauri. (*Vid.* Centauri.)

HIPPOCRATES, a celebrated physician, born in the island of Cos. The particulars of his life, as far as they have reached us, are few in number. His contemporaries have commended him in the highest terms for his consummate skill and his profound acquaintance with the medical art; but they have left us little information relative to the man himself. Hippocrates, too, in those of his writings, the authenticity of which no one contests, enters into very few details respecting his long and honourable career. The Greek writer, who, under the name of Soranus, has transmitted to us some biographical information concerning this eminent physician, relates, that the father of Hippocrates was named Heraclides, and deduced his descent, through a long line of progenitors, from Æsculapius himself. On the side of his mother, who was named Praxithe, he was fabled to be a descendant of Hercules. In other words, he belonged to the race or family of the Asclepiades, who, from time immemorial, had devoted themselves exclusively to the service of the god of medicine and the cultivation of the medical art. It appears, from the table of Meibomius (*Comment. in Hipp. jusjur.*), that he was the seventeenth in order of the pretended descendants of Æsculapius, his uncle Hippocrates I. being the fifteenth. The birth of Hippocrates II., or the Great, is fixed by Soranus in the first year of the eighteenth Olympiad, B.C. 460; consequently, he was contemporary with Socrates and Plato, a little younger than the former, and a little older than the latter. His name began to be illustrious during the Peloponnesian war.—After having received at Cos his first professional instruction from his father Heraclides, Hippocrates went to study at Athens under Herodicus of Selymbria. He had also for one of his masters the sophist Gorgias. Some authors pretend that he was also a disciple of Democritus; it is even said that he conceived so high an esteem for this philosopher, as to show it by writing his works in the Ionic dialect, though he himself was a Dorian. It would seem, however, from an examination of his writings, that Hippocrates preferred the doctrines of Heraclitus to those of Democritus.—After the death of his father he travelled over many countries, according to the custom of the physicians and philosophers of his time; and finally established himself in Thessaly, whence some have called him "the Thessalian." Soranus informs us, that Hippocrates lived at the court of Perdiccas, king of Macedonia, and that he cured this prince of a consumption caused by a violent passion which he had conceived for his mother-in-law Phila. This fact is not, indeed, in contradiction of chronology; but what gives it a suspicious appearance is, that a story almost similar is related by the ancient writers as having happened at the court of Seleucus Nicator. (*Vid.* Erasistratus.) It is possible, however, that Hippocrates may have passed some time with Perdiccas; for he states that he had observed many maladies in the cities of Pella, Olynthus, and Acanthus, situate in Macedonia. He appears also to have sojourned for a while in Thrace, for he frequently mentions, in his accounts of epidemic disorders, the Thracian cities of Abdera, Datus, Doriscus, Ænos, Cardia, and the isle of Thasos. It is equally probable that he travelled in Scythia and the countries immediately contiguous to the kingdom of Pontus and the

Palus Mæotis, because the description he gives of the manners and mode of life of the Scythians is extremely exact and faithful. According to Soranus, the cities of Athens and Abdera owed to Hippocrates the benefit of having been delivered from a plague which had caused great ravages. It is uncertain whether the frightful epidemic is here meant which desolated Athens during the Peloponnesian war, and which Thucydides has so faithfully described, or some other malady; for the historian, who was an eyewitness of the ravages of the disease, makes no mention of Hippocrates. However this may be, the Athenians, grateful for the services which this distinguished physician had rendered, either in delivering them from a pestilential scourge, or in publishing valuable works on the art of preserving life, or in refusing the solicitations of the enemies of Greece, decreed that he should be initiated into the mysteries of Ceres, should be gifted with a golden crown, should enjoy the rights of citizenship, should be supported all his days at the public expense in the Prytaneum, and, finally, that all the children born in Cos, the native island of Hippocrates, might come and pass their youth at Athens, where they would be reared as if offspring of Athenian citizens. According to Galen, it was by kindling large fires, and burning everywhere aromatic substances, that Hippocrates succeeded in arresting the pestilence at Athens. The reputation of this eminent physician extended far and wide, and Artaxerxes Longimanus even sent for him to stop the progress of a malady which was committing great ravages among the forces of that monarch. Hippocrates declined the offer and the splendid presents that accompanied it; and Artaxerxes endeavoured to accomplish his object by menacing the inhabitants of Cos, but in vain. Though the correspondence which took place on this point between Hippocrates and the satrap Hystanes, and which has reached our days, must be regarded as altogether unauthentic, yet it appears that credit was given to the story by ancient writers, two of whom, Galen and Plutarch, relate the circumstance. Stobæus also makes mention of it, but commits, at the same time, an anachronism in giving the name of the monarch as Xerxes, and not Artaxerxes. Certain Arabian authors affirm, that, in the course of his travels, Hippocrates spent some time at Damascus; there is no authority, however, for this, and the assertion is altogether destitute of probability. An individual named Andreas or Andron, who lived under Ptolemy Philopator, and who was a disciple of Herophilus, undertook, nearly three centuries after the death of Hippocrates, to assign a very disgraceful motive for the travels of this physician. He says that Hippocrates was compelled to flee for having set fire to the library at Cnidus, after having copied the best medical works contained in it. Tzetzes, agreeing in this accusation, states that it was the library at Cos which became a prey to the flames; and Pliny, without charging Hippocrates with the deed, and without speaking of any library, reduces the loss to that of a few votive tablets, which were consumed together with the temple of Æsculapius. The discrepancy of these statements alone is sufficient to show the falsity of the accusation. Besides, all contemporaneous history is silent on the subject; nor would Plato have shown so much esteem for the physician of Cos, nor Athens and Greece, in general, have rendered him so many and so high honours, had he been guilty of the disgraceful crime alleged against him. The name of Hippocrates is still held in veneration by the natives of Cos (*Stancu*), and they show a small building which they pretend was the house that he inhabited. Hippocrates passed the latter years of his life in Thessaly, at Larissa in particular, as well as at Cranon, Phere, Tricæ, and Melibœa, as appears from many observations made by him relative to the maladies of these different

cities. The period of his death is unknown. Soranus affirms, that he ended his long and brilliant career in his 85th or 90th year, according to some; in his hundredth year, according to others; and some even give 109 years as the extent of his existence. The number of works ascribed to Hippocrates is very considerable; they are made by some to amount to eighty; those, however, about the authenticity of which there is no doubt, reduce themselves to a very few. Palladius, a physician of the 6th century of the present era, who wrote scholia on the treatise of Hippocrates respecting fractures, points out eleven works of this physician as alone authentic. One thousand years after, two learned men turned their attention to a critical review of the works of Hippocrates; these were Hieronymus Mercurialis, a celebrated physician and philologist of the 16th century, and a native of Portugal, Louis de Lemos. These two scholars conceived the idea, at the same period, of classifying the works of Hippocrates. The Paduan professor established four categories of them: 1. Works in which the doctrine and style of this distinguished physician plainly present themselves, and which are therefore manifestly authentic. 2. Works written by Hippocrates, but published by his sons and disciples. 3. Works composed by the sons and disciples of Hippocrates, but which are in conformity with his doctrine. 4. Works, the very contents of which are not in accordance with his doctrine. (*Censura Operum Hippocratis*, Vcnct., 1583, 4to.) Lemos, after having critically examined all the works ascribed to Hippocrates, acknowledges only nineteen as authentic. (*De Optima prædicandi ratione item judicii operum magni Hippocratis liber unus*, Salamantica, 1585, 12mo.) When, in the 18th century, the critical art, long neglected, was at last made to rest on sure principles, the works of Hippocrates were again subjected to rigorous investigation. The celebrated Haller, on reprinting a Latin translation of these works, discussed their authenticity, and allowed only fifteen treatises to be genuine. Two other German physicians, MM. Gruner and Grimm (*Hippokrates Werke, aus dem Gr.—Censura librorum Hippocraticensium*, Vratislav, 1772, 8vo), of distinguished reputation, employed themselves in researches, the object of which was to distinguish what was authentic from what was falsely ascribed to the father of medicine. In pursuing this examination, they combined the testimonies of ancient writers with the internal characters of the works themselves. The result is, that, according to Gruner, there exist but ten authentic works of Hippocrates, while Grimm makes the number still less. Linck, a professor at Berlin, comes to a bolder conclusion. He maintains, that the works of Hippocrates, as they are called, are a mere collection of pieces by different authors, who all lived before the period when the medical art flourished at Alexandria. A full list of the works of Hippocrates is given by Schöll (*Hist. Lit. Gr.*, vol. 3, p. 19, seqq.). The best edition of all the works is that of Fæsius, *Frankf.*, 1595, fol., reprinted at several subsequent periods, and, with the glossaries, at Geneva, in 1657, fol. The edition of Kühn, in the Collection of the Greek Medical Writers (*Lips.*, 1825–1827, 3 vols. 8vo), is also a good one. In 1815 M. de Mercey commenced a valuable edition of select works of Hippocrates, with a French translation and commentary. The learned Coray also published a translation in French of the treatise on Airs, Waters, and Places, at Paris, 1801, in 2 vols. 8vo, enriched with critical, historical, and medical notes — “Of all the medical authors,” observes Dr. Adams, “of ancient, and, I believe I may add, of modern times, no one deserves to be so frequently in the hands of the student of medicine as Hippocrates; for his works not only contain an invaluable treasure of practical facts, but likewise abound in precepts inculcating propriety of conduct

and purity of morals. In his *Oath*, he exacts from those who enter on the profession a solemn promise never to indulge in libertine practices, nor to degrade their art by applying it to any criminal purposes. In his other works he is at great pains to inculcate the necessity of attention to address and apparel; and gives particular directions to assist in forming a correct prognosis. With regard to his descriptions of the phenomena of disease, one may venture to affirm, that even at the present day they are perfectly unvalued. As a guide to practice, he may be followed with great confidence; for his indications are always derived from personal observation, and his principles are never founded on vague hypothesis. Indeed, as an intelligent American author, Dr. Hosack, remarks, his professional researches were conducted according to the true principles of the Baconian philosophy; and his late editor, Kühn, relates, that a zealot for the Brunonian theory of medicine was convinced of its being untenable by an attentive perusal of the works of Hippocrates. His treatment of acute diseases may be instanced as being so complete that the experience of more than two thousand years has scarcely improved upon it. Nay, in some instances, the correctness of his views outstripped those of succeeding ages, and we now only begin to recognise the propriety of them. Thus, in acute attacks of anasarca, he approved of bloodletting, which is a mode of practice now ascertained to be highly beneficial in such cases, but against which great and unfounded prejudices have existed, not only in modern times, but even as far back as the days of Galen, who found great difficulty in enforcing the treatment recommended by Hippocrates. In his work on *Airs, Places, and Waters*, he has treated of the effects of the seasons and of situation on the human form, with a degree of accuracy which has never been equalled. His *Epidemics* contain circumstantial reports of febrile cases highly calculated to illustrate the causes, symptoms, and treatments of these diseases. Though he has not treated of the capital operations of Surgery, which, if practised at all in his day, most probably did not come within his province, he has given an account of Fractures and Dislocations, to which little has been added by the experience of after ages. He has also left many important remarks upon the treatment of wounds and ulcers, and the American author alluded to above ventures to assert, that the surgeons of the present day might derive an important lesson from him on the use of the Actual Caustery. The following aphorism points out the class of diseases to which he considered this mode of practice applicable. 'Those complaints which medicines will not cure, iron will cure; what iron will not cure, fire will cure; what fire will not cure are utterly incurable.' In his treatise on the Sacred Disease, he has shown himself superior to the superstition of his age; for he maintains that the epilepsy is not occasioned by demoniacal influence, but by actual disease of the brain; and he mentions, what is now well known to be the fact, that when the brains of sheep or goats that are affected with this complaint are opened, they are found to contain water. Of the anatomical treatises attributed to him it is unnecessary to say anything, as it appears highly probable that all, or most of them, at least, are not genuine. Dr. Alston counted, in his *Materia Medica*, 36 mineral, 300 vegetable, and 150 animal substances; in all 586, and he could not pretend to have overlooked none. Hippocrates appears to have been profoundly skilled in the principles of the Ionian philosophy, of which he has left several curious samples. He has treated likewise both of animal and vegetable physiology; and Aristotle and Theophrastus are said to have profited by his labours in this department of natural science."

HIPPOCRÈNE, a fountain of Bœotia, on Mount Helicon, sacred to the Muses. It was fabled to have burst

forth from the ground when Pegasus struck his hoof into the side of the mountain; and hence the name applied to it, Ἱπποκρήνη or Ἱππονακρήνη, i. e., "the horse's fountain," from ἵππος (genitive ἵππου), "a horse," and κρήνη, "a fountain." (*Strab.*, 410.—*Pausan.*, 9, 31.)

HIPPONAMIA, I. a daughter of CEnomaus, king of Pisa, in Elis, who married Pelops, son of Tantalus. (*Vid.* Pelops, where the full legend is given.)—II. A daughter of Adrastus, king of Argos, who married Pirithous, king of the Lapithæ. The festivity which prevailed on the day of her marriage was interrupted by the violent conduct of the Centaurs, which led to their conflict with the Lapithæ. (*Vid.* Centauri, Lapithæ.)

HIPPOLYTE, I. a queen of the Amazons. She was mistress of the belt of Mars, as a token of her exceeding all the Amazons in valour. This belt Eurystheus coveted for his daughter Admetæ, and he ordered Hercules to bring it to him. The hero, having drawn together some volunteers, among whom were Theseus, Castor, and Pollux, reached, after some incidental adventures, the haven of Themiscyra, where Hippolyta came to inquire the cause of his arrival; and, on hearing it, promised to give him her girdle. But Juno, taking the form of an Amazon, went and persuaded the rest that the strangers were carrying off their queen. They instantly armed, mounted their horses, and came down to the ship. Hercules, thereupon, thinking that Hippolyta had acted treacherously, slew her, and, taking her belt, made sail homeward. (*Apollod.*, 2, 5, 9—*Diod. Sic.*, 4, 16.) Another account made Theseus to have received Hippolyta in marriage from Hercules, and to have become, by her, the father of Hippolytus. (Compare *Heyne*, *ad Apollod.*, l. c.)—II. The wife of Acastus, who falsely accused Pelæus, while at her husband's court, of dishonourable conduct. (*Vid.* Acastus.)

HIPPOLYTUS, I. a son of Theseus and Hippolyte, or, according to others, of Theseus and Antiope. Theseus, after the death of his first wife, married Phædra, the daughter of Minos, and sister of Ariadne. This princess was seized with a violent affection for the son of the Amazon, an affection produced by the wrath of Venus against Hippolytus, for neglecting her divinity, and for devoting himself solely to the service of Diana; or else against Phædra as the daughter of Pasiphaë. During the absence of Theseus, the queen made advances to her step-son, which were indignantly rejected by the virtuous youth. Filled with fear and hate, on the return of her husband she accused his innocent son of an attempt on her honour. Without giving the youth an opportunity of clearing himself, the blinded monarch, calling to mind that Neptune had promised him the accomplishment of any three wishes that he might form, cursed and implored destruction on his son from the god. As Hippolytus, leaving Træzene, was driving his chariot along the seashore, a monster, sent by Neptune from the deep, terrified his horses; they burst away in fury, heedless of their driver, dashed the chariot to pieces, and dragged along Hippolytus, entangled in the reins, till life abandoned him. Phædra ended her days by her own hand; and Theseus, when too late, learned the innocence of his son. Euripides has founded a tragedy on this subject, but the legend assumes a somewhat different shape with him. According to the plot of the piece, Phædra hangs herself in despair when she finds that she is slighted by her step-son, and Theseus, on his return from abroad, finds, when taking down her corpse, a writing attached to it, in which Phædra accused Hippolytus of having attempted her honour—According to another legend, Æsculapius restored Hippolytus to life, and Diana transported him, under the name of Virbius, to Italy, where he was worshipped in the grove of Aricia. (*Vid.* Virbius.—*Apollod.*, 3, 10, 3,

—*Heyne, ad loc.*—*Ovid, Met.*, 15, 492, *seqq.*—*Virg., Æn.*, 7, 761, *seqq.*—Consult *Buttmann, Mythologus*, vol. 2, p. 145, *seqq.*

HIPPOMEDON, a son of Nisimachus and Mythidice, was one of the seven chiefs that went against Thebes. He was killed by Ismarus, son of Acastus. (*Apollod.*, 3, 6.—*Pausan.*, 2, 36.)

HIPPOMENES, son of Megareus, was, according to some authorities, the successful suitor of Atalanta. (*Virg. Atalanta*, and consult *Heyne, ad Apollod.*, 3, 9, 2, and the authorities there cited.)

HIPPOMOLGI, or, more correctly, HIPPEMOLGI (Ἰππημολγοί), a people of Scythia, who, as the name imports, lived on the milk of mares. (*Dionys. Perieg.*, 309.—*Bernhardy, ad loc.*)

HIPPONA, a goddess who presided over horses. Her statues were placed in horses' stables. (*Juv.*, 8, 157.—Consult *Ruperti, ad loc.*, who gives *Epona* as the reading demanded by the line.)

HIPPONAX, a Greek poet, who flourished about the 60th Olympiad, or 540 B.C. He was born at Ephesus, and was compelled by the tyrants Athenagoras and Comas to quit his home, and to establish himself in another Ionian city, Clazomenæ. This political persecution (which affords a presumption of his vehement love of liberty) probably laid the foundation for some of the bitterness and disgust with which he regarded mankind. Precisely the same fierce and indignant scorn, which found an utterance in the iambs of Archilochus, is ascribed to Hipponax. What the family of Lycambes was to Archilochus, Bupalus (a sculptor belonging to a family of Chios, which had produced several generations of artists) was to Hipponax. He had made his small, meager, and ugly person the subject of caricature; an insult which Hipponax avenged in the bitterest and most pungent iambs, of which some remains are extant. In this instance, also, the satirist is said to have caused his enemy to hang himself. The satire of Hipponax, however, was not concentrated so entirely on certain individuals. From existing fragments it appears rather to have been founded on a general view of life, taken, however, on its ridiculous and grotesque side. His language is filled with words taken from common life, such as the names of articles of food and clothing, and of ordinary utensils, current among the working people. He evidently strives to make his iambs local pictures, full of freshness, nature, and homely truth. For this purpose, the change which Hipponax devised in the iambic metre was as felicitous as it was bold. He crippled the rapid, agile gait of the iambus, by transforming the last foot from an iambic into a spondee, contrary to the fundamental principle of the whole mode of versification. The metre, thus maimed and stripped of its beauty and regularity, was a perfectly appropriate rhythmical form for the delineation of such pictures of intellectual deformity as Hipponax delighted in. Iambs of this kind (called choliambics, or trimeter scæzons) are still more cumbrous and halting when the fifth foot is also a spondee; which, indeed, according to the original structure, is not forbidden. These were called *broken-backed* (ischiorrhogic) iambs, and a grammarian (*ap Tyrwhitt, Dissert. de Babrio*, p. 17) settles the dispute (which, according to ancient testimony, was so hard to decide), how far the innovation of this kind of verse ought to be ascribed to Hipponax, and how far to another iambographer, Ananius, by pronouncing, that Ananius invented the ischiorrhogic variety, and Hipponax the common scæzon. It appears, however, from the fragments attributed to him, that Hipponax sometimes used the spondee in the fifth place. In the same manner, and with the same effect, these poets also changed the trochaic tetrameter by regularly lengthening the penultimate short syllable. Some remains of this kind are extant. Hipponax likewise composed pure trimeter

ters in the style of Archilochus; but there is no conclusive evidence that he mixed them with scæzons. Ananius has hardly any individual character in literary history distinct from that of Hipponax. In Alexandria their poems seem to have been regarded as forming one collection; and thus the criterion by which to determine whether a particular passage belonged to the one or the other, was often lost or never existed. Hence, in the uncertainty which is the true author, the same verse is occasionally ascribed to both (as in *Athenæus*, 14, p. 625, c.) The few fragments which are attributed with certainty to Ananius are so completely in the tone of Hipponax, that it would be a vain labour to attempt to point out any characteristic difference.—The fragments of Hipponax and Ananius were edited by Welcker, *Götting*, 1817, 4to. (*Müller, Hist. Græc. Lit.*, p. 141, *seqq.*—*Philological Museum*, vol. 1, p. 281.)

HIPPONIUM, called also Vibo Valentia, a town of Italy, on the western coast of the territory of the Brutii, southwest from Scylacium. According to Strabo (56) it was founded by the Epizephyrian Locri. We learn from Diodorus (14, 107; 15, 24), that not long afterward it was destroyed by Dionysius the elder, who transplanted the inhabitants to Syracuse. It was restored, however, by the Carthaginians, who were then at war with that prince. Subsequently it fell into the hands of the Brutii, together with all the Greek settlements on the coast. (*Strab., l. c.*) About 297 B.C., Agathocles, tyrant of Sicily, seized upon the harbour of Hipponium, which he fortified, and even succeeded in obtaining possession of the town for a short period. He was soon, however, compelled by the Brutii to relinquish it, together with the port. (*Diod. Sic., Excerpt.*, 21, 8.—*Strab., l. c.*) This city became a colony of the Romans, A.U.C. 560, and took the name of Vibo Valentia. (*Liv.*, 35, 40.) Antiquaries and topographers are generally of opinion that the modern town of *Monte Leone* represents the ancient Hipponium, and they recognise its haven in the present harbour of *Bicona*. (*Cramer's Anc. Italy*, vol. 2, p. 420.)

HIPPOPODES, a people of Scythia, who were fabled to have *horses' feet* (ἵππων πόδες), whence their name. The Hippopodes are mentioned by Dionysius Periegetes, Mela, Pliny, and St. Augustine. The truth appears to be, that they had this appellation given them on account of their swiftness of foot. (*Dionys. Perieg.*, 310.—*Mela*, 3, 6, 83.)

HIRA OF ALEXANDRÆA, now *Mesjid-ali*, or *Meham-ali*, a town of Asia in Babylonia, situate on a lake, a short distance from the western bank of the Euphrates. It was the residence of a dynasty of princes who aided the Persians and Parthians against the Romans. They are called in history by the general name of Alamundari, after the term *Al-Mondar*, common to many of these princes at the fall of their dynasty under the Mohammedan power. The body of Ali was here interred; and hence, from the sepulchre of the calif, came the modern name. (*Bischoff und Moller, Wörterb. der Geogr.*, p. 615.)

HIRPINI, a people of Italy, who formed a part of the Samnites, and were situate to the south of Samnium Proper. As the term *Hirpinus* signified in the Samnite dialect a wolf, they are said to have been thus called from their having followed the tracks of these animals in migrating to this quarter. Towards the end of the second Punic war they began to be distinguished from the rest of the Samnites. Their territory comprehended the towns of Beneventum, Caudium, Abellinum, and Compsa. (*Cramer's Anc. Italy*, vol. 2, p. 248.)

HIRTIUS AULUS, a Roman of a distinguished family. He applied himself in early life to the study of rhetoric, and spoke on several occasions with great success. He followed Cæsar in the war against the Gauls, and merited the esteem of that great captain. On his re-

turn from this expedition, he eagerly courted the friendship of Cicero, and accompanied him in his retreat to Tusculum. Here he exercised himself in declamation, under the eyes of this illustrious orator, who speaks highly of his talents in many of his letters, and particularly in that addressed to Volumnius (8, 32). Cicero sent Hirtius to Cæsar, on the return of the latter from Africa, with the view of bringing about a reconciliation with the dictator, whom the orator had offended by the freedom of some of his discourses. Hirtius, either from affection or gratitude, was always attached to the party of Cæsar; but after the death of the dictator, he declared against Antony.—Being created consul elect along with C. Vibius Pansa, he fell sick soon after his election, and Cicero informs us (*Phil.*, 37), that the people testified the warmest concern in his recovery. Hirtius was scarcely restored to health, when he set out with his colleague to attack Antony, who was besieging Brutus in Mutina, near Modena. They gained a victory over Antony, near the city, B.C. 43; but Hirtius fell in the battle, and Pansa died a few days after of his wounds. The report was spread abroad, that Octavius had caused the two consuls to be poisoned in order to appropriate to himself all the glory of the day. (*Sueton.*, *Vit. Aug.*, 11.)—It cannot be affirmed with any degree of certainty that Hirtius was the author of the continuation of Cæsar's Commentaries which commonly goes by his name. Even as far back as the time of Suetonius, great difference of opinion prevailed on this point; some, according to that writer, attributing the continuation in question to Oppius, and others to Hirtius; the latter opinion, however, has, in general, gained the ascendancy. This continuation forms the eighth book of the Gallic war. The author addresses himself, in a letter, to Balbus, in which he apologizes for having presumed to terminate a work so perfect in its nature, that Cæsar seems to have had in view, in composing it, not so much the collecting together of materials, as the leaving a model of composition to historical writers. We learn by the same letter, that the book on the Alexandrine War, and that on the African War, proceeded from the same pen; and these three works, in a style at once simple and elegant, do not appear unworthy of the friend of Cæsar and Cicero. We have also, under the name of Hirtius, a book on the Spanish War, so inferior to the preceding that judicious critics regard it as the mere journal of a soldier, who has an eyewitness of the events which he relates (*Biogr. Univ.*, vol. 20, p. 423, *seqq.*—*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 360.)

HISPALIS, a famous city of Spain, situate on the Bætis, and corresponding to the modern Seville. Mannert thinks that it was the same as the ancient Tartessus. (*Geogr.*, vol. 1, p. 312.) The name is supposed to be of Phœnician origin, and, according to Isidorus, has reference to the city's being founded on *piles* or *stakes* of wood, on account of the insecurity of the ground where it stood. (*Isidor.*, *lib. etymol.*, 15, 1.) Some ascribe the origin of the place to Hercules; probably, however, it was a Phœnician colony. It was a place of great commerce, the Bætis being navigable in ancient times for the largest ships up to the city. Now, however, vessels drawing more than ten feet of water are compelled to unload eight miles below the town, and the largest vessels stop at the mouth of the river. When Hispalis became a Roman colony, the name was changed to Julia Romulensis. (*Cæs.*, B. C., 2, 18—*Id.*, *Bell. Hisp.*, 27, 35, *seqq.* *Isidor.*, *Chron. Goth.*, p. 168.—*Id.*, *Chron. Vand.*, p. 176.—*Id.*, *Hist. Suev.*, p. 180.—*Plin.*, 3, 1.)

HISPANIA, an extensive country, forming a kind of peninsula, in the southwest of Europe. It was bounded on the north by the Pyrenees and Sinus Cantabricus or Bay of Biscay, on the west by the Atlantic, on the south by the Atlantic, Fretum Herculeum or

Straits of Gibraltar, and the Mediterranean, which last bounds it also on the east. Many conjectures have been formed concerning the origin of the name *Hispania*. Bochart (*Geogr. Sacr.*—*Phaleg.*, 3, 7) derives its name from the Phœnician (or Hebrew) *saphan*, "a rabbit," from the vast numbers of those animals which the country was found by the early Phœnician colonists to contain. (Compare *Catullus*, 37, 18.—*Varro*, *R. R.*, 3, 12.—*Ælian*, de *An.*, 13, 15.—*Plin.*, 8, 29, &c.—*Bochart*, *Geogr. Sacr. Canaan.*, 1, 35.) Others deduce the name in question from the Phœnician *span*, "concealed," and consider it as referring to the circumstance of the country's being little known at an early period to the Phœnician traders. Neither of these etymologies is of much value, though the former is certainly the better of the two. It would seem to have been adopted by the Romans, as appears from a medal of Hadrian, on which Spain is represented by the figure of a woman with a rabbit at her side. (*Flores. Medallas de Espania*, vol. 1, p. 109.) The Romans borrowed the name Hispania, appending their own termination to it, from the Phœnicians, through whom they first became acquainted with the country. The Greeks called it Iberia, but attached at different periods different ideas to the name. Up to the time of the Aethæan league and their more intimate acquaintance with the Romans, they understood by this name all the seacoast from the Pillars of Hercules to the mouth even of the Rhodanus or Rhone in Gaul. (*Scylax*, p. 1, *seqq.*—*Scymnus Chius*, v. 198.—*Polybius*, 3, 37.—*Strabo*, 116.—*Mannert*, *Geogr.*, vol. 1, p. 233.) The coast of Spain on the Atlantic they called Tartessus. (*Scymnus Chius*, v. 164, v. 193.—*Herod.*, 1, 163.) The interior of the country they termed Celtice (Κελτική), a name which they applied, in fact, to the whole northwestern part of Europe. (*Aristot.*, de *Mundo*.—*Opp.*, ed. *Dural*, vol. 1, p. 850.) The Greeks in after ages understood by Iberia the whole of Spain. The name Iberia is derived from the Iberi, of whom the Greeks had heard as one of the most powerful nations of the country. The origin of the ancient population of Spain is altogether uncertain. Some suppose that a colony first settled on the shores of this country from the island of Atlantis; an assumption as probable as the opinion supported by several Spanish authors, that the first inhabitants were descended from Tubal, a son of Noah, who landed in Spain twenty-two centuries before the Christian era. The Iberi, according to the ancient writers, were divided into six tribes; the Cynetes, Gletes, Tartessii, Elbysinii, Mastieni, and Calpiani. (*Herodori fragm. ap. Const. Porphyrog. de adm. Imp.*, 2, 23.—Compare *Steph. Byz.*, ed. *Berkel*, p. 408.—*Ukert*, *Geogr.*, vol. 2, pt. 1, p. 252.) Diodorus Siculus (5, 31, *seqq.*) mentions the invasion of Spain by the Celts. The Iberi made war against them for a long time, but, after an obstinate resistance on the part of the natives, the two people entered into an agreement, according to which they were to possess the country in common, bear the same name, and remain for ever united; such, says the same historian, was the origin of the Celtiberi in Spain. These warlike people, continues Diodorus, were equally formidable as cavalry and infantry; for, when the horse had broken the enemy's ranks, the men dismounted and fought on foot. Their dress consisted of a *sagum*, or coarse woollen mantle; they wore greaves made of hair, an iron helmet adorned with a red feather, a round buckler, and a broad two-edged sword, of so fine a temper as to pierce through the enemy's armour. Although they boasted of cleanliness both in their nourishment and their dress, it was not unusual for them to wash their teeth and bodies with urine, a custom which they considered favourable to health. Their habitual drink was a sort of hydromel; wine was brought into the country by foreign merchants. The land was equally distributed, and the harvests were divided

among all the citizens; the law punished with death the person who appropriated more than his just share. They were hospitable; nay, they considered it a special favour to entertain a stranger, being convinced that the presence of a foreigner called down the protection of the gods on the family that received him. They sacrificed human victims to their divinities, and the priests pretended to read future events in the palpitating entrails. At every full moon, according to Strabo, they celebrated the festival of a god without a name; from this circumstance, their religion has been considered a corrupt deism.—The Phœnicians were the first people who established colonies on the coast of Spain: Tartessus was perhaps the most ancient; at a later period they founded Gades, now Cadiz, on the isle of Leon. They carried on there a very lucrative trade, inasmuch as it was unknown to other nations; but, in time, the Rhodians, the Samians, the Phœnicians, and other Greeks established factories on different parts of the coast. Carthage had been founded by the Phœnicians; but the inhabitants, regardless of their connexion with that people, took possession of the Phœnician stations, and conquered the whole of maritime Spain. The government of these republicans was still less supportable: the Carthaginians were unable to form any friendly intercourse with the Spaniards in the interior; their rapine and cruelty excited the indignation of the natives. The ruin of Carthage paved the way to new invaders, and Spain was considered a Roman province two centuries before the Christian era. Those who had been the allies became masters of the Spaniards, and the manners, customs, and even language of the conquerors were introduced into the peninsula. But Rome paid dearly for her conquest; the north, or the present Old Castile, Aragon, and Catalonia, were constantly in a state of revolt: the mountaineers shook off the yoke, and it was not before the reign of Augustus that the country was wholly subdued. The peninsula was then divided into *Hispania Citerior* and *Uterior*. *Hispania Citerior* was also called *Tarraconensis*, from *Tarraco*, its capital, and extended from the foot of the Pyrenees to the mouth of the *Durius* or *Douro*, on the Atlantic shore; comprehending all the north of Spain, together with the south as far as a line drawn below *Carthago Nova* or *Carthagena*, and continued in an oblique direction to *Salamantica* or *Salamanca*, on the *Durus*. *Hispania Uterior* was divided into two provinces; *Bætica*, on the south of Spain, between the *Anas* or *Gaudiana*, and *Citerior*, and above it *Lusitania*, corresponding in a great degree, though not entirely, to modern *Portugal*. In the age of Dioclesian and Constantine, *Tarraconensis* was subdivided into a province towards the limits of *Bætica*, and adjacent to the Mediterranean, called *Carthaginensis*, from its chief city *Carthago Nova*, and another, north of *Lusitania*, called *Gallaecia* from the *Callaici*. The province of *Lusitania* was partly peopled by the *Cynetes* or *Cynesi*, the earliest inhabitants of *Algarve*. The *Celtici* possessed the land between the *Gudiana* (*Anas*) and the *Tagus*. The country round the mountains of *Gredos* belonged to the *Vettones*, a people that passed from a state of inactivity and repose to the vicissitudes and hardships of war. The *Lusitani*, a nation of freebooters, were settled in the middle of *Estremadura*: they were distinguished by their activity and patience of fatigue; their food was flour and sweet acorns; beer was their common beverage. They were swift in the race; they had a martial dance, which the men danced while they advanced to battle.—The part of *Bætica* near the Mediterranean was peopled by the *Bastuli Pœni*. The *Turduli* inhabited the shores of the ocean, near the mouth of the *Bætis*. The *Baturi* dwelt on the *Montes Mariani*, and the *Turdetani* inhabited the southern declivities of the *Sierra d'Aracena*. The last people, more enlightened than any other in

Bætica, were skilled in different kinds of industry long before their neighbours. When the Phœnicians arrived on their coasts, silver was so common among them that their ordinary utensils were made of it. What was afterward done by the Spaniards in America was then done by the Phœnicians in Spain: they exchanged iron and other articles of little value for silver; nay, if ancient authors can be credited, they not only loaded their ships with the same metal, but if their anchors at any time gave way, others of silver were used in their places.—The people in *Gallaecia*, a subdivision of *Tarraconensis*, were, the *Artabri*, who derived their name from the promontory of *Artabrum*, now *Cape Finisterre*; the *Bracari*, whose chief town was *Bracara*, the present *Braga*; and, lastly, the *Lucenses*, the capital of whose country was *Lucus Augusti*, now *Lugo*. These tribes and some others formed the nation of the *Callaici* or *Callæci*, who, according to the ancients, had no religious notions. The *Astures*, now the *Asturians*, inhabited the banks of the *Asturis*, or the country on the east of the *Gallaecian* mountains. Their capital was *Asturica Augusta*, now *Astorga*. The *Vaccæi*, the least barbarous of the *Celtiberians*, cultivated the country on the east of the *Astures*. The fierce *Cantabri* occupied *Biscay* and part of *Asturias*: it was customary for two to mount on the same horse when they went to battle. The *Vascones*, the ancestors of the present Gascons, were settled on the north of the *Iberus* or *Ebro*. The *Jacetani* were scattered over the *Pyrenean* declivities of *Aragon*. The brave *Ilergetes* resided in the country round *Lerida*. As to the country on the east of these tribes, the whole of *Catalonia* was peopled by the *Ceretani*, *Indigetes*, *Ausetani*, *Cosetani*, and others. The lands on the south of the *Ebro* were inhabited by the *Arevaici* and *Pelendones*; the former were so called from the river *Areva*; they were settled in the neighbourhood of *Arevola*, and in the province of *Segovia*: the latter possessed the high plains of *Soria* and *Moncayo*. The space between the mountains of *Albaracino* and the river was peopled by the *Edetani*, one of the most powerful tribes of Spain. The *Ilercaones*, who were not less formidable, inhabited an extensive district between the upper *Jucar* and the lower *Ebro*. The country of the *Carpetani*, or the space from the *Guadiana* to the *Somo-Sierra*, forms at present the archiepiscopal see of *Toledo*. The people on the south of the last were the *Oretani*, between the *Guadiana* and the *Montes Mariani*; and the *Olcades*, a small tribe near the confluence of the *Gabriel* and *Jucar*. *Carthaginensis*, a subdivision of *Tarraconensis*, was inhabited by two tribes: the *Bastitani*, in the centre of *Murcia*, who often made incursions into *Bætica*; and the *Contestani*, who possessed the two banks of the *Segura*, near the shores of the *Mediterranean*, from *Cape Palos* to the *Jucar*.—In time of peace, says *Diocorus Siculus*, the *Iberi* and *Lusitani* amused themselves in a lively and light dance, which required much activity. The ancient writer alludes, perhaps, to the *fandango*, a dance of which the origin is unknown. An assembly, composed of old *Celtiberians*, was held every year; it was part of their duty to examine what the women had made with their own hands within the twelvemonth, and to her whose work the assembly thought the best a reward was given. An ancient author mentions that singular custom, and adds, that corpulency was considered a reproach by the same people; for, in order to preserve their bodies light and active, the men were measured every year by a circumference of a certain breadth, and some sort of punishment was inflicted on those who had become too large. (*Nic. Damasc., frag. ap. Const. Porphyrog.*) The age for marriage was fixed by law; the girls chose their husbands from among the young warriors, and the best means of obtaining the preference was to present the fair one with the head of an enemy slain in battle.

Strabo enters into some details concerning the dress of the ancient Spaniards. The Lusitani covered themselves with black mantles, because their sheep were mostly of that colour. The Celtiberian women wore iron collars, with rods of the same metal rising behind, and bent in front; to these rods was attached the veil, their usual ornament. Others wore a sort of broad turban, and some twisted their hair round a small ring about a foot above the head, and from the ring was appended a black veil. Lastly, a shining forehead was considered a great beauty; on that account they pulled out their hair and rubbed their brows with oil.—The different tribes were confounded while the Romans oppressed the country; but, in the beginning of the fifth century, the Suevi, Vandals, and Visigoths invaded the Peninsula, and, mixing with the Celts and Iberians, produced the different races which the physiologist still observes in Spain. The first-mentioned people, or Suevi, descended the Durus or Duero under the conduct of Ermerie, and chose Braga for the capital of their kingdom. Genseric led his Vandals to the centre of the peninsula, and fixed his residence at Toletum or Toledo; but fifteen years had not elapsed after the settlement of the barbarous horde, when Theodorik, conquered by Clovis, abandoned Tolosa or Toulouse, penetrated into Spain, and compelled the Vandals to fly into Africa. During the short period that the Vandals remained in the country, the ancient province of Bætica was called Vandalousia, and all the country, from the Ebro to the Straits of Gibraltar, submitted to them. The ancient Celtiberians, who had so long resisted the Romans, made then no struggle for liberty or independence; they yielded without resistance to their new masters. Powers and privileges were the portion of the Gothic race, and the title of *hijo del Goda*, or the son of the Goth, which the Spaniards changed into *hidalgos*, became the title of a noble or a free and powerful man among a people of slaves. A number of petty and almost independent states were formed by the chiefs of the conquering tribes; but the barons or freemen acknowledged a liege lord. Spain and Portugal were thus divided, and the feudal system was thus established. Among the Visigoths, however, the crown was not hereditary, or, at least, the law of regular succession was often set at defiance by usurpers. The sovereign authority was limited by the assemblies of the great vassals, some of whom were very powerful; indeed, the Count Julian, to avenge himself on King Roderic for an outrage committed on his daughter, delivered Spain to the Mohammedan yoke. (*Malte-Brun, Geog.*, vol. 8, p. 18, *seqq.*, *Am. ed.*)

HISTIAEA. *Vid.* Oreus.

HISTIAEOTIS. *Vid.* Estiæotis.

HISTIAEUS, a tyrant of Miletus, who, when the Scythians had almost persuaded the Ionian princes to destroy the bridge over the Ister, in order that the Persian army might perish, opposed the plan, and induced them to abandon the design. His argument was, that if the Persian army were destroyed, and the power of Darius brought to an end, a popular government would be established in every Ionian city, and the tyrants expelled. He was held in high estimation on this account by Darius, and rewarded with a grant of land in Thrace. But Megabyzus having convinced the king that it was bad policy to permit a Grecian settlement in Thrace, Darius induced Histiaeus, who was already founding a city there, to come to Susa, having allured him by magnificent promises. Here he was detained under various pretences, the king being afraid of his influence and turbulent spirit at home. Histiaeus, tired of this restraint, urged, by means of secret messengers, his nephew Aristagoras to effect a revolt of the Ionians. This was done, and Histiaeus was sent by Darius to stop the revolt. Availing himself of the earliest opportunity of escape, he passed

over to the side of the Greeks, and eventually obtained the command of a small squadron of eight triremes, with which he sailed to Byzantium. But the subjugation of Ionia by the arms of Persia was soon effected, and Histiaeus himself did not long survive the misery he had brought upon his countrymen. Having made a descent on the Persian territory, for the purpose of reaping the harvest in the vale of the Caicus, he was surprised and routed by Harpagus, a Persian commander, who happened to be at hand with a considerable force; and, being taken prisoner, was led to Artaphernes, the king's satrap in that quarter, who ordered him to be crucified, and sent his head to Susa. (*Herodot.*, 4, 137. — *Id.*, 5, 11, *seqq.* — *Thirlwall's Greece*, vol. 2, p. 222, *seq.*)

HOMERUS, a celebrated Greek poet, whose life is involved in great obscurity. The only accounts which have been preserved on this subject are a few popular traditions, together with conjectures of the grammarians founded on inferences from different passages of his poems; yet even these, if examined with patience and candour, furnish some materials for arriving at probable results. With regard to the native country of Homer, the traditions do not differ so much as might at first view appear to be the case. Although seven cities contended for the honour of having given birth to the great poet, the claims of many of them were only *indirect*. Thus the Athenians only laid claim to Homer from their having been the founders of Smyrna, as is clearly expressed in the epigram on Pisistratus contained in Bekker's *Anecdota* (vol. 2, p. 768), and the opinion of Aristarchus, the Alexandrian critic, which admitted their claim, was probably qualified with the same explanation. This opinion is briefly stated by the pseudo-Plutarch (*Vit. Hom.*, 2, 2). Even Chios cannot establish its right to be considered as the original source of the Homeric poetry, although the claims of this Ionic island are supported by the high authority of the lyric poet Simonides (*ap. Pseudo-Plutarch*, 2, 2.) It is true that in Chios lived the race of the Homeridae, who, from the analogy of other γένη, or races, are to be considered not as a family, but as a society of persons, who followed the same art, and therefore worshipped the same gods, and placed at their head a hero, from whom they derived their name. (*Niebuhr, Rom. Hist.*, vol. 1, note 747.) A member of this house of Homeridae was probably "the blind poet," who, in the Homeric hymn to Apollo, relates of himself, that he dwelt on the rocky Chios, whence he crossed to Delos for the festival of the Ionians and the contests of the poets, and whom Thucydides (3, 104) took for Homer himself; a supposition which at least shows that this great historian considered Chios as the dwelling-place of Homer. But, notwithstanding the ascertained existence of this clan of Homeridae at Chios; nay, if we even, with Thucydides, take the blind man of the hymn for Homer himself, it would not follow that Chios was the birthplace of Homer; indeed, the ancient writers have reconciled these accounts by representing Homer as having, in his wanderings, touched at Chios, and afterwards fixed his residence there. A notion of this kind is evidently implied in Pindar's statements, who in one place called Homer a Smyranean by origin, in another a Chian and Smyranean. (*Böckh, Pind., Fragm. inc.*, 86.) The same idea is also indicated in the passage of an orator incidentally cited by Aristotle; which says, that the Chians greatly honoured Homer, although he was not a citizen. (*Aristot., Rhet.*, 2, 23.) On the other hand, the opinion that Homer was a Smyranean not only appears to have been the prevalent belief in the flourishing times of Greece, but is supported by the two following considerations: first, the important fact that it appears in the form of a popular legend, a *mythos*, the divine poet being called a son of a nymph, Critheis, and the Smyranean river Meles; secondly,

that, by assuming Smyrna as the central point of Homer's life and celebrity, the claims of all the other cities which rest on good authority, may be explained and reconciled in a simple and natural manner.—If one may venture to follow the faint light afforded by the dawnings of tradition, and by the memorials that have come down to us relative to the origin of the bard, the following may be considered as the sum of our inquiries. Homer was an Ionian, belonging to one of the families which went from Ephesus to Smyrna, at a time when Æolians and Achæans composed the chief part of the population of the city, and when, moreover, their hereditary traditions respecting the expedition of the Greeks against Troy excited the greatest interest; whence he reconciles, in his poetical capacity, the conflict of the contending races, inasmuch as he treats an Achæan subject with the elegance and geniality of an Ionian. But when Smyrna drove out the Ionians, it deprived itself of this poetical renown; and the settlement of the Homeridæ in Chios was, in all probability, a consequence of the expulsion of the Ionians from Smyrna. It may, moreover, be observed, that, according to this account, founded on the history of the colonies of Asia Minor, the time of Homer would fall a few generations after the Ionic migration to Asia; and with this determination the best testimonies of antiquity agree. Such are the computations of Herodotus, who places Homer, with Hesiod, 400 years before his time (*Herod.*, 2, 53), and that of the Alexandrian chronologists, who place him 100 years after the Ionic migration, 60 years before the legislation of Lycurgus (*Apollod.*, *Fragm.*, 1, p. 410, *ed. Heyne*); although the variety of opinions on this subject, which prevailed among the learned writers of antiquity, cannot be reduced within these limits.—It is said by Tatian (*Fabr. Bibl. Gr.*, 2, 1, 3), that Theagenes of Rhegium, in the time of Cambyses, Stesimbrotus the Thasian, Antimachus the Colophonian, Herodotus of Halicarnassus, Dionysius the Olynthian, Ephorus of Cumæ, Philochorus the Athenian, Metacides and Chamæleon the Peripatetics, and Zenodotus, Aristophanes, Callimachus, Crates, Eratosthenes, Aristarchus, and Apollodorus, the grammarians, all wrote concerning the poetry, the birth, and the age of Homer. Of the works of all these authors nothing now remains, with the nominal exception of a life of Homer attributed to Herodotus, but which, as well on account of its minute and fabulous details, as of the inconsistency of a statement in it with the undoubted language of Herodotus, is now almost universally considered as spurious. Such as it is, however, the life of Homer is a very ancient compilation, and the text from which all subsequent stories have been taken or altered. There is a short life of Homer, also, bearing the name of Plutarch, but which is, like the former, generally condemned as a forgery; a forgery, however, of this unusual nature, that there is reason to believe it more ancient than its supposed author. Thus Quintilian (10, 1) and Seneca (*Ep.*, 88), both more ancient than Plutarch, seem clearly aware of this life of Homer. Some account of the common traditions about Homer will probably be looked for here, and the story will explain the origin of several epithets which are frequently applied to him, and the meaning of many allusions to be met with in the Greek and Latin writers.—There is, then, a general agreement that the name of Homer's mother was Critheis; but the accounts differ a good deal as to his father. Ephorus says (*pseud-Plutarch*, *Vit. Hom.*) that there were three brothers, natives of Cumæ, Atelles, Mæon, and Dius; that Dius, being in debt, migrated to Ascræ in Bœotia, and there became the father of Hesiod by his wife Pycimede; that Atelles died in Cumæ, having appointed his brother Mæon guardian of his daughter Critheis; that Critheis, becoming with child by her uncle, was given in marriage to Phemius, a native of Smyrna,

and a schoolmaster in that city, and that, in due time afterward, while she was in or near the baths on the river Meles, she gave birth to a child who was called Melesigenes from this circumstance. Aristotle relates (*pseud-Plut.*, *V. H.*), that a young woman of the island of Ios, being with child by a dæmon or genius, a familiar of the Muses, fled to the coast, where she was seized by pirates, who presented her as a gift to Mæon, king of the Lydians, at that time resident in, and ruler over, Smyrna. Mæon married her; she, Critheis, gave birth to Melesigenes, as before mentioned, and upon her death, soon after, Mæon brought up the child as his own. Here we have an origin of the two epithets or appellations Melesigenes and Mæonides. Ephorus says (*pseud-Plut.*, *V. H.*) he was called Homer (*Ὅμηρος*) when he became blind, the Ionians so styling blind men, because they were followers of a guide (*ὁμηρεύων*). Aristotle's account is, that the Lydians being pressed by the Æolians, and resolved to abandon Smyrna, made a proclamation, that whoever wished to follow them should go out of the city, and that thereupon Melesigenes said he would follow or accompany them (*ὁμηρεῖν*); upon which he acquired the name of Homer. Another derivation of the name is from *ὁ μὴ ὁρᾶν*, *one not seeing*; as to which notion of blindness, Patereulus says, that whoever thinks Homer was born blind must needs be blind himself in all his senses. It was said also that he was so called from *ὁ μῦρος* (the thigh), because he had some marks on his thigh to denote his illegitimacy. In the life of Homer by Proclus, the story is, that the poet was delivered up by the people of Smyrna to those of Chios as a pledge or hostage (*ὅμηρος*) on the conclusion of a truce. The derivation that favours the theories both of Wolfe and Heyne is from *ὁμοῦ εἶπεν*, "*to speak together*," or from *ὁμηρεῖν*, "*to assemble together*." Ilgen derives the name from *ὁμοῦ*, "*together*," and *ἄρω*, "*to fit*," whence comes *ὁμηρεῖν*, synonymous with *ὑπαίδειν*, and hence *Ὅμηρος* means, according to him, a poet who accompanies the lyre with his voice, "*cantor qui citharam pulsans ὑπὸ καθ' ὃν ἀείδει*." The stories proceed in general to state that Homer himself became a schoolmaster and poet of great celebrity at Smyrna, and remained till Mentes, a foreign merchant, induced him to travel. That the author or authors of the *Iliad* and *Odyssey* must have travelled pretty extensively for those times, is unquestionable; for, besides the accurate knowledge of Greece proper displayed in the Catalogue, it is clear that the poet had a familiar acquaintance with the islands both in the Ægean and Ionian seas, the coast of Asia Minor from the Hellespont indefinitely southward, Crete, Cyprus, and Egypt; and possessed also distinct information with respect to Libya, Caria, and Phrygia. In his travels Homer visited Ithaca, and there became subject to a disease of the eyes, which afterward terminated in total blindness. From this island he is said to have gone to Italy and even to Spain; but there is no sign in either of the two poems of any knowledge westward of the Ionian Sea. Wherever he went, Homer recited his verses, which were universally admired except at Smyrna, where he was a prophet in his own country. At Phœcæa, a schoolmaster of the name of Thestorides obtained from Homer a copy of his poetry, and then sailed to Chios and recited the Homeric verses as his own. Homer followed, was rescued by Glaucus, a goatherd, from the attack of his dogs, and brought by him to Bolissus, a town in Chios, where he resided a long time in possession of wealth and a splendid reputation. Thestorides left the island upon Homer's arrival. According to Herodotus, he died at Ios, on his way to Athens, and was buried near the seashore. Proclus says he died in consequence of falling over a stone. Plutarch tells a very different story. He preserves two responses of an oracle to Homer, in both of which he was cautioned to beware of the young men's riddle, and re-

rates that the poet, being on his voyage to Thebes, to attend a musical or poetical contest at the feast of Saturn in that city, landed in the island of Io, and, while sitting on a rock by the seashore, observed some young fishermen in a boat; that Homer asked them if they had anything (*εἰ τι ἔχοντες*), and that the young wags, who, having had no sport, had been diligently catching, and killing as many as they could catch, of certain personal companions of a race not even yet extinct, answered, "as many as we caught we left; as many as we could not catch we carry with us." The catastrophe is, that Homer, being utterly unable to guess the meaning of this riddle, broke his heart out of pure vexation, and that the inhabitants of the island buried him with great magnificence.—There has been as much doubt and controversy about the age of Homer as about himself and his poems. According to the argument of Wood (*Essay on the Original Genius, &c., of Homer*), Haller (*Heyne, Excurs. 4. ad Il., 24.*), and Mitford (*History of Greece, c. 1.*), he lived about the middle of the ninth century before Christ; which date agrees exactly with the conjecture of Herodotus, who wrote B.C. 444, and is founded on the assumption that Homer must have lived before the return of the Heraclidæ into Peloponnesus, an event which took place within eighty years after the Trojan war. The Newtonian calculation is also adopted, which fixes the capture of Troy as low as B.C. 904. The argument is based upon the great improbability that Homer, so minute as he is in his descriptions of Greece, and so full of the histories of the reigning dynasties in its various districts, should never notice so very remarkable an occurrence as the almost total abolition of the kingly government throughout Greece, and the substitution of the republican form in its stead. Now this national revolution was coincident with, or immediately consequent on, the return of the descendants of Hercules. It is said, also, that the poet mentions the grandchildren of Æneas as reigning in Troy, in the prophecy of Neptune in the Iliad (20, 308), and that, in another speech of Juno's, he seems to intimate the insecure state of the chief existing dynasties of the race of Pelops; and it is inferred from this, that he flourished during the third generation, or upward of sixty years after the destruction of Troy. Upon this argument Heyne remarks (*Excurs., ad Il., 24.*), that, in the first place, a poet who was celebrating heroes of the Pelopid race had no occasion to notice a revolution by which their families were expatriated and their kingdoms abolished; and next, which seems an insurmountable objection, that the Ionic migration took place sixty years *later* than the return of the Heraclidæ; yet that Homer was an Ionian, and a resident in, or at least perfectly conversant with, Ionian Asia, is admitted on all hands, and is indeed incontestable; and as he never notices this migration, though it was certainly a very remarkable event, and one which he must have known, he may just as well, for other or the same reasons, have been silent on the subject of a revolution by which that migration was caused. The Arundelian marbles place Homer B.C. 907, the Ionic migration B.C. 1044, the return of the Heraclidæ B.C. 1104, and the capture of Troy B.C. 1184. Heyne approves of this calculation, as, upon the whole, the most consistent with all the authorities; but it is at variance with Newton's Chronology, and is therefore a calculation, of the exactness of which we can never feel confident.—The viçissitudes to which Homer's reputation and influence have been subject, deserves notice. From the first known collection of the Iliad and Odyssey in the time of the Pisistratidæ to the promulgation of Christianity, the love and reverence with which the name of Homer was regarded went on constantly increasing, till at last public games were instituted in his honour, statues dedicated, temples erected, and sacrifices offered to him as a divinity. There

were such temples at Smyrna, Chios, and Alexandria; and, according to Ælian (*V. H., 9, 15*), the Argives sacrificed to, and invoked the names and presence of Apollo and Homer together. But about the beginning of the second century of the Christian era, when the struggle between the old and new religion was warm and active, the tide turned. "Heathenism," says Pope (*Essay on Homer*), "was then to be destroyed, and Homer appeared the father of it, whose fictions were at once the belief of the pagan religion, and the objections of Christianity against it. He became, therefore, deeply involved in the question, and not with that honour which hitherto attended him, but as a criminal who had drawn the world into folly. He was, on the one hand (*Just. Mart., admon. ad gentes*), accused of having formed fables upon the works of Moses; as the rebellion of the Giants from the building of Babel, and the casting of Ate out of Heaven from the fall of Lucifer. He was exposed, on the other hand, for those which he is said to invent, as when Arnobius (*adv. gentes, lib. 7*) cries out, 'This is the man who wounded your Venus, imprisoned your Mars, who freed even your Jupiter by Briareus, and who finds authority for all your vices,' &c. Mankind were derided (*Tertull., Apollod., c. 14*) for whatever he had hitherto made them believe; and Plato (*Arnobius, ib.—Euseb., Præp. Evang., 14, 10*), who expelled him his commonwealth, has, of all the philosophers, found the best quarter from the fathers for passing that sentence. His finest beauties began to take a new appearance of pernicious qualities; and because they might be considered as allurements to fancy, or supports to those errors with which they were mingled, they were to be depreciated while the contest of faith was in being. It was hence that the reading of them was discouraged, that we hear Rufinus accusing St. Jerome of it, and that St. Augustin (*Confess., 1, 14*) rejects him as the grand master of fable; though indeed the *dulcissime vanus* which he applies to Homer, looks but like a fondling manner of parting with him. Those days are past; and, happily for us, the obnoxious poems have weathered the storms of zeal which *might* have destroyed them. Homer will have no temples, nor games, nor sacrifices in Christendom; but his statue is yet to be seen in the palaces of kings, and his name will remain in honour among the nations to the world's end. He stands, by prescription, alone and aloof on Parnassus, where it is not possible *now* that any human genius should stand with him, the father and the prince of all heroic poets, the boast and the glory of his own Greece, and the love and the admiration of all mankind." (*Müller, Hist. Greek Lit., p. 41, seqq.*—*Coleridge, Introduction to the Study of the Greek Classic Poets, pt. 1, p. 57, seqq.*)—This Homer, then (of the circumstances of whose life we know so little that may be relied upon), was the person who gave epic poetry its first great impulse. Before his time, in general, only single actions and adventures were celebrated in short lays. The heroic mythology had prepared the way for the poets by grouping the deeds of the principal heroes into large masses, so that they had a natural connexion with each other, and referred to some common fundamental notion. Now, as the general features of the more considerable legendary collections were known, the poet before the time of Homer had the advantage of being able to narrate any one action of Hercules, or of one of the Argive champions against Thebes, or of the Achæans against Troy; and, at the same time, of being certain that the scope and purport of the action (namely, the elevation of Hercules to the gods, and the fated destruction of Thebes and Troy) would be present to the minds of his hearers, and that the individual adventure would thus be viewed in its proper connexion. Thus, doubtless, for a long time, the bards were satisfied with illustrating single points of the heroic mythol-

ogy with brief epic lays; such as in later times were produced by several poets of the school of Hesiod. It was also possible, if it were desired, to form from them longer series of adventures of the same hero; but they always remained a collection of independent poems on the same subject, and never attained to that unity of character and composition which constitutes one poem. It was an entirely new phenomenon, which could not fail to make the greatest impression, when a poet selected a subject of the heroic tradition, which (besides its connexion with the other parts of the same legendary circle) had in itself the means of awakening a lively interest and of satisfying the mind; and, at the same time, admitted of such a development, that the principal personages could be represented as acting each with a peculiar and individual character, without obscuring the chief hero and the main action of the poem. One legendary subject of this extent and interest Homer found in the *Anger of Achilles*, and another in the *Return of Ulysses*. The former of these gave birth to the *Iliad*, the latter to the *Odyssey*. Of the character of these two poems we will treat in separate articles (*vid.* *Ilias*, *Odyssea*). Our attention will now be directed to other parts of the main subject.

Origin and Preservation of the Homeric Poems.

Whether the Homeric poems were in reality the work of a single bard or not, their intrinsic merit, and, consequently, their rank in Greek literature, must remain the same, and be equally a worthy object of studious inquiry. The decision of that question cannot in the slightest degree affect our estimate of their quality. Whether *all* the poems that are now attributed to Homer were his production; whether the *Iliad* and the *Odyssey*, both, or one of them only, can lay claim to such parentage; or whether, lastly, any such person as Homer, or, indeed, any individual author of the poem ever existed, whichever of these propositions be true, it seems to be a matter of little importance to those whose object it is not to spell the inscriptions on mouldering monuments, but to inhale the breath of ancient grandeur and beauty amid the undoubted ruins of the great. The *Iliad* and the *Odyssey* exist; we have them in our hands; and we should not set them the less in honour though we were to doubt the impress of any Homer's hand, any more than we should cease to reverence the genius or the ruins of Rome, because shepherds or worse may have laid the first stone of her walls. It is this very excellence, however, of the Homeric poetry, and the apparent peculiarity of the instance, together with the celebrity of the controversy, to which the scepticism of some modern scholars has given birth, that compels us to devote a portion of this article to a notice of the points in question. No trace appears of any doubt having ever been entertained of the personal existence of Homer, as the author of the *Iliad*, till the close of the 17th and beginning of the 18th century, when two French writers, Hédelin and Perrault, first suggested the outlines of a theory respecting the composition of that poem, which has since been developed with so much learning and talent by Heyne, Wolfe, and others, that its original authors are now almost forgotten. The substance of this theory is, that, whether any such person as Homer lived or not, the *Iliad* was not composed entirely by him or by any other individual, but is a compilation, methodized indeed and arranged by successive editors, but still a compilation of minstrelies, the works of various poets in the heroic age, all having one common theme and direction, the wars of Troy, and the exploits of the several Grecian chiefs engaged in them. Wolfe, in particular, believed that the *verses* now constituting the *Iliad*, were written (we should rather say *made* or *invented*) by one Homer, but in short rhapsodies, unconnected purposely with each

other, and that they were put together as after mentioned. Much of his argument, however, of the impossibility of one man having composed the *Iliad* in form as we now have it, applies to the theory just stated. Bentley expressed an opinion similar to Wolfe's on the history and compilation of the *Iliad*. "Homer wrote a sequel of songs and rhapsodies to be sung by himself, for small earnings and good cheer, at festivals and other days of merriment: the *Iliad* he made for the men, and the *Odyssey* for the other sex. These loose songs were not collected together in the form of an Epic poem till about 500 years after." (*Letter to N. N., by Philoleuth. Lipsiens., § 7.*) One of the main arguments insisted upon by those who deny the existence of a Homer, and the unity, consequently, of the *Iliad* and *Odyssey*, is the question of writing. It is said that the art of writing, and the use of manageable writing materials, were entirely, or all but entirely, unknown in Greece and the islands at the supposed date of the composition of the *Iliad*; that, if so, this poem could not have been committed to writing during the time of such its composition; that, in a question of comparative probabilities like this, it is a much grosser improbability that even the single *Iliad*, amounting, after all curtailments and expungings, to upward of 15,000 lines, should have been actually conceived and perfected in the brain of one man, with no other help but his own or others' memory, than that it should be, in fact, the result of the labours of several distinct authors; that, if the *Odyssey* be counted, the improbability is doubled; that if we add, upon the authority of Thucydides and Aristotle, the Hymns and Margites, not to say the *Batrachomyomachia*, that which was improbable becomes absolutely impossible; that all that has been so often said as to the fact of as many lines or more having been committed to memory, is beside the point in question, which is not whether 15,000 or 30,000 lines may not be learned by heart from a book or manuscript, but whether one man can compose a poem of that length, which, rightly or not, shall be thought to be a perfect model of symmetry and consistency of parts, without the aid of writing materials; that, admitting the superior probability of such a thing in a primitive age, we know nothing analogous to such a case, and that it so transcends the common limits of intellectual power, as, at the least, to merit, with as much justice as the opposite opinion, the character of improbability.—When it is considered that throughout the Homeric Poems, though they appear to embrace the whole circle of the knowledge then possessed by the Greeks, and enter into so many details on the arts of life, only one ambiguous allusion occurs to any kind of writing (*Il.* 6, 169), it is scarcely possible to avoid the conclusion, that the art, though known, was still in its infancy, and was very rarely practised. But the very poems from which this conclusion has been drawn would seem to overthrow it, if it should be admitted that they were originally committed to writing; for they would then seem to afford the strongest proof, that, at the time of their composition, the art had made very considerable progress, and that there was no want, either of materials or of skill, to prevent it from coming into common use. Hence the original form of these poems becomes a question of great historical as well as literary importance. The Greeks themselves almost universally, and the earliest writers the most unanimately, believed them both to have been the work of the same author, who, though nothing was known of his life, or even his birthplace, was commonly held to have been an Asiatic Greek. The doubt whether his poems were written from the first, seems hardly to have been seriously entertained by any of the ancients, and in modern times it has been grounded chiefly on the difficulty of reconciling such a fact with the very low degree in which the art of writing is supposed to have been cul-

tivated in the Homeric age. It has likewise been urged, that the structure of the Homeric verses furnishes a decisive proof, that the state of the Greek language, at the time when these poems were written, was different from that in which they must have been composed. And by others it has been thought inconsistent with the law of continual change, to which all languages are subject, that the form in which these works now appear should differ so slightly as it does from that of the Greek literature, if it really belonged to the early period in which they were first recited. These difficulties are, it must be owned, in a great measure removed by the hypothesis that each poem is an aggregate of parts composed by different authors; for then the poet's memory might not be too severely taxed in retaining his work during its progress, and might be aided by more frequent recitations. But this hypothesis has been met by a number of objections, some of which are not very easily satisfied. The original unity of each poem is maintained by arguments derived partly from the uniformity of the poetical character, and partly from the apparent singleness of plan which each of them exhibits. Even those who do not think it necessary to suppose an original unity of design in the *Iliad*, still conceive that all its parts are stamped with the style of the same author. (*Clinton, Fast. Hellen.*, vol. 3, p. 375, 379.) But with others, from the time of Aristotle to our own day, the plan itself has been an object of the warmest admiration; and it is still contended, that the intimate coherence of the parts is such as to exclude the hypothesis of a multiplicity of authors. (*Vid. Ilias*.) If the parts out of which the *Iliad* or the *Odyssey* was formed are supposed to have been at first wholly independent of each other, the supposition that they could have been so pieced together as to assume their present appearance is involved in almost insurmountable difficulties. For how, it may be asked, did the different poets in each instance happen to confine themselves to the same circle of subjects, as to the battles before Troy, and the return of Ulysses? Must we suppose, with a modern critic (*Hermann, Wiener-Jahrbücher*, vol. 54), that in the *Iliad* and *Odyssey* we see the joint labours of several bards, who drew their subjects from an earlier *Iliad* and an earlier *Odyssey*, which contained no more than short narratives of the same events, but yet had gained such celebrity for their author, that the greatest poets of the succeeding period were forced to adopt his name, and to content themselves with filling up his outline? This would be an expedient only to be resorted to in the last emergency. Or must we adopt the form which this hypothesis, by giving it a different turn, has been made by others to assume, that the *Iliad* and *Odyssey*, after the main event in each had formed the subject of a shorter poem, grew under the hands of successive poets, who, guided in part by popular tradition, supplied what had been left wanting by their predecessors, until in each case the curiosity of their hearers had been gratified by a finished whole? (*Thirlwall's Greece*, vol. 1, p. 246.) This supposition is involved in still greater difficulty than the former, for we have here a race of bards, who, though living at different periods, and though the language was, during all this time, undergoing changes of some kind or other, yet write all of them in a manner so similar, and display so few, if any, discrepancies, that their various productions, when collected together, wear all the appearance of a poem by a single bard.—According to every hypothesis, the origin of the Homeric poetry is wrapped in mystery; as must be the case with the beginning of a new period, when that which precedes it is very obscure. And it would certainly be an unparalleled or surprising coincidence, if the production of a great work, which formed the most momentous epoch in the history of Greek literature, should have concurred with either the

first introduction, or a new application of the most important of all inventions. Still, however, we are not driven to the necessity of adopting such a view of the subject. It is true, we are perpetually met with difficulties in endeavouring to form a notion of the manner in which these great epic poems were composed, at a time anterior to the use of writing. But these difficulties arise much more from our own ignorance of the period, and our own incapability of conceiving a creation of the mind without those appliances of which the use has become to us a second nature, than in the general laws of the human intellect. Who can determine how many thousand verses a person, thoroughly impregnated with his subject, and absorbed in the contemplation of it, might produce in a year, and confide to the faithful memory of disciples, devoted to their master and his art? Wherever a creative genius has appeared, it has met with persons of congenial taste, and has found assistants, by whose means it has completed astonishing works in a comparatively short period of time. Thus the old bard may have been followed by a number of younger minstrels, to whom it was both a pleasure and a duty to collect and diffuse the honey which flowed from his lips. But it is at least certain, that it would be unintelligible how these great epics were composed, unless there had been occasions on which they actually appeared in their integrity, and could charm an attentive hearer with the full force and effect of a complete poem. Without a connected and continuous recitation, they were not finished works; they were mere disjointed fragments, which might, by possibility, form a whole. But where were there meals or festivals long enough for such recitations? What attention, it has been asked, could be sufficiently sustained, in order to follow so many thousand verses?—If, however, the Athenians could at one festival hear in succession about nine tragedies, three satyric dramas, and as many comedies, without ever thinking that it might be better to distribute this enjoyment over the whole year, why should not the Greeks of earlier times have been able to listen to the *Iliad* and *Odyssey*, and perhaps other poems, at the same festival? At a later date, indeed, when the rhapsodist was rivalled by the player on the lyre, the dithyrambic minstrel, and by many other kinds of poetry and music, these latter necessarily abridged the time allowed to the epic reciter; but, in early times, when the epic style reigned without a competitor, it would have received an undivided attention. Let us beware of measuring, by our loose and desultory reading, the intension of mind with which a people enthusiastically devoted to such enjoyments, hung with delight on the flowing strains of the minstrel. In short, there was a time (and the *Iliad* and *Odyssey* are the records of it) when the Greek people, not indeed at meals, but at festivals, and under the patronage of their hereditary princes, heard and enjoyed these and other less excellent poems as they were intended to be heard and enjoyed, namely, as complete wholes. Whether they were at this early period ever recited for a prize, and in competition with others, is doubtful, though there is nothing improbable in the supposition. But when the conflux of rhapsodists to the contests became perpetually greater; when, at the same time, more weight was laid on the art of the reciter than on the beauty of the well-known poem which he recited; and when, lastly, in addition to the rhapsodizing, a number of other musical and poetical performances claimed a place, then the rhapsodists were permitted to repeat separate parts of poems, in which they hoped to excel; and the *Iliad* and *Odyssey* (as they had not yet been reduced to writing) existed for a time only as scattered and unconnected fragments. (*Wolf's Prolegomena*, p. cxliii.) And we are still indebted to the regulator of the contest of rhapsodists at the Panathæna (whether it was Solon or Pisistratus) for having

compelled the rhapsodists to follow one another, according to the order of the poem, and for having thus restored these great works, which were falling into fragments, to their pristine integrity. It is indeed true, that some arbitrary additions may have been made to them at this period; which, however, we can only hope to be able to distinguish from the rest of the poem, by first coming to some general agreement as to the original form and subsequent destiny of the Homeric compositions. (*Müller, Hist. Gr. Lit.*, p. 62, seq.)

Introduction of the Homeric Poems into Greece.

Two different accounts are given on this head. 1. First, it is said that Lycurgus, the Spartan legislator, met with the poems of Homer during his travels in Asia, and, being charmed with them, carried them with him by some means, and in some shape or other, back to his native city. The authority for this is a passage of a fragment of Heraclides Ponticus, in which he says that Lycurgus, "having procured the poetry of Homer from the descendants of Creophylus, first introduced it into the Peloponnesus." *Ælian* (*V. H.*, 13, 14) repeats this with advantage: "Lycurgus the Spartan first carried the poetry of Homer *into Greece*." Plutarch (*Vit. Lycurg.*) finishes off the story in his usual manner. "There (in Asia) Lycurgus first fell in with the poems of Homer, probably in the keeping of the descendants of Cleophylus; he wrote them out eagerly, and collected them together for the purpose of bringing them hither into Greece; for there was already at that time an obscure rumour of these verses among the Greeks, but some few only possessed some scattered fragments of this poetry, which were circulated in a chance manner. Lycurgus had the principal hand in making it known." This Creophylus or Cleophylus, a Samian, is said to have been Homer's host in Samos, and a poet himself. The nucleus of fact in this story may probably consist in this; that Lycurgus became more acquainted with the Homeric verses among the Ionian rhapsodists, and succeeded in introducing, by means of his own or others' memory, some connected portions of them into Western Greece. That he wrote them all out is, as we may see, so far as the original authority goes, due to the ingenious biographer alone. But the better founded account of the introduction, or, at least, of the formal collection of the Homeric verses, though not inconsistent with the other, is, that after Solon had directed that the rhapsodists should, upon public occasions, recite in a certain order of poetical narration, and not confusedly, the end before the beginning, as had been the previous practice, Pisistratus, with the help of a large body of the most celebrated poets of his age, made a regular collection of the different rhapsodies which passed under Homer's name, committed them all to writing, and arranged them very much in the *series* in which we now possess them. The division of the rhapsodies into books corresponding with the letters of the Greek alphabet, was probably the work of the Alexandrian critics many centuries afterward. Now the authorities for attributing this primary reduction into form to Pisistratus, are numerous and express, and a few quotations from them will be the most satisfactory way of putting the student in possession of the opinions of the ancients upon this subject.—"Who," says Cicero, "was more learned in that age, or whose eloquence is reported to have been more refined by literature than that of Pisistratus, who is said first to have disposed the books of Homer, which were before confused, in the order in which we now have them?" (*Cic., de Orat.*, 3, 34).—"Pisistratus," observes Pausanias, "collected the verses of Homer, which were dispersed, and retained in different places by memory." (*Pausanias*, 7, 26).—"Afterward," remarks *Ælian*, "Pisistratus, having collected

the verses, set out the *Iliad* and *Odyssey*." (*Ælian*, *V. H.*, 13, 14).—"We praise Pisistratus," observes Libanius, "for his collection of the verses made by Homer." (*Liban., Pan. in Jul.*, vol. 1, p. 170, ed. *Reiske*).—"The poetry of the *Iliad*," says Eustathius, "is one continuous body throughout, and well fitted together; but they who put it together, under the direction, as is said, of Pisistratus," &c. (*Wolf, Prolegom.*, p. cxliii., in *not.*)—That this collection was made with the assistance, and probably by the principal operation of the contemporary poets, rests also upon good authority. Pausanias, in speaking of v. 573, in the second book of the *Iliad*, says that Pisistratus, or some one of his associates, had changed the name through ignorance. "Afterward," remarks Suidas, "this poetry was put together and set in order by many persons, and in particular by Pisistratus." (*Suid., s. v. Οἰκιστής*.) The great poets with whom Pisistratus lived in friendship, and of whose aid he is supposed to have availed himself on this occasion, were Orpheus of Crotona, said to be the author of the *Argonautics*, Onomacritus the Athenian, Simonides, and Anacreon. In the dialogue called *Hipparchus*, attributed to Plato, it is said, indeed, of the younger son of Pisistratus of that name, "that he executed many other excellent works, and particularly he brought the verses of Homer into this country, and compelled the rhapsodists at the Panathenæic festival to go through them all in order, one taking up the other, in the same manner that they do now." There seems, however, no great inconsistency in these statements. They may very reasonably be reconciled, by supposing that this great work of collecting and arranging the scattered verses of the Homeric rhapsodists was begun in an imperfect manner by Solon, principally executed by Pisistratus and his friends, and finished under Hipparchus. This will embrace about eighty years from the date of Solon's law, B.C. 594, to the death of Hipparchus, B.C. 513. It must be remembered, however, that, although the Homeric rhapsodies were undoubtedly committed to writing, and reduced into a certain form and order of composition, in the age of the Pisistratidæ, the ancient and national practice of recitation still continued in honour, and for a considerable time afterward was, perhaps, the only mode by which those poems were popularly known. But it may readily be believed, that, in proportion as written copies became multiplied, a power of, and taste for, reading generated, and a literature, in the narrow sense of the word, created, this practice of publicly reciting national poetry, which was as congenial as it was indispensable to a primitive and unlettered people, would gradually sink in estimation, become degraded in character, and finally fall into complete disuse. This we find to have been precisely the case from about the year B.C. 430, till the age of the Alexandrian critics, under the polite and civilized government of the Ptolemies. The old manner of reciting was no doubt very histrionic; but after the formation of a regular theatre, and the composition of formal dramas in the time of *Æschylus*, the heroic verses of the Homeric age must have seemed very unfit vehicles of, or accompaniments to, scenic effect of any kind. In this interval, therefore, are to be placed a third and last race of rhapsodists, now no longer the fellow-poets and congenial interpreters of their originals, but, in general, a low and ignorant sort of men, who were acceptable only to the meanest of the people. Xenophon (*Sympos.*, 3) and Plato (*Ion, passim*) bear abundant testimony to the contempt with which they were regarded, though the object of the latter in the *Ion* or Ionian was probably to sketch a true and exalted picture of the duty and the character of a genuine rhapsodist. There were many editions, or *Διορθώσεις*, as they were called, of the *Iliad*, after this primary one by the Pisistratidæ. We read of one by Antimachus,

a poet of Colophon; and of another very celebrated one by Aristotle, which edition Alexander is said to have himself corrected and kept in a very precious casket, taken among the spoils of the camp of Darius. This edition was called *ἡ ἐκ τοῦ νάπηθρος*. The editions by any known individual were called *αἱ κατ' ἑνὸν*, to distinguish them from several editions existing in different cities, but not attributed to any particular editors. These latter were called *αἱ κατὰ πόλεις*, or *αἱ ἐκ πόλεων*. The Massiliotic, Chian, Argive, Sinopic, Cyprian, and Cretan are mentioned. There are three other names very conspicuous among the multitude of critics, and commentators, and editors of the *Iliad* in subsequent times; these are Zenodotus, Aristophanes, the inventor of accents, and Aristarchus. This last celebrated man lived in the reign of Ptolemy Philometor, B.C. 150, and, after a collation of all the copies then existing, he published a new edition, or *διόρθωσις*, of the *Iliad*, divided into books, the text of which, according to the general opinion of critics, has finally prevailed as the genuine diction of Homer. (Coleridge, *Introduction*, &c., p. 37-55.) In the preface to Gronovius' *Thesaurus* (vol. 5), there is a particular and curious account of the manner in which Pisistratus put together the poems of Homer. It is taken from the Commentary of Diomedes Scholasticus on the grammar of Dionysius the Thracian, and was first published in the original Greek by Bekker, in the second vol. of his *Anecdota Græca* (p. 767, seqq.). It is in substance as follows: The poems of Homer were in a fragmentary state, in different hands. One man had a hundred verses; another two hundred; a third a thousand, &c. Thereupon Pisistratus, not being able to find the poems entire, proclaimed all over Greece, that whoever brought to him verses of Homer, should receive so much for each line. All who brought any received the promised reward, even those who brought lines which he had already obtained from others. Sometimes people brought him verses of their own for those of Homer, now marked with an obelus (*τοὺς νῦν ὀβελισμομένους*). After having thus made a collection, he employed 72 grammarians to put together the verses of Homer in the manner they thought best. After each had separately arranged the verses, he brought them all together, and made each show to the whole his own particular work. Having all in a body examined carefully and impartially, they with one accord gave the preference to the compositions of Aristarchus and Zenodotus, and determined still farther, that the former had made the better one of the two. (Bekker, *Anec. Græc.*, l. c.)

Iliad and Odyssey.

For an account of these two poems, and the discussions connected with them, consult the articles *Ilias* and *Odyssea*. The remainder of our remarks on the present occasion will be confined to a brief consideration of a few minor productions that are commonly attributed to Homer.

1. *Margites*.

This poem, which was a satire upon some strenuous blockhead, as the name implies, does not now exist; but it was so famous in former times that it seems proper to select it for a slight notice from among the score of lost works attributed to the hand of Homer. It is said by Harpocration that Callimachus admired the *Margites*, and Dio Chrysostom says (*Diss.* 53) that Zeno the philosopher wrote a commentary on it. A genuine verse, taken from this poem, is well known:

Πᾶν' ἡπίστατο ἔργα, κακὸς δ' ἡπίστατο πάντα.

"For much he knew, but everything knew ill."

Two other lines in the same strain are preserved by Aristotle, and one less peculiar is found in the scholiast to the *Birds* of Aristophanes (v. 914). By

others, however, the *Margites* was attributed to Pigres; and Knight is of opinion, from the use of the augment in the few lines still preserved, that it was the work of an Athenian earlier than the time of Xerxes, but long after the lowest time of the composition of the *Iliad*. (Coleridge, *Introduction*, &c., p. 180.)

2. *Batrachomyomachia*.

"The Battle of the Frogs and Mice" is a short mock-heroic poem of ancient date. The text varies in different editions, and is obviously disturbed and corrupt to a great degree. It is commonly said to have been a juvenile essay of Homer's genius; but others have attributed it to the same Pigres mentioned above, whose reputation for humour seems to have invited the appropriation of any piece of ancient wit, the author of which was uncertain. So little did the Greeks, before the era of the Ptolemies, know or care about that department of criticism which is employed in determining the genuineness of ancient writings. As to this little poem being a youthful prolusion of Homer's, it seems sufficient to say, that from the beginning to the end it is a plain and palpable parody, not only of the general spirit, but of numerous passages of the *Iliad* itself; and, even if no such intention to parody were discoverable in it, the objection would still remain, that, to suppose a work of mere burlesque to be the primary effort of poetry in a simple age, seems to reverse that order in the development of national taste, which the history of every other people in Europe and of many in Asia has almost ascertained to be a law of the human mind. It is in a state of society much more refined and permanent than that described in the *Iliad*, that any popularity would attend such a ridicule of war and the gods as is contained in this poem; and the fact of there having existed three other poems of the same kind, attributed, for aught we can see, with as much reason to Homer, is a strong inducement to believe that none of them were in reality of the Homeric age. Knight infers, from the usage of the word *δέλτος*, as a writing tablet, instead of *διδόθερα* or a skin, which, according to Herodotus (5, 58), was the material employed by the Asiatic Greeks for that purpose, that this poem was another offspring of Attic ingenuity; and, generally, that the familiar mention of the cock (v. 191) is a strong argument against so ancient a date for its composition.

3. *Hymns*.

The Homeric Hymns, including the hymn to Ceres and the fragment to Bacchus, which were discovered in the last century at Moscow, and edited by Ruhnken, amount to thirty-three; but with the exception of those to Apollo, Mercury, Venus, and Ceres, they are so short as not to consist of more than about three hundred and fifty lines in all. Almost all modern critics, with the eminent exception of Hermann, deny that any of these hymns belong to Homer. Nevertheless, it is certain that they are of high antiquity, and were commonly attributed by the ancients to Homer with almost as much confidence as the *Iliad* and *Odyssey*. Thucydides (3, 104) quotes a passage from the Hymn to Apollo, and alleges the authority of Homer, whom he expressly takes to be the writer, to prove an historical remark; and Diodorus Siculus (3, 66; 4, 2), Pausanias (2, 4), and many other ancient authors, cite different verses from these hymns, and always treat them as genuine Homeric remains. On the other hand, in the life under the name of Plutarch, nothing is allowed to be genuine but the *Iliad* and *Odyssey*; Athenæus (1, 19) suspects one of the *Homeridæ* or Homeric rhapsodists to be the author of the Hymn to Apollo; and the scholiast to Pindar (*Nem.* 2) testifies, that one Cynæthus, a Chian rhapsodist, who flourished

in great reputation at Syracuse about 500 B.C., was supposed by many to be the real Homer of this particular poem. One thing, however, is certain, that these hymns are extremely ancient, and it is probable that some of them only yield to the Iliad and Odyssey in remoteness of date. They vary in character and poetical merit; but there is scarcely one among them that has not something to interest us, and they have all of them, in a greater or less degree, that simple Homeric liveliness which never fails to charm us wherever we meet with it.

4. Epigrams.

Under the title of Epigrams are classed a few verses on different subjects, chiefly addresses to cities or private individuals. There is one short hymn to Neptune which seems out of its place here. In the fourth epigram, Homer is represented as speaking of his blindness and his itinerant life. As regards the general character of the Greek Epigram, it may here be remarked, that it is so far from being the same with, or even like to, the Epigram of modern times, that sometimes it is completely the reverse. In general, the songs in Shakspeare, Ben Jonson, Waller, and, where he writes with simplicity, in Moore, give a better notion of the Greek Epigrams than any other species of modern composition.

5. Fragments.

The Fragments, as they are called, consist of a few scattered lines which are said to have been formerly found in the Iliad, the Odyssey, and the other supposed works of Homer, and to have been omitted as spurious or dropped by chance from their ostensible context. Besides these, there are some passages from the Little Iliad, and a string of verses taken from Homer's answers in the old work, called the Contests of Homer and Hesiod. (*Coleridge, Introduction, &c.*, p. 235.)

Conclusion.

Since the Homeric question was first agitated by Wolf and Heyne, it has been placed on a very different footing by the labours of more recent scholars. The student may consult with advantage the following works: *Nitzsch, de Historia Homerici Meltemata*.—*Kreuser, Vorfragen über Homeros*.—*Id., Homerische Rhapsoden*.—*Müller, Homerische Vorschule*.—*Heinecke, Homer und Lycurg*.—*Knight, Prolegomena ad Homerum*.—*London Quarterly Review*, No. 87.—*Müller's* Review of Nitzsch's work, in the *Göttingen, Gel. Anzeigen*, for Febr., 1831.—*Hermann's* remarks in the *Wiener Jahrbücher*, vol. 54.—*Hug, Erfindung der Buchstabenschrift*.—An argument which confines itself to the writings of Wolf and Heyne, can now add but little to our means of forming a judgment on the Homeric question, and must keep some of its most important elements out of sight. (*Thirlwall's Greece*, vol. 1, p. 248, *in notis*.)—The best edition of the Iliad is that of Heyne, *Lips.*, 1802–1822, 9 vols. 8vo. The most popular edition of the entire works is that of Clarke, improved by Ernesti, *Lips.*, 1759, 1824, *Glasg.*, 1814, 5 vols. 8vo. The most critical one, however, is that of Wolf, *Lips.*, 1804–1807, 4 vols. 12mo. A good edition of the Odyssey is still needed, though the want may in a great measure be supplied by the excellent commentary of Nitzsch, *Hannov.*, 1826–1831, 2 vols. 8vo.—II. A poet, surnamed, for distinction's sake, the Younger. He was a native of Hierapolis in Caria, and flourished under Ptolemy Philadelphus. Homer the Younger formed one of the Tragic Pleiades. (*Schöll, Gesch. Gr. Lit.*, vol. 2, p. 41.)

HOMONADA, a strong fortress of Cilicia Trachea, on the confines of Isauria. This place Mannert makes to belong to Pisidia. (*Geogr.*, vol. 6, pt. 2, p. 166.)

The Homonadenses were a wild and plundering people, and greatly infested the neighbouring country. They were subdued, however, by the Roman commander Quirinus, who blocked up the passages of the mountains, and reduced them by famine. D'Anville was of opinion, that Homonada was represented by the fortress of *Ermenak*, situate near the sources of the *Giuk-sou*; and this locality has been adopted by Gossellin and others. (*French Strabo*, vol. 4, pt. 2, p. 100.) But Col. Leake, in his map, supposes *Ermenak* to be Philadelphia. (*Cramer's Asia Minor*, vol. 2, p. 333.)

HONORIUS, son of Theodosius the Great, and younger brother of Arcadius, was born at Constantinople A.D. 384. After the death of his father in 395, Honorius had for his share the Empire of the West, under the guardianship of Stilicho, a distinguished general of the imperial armies, and fixed his residence at Milan. For several years after, Stilicho was the real sovereign of the West; and he also endeavoured to extend his sway over the territories of Arcadius in the East, under the pretence of defending them against the Goths. He gave his daughter Maria in marriage to Honorius, and recovered the province of Africa, which had revolted. About A.D. 400, the Goths and the Huns, under Alaric and Radagaisus, invaded Italy, but were repelled by Stilicho. In the year 402, Alaric came again into Italy, and spread alarm as far as Rome, when Stilicho hastily collected an army, with which he met Alaric at Pollentia, on the banks of the Tanarus, completely defeated him, and compelled him to recross the Noric Alps. After this victory Honorius repaired to Rome with Stilicho, where they were both received with great applause. On that occasion Honorius abolished by a decree the fights of gladiators, and he also forbade, under penalty of death, all sacrifices and offerings to the pagan gods, and ordered their statues to be destroyed. In the year 404 Honorius left Rome for Ravenna, where he established his court, making it the seat of his empire, like another Rome, in consequence of which, the province in which Ravenna is situated assumed the name of Romania, Romaniola, and afterward *Romagna*, which last it retains to this day. In the following year Radagaisus again invaded Italy with a large force of barbarians, but was completely defeated, and put to death by Stilicho, in the mountains near Fæsulæ in Etruria. In the next year, the Vandals, the Alani, the Alemanni, and other barbarians, crossed the Rhine and invaded Gaul. A soldier, named Constantine, revolted in Britain, usurped the imperial power, and, having passed over into Gaul, established his dominion over part of it, and was acknowledged by Honorius as his colleague, with the title of Augustus. Stilicho now began to be suspected of having an understanding with the barbarians, and especially with Alaric, to whom he advised the emperor to pay a tribute of 4000 pounds' weight of gold. Honorius, in consequence, gave an order for his death, which was executed at Ravenna, in August of the year 408. Historians are divided concerning the fact of Stilicho's treason. Zosimus and the poet Claudian consider it a calumny. His death, however, was fatal to the empire, of which he was the only remaining support. Alaric again invaded Italy, besieged Rome, and at last took it, and proclaimed the prefect Attalus emperor. Honorius meantime remained inactive, and shut up within Ravenna. The continued indecision and bad faith of Honorius, or, rather, of his favourites, brought Alaric again before Rome, which was this time plundered by the invader (A.D. 410). After Alaric's death, his son Ataulphus married Placidia, sister of Honorius, and took possession of Spain. The rest of the reign of Honorius was a succession of calamities. The Empire of the West was now falling to pieces on every side; and in the midst of the universal ruin, Hon-

rius died of the dropsy at Ravenna, in August, 423, leaving no issue. (*Gibbon, Decline and Fall*, c. 29, *seq.*—*Encycl. U. S. Knowl.*, vol. 12, p. 281.)

HORAPOLLO, or HORUS APOLLO, a grammarian of Alexandria, according to Suidas, in the time of the Roman emperor Theodosius. He taught, first in his native city, and afterward in Constantinople, and wrote, under the title of *Τετρακτά*, a work on consecrated places. Several other writers of this name are mentioned by Suidas, by Stephanus of Byzantium (*s. v. Φερέβητος*), by Photius (p. 536, *ed. Bekker*), and by Eustathius (*ad Od.* 4). It is doubtful to which one of the whole number a treatise which has come down to us on Egyptian Hieroglyphics is to be ascribed. According to the inscription that is found in most MSS., the work was originally written in Egyptian, and translated into Greek by a person named Philip. But, whatever opinion we may form respecting the author, it is evident that the work could not have been written before the Christian era, since it contains allusions to the philosophical tenets of the Gnostics. Its merits are differently estimated. The object of the writer appears to have been, not to furnish a key to the Hieroglyphic system, but to explain the emblems and attributes of the gods. Champollion, and Leemans in his edition of the work, are disposed to attribute greater importance to it than former critics had been willing to allow. The best edition is that of Leemans, *Amst.*, 1834, 8vo. Previous to the appearance of this, the best edition was that of De Pauw, *Traj. ad Rhén.*, 1727, 4to.

HORÆ (Ὠραὶ), the Seasons or Hours, who had charge of the gates of Heaven. Hesiod says that they were the daughters of Jupiter and Themis; and he names them Eúnomia (*Order*), Díke (*Justice*), and Eírene (*Peace*). "They watch," adds the poet, "over the works of mortal man" (*ἐργ' ὀραῖονσι καθ' ἡμετέρας βροτοῖσι*.—*Theog.*, 903). By an unknown poet (*ap. Stobæum*.—*Lobeck, Aglaoph.*, p. 600), the Horæ are called the daughters of Time; and by late poets they were named the children of the year, and their number was increased to twelve. (*Nonnus*, 11, 486.—*Id.*, 12, 17.) Some made them seven or ten in number. (*Hygin.*, *fab.*, 183.)—The Horæ seem to have been originally regarded as presiding over the three seasons into which the ancient Greeks divided the year. (*Welcker, Tril.*, p. 500, *not.*) As the day was similarly divided (*Id.*, 21, 111), they came to be regarded as presiding over its parts also; and when it was farther subdivided into *hours*, these minor parts were placed under their charge, and were named from them. (*Quint.*, *Smyrn.*, 2, 595.—*Nonnus*, *l. c.*) Order and regularity being their prevailing attributes, the transition was easy from the natural to the moral world; and the guardian goddesses of the seasons were regarded as presiding over law, justice, and peace, the great producers of order and harmony among men. (*Knightley's Mythology*, p. 190, *seq.*)

HORATIA, the sister of the Horatii, killed by her surviving brother for deploring the death of her betrothed, one of the Curiatii, and for reproaching him with the deed by which she had lost her lover. (*Vid. Horatius II.*)

HORATIUS, I. QUINTUS FLACCUS, a celebrated Roman poet, born at Venusia or Venusium, December 8th, B.C. 65, during the consulship of L. Aurelius Cotta and L. Manlius Torquatus. (*Od.*, 3, 21, 1.—*Epod.*, 13, 6.) His father, who was a freedman of the Horatian family, had gained considerable property as a *coactor*, a name applied to the servant of the money-brokers, who attended at sales at auction, and collected the money from the purchasers. (*Serm.*, 1, 6, 6.) With these gains he purchased a farm in the neighbourhood of Venusia, on the banks of the Aufidus. In this place Horace appears to have lived until his eleventh or twelfth year, when his father, dissatis-

fied with the country school of Flavius (*Serm.*, 1, 6, 72), removed with his son to Rome, where he was placed under the care of a celebrated teacher, Orbilius Pupillus, of Beneventum, whose life has been written by Suetonius. (*De Illustr. Gramm.*, c. 9.) After studying the ancient Latin poets (*Epist.*, 2, 1, 70, *seq.*), Horace acquired the Greek language. (*Epist.*, 2, 2, 41, *seq.*) He also enjoyed, during the course of his education, the advice and assistance of his father, who appears to have been a sensible man, and who is mentioned by his son with the greatest esteem and respect. (*Serm.*, 1, 4, 105, *seqq.*; 1, 6, 76, *seqq.*) It is probable that, soon after he had assumed the *toga virilis*, at the age of seventeen, he went to Athens to pursue his studies (*Epist.*, 2, 2, 43), where he appears to have remained till the breaking out of the civil war during the second triumvirate. In this contest he joined the army of Brutus, was promoted to the rank of military tribune (*Serm.*, 1, 6, 48), and was present at the battle of Philippi, his flight from which he compares to a similar act on the part of the Greek poet Alcæus. (*Od.*, 2, 7, 9.) Though the life of Horace was spared, his paternal property at Venusia was confiscated (*Epist.*, 2, 2, 49), and he repaired to Rome, with the hope of obtaining a living by his literary exertions. Some of his poems attracted the notice of Virgil and Varius, who introduced him to Mæcenas, and the liberality of the minister quickly relieved the poet from all pecuniary difficulties. From this eventful epoch for our bard, the current of his life flowed on in smooth and gentle course. Satisfied with the competency which the kindness of his patron had bestowed, Horace declined the offers made him by Augustus, to take him into his service as private secretary, and steadily resisted the temptation thus held out of rising to opulence and political consideration; advantages which, to one of his philosophical temperament, would have been dearly purchased by the sacrifice of his independence. For that he was independent in the noblest sense of the word, in freedom of thought and action, is evidenced by that beautiful epistle to Mæcenas, in which he states, that if the favour of his patron is to be secured by a slavish renunciation of his own habits and feelings, he will at once say, Farewell to fortune, and welcome poverty! (*Epist.*, 1, 7.)—Not long after his introduction to Mæcenas the journey to Brundisium took place, and the gift of his Sabine estate soon followed. Rendered independent by the bounty of Mæcenas, high in the favour of Augustus, courted by the proudest patricians of Rome, and blessed in the friendship of his brother poets, Virgil, Tibullus, and Varius, it is difficult to conceive a state of more perfect temporal felicity than Horace must have enjoyed. This happiness was first sensibly interrupted by the death of Virgil, which was shortly succeeded by that of Tibullus. These losses must have sunk deeply into his mind. The solemn thoughts and grave studies which, in the first epistle of his first book, he declares shall henceforward occupy his time, were, if we may judge from the second epistle of the second book, addressed to Julius Florus, confirmed by those sad warnings of the frail tenure of existence. The severest blow, however, which Horace had to encounter, was inflicted by the dissolution of his early friend and best patron Mæcenas. He had declared that he could never survive the loss of one who was "part of his soul" (*Od.*, 2, 17, 5), and his prediction was verified. The death of the poet occurred only a few weeks after that of his friend, on the 27th of November, B.C. 8, when he had nearly completed his 58th year, and his remains were deposited next to those of Mæcenas, at the extremity of the Esquiline Hill.—When at Rome, Horace resided in a small and plainly-furnished mansion on the Esquiline. When he left the capital, he either betook himself to his Sabine farm or his villa at Tibur, the modern *Tivoli*. When in the country, as the whim seized

him, he would either study hard or be luxuriously idle. The country was the place where his heart abode, and here he displayed all the kindness of his disposition. At times reclining under the shade of a spreading tree, by the side of some "bubbling rannel," he would temper his Massic with the cooling lymph; at others he would handle the spade and mattock, and delight in the good-humoured jokes of his country neighbours when they laughed at him, with his little punchy figure, puffing and blowing at the unwonted work. But his suppers here were the chief scene of his enjoyment. He would then collect around him the patriarchs of the neighbourhood, listen to their homely but practical wisdom, and participate in the merriment of his slaves seated around the blazing fire. Well and truly might he exclaim, "*Noctes cwnaque Deûm!*"—The character of Horace is as clearly developed in his writings, as the manner in which he passed his time, or the locality of his favourite haunts. Good sense was the distinguishing characteristic of his intellect; tenderness that of his heart. He acknowledged no master in philosophy, and his boast was not a vain one. Although leaning to the tenets of Epicurus, the "*summum bonum*" of Horace soared far above selfishness. His happiness centred not in self, but was reflected from that of others. Culling what was best from each sect, he ridiculed unsparingly the vague theories of all; and, notwithstanding his shafts were chiefly directed against the Stoics, he assented to the loftier and better part of their doctrine, the superintendence of the divinity over the ways of man. Like those of every other mortal, the sterling qualities of Horace were mixed with baser alloy. His philosophy could not preserve him, even at the age of fifty, from the weaknesses of a boy, and he did not escape unsullied by the vices of the time. These frailties apart, we recognise in Horace all the amenities, and most of the virtues, which adorn humanity.—The productions of Horace are divided into *Odes*, *Epodes*, *Satires*, and *Epistles*. The *Odes*, which for the most part are little more than translations or imitations of the Greek poets, are generally written in a very artificial manner, and seldom depict the stronger and more powerful feelings of human nature. The best are those in which the poet describes the pleasures of a country life, or touches on the beauties of nature, for which he had the most lively perception and the most exquisite relish: nor yet, at the same time, are his lyrical productions altogether without those touches which excite our warmer sympathies. But if we were to name those qualities in which Horace most excels, we should mention his strong good sense, his clear judgment, and the purity of his taste.—The best edition of Horace is that of Döring, *Lips.*, 1803, 1815, 1828, 2 vols. 8vo, reprinted at the London press, and also at Oxford, 1838, in one volume 8vo.—Many critics have maintained that each ode, each satire, &c., was published separately by the poet. But Bentley, in the preface to his edition of the poet's works, argues, from the words of Suetonius, the practice of other Latin poets, and the expressions of Horace himself, that his works were originally published in books, in the order in which they now appear. Consult on this subject the "*Horatius Rescriptus*" of Tate, *Cambr.*, 1832; 2d ed., 1837. (*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 220, seqq. —*Quarterly Review*, No. 124.—*Encycl. Us. Knowl.*, vol. 12, p. 290.)—II. The name of three brave Roman twin-brothers, who fought, according to the old Roman legends, against the Curiatii, three Alban twin-brothers, about 667 years before the commencement of our era. Mutual acts of violence committed by the citizens of Rome and Alba had given rise to a war. The armies were drawn up against each other at the *Fossa Cluilia*, where it was agreed to avert a battle by a combat of three brothers on either side, namely, the *Horatii* and *Curiatii*, whose mothers were sisters. Ev-

ery one will perceive that we have here types of the two nations regarded as sisters, and of the three tribes in each. In the first onset, two of the *Horatii* were slain by their opponents; but the third brother, by joining address to valour, obtained a victory over all his antagonists. Pretending to fly from the field of battle, he separated the three *Curiatii*, and then, attacking them one by one, slew them successively. As he returned triumphant to the city, his sister *Horatia*, who had been betrothed to one of the *Curiatii*, met and reproached her brother bitterly for having slain her intended husband. *Horatius*, incensed at this, stabbed his sister to the heart. He was tried and acquitted. (*Liv.*, 1, 26.)

HORESTI, a people of Scotland, mentioned by *Tacitus*. In *Agricola's* time, they seem to have been the inhabitants of what is now *Angus*. They were probably incorporated with, or subdued by, the *Vacomagi*, before *Ptolemy* wrote his geography. *Mannert* places them near the *Frith of Tay*. (*Tacit.*, *Vit Agric.*, 38.)

HORTENSIA, daughter of the orator *Hortensius*, and who would seem to have inherited a portion of her father's eloquence. When the members of the second triumvirate had imposed a heavy tax upon the Roman matrons, and no one of the other sex dared to espouse their cause, *Hortensia* appeared as their advocate, and made so able a speech that a large portion of the burden was removed. (*Val. Max.*, 8, 3, 3.) This harangue was extant in *Quintilian's* time, who speaks of it with encomiums. *Freinsheimus* has adumbrated it from *Appian* in his Supplement to *Livy*. (*Quintil.*, 1, 1, 6 — *Freinsh.*, *Suppl. Liv.*, 122, 44, seq.)

HORTENSIVS, *QUINTUS*, a celebrated orator, who began to distinguish himself by his eloquence in the Roman forum at the age of nineteen. He was born of a plebeian family, A.U.C. 640, eight years before *Cicero*. He served at first as a common soldier, and afterward as military tribune, in the Social war. In the contest between *Marius* and *Sylla* he remained neuter, and was one of the twenty quaestors established by *Sylla*, A.U.C. 674. He afterward obtained in succession the offices of ædile, prætor, and consul, the last of these A.U.C. 685. As an orator he for a long time balanced the reputation of *Cicero*; but, as his orations are lost, we can only judge of him by the account which his rival gives of his abilities. "Nature had given him," says *Cicero*, in his *Brutus* (c. 88), "so happy a memory, that he never had need of committing to writing any discourse which he had meditated, while, after his opponent had finished speaking, he could recall, word by word, not only what the other had said, but also the authorities which had been cited against himself. His industry was indefatigable. He never let a day pass without speaking in the forum, or preparing himself to appear on the morrow; oftentimes he did both. He excelled particularly in the art of dividing his subject, and in then reuniting it in a luminous manner, calling in, at the same time, even some of the arguments which had been urged against him. His diction was noble, elegant, and rich; his voice strong and pleasing; his gestures carefully studied." The eloquence of *Hortensius* would seem, in fact, to have been of that showy species called Asiatic, which flourished in the Greek colonies of Asia Minor, and was infinitely more florid and ornamental than the oratory of Athens, or even of Rhodes, being full of brilliant thoughts and of sparkling expressions. This glowing style of rhetoric, though deficient in solidity and weight, was not unsuitable in a young man; and, being farther recommended by a beautiful cadence of periods, met with the utmost applause. But *Hortensius*, as he advanced in life, did not correct this exuberance, nor adopt a chaster eloquence; and this luxury and glitter of phraseology, which, even in his earliest years, had occasionally excited ridicule or disgust among the graver fathers of the senatorial order, being totally in

consistent with his advanced age and consular dignity, which required something more serious and composed, his reputation in consequence diminished with increase of years. Besides, from his declining health and strength, which greatly failed in his latter years, he may not have been able to give full effect to that showy species of rhetoric in which he indulged. A constant toothache and swelling in the jaws greatly impaired his powers of elocution and utterance, and became at length so severe as to accelerate his end. A few months, however, before his death, which happened in 703, he pleaded for his nephew Messala, who was accused of illegal canvassing, and who was acquitted more in consequence of the astonishing exertions of his advocate than the justice of his cause. So unfavourable, indeed, was his case esteemed, that, however much the speech of Hortensius had been admired, he was received, on entering the theatre of Curio on the following day, with loud clamours and hisses, which were the more remarked as he had never met with similar treatment in the whole course of his forensic career. (*Cic., Ep. ad Fam.*, 8, 2.) The speech, however, revived all the ancient admiration of the public for his oratorical talents, and convinced them that, had he possessed the same perseverance as Cicero, he would not have ranked second to that orator. The speeches of Hortensius, as has already been mentioned, lost part of their effect by the orator's advance in years, but they suffered still more by being transferred to writing. As his chief excellence consisted in action and delivery, his writings were much inferior to what was expected from the high fame which he had enjoyed; and accordingly, after death, he retained little of that esteem which he had so abundantly possessed during life. (*Quint., Inst. Orat.*, 11, 3.) It appears from Macrobius, that he was much ridiculed by his contemporaries on account of his affected gestures. In pleading, his hands were constantly in motion, whence he was often attacked by his adversaries in the forum for resembling an actor; and on one occasion he received from his opponent the appellation of *Dionysia*, which was the name of a celebrated dancing girl. (*Aulus Gellius*, 1, 8.) Æsopus and Roscius frequently attended his pleadings to catch his gestures and imitate them on the stage. (*Val. Max.*, 8, 10.) Such, indeed, was his exertion in action, that it was commonly said that it could not be determined whether people went to hear or to see him. Like Demosthenes, he chose and put on his dress with the most studied care and neatness. He is said not only to have prepared his gestures, but also to have adjusted the plaits of his gown before a mirror when about to issue forth to the forum; and to have taken no less care in arranging them than in moulding the periods of his discourse. He so tucked up his gown that the folds did not fall by chance, but were formed with great care by help of a knot carefully tied, and concealed by the plies of his robe, which apparently flowed carelessly around him. (*Macrobius*, *Sat.*, 3, 13.) Macrobius also records a story of his instituting an action of damages against a person who had jostled him while walking in this elaborate dress, and had ruffled his toga when he was about to appear in public with his drapery adjusted according to the happiest arrangement; an anecdote which, whether true or false, shows by its currency the opinion entertained of his final attention to everything that concerned the elegance of his attire, or the gracefulness of his figure and attitudes. This appears to have been the only blemish in his oratorical character; and the only stain on his moral conduct was his practice of corrupting the judges of the causes in which he was employed, a practice which must be in a great measure imputed to the defects of the judicial system at Rome; for, whatever might be the excellence of the Roman laws, nothing could be worse than the procedure under which they were administered.—Hortensius was, from

A.U.C. 666 till 679, a space of thirteen years, at the head of the Roman bar; and being, in consequence, engaged during that long period on one side or other in every cause of importance, he soon amassed a prodigious fortune. He lived, too, with a magnificence corresponding to his wealth. His house at Rome, which was splendidly furnished, formed the centre of the chief imperial palace, which increased from the time of Augustus to that of Nero, till it nearly covered the whole Palatine Mount, and branched over other hills. Besides his mansion in the capital, he possessed sumptuous villas at Tusculum, Bauli, and Laurentum, where he was accustomed to give the most elegant and expensive entertainments. His olive plantations he is said to have regularly moistened and bedewed with wine; and, on one occasion, during the hearing of an important cause in which he was engaged along with Cicero, he begged the latter to change with him the previously arranged order of pleading, as he was obliged to go to the country to pour wine on a favourite *platanus*, which grew near his Tusculan villa. (*Macrobius*, *Sat.*, 3, 13.) Notwithstanding this profusion, his heir found not less than 10,000 casks of wine in his cellar after his death. (*Plin.*, 14, 14.) Besides his taste for wine and fondness for plantations, he indulged in a passion for pictures and fish-ponds. At his Tusculan villa he built a hall for the reception of a painting of the expedition of the Argonauts, by the painter Cydias, which cost the enormous sum of 144,000 sesterces. At his country seat near Bauli, on the seashore, he vied with Lucullus and Philippus in the extent of his fish-ponds, which were constructed at immense cost, and so formed that the tide flowed into them. (*Varro, R. R.*, 3, 3.) Yet such was his luxury, and reluctance to diminish his supply, that, when he gave entertainments at Bauli, he generally sent to the neighbouring town of Puteoli to buy fish for supper. (*Id.*, 3, 17.) He had a vast number of fishermen in his service, and paid so much attention to the feeding of his fish, that he had always ready a large stock of small fish to be devoured by the great ones. It was with the utmost difficulty he could be prevailed upon to part with any of them; and Varro declares that a friend could more easily get his chariot-mules out of his stable than a mullet from his ponds. He was more anxious about the welfare of his fish than the health of his slaves, and less solicitous that a sick servant might not take what was unfit for him, than that his fish might not drink water which was unwholesome. It is even said (*Plin.*, 9, 55) that he was so passionately fond of a particular lamprey as to shed tears for its untimely death. At his Laurentan villa Hortensius had a wooded park of fifty acres, encompassed with a wall. This enclosure he called a nursery of wild beasts, all of which came for their provender at a certain hour on the blowing of a horn: an exhibition with which he was accustomed to amuse the guests who visited him here. Varro mentions an entertainment where those invited supped on an eminence, called a Triclinium, in this sylvan park. During the repast, Hortensius summoned his Orpheus, who, having come with his musical instruments, and being ordered to display his talents, blew a trumpet, when such a multitude of deer, boars, and other quadrupeds rushed to the spot from all quarters, that the sight appeared to the delighted spectators as beautiful as the courses with wild animals in the great circus of the *Ædiles*. (*Dunlop, Hist. Rom. Lit.*, vol. 2, p. 222, *seqq.*)

HORUS, a son of Isis and Osiris, and one of the deities of Egypt. Horus is the sun at the summer solstice. From the month of April until this season of the year, Typhon was said to bear sway, with his attendant band of heats and maladies: the earth was parched, gloomy, and desolate. Horus thereupon recalls his father Osiris from the lower world, he revives the parent

in the son, he avenges him on Typhon: the solstitial sun brings back the Nile from the bottom of Egypt, where it had appeared to be sleeping the sleep of death; the waters spread themselves over the land, everything receives new life; contagious maladies, hurtful reptiles, parching heats which had engendered them, all disappear before the conqueror of Typhon; through him nature revives, and Egypt resumes her fertility.—Horus was the deity of Apollinopolis Magna (*Edfou*), where he had a magnificent temple. The Greeks compared him to their Apollo. He is the conqueror of Typhon, as Apollo is of Python, and Crishna of the serpent Caliya. (*Creuzer, Symbolik*, vol. 2, p. 276.—*Creuzer, par Guigniant*, vol. 1, p. 400.—Compare the remarks of *Jomard*, in the "*Description de l'Égypte—Antiq.*" vol. 1, p. 26, *seqq.*)

HOSTILIA, a village on the Padus, or *Po*, now *Ostiglia*, in the vicinity of Cremona. (*Tacit., Ann.*, 2, 40.)

HOSTIUS, a Roman poet, contemporary with Lucilius the satirist. He wrote a poem on the Istrian war, which took place 576 A.U.C., or B.C. 178. Some fragments of this have reached our time. Hostius wrote also metrical annals, after the manner of Ennius. (*Weichert, de Hostio poeta, ejusque earm. reliquis, Commentatio*, p. 1–18.) Some make him to have been the father, others the grandfather, of the Cynthia of Propertius. (Consult *Brouckhus.*, *ad Propert.*, *Eleg.*, 3, 18, 8.)

HUNNI, one of the barbarian nations that invaded the Roman empire. The first ancient author who makes mention of the Huns is Dionysius Periegetes. This geographer, who wrote probably about 30 years before our era, names four nations, which, in the order of his narrative, followed from north to south along the western shores of the Caspian Sea, viz., the Scythians, the Huns (*Οὐννοι*), the Caspians, and the Albanians. Eratosthenes, cited by Strabo, places these nations in the same order; but, in place of Huns, he calls the second *Οὐννιοι*, *Hunnioi*, who were probably the Hunnic tribe farthest to the west. Ptolemy, who lived about the middle of the third century, placed the Huns (*Χοῖννοι*) between the Bastarnæ and Roxolani, consequently on the two banks of the Borysthenes. The Armenian historians know this people under the denomination of *Houuk*, and place them to the north of Caucasus, between the Volga and the Don. Hence they call the defile of Derbend the "Rampart of the Huns." In the geographical work falsely attributed to Moses of Chorene, the following passage occurs: "The Massagetae dwell as far as the Caspian Sea, where is the branch of Mount Caucasus that contains the rampart of Tarpant (Derbend) and a wonderful tower built in the sea: to the north are the Huns within the city of Varkatchan, and others besides." Moses of Chorene relates, in his Armenian history, the wars which Tiridates the Great, who reigned from 259 to 312, sustained against certain northern nations that had made an irruption into Armenia. This prince attacked and defeated them, slew their king, and pursued them into the country of the Houuk (Huns). Zonaras states, that, according to some, the Emperor Carus was slain (A.D. 283) in an expedition against the Huns. From all that has been stated, we see clearly that this people were already known before their invasion of Europe, and that, when Ammianus Marcellinus speaks of them as a nation "little known to the ancients," he is not to be considered as meaning that there was no knowledge of them prior to A.D. 376. "They live," remarks the same writer, "beyond the Palus Mæotis, on the borders of the Icy Sea. They are marked by extreme ferocity of manners. As soon as a child is born, they cut deep incisions into its cheeks, in order that the scars thus formed may prevent, at a later period, the first growth of the beard from appearing. They reach an advanced age without

having any beard, and they are as-deformed as eunuchs. They are of squat figures, and have strong limbs and large heads. Their figure is a remarkable one; they are bent to such a degree that one would almost fancy them to be brute beasts moving on two legs, or those rudely carved pillars which are used to support bridges, and which are cut into some resemblance to a human form." Zosimus, who wrote about a century after the first inroad of the Huns into Europe, supposes them to be identical with the royal Scythians of Herodotus. Jornandes gives a fabulous account of their origin from some sorceresses who had united themselves with the impure spirits of the desert. He describes them as a race which showed no other resemblance to the human species than what the use of the faculty of speech afforded. The portrait of these barbarians will be complete, if we add to it the description given by Sidonius Apollinaris, in 472 (2, 245, *seqq.*). The terror which these barbarians occasioned, contributed, no doubt, in a very great degree, to heighten the picture which the ancient writers just mentioned have given us of their personal deformity. We must also take into consideration the following circumstance: The various hordes of barbarians, such as the Lombards, Goths, Vandals, and others, which made inroads into the Roman empire before the invasion of the Huns, were of the Indo-Germanic race; their physiognomy, therefore, did not differ much from that of the European nations already known to the Greeks and Romans. On a sudden the Huns presented themselves, belonging clearly to a different race, and whose figures and personal appearance generally, in themselves far from pleasing, were rendered still more disagreeable to the eye by artificial means. The sudden presence of such a race could not but produce an alarming impression; and hence the writers of that day can hardly find expressions strong enough to depict, amid the terror by which they were surrounded, the repulsive deformity of this new swarm of conquerors; they endeavour to improve, the one upon the other, in placing before their readers the most frightful traits of savage portraiture.—As regards the origin of the Hunnic race, it must be confessed that great uncertainty has for a long time prevailed. Some have seen in them the progenitors of the Mogul and Calmuc Tartars of the present day, without having any better foundation for this opinion than vague descriptions of the forms of the Huns. These writers ought to have reflected that the descriptions in question would apply equally well to a large number of the races of northern Asia, to the Vogoules, the Samoïedes, the Tougoules, and others. De Guignes, on the other hand, traces up the Huns to a nomadic and powerful race which infested the borders of China, and who are called by the historians of this country *Houng nou*. The simple resemblance of names has caused this theory to wear a plausible appearance, but Klaproth fully establishes its fallacy. This writer, in following as his guides the Byzantine historians, makes the Huns to have been of the same origin with the Avares, and to have been a branch of the Oriental Finns, and the progenitors of the present Vougoules. (*Klaproth, Tableaux Historiques de l'Asie*, p. 246.)—The history of the Huns, in its more important features, is as follows: In 374 they quitted their settlements on the Volga and Palus Mæotis, under the conduct of their monarch Balamir, and subjected the Akatsires, who, according to the statement of Priscus, had a common origin with them. Reunited to this people, they attacked the Alani, called Tanaitæ from their dwelling on the banks of the Tanais or Don. The Alani, being conquered, made common cause with the Huns, and in 376 the united hordes invaded the country of the Ostrogoths. Hermannrich, the king of this latter people, met with a total defeat, and killed himself in despair. His suc-

cessor Vithimir endeavoured in vain to make head against the victors; he was slain in battle, and the Ostrogoths were dispersed. The Visigoths, to the number of 200,000 combatants, retreated before them, and obtained permission of the Emperor Valens to cross the Danube and retire into Thrace. In 380 Balamir or Balamir desolated the Roman provinces and destroyed numerous cities. Their farther ravages, however, were bought off by an annual tribute until 442, when, under Attila and Bleda, sons of Moundzouk, they ravaged Thrace and Illyria, and Theodosius II. was compelled to fly for refuge into Asia, and to conclude from that country a shameful peace with the invaders. In 444 Attila became sole monarch, and in 447 entered at the head of an immense army into the countries subject to the Eastern empire, and advanced to the very gates of Constantinople. The armies of Theodosius II. were everywhere defeated, and a fresh tribute alone saved the capital of the East. The death of Theodosius, which happened in 450, appeared to Attila to offer a new opportunity for farther exactions; but Marcian, the new emperor, refused to listen to his demands; and Attila, finding menaces ineffectual, began to seek various pretexes for carrying the war into the West. He penetrated into Gaul and ravaged various parts of the country, but was defeated in the battle of Chalons-sur-Marne. Notwithstanding, however, this overthrow, he soon made an irruption into Italy, ravaged Cisalpine Gaul, took Aquileia, and pillaged Milan and Pavia. He died this same year (453), on the night of his nuptials. The power of the Huns fell with Attila, and the nation was soon after dispersed. A portion of them settled in the country which from them was called Hungary. Some authors state, that the race of the ancient Huns were all cut off in the long war waged against them by Charlemagne, and that the country was afterward peopled by the neighbouring nations, to whom the present Hungarians owe their origin. But other and more accurate authors make the Hungarians of the present day to be descended from the ancient Huns mingled with other races. The personal appearance of the Huns does not, it is true, favour this idea; but the Finnic tribe, which formed the germe of the Hungarian nation, becoming intermingled in the course of time with Turkish, Slavonic, and Germanic races, may be said to have almost totally changed its external characteristics. The language of the present Hungarians, too, is composed of Finnic, Turkish, Slavonic, and German elements. (*Klaproth, Tableaux Historiques*, &c., p. 247, *seqq.*)

HYACINTHIA, a festival, celebrated for three days in the summer of each year, at Amyclæ, in honour of Apollo and his unhappy favourite Hyacinthus. (*Vul. Hyacinthus.*) Müller gives strong reasons for supposing that the Hyacinthia were originally a festival of Ceres. (*Dorians*, vol. 1, p. 373.)

HYACINTHUS, a beautiful youth of Amyclæ, beloved by Apollo. He was playing one day at discus-throwing with the god, when the latter made a great cast, and Hyacinthus running too eagerly to take up the discus, it rebounded and struck him in the face. The god, unable to save his life, changed him into the flower which was named from him, and on whose petals Grecian fancy saw traced *ai, ai*, the notes of grief. (*Ovid, Met.*, 10, 162, *seqq.*—*Apollod.*, 1, 3, 3.—*Id.*, 3, 10, 3.—*Eurip.*, *Hcl.*, 1489, *seq.*)—Other versions of the legend say that Zephyrus (*the West Wind*), enraged at Hyacinthus' having preferred Apollo to himself, blew the discus, when flung by Apollo, against the head of the youth, and so killed him. (*Eudocia*, 408.—*Nonnus*, 10, 253, *seq.*—*Id.*, 29, 95, *seq.*—*Lucian*, *D. D.*, 14.—*Keightley's Mythology*, p. 120.)

HYADES, according to some, the daughters of Atlas and sisters of the Pleiades. The best accounts, however, make them to have been the nymphs of Dodona,

unto whom Jupiter confided the nurture of Bacchus. (Consult *Guignaut*, vol. 3, p. 68.) Pherecydes gives their names as Ambrosia, Coronis, Eudora, Dionce, Asula, and Polyxo. (*Pherecyd.*, *ap. Schol.*, *Il.*, 18, 486.) Hesiod, on the other hand, calls them Phæsula, Coronis, Clea, Phæo, and Eudora. (*Ap. Schol. ad Arat.*, *Phæn.*, 172.) The Hyades went about with their divine charge, communicating his discovery to mankind, until, being chased with him into the sea by Lycurgus, Jupiter, in compassion, raised them to the skies and transformed them into stars. (*Pherecyd.*, *l. c.*) According to the more common legend, however, the Hyades, having lost their brother Hyas, who was killed by a bear or lion, or, as Timæus says, by an asp, were so disconsolate at his death, that they pined away and died; and after death they were changed into stars. (*Hygin.*, *fah.*, 192.—*Muncker*, *ad loc.*)—The stars called Hyades (*Υἱάδες*) derived their name from *ῥω*, "to make wet," "to rain," because their setting, at both the evening and morning twilight, was for the Greeks and Romans a sure presage of wet and stormy weather, these two periods falling respectively in the latter half of April and November. (*Ideler*, *Sternnamen*, p. 139.) On this basis, therefore, both the above legends respecting the Hyades were erected by the poets. In the case of the nymphs of Dodona, the Hyades become the type of the humid principle, the nurturer of vegetation; while in the later fable, the rain-drops that accompany the setting of the Hyades are the tears of the dying daughters of Atlas. Hence Horace, with a double allusion to both fable and physical phenomena, calls the stars in question "*tristes Hyadas.*" (*Od.*, 1, 3, 14.)—The Roman writers sometimes call these stars by the name of *Sucula*, "little swine," for which singularly inelegant epithet Pliny assigns as singular a derivation. According to this writer, the Roman farmers mistook the etymology of the Greek name Hyades, and deduced it, not from *ῥω*, "to rain," but from *ῥς*, gen. *ῥός*, "a sow." (*Plin.*, 18, 26.) The reason for this amusing derivation appears to have been, because the continual rains at the setting of the Hyades made the roads so miry, that these stars seemed to delight in dirt like swine! Isidorus derives the term *Sucula* from *succus*, in the sense of "moisture" or "wet" ("a *succo et pluvii*."—*Isid.*, *Orig.*, 3, 70), an etymology which has found its way into many modern works. Some grammarians, again, sought to derive the name Hyades from the Greek *Υ* (upsilon), in consequence of the resemblance which the cluster of stars bears to that letter. (*Schol. ul. Il.*, *l. c.*)—The Hyades, in the celestial sphere, are at the head of the Bull (*ἐπὶ τοῦ βουκράνου*). The number of the stars composing the constellation are variously given. Thales comprehended under this name only the two stars α and ϵ ; Euripides, in his *Phæthon*, made the number to be three; Achæus gave four; Hesiod five; and Pherecydes, who must have included the horns of the Bull, numbered seven. (*Schol. ad Arat.*, *l. c.*) The scholiast on the *Iliad*, however, gives only the names of six Hyades, when quoting from the same Pherecydes, the name of one having probably been dropped by him; for the Atlantides were commonly reckoned as amounting to fourteen, namely, seven Pleiades and seven Hyades.—The names of the Hyades, as given by Hyginus, are evidently in some degree corrupted, and in emending the text we ought to employ the scholia on Homer (*Il.*, 18, 486), especially those from the Venetian MS., together with the remarks of Valckenauer (*ad Ammon.*, p. 207, *seqq.*—*Buttmann*, *Bemerk. zu Ideler*, p. 315.)

HYAMPRIA, one of the two lofty rocks which rose perpendicularly from behind Delphi, and obtained for Parnassus the epithet of *διόρυφος*, or the two-headed. (*Eurip.*, *Phæn.*, 231.—*Herodot.*, 8, 39.) The other was called Naupleia. It was from these elevated crags that culprits and sacrilegious criminals were

hurled by the Delphians, and in this manner the unfortunate Æsop was barbarously murdered. (*Plut., de Ser. Num. Vind.*—*Diod. Sic.*, 16, 523.—*Cramer's Anc. Greece*, vol. 2, p. 170.)

HYAMPOLIS, a town in the northern extremity of Phocis, and one of the most ancient places in that territory. It was said to have been founded by the Hyantes, one of the earliest tribes of Greece. (*Strabo*, 423.) Herodotus places Hyampolis near a defile leading towards Thermopylæ, where, as he reports, the Phocians gained a victory over the Thessalians, who had invaded their territory. (*Herod.*, 8, 28.) He informs us elsewhere that it was afterward taken and destroyed by the Persians. (*Herodot.*, 8, 33.) Diodorus states, that the Boeotians defeated the Phocians on one occasion near Hyampolis, and Xenophon affirms that its citadel was taken by Jason of Pheræ. (*Diod. Sic.*, 6, 4.) The whole town was afterward destroyed by Philip and the Amphictyons. (*Pausan.*, 10, 37.) Both Pliny (4, 7) and Ptolemy (p. 87) erroneously ascribe this ancient city to Bœotia. The ruins of Hyampolis may be seen near the village of Bogdana, upon a little eminence at the junction of three valleys. (*Gell's Ilin.*, p. 223.—*Cramer's Anc. Greece*, vol. 2, p. 184, *seqq.*)

HYANTES, the name of an ancient people of Bœotia, who succeeded the Ectenes in the possession of that country when the latter were exterminated by a plague. (*Strabo*, 401.—*Pausan.*, 9, 5.) Ovid applies the epithet *Hyantius* to Actæon, as equivalent to *Boeotus*. (*Met.*, 3, 147.)

HYANTIS, an ancient name of Bœotia, from the Hyantes. (*Vid.* Hyantes.)

HYAS, the son of Atlas, and brother of the Atlantes. He was extremely fond of hunting, and lost his life in an encounter with a bear or lion, or, as Timæus relates, from the bite of an asp. (*Hygin. fab.*, 192.—*Munck.*, *ad loc.*—*Vid.* Hyades.)

HYBLA, I. the name of three towns in Sicily; Hybla Major, Minor, and Parva. The first was situate near the south of Mount Ætna, on a hill of the same name with the city; near it ran the river Simæthus. This was the Hybla so famous in antiquity for its honey and bees. (*Steph. Byz.*, s. v.—*Pausan.*, 5, 23.)—II. The second place was called also Heraia; it was situate in the southern part of Sicily, and is placed in the itinerary of Antonine on the route from Agrigentum to Syracuse. On D'Anville's map it is north of Camarina. This is now *Calata Gironc.* (*Lic.*, 24, 30.—*Steph. Byz.*, s. v.)—III. The last place was a maritime one on the eastern coast of Sicily, above Syracuse. It was also denominated Galaotis, but more frequently Megara, whence the gulf to the south of it was called Megarensis Sinus. (*Plin.*, 3, 8.—*Diod. Sic.*, 4, 80.)

HYDASPES, a river of India, and one of the tributaries of the Indus. D'Anville makes it to be the modern *Shantrou*; Mannert is in favour of the *Behut*. The true modern name, however, is the *Ilum* or *Ithum*. As regards the variety of appellations given to this stream in both ancient and modern writers (no less than twelve in number), consult *Vincent, Voyage of Nearchus*, p. 91, *seq.*—*Ancient Commerce*, vol. 1, p. 91.

HYDRA, a celebrated monster, which infested the Lernean marsh and its vicinity. It was destroyed by Hercules in his second labour. (*Vid.* Hercules, where a full account is given.)

HYDRAOTES, a tributary to the Indus, now the *Raree*. Strabo and Quintus Curtius call it the Hyarotes, while Ptolemy styles it the Rhoadis. The Sanscrit name is *Iravutti*. (Consult *Vincent, Voyage of Nearchus*, p. 98.—*Ancient Commerce*, vol. 1, p. 98.)

HYDROPHORIA, a festival observed at Athens, so called ἀπὸ τοῦ ὀρεῖν ὕδωρ, *from carrying water*. It was celebrated in commemoration of those who perished in the deluge. (*Plut., Vit. Syll.*—*Suid.*, s. v.—*Theo-*

pomp., *ap. Schol. ad Arist., Acharn.*, 1075.) There was also another festival of the same name, which is said to have originated in the island of Ægina, when the Argonauts landed there for water. A friendly contest took place between the crews of the different vessels, as to who should display the most speed in carrying water to the ships. (*Apollod.*, 1, 9, 26.—*Apoll. Rh.*, 4, 1766.—*Müller, Ægnetica*, p. 24, π. v.)

HYDRUNTUM and HYDRUS (Ἰδρυόν, gen. Ἰδρυόντος), I. a port and city of Calabria, 50 miles south of Brundisium. It was a place of some note as early as the time of Scyllax, who names it in his *Periplus* (p. 5). It was deemed the nearest point of Italy to Greece, the distance being only 50 miles, and the passage might be effected in five hours. (*Cic., Ep. ad Att.*, 15, 21.) This circumstance led Pyrrhus, as it is said, to form the project of uniting the two coasts by a bridge thrown across from Hydruntum to Apollonia. (*Plin.*, 3, 11.) In Strabo's time, Hydruntum was only a small town, though its harbour was still frequented. (*Strabo*, 281.) Stephanus Byzantinus records a tradition, from which it would appear that Hydruntum was founded by some Cretans. The modern name is *Otranto*. (*Cramer's Anc. Italy*, vol. 2, p. 309.)—II. A small river running close to Hydruntum. It is now the *Idro*. (*Lucan.*, 5, 374.)

HYGEIA, the goddess of health, daughter of Æsculapius, held in great veneration among the ancients. She was commonly worshipped in the same temple with Æsculapius. Her statue, moreover, was often placed by the side of that of Apollo, who then derived from her a surname. So also, on the Acropolis at Athens, her statue stood near that of Minerva, who was hence called Minerva-Hygeia. (*Pausan.*, 1, 23.)—Hygeia was usually represented holding a cup in one hand, and a serpent in the other, which twines round her arm and drinks from the cup. The long robe in which she is attired, as well as the serpent which she holds, sufficiently distinguish her from Hebe, who is also represented holding a cup. (*Vollmer, Wörterb. der Mythol.*, p. 899.)

HYGINUS CAIUS JULIUS (written also Higinus, Hygenus, Yginus, or Iginus), a celebrated grammarian. He is mentioned by Suetonius as a native of Spain, though some have supposed him an Alexandrian, and to have been brought to Rome after the capture of that city by Cæsar. Hyginus was a freedman of Augustus Cæsar's, and was placed by that emperor over the library on the Palatine Hill. He also gave instruction to numerous pupils. Hyginus was intimately acquainted with Ovid and other literary characters of the day, and was said to be the imitator of Cornelius Alexander, a Greek grammarian. Some suppose him to have been the faithless friend of whom Ovid complains in his *Ibis*. His works, which were numerous, are frequently quoted by the ancients with great respect. The principal ones appear to have been: 1. *De Urbibus Italicis*: 2. *De Trojanis Familiis*: 3. *De Claris Viris*: 4. *De Proprietatibus Deorum*: 5. *De Dis Penatibus*: 6. A Commentary on Virgil: 7. A Treatise on Agriculture.—These works are all lost. Those which are extant, and are ascribed to Hyginus, were probably written by another individual of the same name. These are: 1. *Fabularum Liber*, a collection of 277 fables, taken for the most part from Grecian sources, and embracing all the most important legends of antiquity. It is written in a very inferior style, but is still of great importance for the mythologist. 2. *Poeticôn Astronomicôn*. This, like the previous work, is in prose, and consists of four books, being partly astronomical and mathematical, partly mythological and philosophical in its character, since it gives the origin of the Catasterisms according to the legends of the poets. The poem of the work is addressed to a certain Quintus Fabius, in whom some, without any sufficient reason whatsoever, pre-

tend to recognise Q. Fabius Quintilianus. This work also is written in a careless and inferior manner, and yet is very important for obtaining a knowledge of ancient astronomy, and for a correct understanding of the poets. The principal source, whence the writer obtained his materials, was, according to Salmassius (*de Ann. Climact.*, p. 594), the Greek *Sphæra* (Σφαῖρα) of Nigidius; but, according to Scaliger (*Jos. Scal. ad Manif.*, 1, p. 33.—*Id.*, ad *Euseb.*, p. 10), he drew them from Eratosthenes and others.—An examination of the style and character of these two works will leave no doubt on our mind that the author of them was not the celebrated grammarian of the Augustan age; but that these were written at a later period. Many regard the *Fables* as a selection made from several earlier works, by a grammarian of a later day, probably Avianus, whose name Barth thought he had discovered in one of the MSS. (*Barth, Advers.*, 10, 12.—*Id.*, 10, 20.) Scheffer places the writer, about whose name, Hyginus, there cannot well be any doubt, in the age of the Antonines. (*De Hygini Script. fabul. ætate atque stylo.*) Muncker thinks that many parts are taken from the earlier Hyginus, and that the rest is the production of a very inferior writer. (*Munck., Pref. ad Hygin.*, tttt, seqq.) N. Heinsius makes the compiler of the work to have lived under Theodosius the younger; and Van Stavere regards the collection as having been made at a late period, with the name of an ancient grammarian prefixed to it. (*Pref. ad Auet. Mythogr., sub fin.*) Niebuhr, finally, thinks that a mythological fragment found by him (*Fragmentum de rebus Thebanis mythologicis*) formed part of the work out of which, by the aid of numerous additions, the two productions that now go by the name of Hyginus appear to have originated. (*Cic., Orat. pro Rabir.*, &c., *Fragm.*, p. 105, seqq., *Rom.*, 1820, 8vo.) The best editions of Hyginus are: that of Muncker, *Amst.*, 1681, 2 vols. 8vo. and that of Van Stavere, *Lugd. Bat., et Amst.*, 1742, 4to. (*Bähr, Gesch. Rom. Lit.*, vol. 1, p. 712, seqq.)

HYLACTOR, one of Actæon's dogs, named from his barking (ὕλακτω, "to bark").

HYLAS, I. a son of Theodamas, king of Mysia, and of Menodice, who accompanied Hercules in the Argo. On the coast of Mysia the Argonauts stopped to obtain a supply of water, and Hylas having gone for some, was seized and kept by the nymphs of the stream into which he dipped his urn. Hercules went in quest of him, and in the midst of his unavailing search was left behind by the Argo. (*Apollod.*, 1, 9, 19.—*Apoll. Rh.*, 1, 1207, seq.—*Munck., ad Anton. Lib.*, 26.—*Sturz, ad Hellenic. fragm.*, p. 111.)—It was an ancient custom of the Bithynians to lament in the burning days of midsummer, and call out of the well, into which they fabled he had fallen, a god named Hylas. The Maryandinians lamented and sought Bormos, and the Phrygians Lityorses, with dirges, in a similar manner. This usage of the Bithynians was adopted into their mythology by the Greek inhabitants of Cius, near which the scene of the fable was laid, and it was connected in the manner just narrated with the Argonautic expeditions, and the history of Hercules. (*Müller, Orehom.*, p. 293.—*Id.*, *Dorians*, vol. 1, p. 367, 457.)—II. A river of Bithynia, flowing into the Sinus Cianus, near the town of Cius, and to the southwest of the lake Ascianus and the city of Nicæa. The inhabitants of Cius celebrated yearly a festival in honour of Hylas, who was carried off by the nymphs, as is above mentioned, in the neighbourhood of this river. The river was named after him. At this celebration it was usual to call with loud cries upon Hylas. (*Plin.*, 5, 32.) Consult remarks under the article Hylas, I.

HYLLUS, I. a son of Hercules and Dejanira, who, after his father's death, married Iole. According to the common legend, he was persecuted, as his father had been, by Eurystheus, and obliged to fly from the

Peloponnesus. The Athenians gave a kind reception to Hyllus and the rest of the Heraclidæ, and marched against Eurystheus. Hyllus obtained a victory over his enemies, killed with his own hand Eurystheus, and sent his head to Alcmena, his grandmother. Some time after he attempted to recover the Peloponnesus with the other Heraclidæ, but was killed in single combat by Echemus, king of Arcadia. (*Vid. Heraclidæ, Hercules.*—*Herodot.*, 7, 204, &c.—*Ovid, Met.*, 9, 279.—II. A river of Lydia, which falls into the Hermus. It is mentioned by Homer (*Il.*, 20, 392). Strabo states that it was named in his time the Phrygius. Pliny, however, distinguishes between the Hyllus and the Phryx or Phrygius (5, 29); and, if he is correct, it is probable that, in his opinion, the Hyllus was the river of Thyatira; but the Phrygius, the larger branch, which comes from the northeast, and rises in the hills of the ancient Phrygia Epictetus. (*Cramer's Asia Minor*, vol. 1, p. 428.)

HYMENÆUS and HYMEN, the god of marriage, was said to be the offspring of the muse Urania, but the name of his sire was unknown. (*Catullus*, 61, 2.—*Nonnus*, 33, 67.) Those who take a less sublime view of the sanctity of marriage, give him Bacchus and Venus for parents. (*Servius, ad Æn.*, 4, 127.) He was invoked at marriage festivals. (*Eurip., Troad.*, 310.—*Catull.*, l. c.) By the Latin poets he is presented to us arrayed in a yellow robe, his temples wreathed with the fragrant plant amaracus, his locks dropping perfume, and the nuptial torch in his hand. (*Catull.*, l. c.—*Ovid, Her.*, 20, 157, seqq.—*Id.*, *Met.*, 10, 1, seq.)

HYMETTUS, a mountain of Attica, southeast of Athens, and celebrated for its excellent honey. According to Hobhouse, Hymettus approaches to within three miles of Athens, and is divided into two ranges; the first running from east-northeast to southwest, and the second forming an obtuse angle with the first, and having a direction from west-northwest to east-southeast. One of these summits was named Hymettus, the other Anydros, or the dry Hymettus. (*Theophr., de Sign. Pl.*, p. 419, *Heins.*) The first is now called *Trelo Vouni*, the second *Lambra Vouni*. The modern name of Hymettus (*Trelo Vouni*) means "the Mad Mountain." This singular appellation is accounted for, from the circumstance of its having been translated from the Italian *Monte Matto*, which is nothing else than an unmeaning corruption of Mons Hymettus. The same writer states, that Hymettus is neither a high nor a picturesque mountain, but a flat ridge of bare rocks. The sides about half way up are covered with brown shrubs and heath, whose flowers scent the air with delicious perfume. The honey of Hymettus is still held in high repute at Athens, being distinguished by a superior flavour and a peculiar aromatic odour, which plants in this vicinity also possess. (*Hobhouse's Journey*, vol. 1, p. 320.) Herodotus affirms that the Pelasgi, who, in the course of their wanderings, had settled in Attica, occupied a district situated under Mount Hymettus: from this, however, they were expelled in consequence, as Hecataeus affirmed, of the jealousy entertained by the Athenians of the superior skill exhibited by these strangers in the culture of land (6, 137). Some ruins, indicative of the site of an ancient town near the monastery of *Syriani*, at the foot of *Trelo Vouni*, have been thought to correspond with this old settlement of the Pelasgi, apparently called Larissa. (*Strabo*, p. 440.—*Gell's Itinerary*, p. 94.—*Kruse, Hellas*, vol. 1, p. 294.—*Cramer's Anc. Greece*, vol. 2, p. 391.)

HYPÂNIS, I. a river of European Scythia, now called *Bog*, which falls into the Borysthenes, after a south-east course of about 400 miles, and with it into the Euxine. (*Herod.*, 4, 52.)—II. A river of Asia, rising in Mount Caucasus, and falling into the Palus Mæotis. (*Vid. Vardanus.*)

HYΠATA, the principal town of the Ænians, in Thessaly, on the river Sperchius. Livy mentions it as being in the possession of the Ætolians, and as a place where their national council was frequently convened (36, 14). Its women were celebrated for their skill in magic. (*Apul. Met.*, 1, p. 104.—*Theophr.*, *Hist. Plant.*, 9, 2.) Hypata was still a city of note in the time of Hierocles (p. 642). Its ruins are to be seen on the site called *Castritza*, near the modern *Patragick*, which represents probably the *Nes Patrae* of the Byzantine historians. (*Nicéphorus Gregor.*, 4, p. 67.—*Cramer's Ancient Greece*, vol. 1, p. 447.)

HYPATIA, a female mathematician of Alexandria, daughter of Theon, and still more celebrated than her father. She was born about the end of the fourth century. Endowed with a rare penetration of mind, she joined to this so great a degree of ardour in the path of self-instruction, as to consecrate to study her entire days and a large portion of the night. She applied herself in particular to the philosophy of Plato, whose sentiments she preferred to those of Aristotle. Following the example of these great men, she resolved to add to her information by travelling; and, having reached Athens, attended there the lectures of the ablest instructors. On her return to her native city, she was invited by the magistrates to give lessons in philosophy, and Alexandria beheld a female succeed to that long line of illustrious teachers which had rendered its school one of the most celebrated in the world. She was an Eclectic; but the exact sciences formed the basis of all her instructions, and she applied their demonstrations to the principles of the speculative sciences. Hence she was the first who introduced a rigorous method into the teaching of philosophy. She numbered among her disciples many celebrated men, among others Synesius, afterward bishop of Ptolemais, who preserved during his whole life the most friendly feelings towards her, although she constantly refused to become a convert to Christianity. Hypatia united to the endowments of mind many of the attractions and all the virtues of her sex. Her dress was remarkable for its extreme simplicity; her conduct was always above suspicion; and she knew well how to restrain within the bounds of respect those of her auditors who felt the influence of her personal charms. All idea of marriage was constantly rejected by her as threatening to interfere with her devotion to her favourite studies. Merit so rare, and qualities of so high an order, could not fail to excite jealousy. Orestes, governor of Alexandria, admired the talents of Hypatia, and frequently had recourse to her for advice. He was desirous of repressing the too ardent zeal of St. Cyrill, who saw in Hypatia one of the principal supports of paganism. The partisans of the bishop, on their side, beheld in the measures of the governor the result of the counsels of Hypatia; the most seditious of their number, having at their head an ecclesiastic named Peter, seized upon Hypatia as she was proceeding to her school, forced her to descend from her chariot, and dragged her into a neighbouring church, where, stripped of her vestments, she was put to death by her brutal foes. Her body was then torn to pieces, and the palpitating members were dragged through the streets and finally consigned to the flames. This deplorable event took place in the month of March, A.D. 415.—The works of Hypatia were lost in the burning of the Alexandrian library. In the number of these were, a Commentary on Diophantus, an Astronomical Canon, and a Commentary on the Conics of Apollonius of Perga. The very names of her other productions are lost. The letter published by Lupus, in his *Collect. Var. Epist.*, is evidently supposititious, since it contains mention of the condemnation of Nestorius, which was posterior to the death of Hypatia. In the works of Synesius,

published by Petavius (1633, fol.), are found seven of the letters written by that prelate to Hypatia; but we have to regret the loss of her answers, which would have thrown much light on the subject matter of the epistles in question. The Greek Anthology contains an epigram in praise of Hypatia, attributed to Paulus Silentiarius. For farther information relative to this celebrated female, consult Menage, *Hist. Mulier. Philosophor.*, p. 52, seqq.; a *Dissertation of Desvignoles*, in the *Bibl. German.*, vol. 3; and a *Letter of the Abbé Goujet*, in the fifth and sixth volumes of the *Continuation des Memoires de Literature*, by Desmolets. Socrates Scholasticus also gives us some account of her method of instruction. (*Hist. Eccles.*, 7, 15.)

HYPERBORÆI, a name given by the ancient writers to a nation supposed to dwell in a remote quarter of the world, beyond the wind *Boreas*, or the region where, in the popular belief, this wind was supposed to begin to blow. Hence they were thought to live in a delightful climate, and in the enjoyment of every blessing, and to attain also to an incredible age, even to a thousand years. (*Pind.*, *Ol.*, 3, 55.—*Pherecrates*, *ap. Schol. ad Pind.*, l. c.)—The term Hyperborean has given rise to various opinions. Pelloutier makes the people in question to have been the Celtic tribes near the Alps and Danube. Pliny places them beyond the Rhipæan mountains and the northeast wind, "*ultra aquilonis initia*." Mention is made of them in several passages of Pindar; and the scholiast on the 8th Olympiad, p. 63, observes, *ἐν τῇ ὑπερβορείῳ, ἐνθα Ἰστρος τὰς πηγὰς ἔχει*, to the Hyperboreans, where the Ister has its rise. Protarchus, who is quoted by Siephanus of Byzantium under the word ὑπερβορεῖαι, states, that the Alps and Rhipæan Mountains were the same, and that all the nations dwelling at the foot of this chain were called Hyperboreans. It would appear from these and other authorities (an enumeration of most of which is made by Spanheim, *ad Callim.*, *Hymn. in Del.*, v. 281), that the term Hyperborean was applied by the ancient writers to every nation situated much to the north. But whence arise the highly coloured descriptions which the ancients have left us of these same Hyperboreans? It surely could not be, that rude and barbarous tribes gave occasion to those beautiful pictures of human felicity on which the poets of former days delighted to dwell. "On sweet and fragrant herbs they feed, amid verdant and grassy pastures, and drink ambrosial dew, divine potation; all resplendent alike in coeval youth, a placid serenity for ever smiles on their brows, and lightens in their eyes; the consequence of a just temperament of mind and disposition, both in the parents and in the sons, disposing them to do what is just and to speak what is wise. Neither diseases nor wasting old age infest this holy people; but, without labour, without war, they continue to live happily, and to escape the vengeance of the cruel Nemesis." Thus sang Orpheus and Pindar. If an opinion might be ventured, it would be this, that all the traditions respecting the Hyperborean race which are found scattered among the works of the ancient writers, point to an early and central seat of civilization, whence learning and the arts of social life diverged over the world. Shall we place this seat of primitive refinement in the north? But, it may be replied, the earliest historical accounts which we have of those regions represent them as plunged in the deepest barbarism. The answer is an easy one. Ages of refinement may have rolled away, and been succeeded by ages of ignorance. Who will venture to say, that the northern regions of Europe must not, at an early period, have enjoyed a milder climate, when the vast quantities of amber found in the environs of the Baltic clearly show that the forests, now imbedded in the earth, in which amber is produced, could not have yielded this substance if a very elevated temperature had not prevailed there. We will abandon, however, this argu-

ment, strong as it is, and pursue the inquiry on other and clearer grounds. The term Hyperborean means a nation or people who dwell beyond the wind Boreas. The name Boreas is properly applied by the Greeks to the wind which blows from the north-northeast (*Pas-sor, Lex., s. v.*), and is the same with the Aquilo of the Latins. Of this latter wind Pliny remarks, "*flat inter Septentrionem et Ortum solstitialem*;" and Forcellini (*Lex. Tot. Lat.*) observes, that it is often confounded with, and mistaken for, the north. The term Hyperborei, then, if we consider its true meaning, refers to a people dwelling far to the northeast of the Greeks, and will lead us at once to the plains of central Asia, the cradle of our race. Here it was that man existed in primeval virtue and happiness, and here were enjoyed those blessings of existence, the remembrance of which was carried, by the various tribes that successively migrated from this common home, into every quarter of the earth. Hence it is that, even among the Oriental nations, so many traces are found of their origin being derived from some country to the north. Adelung has adopted the opinion which assigns central Asia as the original seat of the human species, and has mentioned a variety of considerations in support of it. He observes, that the central plains of Asia being the highest region in the globe, must have been the first to emerge from the universal ocean, and, therefore, first became capable of affording a habitable dwelling to terrestrial animals and to the human species: hence, as the subsiding waters gradually gave up the lower regions to be the abode of life, they may have descended, and spread themselves successively over their new acquisitions. The desert of Kobi, which is the summit of the central steppe, is the most elevated ridge in the globe. From its vicinity the great rivers of Asia take their rise, and flow towards the four cardinal points. The Selinga, the Ob, the Irtysh, the Lena, and the Jenisei, send their water to the Frozen Ocean; the Iaik flows towards the setting sun; the Amu and Hoang-ho, and the Indus, Ganges, and Burrampooter, towards the east and south. On the declivities of these high lands are the plains of Thibet, lower than the frozen region of Kobi, where many fertile tracts are well fitted to become the early seat of animated nature. Here are found not only the vine, the olive, rice, the legumina, and other plants, on which man has in all ages depended, in a great measure, for his sustenance, but all those animals run wild upon these mountains, which he has tamed and led with him over the whole earth; as the ox, the horse, the ass, the sheep, the goat, the camel, the hog, the dog, the cat, and even the gentle reindeer, which accompanies him to the icy polar tracts. In Cashmere, plants, animals, and men exist in the greatest physical perfection. A number of arguments are suggested in favour of this opinion. Bailly has referred the origin of the arts and sciences, of astronomy and of the old lunar zodiac, as well as of the discovery of the planets, to the most northerly tract of Asia. His attachment to Buffon's hypothesis of the central fire, and the gradual refrigeration of the earth, has driven him, indeed, to the banks of the Frozen Ocean; but his arguments apply more naturally to the centre of Asia. In our Scriptures, moreover, the second origin of mankind is referred to a mountainous region eastward of Shinar, and the ancient books of the Hindoos fix the cradle of our race in the same quarter. The Hindu paradise is on Mount Meru, which is on the confines of Cashmere and Thibet. (*Müller, Univ. Hist., vol. 4, p. 19, not.*)

HYPERĒA, a fountain of Thessaly, placed by some in the vicinity of Argos Pelasgicum, while others think that it was near Pheræ. (*Strabo, 432.—Heyne, ad Hom., Il., 6, 457.—Cramer's Anc. Greece, vol. 1, p. 395.*)

HYPERĒIA, the more ancient name of Ægira in

Achaia. Pausanias (7, 26) relates a story which accounts for the subsequent change of name. The Ionians, who had colonized the city, being attacked by a superior number of Sicyonians, collected a great many goats, and, having tied fagots to their horns, set them on fire, when the enemy, conceiving the besieged to have received re-enforcements, hastily withdrew. From these goats, ἀπὸ τῶν αἰγῶν, Hyperesia took the name of Ægira, though its former appellation, as Pausanias remarks, never fell into total disuse. (*Pausan., l. c.—Cramer's Anc. Greece, vol. 3, p. 57, seq.*)

HYPERĒIDES, a celebrated Athenian orator, contemporary with Demosthenes. After having completed his education, he employed himself in writing orations and pleadings for others, until he was of an age that qualified him for the practice of the bar. In entering on his political career, he attached himself, like Demosthenes, to the party opposed to Philip, king of Macedonia, and was sent, along with Ephialtes, on a secret mission to the court of Persia, the territories of which were equally threatened by Philip, to procure aid against that ambitious and powerful prince. When Eubœa was in fear of an invasion by Philip, and while the Athenians were wasting their time in idle deliberations, Hyperides prevailed upon the richer citizens to unite with him in immediately equipping forty vessels, two of which were armed at his own expense. He was engaged also in the expedition which the Athenians sent to the aid of Byzantium, under the orders of Phocion. When news reached Athens of the disastrous battle of Chæronea, Hyperides mounted the tribune, and proposed that their wives, children, and gods should be placed for safe keeping in the Piræus; that the exiles should be recalled; that their rights should be restored to those citizens who had been deprived of them; that the sojourners should be admitted to the rank of citizens; that liberty should be granted to the slaves; and that all classes should take up arms in defence of their country. These measures were adopted, and to them the republic owed the honourable peace which it subsequently obtained. When this danger was passed, Hyperides was attacked by Aristogiton, who accused him of having violated, by the decree just mentioned, all the fundamental laws of the republic. Hyperides defended himself in a celebrated speech, in which he declared, that, dazzled by the Macedonian arms, he was unable to see the laws; and he gained his cause. He was one of the two orators whom Alexander wished to have delivered into his hands after the destruction of Thebes; but the anger of the monarch was appeased by Demades, and Hyperides remained in his country. He was one of the small number whom the gold of Harpalus could not gain over; and hence it is that he became the accuser of Demosthenes, who had suffered himself to be corrupted. We find Hyperides subsequently pronouncing the funeral oration over Leosthenes, who fell in the Lamiae war, and which the ancients considered one of the best of its kind. After the defeat of his countrymen he was exiled from Athens. He retired first to Ægina, where he became reconciled to Demosthenes. Pursued, however, by the Macedonians, he took refuge in the temple of Neptune at Hermione. From this asylum he was torn by Archias, who was charged with the infamous mission of delivering up to Antipater the Athenian orators by whom his schemes had been opposed. Antipater caused his tongue to be cut out, and put him to death, B.C. 322. His body, which had been left without burial, was carried off by his relatives, and interred in Attica.—Hyperides is regarded as the third in order of the Athenian orators, or the first after Demosthenes and Æschines. Cicero, however, places him immediately after Demosthenes, and almost on the same level. Dionysius of Halicarnassus praises the strength, the simplicity, the order, and the method of his orations (*ed. Reiske, vol. 2, p.*

643). Dio Chrysostom appears to have given him the preference over all orators with the exception of Eschines. (*Or.*, 18, ed. Reiske, p. 372.) Unfortunately, there exists no oration which we can with certainty ascribe to Hyperides, and by which we might be enabled to form for ourselves some idea of his merits and style. Libanius believes him to have been the author of a harangue which is found among those of Demosthenes, and entitled *Περὶ τῶν πρὸς Ἀλεξάνδρον συνθήκων*, "On the conventions with Alexander." Reiske is incorrect in assigning to him one of the two orations against Aristogiton, found among the works of Demosthenes. (*Schöll, Histoire de la Littérature Gr.*, vol. 2, p. 220.)

HYPERION, a son of Cœlus and Terra, who married Thea, by whom he had Aurora, the sun and moon. (*Theog.*, 371, seq.) In Homer, Hyperion is identical with the Sun. (*Il.*, 19, 398.—Compare, however, *Il.*, 6, 513.) It is very probable that Ὑπερίων is the contraction of Ὑπεριονίων. (*Passow, Lex., s. v.—Völkner, Hom. Geogr.*, p. 26.) The interpretation given by the ancients to the name, as denoting "him that moves above," seems liable to little objection. Hermann renders it *Tollo*, as a substantive: "*Post hos videmus, Ὑπεριονία et Ἰαπερόν, Tollimur et Mersimur.*" (*Opusc.*, vol. 2, p. 175.—*Keightley's Mythology*, p. 52, seq.)

HYPERNĒSTRA, one of the fifty daughters of Danaus, who married Lynceus, son of Ægyptus. She disobeyed her father's bloody commands, who had ordered her to murder her husband the first night of her nuptials, and suffered Lynceus to escape unhurt. Her father, at first, in his anger at her disobedience, put her into close confinement. Relenting, however, after some time, he gave his consent to her union with Lynceus. (*Vid. Danaïdes.*)

HYPHĒSIS, a tributary of the Indus, now the *Beypashah*, or, as it is more commonly written, *Beyah*. The ancient name is variously given. In Arrian it is Ὑπασσις and Ὑφασσις; in Diodorus (17, 93) and in Strabo, Ὑπανις (Hypanis). Pliny (6, 17) gives the form Hypasis. This river was the limit of Alexander's conquests, and he erected altars on its banks in memory of his expedition. Some writers erroneously give the modern name of the Hyphasis as the *Setledje*. (*Vincent's Voyage of Nearchus*, p. 101.)

HYPSA, now *Belici*, a river of Sicily falling into the Crimæus. (*Sil. Ital.*, 14, 228.)

HYPSICLES, an astronomer of Alexandria, who flourished under Ptolemy Physcon, about 146 B.C. He is considered by some to have been the author of the 14th and 15th books which are appended to Euclid's Elements; though others strenuously deny this. No one, however, disputes his claim to a small work entitled *Ἀναφορικὴ*, in which he gives a method, far from exact, of calculating the risings of each sign or portion of the ecliptic. Hypsicles was nearly contemporary with Hipparchus, who was the first that gave an exact solution to this problem. He may have been ignorant of the discoveries of Hipparchus, and this may serve to excuse him; but it is hard to conceive why his treatise called *Anaphorice*, to which we have just alluded, should have been included in the collection entitled the "Little Astronomer," which formed a text-book in the Alexandrian schools preparatory to the reading of the astronomy of Ptolemy. It was idle to show the pupil a very vicious solution of an easy problem, which they would subsequently find solved in the work itself of Ptolemy. (*Biographie Univ.*, vol. 21, p. 137.)

HYPSIPYLE, daughter of Thoas and queen of Lemnos. The Lemnian women, it is said, having offended Venus, the goddess, in revenge, caused them to become personally disagreeable to their husbands, so that the latter preferred the society of their female captives. Incensed at this neglect, the Lemnian wives murdered

their husbands. Hypsipyle alone saved her father, whom she kept concealed. About a twelvemonth after this event, the Argonauts touched at Lemnos. The women, taking them for their enemies the Thracians, came down in arms to oppose their landing; but, on ascertaining who they were, they retired and held a council, in which, on the advice of Hypsipyle's nurse, it was decided that they should invite them to land, and take this occasion of having offspring. The Argonauts accepted the invitation, Hercules alone refusing to quit the vessel. They gave themselves up to joy and festivity, till, on the remonstrance of that hero, they tore themselves away from the Lemnian fair ones, and once more handled their oars. When her countrywomen subsequently found that Hypsipyle had saved the life of her father, they sold her into slavery, and she fell into the hands of Lycurgus, king of Nemea, who made her nurse to his infant son Opheltes. As the army of Adrastus was on its march against Thebes, it came to Nemea, and, being in want of water, Hypsipyle undertook to guide them to a spring. She left the child Opheltes lying on the grass, where a serpent found and killed him. Amphiaraus augured ill-luck from this event, and called the child Archemorus (*Fate-Beginner*), as indicative of the evils which were to befall the chiefs. They then celebrated funeral games in his honour. Lycurgus endeavoured to avenge the death of his child; but Hypsipyle was screened from his resentment by Adrastus and the other chieftains. (*Apollod.*, 1, 9, 17.—*Id.*, 3, 6, 4.—*Hygin., fab.*, 15, 74, &c.)

HYRCANIA, a large country of Asia, situate to the south of the eastern part of the Caspian Sea. This country was mountainous, covered with forests, and inaccessible to cavalry. Under Alexander's successors, Hyrcania was restricted to narrow limits; Nisra and Margiana, which were previously portions of it, being converted into a separate province; during the Parthian rule, these two became an appendage to Parthiæ; for, under the feeble Seleuco-Syrian kings, the northern nomades, called the Parthians, had pressed onward and founded a large kingdom. Hyrcania, now restricted, contained the north of *Comis*, the east of *Masanderan*, the country now called *Corean* or *Jorjan* (*Dshirdshian*), and the west of the province of *Chorasan*. The name Hyrcania is said to denote a waste and uncultivated country. (*Wahl, Vorder und Mittel Asien*, p. 551.)

HYRCANUM MARE, the southeastern part of the Caspian, lying along the shores of Hyrcania. (*Vid. Caspium Mare.*)

HYRCANUS, I. John, high-priest and prince of the Jewish nation, succeeded his father Simon Maccabeus, who had been treacherously slain by the orders of Ptolemæus, his son-in-law. Hyrcanus commenced his reign by punishing the assassin, whereupon Ptolemæus applied for aid to Antiochus, king of Syria, who laid siege to Jerusalem and compelled Hyrcanus to pay him tribute. At the death of Antiochus, however, he profited by the troubles of Syria to effect the deliverance of his country from this foreign yoke. He took several cities in Judæa, subjugated the Idumæans, demolished the temple at Gerazim, and made himself master of Samaria. He died not long after, B.C. 106.—II. The eldest son of Alexander I., succeeded his father in the high-priesthood, B.C. 78. Aristobulus, his brother, disputed the crown with him, on the death of Alexander, their mother, and proved victorious, B.C. 66. Hyrcanus, reduced to the simple office of the priesthood, had recourse to Aretas, king of Arabia, who besieged Aristobulus in the temple. Scaurus, the lieutenant of Pompey, however, whom Aristobulus had engaged in his interests, compelled Aretas to raise the siege, and Hyrcanus was forced to content himself with the office of high-priest. He was put to death by Herod, at the age of 80 years, B.C. 30, on his at-

tempting to take refuge once more among the Arabians. (*Jahn's Hist. Hebræo Com.*, p. 307 and 345.)

HYREIUM, a town of Apulia, also called Uria. (*Vid. Uria*.)

HYRĪA, I. a city of Apulia, in the more northern part of the Iapygian peninsula, between Brundisium and Tarentum. It is now *Oria*, and would seem to have been a place of great antiquity, since its foundation is ascribed by Herodotus to some Cretans, that formed part of an expedition to avenge the death of Minos, who had perished in Sicily, whither he went in pursuit of Dædalus. (*Herod.*, 7, 171.) Strabo, in his description of Iapygia, does not fail to cite this passage of Herodotus, but he seems undetermined whether to recognise the town founded by the Cretans in that of Thyraï or in that of Veretum. By the first, which he mentions as placed in the centre of the isthmus, and formerly the capital of the country, he seems to designate *Oria* (*Strab.*, 282). It is probable the word Thyraï is corrupt; for elsewhere Strabo calls it Uria, and describes it as standing on the Apian Way, between Brundisium and Tarentum, as above remarked. (*Cramer's Ancient Italy*, vol. 2, p. 310.)—II. A town of Bœotia, in the vicinity of Aulis. (*Hom.*, *Il.*, 2, 496.—*Strab.*, 404.)

HYRIEUS, I. an Arcadian monarch, for whom Agamemes and Trophonius constructed a treasury. (*Vid. Agamemes*.)—II. A peasant of Hyria in Bœotia, whose name is connected with the legend of the birth of Orion. (*Vid. Orion*.)

HYRTÆUS, a Trojan, father to Nisus, one of the companions of Æneas. (*Virg.*, *Æn.*, 9, 177, 406.) Hence the patronymic of *Hyrtæides* applied to Nisus. (*Æn.*, 9, 176.—Compare *Hom.*, *Il.*, 2, 837, *seq.*)—The same patronymic form is applied by Virgil to Hippocoon. (*Æn.*, 5, 492.)

HYSTIA, I. a town of Bœotia, at the foot of Cithæron, and to the east of Platæa. It was in ruins in the time of Pausanias (9, 2). The vestiges of this place should be looked for near the village of Platonia, said to be one mile from Platæa, according to Sir W. Gell. (*Itin.*, p. 112.)—II. A small town of Argolis, not far from the village of Cenchreæ, and on the road from Argos to Tegea in Arcadia. It was destroyed by the Lacedæmonians in the Peloponnesian war. (*Thucyd.*, 5, 83.)

HYSTASPES, a noble Persian, of the family of the Achæmenides. His son Darius reigned in Persia after the murder of the usurper Smerdis.—As regards the meaning of the name Hystaspes, consult remarks under the article Darius, page 416, col. 2, line 20.

I.

IACCHUS, a surname of Dionysus or the Grecian Bacchus, as indicative of his being the son of Ceres, and not, according to the common legend, of Semele. In accordance with this idea, Bochart makes it of Phœnician origin, and signifying an infant at the breast. (*Geogr. Sacr.*, 1, 18.) A similar definition is found in Suidas (*s. v.* *Ἰακχος*). Sophocles represents the young god on the breast of the Eleusinian Ceres. (*Antig.*, 132.) Lucretius (4, 1162) gives Ceres the epithet of *Mammosa*. Orpheus, cited by Clemens Alexandrinus (*Admon. ad Gent.*—*Op.*, ed. Morcell., p. 13), also speaks of Iacchus as a child at the breast of Ceres. According to the Athenian traditions, Ceres was nursing Bacchus when she came to Attica in search of Proserpina. A great number of ancient monuments represent Ceres with Iacchus or Bacchus at her breast. (*Winckelmann, Mon. Ined.*, vol. 1, p. 28, 68, 71.) Iacchus was also called *κοῖρος*, a name which the Greeks gave to infant deities. (*Salmas.*, *ad Inscr. Her. Attic. et Reg. de Ann. climact.*, p. 556, *seqq.*—*Sainte-Croix, Mysteres du Paganisme*, vol. 1, p. 199.) Demetrius (*Δημήτριος*) was also a surname of Bacchus.

(*Sainte-Croix, ib.*, p. 200.) Ceres was called *κοῖρος*, “nourisher of the young.” She has been represented with two children, one at each breast, and holding a horn of plenty. Bochart cites the mystic van of Iacchus as a proof of the correctness of this interpretation. This van is called in Greek *Λίκνος*, a word which not only denotes a van, but also the swaddling clothes of children. According to Hesychius (*s. v.* *Λικνῖτης*), the epithet Liknites, given to Bacchus, comes from *λίκνος* in the sense of swaddling clothes. In the hymn to Jupiter by Callimachus (v. 48), Adrastea envelops him in swaddling clothes of gold after his birth, and to denote this the word *λίκνος* is employed. An old glossary renders *λίκνος* by *incubulum*. It would seem also that there is a close analogy between the name Iacchus and the Oriental *Iao*, the great appellation for the deity; from which both *Jehova* and *Joris* would appear to have sprung. *Iacchus*, moreover, is the parent form of the Greek *Bacchus*, the difference being merely a variation in dialect. Moor, in his *Hindoo Pantheon* (4to, *London*, 1810), assigns the name Iaccheo to the Hindu Iswara or Bacchus, and makes it equivalent to “lord of the Iacchi,” or followers of that god. (*Edinb. Rev.*, vol. 17, p. 317.)

IALYSUS, a town of the island of Rhodes, 80 stadia from the city of Rhodes. Its vicinity to the capital proved so injurious to its growth, that it became reduced in Strabo's time to a mere village. (*Strabo*, 655.—*Mannert, Geogr.*, vol. 6, pt. 3, p. 227.)

IAMBE, a servant-maid of Metanira, wife of Celeus, king of Eleusis, who succeeded by her tricks in making Ceres smile when the goddess was full of distress at the loss of her daughter. (*Apollod.*, 1, 5, 1.)

IAMBlichus, I. an ancient philosopher, a native of Syria, and educated at Babylon. Upon Trajan's conquest of Assyria he was reduced to slavery, but, recovering his liberty, he afterward flourished under the Emperor Antoninus. He had learned the Greek language, and wrote it with facility. He composed a romance in this language, entitled *Ἰστροπία Βελήωνιακά*, and turning on the loves of Rhodane and Simonis. (Compare *Chardon de la Rochette, Melanges*, vol. 1, p. 18.) It consisted of sixteen books, from which Photius has left us an extract. Some have pretended, that a manuscript of this work, which had belonged to Meibomius, passed in 1752 into the library of the younger Burmann. Its existence, however, is very uncertain. A fragment was preserved by Leo Allatius, accompanied with his own Latin version, in his selections from the MSS. of Greek rhetoricians and sophists, Rome, 1641, in 8vo.—II. A native of Chalcis in Syria, who flourished about the beginning of the fourth century. He was a disciple of Porphyry's, and, pursuing the route traced by Porphyry and Plotinus, he carried the doctrines of the new-Platonics to the last degree of absurdity. Inferior to these two philosophers in talents and erudition, without having made any important discovery, or thrown any more light upon the new-Platonic school, he nevertheless attained to great celebrity. The air of superior sanctity which he knew so well how to assume, the fame of his pretended miracles, his zealous efforts for the preservation of paganism, the use which he made for this end of the new-Platonic doctrines, and perhaps the lucky coincidence of his having lived at the very period when a new religion was supplanting the old; in fine, the admiration conceived for him by the Emperor Julian, and which that emperor expressed by the most exaggerated praise; all these circumstances combined were the cause of this individual's arriving, in spite of his moderate abilities, to a degree of reputation far superior to that of any of his predecessors. Plotinus and Porphyry were enthusiasts; Iamblichus, however, was a mere impostor; and we want no better proof of this than the recital which has been handed down to us of those pretended miracles that acquired for him the

name of a performer of miracles and a divine personage. His merit as a writer is entitled to little if any notice. He compiled, he copied, he mingled the ideas of others with his own conceptions; nor was he always capable of imparting clearness or method to his compositions. But he declared himself the protector of mythology and paganism; he strove to preserve them by working miracles in their behalf; he overthrew the barrier which enlightened philosophy had placed between religion and superstition; he amalgamated into one system all that various nations had imagined, in popular belief, of demons, angels, and spirits; and, in order to give this work of folly a philosophic appearance, he attached it to the doctrine of Plato. The intuitive perception of the divine nature, by means of *ecstasy*, had appeared to Plotinus and Porphyry the most sublime point to which the mind of man could elevate itself; this, however, was not sufficient for Iamblichus; he must have a *theurgy*, or that species of direct communication with gods and spirits, which takes place, not from man's raising himself to the level of these supernatural intelligences, but because, yielding to the power of certain formulae and ceremonies, they are compelled to descend unto mortals and execute their commands.—We have no edition of the entire works of Iamblichus, and must therefore consider his productions separately. 1. *Life of Pythagoras*. (Περὶ τοῦ Πυθαγορικοῦ βίου, or, as it is named in some manuscripts, Λόγος πρῶτος, περὶ τῆς Πυθαγορικῆς αἰρέσεως. Book First: Of the Pythagorean Sect.) It was, in fact, the commencement of a work in ten books. Although a most wretched compilation, and most clumsily put together, it is nevertheless instructive, from the information it affords respecting the opinions of Pythagoras, and because the sources whence Iamblichus and Porphyry drew no longer exist for us. The best edition of this work, including the life of Pythagoras by Porphyry, and that preserved by Plotinus, is Kiessling's, Lips., 1815, 2 vols. 8vo.—2. *Second Book, Of Pythagorean explanations, including an exhortation to Philosophy*. (Πυθαγορείων ὑπομνημάτων λόγος δεύτερος, περιέχων τοὺς προτρεπτικοὺς λόγους εἰς φιλοσοφίαν.) This work formed a continuation of the preceding, and is the second book of the great compilation treating of Pythagoras. In it we find many passages from Plato; or, rather, one third of the work is made up of extracts taken from the dialogues of that writer; and Iamblichus has reunited them with so little skill and with so much negligence, that he often forgets to make the necessary changes in the tenses of verbs, in order to adapt one passage to another. Sometimes traces of the Platonic dialogue are even allowed to remain. The most interesting part is the last chapter, which gives an explanation of thirty-nine symbols of Pythagoras. This work is also contained in Kiessling's edition of the life.—3. *Of common Mathematical Science* (Περὶ κοινῆς μαθηματικῆς ἐπιστήμης), or, third book of the great work on the philosophy of Pythagoras. It is important, by reason of the fragments from the ancient Pythagoreans, such as Philolaus and Archytas, which it contains. These fragments are written in the Doric dialect, which furnishes an argument in favour of their authenticity. This work, of which fragments were only known at an early period, was published entire for the first time by Villoison, in his *Anecdota Græca*, vol. 2, p. 188, *seqq.*, and reprinted by Friis, with a translation, at Copenhagen, 1790, 4to. A future editor will find various readings, from a manuscript of Zeitz, as given by Kiessling in his edition of the life of Pythagoras.—4. *On the Introduction to the Arithmetic of Nicomachus*. (Περὶ τῆς Νικομάχου ἀριθμητικῆς εἰσαγωγῆς.) We have only one edition of this work, that of Tennulius, *Darent.*, 1667–8, 2 vols. 4to. Kiessling's life of Pythagoras contains manuscript readings for this work also.—5. *Theology*

of Numbers. (Τὰ Θεολογούμενα τῆς ἀριθμητικῆς.) On the different speculations in which the ancient theological and philosophical writers indulged relative to the force of numbers. This work does not bear the name of Iamblichus in the manuscripts, but Gale (*ad Iamb. de Myst. Egypt.*, p. 201) and Fabricius (*Bibl. Gr.*, vol. 5, p. 639, *ed. Hædles.*) agree in ascribing it to him. It is certain that Iamblichus wrote a work under this title, which made the sixth book of his great compilation respecting Pythagoras. This work has only been twice printed, once at Paris, 1543, 4to, and again by Wechel, at Leipzig, 1817, 8vo, with the notes of Ast.—6. Porphyry had addressed a letter to an Egyptian named Anebo, full of questions relative to the nature of gods and demons. We have an answer to this epistle, written by Abammon Magister (Ἀβάμμων Διδάσκαλος); and, according to a scholium found in many manuscripts, Proclus declared that it was Iamblichus who disguised himself under this name. The title of the work is as follows: "Ἀβάμμωνος Διδασκάλου πρὸς τὴν Πορφύριον πρὸς Ἀνεβὸς ἐπιστολὴν ἀποκρίσεις, καὶ τῶν ἐν αὐτῇ ἀπορημάτων λύσεις, i. e., "Answer of Abammon the Master to the letter of Porphyry addressed to Anebo, and the solution of the questions which it contained." It is often, however, cited under the shorter title of "Mysteries of the Egyptians." The work is full of theurgic and extravagant ideas, and Egyptian theology. Meiners thinks that this work was not written by Iamblichus; but his reasons for this opinion, drawn from the inequality of the style and the contradictions contained in the work, have been refuted by Tennemann. (*Comment. Soc. Scient. Götting.*, vol. 4, p. 59.—*Tennemann, Gesch. der Phil.*, vol. 6, p. 248.) There is only one complete edition of this work, by Gale, *Oxon.*, 1678, fol.—Iamblichus wrote also a work on idols or statues (περὶ Ἀγαλμάτων), to prove that idols were filled with the presence of the divinities whom they represented. We only know it through the refutation of John Philoponus, and what we do know of it is very limited. Iamblichus composed also a treatise on the soul (περὶ ψυχῆς), of which Stobæus has preserved very copious extracts. These are the more valuable, as Iamblichus gives in them the opinions of various philosophers, without troubling us with his own. The same compiler has preserved several fragments of the letters of Iamblichus. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 144, *seqq.*)

IAMBIDÆ, certain prophets among the Greeks, descended from Iamus, a son of Apollo, who received the gift of prophecy from his father, and which remained among his posterity. (*Pausan.*, 6, 2.)

JANICULUM, a hill of Rome, across the Tiber, and connected with the city by means of the Sublician bridge. It was the most favourable place for taking a view of the Roman capital; and from its sparkling sands it obtained the name of Mons Aureus, now by corruption *Montorio*. There was an ancient tradition, that Janus, king of the Aborigines, contemporary with Saturn, who then inhabited the Capitoline Hill, founded a city opposite to the residence of Saturn, and, dying, left his name to the hill on which he had built. (*Virg., Æn.*, 8, 355, *seqq.*—*Serv., ad loc.*) The Janiculum therefore comprised the site of the church of *S. Pietro in Montorio*, and the present *Cosimi gardens*. As Ancus Marcius joined it to the Aventine by a bridge and a wall, lest an enemy should make it a citadel for attack, it is natural to conclude that the first wall would enclose the bridge, and run up to the summit, which it was desirable to preserve from the possession of an enemy; on the other hand, since nothing more was to be effected than the defence of the city, it is also deducible, that his walls would only enclose a narrow space of territory, extending from near the Pons Sublicius, or *Ponte Orazio*, to the *Montorio*, and descending again to the river at the *Ponte Rotto*; for the island did not exist in those days. (*Dion. Hal.*, 655

3, 45.) Such a circuit of wall would at once defend the passage of the Tiber, and cover the three important hills of the city.—The summit of the Janiculum was seen from the Comitia, and also from the place of popular assemblies in the Campus Martius. At the earliest period of the republic, when the Romans were surrounded by foes, and feared lest, while they held these assemblies, the enemy might come upon them unawares, they placed some of their citizens upon the Janiculum to guard the spot, and to watch for the safety of the state; a standard was erected upon the top of the hill, and the removal thereof was a signal for the assembly immediately to dissolve, for that the enemy was near. (*Dio Cassius*, 37, 28.) This act, which had its origin in utility to the commonwealth, afterward dwindled into a mere ceremony; it was, however, made subservient to the designs of factious citizens in those times when there was no danger to the city but from its intestine discords; and the taking down of the standard on the Janiculum more than once put a stop to public proceedings at the Comitia. (*Burgess, Topography and Antiquities of Rome*, vol. 1, p. 67, *seqq.*)

JANUS, an ancient Italian deity, usually represented with two faces, one before and one behind, and hence called *Bifrons* and *Beeps*. Sometimes he is represented with four faces, and is thence denominated *Quadrifrons*. Janus was invoked at the commencement of most actions; even in the worship of the other gods, the votary began by offering wine and incense to him. (*Ovid, Fast.*, 1, 171.) The first month in the year was named after him; and under the title of *Matutinus* he was regarded as the opener of the day. (*Horat.*, *Serm.*, 2, 6, 20, *seq.*) Hence he had charge of the gates of heaven, and hence, too, all gates (*januæ*) on earth were called after him, and supposed to be under his care. In this way some explain his double visage, because every door looks two ways; and thus he, the heavenly porter, can watch the east and west without turning. (*Ovid, Fast.*, 1, 140.) His four visages, on the other hand, when he is so represented, indicate the four seasons of the year.—His temples at Rome were numerous. In war time, the gates of the principal one, that of Janus Quirinus, were always open; in peace they were closed, to retain wars within (*Ovid, Fast.*, 1, 124); but they were shut only once between the reign of Numa and that of Augustus, namely, at the close of the first Punic war. Augustus closed them after he had given repose to the Roman world. The temples of Janus Quadrifrons were built with four equal sides, each side containing a door and three windows. The four doors were emblematic of the four seasons of the year, while the three windows on a side represented the three months in each season. Janus was usually represented as holding a key in his left hand and a staff in the other. He was called by different names, such as *Consivius* (from *consero*), because he presided over generation and production; *Quirinus*, because presiding over war; and *Clusius* and *Patulcius* (from *cludo* and *patco*), or the “shutter” and “opener,” with reference to his having charge of gates.—After Ennius had introduced Euhemerism into Rome, Janus shared the fate of the other deities, and became a mortal king, famed for his uprightness, and dwelling on the Janiculum. He was said to have received Saturn when the latter fled to Italy; and he also married his own sister Camasa or Camasane. (*Macrob.*, *Sat.*, 1, 7.—*Lydus, de Mens.*, 4, 1.—*Athenæus*, 15, p. 692.)—The following remarks, though in part anticipated, may serve to throw some light upon the mythological history of Janus. Janus occupies a place among the first class of Etrurian divinities, and is in many respects identified with the Tiva of that nation. (*Varro, ap. Augustinus, de Civ. Dei*, 7, 10.—*Proclus, Hymn. in Hec. et Janum.*) His origin is to be traced

back to the mythology of India. Janus, with his wife and sister Camasane, half fish and half human being, as sometimes represented, can only be explained by a comparison with the avatars, the descents or incarnations of the Hindu deities. (Compare the incarnation of Vishnou in a fish, and the legend of the Babylonian Oannes and Syrian Atergatis.)—Viewed in another way, the name *Janus* or *Djanus* assimilates itself very closely to that of *Diana*. These two appellations resolve themselves into the simple form *Dia*, or the goddess by way of excellence; and this *Dia* belongs in common to the religions of Samothrace and Attica. She is the Pelasgic Ceres, frequently found under this denomination in the songs of the *Fratres Arceles*. (*Marini, Atti*, &c., p. 23, *seqq.*—*Creuzer, ad Cic. de N. D.*, 3, 22.)—While the Jupiter of Dodona was penetrating into Italy and Latium, with his spouse Dione (the same as Juno), *Dia-Diana* and Janus arrived, by another route, in Etruria, from the borders of Pontus and the isle of Samothrace. From this view of the subject it would appear, that Jupiter and Janus were originally distinct from each other, but subsequently more or less amalgamated. The system of Dodona and that of Samothrace, the Latin system and that of the Etrurians, based on ideas mutually analogous, united, but did not become completely blended, with each other.—On the soil of Italy Janus appears at one time as a king of ancient days, at another as a hero who had rendered his name conspicuous by great labours and by religious institutions (*Arnob.*, *adv. Gen.*, 3, p. 147.—*Lyd.*, *de Mens.*, p. 57, *ed. Schow.*), at another, again, as a god of nature. At first he is called the *Heaveens*, according to the Etrurian doctrine. (*Lyd.*, *ibid.*, p. 146, *ed. Roeth.*) He is the year personified, and his symbols contain an allusion either to the number of the months or to that of the days of the year. The month, called after him January, formed from the time of Numa the commencement of the religious year of the Romans. On the first day of this month was presented to Janus what was called the *Janual*, an offering consisting of wine and fruits. On this same day the image of the god was crowned with laurel, the consul ascended in solemn procession to the Capitol, and small presents were made to one another by friends. By virtue of his title of god of nature, Janus is represented as holding a key: he holds this as the god who presides over gates and openings. He opens the course of the year in the heavens; and every gate upon earth, even to those of private dwellings, is under his superintending care. (*Spanheim, ad Callim.*, *Hymn. in Cer.*, 45.—*Lydus, de Mens.*, p. 55, 144.) This attribute, indeed, is given him in a sense of a more or less elevated nature. It designates him at one time as the *genius* who presides over the goods of the year, and who dispenses them to mortals; who holds the key of fertilizing sources, of refreshing streams: at another time it typifies him as the master and sovereign of nature in general, the guardian of the whole universe, of the heaven, the earth, and the sea. (*Ov.*, *Fast.*, 1, 117.) As holder of the key, Janus took the name of *Clusius*; as charged with the care of the world, he is styled *Curvatus*. (*Lyd.*, *de Mens.*, p. 55, 144.) Thus, under these and similar points of view, Janus reveals himself to us as exactly similar to the gods of the year in the Egyptian, Persian, and Phenician mythologies. Like Osiris, Sem-Herales, Dschemschid, and others, he represents the year personified in its development through the twelve signs of the zodiac, with its exaltation and its fall, and with all the plenitude of its gifts. And as the career of the year is also that of the souls which traverse in their migrations the constellations of the zodiac, Janus, as well as the other great gods of nature, becomes the guide of souls. Similar in every respect to Osiris-Serapis, he is called, like him, the *Sun*; and the gate of the east, as well as that of the west, becomes at once

his peculiar care. (*Lutat., ap. Lyd., p. 57.* Identifying Janus with the Sun, we ought not to be surprised at finding the Moon called *Jana* in Varro. (*R. R., 1, 37, 3, ed. Schneid.*—Compare *Sealiger, de vet. ann. Rom. in Græc. Thes., 8, p. 311.*) In like manner, as the lunar goddess is styled *Deiva Jana* (*Deina, Diana*), so the Salian hymns invoke the solar god under the name of *Deivos Janos*, contracted into *Di-anus* or *Djanus*. *Nigidius (ap. Macrobi., Sat., 1, 9)* says expressly, “*Apollinem Janum esse, Dianamque Janum, apposita d. litera.*” Buttmann, regarding *Janus* and *Jana* as the solar and lunar deities respectively, discovers in these ancient Italian appellations the *Zar* and *Zaró* of the Greeks, or, rather, the ancient and originally Oriental name of the Divinity, *Jah, Jao, Jova, Jovis*, whence *Jom* or *Yum*, “the day.” (*Mythologus, vol. 2, p. 73.*)—Janus also assimilates himself to the Persian Mithras, and becomes the mediator between mortals and immortals. He bears the prayers of men to the feet of the great deities. (*Canus Bassus, ap. Lyd., p. 57, 146.*) It is in reference to this that some explain his double visage, turned at one and the same time towards both heaven and earth. Others, however, give to the representation of Janus with two faces an explanation purely historical, and consider it as alluding either to the emigration of Saturn or Janus, come by sea from Greece into Italy; or to the settling of the latter among the barbarous nations of Italy, and the establishment of agriculture. (*Phyl., Quæst. Rom., 22, p. 269, vol. 2, p. 100, ed. Wytt.*—*Serv., ad Virg., Æn., 1, 294; 7, 607; 8, 357.*—*Öv., Fast., 1, 299.*) The national tradition of the Romans referred it to the alliance between Romulus and Tatius and the blending of the two nations. (Compare *Lanzi, Saggio, vol. 2, p. 94.*—*Eckhel, Doctr. Vet. Num., vol. 5, p. 14, seqq.*)—Similar figures with a double face are found on medals of Etruria, Syracuse, and Athens: Cærops, for example, was so represented. It is certainly most rational to suppose, that this mode of representing was purely allegorical in every case. It recalls to mind the figures, not less strange and significant, of the Hindoo divinities: Janus, with four faces (*Quadri-frons.*—*Serv., ad Virg., Æn., 8, 607.*—*Augustin. de Civ. Dei, 7, 4.*), is identical in appearance with the Brahma of India.—As the gods who preside over nature and the year, in the Oriental systems, raise themselves to the higher office of gods of time, eternity, and infinity, so also it seems to have happened with the western Janus. He is called the inspector of time, and then *Time* itself; in a cosmogonical sense he passes for *Chaos*. (*Lyd., de Mens., p. 57.*) Under these two points of view he is distinct from Jupiter, the supreme ruler and the universal regulator of things, in that Janus had specially under his control the beginning and the end. (*Cic., de N. D., 2, 27.*) In the higher doctrine, however, all distinction between the two disappears. As *Chusius* or bearer of the key, Janus was the monarch of the universe, and Greece had no divinity that could be at all compared with him. (*Öv., Fast., 1, 90.*) In the solemn ceremonies and religious songs of the old Romans, he figured as inaugurator, and even bore the name. (*Initiator.*—*Augustin. de Civ. Dei, 4, 11.*) At the festivals of the great gods he had the first sacrifice offered to him. (*Cic., de N. D., 2, 27.*) He was called the *Father* (*Brisson, de Formul., 1, p. 45.*—*Marini, Atti, 2, p. 365.*) and the Saliî invoked him in their hymns as the *god of gods*. (“*Deorum Deus.*”—*Macrobi., Sat., 1, 9.*—Compare *Guthrie, de Saliis, c. 20.*) This god of gods they named also *Janes* or *Eanus*, while they themselves assumed the name of *Janes* or *Eani*, in accordance with the ancient usage which so often assimilated the priests to their divinities. (*Vossius, Inst. Orat., 4, 1, 7.*) These appellations, *Janes* and *Eanus*, remind us of Cicero’s derivation from *eundo*, i.

e., from the old Greek and Latin verb *io*. (*N. D., 2, 27.*) The Romans also invoked Janus when they made a lustration or consecration of their fields. (*Cato, R. R., p. 92, ed. Schneider.*)—But why multiply proofs to show that the Etrurian priesthood conceived and taught its dogmas in the true spirit, and under the very forms of Oriental mythology? In Etruria, as in the East, a series of gods sprung from a supreme being, and are reflected in their turn in a dynasty of kings or chiefs, their children, their heirs, and the imitators of their actions. Janus, the first monarch, founds cities, rears ramparts, erects gates; become a hero, he consecrates sanctuaries, institutes religious worship, fixes the sacred year, and arranges all civil ordinances. This son of the gods is no less the Sun moving through his annual career, opening with his powerful key the reservoirs of the empire of waters, giving drink to men and animals, drying up the earth, and ripening the fruit by his vivifying rays, presiding at once over the rising and setting, and guarding the two gates of heaven as the chief of the army of the stars.—He was invoked also in war; and when the gate of his temple on earth was opened, it was the signal for battles; when closed, it became the pledge of peace. For Janus is the god that opens the new year in the spring, the period when warlike movements and campaigns begin: it is he that opens at this season the career of combats, to which he summons warriors, and to whom he becomes a guide and an example. Hence his names of *Patuleius* and *Chusius*. He is the defender, the combatant by way of excellence, the great *Quirinus* (a name derived from the Sabine word *curis*, “a spear”), and the senate could find no appellation more glorious to bestow on the valiant Romulus after he had disappeared from the earth. (*Creuzer, Symbolik, par Guigniaut, vol. 3, p. 430, seqq.*)—II. In the Roman forum, by the side of the temple of Janus, there were three arches or arcades dedicated to Janus, standing at some distance apart, and forming by their line of direction a kind of street (for, strictly speaking, there were no streets in the forum). The central one of these arches was the usual rendezvous of brokers and money-lenders, and was termed *medius Janus*, while the other two were denominated, from their respective positions, *summus Janus*, and *infimus* or *imus Janus*. (*Horat., Serm., 2, 3, 18.*)

IAPĒTUS, a son of Cælus and Terra, and one of the Titans. According to the Theogony (v. 507, seq.), he married Clymene, a daughter of Oceanus, by whom he became the father of four sons, Atlas, Menætius, Prometheus, and Epimæthens. Some authorities made him to have espoused Æthra (*Timeus, ap. Schol. ad Il., 18, 486.*), others Asia, others again Libya: these last two refer to the abodes of Prometheus and Atlas.—We find Iapetus frequently joined with Kronus, apart, as it were, from the other Titans; and it is worthy of notice, that, in the Theogony, the account of Iapetus and his progeny immediately succeeds that of Saturn and the gods sprung from him. These circumstances, combined with the plain meaning of the names of his children, lead to the conclusion of Iapetus being intended to represent the origin of the human race. Buttmann, however, sees in Iapetus and Japhet, not a son of Noah, but the Supreme Being himself (*Jao, Jao, and pet, petos, petor*, the Sanscrit *pter*, i. e., *pater*, “father”), and identical with the *Ζεύς πατήρ*, or *Jupiter*, of the western nations. (*Mythologus, vol. 1, p. 224.*)

IAPĒDES or IAPĒNES, a people of Illyricum, to the south of Istria, whose territory would appear, from Virgil (*Georg., 3, 474.*), to have reached at one time to the banks of the river Timavus. They occupied an extent of coast of more than one thousand stadia, from the river Arsia, which separated them from the Istri, to the neighbourhood of *Zara*, a district which forms

part of the present *Morlachia*. In the interior, their territory was spread along Mount Albius, which forms the extremity of the great Alpine chain, and rises to a considerable elevation. On the other side of this mountain it stretched towards the Danube, on the confines of Pannonia. The Iapydes were a people of warlike spirit, and were not reduced until the time of Augustus. (*Strab.*, 315.—*App.*, *Illyr.*, 18.) Their principal town was Metulum, which was taken by that emperor after an obstinate defence. (*App.*, *Illyr.*, 19.) Its site remains at present unknown. (*Cramer's Anc. Greece*, vol. 1, p. 33.)

IAPYGIÀ, a division of Italy, forming what is called the heel. It was called also Messapia, and contained two nations, the Calabri on the northeast, and the Salentini on the southwest side. The name of Iapygia was not known to the Romans, except as an appellation borrowed from the Greeks, to whom it was familiar. Among the many traditions current with the latter people may be reckoned their derivation of this name from Iapix, the son of Dædalus. (*Strab.*, 279.—*Phin.*, 3, 11.) This story, however, belongs rather to fable than to history. We have no positive evidence regarding the origin of the Iapyges, but their existence on these shores prior to the arrival of any Grecian colony is recognised by the earliest writers of that nation, such as Herodotus (7, 170) and Hellanicus of Lesbos (*ap. Dion. Hal.*, 1, 22). Thucydides evidently considered them as barbarians (7, 33), as well as Scylax in his Periplus (p. 5), and Pausanias (10, 1); and this, in fact, is the idea which we must form of this people, whether we look upon them as descended from an Umbrian, Oscan, or Illyrian race, or from an intermixture of these earliest Italian tribes.—Very little is known of the language of this people; but, from a curious old inscription found near Otranto, and first published by Galateo, in his history of Iapygia, it appears to have been a mixture of Greek and Oscan. (*Lanzi*, vol. 3, p. 620.—*Romanelli*, vol. 2, p. 51.) It may also be noticed, that the name of the Iapyges appears in one of the Eugubian tables under the form *Iapyscom*; which might lead us to suppose that some connexion once existed between this people and the Umbri. (*Lanzi*, vol. 3, p. 663.—*Cramer's Anc. Italy*, vol. 2, p. 302.)

IAPYGIUM, or SALLENTINUM, PROMONTORIUM (*Salust.*, *ap. Serv. ad Æn.*, 3, 400), a famous promontory of Italy, at the southern extremity of Iapygia, now *Capo di Leuca*. When the art of navigation was yet in its infancy, this great headland presented a conspicuous landmark to mariners bound from the ports of Greece to Sicily, of which they always availed themselves. The fleets of Athens, after having circumnavigated the Peloponnesus, are represented on this passage as usually making for Corcyra, whence they steered straight across to the promontory, and then coasted along the south of Italy for the remainder of their voyage. (*Thucyd.*, 6, 30.) There seems, indeed, to have been a sort of haven here, capable of affording shelter to vessels in tempestuous weather. (*Thucyd.*, 6, 44.) Strabo describes this promontory as defining, together with the Ceraunian Mountains, the line of separation between the Adriatic and Ionian Seas, while it formed, with the opposite Cape of Iaciniun, the entrance to the Tarentine Gulf; the distance in both cases being 700 stadia. (*Strab.*, 281.—*Cramer's Anc. Italy*, vol. 2, p. 315.)

IAPYGIUM TRIA PROMONTORIA, three capes on the coast of Magna Græcia, to the south of the Iaciniian promontory. They are now called *Capo delle Castelle*, *Capo Rizzuto*, and *Capo della Nave*. (*Cramer's Anc. Italy*, vol. 2, p. 397.)

IAPYX, I. a son of Dædalus, who was fabled to have given name to Iapygia in Lower Italy. (Consult remarks under the article Iapygia.)—II. A name given to the west-northwest wind. It was so called from

Iapygia, in Lower Italy, which country lay partly in the line of its direction. It is the same with the Ἰαπύγος of the Greeks, and was the most favourable wind for sailing from Brundisium towards the southern parts of Greece. (*Hor.*, *Od.*, 1, 3, 4.)

IARBAS, a son of Jupiter and Garamantis, king of Gætulia. (*Vid.* Dido.)

IASIDES, a patronymic given to Palinurus, as descended from a person of the name of Iasius. (*Virg.*, *Æn.*, 5, 813.)

IASION or IÆSUS, a son of Jupiter and Electra, one of the Atlantides (*Hellanicus*, *ap. Schol. ad Od.*, 5, 125), while others made him a son of Minos or Kratos and the nymph Phronia. (*Schol. ad Od.*, l. c.—*Schol. ad Theocrit.*, *Id.*, 3, 50.) He is said to have had by Ceres a son named Plutus (*Wealth*), whereupon Jupiter, offended at the connexion, struck the mortal lover with his thunder. (*Hom.*, *Od.*, 5, 125.) Hesiod makes Crete the scene of this event. (*Theog.*, 969.) Iasion is also named as the father of the swift-footed Atalanta (*Vid.* Atalanta).—We have here an agricultural legend. Iasion is made the offspring of Force and Prudence. (Κράτος and Φρόνια.—*Creuzer*, *Symbolik*, *par Guigniaut*, vol. 3, p. 325.) In other words, strength, or courage in enduring labour, and prudence, or skill in the application of that strength, excite the instinctive powers of the earth, causing famine to disappear, nourishing the human race, and rendering them healthy and vigorous. Hence the name of Iasion, “*he that saves*” (*ἰσώσας*) from evil. (Compare remarks under the article Trophonius.)

IÆSIS, a name given to Atalanta, daughter of Iasus.

JÆSON, I. a celebrated hero, son of Alcimede, daughter of Phylæus, by Æson, the son of Cretheus, and Tyro, the daughter of Salmoneus. Tyro, before her union with Cretheus, the son of Æolus, had two sons, Pelias and Neleus, by Neptune. Æson was king of Iolcos, but was dethroned by Pelias. The latter also sought the life of Jason; and, to save him, his parents gave out that he was dead, and, meantime, conveyed him by night to the cave of the centaur Chiron, to whose care they committed him. (*Apollod.*, 1, 9, 16.—*Apoll. Rh.*, 1, 10.—*Hygin.*, *fab.*, 12, 13.) An oracle had told Pelias to beware of the “*one-sandaled man*,” but during many years none such appeared to disturb his repose. At length, when Jason had attained the age of twenty, he proceeded, unknown to Chiron, to Iolcos, in order to claim the rights of his family. He bore, says the Theban poet, two spears; he wore the close-fitting Magnesian dress, and a pard skin to throw off the rain, and his long unshorn locks waved on his back. In his journey he was stopped by the inundation of the river Evenus or Enipeus, over which he was carried by Juno, who had changed herself into an old woman. In crossing the stream he lost one of his sandals, and on his arrival at Iolcos, the singularity of his dress and the fairness of his complexion attracted the notice of the people, and drew a crowd around him in the market-place. Pelias came to see him with the rest, and as he had been warned by the oracle to beware of a man who should appear at Iolcos with one foot bare and the other shod, the appearance of Jason, who had lost one of his sandals, alarmed him. He asked him who he was, and Jason mildly answered his question, telling him he was come to demand the kingdom of his fathers. He then went into the house of his parent Æson, by whom he was joyfully recognised. On the intelligence of the arrival of Jason, his uncles Pheres and Amythaon, with their sons Admetus and Melampus, hastened to Iolcos. Five days they feasted and enjoyed themselves; and on the sixth Jason disclosed to them his wishes, and went, accompanied by them, to the dwelling of Pelias, who at once proposed to resign the kingdom, retaining the herds and pastures, at the

same time stimulating Jason to the expedition of the golden fleece. (*Pind., Pyth.*, 4, 193, *seqq.*)—Another account is, that Pelias, being about to offer a sacrifice on the seashore to his father Neptune, invited all his subjects. Jason, who was ploughing on the other side of the Anaurus, crossed that stream to come to it, and in so doing lost one of his sandals. It is said that Juno, out of enmity to Pelias, who had neglected to sacrifice to her, took the form of an old woman, and asked Jason to carry her over, which caused him to leave one of his sandals in the mud. Her object was to give occasion for Medea's coming to Iolcos and destroying Pelias. When Pelias perceived Jason with but one sandal, he saw the accomplishment of the oracle, and, sending for him next day, asked him what he would do, if he had the power, had it been predicted to him that he should be slain by one of his citizens. Jason replied, that he would order him to go and fetch the golden fleece. Pelias took him at his word, and imposed the task upon Jason himself. (*Pherecydes, ap. Schol. ad Pind., Pyth.*, 4, 133.)—An account of the celebrated expedition which Jason in consequence undertook, will be found under a different article. (*Vid. Argonautæ*.)—During the absence of Jason, Pelias had driven the father and mother of the hero to self-destruction, and had put to death their remaining child. Desirous of revenge, Jason, after he had delivered the fleece to Pelias, entreated Medea to exercise her art in his behalf. He sailed with his companions to the Isthmus of Corinth, and there dedicated the Argo to Neptune; and Medea, shortly afterward, ingratiated herself with the daughters of Pelias, and, by vaunting her art of restoring youth, and proving it by cutting up an old ram, and putting the pieces into a pot, whence issued a bleating lamb, she persuaded them to treat their father in the same manner, and then refused to restore him to youth. Acastus, son of Pelias, thereupon drove Jason and Medea from Iolcos, and they retired to Corinth, where they lived happily for ten years, till Jason, wishing to marry Glauce or Creüsa, the daughter of Creon, king of that place, put away Medea. The Colchian princess, enraged at the ingratitude of her husband, sent a poisoned robe and crown as gifts to the bride, by which the latter, together with her father Creon, miserably perished. Medea then killed her own children, mounted a chariot drawn by winged serpents, and fled to Athens, where she married King Ægeus, by whom she had a son named Medus. But, being detected in an attempt to destroy Theseus, she fled from Athens with her son. Medus conquered several barbarous tribes, and also the country which he named Media after himself, and finally fell in battle against the Indians. Medea, returning unknown to Colchis, found that her father Æetes had been robbed of his throne by her brother Perses. She restored him, and deprived the usurper of life.—The narrative here given is taken from Apollodorus, who seems to have adhered closely to the versions of the legend found in the Attic tragedians. The accounts of others will now be stated. In the Theogony, Medea is classed with the goddesses who honoured mortal men with their love. Jason made her his spouse, and she bore to “the shepherd of the people” a son named Medus, whom Chiron reared in the mountains, and “the will of great Jove was accomplished.” (*Theog.*, 992, *seqq.*) It is evident, therefore, that this poet supposed Jason to have reigned at Iolcos after his return from his great adventure.—According to the poem of the Nostoi, Medea restored Æson to youth (*Argum. Eurip., Medea*.—*Ovid, Met.*, 7, 159, *seqq.*), while Simonides and Pherecydes say that she effected this change in Jason himself (*Arg. Eur., Med.*); and Æschylus, that she thus renewed the Hyades, the nurses of Bacchus, and their husbands. (*Arg. Eur., Med.*.—*Ovid, Met.*, 7, 294, *seqq.*)—Jason is said to have put an end to his life after the tragic fate of his children;

or, as another account has it, when the Argo was falling to pieces with time, Medea persuaded him to sleep under the prow, and it fell on him and killed him. (*Arg. Eurip., Med.*) Medea herself, we are told, became the bride of Achilles in the Elysian fields. (*Ibycus et Simonides, ap. Schol. ad Apoll. Rh.*, 4, 815.—*Keightley's Mythology*, p. 307, *seqq.*)—For remarks on the whole Argonautic legend, consult the article Argonautæ.—II. A tyrant of Thessaly, born at Phæræ, and descended from one of the richest and most distinguished families of that city. He usurped the supreme power in his native place while still quite young, about 375 B.C.: reduced nearly all Thessaly under his sway; and caused himself to be invested with the title of generalissimo, which soon became, in his hands, only another name for monarch of the country. The success which attended his other expeditions also, against the Dolopes, the Phocians, &c.; his alliances with Athens, Macedon, and Thebes; in fine, his rare military talents, emboldened him to think of undertaking some enterprise against Persia; but, before he could put these schemes into operation, he was assassinated while celebrating some public games at Phæræ, in the third year of his reign. Jason was a popular tyrant among his immediate subjects. He cultivated letters and the oratorical art, and was intimate with Isocrates, and Gorgias of Leontini. He had contracted a friendship also with Timotheus, the son of Conon, and went himself to Athens to save him from a capital accusation.—III. A native of Cyrene, an abridgment of a work of whose, on the exploits of the Maccabees, is given in the second section of the book of Maccabees. St. Augustine speaks of this abridgment as of a work which the Church had placed in the Canon, by reason of the histories of the martyrs which it contains. St. Jerome, however, says the contrary. The councils of Carthage in 397, and of Trent, have declared it canonical. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 431.)—IV. A native of Argos, who flourished during the second century. He wrote a work on Greece, in four books, comprehending the earlier times of the nation, the wars against the Persians, the exploits of Alexander, the actions of Antipater, and ending with the capture of Athens. He composed also a treatise on the Temples (or, as others render it, Sacrifices) of Alexander, *Ἡπερ τῶν Ἀλεξάνδρου ἱερῶν*. (*Schöll, Hist. Lit. Gr.*, vol. 4, p. 172.—*Voss., Hist. Gr.*, 1, 10, p. 62.—*Atheni Op., ed. Schweigh.*, vol. 9, p. 136, *Ind. Auct.*)—V. A Rhodian, grandson of Posidonius, who succeeded his grandfather in the Stoic school of his native island. His works have not reached us.

IASONIUM PROMONTORIUM, a promontory of Pontus, northeast of Polemonium. It was so called from the ship Argo having anchored in its vicinity. (*Xen., Anab.*, 6, 2, 1.) It is also mentioned by Strabo (548), and it preserves evident vestiges of the ancient appellation in that of *Iasoun*. (*Cramer's Asia Minor*, vol. 1, p. 273.)

IASSICUS SINUS, a gulf of Caria, deriving its name from the city of Iassus, situate at its head. It is now called *Assem-Kulessi*. (*Thucyd.*, 8, 26.)

IASSUS, a city of Asia Minor, situate on a small island very near the coast of Caria, and giving to the adjacent bay the name of Sinus Iassicus. It was a rich and flourishing city, and the inhabitants were chiefly occupied with fisheries along the adjacent coasts. It is now in ruins, though many vestiges remain of it. The name of the place is *Assem*. (*Phin.*, 5, 28.—*Liv.*, 32, 33; 37, 17.)

IAXARTES, a large river of Asia, rising in the chain of Mons Imaus, and flowing into the *Sea of Aral*, after a course of 1682 English miles. It is now the *Sir*, or *Sir Darjah*. Ptolemy makes it flow into the Caspian, as he was unacquainted with the existence of the *Sea of Aral*. Herodotus, long before, had called the Iax-

artes by the name of Araxes, and confounded it with the Oxus (1, 204, *seqq.*). Rennell, after quoting the passage just referred to, remarks as follows: "In this description the Iaxartes and Oxus appear to be confounded together (Herodotus had perhaps heard certain particulars of both rivers, but might refer them to one only), for there are circumstances that may be applied to each respectively, although most of them are applicable only to the former. It may be observed, that Herodotus mentions only one large river in this part of the empire of Cyrus; that is, the river which separates it from the Massagetæ, and which was undoubtedly the Iaxartes; for there is no question that Sogdia was included in the empire of Cyrus, and it lay between the Oxus and Iaxartes. The Oxus, therefore, has no distinct place in the geography of our author, although a river of much greater bulk and importance than the Iaxartes. But that the Oxus was intended, when he says that the larger stream continued its even course to the Caspian, appears probable; although the numerous branches that formed the large islands, and were afterward lost in bogs and marshes, agrees rather with the description of the *Aral* lake, and lower part of the *Sir*." (*Geography of Herodotus*, vol. 1, p. 270, *seqq.*, ed. 1830.)—With regard to the tribe of the Iaxartæ, and the origin of the name Iaxartes, the same writer observes as follows: "Ptolemy mentions the Iaxartæ: placing them along the northern bank of the Iaxartes, throughout the lower half of its course. These, consequently, occupy the place of the Massagetæ of Herodotus and Arrian, and of the Sacæ of Strabo. Ptolemy may possibly have named them arbitrarily; but as there is a remnant of a tribe named *Sartes*, now existing between the Oxus and Iaxartes, and which are reported to be the remains of the ancient inhabitants of the country, it is possible that this was one of the tribes of the Massagetæ or Sacæ; while Iaxartæ may have been the true name in the country itself, and very probably gave name to the river Iaxartes at that period; of which *Sir* and *Sirt*, which are in use at present, may be the remains. Ammianus speaks of the Iaxartæ as a tribe, and of good account, in lib. xxiii." (*Geogr. of Herodotus*, vol. 2, p. 295, *seqq.*)—It is generally supposed that the Greeks in the time of Alexander were guilty of an error in confounding this river with the Tanais. Klaproth, however, shows that the name Tanais was common to both the Iaxartes and the modern Don, a people of the same race occupying at that time the banks of both streams, and using for both an appellation, the root of which (*dau, tan, or don*) has a general reference to water. (Consult remarks under the article Tanais.—*Klaproth, Tableaux Historiques de l'Asie*, p. 181.)

IAZYGES, a people of Scythia. Of these there were the Iazyges Mæotæ, who occupied the northern coast of the Palus Mæotis; the Iazyges Metanastæ (*Ptol.*,—Compare *Cellarius, Geogr.*, vol. 2, p. 83), who inhabited the angular territory formed by the Tibiscus, the Danube, and Dacia; they lived in the vicinity of Dacia, and are called by Pliny Sarmates. The Iazyges Basilii, or Royal (*Ovid, Ep. ex Pont.*, 1, 2, 79.—*Id., Trist.*, 2, 191), were a people of Sarmatia, joined by Strabo to the Iazyges on the coast of the Euxine, between the Tyras and the Borysthenes. Ptolemy speaks only of the Metanastæ, who were probably the most considerable of the three. The territory of this latter people was, towards the decline of the empire, occupied by the Vandals, and afterward became a part of the empire of the Goths. About the year 350 they were expelled by the Huns. It has since formed a part of *Hungary*, and of the *Bannat of Temeswar*. According to some writers, the Iazyges were the ancestors of the *Iatwings*, whom the Polish authors call also *Pollexiani*. (*Balbi, Introduction a l'Atlas Ethnogr.*, &c., vol. 1, p. 188.)

IBERĀ, I. a country of Asia, bounded on the west by Colchis, on the north by Mount Caucasus, on the east by Albania, and on the south by Armenia. It answers now to *Ineriti, Georgia*, the country of the *Gurians*, &c. The name of Ineriti is an evident derivation from the ancient one. The Cyrus, or *Kur*, flowed through Iberia. Ptolemy enumerates several towns of this country, such as Agiuna, Vasæda, Varica, &c. The Iberians were allies of Mithradates, and were therefore attacked by Pompey, who defeated them in a great battle, and took many prisoners. Plutarch makes the number of slain to have been not less than nine thousand, and that of the prisoners ten thousand. (*Vit. Pomp.*) The same writer states, that the Iberians had never been subject to the Medes or to the Persians; they had escaped even the Macedonian yoke, because Alexander was obliged to quit Hircania in haste. (*Plin.*, 6, 4.—*Id.*, 10, 3.—*Strab.*, 499.—*Ptol.*, 5, 11.—*Socrat., Hist.*, 1, 26.—*Socron.*, 2, 7.)—II. One of the ancient names of Spain, derived from the river Iberus. Consult remarks under the article Hispania.

IBĒRI, a powerful nation of Spain, situate along the Iberus, and who, mingling with Celtic tribes, took the name of Celtiberi. (Consult remarks under the article Hispania.)

IBĒRUS, I. one of the largest rivers in Spain. It rises in what was once the country of the Cantabri, from the ancient Fons Iberus, in the valley of *Reynosa*, near the town of Juliobriga, and flows with a south-eastern course into the Mediterranean Sea, a little distance above the Tenebrum Promontorium, passing, not far from its mouth, the city of Tortosa, now *Tortosa*. The chain of Mons Idubeda, by which it runs for a great part of its course, prevents it from taking a western course along with the other rivers of Spain. It is now the *Ebro*, and is in general very rapid and unfit for navigation, being full of rocks and shoals, and hence the Spanish government have been compelled to cut a canal parallel to the river from *Tudela* to *Sastaga*. The deposits which the river carries to the Mediterranean have formed a considerable delta at its embouchure, and it has been necessary to cut a canal, in order that vessels may ascend to the small town of *Amposta*, below *Tortosa*. (*Malte-Brun*, vol. 8, p. 10, *Am. ed.*) This river was made the boundary between the Carthaginian and Roman possessions in Spain after the close of the first Punic war. (*Lucan.*, 4, 335.—*Plin.*, 3, 3.—*Mela*, 2, 6.—*Liv.*, 21, 5.)—II. A river of Iberia in Asia, flowing from Mount Caucasus into the Cyrus, probably the modern *Jora*.

IBIS, a lost poem of the poet Callimachus, in which he bitterly satirizes the ingratitude of his pupil the poet Apollonius. (*Vid. Callimachus*.) Ovid also wrote a poem under the same title, in imitation of Callimachus. This latter has come down to us, and is thought to be directed against Hyginus, a false friend of the poet's (*Vid. Ovidius*.)

IBYCUS, a lyric poet, a native of Rhegium, who flourished about B.C. 528. Rhegium was peopled partly by Ionians from Chalcis, partly by Dorians from the Peloponnesus, the latter of whom were a superior class. The peculiar dialect formed in Rhegium had some influence on the poems of Ibycus, although these were in general written in an epic dialect with a Doric tinge, like the poems of Stesichorus. Ibycus was a wandering poet, as is intimated by the story of his death, which will be given below; but his travels were not, like those of Stesichorus, confined to Sicily. He passed a part of his time in Samos with Polycrates, whence the flourishing period of this bard may be fixed as we have already given it. In consequence of the peculiar style of poetry which was admired at the court of Polycrates, Ibycus could not here compose solemn hymns to the gods, but had to accommodate his Dorian cithara, as he was best able, to the strains

of Anacreon. Accordingly, it is probable that the poetry of Ibycus was first turned mainly to erotic subjects during his residence in the court of the tyrant of Samos; and that his glowing love-songs, which formed his chief title to fame in antiquity, were composed at this period. But that the poetical style of Ibycus resembled that of Stesichorus, is proved by the fact, that the ancient critics often doubted to which of the two a particular idea or expression belonged. (Compare *Athenæus*, 4, p. 172, d.—*Schol. Ven. ad Il.*, 24, 259.—*Hesych.*, s. v. βραχίλικται.—*Schol. ad Aristoph. Av.*, 1302.—*Schol. Vratistlav. ad Pind.*, Ol. 9, 128.—*Etymol. Gud.*, s. v. ἄσπερνος, p. 98, 31.) The metres of Ibycus also resemble those of Stesichorus, being in general dactylic series, connected together into verses of different lengths, but sometimes so long that they are to be called systems rather than verses. Besides these, Ibycus frequently used logæædic verses of a soft or languid character; and, in general, his rhythms are less stately and dignified, and more suited to the expression of passion, than those of Stesichorus. Hence the effeminate poet Agathon is represented by Aristophanes as appealing to Ibycus with Anacreon and Alcaeus, who had made music more sweet, and had worn many-coloured fillets (in the Oriental fashion), and led the Ionic dance. The subjects of the poems of Ibycus appear also to have had a strong affinity with those of Stesichorus; and so many particular accounts of mythological stories, especially relating to the heroic period, are cited from his poems, that it seems as if he too had written long poems on the Trojan war, the expedition of the Argonauts, and other similar subjects. The erotic poetry, however, of Ibycus is most celebrated, and those productions breathed a fervour of passion far exceeding that expressed in any similar pieces throughout the whole range of Grecian literature. The death of the poet is said to have been as follows: he was assailed and murdered by robbers, and at the moment of his death, he implored some cranes that were flying over head to avenge his fate. Some time after, as the murderers were in the market-place, one of them observed some cranes in the air, and remarked to his companions, αἱ Ἰβύκων ἐκδοικοὶ πᾶραισιν! "Here are the avengers of Ibycus!" These words and the recent murder of Ibycus excited suspicion; the assassins were seized, and, being put to the torture, confessed their guilt. (*Müller, Hist. Gr. Lit.*, p. 205, seqq.)

ICARIA, an island of the Ægean, near Samos, and, according to Strabo, eighty stadia due west from Ampelos, the western promontory of the latter. Pliny (4, 12) makes the distance greater, but he probably measures from the harbour at the western extremity. Mythology deduced the name of this island from Icarus, son of Dædalus, whose body was washed upon its shores after the unfortunate termination of his flight. Bochart, however, inclines towards a Phœnician derivation, and assigns, as the etymology of the name, *I-caure*, i. e., "insula piscium," the island of fish. In support of this explanation, he refers to Athenæus (1, 24), Stephanus Byzantinus, and others, according to whom one of the early Greek names of the island was *Ichthyoessa* (Ἰχθυόεσσα), i. e., "abounding in fish." (*Geogr. Sacra*, 1, 8, sub fin.)—Icaria was of small extent, being long but narrow. In Strabo's time it was thinly inhabited, and the Samians used it principally for the pasturage of their cattle. The modern name is *Nicaria*. The island at the present day is said to abound in timber, but to be otherwise sterile; and to be inhabited by a few Greeks, very poor, and very proud of their pretended descent from the imperial line of Constantine. (*Georgievicus, Descrip. de Samos, Nicaria*, &c., p. 304)

ICARIS and ICARIOTIS, a name given to Penelope, as daughter of Icarus.

ICARIUM MARE, a part of the Ægean Sea near the islands of Myconus and Gyarus. The ancient mythologists deduce the name from Icarus, who fell into it and was drowned. But compare remarks under the article Icaria.

ICARIUS, I. an Athenian, father of Erigone. Having been taught by Bacchus the culture of the vine, he gave some of the juice of the grape to certain shepherds, who, thinking themselves poisoned, killed him. When they came to their senses they buried him; and his daughter Erigone, being shown the spot by his faithful dog Mæra, hung herself through grief. (*Apollod.*, 3, 14, 7.—*Hygin.*, fab., 130.) Icarus was fabled to have been changed after death into the constellation Boötes, Erigone into Virgo, while Mæra became the star Canis. (*Vid. Erigone*).—II. A son of Cæbalus of Lacedæmon. He gave his daughter Penelope in marriage to Ulysses, king of Ithaca, but he was so tenderly attached to her that he wished her husband to settle at Lacedæmon. Ulysses refused; and when he saw the earnest petitions of Icarus, he told Penelope, as they were going to embark, that she might choose freely either to follow him to Ithaca or to remain with her father. Penelope blushed in silence, and covered her head with her veil. Icarus, upon this, permitted his daughter to go to Ithaca, and immediately erected a temple to the goddess of modesty, on the spot where Penelope had covered her blushes with her veil.

ICARUS, a son of Dædalus, who, with his father, fled with wings from Crete to escape the resentment of Minos. His flight being too high proved fatal to him; for the sun melted the wax which cemented his wings, and he fell into that part of the Ægean Sea which was called after his name. (*Vid. Icarium Mare*; and consult also remarks under the article Dædalus.)

ICENI, a people of Britain, north of the Trinobantes. They inhabited what answers now to the counties of *Suffolk, Norfolk, Cambridge, and Huntingdon*. This nation is called by several different names, as *Simeni* by Ptolemy, *Cenimagni* by Cæsar, &c. They at first submitted to the Roman power, but afterward revolting in the reign of Claudius, were defeated in a great battle by Ostorius Scapula, the second Roman governor of Britain, A.D. 50, and reduced to a state of subjection. They again revolted under the command of the famous Boadicea, but were entirely defeated with great slaughter by Suetonius Paulinus, A.D. 61, and totally subjugated. Their capital was *Venta Icenorum*, now *Caister*, about three miles from *Norwich*. (*Tacit.*, 12, 31.—*Cæs.*, B. G., 5, 21.—*Cellarius, Geogr. Ant.*, vol. 2, p. 339.)

ICHNÆ, I. a town of Macedonia, placed by Herodotus in Botæia, and situated probably at the mouth of the Ludias. (*Herod.*, 7, 123.—Compare *Mela*, 2, 3.—*Plin.*, 4, 10.) From other authors, cited by Stephanus, it appears that the name was sometimes written *Achne*.—II. A city of Thessaly, near Phyllus, and in the district of Phthiotis. The goddess Themis was especially revered here. (*Strab.*, 435.—*Horn.*, *Hymn. in Apoll.*, 94.)

ICHNUSA, an ancient name of Sardinia, which it received from its likeness to a human foot. Ἰχνοῦσα, from ἵχνος, *vestigium*. (*Pausan.*, 10, 17.—*Plin.*, 3, 7.—*Sil. Ital.*, 12, 881.) It was also called *Sandaliotis*, from its resemblance to a sandal (σανδάλιον). Ritter, however, indulges in some very learned and curious speculations to prove that the name *Ichnusa* refers, not to the shape of the island, but to the establishment in it, at an early period, of the religion of the Sun. And, in support of this position, he avails himself very skillfully of the various accounts of the prints of human footsteps as found in different parts of the ancient world. (*Vorhalle*, p. 351, seqq.)

ICHTHYOPHAGI, a name given by the Greek geographers to several tribes of barbarians in different parts

of the ancient world, and which indicates a people "living on fish." I. A people of Gedrosia, on the coast of the Mare Erythræum. (*Plin.*, 6, 23.—*Arrian*, 6, 28.—*Id.*, *Ind.*, 26.)—II. A people in the northeastern part of Arabia Felix, along the coast of the Sinus Persicus.—III. A people of Trogloditica, according to Strabo, southwest of the island Tapozos; probably near the straits of Diræ, or *Bab-el-Mandeb*. According to the Peutinger Table, they dwelt between Albus Portus and Berenice.

ICHTHYOPHAGÖRUM SINUS, a bay on the northeastern coast of Arabia Felix.

ICONIUM, a very ancient city of Asia Minor, and during the Persian dominion the easternmost city of Phrygia. (*Xen.*, *Anab.*, 1, 2.) At a later period it became and continued the capital of Ilycaonia. It was never a very important place: Strabo (568) calls it a *πολίχνη*, "small city." Pliny, it is true, gives it the appellation of *urbis celeberrima*, but this merely refers to its being the head of a tetrarchy of fourteen cities. (*Plin.*, 5, 27.) Strabo praises the activity of the inhabitants and the fruitfulness of the surrounding country. The Greeks, according to their wonted custom, brought their own mythology to bear on the name of this place, without at all caring for the fact that the city was called Iconium long before any of their nation had penetrated into inner Asia. They deduced the appellation from *εἰκώνιον* ("a small image"), and then no difficulty presented itself as to the mode of explaining it. According to some, Prometheus and Minerva were ordered by Jupiter, in order to replenish the earth after the deluge of Deucalion, to make human forms of clay, and to inspire them with the breath of life by calling in the aid of the winds. The scene of this was the vicinity of Iconium, whence the place received its name. (*Steph. Byz.*, s. v. *Ἰκόνιον*.) This etymology, however, had but few supporters; another and a more popular one prevailed, though of later date than the former, since Strabo and his contemporaries knew nothing of it. According to this last, Perseus here raised a column with an image of Medusa upon it, and hence the name of the place. (*Eustath.*, *Schol. in Dionys. Perieg.*, v. 856.) When Constantine the Great found statues of Perseus and Andromeda at Iconium, and caused them to be transported to Constantinople, this discovery only served to confirm the previous tradition in the minds, not only of the neighbouring communities, but also of the Byzantines themselves. (*Antiq. Constantin.*, l. 2 c 6.—*Bandurii*, *Imp. Orient.*, vol. 1, p. 24, 106.) It created no difficulty whatever that the name of Iconium commenced, not with the diphthong *Ei*, but the single *I*. Stephanus (*l. c.*) asserts, that the name ought to be written with the initial diphthong, and it is, in fact, so written by Eustathius and the Byzantine historians. (*Εἰκόνιον*—*Chron. Alexandrin.*, *Cedrenus*.) Eekhel also cites medals on which this orthography is given; but other and earlier ones have the true form, and the grammarian Chæroboscus observes, that the first syllable of the name was pronounced short by Menander. (*Cod. Barocc.*, 50, f. 131.)—The most interesting circumstances connected with the history of Iconium, are those which relate to St. Paul's preaching there, towards the commencement of his apostolical mission to the Gentiles. (*Acts*, 13, 51, *seqq.*)—Under the Byzantine emperors frequent mention is made of this city; but it had been wrested from them, first by the Saracens, and afterward by the Turks, who made it the capital of an empire, the sovereigns of which took the title of Sultans of Iconium. They were constantly engaged in hostilities with the Greek emperors and the crusaders, with various success; and they must be considered as having laid the foundation of the Ottoman power in Asia Minor, which commenced under Osman Oglou and his descendants, on the termination of the Iconian dynasty, towards the beginning of the

fourteenth century.—This place has been included in the domains of the Grand Seigneur, under the name of *Konia*, ever since the time of Bajazet, who finally extirpated the Ameers of Caramania. It is the residence of a pacha. Col. Leake gives the following account of its present state: "The circumference of the walls of Konia is between two and three miles, beyond which are suburbs not much less populous than the town itself. The walls, strong and lofty, and flanked with square towers, which at the gates are built close together, are of the time of the Seljukian kings, who seem to have taken considerable pains to exhibit the Greek inscriptions, and the remains of architecture and sculpture belonging to the ancient Iconium, which they made use of in building the walls. The town, suburbs, and gardens around are plentifully supplied with water from streams which flow from some hills to the westward, and which to the northeast join a lake varying in size according to the season of the year. In the town carpets are manufactured, and they tan and dye blue and yellow leather. Cotton, wool, hides, and a few of the other raw materials, which enrich the superior industry and skill of the manufacturers of Europe, are sent to Smyrna by the caravans." (*Journal of a Tour in Asia Minor*, p. 48.) Col. Leake travelled in this country in 1800. Mr. Browne, who passed through in 1802, says, that "the scanty population and shapeless mud-hovels of Konia, the abode of poverty and wretchedness, are strongly contrasted with what still remains of the spacious and lofty walls of the Greek city." (*Walpole's Memoirs*, &c., vol. 2, p. 121.) "The modern city," says Capt. Kinneir, "has an imposing appearance, from the number and size of the mosques, colleges, and other public buildings; but these stately edifices are crumbling into ruins, while the houses of the inhabitants consist of a mixture of small huts built of sun-dried brick, and wretched hovels thatched with reeds." The same traveller also gives an interesting description of the antiquities of the place. He makes the present number of inhabitants about 80,000, principally Turks, with only a small proportion of Christians.

IDA, I. a chain of mountains in Troas, or, more correctly speaking, a mountainous region, extending in its greatest length from the promontory of Lectum to Zelea, and in breadth from the Hellespont to the neighbourhood of Adramyttium; so that it occupied by its ridges and ramifications the whole of the tract anciently called Phrygia Minor. Among a number of ridges or ranges and irregular masses of mountains of which it is composed, there are three ridges that are superior in point of elevation to the rest, and one of them eminently so. From their relative positions to each other, they may be compared collectively, in point of form, to the Greek *Delta*; the head or northeastern angle of which approaches the Hellespont, near the site of the ancient Dardanus; and the two lower angles approach the promontory of Lectum on the one hand, and Adramyttium on the other. The loftiest of these ridges is that which forms the right or eastern side of the Δ ; extending southeastward between the Hellespont and the head of the gulf of Adramyttium, and terminating in the lofty summit of Gargarus, which overtops, in every distant view, the great body of Ida, like a dome over the body of a temple. The second ridge, forming the left of the Δ , runs parallel to the coast of the *Ægean* Sea, from north to south, at the distance of six or seven miles. Its commencement in the north is, like that of Ida, near the Hellespont, and it extends far on towards the promontory of Lectum. In a general view from the west it appears to extend to the promontory itself; although, in reality, it is separated from it by a wide valley, through which flows the *Touza* or Salt River. The third ridge, forming the basis of the Δ , extends along the southern coast of the Lesser Phrygia, from the summit of Mount Gargarus

to the promontory of Lectum, diminishing in altitude as it proceeds towards the latter. Mr. Hawkins says that this ridge is not inferior in height to that which faces the plain of Troy. Herodotus, Xenophon, and Strabo evidently design by Ida the ridge towards Troy; or at least they exclude Gargarus. The former, in describing the march of Xerxes northward from Pergamum, Thebes, and Antandros, to Ilium, makes the Persian monarch leave Ida "on his left hand" (7, 42), that is, to the west. Now the summit of Gargarus being little short of an English mile in altitude, what should have induced Xerxes to lead his army over such a ridge, when he might have gone a straighter and smoother road by avoiding it, and when, after all, he must of necessity have crossed the western ridge also in order to arrive at Ilium?—Again, Xenophon says (*Anab.*, 7), that in his way (southward) from Ilium through Antandros to Adramyttium, he crossed Mount Ida. Of course it must have been the western and southern ranges, as is done at present by those who travel from the Dardanelles to *Adramyt* or *Adramyttium*. Strabo unquestionably refers the ideas of Demetrius respecting the mountains of Cotylus (i. e., Gargarus) and its views to the Trojan Ida; never supposing that the lofty mountain ever Antandros and Gargara was Cotylus, the highest point of Ida, whence Demetrius derives the fountains of the Scamander, the Æsepus, and the Granicus. Strabo concluded that all these rivers sprang from that chain of Ida bordering on the Trojan plain which he had in view from the seacoast; and which, it appears, was the only Ida known to him. (*Rennell's Observations on the Topography of Troy*, p. 17, *seqq.*)—Ida was remarkable for its thick forests and excellent timber. Its name is thought to be derived from the circumstance of its being covered with woods, ἰδῆσαι κατηρεφής, as Herodotus says of a part of Media (1, 110). It was the source of many streams (*Hom.*, *Il.*, 12, 19), and on Ida also Paris adjudged to Venus the prize of beauty.—II. The highest and most celebrated mountain of Crete, rising nearly in the centre of the island. According to Strabo, it was 600 stadia in circuit, and around its base were many large and flourishing cities. (*Strab.*, 475.—Compare *Dionys. Perieg.*, v. 501.) The summit, named Panacra, was especially sacred to Jove. (*Callim.*, *Hymn. in Jov.*, 50.) Here Jove was fabled to have been educated by the Corybantes, who on that account were called Idæi. The modern name of the mountain is *Psiloriti*. (*Cramer's Anc. Greece*, vol. 3, p. 381.)

ΙΔÆΑ, the surname of Cybele, because she was worshipped on Mount Ida. (*Lucr.*, 2, 611.)

ΙΔÆΙ ΔΑΚΤΥΛΙ, priests of Cybele, who, according to Ephorus (*ap. Diod. Sic.*, 5, 64.—*Fragm.*, ed. *Marr.*, p. 176), were so called from Ida, the mountain of Phrygia, where they had their abode. The poets and mythologists vary much in their accounts of this class of individuals. Some make them to have been the sons of Jupiter and the nymph Ida; others confound them with the Curetes or Corybantes; while others, again, make the Curetes their offspring. The same diversity of opinion exists as to their number. Some make them to have been only five (*Pausan.*, 5, 7), and hence they suppose them to have been called Dactyli, from the analogy between their number and that of the fingers (δάκτυλοι) on each hand. Others make the number much larger. Pherecydes, one of the early Grecian historians, spoke of 20 Idæi Dactyli placed on the right, and of 32 on the left, all children of Ida, all workers in iron, and, moreover, expert in sorcery. (*Schol. ad Apoll. Rh.*, 1, 1129.—*Pherecyd.*, *fragm.*, ed. *Sturz.*, p. 146.) Hellenicus pretended that the Dactyli on the right were occupied with breaking the charm formed by those on the left. In one thing all the ancient authorities agree, namely, that the Idæi Dactyli first taught mankind the art of working iron

and copper. (*Clem. Alex., Strom.*, 1, p. 420.) The Chronicle of Paros places the date of this discovery under the reign of Pandion, king of Athens, that is to say, 1432 years before the Christian era. (*Marm., Oxon. Epoch.*, 11.) Strabo informs us, that, according to some ancient writers, the Curetes and the Corybantes were the offspring of the Idæi Dactyli; that 100 men, the first inhabitants of Crete, were called by this latter name; that these begat nine Curetes, and that each one of these nine begat in his turn ten sons, named Idæi Dactyli like their grandfathers. (*Strabo*, 473, *seqq.*) Strabo remarks on this occasion, with great good sense, that early antiquity was accustomed to throw the garb of fable around many notions based in reality on the nature of things. An ingenious antiquary of modern times, struck by the truth of this remark, first calls our attention to the metrical sense of δάκτυλος (*finger*), and then adds, with every appearance of reason, that the numbers 100, 9, and 10, applied to the Dactyli and the Curetes, belong probably to some arithmetical or physical theory. As to the name Dactyli itself, whether we must seek its etymology in the number of fingers on each hand, or else in the idea of measure, and, consequently, of cadence, equally derived from the movement of the fingers, and identical, besides, with the idea of number, still it is thought that, in forging iron by the aid of their hands and fingers, the Dactyli observed at first a species of dactylic rhythm, and that these forgers were the first that applied the dance to this same rhythm; from all which arose their peculiar name. (*Jomard, sur le Système Métrique des anciens Egyptiens.—Description de l'Égypte, Antiquités, Mémoires*, vol. 1, p. 744, *seqq.*)

ΙΔΑΛΙUM, a height and grove of Cyprus, near the promontory of Pedalium. It was the favourite abode of Venus, hence called Idalia, and here, too, Adonis was killed by the tooth of the boar. Virgil speaks of this hill or mountain under the name of *Idalium* (*Æn.*, 1, 681), and shortly after makes mention of the groves of *Idalia* (1, 693). By this last is meant the entire region (Ἰδάλια χώρα.—*Heyne, ad Virg.*, l. c.). On another occasion (*Æn.*, 10, 86), he speaks of a city named Idalium. (Compare *Theocritus*, 15, 101. Γολγὺς τε καὶ Ἰδάλιον.—*Steph. Byz.*, s. v.) The city or town of Idalium is passed over in silence by the ancient geographical writers. It is first referred to by the later scholiasts. (*Serv.*, *ad Virg.*, *Æn.*, 1, 681. *Schol. ad Theocrit.*, 15, 101.) It no doubt existed from an early period, but was too insignificant to excite attention. D'Anville is inclined to make the modern *Dalīn* correspond to the ancient grove and city. Idalium is said to signify literally, "the place of the goddess," in the Phœnician tongue. (*Bochart, Geogr. Sacr.*, lib. 1, c. 3, p. 356.—Compare *Gale's Court of the Gentiles*, as cited by Clarke, *Travels*, vol. 4, p. 36, *Lond. ed.*, 1817.)

ΙΔΑΣ, a son of Aphareus, famous for his valour. He was among the Argonauts, and married Marpessa, the daughter of Evenus, king of Ætolia. Marpessa was carried away by Apollo, and Idas pursued him, and obliged him to restore her. (*Vid. Marpessa.*) According to Apollodorus, Idas, with his brother Lynceus, associated with Pollux and Castor to carry away some flocks; but, when they had obtained a sufficient quantity of plunder, they refused to divide it into equal shares. This provoked the sons of Leda; Lynceus was killed by Castor, and Idas, to revenge his brother's death, immediately slew Castor, and in his turn perished by the hand of Pollux. According to Pausanias, the quarrel between the sons of Leda and those of Aphareus arose from a different cause. Idas and Lynceus, as they say, were going to celebrate their nuptials with Phœbe and Hilara, the two daughters of Leucippus; but Castor and Pollux, who had been invited to partake the common festivity, carried off the brides, and Idas and Lynceus

tell in the attempt to recover their wives. (*Hygin., fab.*, 14, 100, &c.—*Ovid., Fast.*, 5, 700.—*Pausan.*, 4, 2; 5, 18.—*Apollod.*, 3, 11, 2.)

INISTAVISUS, a plain of Germany, where Germanicus defeated Arminius. The name appears to have some affinity to the German word *wiese*, signifying "a meadow." Mannert supposes the field of battle to have been on the east of the *Weser*, south of the city of *Minden*. (*Mannert, Anc. Geogr.*, vol. 3, p. 85.—*Tacit., Ann.*, 2, 16.)

INMON, I. son of Apollo and Asteria, was the prophet of the Argonauts. He was killed in hunting a wild boar in Bithynia, and received a magnificent funeral. He had predicted the time and manner of his death. (*Apollod.*, 1, 9.—II. A dyer of Colophon, father to Arachne. (*Ovid., Met.*, 6, 8.)

IDOMENEUS (four syllables), I. succeeded his father Deucalion on the throne of Crete, and accompanied the Greeks to the Trojan war with a fleet of 90 ships. During this celebrated contest he rendered himself conspicuous by his valour. At his return he made a vow to Neptune, in a dangerous tempest, that if he escaped from the fury of the seas and storms, he would offer to the god whatever living creature first presented itself to his eye on the Cretan shore. This was no other than his own son, who came to congratulate his father upon his safe return. Idomeneus performed his promise to the god, but the inhumanity and rashness of his sacrifice rendered him so odious in the eyes of his subjects, that he left Crete, and went abroad in quest of a settlement. He came to Italy, and founded a city on the coast of Calabria, which he called Sallentia. (*Vid.* Sallentini.) He died at an advanced age, after he had the satisfaction of seeing his new kingdom flourish and his subjects happy. According to the Greek scholiast on Lycophron (v. 1218), Idomeneus, during his absence in the Trojan war, intrusted the management of his kingdom to Leucos, to whom he promised his daughter Clisithere in marriage at his return. Leucos at first governed with moderation; but he was persuaded by Nauplius, king of Eubœa, to put to death Meda, the wife of his master, with her daughter Clisithere, and to seize the kingdom. After these violent measures, he strengthened himself on the throne of Crete; and Idomeneus, at his return, found it impossible to expel the usurper. (*Ovid., Met.*, 13, 358.—*Hygin., fab.*, 92.—*Hom., Il.*, 11, &c.—*Pausan.*, 5, 25.—*Virg., Æn.*, 3, 122)—II. A Greek historian of Lampsacus, in the age of Epicurus. He wrote a history of Samothrace.

IOOTRŒA, a daughter of Prætus, king of Argos. She was cured of insanity, along with her sisters, by *Melampus*. (*Vid.* Prætidæ.)

IDUEBDA, a range of mountains in Spain, commencing among the Cantabri, and extending nearly in a southeastern direction through Spain until it terminates on the Mediterranean coast, near Saguntum, which lay at its foot. Such, at least, is its extent, according to Strabo. Ptolemy, however, gives merely a part of it, from Cæsar Augusta, or *Saragossa*, to Saguntum. (*Strab.*, 161.—*Mannert, Geogr.*, vol. 1, p. 406.)

IDUMÆA, a country of Asia, on the confines of Palestine and Arabia, or, rather, comprehending parts of each, having Egypt on the west, and Arabia Petræa on the south and east. Its extent varied at different periods of time. Esau or Edom, from whom it derived its name, and his descendants, settled along the mountains of Seir, on the east and south of the Dead Sea, whence they spread themselves by degrees through the western part of Arabia Petræa, and quite to the Mediterranean. In the time of Moses, Joshua, and even of the Jewish kings, they were hemmed in by the Dead Sea on one side, and the Sinus Ælanitis on the other. But the Idumæa of the New Testament applies only to a small part adjoining Judæa on the

south, and including even a portion of that country, which was taken possession of by the Edomites or Idumæans, while the land lay unoccupied during the Babylonian captivity. The capital of this country was Hebron, which had formerly been the metropolis of the tribe of Judah. These Idumæans were so reduced by the Maccabees, that, in order to retain their possessions, they consented to embrace Judaism, and their territory became incorporated with Judæa; although, in the time of our Saviour, it still retained its former name of Idumæa. Strabo divides it into Eastern and Southern Idumæa, with reference to its situation from Palestine. The capital of the former was Bozra or *Bossra*, and of the latter, Petra or *Jacktael*. Idumæa was famous for its palm-trees. (*Virg., Geogr.*, 3, 12.) The country in general was hot, dry, mountainous, and in some parts barren. It is now inhabited by some tribes of wild Arabs. (*Plin.*, 5, 13.—*Juv., Sat.*, 8, 160.—*Stat., Sylv.*, 5, 2.—*Mart.*, 10, 50.—*Joseph., Ant. Jud.*, 2, 1.—*Id., Bell. Jud.*, 4, 30.)

INËYSUS, a city of Syria, not far from Gaza. The modern village of *Kan-Jones* marks the ancient site. (*Herod.*, 3, 5.—*Rennell, Geogr. Herod.*, vol. 1, p. 342, *ed.* 1830.)

JERÏCHO (in Greek *Ἰεριχὺς*, gen. *-οῦντος*), a city of Judæa, in the tribe of Benjamin, about seven leagues to the northeast of Jerusalem, and two from the river Jordan. Jericho was the first city of Canaan taken by Joshua, who destroyed it. A new city was afterward built by Hiel of Bethel, but it would seem that before the time of Hiel there was another Jericho built near the site of the old. The situation of this city is said (2 *Kings*, 2, 19) to have been very pleasant, but "the water naught and the ground barren;" when Elisha, at the entreaty of the inhabitants, "healed the water," and rendered it wholesome and abundant. It is probable that, before this miracle of Elisha, the only water which supplied the city and adjoining plain was both scanty and bad; so that the inhabitants were destitute of this essential and fertilizing element, and the soil was consequently parched and barren. The place which is by nearly all authorities considered to be the same with Jericho, is a mean and miserable village called *Richa* or *Rihha*, situated in a plain about three leagues wide, surrounded by barren mountains, and about three miles from the Jordan. But the true site of ancient Jericho may be proved to have been about four miles higher up the valley, on the west of Rihha, and not far from its commencement on this side, at the foot of the mountains. Here Mr. Buckingham found a large square area, enclosed by long and regular mounds, uniform in their height, breadth, and angle of slope, which seemed to mark the place of enclosing walls, now worn into mounds. Besides which, the foundations of other walls in detached pieces, portions of ruined buildings of an indefinite nature, shafts of columns, &c., were seen scattered about over the widely-extended heaps of this ruined city, which seemed to cover a surface of square miles. These remains, nothing of which kind is to be found at Rihha, may be considered as sufficient to determine the position of ancient Jericho; besides which, to remove all doubt upon the subject, they agree exactly with the required distance from Jerusalem on one side, and the Jordan on the other, as given by Josephus, who makes it 150 furlongs from the former, and 60 from the latter. The plain of Jericho extends eastward to the Jordan, and is nearly enclosed on all sides by barren and rugged mountains. This circumstance, with the lowness of its level, renders it extremely hot; so much so as to enable the palm-tree to flourish, which is not the case in any other part of Judæa. Jericho itself was indeed always celebrated for the abundant growth of this tree, which obtained for it the name of "the city of palm-trees." (*Deut.*, 34, 3.—*Judges*, 1, 16; 3, 13.) Josephus says, that in his time the

neighbouring country abounded in thick groves of these trees, together with the tree which afforded the balm or balsam of Gilead. At present, however, there is not a tree of any kind, either palm or balsam, and scarcely any verdure or bushes, to be seen about the site of this deserted city. But the desolation with which its ruins are surrounded is rather to be ascribed, according to Mr. Buckingham, to the cessation of the usual agricultural labours on the soil, and the want of a distribution of water over it by the aqueducts, the remains of which evince that they were constructed chiefly for that purpose, than to any change in the climate or the soil; an observation which may be extended to many parts of the Holy Land. (*Mansford's Scripture Gazetteer*, p. 208, *seqq.*)

IERNE, one of the ancient names of Ireland. Pytheas, who, to his own personal acquaintance with this quarter of the globe, added much information respecting it, which he had obtained from the early inhabitants of Gades in Spain, is the first who calls Ireland by the name of Ierne (*ἡ Ἰέρνη*). From Aristotle, a contemporary of his, we learn that what are now England and Ireland were then denominated *Βρετανικαὶ νῆσοι*. (*De Mundo*, c. 3.) In Cæsar's commentaries a change of appellation appears. England is there styled *Britannia*, and Ireland, *Hibernia*. (*B. G.*, 5, 12, &c.) The idea very naturally suggests itself, that Cæsar may have given this name to the latter island of his own accord, for the purpose of denoting the severity of its climate, and that the meaning of the term is nothing more than *Winter-land*. Such a supposition, however, although it may wear a plausible appearance, seems to have no foundation whatever in fact. It is more than probable that Cæsar gives the name as he heard it from others, without associating with it any idea of cold. He merely places the island to the west of Britain. It was Strabo who made it lie far to the north, and, in consequence of this error, first gave rise to the opinion, if any such were ever in reality entertained, that the climate of Ireland was cold and rigorous. But a question here presents itself, whether Ierne or Hibernia be the true appellation of this island. The latter, we believe, will, on examination, appear entitled to the preference. It is more than probable that Pytheas received the name Ierne from the mouths of the neighbouring nations, contracted from Hibernia. This supposition would approach to certainty, if we possessed any means of substantiating as a fact, that the appellation Hiberni, which is given to the inhabitants of the island, was used in the old accounts respecting it, and not first introduced by so late a writer as Avienus. A strong argument may be deduced, however, from what appears to have been the ancient pronunciation of the word Hibernia. The consonant *b* may have been softened down so as to resemble *ou* in sound, a change far from uncommon; and hence Hibernia would be pronounced as if written *Ioveria*, whence Ierne may very easily have been formed. (Consult remarks under the article Iuverna.) The modern name Erin, which is sometimes applied to Ireland, is an evident derivation from Ierne, if not itself the ancient Erse root of that term. Ireland was known at a very early period to the ancient mariners of southern Europe, by the appellation of the Holy Island. This remarkable title leads to the suspicion that the primitive seat of the Druidical system of worship may have been in Ireland. Cæsar, it is true, found Druids in Gaul, but he states, at the same time, that they were always sent to complete their religious education in Britain; and we shall perceive, if we compare later authorities, that the sanctuary of the Druids was not in Britain itself, but in the island of *Anglesea*, between which and the adjacent coast of Ireland the distance across is only 85 miles. Had the Romans extended their inquiries on this subject to Ireland itself, we should evidently have received

such accounts from them as would have substantiated what has just been advanced. As regards the early population of this island, it may, we believe, be safely assumed as a fact, that the northern half of the country was peopled by the Scoti; not only because in later years we find Scoti in this quarter as well as on the Isle of Man, but because even at the present day the Erse language is not completely obliterated in some of the northern provinces. The southern half of the island seems to have had a Celtic population. It is a very curious fact, however, that the names of many places in ancient Ireland, as given by Ptolemy, bear no resemblance whatever either to Scottish or Celtic appellations. This has given rise to various theories, and, in particular, to one which favours the idea of migrations from the Spanish peninsula. Tacitus considers the Silures in Britain as of Spanish origin; but this supposition is merely grounded on an accidental resemblance in some national customs. Inquiries have been made in modern days into the Basque language, which is supposed to contain traces of the ancient Iberian, but no analogy has been discovered between it and the modern Irish. The Roman arms never reached Ireland, although merchants of that nation often visited its coasts. From the accounts of the latter, Ptolemy obtained materials for his map of this island. It is worthy of remark, that this geographer does not name a single place in northern Scotland, whereas, in the same quarter of the sister island, he mentions as many as 10 cities, one of them of considerable size, and three others of the number situate on the coast. Is not this a proof that Ireland, at this early period, had attained a considerable degree of civilization? A barbarous people never found cities on the coast. In addition to what has thus far been remarked, it may be stated that Herodotus was equally ignorant of Ireland and Britain. Eratosthenes gives a general and rude outline of the latter, but knew nothing of the former. Strabo had some knowledge, though very imperfect, of both. Pliny's information, with regard to both Britain and Ireland, greatly surpasses that of his predecessors. Diodorus Siculus calls the latter Iris or Irin, and copies a foolish story of the natives being cannibals. (*Mannert, Geogr.*, vol. 2, pt. 2, p. 33, *seqq.*)

JERUSALEM, the capital of Judæa. (*Vid.* Hierosolyma.)

IGILGILIS, a town of Mauretania Cæsariensis, west of the mouth of the river Ampsagas, and north of Cirta. It is now *Gigeri* or *Jigel*. (*Pliny*, 5, 2.—*Amm. Marcell.*, 29, 5.)

IGILIUM, now *Giglio*, an island of Italy, near the coast of Etruria, off the promontory of Argentario. The thick woods of this island served as a place of refuge for a great number of Romans, who fled from the sack of Rome by Attila. (*Mela*, 2, 7.—*Rutilius, It. I.*, 325.)

IGNATIUS, a martyr who suffered at Rome during the third persecution of the Christians. He was a Syrian by birth, and an immediate disciple of St. John the Evangelist, who, in the 67th year of the Christian era, committed the church at Antioch to his pastoral superintendence, as successor to Eudodius. Over this bishopric he presided for upward of 40 years, when the Emperor Trajan, after his triumph over the Dacians, entering the city, exercised many severities towards those who professed the Christian faith, and summoned the prelate himself before him, on which occasion Ignatius conducted himself with such boldness in the imperial presence, that he was forthwith sent to Rome, and ordered to be exposed in the amphitheatre to the fury of wild beasts. This dreadful death he underwent with great fortitude, having availed himself of the interval between his sentence and its execution to strengthen, by his exhortations, the faith of the Roman converts. After his decease, which took place A.D. 107, or, accord-

ing to some accounts, A.D. 116, his remains were carried to Antioch for internment.—If, as some suppose, Ignatius was not one of the little children whom Jesus took up in his arms and blessed, it is certain that he conversed familiarly with the apostles, and was perfectly acquainted with their doctrine. Of his works there remain seven epistles, edited in 1645 by Archbishop Usher, republished by Cotelierius in 1672, in his collection of the writings of the apostolical fathers; and again printed in 1697 at Amsterdam, with notes, and the commentaries of Usher and Pearson. An English translation of them, from the pen of Archbishop Wake, is to be found among the works of that prelate. There are some other letters of minor importance, which, though the question of their authenticity has met with supporters, are generally considered to have been attributed to him on insufficient authority.—II. A patriarch of Constantinople, about the middle of the ninth century. He was son to the Emperor Michael Curopalata, and on the deposition of his father assumed the ecclesiastical habit. The uncompromising firmness which he displayed after his elevation to the patriarchal chair in 817, in subjecting Bardas, a court-favourite, to the censures of the church, on account of an incestuous connexion, caused him to undergo a temporary deprivation of office. Under Basil, however, he was restored to his former dignity, and presided in his capacity of patriarch at the eighth general council. His death took place about the year 878. (*Gorton's Biogr. Dict.*, vol. 2, p. 162.)

IGUVIUM, a city of Umbria, on the Via Flaminia, to the south of Tifernum, and at the foot of the main chain of the Apennines. It is now *Eugubbio*, or, as it is more commonly called, *Gubbio*. Iguvium was a municipal town; and, as it would seem from the importance attached to its possession by Cæsar when he invaded Italy, a place of some consequence. (*Cæs.*, *Bell. Civ.*, 1, 2.—Compare *Cic. ad Att.*, 7, 13.—*Plin.*, 3, 14.) This city has acquired great celebrity in modern times, from the discovery of some interesting monuments in its vicinity, in the year 1440. These consist of several bronze tablets covered with inscriptions, some of which are in Umbrian, others in Latin characters. They have been made the subject of many a learned dissertation by modern literati. The most recent work on the subject is by Grotefend, entitled *Rudimenta Lingue Umbrie*, Ato, Hannover, 1835-39.

ILBA or ILVA, an island of the Tyrrhene Sea, off the coast of Etruria, and about ten miles from the promontory of Populonium. It was early celebrated for its rich iron mines; but by whom they were first discovered and worked is uncertain, as they are said to exhibit the marks of labours carried on for an incalculable time. (*Pini, Ossere. Mineral. sulla miniera di ferro di Rio*, &c., 1777, 8vo.—*Lettre sur l'histoire naturelle de l'île d'Elbe*, par Kœstlin, Vienne, 1780, 8vo.) It even seems to have been a popular belief among the ancients, that the metallic substance was constantly renewed. (*Aristot., de Mir.*, p. 1158.—*Strab.*, 223.—*Plin.*, 34, 14.) It is probable that the Phœnicians were the first to make known the mineral riches of this island, and that it was from them the Tyrrheni learned to estimate its value, which may have held out to them no small inducement for settling on a coast otherwise deficient in natural advantages. It is to the latter people that we ought to trace the name of Æthalia, given to this island by the Greeks, and which the latter derived from *αἶβα* (*to burn*), in allusion to the number of forges on the island. According to Polybius (*ap. Steph. Byz.*), the same appellation was given to Lemnos, a Tyrrhenian settlement in early times. Ilva is now *Elba*. (*Cramer's Anc. Italy*, vol. 1, p. 210.)

ILERCAONES, a Spanish tribe, east of the Edetani, on both sides of the Iberus, near its mouth. Dertosa

(now *Tortosa*) and Tarraco (now *Tarragona*) were two of their towns. (*Ukert, Geogr.*, vol. 2, p. 418.)

ILERDA, the capital city of the Ilergetes in Spain, situate on the Sicoris or *Sègre*, a tributary of the Iberus. (*Strabo*, 161.) The situation of this place, near the foot of the Pyrenees, exposed it incessantly to the horrors of war, from the time that the Romans began to penetrate into Spain. It was celebrated for the resistance it made against Cæsar, under the lieutenants of Pompey, Afranius and Petreius, who were, however, finally defeated. (*Cæs.*, *B. Civ.*, 1, 61.—*Flor.*, 4, 12.—*Appian, B. Civ.*, 2, 42.) In the reign of Gallienus it was almost entirely destroyed by the barbarians, who, migrating from Germany, ravaged the western parts of the empire. It is now Lerida in Catalonia. (*Auson., Epist. ad Paulin.*, 26, 59.—*Id., Profess.*, 23, 4.—*Ukert, Geogr.*, vol. 2, p. 451.)

ILERGÈTES. *Vid.* Ilerda.

ILIA, otherwise called Rhea Silvia, daughter of Numitor, king of Alba, was appointed one of the vestal virgins by Amulius, after the latter had wrested from his brother Numitor the kingdom of Alba. Amulius made his niece a vestal to prevent her having any offspring, the vestals being bound to perpetual chastity. Mars, however, according to the old legend, overpowered the timid maiden in the sacred grove, whither she had gone to draw water from a spring for the service of the temple. She became the mother of Romulus and Remus, and, according to one account, was buried alive on the banks of the Tiber. Ennius, however, as cited by Porphyrius (*ad Hor.*, *Od.*, 1, 2, 17), makes her to have been cast into the Tiber, previous to which she had become the bride of the Anio. Horace, on the contrary, speaks of her as having married the god of the Tiber. Servius (*ad Æn.*, 1, 274) alludes to this version of the fable as adopted by Horace and others. Acron also, in his scholia on the passage in Horace just cited, speaks of Ilia as having married the god of the Tiber. According to the account which he gives, Ilia was buried on the bank of the Anio, and the river, having overflowed its borders, carried her remains down to the Tiber; hence she was said to have espoused the deity of the last-mentioned stream.

ILIAS, a celebrated poem composed by Homer, upon the Trojan war, which delineates the wrath of Achilles, and all the calamities which befell the Greeks, from the refusal of that hero to appear in the field of battle. It finishes with the funeral rites of Hector, whom Achilles had sacrificed to the shade of his friend Patroclus, and is divided into twenty-four books.—Modern critics differ very much in opinion with regard to the proper termination of the Iliad. Wolf and Heyne, with others, think that there is an excess of two books, and that the death of Hector is the true end of the poem. The 23d and 24th books, therefore, they consider as the work of another author. Granville Penn, however, has undertaken to show (*Primary Argument of the Iliad, Lond.*, 1821), that the poem is to be taken as a whole, and that its primary and governing argument is the sure and irresistible power of the divine will over the most resolute and determined will of man, exemplified in the death and burial of Hector, by the instrumentality of Achilles, as the immediate preliminary to the destruction of Troy.—The following observations on the unity and general character of the Iliad, taken from an able critique in the Quarterly Review (No. 87, p. 147, *seqq.*), may be read with advantage by the student. "Does the Iliad appear to have been cast, whole and perfect, in one mould, by the vivifying energy of its original creator, or does it bear undeniable marks of its being an assemblage of unconnected parts, blended together, or fused into one mass by a different and more recent compiler?—We cannot but think the universal admiration of its unity by the better, the poetic age of Greece, almost conclusive testimony to its original uniform composition. It was

not till the age of the grammarians that its primitive integrity was called in question; nor is it injustice to assert, that the minute and analytical spirit of a grammarian is not the best qualification, for the profound feeling, the comprehensive conception of an harmonious whole. The most exquisite anatomist may be no judge of the symmetry of the human frame, and we would take the opinion of Chantrey or Westmacott on the proportions and general beauty of a form rather than that of Mr. Brodie or Sir Astley Cooper.—There is some truth, though some malicious exaggeration, in the lines of Pope:

*'The critic eye, that microscope of wit,
Sees hairs and pores, examines bit by bit;
How parts relate to parts, or they to whole;
The body's harmony, the beaming soul;
Are things which Kuster, Burman, Wasse, shall see,
When man's whole frame is obvious to a flea.'*

—We would not comprehend, under this sweeping denunciation, men of genius as well as critical sagacity, such as Heyne and Wolf, still less those of the highest poetic feeling, who, both in this and other countries, are converts to their system. Yet there is a sort of contagion in literary as well as religious scepticism; we like, in scholarship, to be on the stronger side, and the very names of Bentley, Wolf, and Heyne would sweep a host of followers into their train. In the authors of a paradox, criticism, like jealousy, furnishes the food which it grows on; and it is astonishing, when once possessed with a favourite opinion, how it draws 'from trifles confirmation strong,' and overlooks the most glaring objections; while, if the new doctrine once forces its way into general notice, ardent proselytes crowd in from all quarters, until that which was at first a timid and doubtful heresy, becomes a standard article of the scholar's creed, from which it requires courage to dissent. Such to us appears to have been the fate of the hypotheses before us.—For, in the first place, it seems that many of the objections to the original unity of the poem apply with equal force to the Pisistratid compilation. It is, for instance, quite as likely, that in the heat of composition the bard should have forgotten something; that, for example, owing to his obliviousness, the Pylæmenes, whom he had slain outright in the fifth book, should revive, gallantly fighting, in the thirteenth; and thus, in a different way from the warrior of the Italian poet:

'Andare combattendo, ed esser morto.'

The slow and cautious compiler is even less likely to have made such an oversight than the rapid and inventive poet; and, by-the-way, Sancho Panza's wife's name is changed, through Cervantes' forgetfulness of such trifles, in the second part of Don Quixote; but no such *lapsus* can be alleged against the spurious continuator of the romance, Avellaneda. Nor, secondly, will any critical reader of Homer pretend that we possess the Homeric poems entire and uninterpolated. That they were, at one period of their history, recited in broken fragments; that the wandering rhapsodists would not scruple to insert occasionally verses of their own; that certain long and irrelevant passages of coarser texture may have thus been interwoven into the rich tissue of the work—all these points will readily be conceded: but while these admissions explain almost every discrepancy of composition and anomaly of language and versification, they leave the main question, the unity of the original design, entirely untouched.—We will hazard one more observation before we venture to throw down our glove in defence of the suspected unity of the Iliad. If, on Heyne's supposition (for the objection does not strictly apply to that of Wolf), the Iliad was compiled from scattered fragments of ancient poetry in the age of the

Pisistratidæ, it is surely unaccountable that, considering the whole of the Trojan war must have been a favourite subject with these wandering bards, all the more valuable part of this poetry should easily combine into a plan, embracing only so short a period of these ten years of splendid Grecian enterprise. Had not one of these numerous Homers touched with Homeric life and truth any of the other great poetical events which preceded, or the still more striking incidents which followed the wrath of Achilles and the death of Hector—the destruction of the city, for instance—the midnight devastation of ancient Ilium? We are far from asserting that many passages of the Iliad—as the adventures of Diomed, the night enterprise of Diomed and Ulysses, with the death of Rhæsus—necessarily belong to that period of the war; it is possible that they may have been inlaid into the work by a later and a foreign hand; but it is somewhat incredible that the compilers should have been able to condense the whole of the nobler Homeric poetry into the plan of the Iliad and Odyssey; and if they rejected any passages of equal merit, what became of them? Did they form the poems of Arctinus, Stasinus, and Lesches? were they left to be moulded up in the Cyclic poems? But how immeasurably inferior, by the general consent of Greece, was all the rest of their epic poetry to the Iliad and Odyssey! It is probable that the better passages in the poem of Quintus Calaber are borrowed, or but slightly modified, from the Cyclic poets; but how rarely do we recognise the clear, the free, the Homeric life and energy of the two great poems! But we must go farther. To us, we boldly confess, the fable of the Iliad is, if not its greatest, among its greatest perfections; the more we study it, like a vast and various yet still uniform building, the more it assumes a distinct relation of parts, a more admirable consonance in its general effect: it is not the simple unity of the single figure, as in the Odyssey, but it is the more daring complexity of the historical design, the grouping of a multitude of figures, subordinate to the principal, which appears the more lofty from the comparative height of those around him. The greatness of Achilles in the Iliad is not that of Teneriffe, rising alone from the level surface of the ocean, but rather that of Atlas, the loftiest peak of a gradually ascending chain; he is surrounded by giants, yet still *collo supereminet omnes*. Much of the difficulty has arisen from seeking in the Iliad a kind of technical unity, foreign to the character and at variance with the object of the primitive epopee: it is a unity, as a French critic, La Motte, long ago remarked, of interest. Mr. Coleridge has sensibly observed, 'it may well, indeed, be doubted whether the alleged difficulty is not entirely the critic's own creation; whether the presumption of the necessity for a pre-arranged plan, exactly commensurate with the extent of the poem, is not founded on a misconception of the history and character of early heroic poetry.' The question is not, whether the whole fable is strictly comprised within the brief proposition of the subject, in the simple exordium, but whether the hearer's mind is carried on with constant and unfailing excitement; whether, if the bard had stopped short of the termination of his poem, he would not have left a feeling of dissatisfaction on the mind; at least, whether every event, even to the lamentations over the body of Hector, does not flow so naturally from the main design, and seem so completely to carry us on in an unbroken state of suspense and intense curiosity, that even to the last verse we are almost inclined to regret that the strain breaks off too soon:

*"The angel ended, and in Adam's ear
So charming left his voice, that he a while
Thought him still speaking."*

It is much to be desired, that, as the *χωρίζοντες*, the

dividers of the Iliad, have zealously sought out every apparent discrepance and contradiction in the several parts of the poem, some diligent student, on the other side, would examine into all the fine and delicate allusions between the most remote parts—the preparations in one book for events which are developed in another—the slight prophetic anticipations of what is to come, and the equally evanescent references to the past—those inartificial and undesigned touches which indisputably indicate that the same mind has been perpetually at work in a subtler manner than is conceivable in a more recent compiler. This has been done in a few instances by M. Lange, in his fervent vindication of the unity of the Iliad, addressed to the celebrated Goethe; in more by Mr. Knight, who has applied himself to obviating the objections of Heyne, but still not so fully or so perfectly as, we are persuaded, might be done. It is obviously impossible for us, in our limited space, to attempt an investigation at once so minute and so extensive, nor can we find room for more than a brief and rapid outline of that unity of interest which appears to us to combine the several books of the Iliad, if not into one preconceived and predistributed whole, yet into one continuous story; in which, however the main object be at times suspended, and apparently almost lost sight of, it rises again before us, and asserts its predominant importance, while all the other parts of the design, however prominent and in bold relief, recede and acknowledge their due subordination to that which is the central, the great leading figure of the majestic group. The general design of the Iliad, then, was to celebrate the glory of the Grecian chieftains at the most eventful period of the war before Troy; the especial object, the pre-eminent glory of the great Thessalian chieftain, during this at the same time the most important crisis of his life. The first book shows us at once who is to be what is vulgarly called the hero of the poem: Achilles stands forth as the assertor of the power of the gods—the avenger of the injured priesthood—taking the lead with the acknowledged superiority due to his valour, bearding the sovereign of men, the great monarch, who commands the expedition. Wronged by Agamemnon, so as to enlist the generous sympathies on his side, yet without any disparagement to the dignity of his character, he recedes into inaction, but it is an inaction which more forcibly enthralls our interest. In another respect, nothing shows the good fortune, or, rather, the excellent judgment of the poet, so much as this dignified secession through so large a part of this poem. Had Achilles been brought more frequently forward, he must have been successfully resisted, and thus his pre-eminent valour have been disparaged; or the poet must have constantly raised up antagonists more and more valiant and formidable, in the same manner as the romancers are obliged, in order to keep up the fame of their Amadis or Esplandian, to go on creating more tall, and monstrous, and many-headed giants, till they have exhausted all imaginable dimensions, and all calculable multiplication of heads and arms. The endless diversity of his adventures permits Ulysses, in the Odyssey, to be constantly on the scene. His character rises with the dangers to which he is exposed, for he contends with the elements and the gods. Achilles could scarcely be in danger, for his antagonists must almost always be men. It is surprising how much the sameness of war is varied in the Iliad, but this chiefly arises from its fluctuations, which could scarcely have taken place in the presence of Achilles, without lowering his transcendent powers. Yet, though he recedes, Achilles is not lost to our sight; like the image of Brutus in the Roman procession, his absence, particularly as on every opportunity some allusion is made to his superior valour, power, or even beauty and swiftness, rivets our attention. In the mean time, the occasion is seized for displaying

the prowess of the other great chieftains; they are led forth in succession, exhibiting splendid valour and enterprise, but still are found wanting in the hour of trial; the gallantry of Diomed, the spirit of Menelaüs, the heavy brute force of Ajax, the obstinate courage of Idomeneus—even the power and craft of the deities, are employed in vain to arrest the still advancing, still conquering forces of Hector and the Trojans, till at last they are thundering before the outworks of the camp, and forcing their way into its precincts. Not that the progress of Trojan success is rapid and continuous; the war fluctuates with the utmost variety of fortune; the hope and fear of the hearer is in a constant state of excitement, lest Hector should fall by a meaner hand, and, notwithstanding the proud secession of Achilles, Greece maintain her uninterrupted superiority. Still, on the whole, Jove is inexorable; the tide of Trojan success swells onward to its height; Patroclus, in the arms of Achilles, arrests it for a time, but in vain; it recoils with redoubled fury; up to the instant, the turning point of the poem, the tremendous crisis for which the whole Iliad has hitherto been, as it were, a skilful prelude; when, unarmed and naked, Achilles, with his voice alone, and by the majesty of his appearance, blazing with the manifest terrors of the deity, arrests at once and throws back the tide of victory; and from that moment the safety, the triumph of Greece, are secure, the fate of Hector and of Troy sealed for ever. This passage, as expressive of human energy, mingled with the mysterious awe attendant on a being environed by the gods, is the most sublime in the whole range of poetry. (*Il.*, 18, 245.) The only parallel to this unrivalled passage is the crisis or turning point in the fortunes of the Odyssey, when Ulysses throws off at once his base disguise, leaps on the threshold, and rains his terrible arrows among the cowering suiters. There is the same mingling of the supernatural as Ulysses tries his bow.—These two passages we have never read and compared, without feeling, however from all other reasons sceptics as to the single authorship of the two great poems, an inward and almost irresistible conviction of the identity of mind from which they sprang—this convergence, as it were, of the whole interest to a single point, and that point—that *περίπτεια*, as the Greek critics would call it—brought out with such intense and transcendent energy, the whole power of the leading character condensed, and bursting forth in one unrivalled effort. Each seems too original to be an imitation, and though apparently of the same master, of that master by no means servilely copying himself.—On no part of the Iliad has so much been written as on the armour framed by Vulcan, more especially on the shield of Achilles. We would only point out the singular felicity of its position, as a quiet relief and resting-place between the first sudden breaking forth of the unarmed Achilles, and his more prepared and final going out to battle; two passages which, if they had followed too close upon each other, would have injured the distinctness and completeness of each. Of the final going forth of Achilles to battle, his irresistible prowess, his conflict with the River God, and his immediate superiority over the appalled and flying Hector, nothing need be said, but that it fully equals the high-wrought expectations excited by the whole previous preparation. That single trumpet-sound, which preluded with its terrific blast, grows into the most awful din of martial sound that ever was awakened by the animating power of poet.—Even the last two books, if we suppose the main object of the poet to be the glory of the great Thessalian hero, with only such regard to the unity of his fable as that it should never cease to interest, are by no means superfluous. The religious influence which funeral rites held over the minds of the Greeks, and the opportunity of displaying Achilles in the interchange of free and noble courtesy, as liberal as he was valiant, might well

tempt the poet, assured of his hearer's profound sympathy, to prolong the strain. The last book, unnecessary as it seems to the development of the wrath of Achilles, yet has always appeared to us still more remarkably conducive to the real though remote design of the Iliad. We have before observed, that the premature and preadvanced mind of the poet seems to have delighted in relieving the savage conflict with traits of milder manners; and the generous conduct of Achilles, and his touching respect for the aged Priam, might almost seem as a prophetic apology to a gentler age for the barbarity with which the poet might think it necessary to satisfy the implacable spirit of vengeance which prevailed among his own warlike compeers. Hector dragged at the car of his insulting conqueror was for the fierce and martial vulgar, for the carousing chieftain, scarcely less savage than the Northman, delighted only by his dark Sagas; Hector's body, preserved by the care of the gods, restored with honour to Priam, lamented by the desolate women, for the heart of the poet himself, and for the few congenial spirits which could enter into his own more chastened tone of feeling.—Still, in all this there is nothing of the elaborate art of a later age; it is not a skilful compiler, arranging his materials so as to produce the most striking effect: the design and the filling up appear to us to be evidently of the same hand; there is the most perfect harmony in the plan, the expression, the versification; and we cannot, by any effort, bring ourselves to suppose that the separate passages, which form the main interest of the poem, the splendid bursts, or more pathetic episodes, were originally composed without any view to their general effect; in short, that a whole race of Homers struck out, as it were by accident, all these glorious living fragments, which lay in a kind of unformed chaos, till a later and almost mightier Homer commanded them to take form, and combine themselves into a connected and harmonious whole.—There is another very curious fact, on which we do not think, though it was perceived by both Wolf and Heyne, that sufficient stress has been laid—the perfect consistency of the characters in the separate parts of the poem. It is quite conceivable that there should have been a sort of conventional character assigned to different heroes by the minstrels of elder Greece. To take Mr. Coleridge's illustration of the ballads on Robin Hood; in all of these bold Robin is still the same frank, careless, daring, generous, half-comic adventurer: so Achilles may have been by prescription,

Impiger, iracundus, inexorabilis, acer;

Ajax heavy and obstinate, Ulysses light and subtle; but can we thus account for the finer and more delicate touches of character, the sort of natural consistencies which perpetually identify the hero, or even the female of one book, with the same person in another?—Take, for instance, that of Helen, perhaps the most difficult to draw, certainly drawn with the most admirable success. She is, observes Mr. Coleridge, 'a genuine lady, graceful in motion and speech, noble in her associations, full of remorse for a fault, for which higher powers seem responsible, yet graceful and affectionate towards those with whom that fault had connected her.' Helen first appears in the third book, in which it is difficult to admire too much the admiration of her beauty extorted from the old men, who are sitting *τεττίγισσιν ἐοικότες*

Οὐ νέμεσις, Τρῶας καὶ ἑὺκνήμιδας Ἀχαιοὺς
Τουτῇ ἀυτὴ γυναῖκι πολλὸν χρόνον ἄλγεα πάσχειν·
Αἰνὸς ἀθανάτῃσι θεῆς εἰς ὧπα δοῖκεν.

(II, 3, 156, seqq.)

No wonder such celestial charms

For nine long years have set the world in arms.

What winning graces! what majestic mien!

She moves a goddess, and she looks a queen.

Nothing can equal this, except the modesty with which she alludes to her own shame; the courteous respect with which she is treated by Priam and Antenor; the touching remembrance of her home and of her brothers; and the tender emotions excited by the reminiscences which flow from the history of almost each successive warrior as she describes them to Priam.—In the same book, we find her soon after reproaching the recreant Paris; yet, under the irresistible influence of the goddess, yielding to his embraces in that well-known passage, over which Pope has thrown a voluptuous colouring foreign to the chaster simplicity of the original.—The companion to the first lovely picture is the interview between Hector and Helen, in book vi., l. 343, when she addresses her brother.—We turn to the close of the poem, and find the lamentation of Helen over the body of Hector, which we concur with Mr. Coleridge in considering almost the sweetest passage of the poem. But beautiful as it is in itself as an insulated fragment, how much does it gain in pathetic tenderness, when we detect its manifest allusions to the two earlier scenes to which we have referred above!—Compare all these, and then consider whether it is possible to suppose that the Helen of the Iliad sprung from different minds, or even from the same mind, not full of the preconcerted design of one great poem. Could even Simonides, if Simonides assisted in the work of compilation, have imagined, or so dexterously inserted, these natural allusions?—For some very able remarks on this same subject, consult Müller, *History of Grecian Literature*, p. 48, seqq.

LIENSES, a people of Sardinia, fabled to have been descended from some Trojans who came to that island after the fall of Troy. They were driven into the mountains by Libyan colonies, and here, according to Pausanias (10, 17), the name *Λιῆσις* existed even in his time. (*Mannert, Geogr.*, vol. 9, pt. 2, p. 475.)

LIÖNE, the eldest daughter of Priam, who married Polymnestor, king of Thrace. (*Virg., Æn.*, 1, 657.—Consult Heyne, *Excurs.*, ad loc.)

LISSUS, a small stream rising to the northeast of Athens, and from which that city was principally supplied with water. It loses itself, after a course of a few miles, in the marshes to the south of the place. From the beautiful passage in which Plato alludes to it (*Phædrus*, p. 229), it appears to have been at that period a perennial stream, whereas now it is almost always dry, its waters being either drawn off to irrigate the neighbouring gardens, or to supply the artificial fountains of Athens. The modern name is *Ilisse*. (*Leake's Topogr.*, p. 49.)

LITHYIA, a goddess who presided over childbirth, and who was the same in the Greek mythology with the Juno Lucina of the Romans. In the Iliad (11, 270) mention is made of lithyiaë in the plural, and they are called the daughters of Juno. In two other parts, however, of the same poem (16, 187, and 19, 103), the term lithyia occurs in the singular. In the Odyssey (19, 188) and in Hesiod (*Theog.*, 922) the number is reduced to one. We also meet with but one lithyia in Pindar (*Ol.*, 6, 72.—*Nem.*, 7, 1), and the subsequent poets in general.—It is not by any means an improbable supposition, that lithyia was originally a moon-goddess, and that the name signifies "light wanderer," from *ἐλθῆναι*, "light," and *θίω*, "to move rapidly." (*Welcker, Kret. Alc.*, p. 11, 19.) The moon was believed by the ancients to have great influence over growth in general; and as, moreover, a woman's time was reckoned by moons, it was natural to conceive that the moon-goddess presided over the birth of children. (*Keightley's Mythology*, p. 193, seqq.)

LIÏUM or ILIÖN, I. another name for the city of Troy, or, more properly, the true one, since Troja, the appellation given to the place by the Roman writers, was, strictly speaking, the name of the district. (*Virg.*

Troja.—II. Novum, a city of the Troad, the site of which is not to be confounded with that of Troy. Whatever traces might remain of the ruins of the city of Priam, after it had been sacked and burned by the Greeks, these soon disappeared, as Strabo assures us, by their being employed in the construction of Sigæum, and other towns founded by the Æolians, who came from Lesbos, and occupied nearly the whole of Troas. The first attempt made to restore the town of Troy was by some Astypalæans, who, having first settled at Rhæteum, built, near the Simois, a town which they called Polium, but which subsisted only a short time; the spot, however, still retained the name of Polisma when Strabo wrote. Some time after, a more advantageous site was selected in the neighbourhood, and a town, consisting at first of a few habitations and a temple, was built under the protection of the kings of Lydia, the then sovereigns of the country. This became a rising place; and, in order to ensure the prosperity of the colony, and to enhance its celebrity, the inhabitants boldly affirmed that their town actually stood on the site of ancient Troy, that city having never been actually destroyed by the Greeks. There were not wanting writers who propagated this falsehood, in order to flatter the vanity of the citizens (*Strabo*, 601); and when Xerxes passed through Troas on his way to the Hellespont, the pretensions of New Ilium were so firmly established, that the Persian monarch, when he visited their acropolis, and offered there an immense sacrifice to Minerva, actually thought that he had seen and honoured the famed city of Priam. (*Herod.*, 7, 42.) In the treaty made with the successor of Xerxes, Ilium was recognised as a Greek city, and its independence was secured; but the peace of Antalcidas restored it again to Persia. On the arrival of Alexander in Asia Minor (*Arrian*, *Exp. Al.*, 1, 11, 12), or, as some say, after the battle of the Granicus (*Strab.*, 593), that prince visited Ilium, and, after offering a sacrifice to Minerva in the citadel, deposited his arms there, and received others, said to have been preserved in the temple from the time of the siege of Troy. He farther granted several rights and privileges to the Ilienses, and promised to erect a more splendid edifice, and to institute games in honour of Minerva; but his death prevented the execution of these designs. (*Arrian*, *l. c.*—*Strab.*, *l. c.*) Lysimachus, however, to whose share Troas fell on the division of Alexander's empire, undertook to execute what had been planned by the deceased monarch. He enclosed the city within a wall, which was forty stadia in circumference; he also increased the population by removing thither the inhabitants of several neighbouring towns. (*Strabo*, 593.) At a subsequent period Ilium farther experienced the favour and protection of the kings of Pergamus; and the Romans, on achieving the conquest of Asia Minor, sought to extend their popularity, by securing the independence of a city from which they pretended to derive their origin, and added to its territory the towns of Rhæteum and Gergitha. (*Livy*, 37, 37.—*Id.*, 38, 29.) And yet it would appear, that at that time Ilium was far from being a flourishing city, since Demetrius of Scepsis, who visited it about the same period, affirmed that it was in a ruinous state, many of the houses having fallen into decay for want of tiling (*on Strab.*, *l. c.*). During the civil wars between Sylla and Cinna, Ilium was besieged and taken by assault by Fimbria, a partisan of the latter. This general gave it up to plunder, butchered the inhabitants, and finally destroyed it by fire. Not long after, however, Sylla arrived in Asia, defeated Fimbria, who fell by his own hand, restored Ilium to the surviving inhabitants, reinstated them in their possessions, and restored the walls and public edifices. (*Appian*, *Bell. Mithr.*, c. 53.—*Plut.*, *Vit. Syll.*—*Strab.*, 594.) After the battle of Pharsalia, Ilium was visited by Julius

Cæsar, who explored, if we may believe Lucan, all the monuments and localities which claimed any interest from their connexion with the poem of Homer. (*Phars.*, 9, 961.) Cæsar, in consequence of his visit, and his pretended descent from Iulus, conceded fresh grants to the Ilienses; he also instituted those games to which Virgil has alluded in the Æneid, and which the Romans called "*Ludi Trojani*." (*Æn.*, 5, 602.—*Suet.*, *Vit. Cæs.*, c. 39.—*Dio Cass.*, 43, 23.) We trace the history of this place also during the times of the emperors. It preserved its privileges and freedom under Trajan, as we learn from Pliny, who styles it, "*Ilium immune, unde omnis claritas*" (5, 30). It subsisted under Dioclesian, and it is even said that Constantine had entertained, at one time, serious thoughts of transferring thither the seat of empire. (*Sozom.*, *Hist. Eccles.*, 2, 3.—*Zosim.*, 2, 34.) The last records we have of its existence are derived from Hierocles (*Synecd.*, p. 663), the Itineraries, and the notices of Greek bishops under the Byzantine empire. It became afterward exposed to the ravages of the Saracens and other barbarians, who depopulated the Hellespont and Troad; it sunk beneath their repeated attacks, and became a heap of ruins. The surrounding villages are yet filled with inscriptions, and fragments of buildings and monuments, which attest its former splendour and magnificence. According to the account of a modern traveller, who has minutely explored the whole of Troas, New Ilium occupied a gently rising hill about seventy feet high, above the adjacent plain, in which the waters of the *Tunbrück-tchai* and *Kamar-sou* form some marshes. The Turks call the site of New Ilium *Hissardjick*, or *Eski Kalafatli*. (*Choiseul Gouffier*, vol. 2, pt. 3, p. 381.—*Barker Webb*, *Osservazioni intorno l'Argo Trojano*, *Bibl. Ital.*, No. 67, Luglio, 1821.) New Ilium was twenty-one miles from Abydus, and about eleven miles from Dardanus. (*Strab.*, 591.—*Itin.*, *Anton.*, p. 334.)—We must be careful, as has already been remarked, not to confound the site of New Ilium with that of the city of Priam, an error into which many careless travellers have fallen. (*Cramer's Asia Minor*, vol. 1, p. 104, *seqq.*)

ILLIBÉRIS or ELIBÉRI, a city of Gallia Narbonensis, south of Ruscino, and in the territory of the Sardones, the same probably with the Volcæ Tectosages. It was a flourishing place when Hannibal passed through on his march into Italy, and here he established a garrison. It sunk in importance afterward, until Constantine almost rebuilt it, and called it, in memory of his mother Helena, *Helensis civitas*. In this place Magnentius slew Constans, and here Constantine died in a castle built by himself. It is now *Elne*. (*Mela*, 2, 5.)

ILLÍCIS, a city of the Contestani in Spain, northeast of Carthago Nova. Now *Elche*. (*Mela*, 2, 6.—*Plin.*, 3, 3.)

ILLICITÁNUS SINUS, a bay on the southeast coast of Spain, extending from Carthago Nova to the Dianium Promontorium. It is now the bay of *Alicante*. (*Mela*, 2, 6.)

ILLITURGIS, ILITURGIS, or ILITURGI, a city of Spain, not far from Castulo and Mentesa, and five days' march from Carthago Nova. It was situate near the *Pætis*, on a steep and rugged rock, and was called in Roman times *Forum Iulium*. Appian calls it *Iurgia* (*Bell. Hisp.*, c. 32), and it is the same also, no doubt, with the *Iurgis* of Ptolemy (2, 4), and the *Iurgea* of Stephanus of Byzantium. The place was destroyed by Scipio B.C. 210 (*Liv.*, 28, 19), but was soon afterward repopled. The site of the ancient place is near the modern *Andujar*, where the church of *St Potenciana* stands. (*Ukerl*, *Geogr.*, vol. 2, p. 380.)

ILLYRICUM, ILLYRIS, and ILLYRIA, a country bordering on the Adriatic Sea, opposite Italy. The name of Ilyrians, however, appears to have been commor

to the numerous tribes which were anciently in possession of the countries situated to the west of Macedonia, and which extended along the coast of the Adriatic from the confines of Italy and Istria to the borders of Epirus. Still farther north, and more inland, we find them occupying the great valleys of the *Saave* and *Drave*, which were only terminated by the junction of those streams with the Danube. This large tract of country, under the Roman emperors, constituted the provinces of Illyricum and Pannonia.—Antiquity has thrown but little light on the origin of the Illyrians; nor are we acquainted with the language and customs of the barbarous hordes of which the great body of the nation was composed. Their warlike habits, however, and the peculiar practice of puncturing their bodies, which is mentioned by Strabo as being also in use among the Thracians, might lead us to connect them with that widely-extended people. (*Strabo*, 315.) It appears evident, that they were a totally different race from the Celts, as Strabo carefully distinguishes them from the Gallic tribes which were incorporated with them. (*Strabo*, 313.) Appian, indeed, seems to ascribe a common origin to the Illyrians and Celts, for he states that Illyrius and Celtus were two brothers, sons of Polyphemus and Galatea, who migrated from Sicily, and became the progenitors of the two nations which bore their names (*Bell. Illyr.*, 2); but this account is evidently too fabulous to be relied on. It is not unlikely that the Illyrians contributed to the early population of Italy. The Liburni, who were undoubtedly a part of this nation, had formed settlements on the Italian shore of the Adriatic at a very remote period. The Veneti, moreover, were, according to the most probable account, Illyrians. But, though so widely dispersed, this great nation is but little noticed in history until the Romans made war upon it, in consequence of some acts of piracy committed on their traders. Previous to that time, we hear occasionally of the Illyrians as connected with the affairs of Macedonia; for instance, in the expedition undertaken by Perdiccas, in conjunction with Brasidas, against the Lyncestæ, which failed principally from the support afforded to the latter by a powerful body of Illyrian troops. (*Thucyd.*, 4, 125.) They were frequently engaged in hostilities with the princes of Macedonia, to whom their warlike spirit rendered them formidable neighbours. This was the case more especially while under the government of Bardylis, who is known to have been a powerful and renowned chief, though we are not positively acquainted with the extent of his dominions, nor over what tribes he presided. Philip at length gained a decisive victory over this king, who lost his life in the action, and thus a check was given to the rising power of the Illyrians. Alexander was likewise successful in a war he waged against Clytus, the son of Bardylis, and Glaucias, king of the Taulantii. The Illyrians, however, still asserted their independence against the kings of Macedon, and were not subdued till they were involved in the common fate of nations by the victorious arms of the Romans. The conquest of Illyria led the way to the first interference of Rome in the affairs of Greece; and Polybius, from that circumstance, has entered at some length into the account of the events which then took place. He informs us, that about this period, 520 A.U.C., the Illyrians on the coast had become formidable from their maritime power and the extent of their depredations. They were governed by Agron, son of Pleurastus, whose forces had obtained several victories over the Ætolians, Epirots, and Achæans. On his death, the empire devolved upon his queen Teuta, a woman of an active and daring mind, who openly sanctioned, and even encouraged the acts of violence committed by her subjects. Among those who suffered by these lawless pirates were some traders of Italy, on whose account satisfaction was demanded by the Roman sen-

ate. So far, however, from making any concessions, Teuta proceeded to a still greater outrage, by causing one of the Roman deputies to be put to death. The senate was not slow in avenging these injuries; a powerful armament was fitted out, under the command of two consuls, who speedily reduced the principal fortress held by Teuta, and compelled that haughty queen to sue for peace. (*Polyb.*, 2, 12.—*Appian, Bell. Illyr.*, 7.) At a still later period, the Illyrians, under their king Gentius, were again engaged in a war with the Romans, if the act of taking possession of an unresisting country may be so called. Gentius had been accused of favouring the cause of Perseus of Macedon, and of being secretly in league with him. His territory was therefore invaded by the prætor Anicius, and in thirty days it was subjugated by the Roman army. Gentius himself, with all his family, fell into the hands of the enemy, and was sent to Rome to grace the prætor's triumph. (*Liv.*, 44, 31.—*Appian, Bell. Illyr.*, 9.) Illyria then became a Roman province, and was divided into three portions; but it received afterward a considerable accession of territory on the reduction of the Dalmatians, Iapydes, and other petty nations by Augustus, these being included from that period within its boundaries. So widely, indeed, were the frontiers of Illyricum extended under the Roman emperors, that they were made to comprise the great districts of Noricum, Pannonia, and Mæsia. (*Appian, Bell. Illyr.*, 6 — *Cramer's Anc. Greece*, vol. 1, p. 29.)

ILUS, the fourth king of Troy, was the son of Tros and of Callirhoe, the daughter of the Scamander. He married Eurydice, the daughter of Adrastus, king of Argos, and became by her the father of Themis (the grandmother of Æneas) and of Laomedon, the predecessor of Priam. Ilus embellished Troy, which had been so called from his father Tros, and gave to it the name of Ilium. According to tradition, it was he who received from Jupiter the Palladium, and who, in the wars which had been excited by the animosity of Tantalus and Tros, made an attempt to rescue this statue from the flames, in which the temple of Minerva was wrapped, although he was aware that the city would be impregnable as long as it remained within the walls. For this misplaced zeal, he was, at the moment, struck with blindness by the goddess, but was subsequently restored to sight. (*Apollod.*, 3, 12, 3.)

IMAUS, the name of a large chain of mountains, which in a part of its course divided, according to the ancients, the vast region of Scythia into Scythia intra Imaum and Scythia extra Imaum. It is, in fact, merely a continuation of the great Tauric range. That part of the range over which Alexander crossed, and whence the Indus springs, was called Paropamisus. Farther on were the Emodi Montes, giving rise to the Ganges; and still farther to the east the range of Imaus, extending to the Eastern Ocean. Imaus is generally thought to answer to the *Himalaya* Mountains of *Thibet*; strictly speaking, however, this name belongs to the Emodi Montes; and Imaus, in the early part of its course, is the modern *Mustag*, or the chain which branches off to the northwest from the centre of the *Himalaya* range. The word *Himalaya* is Sanscrit, and is compounded of *hima*, "snow," and *alaya*, "an abode." (*Wilson's Sanscrit Dict.*) The former of these Sanscrit roots gives rise also to the name Imaus and Emodus among the ancients, and it also brings to mind the *Hæmus* of Thrace, the *Hymettus* of Attica, the *Mons Imaus* of Italy, and the different mountains called *Himmel* in Saxony, Jutland, and other countries. It is the radix, also, of the German word *himmel*, denoting heaven.—As the chain of Imaus proceeds on to the east, it ceases to be characterized as snowy, and, in separating the region of Scythia into its two divisions, answers to the modern range of *Altai*. It is only of late that the height of

the Himalaya Mountains on the north of India has been appreciated. In 1802, Col. Crawford made some measurements, which gave a much greater altitude to these mountains than had ever before been suspected; and Col. Colebrook, from the plains of Rhoihilund, made a series of observations which gave a height of 22,000 feet. Lieut. Webb, in his journey to the source of the Ganges, executed measurements on the peak of Iamunavatari, which gave upward of 25,000 feet. The same officer, in a subsequent journey, confirmed his former observations. This conclusion was objected to, on account of a difference of opinion respecting the allowance which ought to be made, for the deviation of the light from a straight direction, on which all conclusions drawn from the measurement of angles must depend. In a subsequent journey, however, this same officer confirmed his conclusions by additional measurements, and by observing the fall of the mercury in the barometer at those heights which he himself visited. It was found by these last observations that the line of perpetual snow does not begin till at least 17,000 feet above the level of the sea, and that the banks of the *Seltledge*, at an elevation of nearly 15,000 feet, afford pasturage for cattle, and yielded excellent crops of mountain-wheat. This mild temperature, however, at so great a height, is confined to the northern side of the chain. This probably depends on the greater height of the whole territory on the northern side, in consequence of which, the heat which the earth receives from the solar rays, and which warms the air immediately superincumbent, is not so much expanded by the time the ascending air reaches these greater elevations, as in that which has ascended from a much lower country. Mr. Frazer, in a later journey, inferred that the loftiest peaks of the Himalaya range varied from 18,000 to 23,000 feet; but he had no instruments for measuring altitudes, and no barometer, and he probably did not make the due allowance for the extraordinary height of the snow-line. The point, however, is now at last settled. The Himalaya Mountains far exceed the *Andes* in elevation; *Chimborazo*, the highest of the latter, being only 21,470 feet above the level of the sea, while *Ghosa Cote*, in the *Dhawalagghiri* range, attains to an elevation of 28,000 feet, and is the highest known land on the surface of the globe.

IMBRACŬLES, a patronymic given to Asius, as son of Imbracŭs. (*Virg., Æn.*, 10, 123.)

IMBRACLES, a patronymic given to Glaucus and Laetes, as sons of Imbracŭs. (*Virg., Æn.*, 12, 343.)

IMBROS, an island of the *Ægean*, 22 miles east of Lemnos, according to Pliny (4, 12), and now called *Imbro*. Like Lemnos, it was at an early period the seat of the Pelasgi, who worshipped the Cabiri and Mercury by the name of Imbracŭs. (*Steph. Byz., s. v. Ἰμβρος*.) Imbros is generally mentioned by Homer in conjunction with Lemnos. (*Hymn. in Apoll.*, 36.—*Ib.*, 13, 32.) It was first conquered by the Persians (*Herod.*, 5, 27), and afterward by the Athenians, who derived from thence excellent darters and targeteers. (*Thucyd.*, 4, 28.) There was a town probably of the same name with the island, the ruins of which are to be seen at a place called *Castro*. (*Cramer's Anc. Greece*, vol. 1, p. 312.)

INACHIDÆ, the name of the first eight successors of Inachus on the throne of Argos.

INACHIDES, a patronymic of Epaphus, as grandson of Inachus. (*Ovid, Met.*, 1, 704.)

INACHIS, a patronymic of Io, as daughter of Inachus. (*Ovid, Fast.*, 1, 454.)

INACHUS, I. a son of Oceanus and Tethys, father of Io. He was said to have founded the kingdom of Argos, and was succeeded by his son Phoroneus, B.C. 1807. Inachus is said, in the old legend, to have given his name to the principal river of Argolis. Hence probably he was described as the son of Oce-

anus, the common parent of all rivers. They who make Inachus to have come into Greece from beyond the sea, regard his name as a Greek form for the Oriental term *Enak*, denoting "great" or "powerful," and this last as the root of the Greek *ἄναξ*, "a king." The foreign origin of Inachus, however, or, rather, his actual existence, is very problematical.—According to the mythological writers, Inachus became the father of Io by his sister, the ocean-nymph Melia. (*Apollod.*, 2, 1, 1.—*Heyne, ad loc.*)—II. A river of Argolis, flowing at the foot of the Acropolis of Argos, and emptying into the bay of Nauplia. Its real source was in Mount Lyrceus, on the confines of Arcadia; but the poets, who delighted in fiction, imagined it to be a branch of the Inachus of Amphilochia, which, after mingling with the Achelous, passed under ground, and reappeared in Argolis. (*Strabo*, 271.—*Id.*, 370.) According to Dodwell (vol. 2, p. 223), the bed of this river is a short way to the northeast of Argos. It is usually dry, but supplied with casual floods after hard rains, and the melting of snow on the surrounding mountains. It rises about ten miles from Argos, at a place called *Mushi*, in the way to Tripolitza in Arcadia. In the winter it sometimes descends from the mountains in a rolling mass, when it does considerable damage to the town. It is now called *Xeria*, which means dry. (*Cramer's Anc. Greece*, vol. 3, p. 245.)

—III. A river of the Amphilochean district in Acarnania. There were phenomena connected with the description given by ancient geographers of its course, which have led to a doubt of its real existence. It is from Strabo more especially that we collect this information. Speaking of the submarine passage of the Alpheus, and its pretended junction with the waters of Arethusa, he says a similar fable was related of the Inachus, which, flowing from Mount Læmon, in the chain of Pindus, united its waters with the Achelous, and, passing under the sea, finally reached Argos, in the Peloponessus. Such was the account of Sophocles, as appears from the passage quoted by the geographer, probably from the play of Inachus. (Compare Oxford Strabo, vol. 1, p. 391, *in notis*.) Strabo, however, regards this as an invention of the poets, and says that Hecateus was better informed on the subject, when he affirmed that the Inachus of the Amphilochean Argos. According to this ancient geographical writer, the former stream flowed from Mount Læmon; whence also the *Æas*, or *Aois*, derived its source, and fell into the Achelous, having, like the Amphilochean Argos, received its appellation from Amphilocheus. (*Strab.*, 271.) This account is sufficiently intelligible: and, in order to identify the Inachus of Hecateus with the modern river which corresponds with it, we have only to search in modern maps for a stream which rises close to the *Aois* or *Voïoussa*, and, flowing south, joins the Achelous in the territory of the ancient Amphilochei. Now this description answers precisely to that of a river which is commonly looked upon as the Achelous itself, but which would seem, in fact, to be the Inachus, since it agrees so well with the account given by Hecateus; and it should be observed, that Thucydides places the source of the Achelous in that part of Pindus which belonged to the Dolopes, a Thessalian people, who occupied the southeastern portion of the chain. (*Thucyd.*, 3, 102.) Modern maps, indeed, point out a river coming from this direction, and uniting with the Inachus, which, though a more considerable stream, was not regarded as the main branch of the river. Strabo elsewhere repeats what he has said of the junction of the Inachus and Achelous. (*Strab.*, 327.) But in another passage he quotes a writer whose report of the Inachus differed materially, since he represented it as traversing the district of Amphilocheia, and falling into the gulf. This was the statement

made by Ephorus (*ap. Strab.*, 326), and it has led some modern geographers and critics, in order to reconcile these two contradictory accounts, to suppose that there was a stream which, branching off from the Achelous, fell into the Ambracian Gulf near Argos. This is more particularly the hypothesis of D'Anville; but modern travellers assure us that there is no such river near the ruins of Argos (*Holland's Travels*, vol. 2, p. 225); and, in fact, it is impossible that any stream should there separate from the Achelous, on account of the Amphilochean Mountains, which divide the valley of that river from the Gulf of Arta. Mannert considers the small river *Krikeli* to be the representative of the Inachus (*Geogr.*, vol. 8, p. 65), but this is a mere torrent, which descends from the mountains above the gulf, and can have no connexion with Mount Læmus or the Achelous. All ancient authorities agree in deriving the Inachus from the chain of Pindus. (*Cramer's Anc. Greece*, vol. 2, p. 40, *seqq.*)

INARIME, an island off the coast of Campania, otherwise called Ænaria and Pithecusa. Under an extinguished volcano, in the middle of this island, Jupiter was fabled to have confined the giant Typhæus. (Consult remarks under the articles Ænaria and Arima.) Heyne thinks that some one of the early Latin poets, in translating the *Iliad* into the Roman tongue, misunderstood Homer's *εἰν Ἀπίουσις*, and rendered it by *Inarime* or *Inarima*; and that the fable of Typhæus, travelling westward, was assigned to Ænaria or Pithecusa as a volcanic situation. (*Heyne, Excurs. ad Virg., Æn.*, 9, 715.)

INARUS, a son of Psammetichus (*Thucyd.*, 1, 104), king of that part of Libya which borders upon Egypt. Sallying forth from Marea, he drew over the greater part of Egypt to revolt from Artaxerxes, the Persian emperor, and, becoming himself their ruler, called in the Athenians to his assistance, who happened to be engaged in an expedition against Cyprus, with two hundred ships of their own and their allies. The enterprise at first was eminently successful, and the whole of Egypt fell under the power of the invaders and their ally. Eventually, however, the Persian arms triumphed, and Inarus, being taken by treachery, was crucified. (*Thucyd.*, 1, 109; 1, 110.) Herodotus and Ctesias say he was crucified, *ἐν τριῶν σταυροῖς*, which might more properly be termed impalement. Bloomfield (*ad Thucyd.*, l. c.) thinks that he was of the ancient royal family of Egypt, and descended from the Psammetichus who died B.C. 617. It is not improbable, he adds, that, on Apries being put to death by his chief minister Amasis, his son, or some near relation, established himself among the Libyans bordering on Egypt, from whom descended this Psammetichus.

INDIA, an extensive country of Asia, divided by Ptolemy and the ancient geographers into India intra Gangem and India extra Gangem, or India on this side, and India beyond, the Ganges. The first division answers to the modern *Hindustan*; the latter to the *Birman Empire*, and the dominions of *Pegu, Siam, Laos, Cambodia, Cochin China, Tonquin, and Malacca*.—Commerce between India and the western nations of Asia appears to have been carried on from the earliest historical times. The spice, which the company of Ishmaelites mentioned in Genesis (37, 25) were carrying into Egypt, must in all probability have been the produce of India; and in the 30th chapter of Exodus, where an enumeration is made of various spices and perfumes, cinnamon and cassia are expressly mentioned, which must have come from India, or the islands in the Indian Archipelago. It has been thought by many, that the Egyptians must have used Indian spices in embalming their dead; and Diodorus Siculus says (1, 91), that cinnamon was actually employed by this people for that purpose. The spice trade appears to have been carried on by means of the

Arabs, who brought the produce of India from the modern Sinde, or the Malabar coast, to Hadramunt in the southwestern part of Arabia, or to Gerra on the Persian Gulf, from which place it was carried by means of caravans to Petra, where it was purchased by Phœnician merchants. A great quantity of Indian articles was also brought from the Persian Gulf up the Euphrates as far as Circesium or Thapsacus, and thence carried across the Syrian desert into Phœnicia. Europe was thus supplied with the produce of India by means of the Phœnicians; but we cannot assent to the opinion of Robertson (*Historical Disquisition on India*), that Phœnician ships sailed to India; for there is no reason for believing that the Phœnicians had any harbours at the head of the Red Sea, as Robertson supposes, but, on the contrary, the Idumæans remained independent till the time of David and Solomon; and in the 27th chapter of Ezekiel, which contains a list of the nations that traded with Tyre, we can discover none of an Indian origin; but the names of the Arabian tribes are specified which supplied the Phœnicians with the products of India (v. 19, 22). The conquest of Idumæa by David gave the Jews possession of the harbour of Ezion-geber on the Red Sea, from which ships sailed to Ophir, bringing "gold and silver, ivory, apes, and peacocks." (1 *Kings*, 2, 28.—*Ib.*, 10, 11, 22.) Considerable variety of opinion prevails respecting Ophir; but it is most probable that it was an emporium of the African and Indian trade in Arabia. The Arabian merchants procured the gold from Africa, and the ivory, apes, and peacocks from India. The Hebrew words in this passage appear to be derived from the Sanscrit. In the troubles which followed the death of Solomon, the trade with Ophir was probably neglected; and till the foundation of Alexandria the trade with India was carried on by the Arabians in the way already mentioned. The produce of India was also imported into Greece by the Phœnicians in very early times. Many of the Greek names of the Indian articles are evidently derived from the Sanscrit. Thus, the Greek word for pepper (*πέππερι*, *pepperi*) comes from the Sanscrit *pippali*; the Greek word for emerald is *σμάραγδος* or *μαράγδος* (*smaragdos*, *maragdos*), from the Sanscrit *marakata*; the *βυσσινὴν σιῦδόν* (*byssinē siudōn*), "fine linen" or "muslin," mentioned by Herodotus (2, 86; 7, 181), seems to be derived from *Sindhu*, the Sanscrit name of the river Indus; the produce of the cotton-plant, called in Greek *κάρπασος* (*karpasos*), comes from the Sanscrit *karpāsa*, a word which we also find in the Hebrew (*karpas*.—*Esther*, 1, 6), and it was probably introduced into Greece, together with the commodity, by the Phœnician traders. That this was the case with the word cinnamon, Herodotus (3, 111) informs us. The term cinnamon (in Greek *κιννάμωμον* or *κινναμων*, *cinnamomum*, *cinnamon*; in Hebrew *kinna-mon*) is not found in Sanscrit; the Sanscrit term for this article is *gudha trach.*, "sweet bark." The word cinnamon appears to be derived from the Cingalese *kakyn numa*, "sweet wood," of which the Sanscrit is probably a translation. We are not, however, surprised at missing the Sanscrit word for this article, since the languages in Southern India have no affinity with the Sanscrit. Tin also appears to have been from early times an article of exportation from India. The Greek term for tin, *κασσίτερος* (*kassiteros*), which occurs even in Homer, is evidently the same as the Sanscrit *kastira*. It is usually considered that the Greeks obtained their tin, by means of the Phœnicians, from the *Scilly Islands* or *Cornwall*; but there is no direct proof of this; and it appears probable, from the Sanscrit derivation of the word, that the Greeks originally obtained their tin from India.—The western nations of Asia appear to have had no connexion with India, except in the way of commerce, till the time of Darius Hystaspis, 521 B.C. The tales which Diodo-

rus relates respecting the invasion of India by Sesostris and Semiramis, cannot be estimated as historical facts. The same remark may perhaps apply to the alliance which, according to Xenophon, in his *Cyropædia* (6, 2, 1), Cyrus made with a king of India. But, in the reign of Darius Hystaspis, Herodotus informs us (4, 44), that Scylax of Caryanda was sent by the Persians to explore the course of the Indus; that he set out for the city Caspatyrus, and the Pactyican country (*Pakali*?) in the northern part of India; that he sailed down the Indus until he arrived at its mouth, and thence across the Indian Sea to the Arabian Gulf, and that this voyage occupied 30 months. Darius also, it is said, subdued the Indians and formed them into a satrapy, the tribute of which amounted to 360 talents of gold. (*Herod.*, 3, 94.) The extent of the Persian empire in India cannot be ascertained with any degree of certainty. The Persians appear to have included under the name of Indians many tribes dwelling to the west of the Indus; it seems doubtful whether they ever had any dominion east of the Indus; and it is nearly certain that their authority did not extend beyond the *Penjab*.—The knowledge which the Greeks possessed respecting India, previous to the time of Alexander, was derived from the Persians. We do not find the name of Indian or Hindu in ancient Sanscrit works; but the country east of the Indus has been known under this name by the western nations of Asia from the earliest times. In the Zend and Pehlvi languages it is called *Heando*, and in the Hebrew *Hodu* (*Esther*, 1, 1), which is evidently the same as the Hind of the Persian and Arabic geographers. The first mention of the Indians in a Greek author is in the "Suppliants" of Æschylus (v. 287); but no Greek writer gives us any information concerning them till the time of Herodotus. We may collect from the account of this historian a description of three distinct tribes of Indians: one dwelling in the north, near the city Caspatyrus, and the Pactyican country, resembling the Bactrians in their customs and mode of life. The second tribe or tribes evidently did not live under Brahminical laws; some of them dwelt in the marshes formed by the Indus, and subsisted by fishing; others, called *Padai*, with whom we may probably class the *Calantia* or *Calatia*, were wild and barbarous tribes, such as exist at present in the mountains of the *Deccan*. The third class, who are described as subsisting on the spontaneous produce of the earth, and never killing any living thing, are more likely to have been genuine Hindus. (*Herod.*, 3, 98, *seqq.*) Herodotus had heard of some of the natural productions of Hindustan, such as the cotton-plant and the bamboo; but his knowledge was very limited.—Ctesias, who lived at the court of Artaxerxes Mnemon for many years, has given us a fuller account than Herodotus of the manners and customs of the Indians, and of the natural productions of the country. He had heard of the war-elephants, and describes the parrot, the monkey, cochineal, &c.—The expedition of Alexander into India, B.C. 326, first gave the Greeks a correct idea of the western parts of this country. Alexander did not advance farther east than the *Ilyphasis*; but he followed the course of the Indus to the ocean, and afterward sent Nearchus to explore the coast of the Indian Ocean as far as the Persian Gulf. The *Penjab* was inhabited, at the time of Alexander's invasion, by many independent nations, who were as distinguished for their courage as their descendants the *Rajpoots*. Though the Macedonians did not penetrate farther east than the *Ilyphasis*, report reached them of the *Prasii*, a powerful people on the banks of the Ganges, whose king was prepared to resist Alexander with an immense army. After the death of Alexander, Seleucus made war against Sandrocottus, king of the *Prasii*, and was the first Greek who advanced as far as the Ganges. This Sandrocottus,

called Sandracoptus by Athenæus (*Epit.*, 1, 32), is probably the same as the Chandragupta of the Hindus. (Consult Sir W. Jones, in *Asiatic Researches*, vol. 4, p. 11.—*Wilson's Theatre of the Hindus*, vol. 2, p. 127, *seqq.*, 2d ed.—*Schlegel, Indische Bibliothek*, vol. 1, p. 246.) Sandrocottus is represented as king of the *Gangaridæ* and *Prasii*, who are probably one and the same people, *Gangaridæ* being the name given to them by the Greeks, and signifying merely the people in the neighbourhood of the Ganges, and *Prasii* being the Hindu name, the same as the *Prachi* (i. e., "eastern country") of the Sanscrit writers. Seleucus remained only a short time in the country of the *Prasii*, but his expedition was the means of giving the Greeks a more correct knowledge of the eastern part of India than they had hitherto possessed; since Megasthenes, and afterward Daimachus, resided for many years as ambassadors of the Syrian monarchs at *Palibothra* (in Sanscrit, *Pataliputra*), the capital of the *Prasii*. From the work which Megasthenes wrote on India, later writers, even in the time of the Roman emperors, such as Strabo and Arrian, appear to have derived their principal knowledge of the country. The Seleucids probably lost all influence at *Palibothra* after the death of Seleucus Nicator, B.C. 281; though we have a brief notice in Polybius (11, 34) of an expedition which Antiochus the Great made into India, and of a treaty which he concluded with a king *Sophagasenus* (in Sanscrit, probably, *Subhagaśena*, i. e., "the leader of a fortunate army"), whereby the Indian king was bound to supply him with a certain number of war elephants. The Greek kingdom of Bactria, which was founded by Theodotus or Diodotus, a lieutenant of the Syrian monarchs, and which lasted about 120 years, appears to have comprised a considerable portion of northern India.—After the foundation of Alexandria, the Indian trade was almost entirely carried on by the merchants of that city; few ships, however, appear to have sailed from Alexandria till the discovery of the monsoons by Hippalus; and the Arabians supplied Alexandria, as they had previously done the Phœnicians, with the produce of India. The monsoons must have become known to European navigators about the middle of the first century of our era, since they are not mentioned by Strabo, but were well known in the time of Pliny. Pliny has given us (6, 23) an interesting account of the trade between India and Alexandria, as it existed in his own time. We learn from him that the ships of the Alexandrian merchants set sail from Berenice, a port of the Red Sea, and arrived, in about 30 days, at *Ocelis* or *Carre*, in Arabia. Thence they sailed by the wind Hippalus (the southwest monsoon), in 40 days, to *Muziris* (*Mangalore*), the first emporium in India, which was not much frequented, on account of the pirates in the neighbourhood. The port at which the ships usually stayed was that of *Barace* (at the mouth, probably, of the *Nelisuram* river). After remaining in India till the beginning of December or January, they sailed back to the Red Sea, met with the wind *Africus* or *Auster* (south or southwest wind), and thus arrived at Berenice in less than a twelvemonth from the time they set out. The same author informs us, that the Indian articles were carried from Berenice to Coptos, a distance of 258 Roman miles, on camels; and that the different halting-places were determined by the wells. From Coptos, which was united to the Nile by a canal, the goods were conveyed down the river to Alexandria.—We have another account of the Indian trade, written by Arrian, who lived, in all probability, in the first century of the Christian era, and certainly not later than the second. Arrian had been in India himself, and describes in a small Greek treatise, entitled "the *Periplus of the Erythrean Sea*," the coast from the Red Sea to the western parts of India; and also gives a list of the most important exports and

imports. According to this account, the two principal ports in India were Barygaza on the northwestern, and Barace or Neleynda on the southwestern coast. To Barygaza (the modern *Baraach*, on the river *Nerbudda*) goods were brought from Ozene (*Oujein*), Plithana (*Pultaneh*), and Tagara (*Deoghur*). But Barace or Neleynda seems, from the account of Pliny and Arrian, to have been the principal emporium of the Indian trade. The Roman ships appear to have seldom sailed beyond this point; and the produce of countries farther east was brought to Barace by the native merchants. The knowledge which the Romans possessed of India beyond Cape Comorin was exceedingly vague and defective. Strabo describes the Ganges as flowing into the sea by one mouth; and though Pliny gives a long list of Indian nations, which had not been previously mentioned by any Greek or Roman writers, we have no satisfactory account of any part of India, except the description of the western coast by Arrian. Ptolemy, who lived about 100 years later than Pliny, appears to have derived his information from the Alexandrian merchants, who only sailed to the Malabar coast, and could not, therefore, have any accurate knowledge of the eastern parts of India, and still less of the countries beyond the Ganges; still, however, he is the earliest writer who attempts to describe the countries to the east of this stream. There is great difficulty in determining the position of any of the places enumerated by him, in consequence of the great error he made in the form of the peninsula, which he has made to stretch in its length from west to east instead of from north to south; a mistake the more extraordinary, since all preceding writers on India with whom we are acquainted had given the general shape of the peninsula with tolerable accuracy.—The Romans never extended their conquests as far as India, nor visited the country except for the purposes of commerce. But the increase of the trade between Alexandria and India seems to have produced in the Indian princes a desire to obtain some farther information concerning the western nations. We read of embassies to Augustus Cæsar, sent by Pandion and Porus, and also of an embassy from the isle of Ceylon to the Emperor Claudius. Bohlen, in his work on the Indians (vol. 1, p. 70), doubts whether these embassies were sent; but as they are both mentioned by contemporary writers, the former by Strabo and the latter by Pliny, we can hardly question the truth of their statements. We may form some idea of the magnitude of the Indian trade under the emperors by the account of Pliny (6, 23), who informs us, that the Roman world was drained every year of at least 50 millions of sesterces (upward of 1,900,000 dollars) for the purchase of Indian commodities. The profit upon this trade must have been immense, if we are to believe the statements of Pliny, that Indian articles were sold at Rome at 100 per cent. above their cost price. The articles imported by the Alexandrian merchants were chiefly precious stones, spices, perfumes, and silk. It has usually been considered, that the last article was imported into India from China; but there are strong reasons for believing that the silkworm has been reared in India from very early times. Mr. Colebrooke, in his "Essay on Hindu Classics" (*Miscellaneous Essays*, vol. 2, p. 185), informs us, that the class of silk-twisters and feeders of silkworms is mentioned in an ancient Sanscrit work; in addition to which, it may be remarked, that silk is known throughout the Archipelago by its Sanscrit name *sûtra*. (*Marsden's Malay Dictionary*, s. v. *sûtra*.) Those who wish for farther information on the articles of commerce, both imported and exported by the Alexandrian merchants, may consult with advantage the Appendix to Dr. Vincent's "Periplus of the Erythrean Sea," in which he has given an alphabetical list, accompanied with many explanations,

of the exports and imports of the Indian trade, which are enumerated in the Digest, and in Arrian's "Periplus of the Erythrean Sea."—We have no farther account of the trade between Alexandria and India till the time of the Emperor Justinian, during whose reign an Alexandrian merchant of the name of Cosmas, who had made several voyages to India, but who afterward turned monk, published a work, still extant, entitled "Christian Topography," in which he gives us several particulars respecting the Indian trade. But his knowledge of India is not more extensive than that of Arrian, for the Alexandrian merchants continued to visit merely the Malabar coast, to which the produce of the country farther east was brought by native merchants, as in the time of Arrian. Alexandria continued to supply the nations of Europe with Indian articles till the discovery of the passage round the Cape of Good Hope by Vasco de Gama in 1498. But the western nations of Asia were principally supplied by the merchants of Basora, which was founded by the Calif Omar near the mouth of the Euphrates, and which soon became one of the most flourishing commercial cities of the East. In addition to which it must be recollected, that a land-trade, conducted by means of caravans, which passed through the central countries of Asia, existed from very early times between India and the western nations of Asia. (*Encycl. Useful Knowl.*, vol. 12, p. 222, seqq.)

History of India from the earliest times to the Mohammedan Conquest.

The materials for the history of this period are very few and unsatisfactory. The only ancient history written in the Sanscrit language which the researches of modern scholars have been able to obtain, is a chronicle of the kings of Cashmere, entitled "Raja Taringini," of which an abstract was given by Abulfazl in the "Ayin-i-Akbery." The original Sanscrit was obtained for the first time by English scholars in the present century, and was published at Calcutta in the year 1835. An interesting account of the work is given by Professor Wilson, in the 15th volume of the "Asiatic Researches." But, though this volume throws considerable light upon the early history of Cashmere, it gives us little information respecting the early history of Hindustan. The existence of this chronicle, however, is sufficient to disprove the assertion which some persons have made, that the Hindus possessed no native history prior to the Mohammedan conquest; and it may be hoped that similar works may be obtained by the researches of modern scholars. We may also expect to obtain farther information by a more diligent examination of the various inscriptions which exist on public buildings in all parts of Hindustan, though the majority of such inscriptions relate to a period subsequent to the Mohammedan conquest. The Brahmins profess to give a history of the ancient kingdoms of Hindustan, with the names of the monarchs who successively reigned over them, and the principal events of their reigns. But their accounts are derived from the legendary tales of the Puranas, a class of compositions very similar to the Greek Theogonies; and although these, and especially the two great epic poems, the "Ramayana" and "Mahabharata," are exceedingly valuable for the information they give us respecting the religion, civilization, and customs of the ancient Hindus, they cannot be regarded as authorities for historical events.—The invariable tradition of the Hindus points to the northern parts of Hindustan as the original abode of their race, and of the Brahminical faith and laws. It appears probable, both from the tradition of the Hindus and from the similarity of the Sanscrit to the Zend, Greek, and Latin languages, that the nation from which the genuine Hindus are descended must at some period have inhabited the plains of Central Asia, from

which they emigrated into the northern part of Hindustan. Heeren and other writers have supposed, that the Brahmins, and perhaps the Kshatriyas and Vaisyas, were a race of northern conquerors, who subdued the Sudras, the original inhabitants of the country. But, whatever opinion may be entertained respecting the origin of this people, it is evident that the Hindus themselves never regarded the southern part of the peninsula as forming part of *Aryavarta*, or "the holy land," the name of the country inhabited by genuine Hindus. *Aryavarta* was bounded on the north by the Himalaya, and on the south by the Vindhya Mountains (*Manu*, 6, 21-24); the boundaries on the east and west cannot be so easily ascertained. In this country, and especially in the eastern part, there existed great and powerful empires, at least a thousand years before the Christian era (the probable date of the *Ramayana* and *Mahabharata*), which had made great progress in knowledge, civilization, and the fine arts, and of which the ancient literature of the Sanscrit languages is an imperishable memorial. According to Hindu tradition, two empires only existed in the most ancient times, of which the capitals were *Ayodhya* or *Oude*, and *Pratishthana* or *Vitoria*. The kings of these cities, who are respectively denominated children of the Sun and of the Moon, are supposed to have been the lineal descendants of Satyavrata, the seventh Manu, during whose life all living creatures, with the exception of himself and his family, were destroyed by a general deluge. Another kingdom was afterward established at *Magadha* or *Bahar*, by Jarasaudha, appointed governor of the province by a sovereign of the Lunar race. A list of these kings is given by Sir William Jones, in his "Essay on the Chronology of the Hindus." (*Asiat. Research.*, vol. 2, p. 111, seq., 8vo ed.)—The kings of *Ayodhya* appear to have conquered the Deccan, and to have introduced the Brahminical faith and laws into the southern part of the peninsula. Such, at least, appears to be the meaning of the *Ramayana*, according to which, Rama, an incarnation of Vishnu, and the son of the king of *Ayodhya*, penetrates to the extremity of the peninsula, and conquers the giants of *Lauka* (*Ceylon*). This is in accordance with all the traditions of the peninsula, which recognise a period when the inhabitants were not Hindus. We have no means of ascertaining whether these conquests by the monarchs of *Ayodhya* were permanent; but we know that, in the time of Arrian and Pliny, the Brahminical faith prevailed in the southern part of the peninsula, since all the principal places mentioned by these writers have Sanscrit names. We learn from tradition, and from historical records extant in the Tamil language (Wilson's *Descriptive Catalogue of the Oriental MSS. collected by the late Lieutenant-col. Mackenzie*.—Taylor's *Oriental Historical MSS. in the Tamil language*, 2 vols. 4to, *Madras*, 1835), that three kingdoms acquired, in early times, great political importance in the southern part of the Deccan. These were named *Pandya*, *Chola*, and *Chera*, and are all said to have been founded by natives of *Ayodhya*, who colonized the Deccan with Hindus from the north. *Pandya* was the most powerful of these kingdoms: it was bounded on the north by the river *Vellar*, on the west by the *Ghants*, though in early times it extended as far as the Malabar coast, and on the south and east by the sea. Its principal town was *Madura*. The antiquity of this kingdom is confirmed by Pliny, Arrian, and Ptolemy, who all mention Pandion as a king who reigned in the south of the peninsula. The Brahminical colonists appear to have settled principally in the southern parts of the Deccan: the native traditions represent the northern parts as inhabited by savage races till a much later period. This is in accordance with the accounts of the Greek writers. The names of the places on the upper part of the eastern and western coasts are not

Sanscrit. The modern *Concan* is described by both Arrian and Pliny as the pirate coast; and the coast of the modern *Orissa* is said by Arrian to have been inhabited by a savage race called *Kirrhadae*, who appear to be identical with the *Kiratas* of the Sanscrit writers, and who are represented to have been a race of savage foresters.—The accounts of the Greeks who accompanied Alexander, and more particularly that of Megasthenes, give us, as we have already shown, some information respecting the northern part of Hindustan in the third and fourth centuries before the Christian era. But hardly anything is known of the history of Hindustan from this period to the time of the Mohammedan conquest. There are only a very few historical events of which we can speak with any degree of certainty. After the overthrow of the Greek kingdom of Bactria by the Tartars, B.C. 126, the Tartars (called by the Greeks Scythians, and by the Hindus Sakas) overran the greater part of the northwestern provinces of Hindustan, which remained in their possession till the reign of *Vicramaditya I.*, B.C. 56, who, after adding numerous provinces to his empire, drove the Tartars beyond the Indus. This sovereign, whose date is pretty well ascertained, since the years of the *Samvat* era are counted from his reign, resided at *Ayodhya* and *Canoj*, and had dominion over almost the whole of northern Hindustan, from *Cashmere* to the *Ganges*. He gave great encouragement to learning and the fine arts, and his name is still cherished by the Hindus as one of their greatest and wisest princes. He fell in a battle against *Salivahana*, raja of the *Deccan*. We also read of two other sovereigns of the same name: *Vicramaditya II.*, A.D. 191, and *Vicramaditya III.*, A.D. 441. The most interesting event in this period of Hindu history is the persecution of the Buddhists, and their final expulsion from Hindustan. It is difficult to conceive the reasons that induced the Hindu sovereigns, after so long a period of toleration, to aid the Brahmins in this persecution; more especially as the *Jains*, a sect strikingly resembling the Buddhists, were tolerated in all parts of Hindustan.—Christianity is said to have been introduced into Hindustan in the first century; according to some accounts, by the apostle Thomas; and, according to others, by the apostle Bartholomew. But there is very little dependence to be placed upon these statements. The first Christians who were settled in any number in Hindustan appear to have been Nestorians, who settled on the Malabar coast for the purposes of commerce. Nestorius lived in the middle of the fifth century; and in the sixth century we learn from *Cosmas* that Christian churches were established in the most important cities on the Malabar coast, and that the priests were ordained by the Archbishop of *Seleucia*, and were subject to his jurisdiction. When *Vasco de Gama* arrived at *Cochin*, on the Malabar coast, he was surprised to find a great number of Christians, who inhabited the interior of *Travancore* and *Malabar*, and who had more than a hundred churches. But these Christians appear to have been the descendants of those Nestorians who emigrated to Hindustan in the fifth and sixth centuries, since there is no reason for believing that any Hindus were converted by their means to the Christian religion. (*Encycl. Us. Knowl.*, vol. 12, p. 224, seq.)

INDUS, a celebrated river of India, falling, after a course of 1300 miles, into the Indian Ocean. The sources of this river have not yet been fully explored. Its commencement is fixed, by the most probable conjecture, in the northern declivity of the *Calias* branch of the *Himalaya* Mountains, about lat. 31° 20' N., and long. 80° 30' E., within a few miles of the source of the *Setledge*, and in a territory under the dominion of China. Its name in Sanscrit is *Sindh* or *Hindh*, an appellation which it receives from its blue colour. Under the name *Sindus* it was known even to the Ro-

mans, besides its more common appellation of Indus. In lat. 28° 28', the Indus is joined by five rivers, the ancient names of which, as given by the Greek writers, are, the Hydaspes, Acesines, Hydraotes, Hyphasis, and Xeradrus. These five rivers obtained for the province which they watered the Greek name of Pentapotamia, analogous to which is the modern appellation of *Pendjab*, given to the same region, and signifying in Persian "the country of the five rivers." (Consult *Lassen, Comment. de Pentapot. Indica*, 4to, *Bonnæ*, 1827.—*Beck, Allgemeinein Repertorium*, vol. 1, pt. 2, p. 112.) The Xeradrus, now the *Selledge*, is the longest of the five rivers just mentioned, and the longest stream also within the *Himalaya* range, between the Indus and the *Burrampooter*. The union of all the five rivers into one, before they reach the Indus, was a point in geography maintained by Ptolemy; but, owing to the obscurity of modern accounts, promoted by the splittings of the Indus, and the frequent approximation of streams running in parallel courses, we had been taught to regard this as a specimen of that author's deficiency of information, till very recent and more minute inquiries have re-established that questioned point, and, along with it, the merited credit of the ancient geographer. The five rivers form one great stream, called by the natives in this quarter the *Cherraub*; but in the other countries of India it is known by the name of *Punjuud*. The united stream then flows on between 40 and 50 miles, until it joins the Indus at *Mittun Cote*. The mouths of the Indus Ptolemy makes seven in number; Mannert gives them as follows, commencing on the west: Sagapa, now the river *Pitty*; Sinthos, now the *Darraway*; Aureum Ostium, now the *Ritchel*; Chariphus, now the *Fetty*; Sapara, Sabala, and Lombare, of which last three he professes to know nothing with certainty. According, however, to other and more recent authorities, the Indus enters the sea in one volume, the lateral streams being absorbed by the sand without reaching the ocean. It gives off an easterly branch called the *Fullalee*, but this returns its waters to the Indus at a lower point, forming in its circuit the island on which *Hyderabad* stands. (*Malte-Brun, Geogr.*, vol. 3, p. 13, *Am. ed.*)

INO, daughter of Cadmus and Harmonia. (*Vid. Athamas*.)

INŌPUS, a river of Delos, watering the plain in which the town of Delos stood. (*Strab.*, 485.—*Callim.*, II. in *Del.*, 206.)

INŌUS, a patronymic given to the god Palæmon, as son of Ino. (*Virg.*, *Æn.*, 5, 823.)

INSUBRES (in Greek *Ἰσούριοι*), the most numerous as well as the most powerful tribe of the Cisalpine Gauls, according to Polybius (2, 17). It would appear indeed from Ptolemy (p. 64) that their dominion extended at one time over the Libicii, another powerful Gallic tribe in their vicinity; but their territory, properly speaking, seems to have been defined by the rivers Ticinus and Addua. The Insubres took a very active part in the Gallic wars against the Romans, and zealously co-operated with Hannibal in his invasion of Italy. (*Polyb.*, 2, 40.) They are stated by Livy (5, 34) to have founded their capital Mediolanum (now *Milan*) on their first arrival in Italy, and to have given it that name from a place so called in the territory of the *Ædoui* in Gaul. (*Plin.*, 3, 17.—*Ptol.*, p. 63.—Consult remarks under the article *Gallia*, page 531, col. 1.)

INSŪLA SACRA, an island formed at the mouth of the Tiber, by the separation of the two branches of that river. (*Procopius, Rer. Got.*, 1.—*Rutil. Itin.*, 1, 169.)

INTERMELIUM or ALBIUM INTERMELIUM, the capital of the Intemelii. (*Vid. Albium II.*)

INTERAMNA, I. a city of Umbria, so called from its being situated between two branches (*inter amnes*) of the river Nar. (*Varro, L. L.*, 4, 5.) Hence also the in-

habitants of the place were known as the Interamnates Nartes, to distinguish them from those of Interamna on the Liris. (*Plin.*, 3, 14.) If an ancient inscription cited by Cluverius (*Ital. Ant.*, vol. 1, p. 635) be genuine, Interamna, now represented by the well-known town of *Terni*, was founded in the reign of Numa, or about 80 years after Rome. It is noted afterward as one of the most distinguished cities of municipal rank in Italy. This circumstance, however, did not save it from the calamities of civil war during the disastrous struggle between Sylla and Marius. (*Florus*, 3, 21.) The plains around Interamna, which were watered by the Nar, are represented as the most productive in Italy (*Tacit. Ann.*, 1, 69); and Pliny assures us (18, 28), that the meadows were cut four times in the year. Interamna is commonly supposed to have been the birthplace of the historian Tacitus, and also of the emperor of the same name. (*Cramer's Anc. Italy*, vol. 1, p. 276.)—II. A city of Picenum, in the territory of the Prætutii; hence called, for distinction's sake, Prætutiana. (*Ptol.*, p. 62.) It is now *Teramo*, situate between the small rivers *Viziola* and *Turdino*. (*Romanelli, Antica Topografia*, &c., pt. 3, p. 298, *seqq.*)—III. A city of New Latium, situate on the Liris, and between that river and the small stream now called *Sogne*, but the ancient name of which Strabo, who states the fact, has not mentioned. It was usually called Interamna ad Lirim, for distinction's sake from the other cities of the same name. According to Livy (9, 28) it was colonized A.U.C. 440, and defended itself successfully against the Samnites, who made an attack upon it soon after. (*Liv.*, 10, 36.) Interamna is mentioned again by the same historian (26, 9) when describing Hannibal's march from Capua to Rome. We find its name subsequently among those of the refractory colonies of that war. (*Liv.*, 27, 9.) Pliny informs us that the Interamnates were surnamed Lirinates and Succasini. (*Plin.*, 3, 5.) Cluverius imagined that *Ponte Corvo* occupied the site of Interamna; but its situation agrees more nearly with that of a place called *Terame Castrum*, in old records, and the name of which is evidently a corruption of Interamna. (*Cramer's Anc. It.*, vol. 2, p. 117.)

INŌI CASTRUM. *Vid. Castrum II.*

IO, daughter of Iasus, or, as the dramatic writers said, of Inachus, was priestess of Juno at Argos, and, unhappily for her, was beloved by Jupiter. When this god found that his conduct had exposed him to the suspicions of Juno, he changed Io into a white cow, and declared with an oath to his spouse that he had been guilty of no infidelity. The goddess, affecting to believe him, asked the cow of him as a present; and, on obtaining her, set the "all-seeing Argus" to watch her. (*Vid. Argus*.) He accordingly bound her to an olive-tree in the grove of Mycenæ, and there kept guard over her. Jupiter, pitying her situation, directed Mercury to steal her away. The god of ingenious devices made the attempt; but, as a vulture always gave Argus warning of his projects, he found it impossible to succeed. Nothing then remaining but open force, Mercury killed Argus with a stone, and hence obtained the appellation of *Argus-slayer* (*Ἀργεϊφόντης*). The vengeance of Juno was, however, not yet satiated; and she sent a gad-fly to torment Io, who fled over the whole world from its pursuits. She swam through the Ionian Sea, which was fabled to have hence derived its name from her. She then roamed over the plains of Illyria, ascended Mount Hæmus, and crossed the Thracian strait, thence named the Bosphorus (*rad. Bosporus*), she rambled on through Scythia and the country of the Cimmerians, and, after wandering over various regions of Europe and Asia, arrived at last on the banks of the Nile, where she assumed her original form, and bore to Jupiter a son named Epaphus. (*Vid. Epaphus*.)—The legend of Io would not appear to have attracted so much of the attention of the earlier poets

as might have been expected. Homer never alludes to it, unless his employment of the term *Ἀργειφόντης* (*Argiiphontes*) is to be regarded as intimating a knowledge of Io. It is also doubtful whether she was one of the heroines of the Eoæ. Her story, however, was noticed in the *Ægimius*, where it was said that her father's name was *Peirên*, that her keeper Argus had four eyes, and that the island of Eubœa derived its name from her. (*Apollod.*, 2, 1, 3.—*Schol. ad Eurip.*, *Phæn.*, 1132.—*Steph. Byz.*, s. v. *Ἀβανρίς*.) Pherecydes said that Juno placed an eye in the back of Argus's neck, and deprived him of sleep, and then set him as a guard over Io. (*Ap. Schol. ad Eurip.*, l. c.) *Æschylus* introduces Io into his "Prometheus Bound," and he also relates her story in his "Suppliants."—When the Greeks first settled in Egypt, and saw the statues of Isis with cow's horns, they, in their usual manner, inferred that she was their own Io, with whose name hers had a slight similarity. At Memphis they afterward beheld the worship of the holy bull Apis, and naturally supposing the bull-god to be the son of the cow-goddess, they formed from him a son for their Io, whose name was the occasion of a new legend relative to the mode by which she was restored to her pristine form. (*Müller, Proleg.*, p. 183, seq.—*Keightley's Mythology*, p. 406, seq.)—The whole story of Io is an agricultural legend, and admits of an easy explanation. Io, whether considered as the offspring of Iasus (the favourite of Ceres) or of *Peirên* (the "experimenter" or "tryer"), is a type of early agriculture, progressing gradually by the aid of slow and painful experience. Jupiter represents the firmament, the genial source of light and life; Juno, on the other hand, is the type of the atmosphere, with its stormy and capricious changes. Early agriculture suffers from these changes, which impede more or less the fostering influence of the pure firmament that lies beyond, and hence man has to watch with incessant and sleepless care over the labours of primitive husbandry. This ever-watchful superintendence is typified by Argus with his countless eyes, save that in the legend he becomes an instrument of punishment in the hands of Juno. If we turn to the version of the fable as given in the *Ægimius*, the meaning of the whole story becomes still plainer, for here the four eyes of Argus are types of the four seasons, while the name Eubœa contains a direct reference to success in agriculture. Argus, continues the legend, was slain by Mercury, and Io was then left free to wander over the whole earth. Now, as Mercury was the god of language and the inventor of letters, what is this but saying, that when rules and precepts of agriculture were introduced, first orally and then in writing, mankind were released from that ever-watching care which early husbandry had required from them, and agriculture, now reduced to a regular system, went forth in freedom and spread itself among the nations!—Again, in Egypt Io finds at last a resting-place; here she assumes her original form, and here brings forth Epaphus as the offspring of Jove. What is this but saying that agriculture was carried to perfection in the fertile land of the Nile, and that here it was touched (*ἐπι* and *ἀφῶω*) by the true generative influence from on high, and brought forth in the richest abundance!—Still farther, the eyes of Argus, we are told, were transferred by Juno to the plumage of her favourite bird; and the peacock, it is well known, gives sure indications, by its cry, of changes about to take place in the atmosphere, and is in this respect, therefore, intimately connected with the operations of husbandry. We see, too, from this, why, since Juno is the type of the atmosphere, the peacock was considered as sacred to the goddess. (*Vid. Juno*).—From what has been said, it would seem that the name Io is to be deduced from *ἰώ* (*eiui*), "to go," as indicative of vegetation going forth from the bosom of the earth.

ΙΟΒΑΤΕΣ, a king of Lycia, father of *Sthenobæa*, the wife of *Prætus*, king of Argos. (*Vid. Bellerophon*.)

ΙΟΚΑΣΤΑ, a daughter of *Menœceus*, who married *Laius*, king of Thebes, by whom she had *Œdipus*. She was afterward united to her son *Œdipus* without knowing who he was, and had by him *Eteocles*, *Polynices*, *Ismene*, and *Antigone*. She hung herself on discovering that *Œdipus* was her own offspring. (*Vid. Laius*, and *Œdipus*.)

ΙΟΙΛΟΣ, a son of *Iphiclus*, king of Thessaly, who assisted *Hercules* in conquering the *Hydra*. (*Vid. Hydra*, and *Hercules*.)

Ιολκος, a town of Thessaly, in the district of *Magnesia*, at the head of the *Pelagius Sinus*, and north-east of *Demetrias*. It was celebrated in the heroic age as the birthplace of *Jason* and his ancestors. *Iolcos* was situated at the foot of *Mount Pelion*, according to *Pindar* (*Nem.*, 4, 87), and near the small river *Anaurus*, in which *Jason* is said to have lost his sandal. (*Apoll. Rhod.*, 1, 48.) *Strabo* affirms that civil dissensions and tyrannical government hastened the downfall of this place, which was once a powerful city; but its ruin was finally completed by the foundation of *Demetrias* in its immediate vicinity. In his time the town no longer existed, but the neighbouring shore still retained the name of *Iolcos*. (*Strab.*, 436.—*Compare Liv.*, 43, 12.—*Scylax*, p. 25.—*Steph. Byz.*, s. v. *Ιωλκός*.—*Plin.*, 4, 9.) The poets make the ship *Argo* to have set sail from *Iolcos*; this, however, must either be understood as referring the fact to *Apheta*, or else by *Iolcos* they mean the adjacent coast. (*Cramer's Anc. Greece*, vol. 1, p. 428.)

ΙΟΛΕ, a daughter of *Eurytus*, king of *Œchalia*. (*Vid. Hercules*, page 598, col. 2.)

ION, I. the fabled son of *Xuthus*, and reputed progenitor of the *Ionian* race. (*Vid. Iones*).—II. A tragic poet, a native of *Chios*, and surnamed *Xuthus*. He began to exhibit *Ol.* 82, 2, B.C. 451. The number of his dramas is variously estimated at from twelve to forty. Bentley has collected the names of eleven. (*Epist. ad Mill. Chron. I. Malal. subj.*) The same great critic has also shown that this *Ion* was a person of birth and fortune, distinct from *Ion Ephesus*, a mere begging rhapsodist. Besides tragedies, *Ion* composed dithyrambs, elegies, &c. His elegies are quoted by *Athenæus* (10, p. 436), as also his *Ἐπιδημιαί*, a work giving an account of all the visits paid by celebrated men to *Chios*. (*Athenæus*, 3, p. 93.) *Ion* also composed several works in prose, some of them on philosophical subjects. Though he did not exhibit till after *Euripides* had commenced his dramatic career, and though he was, like that poet, a friend of *Socrates* (*Diog. Laert.*, 2, 23), we should be inclined to infer, from his having written dithyrambs, that he belonged to an earlier age of the dramatic-art, and that his plays were free from the corruptions which *Euripides* had introduced into Greek tragedy: it is, indeed, likely that a foreigner would copy rather from the old models than from modern innovations. *Ion* was so delighted with being decreed victor on one occasion, that he presented each citizen with a vase of *Chian* pottery. (*Athen.*, 1, p. 4.) We gather from a joke of *Aristophanes*, on a word taken from one of his dithyrambs, that *Ion* died before the exhibition of the *Pax*, B.C. 419. (*Pax*, v. 833.—*Theatre of the Greeks*, p. 92, 4th ed.)

ΙΩΝΕΣ, one of the main original races of Greece. The origin of the *Ionians* is involved in great obscurity. The name occurs in the *Iliad* but once, and in the form "*Ιαῶνες*" (*Il.*, 13, 685); but not many years after the war of *Troy*, the *Ionians* appear as settled in *Attica*, and also in the northern part of the *Peloponnese*, along the coast of the *Corinthian Gulf*. *Herodotus* (8, 44) says, that the *Athenians* were originally *Pelagii*, but that after *Ion*, the son of *Xuthus*, became the leader of the forces of the *Athenians*, the people

received the name of Ionians. It appears probable that the Ionians, like the Æolians, were a conquering tribe from the mountains of Thessaly, and that at an unknown period they migrated southward, and settled in Attica and part of the Peloponnesus, probably mixing with the native Pelasgi. The genealogy of Ion, the reputed son of Xuthus, seems to be a legend under which is veiled the early history of the Ionian occupation of Attica. Euripides, in order to flatter the Athenians, makes Ion the son of Apollo. Whatever may be the historical origin of the Ionian name, Athenians and Ionians came to be considered as one and the same people. In the Peloponnesus the Ionians occupied the northern coast of the peninsula, which was then called *Ionía*, and also *Ægialæan Ionía*, and the sea which separates the Peloponnesus from Southern Italy assumed the name of *Ionian Sea*, a circumstance which would seem to indicate the extent and prevalence of the Ionian name. This appellation of *Ionian Sea* was retained among the later Greeks and the Romans, and is perpetuated to the present day among the Italians. When the Dorians invaded the Peloponnesus, about 1100 years B.C., the Achæi, being driven thence, gathered towards the north, and took possession of *Ionía*, which thenceforth was known by the name of *Achaia*. The Ionians of the Peloponnesus, in consequence of this, migrated to Attica, whence, being straitened for space, and perhaps, also, harassed by the Dorians, they resolved to seek their fortune beyond the sea, under the guidance of Neleus and Androclus, the two younger sons of Codrus, the last king of Athens. This was the great *Ionic migration*, as it is called. The emigrants consisted of natives of Attica, as well as of Ionian fugitives from the Peloponnesus, and a motley band from other parts of Greece. (*Herod.*, 1, 146.) But this migration can, perhaps, hardly be considered as one single event: there seem to have been many and various migrations of Ionians, some of which were probably anterior to the Dorian conquest. (*Encycl. Us. Knowl.*, vol. 13, p. 13, *seq.*)—For the history of the Ionic colonies in Asia Minor, consult the article *Ionía*.—We have already remarked, that the origin of the name *Ionian* is altogether uncertain. It is generally thought to come from the Hebrew *Iavan* or (if pronounced with the quiescent *vau*) *Ion*; and in like manner the Hellenes are thought to be the same with *Elisa*, in the sacred writings, more especially their country *Hellas*. Hence Bochart makes *Iavan*, the son of Iaphet, the ancestor of the *Ionæ*. The Persians, moreover, would seem to have called the Greeks by a similar appellation. Thus, in Aristophanes (*Acharn.*, v. 104), a Persian, who speaks broken Greek, is introduced, expressing himself as follows: οὐ λῆψι χρεῖον χαννὸπρωκτ' Ἰαοναῦ, and the scholiast remarks, with reference to the last word, Ἰαοναῦ ἀντὶ τοῦ Ἀθηναίων. . . . ὡς πάντας τοὺς Ἑλλήνας οἱ βάρβαροι ἐκάλεον. In the Coptic, also, the Greeks are styled, by a name quite analogous, OSEININ, as at the end of the Rosetta inscription. (*Akerblad, sur l'inscrip. Egypt. de Rosette*.—*Kruse, Hellas*, vol. 1, p. 2, *in notis*.) They, however, who favour such etymologies, should first determine whether the Hebrew is to be regarded as the primitive language or not; since, if the latter be the case, the names that are given in Hebrew scripture to the early rulers and leaders in the family of Noah, are mere translations from the primitive tongue, and certainly can form no sure basis for the erection even of the slightest superstructure of etymology.

IONIA, a district of Asia Minor, where Ionians from Attica settled, about 1050 B.C. This beautiful and fertile country extended from the river Hermus, along the shore of the Ægean Sea, to Miletus, and the temple of the Branchide, on the promontory of Posideum. Its southern limit, however, probably varied at different times, since some made *Ionía* reach to the Sinus Iassius. Strabo makes the circuit of *Ionía* 3430 sta-

dia. (*Strab.*, 632.—Compare *Tzschucke, ad loc.*) The breadth is nowhere given. Nothing, indeed, could be more irregular in point of form; it consisting, as it would appear, of small districts around the different cities and towns, save only the great peninsula of Erythræ, &c., and the islands of Samos and Chios.—*Ionía*, or the *Ionian league*, originally consisted of twelve cities of considerable note, with many other towns of minor importance; besides a thirteenth city, Smyrna, afterward wrested from the Æolians. The names of the cities, beginning from the north, are Phocæa, Smyrna, Clazomenæ, Erythræ, Chios, Teos, Lebedus, Colophon, Ephesus, Priene, Samos, Myus, and Miletus. Others of less note were Temnus, Leuce, Metropolis, Myonnesus, and Latmus. The *Ionian confederation* appears to have been mainly united by a common religious worship, and by the celebration of a periodic festival; and it seems that the deputies of the several cities only met in times of great difficulty. The place of assembly was the *Panionium*, at the foot of Mount Mycale, where a temple, built on neutral ground, was dedicated to Neptune. In the old *Ionía* (afterward called *Achaia*) Neptune was also the national deity, and his temple continued at Helice till that city was submerged. That the settlers in Asia should retain their national worship is a circumstance perfectly in accordance with the history of colonization, and confirmatory, if confirmation were needed, of the European origin of the Ionians of Asia. We have no materials for a history of these cities of *Ionía* as a political community, and no reason for supposing that their political union came near the exact notion of a federation, as some have conjectured.—In almost every one of the *Ionian cities* there were two parties, aristocratic and democratic, and the Persian kings or their satraps generally favoured the former; and thus it happened that most of the Greek cities in Asia came to be ruled by tyrants, or individuals who possessed the sovereign power.—The *Ionian cities* remained independent of a foreign yoke, however, until the time of Cæsar, by whom they were finally subdued. From the Lydian they passed to the Persian sway, their conquerors, however, in both instances leaving them their own forms of government, and merely subjecting them to the payment of tribute. To the Persian succeeded the Macedonian dominion, and to this last the Roman yoke. Sylla reduced them beneath the Roman power, and treated them, together with other Asiatic cities, with great severity, on account of the murder of so many thousand Romans, whom they had inhumanly put to death in compliance with the orders of Mithradates. Ephesus was treated with the greatest rigour, Sylla having suffered his soldiers to live there at discretion, and obliged the inhabitants to pay every officer fifty drachmæ, and every soldier sixteen denarii a day. The whole sum which the revolted cities of Asia paid Sylla was 20,000 talents, near four millions sterling. This was a most fatal blow, from which they never recovered. *Ionía*, at a later period, was totally devastated by the Saracens, so that few vestiges of ancient civilization remain. Its inhabitants were considered effeminate and voluptuous, but, at the same time, highly amiable. Their dialect partook of their character. The arts and sciences flourished in this happy country, particularly those which contribute to embellish life. The Asiatic Greeks became the teachers and examples of the European Greeks. Homer the poet, and Parrhasius the painter, were *Ionians*. The *Ionic column* proves the delicacy of their taste. (*Encyclop. Amer.*, vol. 7, p. 53.) A notice of the principal sites on the coast is given by Leake (*Journal*, p. 260, *seq.*)—Compare *Rennell, Geography of Western Asia*, vol. 2, p. 1, *seq.*—II. An ancient name given to *Hellas* or *Achaia*, because it was for some time the residence of the Ionians. (Consult remarks under the article *Ionæ*.)

IONIUM MARE, a name given to that part of the Mediterranean which separates the Peloponnesus from Southern Italy. It was fabled to have received its appellation from the wanderings of Io in this quarter. (*Vid. Io.*) The more correct explanation, however, deduces the name from that of the great Ionic race. (*Vid. Iones.*) The statements of the ancient writers respecting the situation and extent of the Ionian Sea are very fluctuating and uncertain. Scylax (p. 11) makes it the same with the Adriatic; and he may be correct in so doing, since, according to Herodotus, the true and ancient name of the Adriatic was the Ionian Gulf (6, 127). Both the Adriatic and Ionian gulfs end, according to Scylax, at the straits near Hydruntum (p. 5). Of the Ionian Sea he says nothing; Herodotus, however, makes it extend as far south as the Peloponnesus. Thucydides keeps up the distinction just alluded to, calling the Adriatic by the name of the Ionian Gulf (being probably as ignorant as Herodotus of any other appellation for this arm of the sea), and styling the rest, as far as the western coast of Greece, the Ionian Sea (1, 24). In later times a change of appellation took place. The limits of the Adriatic were extended as far as the southern coast of Italy and the western shores of Greece, and the Ionian Gulf was considered to be now only a part of it. Eustathius asserts (*ad Dionys. Perieg.*, v. 92), that the more accurate writers of his day maintained this distinction. Hence the remark of Ptolemy is rendered intelligible, who makes the Adriatic Sea extend along the whole western coast of Greece down to the southernmost extremity of the Peloponnesus. (*Mannert, Geogr.*, vol. 9, p. 12.)

ΙΩΡΟΝ, the son of Sophocles, is described by Aristophanes (*Ran.*, 73, *seqq.*) as a man whose powers were, at the time of his father's death, not yet sufficiently proved to enable a critic to determine his literary rank. He appears, however, to have been a creditable dramatist, and gained the second prize in 428 B.C., when Euripides was first and Ion third. (*Arg. ad Eurip., Hippol.—Theatre of the Greeks.* p. 94, *seq.*, 4th ed.)

JOPPA, an ancient city of Palestine, situate on the coast, to the northwest of Jerusalem, and to the south of Casarea. In the Old Testament it is called Japho (*Joshua*, 19, 46 —2 *Chron.*, 2, 16.—*Jonah*, 1, 3). It was the only harbour possessed by the Jews, and the wood for the temple, which was cut on Mount Lebanon, was brought in floats to Joppa, thence to be sent to Jerusalem. It subsequently became a Phœnician city, and fell under the power of the kings of Syria, until the Maccabees conquered it, and restored it to their nation. The Jews, not being a commercial people, made no use of Joppa as a place of trade; and hence it became a retreat for pirates. (*Strabo*, 759.) Under the Roman power the pirates were made to disappear. In the middle ages Joppa changed its name to *Jaffa* or *Yaffa* (*Abulfed., Tab. Syr.*, p. 80).—Joppa was made by the ancient mythologists the scene of the fable of Andromeda, and here Cepheus was said to have reigned. (*Strabo, l. c.*) Pliny (9, 5) even gravely informs us, that M. Scaurus brought away from this place to Rome the bones of the sea-monster to which the princess had been exposed, and which were of a remarkable size. They were probably the remains of a large whale. The Jews saw in them the bones of the whale that had swallowed Jonah; the Greeks, on the other hand, connected them with one of the legends of their fanciful mythology.—Joppa was the place of landing for the western pilgrims, and here the promised pardons commenced. It possesses still, in times of peace, a considerable commerce with the places in its vicinity, and is well inhabited, chiefly by Arabs. Mr. Wilson says the harbour is rocky and dangerous, and difficult of access; in which state it has been since the time of Josephus, who says that a

more dangerous situation for vessels cannot be imagined. The same traveller estimates the present population at 5000. The place is distinguished for its fruits, and the watermelons that grow here are said to be superior to those of any other country. Mr. Buckingham says, "that Jaffa, as it is now seen, is seated on a promontory jutting out into the sea, and rising to the height of about 150 feet above its level." (*Mannert, Geogr.*, vol. 6, pt. 1, p. 256.)

JORDĀNES, a famous river of Palestine, which, according to Josephus, had its source in the lake of Phiala, about ten miles north of Casarea Philippi. This origin of the river was ascertained by Philip the tetrarch, who made the experiment of throwing some chaff or straw into the lake, which came out where the river emerges from the ground, after having run about 120 furlongs beneath the surface of the earth. Mannert deems this story fabulous, and makes the river rise in Mount Paneas. The Talmudists say that the Jordan rises out of the cave of Paneas. They assert, moreover, that Leshem is Paneas. Leshem was subdued by the Danites, and Jeroboam placed one of his golden calves in Dan, which is at the springs of Jordan. Josephus says that the springs of Jordan rise from under the temple of the golden calf. Possibly this temple might stand on a hill, so convenient and proper for such an edifice, that the temple of Augustus was afterward built upon it. Burckhardt, however, says that it rises about four miles northeast from Casarea Philippi, in the plain, near a hill called Tel-el-kadi. There are, he says, two springs near each other, one smaller than the other, whose waters unite immediately below. Both sources are on level ground, among rocks of what Burckhardt calls tufwacke. The larger source immediately forms a river 12 or 15 yards wide, which rushes rapidly over a stony bed into the lower plain. It is soon after joined by the river of Paneas, or Casarea Philippi, which was on the northeast of the city. Over the source of this river is a perpendicular rock, in which several niches have been cut to receive statues, the largest of which is above a spacious cavern, beneath which the river rises. This niche, the editor of Burckhardt conjectures, contained a statue of Pan, whence the name of Paneas given to the city, and of Πανειον to the cavern. Scetzen differs from Burckhardt in making the spring of the river Hasbeia, which rises half a league to the west of Hasbeia, and which, he says, forms the branch of the Jordan, to be the proper head of that river. A few miles below their junction, the united rivers, now a considerable stream, enter the small lake of *Houle*, the ancient Samochonitis or Meroni, into which several other streams from the mountains discharge themselves; some of them, perhaps, having equal claims to the honour of forming the Jordan with those above mentioned. So that, in truth, the Lake of *Houle* may best be considered as the real source of the river. After quitting this small lake, the river runs a course of about 12 miles to the Lake Tabaria, the ancient Sea of Tiberias or Galilee, maintaining, as some travellers report, a distinct current in the centre, through its whole length, without mingling its waters with those of the lake. But when it is recollected that this is 15 miles in length, and in some parts nine in breadth, such a fact is scarcely credible. From this lake the river flows about 70 miles more, through the *Ghor*, or valley of Jordan, the ancient Aulon, until it is finally lost in the Dead Sea. Its whole course is about 100 miles in a straight line by the map; perhaps 150, computing by the windings of its channel. The Jordan, it appears, anciently overflowed (as it probably does sometimes now) in the first month, which answers to our March: as it was at this time that the armies enumerated in 1 *Chron.*, 12, passed the Jordan to David at Ziklag, "when it had overflowed all its banks." This was, in fact, the time when the frequent rains and the melting of the snows

on the mountains at its source would be most likely to occasion such an inundation. Travellers have given different accounts of this celebrated stream. Maundrell assigns it a breadth of 20 yards; but represents it as deep, and so rapid that a man could not swim against the current. Volney calls it from 60 to 80 feet between the two principal lakes, and 10 or 12 feet deep; but makes it 60 paces at its embouchure; Chateaubriand, about the same point, 50 paces, and six or seven feet deep close to the shore. Dr. Shaw computed its breadth at 30 yards, and its depth at nine feet; and that it daily discharges 6,090,000 tons of water into the Dead Sea. Burckhardt, who crossed it higher up, calls it 80 paces broad, and three feet deep; but this was in the middle of summer. Mr. Buckingham, who visited it in the month of January, 1816, states it to be little more at the part where he crossed it, which was a short distance above the parallel of Jericho, than 25 yards in breadth, and so shallow as to be easily forded by the horses. At another point, higher up in its course, he describes it as 120 feet broad. From a mean of these and other accounts, its average width may be computed at 30 yards. It rolls so powerful a volume of water into the Dead Sea, that the strongest and most expert swimmer would be foiled in any attempt to swim across it at its point of entrance: he must inevitably be hurried down by the stream into the lake. The banks of the Jordan are in many places covered with bushes, reeds, tamarisks, willows, oleanders, &c., which form an asylum for various wild animals, who here concealed themselves till the swelling of the river drove them from their coverts. To this Jeremiah alludes (49, 19). Previously to the destruction of the four cities of the plain, it is probable that the Jordan flowed to the Red Sea, through the valley of Ghor or Arabia.—The etymology of its name has been variously assigned. It is thought by some to come from the Hebrew *jarden*, a descent, from its rapid descent through that country. Another class of etymologists deduce its name from the Hebrew and Syriac, importing the *caldron of judgment*. Others make it come from *Jor*, a spring, and *Dan*, a small town near its source; and a third class deduce it from *Jor* and *Dan*, two rivulets. It most probably derives its name from *Yar-Dan*, “the river of Dan,” near which city it takes its rise. The Arabs call it *Arden* or *Harden*, the Persians *Ardun*, and the Arabian geographer Edrisi, *Zacchar*, or swelling. (*Mansford's Scripture Gazetteer*, p. 251.)

JORNANDES or (as he is called in the *Analecta* of Mabillon) JORDANES, a Goth by birth, secretary to one of the kings of the Alans, and, as some believe, afterward bishop of Ravenna. In the year 552 of our era he wrote a history of the Goths (*Re Rebus Geticis*). This is merely an abridgment of the history of Cassiodorus, and is written without judgment and with great partiality. He composed also a work entitled *De regnorum et temporum successione*, or a Roman history from Romulus to Augustus. It is only a copy of the history of Florus, but with such alterations and additions, however, as to enable us sometimes to correct by means of it the text of the Roman historian. (*Schöll, Hist. Lit. Lat.*, vol. 3, p. 177.)

IOS, an island in the Ægean Sea, to the north of Thera. Here, according to some accounts, Homer was interred. (*Strab.*, 484.—*Plin.*, 4, 12.) It was also said, that the poet's mother was a native of this island. (*Steph. Byz.*, s. v. *Ἰός*.) The modern name is *Nio*, for which Bondelmonti assigns a totally false derivation, since it merely comes from a Roman corruption. (*Bondelmonti, Ins. Archipel.*, p. 99, ed. *De Sinncr*.)

JOSEPHUS, FLAVIUS, a celebrated Jew, son of Matthias, a priest, born in Jerusalem. The date of his birth is A.D. 37. He was a man of illustrious race, lineally descended from a priestly family, the first of

the twenty-four courses, an eminent distinction. By his mother's side he traced his genealogy up to the Asmonean princes. He grew up with a high reputation for early intelligence and memory. At fourteen years old (he is his own biographer) he was so fond of letters, that the chief priests used to meet at his father's house to put to him difficult questions of the law. At sixteen he determined to acquaint himself with the three prevailing sects, those of the Pharisees, Sadducees, and Essenes. For though he had led for some time a hardy, diligent, and studious life, he did not consider himself yet sufficiently acquainted with the character of each sect to decide which he should follow. Having heard that a certain Essene named Banus was leading in the desert the life of a hermit, making his raiment from the trees and his food from the fruits of the earth, practising cold ablutions at all seasons, and, in short, using every means of mortification to increase his sanctity, Josephus, ambitious of emulating the fame of such an example of holy seclusion, joined him in his cell. But three years of this ascetic life tamed his zealous ambition; he grew weary of the desert, abandoned his great example of painful devotion, and returned to the city at the age of nineteen. There he joined the sect of the Pharisees. In his twenty-sixth year he undertook a voyage to Rome, in order to make interest in favour of certain priests, who had been sent there to answer some unimportant charge by Felix. On his voyage he was shipwrecked and in great danger. His ship foundered in the Adriatic, six hundred of the crew and passengers were cast into the sea, eighty contrived to swim, and were taken up by a ship from Cyrene. They arrived at Puteoli, the usual landing-place, and Josephus, making acquaintance with one Aliturus, an actor, a Jew by birth, and from his profession in high credit with the Empress Poppæa, he obtained the release of the prisoners, as well as valuable presents from Poppæa, and returned home. During all this time he had studied diligently and made himself master of the Greek language, which few of his countrymen could write, still fewer speak with a correct pronunciation. On his return home he found the Jews on the point of revolting against the power of Rome. After vainly endeavouring to oppose this rash determination, he at last joined their cause, and held various commands in the Jewish army. At Jotapata, in Galilee, he signalized his military abilities in supporting a siege of forty-seven days against Vespasian and Titus, in a small town of Judea. During the siege and capture, 40,000 men fell on the side of the Jews; none were spared but women and children; and the number of captives amounted only to 1200, so faithfully had the Roman soldiery executed their orders of destruction. Josephus saved his life by flying into a cave, where forty of his countrymen had also taken refuge. He dissuaded them from committing suicide, and, when they had all drawn lots to kill one another, Josephus, with one other, remained the last, and surrendered themselves to Vespasian. He gained the conqueror's esteem by foretelling that he would become one day the master of the Roman empire. (*Joseph. Vit.*, § 75.—*Milman's History of the Jews.*, vol. 2, p. 253, seqq.)—Vossius (*Hist. Gr.*, 2, 8) thinks that Josephus, who, like all the rest of his nation, expected at this period the coming of the Messiah, applied to Vespasian the prophecies which announced the advent of our Saviour. He remarks that Josephus might have been the more sincere in so doing, as Jerusalem was not besieged. His prophecy having been accomplished two years afterward, he obtained his freedom and took the prænomén of Flavius, to indicate that he regarded himself as the freedman of the emperor. Josephus was present during the whole siege of Jerusalem, endeavouring to persuade his countrymen to capitulate. Whether he seriously considered resistance impossible, or, as he

pretends, recognising the hand of God and the accomplishment of the prophecies in the ruin of his country, he esteemed it impious as well as vain; whether he was actuated by the baser motive of self-interest, or the more generous desire of being of service to his miserable countrymen, he was by no means held in the same estimation by the Roman army as by Titus. They thought a traitor to his country might be a traitor to them; and they were apt to lay all their losses to his charge, as if he kept up secret intelligence with the besieged. On the capture of the city, Titus offered him any boon he would request. He chose the sacred books, and the lives of his brother and fifty friends. He was afterward permitted to select 190 of his friends and relatives from the multitude who were shut up in the Temple to be sold for slaves. The estate of Josephus lying within the Roman encampment, Titus assigned him other lands in lieu of it. Vespasian also conferred on him a considerable property in land. Josephus lived afterward at Rome, in high favour with Vespasian, Titus, and Domitian. The latter punished certain Jews and a eunuch, the tutor of his son, who had falsely accused him; exempted his estate from tribute, and advanced him to high honour. He was a great favourite with the Empress Domitia. The time of his death is uncertain; he was certainly alive at the end of the first century, and probably at the beginning of the second. After his surrender he had married a captive in Cæsarea, but, in obedience, it may be presumed, to the law which prohibited such marriages to a man of priestly line, he discarded her, and married again in Alexandria. By his Alexandrian wife Josephus had three sons; one only, Hyrcanus, lived to maturity. Dissatisfied with this wife's conduct, he divorced her also, and married a Cretan woman, from a Jewish family, of the first rank and opulence in the island, and of admirable virtue.—At Rome Josephus first wrote the *History of the Jewish War* (*Ἰουδαϊκὴ ἱστορία περὶ ἁλώσεως*), in the Syro-Chaldaic tongue, for the use of his own countrymen in the East, particularly those beyond the Euphrates. He afterward translated the work into Greek, for the benefit of the Western Jews and the Romans. Both King Agrippa and Titus bore testimony to its accuracy. The latter ordered it to be placed in the public library, and signed it with his own hands as an authentic memorial of the times. This work was translated into Latin in the fifth century by Rufinus of Aquileia, or rather by Cassiodorus. (*Muratori, Antiq. Ital.*, vol. 3, p. 920.) Many years afterward, about A.D. 93, Josephus published his great work on the *Antiquities of the Jews* (*Ἰουδαϊκὴ Ἀρχαιολογία*), in twenty books. It forms a history of the chosen people from the creation to the reign of the Emperor Nero. Josephus did not write this work for the use of his countrymen, nor even for the Hellenistic Jews: his object was to make his nation better known to the Greeks and Romans, and to remove the contempt in which it was accustomed to be held. The books of the Old Testament, and, where these failed, traditions and other historical monuments, were the sources whence he drew the materials for his work; but, in making use of these, he allowed himself an unpardonable license, in removing from his narrative all that the religion of the Jews regarded as most worthy of veneration, in order not to shock the prejudices of the nations to whom he wrote. He not only treats the books of the Old Testament as if they were mere human compositions, in explaining, enlarging, and commenting upon them, and thus destroying the native and noble simplicity and pathos which renders the perusal of the sacred volume so full of attraction; but he allows himself the liberty of often adding to the recital of an event circumstances which change its entire nature. In every part of the work in question, he represents his countrymen in a point of view

calculated to conciliate the esteem of the masters of the world. Notwithstanding all this, however, the *Antiquities* of Josephus are extremely interesting, as affording us a faithful picture of Jewish manners in the time of the historian, and as filling up a void in ancient history of four centuries between the last books of the Old Testament and those of the New. With a view similar to that which dictated the work just mentioned, Josephus wrote an answer to Apion, a celebrated grammarian of Egypt (*vid.* Apion, No. 11.), who had given currency to many of the ancient fictions of Egyptian tradition concerning the Jews. He likewise published his own life, in answer to the statements of his old antagonist, Justus of Tiberias, who had sent forth a history of the war, written in Greek with considerable elegance. At what time he died is uncertain; history loses sight of him in his fifty-sixth or fifty-seventh year. A work entitled *Εἰς Μακκαβαίους λόγος, ἡ περὶ αὐτοκράτορος λογισμοὶ*, has been erroneously ascribed to Josephus. In some editions of the Scriptures it appears under the appellation of the Fourth Book of Maccabees. A fragment also, on the *Cause of the Universe* (*περὶ τοῦ παντός*), preserved by John Philoponus, a Christian writer of the seventh century, has been incorrectly attributed to Josephus.—Before leaving the biography of this writer, we must say a few words relative to a famous passage in the Jewish *Antiquities* concerning our Saviour. It occurs in the third chapter of the eighteenth book (*Jos., Op., ed. Hav.*, vol. 1, p. 161), and is as follows: "At this time there exists Jesus, a wise man, if it be allowed us to call him a man; for he performed wonderful works, and instructed those who receive the truth with joy. He thus drew to him many Jews and many of the Greeks. He was the Christ. Pilate having punished him with crucifixion on the accusation of our leading men, those who had loved him before still remained faithful to him. For on the third day he appeared unto them, living anew, just as the prophets of God had announced, who had predicted of him ten thousand other miraculous things. The nation of Christians, named after him, continues even to the present day." This passage, placed in the middle of a work written by a zealous Jew, has all the appearance of a marginal gloss which has found its way into the text: it is *too long* and *too short* to have formed a part of the original text. It is too long to have come from the pen of an infidel, and it is too short to have been written by a Christian. St. Justin, Tertullian, and St. Chrysostom have made no use of it in their disputes with the Jews; and neither Origen nor Photius make any mention of it. Eusebius, who lived before some of the writers just named, is the first who adduces it. These circumstances have sufficed to attach suspicion to it in the eyes of some critics, and especially of Richard Simon (under the name of *Sainjore*, in the *Bibliothèque ou Recueil de diverses pièces critiques*, *Amst.*, 1708, 8vo, vol. 2, ch. 2) and the historian Gibbon. On the other hand, Henri de Valois (*ad Euseb.*, p. 16, 20), Huet, bishop of Avranches (*Demonstr. Evang.*, p. 27), Isaac Vossius (*De LXX. Interpr.*, p. 161), and others, have defended its authenticity. Lambecius (*Biblioth. Vindob.*, vol. 8, p. 5), who advocates the same side, has pretended that the words of Josephus ought to be considered as expressing contempt for our Saviour, although, in order not to offend either party, the historian has concealed his real meaning in equivocal terms. However paradoxical this last opinion may seem, it has assumed an air of considerable probability, in consequence of a slight correction in the text and punctuation which has been proposed by Knittel, a German scholar. (*Neue kritiken über das wellberühmte Zeugnis des alten Juden Flavius Josephus von Jesu Christo*, Braunsch., 1799, 4to.) A celebrated Protestant divine, Godfrey Less, after having carefully and crit-

ically examined both sides of the question, has pronounced the passage to be supposititious, and adds, that the silence of the historian respecting our Saviour and the miracles which he wrought, affords a far more eloquent testimony in favour of the truth of our Redeemer's mission than the most laboured statement could have yielded, especially when we consider that the father of Josephus, one of the priests of Jerusalem, could not but have known our Saviour, and since Josephus himself lived in the midst of the apostles. Had the latter been able, he would have refuted the whole history of our Saviour's mission and works. His silence is conclusive in their favour. The efforts of deistical writers, therefore, to invalidate the authenticity of this remarkable passage, have literally recoiled upon themselves, and Christianity has achieved a triumph with the very arms of infidelity. (*Disputatio super Josephi de Christo Testimon.*, Gott., 1781, 4to.—Compare Olshausen, *Historia Eccles. Vet. præcip. monumenta*, Berol., 1820, 8vo, and Paulus, in the *Heidelb. Jahrb.*, 1820, p. 733, as also Bohmert, *Ueber des Flar. Joseph. Zeugnis von Christo*, Leipz., 1823, 8vo.)—The best editions of the works of Josephus are Hudson's, 2 vols. fol., Oxon., 1720, and Havercamp's, 2 vols. fol., Amst., 1726. A new edition, however, is much wanted. Oerthür commenced one, of which three volumes appeared, embracing the text of Havercamp with the Latin version, in the 8vo form. The editor had promised a commentary, in which was to be contained the result of his own researches, and of those of others made at his request in the principal libraries of Europe. The edition was to be accompanied also by a Lexicon of Josephus, in which the language of this writer would be compared with that of Philo, of the Alexandrian school, and of the writers of the New Testament. His death prevented the completing of his design, and the edition still remains imperfect. In 1825-1827, a 12mo edition, in 6 vols., appeared from the Leipsic press, under the editorial care of Richter. The text, however, is merely a reprint of that of Hudson and Havercamp. (*Hoffmann, Lex. Bibliogr.*, vol. 2. p. 588.—*Schöll, Gesch. der Griech. Lit.*, vol. 2, p. 383, seqq.)

JOVIANUS, FLAVIUS CLAUDIUS, born A.D. 331, was the son of Veronianus, of an illustrious family of Mæsia, who had filled important offices under Constantine. Jovianus served in the army of Julian, in his unlucky expedition against the Persians; and when that emperor was killed, A.D. 363, the soldiers proclaimed him his successor. His first task was to save the army, which was surrounded by the Persians, and in great distress for provisions. After repelling repeated attacks of the enemy, he willingly listened to proposals for peace, which were, that the Romans should give up the conquests of former emperors westward of the Tigris, and as far as the city of Nisibis, which was still in their hands, but was included in the territory to be given up to Persia, and that, moreover, they should render no assistance to the king of Armenia, then at war with the Persians. These conditions, however offensive to Roman pride, Jovian was obliged to submit to, as his soldiers were in the utmost destitution. It is a remarkable instance of the Roman notions of political honesty, that Eutropius reproaches Jovian, not so much with having given up the territory of the empire, as with having observed so humiliating a treaty after he had come out of his dangerous position, instead of renewing the war, as the Romans had constantly done on former occasions. Jovian delivered Nisibis to the Persians, the inhabitants withdrawing to Amida, which became, after this, the chief Roman town in Mesopotamia. On his arrival at Antioch, Jovian, who was of the Christian faith, revoked the edicts of Julian against the Christians. He also supported the orthodox or Nicene creed against the Arians, and he showed his favour to the bishops who had previ-

ously suffered from the Arians, and especially to Athanasius, who visited him at Antioch. Having been acknowledged over the whole empire, Jovian, after staying some months at Antioch, set off during the winter to Constantinople, and, on his way, paid funeral honours to Julian's remains at Tarsus. He continued his journey in very severe cold, of which several of his attendants died. At Ancyra he assumed the consular dignity; but, a few days after, being at a place called Dadastana, in Galatia, he was found dead in his bed, having been suffocated, as some say, by the vapour of charcoal burning in his room; according to others, by the steam of the plaster with which it had been newly laid; while others, again, suspected him of having been poisoned or killed by some of his guards. He died on the 16th of February, A.D. 364, being 33 years of age, after a reign of only seven months. The army proclaimed Valentinianus as his successor. (*Amm. Marcell.*, 25, 5, seqq.—*Le Beau, Hist. du Bas-Empire*, vol. 2, p. 186, seqq.)

JOVINUS, born of an illustrious family of Gaul, assumed the imperial title under the weak reign of Honorius, and, placing himself at the head of a mixed army of Burgundians, Alemanni, Alani, &c., took possession of part of Gaul, A.D. 411. Ataulphus, king of the Visigoths, offered to join Jovinus, and share Gaul between them; but the latter having declined his alliance, Ataulphus made peace with Honorius, attacked and defeated Jovinus, and, having taken him prisoner, delivered him to Dardanus, prefect of Gaul, who had him put to death at Narbo (*Narbonne*), A.D. 412. (*Jornand. de Reb. Get.*, c. 32, seqq.—*Olympiod.—Idac. fast. Chron.—Greg. Tur.*, 2, 9.—*Tillem., Honor.*, art. 48.)

IPHICLES, a son of Amphitryon and Alcmæna, born at the same birth with Hercules. The children were but eight months old, when Juno sent two huge serpents into the chamber to devour them. Iphicles alarmed the house by his cries, but Hercules raised himself up on his feet, caught the two monsters by the throat, and strangled them. (*Pind., Nem.*, 1, 49, seq.—*Theocr.*, *Idyll.*, 24.—*Apollod.*, 2, 4.) Iphicles, on attaining to manhood, was slain in battle during the expedition against the sons of Hippocoon, who had beaten to death Æonius, the son of Licymnius. (*Pausan.*, 3, 15, 4.)

IPHICLES, a king of Phylace in Phthiotis, whose name is connected with one of the legends relative to Melampus. (*Vid. Melampus.*)

IPHICRATES, an Athenian general, of low origin, but distinguished abilities. He was most remarkable for a happy innovation upon the ancient routine of Greek tactics, which he introduced in the course of that general war which was ended B.C. 387, by the peace of Antalcidas. This, like most improvements upon the earlier mode of warfare, consisted in looking, for each individual soldier, rather to the means of offence than protection. Iphicrates laid aside the very weighty panoply which the regular infantry, composed of Greek citizens, had always worn, and substituted a light target for the large buckler, and a quilted jacket for the coat of mail; at the same time he doubled the length of the sword, usually worn thick and short, and increased in the same, or, by some accounts, in a greater proportion, the length of the spear. It appears that the troops whom he thus armed and disciplined (not Athenian citizens, who would hardly have submitted to the necessary discipline, but mercenaries following his standard, like the Free Companions of the middle ages) also carried missile javelins; and that their favourite mode of attack was to venture within throw of the heavy column, the weight of whose charge they could not have resisted, trusting in their individual agility to baffle pursuit. When once the close order of the column was broken, its individual soldiers were overmatched by the longer weapons and unencum-

bered movements of the lighter infantry. In this way Iphicrates and his targeteers (*peltastæ*), as they were called, gained so many successes, that the Peloponnesian infantry dared not encounter them, except the Lacedæmonians, who said, in scoff, that their allies feared the targeteers as children fear hobgoblins. They were themselves, however, taught the value of this new force, B.C. 392, when Iphicrates waylaid and cut off nearly the whole of a Lacedæmonian battalion. The loss in men was of no great amount; but that heavy-armed Lacedæmonians should be defeated by light-armed mercenaries was a marvel to Greece, and a severe blow to the national reputation and vanity of Sparta. Accordingly, this action raised the credit of Iphicrates extremely high. He commanded afterward in the Hellespont, B.C. 389; in Egypt, at the request of the Persians, B.C. 374; relieved Coreyra in 373, and served with reputation on other less important occasions. We have a life of this commander by Cornelius Nepos. (*Xen. Hist. Gr.*, 4, 5, 13.—*Id. ib.*, 4, 8, 34, *seqq.*—*Id. ib.*, 6, 2, 13.—*Diod. Sic.*, 15, 41.—*Id.*, 15, 44.—*Id.*, 16, 85.—*Corn. Nep.*, *Vit. Iphicr.*)

IPHIGENIA, a daughter of Agamemnon and Clytemnestra. The Grecian fleet against Troy had assembled at Aulis; but Agamemnon, having killed a deer in the chase, boasted that he was superior in skill to Diana, and the offended goddess sent adverse winds to detain the fleet. According to another account, the stag itself had been a favourite one of Diana's. Calchas thereupon announced, that the wrath of the goddess could only be appeased by the sacrifice of Iphigenia, the daughter of the offender, and the father, though most reluctant, was compelled to obey. The maiden was accordingly obtained from her mother Clytemnestra, under the pretence of being wanted for a union with Achilles; and, having reached the Grecian camp, was on the point of being sacrificed, when Diana, moved with pity, snatched her away, leaving a hind in her place. The goddess carried her to Tauris, where she became a priestess in her temple. It was the custom at Tauris to sacrifice all strangers to Diana; and many had been thus immolated under the ministrations of Iphigenia, when Orestes and his friend Pylades chanced to come thither, in obedience to the oracle at Delphi, which had enjoined upon the son of Agamemnon to convey to Argos the statue of the Tauric Diana. When Orestes and Pylades were brought as victims to the altar, Iphigenia, perceiving them to be Greeks, offered to spare the life of one of them, provided he would convey a letter for her to Greece. This occasioned a contest between them, which should sacrifice himself for the other, and it was ended in Pylades' yielding to Orestes, and agreeing to be the bearer of the letter: a discovery was the consequence; and Iphigenia accordingly contrived to carry off the statue of Diana, and to accompany her brother and Pylades into Greece.—The story of Iphigenia has been made by Euripides the subject of two plays, in which, of course, several variations from the common legend are introduced.—The name and story of Iphigenia are unnoticed by Homer. Iphigenia is probably a mere epithet of Diana. She is the same with the Diana-Orthia of Sparta, at whose altars the boys were scourged. It was probably this rite that caused Iphigenia to be identified with the "Virgin," to whom human victims were offered by the Tauri. (*Herod.*, 4, 103.) The story of Iphigenia would seem to have been then invented to account for the similarity. Müller thinks that Lemnos was the original mythic Tauris, whence the name was transferred to the Euxine. (*Dorians*, vol. 1, p. 397, *seqq.*) The Homeric name of Iphigenia is Iphianassa. (*Hom.*, *Il.*, 9, 144, *seq.*—*Heyne*, *ad loc.*—Compare *Lucretius*, 1, 86.)

IRIUS, I. a son of Eurytus, king of Œchalia. (*Vid.* *Heracles*, p. 598, col. 2.)—II. A king of Elis, son of Praxinos, in the age of Lycurgus. He re-

established the Olympic games 470 years after their first institution, or B.C. 884. It was not, however, until 108 years after this (B.C. 776) that the custom was introduced of inscribing in the gymnasium at Olympia the names of those who had borne off the prize in the stadium. The first whose name was thus inscribed was Coræbus. (*L'Art de vérifier les Dates*, vol. 3, p. 167.—*Picot*, *Tabl. Chronol.*, vol. 1, p. 322.)

IPSEUS, a city of Phrygia, near Synnada, in the plains adjacent to which was fought the great battle between Antigonus and his son Demetrius on the one side, and the combined forces of Cassander, Lysimachus, Ptolemy, and Seleucus, on the other. We have no detailed account of this decisive conflict, in which Antigonus lost all his conquests and his life. The reader may consult Plutarch in his life of Pyrrhus, Appian in his history of Syria, and the mutilated narrative of Diodorus, as the best authorities to be procured. Little, however, is to be gained from them respecting the position of Ipsus. Hierocles (p. 677) and the Acts of Councils afford evidence of its having been the see of a Christian bishop in the seventh and eighth centuries.—"The site of Ipsus," observes Rennell, "is unknown. It is said to have been near Synnada, and there are certainly the remains of several ancient towns and cities on the great road leading from Synnada towards the Bosphorus, and one of them within a few miles of Synnada, to the N.W.; but it may be doubted whether Ipsus lay on that side of Synnada. The contending armies approached each other along the great road that led from Syria and Cilicia, through the centre of Asia Minor, towards Synnada; but whether they met to the north or south of that city is not known. A town named *Sakli*, and also *Seleukter* (probably from its ancient name of Seleucia), is situated on the continuation of the great road, at about 25 miles from Synnada, to the southward, and precisely at the point of separation of the roads leading to Ephesus and to Byzantium, in coming from Syria. If Seleucus founded any city on occasion of his victory, one might suspect that the field of battle was near, or at, Sakli, from the above circumstance. No point was more likely for the opposing army from the west to have taken post at, than at the meeting of these roads, by which they commanded the passage through a plentiful valley, shut up by ridges of hills on both sides; the line of communication as well in modern as in ancient times." (*Geography of Western Asia*, vol. 2, p. 145, *seqq.*)

IRA, I. a city of Messenia, in the north, towards the confines of Elis, and near the river Cyparissus, commonly supposed by some to have been one of the cities promised by Agamemnon to Achilles, if the latter would become reconciled to him. This is incorrect, as Homer names the place to which Agamemnon alludes *Ipp*, and not *Elpa*. Agamemnon promised Achilles seven cities of Messenia, of which Ire (not Ira) was one, and the poet describes all seven as lying near the sea, whereas Ira was inland. (*Hom.*, *Il.*, 9, 150.) This place is famous in history as having supported a siege of eleven years against the Lacedæmonians. Its capture, B.C. 671, put an end to the second Messenian war. (*Strab.*, 360.—*Steph. Byz.*, s. v. *Ipp*.) We are informed by Sir W. Gell, that "there are some ruins near a village called *Kakoletri*, on the left bank of the Neda, which some think those of Ira, the capital of Messenia, in the time of Aristomenes." (*Itin.*, p. 84.)—II. A city of Messenia, on the eastern shore of the Messenian Gulf, supposed to be the same with Abia. (*Vid.* *Abia*.)

IRENEUS, a native of Greece, disciple of Polycarp, and bishop of Lyons, in France. The time of his birth, and the precise place of his nativity, cannot be satisfactorily ascertained. Dodwell refers his birth to the reign of Nerva, A.D. 97, and thinks that he did not outlive the year 190. Grabe dates his birth about

the year 108. Dupin says that he was born a little before the year 140, and died a martyr in 202. On the martyrdom of Photinus, his predecessor in the see of Lyons, Irenæus, who had been a distinguished member of the church in that quarter, was appointed his successor in the diocese, A.D. 174, and presided in that capacity at two councils held at Lyons, in one of which the Gnostic heresy was condemned, and in another the Quartodecimani. He also went to Rome, and disputed there publicly with Valentinus, Florinus, and Blastus, against whose opinions he afterward wrote with much zeal and ability. He wrote on different subjects; but, as what remains is in Latin, some supposed he composed in that language, and not in Greek. Fragments of his works in Greek are, however, preserved, which prove that his style was simple, though clear and often animated. His opinions concerning the soul are curious. He suffered martyrdom about A.D. 202. From the silence of Tertullian, Eusebius, and others, concerning the manner of his death, Cave, Basnage, and Dodwell have inferred that he did not die by martyrdom, but in the ordinary course of nature. With these Lardner coincides. The best edition of his works is that of Grabe, Oxon., fol., 1702. Dodwell published a series of six essays on the writings of this father of the church, which he illustrates by many historical references and remarks.

IRÆSUS, a beautiful country in Libya, not far from Cyrene. When Battus, in obedience to the oracle, was seeking a place for a settlement, the Libyans, who were his guides, managed so as to lead him through it by night. Milton calls the name Irassa, for which he has the authority of Pindar. (*Pind., Pyth.*, 9, 185.—*Herod.*, 4, 158, *seqq.*)

IRIS, I, the goddess of the rainbow. Homer gives not the slightest hint of who her parents were; Hesiod, however, makes her the daughter of Thaumās (*Wonder*), by the ocean-nymph Electra (*Brightness*), no unapt parentage for the brilliant and wonder-exciting bow of the skies. (*Theog.*, 265.) The office of Iris in the *Iliad* is to act as the messenger of the king and queen of Olympus; a duty which Mercury performs in the *Odyssey*, in which poem there is not any mention made of Iris. There is little mention, also, of the goddess in the subsequent Greek poets; but, whenever she is spoken of, she appears quite distinct from the celestial phenomenon of the same name. In Callimachus (*H. in Del.*, 216, *seq.*) and the Latin poets, Iris is appropriated to the service of Juno; and by these last she is invariably (and we may even say clumsily) confounded with the rainbow. According to the lyric poet Alcæus, who is followed by Nonnus, Iris was by Zephyrus the mother of Love. (*Alcæus, ap. Plut., Amator.*, 20.—*Nonnus*, 31, 110, *seq.*) Homer styles Iris "gold-winged" (*Il.*, 8, 398.—*Ib.*, 9, 185), the only line in the poet which makes against Voss's theory, that none of Homer's gods were winged. (*Mytholog. Briefe*, vol. 1, *Br.* 12, *seqq.*) The name Iris (*Ἥρις*) is usually derived from *ἔρως*, *ἔρῶ*, "to say," an etymology which suits the office of the goddess, and which accords with the view taken of the rainbow in the Book of Genesis. Hermann, however, renders *Iris* by the Latin term *Sertia*, from *εἶπω*, "to unite," the rainbow being formed of seven united or blended colours: "*Ἥρις, Sertia, quod ex septem coloribus conserta est.*" (*Opuse.*, vol. 2, p. 179.—*Keightley's Mythology*, p. 200.)—II. A river of Pontus, rising on the confines of Armenia Minor, and flowing into the sea southeast of Amisus. It receives many tributaries, and near the end of its course passes through the district of Phanæra. The Turks call it the *Tokatlu*, and near its mouth it is more usually styled *Jekil-Ermak*, or the *Green River*. "It has been a prevalent opinion among geographers, both ancient and modern," observes Rennell (*Geography of Western Asia*, vol. 1, p. 269), "that the Iris made a course to the east-

ward of north, from Amasea to the Sinus Amisenus. Ptolemy allows N. 20° E. and 64 miles in distance. Dr. Howell allows northeast-by-north in his map; D'Anville north exactly." The same writer has the following ingenious conjecture respecting the origin of its ancient name. "M. D'Anville says that its name is *Jekil-Ermak*, or the *Green River*. Tournefort tells us that the *Carnili* River (the same with the Lycus, the larger branch) was of a deep red colour, from that of the soil. May it not be, that, if the river was red at some seasons, and green (or fancied to be so) at others, this may have occasioned the name of Iris, from the Greeks?" (*Geography of Western Asia*, vol. 1, p. 356.)

IRUS, a beggar of Ithaca, remarkable for his large stature and his excessive gluttony. His original name was Arnæus, but he received that of Irus, as being the messenger of the suitors of Penelope. (*Ἴρος, κατὰ τὸν ποιητὴν, παρὰ τὸ εἶρω, τὸ λέγω καὶ ἀπαγγέλλω. Eustath. ad Od.*, 18, 6.) Irus attempted to obstruct the entrance of Ulysses into the palace, under the mean disguise assumed by the latter on his return home, and in presence of the whole court challenged him to fight. Ulysses immediately brought him to the ground with a single blow. (*Od.*, 18, 1, *seqq.*)

IS, a city about eight days' journey from Babylon, according to Herodotus, near which flows a river of the same name, which empties into the Euphrates. With the current of this river, adds the historian, particles of bitumen descended towards Babylon, by means of which its walls were constructed. There are some curious fountains, says Rennell, near *Hit*, a town on the Euphrates, about 128 miles above Hillah, reckoning the distance along the banks of the Euphrates. This distance answers to eight ordinary journeys of a caravan of 16 miles direct. There can be no doubt that this *Hit* is the Is of Herodotus, which should have been written It. (Rennell, *Geography of Herodotus*, vol. 1, p. 461, ed. 1830.)

ISĀDAS, a young Spartan, who, when Epaminondas and the Thebans had attacked Lacedæmon, and the city was in danger of falling into their hands, rushed forth from his dwelling in a state of nudity, and newly anointed with oil, having nothing but a spear in one hand and a sword in the other, and in this condition contended valiantly against the foe. The Ephori honoured him with a chaplet for his gallant achievement, but, at the same time, fined him 1000 drachmas for having dared to appear without his armour. (*Plut., Vit. Ages.*) This story is introduced by Bludgett, in his paper upon "The mixture of virtue and vice in the human character." (*Spectator*, No. 564.)

ISÆUS, an orator of Chalcis, in Eubœa, who came to Athens, and became there the pupil of Lysias, and soon after the master of Demosthenes. (*Clinton, Fasti Hellenici*, 2d ed., p. 117.) Dionysius of Halicarnassus could not ascertain the time of his birth or death. So much as this, however, appears certain, that the vigour of his talent belonged to the period after the Peloponnesian war, and that he lived to see the time of King Philip. His style bears a great resemblance to that of Lysias. He is elegant and vigorous; but Dionysius of Halicarnassus does not find in him the simplicity of the other. He understands better than Lysias the art of arranging the several parts of a discourse, but he is less natural. When we read the exposition of a speech of Lysias, nothing appears artificial therein; on the contrary, everything is studied in the orations of Isæus. "One would believe Lysias," adds Dionysius, "though he were stating what was false; one cannot, without some feeling of distrust, assent to Isæus, even when he speaks the truth." Again: "Lysias seems to aim at truth, but Isæus to follow art: the one strives to please, the other to produce effect." Dionysius farther remarks, that, in his opinion, with Isæus originated that vigour and energy of style (*δύ-*

νόης) which his pupil Demosthenes carried to perfection. (*Dion. Hal. de Isæo iudicio.*—*Op.*, ed Reiske, vol. 5, p. 613, *seqq.*)—So far as the extant specimens of Isæus enable us to form an opinion, this judgment appears to be just. The perspicuity and artless simplicity of the style of Lysias are admirable; but, on reading Isæus, we feel that we have to do with a subtle disputant and a close reasoner, whose arguments are strong and pointed, but have too much the appearance of studied effect, and for that reason often fail to convince.—The author of the life of Isæus, attributed to Plutarch, mentions sixty-four orations of his, fifty of which were allowed to be genuine. At present there are only eleven extant, all of which are of the forensic class, and all treat of matters relating to wills, and the succession to the property of testators or persons intestate, or to disputes originating in such matters. These orations are valuable for the insight they give us into the laws of Athens as to the disposition of property by will and in cases of intestacy, and also as to many of the forms of procedure.—The best edition of the text of Isæus is by Bekker, forming part of the *Oratores Attici* (1822–1823, 8vo, *Berol.*—*Orat. Att.*, vol. 3.) The most useful edition, however, is that of Schömann, *Gryphisw.*, 1831, 8vo. Sir W. Jones has given a valuable translation of Isæus. It appeared in 1779. His version, however, extends only to ten of the orations, the eleventh having been discovered since. (*Schöll, Hist. Lit. Gr.*, vol. 2, p. 215.)—II. A native of Assyria, likewise an orator, who came to Rome A.D. 17. He is greatly commended by Pliny the younger, who observes that he always spoke extempore, and that his language was marked by elegance, unlaboured ease, and great correctness. (*Plin., Ep.*, 2, 3.)

ISÆPIS, a river of Umbria. Its ordinary name was the Sapis. (*Strab.*, 216.—*Ptol.*, p. 64.) Its modern appellation is the *Savio*. It rose not far from Sarsina, and fell into the Adriatic to the northwest of the Rubicon. (*Lucan.*, 2, 406.)

ISAR and ISARA, I. now the *Isère*, a river of Gaul, where Fabius routed the Allobroges. It rose in the Graian Alps, and fell into the Rhodanus near Valentia, the modern *Valence*.—II. Another, called the *Oise*, which falls into the Seine below Paris. The Celtic name of Briva Isaræ, a place on this river, has been translated into *Pont-Oise*.

ISAURA (*æ orum*), the capital of Isauria, near the confines of Phrygia. Strabo and Stephanus of Byzantium use the term as a plural one (*τὰ Ἰσαυρα*); Ammianus Marcellinus, however, makes it of the first declension (14, 8). It was a strong and rich place, and its inhabitants appear to have acquired their wealth, in a great degree, by plundering the neighbouring regions. The city was attacked by the Macedonians under Perdicas, the inhabitants having put to death the governor set over the province by Alexander. After a brave resistance, the Isaurians destroyed themselves and their city by fire. The conquerors are said to have obtained much gold and silver from the ruins of the place. (*Diod. Sic.*, 18, 22.) During the contentions between Alexander's successors, the neighbouring mountaineers rebuilt the capital, and commenced plundering anew until they were reduced by Servilius, hence styled Isauricus, and the city was again destroyed. A new Isaura was afterward built by Amyntas, king of Galatia, in the vicinity of the old city, and the stones of this last were employed in its construction. (*Strab.*, 591.) This new Isaura appears to have existed until the third century, when Trebellianus made it his residence, and raised here the standard of revolt. He was slain, and Isaura was probably again destroyed, since, according to Ammianus, its remains were in his time scarcely perceptible. (*Amm. Marcell.*, l. c.—*Treb. Pollio*, 30 *Tyranni*. c. 25.) D'Anville places the old capital near a lake, about whose existence, however, the ancients are silent; the modern name he makes

Bei-Shehri. New Isaura he places on another lake southeast of the former, and terms it *Sidi-Shehri*. Mannert opposes this position of the last, and is in favour of *Seri-Serail*, a small village east-northeast of Iconium. (*Mannert, Anc. Geogr.*, vol. 6, part 2, p. 188.)

ISAURIA, a country of Asia Minor, north of, and adjacent to, Pisidia. The inhabitants were a wild race, remarkable for the violence and rapine which they exercised against their neighbours. P. Servilius derived from his reduction of this people the surname of Isauricus. A conformity in the aspect of the country, which was rough and mountainous, caused Cilicia Trachea, in a subsequent age, to have the name of Isauria extended to it, and it is thus denominated in the notices of the eastern empire. "With respect to Isauria," observes Rennell, "Strabo is not so explicit as might have been wished; but the subject, perhaps, was not well known to him. He no doubt regards Isauria as a province or a part of Pisidia at large; and mentions its two capitals, the old and the new. But then he speaks of the expedition of Servilius, which was sent to one of those cities, as a transaction connected with the modern or maritime Isauria; that is, Cilicia Trachea. This may, perhaps, be explained by the circumstance of Servilius being at the time proconsul of Cilicia, and the expedition being prepared and sent forth from Caycus, in that country, as a convenient point of outset. But Strabo describes Cilicia Trachea under its proper name, and fixes its boundary westward at Coracesium, on the seacoast; and therefore seems to have had no idea of any other Isauria than that which lay inland. The Isauria of Pliny includes both the original province of that name, lying north of Taurus, and also Cilicia Trachea, which had been added to the other; possibly from the date of the above-mentioned expedition of Servilius. About a century and a half had elapsed between the time of Servilius and Pliny; and great changes had probably taken place in the arrangement of boundaries of countries so lately acquired. In later times, the name of Isauria seems to have become appropriate to Cilicia Trachea. Ammianus Marcellinus wrote at so much later a period, that one can hardly allow his description to apply to ancient geography. He describes Isauria as a *maritime* country absolutely; and perhaps the original Isauria was not known by that name, but merged into the larger province of Pisidia." (*Geography of Western Asia*, vol. 2, p. 73, *seqq.*)

ISAUROCUS, a surname of P. Servilius, from his conquests over the Isaurians. (*Ovid, Fast.*, 1, 594.—*Cic., Att.*, 5, 21.—*Vid.* Isaura and Isauria.)

ISINORUS, I. a native of Charax, near the mouth of the Tigris, who published in the reign of Caligula a "Description of Parthia." (*Ἰσινόριος περιηγητικόν*.) It no longer exists; but we have a work remaining, which appears to be an extract from it, and is entitled *Σταθμοὶ Παρθικοί*, "*Parthian Halting-places*." This work gives a list of the eighteen provinces into which the Parthian empire was divided, with the principal places in each province, and the distances between each town. The list was probably taken from official records, such as appear, from the list of provinces, &c., in Herodotus, to have been kept in the ancient Persian empire. The production just referred to has been printed in the second volume of Hudson's "*Geographia veteris Scriptores Græci Minores*," with a dissertation by Dodwell. There is also a memoir on Isidorus by Sainte-Croix, in the 50th volume of the *Mem. de l'Acad. des Inscr.*, &c.—II. A native of Ægæ, an epigrammatic poet, some of whose productions are preserved in the Anthology. (*Jacobs, Anthol. Gr.*, vol. 3, p. 177; vol. 10, p. 329.)—III. An epigrammatic poet, a native of Bolbitine in Egypt. (*Jacobs, Anthol. Gr.*, vol. 10, p. 332.)—IV. A native of Miletus, a Greek architect of the sixth century,

who, together, with Anthemius, was employed by Justinian, emperor of the east, to erect the church of St. Sophia at Constantinople. Anthemius merely laid the foundation of the edifice, and was then arrested by the hand of death, A.D. 534. Isidorus was charged with the completion of this structure. This church is a square building, with a hemispherical cupola in the centre, and its summit 400 feet from the pavement below. This edifice, which was considered the most magnificent monument of the age, was scarcely finished before the cupola was thrown down by an earthquake. But Justinian had it immediately rebuilt. On the taking of Constantinople by the Turks, the church of St. Sophia was appropriated to the worship of the Mohammedan conquerors.—V. A New Platonist, a native of Gaza, who succeeded Hegias in the chair of Athens, in the fifth century, or, rather, at the beginning of the sixth. He was a zealous follower of Proclus, but deficient in talent and erudition, and, consequently, soon made way for Zenodotus as his successor. (*Schöll, Hist. Lit. Gr.*, vol. 7, p. 116.)—VI. A native of Pelusium, a saint in the Roman Catholic calendar, and one of the most celebrated of the disciples of Chrysostom. He lived in the fifth century, professed the monastic life from his youth, and composed some thousand epistles, of which two thousand and twelve remain, in five books, and are deemed valuable, especially for the information which they contain in relation to points of discipline and for practical rules. The best edition is that of Schottus, Paris, 1633, fol. In 1738, Heumann attacked the authenticity of a part of these epistles, in a tract entitled "*Epistolæ Isidori Pelusiote maxime partem confectæ*," &c.—VII. Another saint in the Roman Catholic calendar, and a distinguished Spanish prelate towards the beginning of the seventh century, when he succeeded his brother Leander in the see of Seville. Hence he is commonly called *Isidorus Hispalensis*, "Isidore of Seville." He was, however, a native of Carthago Nova (*Carthagena*), of which his father Severianus was governor. He presided in a council held in that city, A.D. 619; and at the fourth national council, A.D. 633, in which numerous regulations were by his influence adopted, in order to reform ecclesiastical discipline in Spain. He was well acquainted with Greek and Hebrew, and was considered by the council of Toledo as the most learned man of his age. The style of his works, however, is not very clear, and his judgment appears to have been very defective. He died A.D. 636.—Isidorus was the author of many works, chiefly, however, compilations. His principal production is entitled "Twenty Books of Origins and Etymologies" (*Originum sive Etymologiarum Libri XX.*). Death prevented him from finishing this, and it was completed by his friend Braulio, bishop of Saragossa. It contains far more than the title would seem to promise, and is, in fact, a species of encyclopædia, or a summary of all the sciences cultivated at that period. The first book is divided into forty-three chapters, of which the first thirty-eight explain terms connected with grammar. The remaining five have reference to matters connected with history. The second book is devoted principally to rhetorical subjects; it contains also an introduction to philosophy, and a system of Dialectics after Porphyry, Aristotle, and Victorinus. The third book treats of arithmetic, music, and astronomy. The fourth book is devoted to medicine. The fifth book contains jurisprudence and chronology; together with a species of historical summary, terminating at the sixth year of the reign of Heraclius. In the sixth book, the author occupies himself with the Bible, with libraries and manuscripts; he speaks of canons, of gospels, and councils; he then explains the paschal cycle, the calendar, and the festivals of the church. The seventh and eighth books treat of God, of angels

and men, of faith, of heresies, of pagan philosophers, of sibyls, of magicians, and of the gods of the heathen. The ninth book has for its subjects the different languages spoken among men, names of communities, official dignities, relationships, affinities, marriages. The last ten books explain and define a large number of words, the origin of which is not generally known. In these etymologies the author has no doubt committed a number of errors, neither has he displayed much critical acumen in many of his remarks; yet, notwithstanding these defects, his work is valuable on account of the extracts from lost works which it contains, and because it serves to show to what state of advancement each of the sciences of which it treats had attained among the ancients. Isidorus was also the author of a work entitled "*De Differentiis sive proprietate verborum*," in three books. The first of these is taken from Agretius and other ancient grammarians; the second treats "*de differentiis spiritualibus*." The third, more complete than the first, is arranged in alphabetical order. We have also various glossaries ascribed to Isidorus, of which has been formed a *liber glossarum*. A small glossary, containing grammatical terms in Greek and Latin, was published for the first time by Heusinger, in his second edition of Mallius Theodorus.—We have to mention also a *Chronicle* by Isidorus, from the beginning of the world to the fifth year of the reign of Heraclius, A.D. 615. It is derived from ancient chronicles, and contains likewise some new details respecting the period in which it was composed. It is sometimes cited under the following titles: "*De Temporibus*;" "*Abbreviator Temporum*;" "*De Sex mundi ætatuibus*;" "*Imago Mundi*." Isidorus wrote also two abridged histories of the Germanic tribes that settled in Spain during the fifth century; one entitled "*De historia, sive Chronicon Gothorum*;" and the other, "*Chronicon breve regum Visigothorum*." The first is followed by an appendix on the Vandals and Suevi. Other works of Isidorus are as follows: "A Treatise on Ecclesiastical Writers;" "Sentences;" "Commentaries on the Historical Books of the Old Testament;" "Scriptural Allegories;" "A Book of Poems, or Prolegomena to the Scriptures;" "A Treatise on Ecclesiastical Discipline," in which he mentions seven prayers of the sacrifice still to be found in the Mosarabic mass, which is the ancient Spanish liturgy, of which Isidorus was the principal author. A collection of canons, attributed to this Isidorus, were by a later priest of the same name, Isidore of Seville, who is more admired by later churchmen for learning than discrimination, and is frequently ranked among musical writers, much being said by him on the introduction of music into the church, in his divine offices. The best edition of the works of Isidorus is that of Arevali, Romæ, 1797–1803, 2 vols. fol. The best edition of the *Origines* is that of Otto, forming the third volume of Lunde-mann's *Corpus Grammaticorum Latinorum*, Lips., 1833, 4to. (*Schöll, Hist. Lit. Rom.*, vol. 3, p. 180, seq.—*Id. ib.*, vol. 3, p. 333.)

Isis, one of the chief deities of the Egyptians, and the sister and spouse of Osiris. She was said to have first taught men the art of cultivating corn, and was regarded as the goddess of fecundity. Hence the cow was sacred to her. The annual festival of Isis in Egypt lasted eight days, during which a general purification took place. The priests of the goddess were bound to observe perpetual chastity; their heads were shaved, and they went barefoot. This deity was often represented as a woman with the horns of a cow. She also appears with the lotus on her head and the sistrum in her hand; and in some instances her head is seen covered with a hood. Heads of Isis are frequent ornaments of Egyptian capitals on the pillars of the temples.—As the worship of Isis passed into foreign lands, it assumed a foreign character and many foreign

attributes, as we see from the Greek and Roman writers. Sometimes she is represented like Diana of Ephesus, the universal mother, with a number of breasts. The mysterious rites of Isis were probably in their origin symbolical: on one of her statues was this inscription, "I am all that has been or that shall be; no mortal has hitherto taken off my veil."—But the Isiac rites, transplanted to Italy, became a cloak for licentiousness, and they were repeatedly forbidden at Rome. Tiberius caused the images of Isis to be thrown into the Tiber; but the worship subsequently revived, and Juvenal speaks of it in an indignant strain.—The Isiac Table in the Turin Museum, which is supposed to represent the mysteries of Isis, has been judged by Champollion to be the work of an uninitiated artist, little acquainted with the true worship of the goddess, and probably of the age of Hadrian. (Consult Plutarch's treatise on *Isis and Osiris*, ed. Wyttenb., vol. 2, p. 441.—*Herod.*, 2, 41, seqq.—*Pausan.*, 2, 13, 7.—*Id.*, 10, 32, 13.)—The legend of Isis and Osiris may be found in full detail in Creuzer (*Symbolik*, vol. 1, p. 258, seqq.). On comparing the different explanations given by Plutarch and other ancient writers, it will appear that Isis is the type of the active, generating, and beneficent force of nature and the elements; Isis, on the contrary, is the passive force, the power of conceiving and bringing forth into life in the sublunary world. Osiris was particularly adored in the sun, whose rays vivify and impart new warmth to the earth, and who, on his annual return in the spring, appears to create anew all organic bodies. He was adored also in the Nile, the cause of Egyptian fertility. Isis was the earth, or sublunary nature in general; or, in a more confined sense, the soil of Egypt inundated by the Nile, the principle of all fecundity, the goddess of generation and production. United to one another, Osiris and Isis typify the universal Being, the soul of nature, the Pantheus of the Orphic verses. (*Symbolik*, par Guignaut, vol. 1, pt. 2, p. 806.)—In accordance with this general view of the subject are the remarks of Knight: "Isis was the same with the goddess of generation, except that by the later Egyptians the personification was still more generalized, so as to comprehend universal nature; whence Apuleius invokes her by the names of Eleusinian Ceres, Celestial Venus, and Proserpina; and she answers him by a general explanation of these titles. 'I am,' says she, 'Nature, the parent of things, the sovereign of the elements, the primary progeny of time, the most exalted of the deities, the first of the heavenly gods and goddesses, the queen of the shades, the uniform countenance; who dispose with my rod the numerous lights of heaven, the salubrious breezes of the sea, and the mournful silence of the dead; whose single deity the whole world venerates in many forms, with various rites and many names. The Egyptians, skilled in ancient lore, worship me with proper ceremonies, and call me by my true name, Queen Isis.'" (*Apul., Met.*, 11, p. 257.) This universal character of the goddess appears, however, to have been subsequent to the Macedonian conquest, when a new modification of the ancient systems of religion and philosophy took place at Alexandria, and spread itself gradually over the world. The statues of this Isis are of a composition and form quite different from those of the ancient Egyptian goddess; and all that we have seen are of Greek or Roman sculpture. The original Egyptian figure of Isis is merely the animal symbol of the cow humanized, with the addition of the serpent disc, or some other accessory emblem: but the Greek and Roman figures of her are infinitely varied, to signify by various symbols the various attributes of universal nature. In this character she is confounded with the personifications of Fortune and Victory, which are, in reality, no other than those of Providence, and, therefore, occasionally decked with all the

attributes of universal power. The allegorical tales of the loves and misfortunes of Isis and Osiris are an exact counterpart of those of Venus and Adonis (*Suid.*, s. v. *διαγνώων*), which signify the alternate exertion of the generative and destructive attributes. (*Enquiry into the Symb. Lang.*, &c., § 118, 119.) The Disa or Isa of the north was represented by a conic figure enveloped in a net, similar to the cortina of Apollo on the medals of Cos, Chersonesus in Crete, Neapolis in Italy, and the Syrian kings; but, instead of having the serpent coiled round it as in the first, or some symbol or figure of Apollo placed upon it as in the rest, it is terminated by a human head. (*Ol. Rudbeck, Atlant.*, vol. 2, c. 5, p. 219.) This goddess is unquestionably the Isis whom the ancient Suevi, according to Tacitus, worshipped (*Germ.*, c. 9); for the initial letter of the first name appears to be an article or prefix joined to it; and the Egyptian Isis was occasionally represented enveloped in a net, exactly as the Scandinavian goddess was at Upsal. (*Isiac Table*, and *Ol. Rudbeck, Atlant.*, p. 209.) This goddess is delineated on the sacred drums of the Laplanders, accompanied by a child, similar to the Horus of the Egyptians, who so often appears in the lap of Isis on the religious monuments of that people. The ancient Muscovites also worshipped a sacred group, composed of an old woman with one male child in her lap, and another standing by her, which probably represented Isis and her offspring. They had likewise another idol, called the golden heifer, which seems to have been the animal-symbol of the same personage. (*Ol. Rudbeck, Atlant.*, p. 512, seqq.—*Id.*, p. 280.—*Knight, Enquiry into the Symb. Lang.*, § 195.) For some speculations on the name of Isis, Jablonski may be consulted. (*Panth. Egypt.*, 2, 29.—*Id. Opusc.*, 1, s. v.) Isis received, as is well known, the names of "Lady," "Mistress," "Mother," "Nurse," &c., common to many other Egyptian deities. Her favourite name, however, is "Myrionyma," or "She that has ten thousand names." Creuzer finds an analogy between the Egyptian Osiris and Isis, and the Hindu *Isa* and *Isam* or *Isi*; and this analogy displays itself not only in their respective attributes and offices, but also in the meaning of their names; they are the "Lord" and "Lady," two titles of almost all great popular divinities among the pagan nations both of ancient and modern times. The different forms of the Egyptian year, and the successive efforts made to correct the calendar, could not fail to produce considerable variations in the legend of Isis and Osiris, which had itself been founded originally on a normal period. In this way, perhaps, we may explain the double death of Osiris, and regard it as typifying those variations that were the necessary result of the vague state of the year. The principal festivals of Egypt, moreover, established, like those of most other nations, after the natural epochs of the year, found at once in the popular mythology their commentary and their sanction. The most solemn one of these, called the *festival* (the lamentations) of *Isis*, or the *disappearance* (death) of *Osiris*, commenced on the 17th of the month Athyr, or the 13th of November, according to Plutarch: it was a festival of mourning and tears. (*Plut., de Is. et Os.*, c. 39, 69, p. 501, 549, ed. Wyttenb.—*Creuzer, Comment. Herod.*, p. 120, seqq.) Towards the winter solstice was celebrated the *finding of Osiris*; and on the seventh of Tybi, or the second of January, the *arrival of Isis from Phœnicia*. A few days after, the festival of *Osiris found* (a second time) united the cries of gladness on the part of all Egypt to the pure joy experienced by Isis herself. The festival of *grain-sowing* and that of the *burial of Osiris*; the festival of his *resurrection*, at the period when the young blade of grain began to show itself out of the ground; the pregnancy of Isis, the birth of Harpocrates, to whom were offered the first fruits of the approaching

harvest; the festival of the Pamyliā; all these fell in a great period embracing the one half of the year, from the autumnal equinox to that of the spring, at the commencement of which latter season was celebrated the feast of the purification of Isis. A little before this the Egyptians solemnized, at the new moon of Phamenoth (March), the entrance of Osiris into the Moon, which planet he was believed to fecundate, that it might, in its turn, fecundate the earth. (*Plut., Ib.*) Finally, on the 30th of Epiphi (21st of July), the festival of the birth of Horus took place (of Horus the representative of Osiris, the conqueror of Typhon), in the second great period, extending from the month Pharmuthi (27th of March) to Thoth (29th of August), when the year recommenced. (*Cruzer, Symbolik*, note 3, *Guignaut*, vol. 1, pt. 2, p. 801.)

ISMARUS (Ismara, *plur.*), a mountain of Thrace near the mouth of the Hebrus, covered with vineyards. This part of Thrace was famous for its wines. Ulysses, in the Odyssey, is made to speak in commendation of some wine given him by Maron, the priest of Apollo. Ismarus was situated in the territory of the Cicones, whose capital was also called by the same name. Homer (*Od.*, 1, 40) makes Ulysses to have taken and plundered this city; but the natives coming down from the interior in great force, he was driven off with severe loss both of men and ships. Ismarus is only known to later writers as a mountain celebrated for its wine, which indeed Homer himself alludes to in another passage. (*Od.*, 1, 197.—*Virg., Georg.*, 2, 37.)

ISMÈNE, I. a daughter of Œdipus and Jocasta, who, when her sister Antigone had been condemned to be buried alive by Creon for giving burial to her brother Polyneices, against the tyrant's positive orders, declared herself as guilty as her sister, and insisted upon being punished along with her. (*Soph., Antig.—Apollod.*, 3, 5).—II. A daughter of the river Asopus, who married the hundred-eyed Argus, by whom she had Iasus. (*Apollod.*, 2, 1.)

ISMENIAS, I. a celebrated musician of Thebes. When he was taken prisoner by the Scythians, Athenas, the king of the country, observed, that he liked the neighing of his horse better than all the music of Ismenias. (*Plut. in Apophth.*)—II. A Theban general, sent to Persia on an embassy by his countrymen. As none were admitted into the king's presence without prostrating themselves at his feet, Ismenias had recourse to artifice to avoid performing an act which would render him degraded in the eyes of his countrymen, and yet, at the same time, not to offend against the customs of Persia. When he was introduced he dropped his ring, and the motion he made to recover it from the ground being mistaken for the required homage, Ismenias had a satisfactory audience of the monarch. (*Ælian, V. H.*, 1, 21.)

ISMENUS, I. a son of Apollo and Melia, one of the Nereides, who gave his name to a river of Bœotia, near Thebes.—II. A river of Bœotia, in the immediate vicinity of Thebes, at the foot of a hill. It was sacred to Apollo, hence called Ismenius, who had a temple here. (*Pind., Pyth.*, 11, 6.—*Soph., Œd. Tyr.*, 19.) The Ismenius was more frequently alluded to in conjunction with the celebrated fountain of Dirce. (*Eurip., Bacch.*, 5.—*Id.*, *Pluon.*, 830.—*Here.*, *Fur.*, 572.—*Ib.*, 781.—*Pind., Isthm.*, 6, 108.) Dodwell observes, that the Ismenus has less pretensions to the title of a river than the Athenian Ilissus, for it has no water except after heavy rains, when it becomes a torrent, and rushes into the lake of *Hylika*, about four miles west of Thebes. (*Tour*, vol. 2, p. 268.) Sir W. Gell states that it is usually dry, from its being made to furnish water to several fountains. (*Cramer's Anc. Greece*, vol. 2, p. 229, *seqq.*)

ISOCRATES, a distinguished orator, or, rather, oratorical writer, born at Athens, B.C. 436. His principal

teachers were Gorgias, Prodicus and Tisias. On account of his weak voice and natural timidity, he was reluctant to speak in public; but he applied himself with the greatest ardour to instruction in the art of eloquence and preparing orations for others. His success as a rhetorical instructor was most brilliant. He taught at both Chios and Athens, and some of the greatest orators of Greece, such as Isæus, Lycurgus, Hyperides, and, according to some accounts, Demosthenes, formed themselves in his school. Hence Cicero compares this school of his to the wooden horse at Troy: since the latter contained the most famous chieftains of the Greeks, the former the leaders in eloquence. (*De Orat.*, 2, 22.) Although he never filled any public station, yet he rendered himself useful to his country by the discourses which he published on various topics of a political character. He is said to have charged one thousand drachmæ (nearly 180 dollars) for a complete course of oratorical instruction, and to have said to some one who found fault with the largeness of the amount, that he would willingly give ten thousand drachmæ to any one who should impart to him the self-confidence and the command of voice requisite in a public orator. The orations of Isocrates were either sent to the persons to whom they were addressed, for their private perusal, or they were intrusted to others to deliver in public. He is said to have delivered only one himself. Isocrates treated of great moral and political questions, and his views are distinguished by a regard for virtue, and an aversion to all meanness and injustice. In his childhood Isocrates was the companion of Plato, and they remained friends during their whole lives. He had a great veneration for Socrates. After the death of that distinguished philosopher, which filled his scholars with fear and horror, he alone had the courage to appear in mourning. He gave another proof of his courage by publicly defending Theramenes, who had been proscribed by the thirty tyrants. Isocrates was particularly distinguished by a polished style and an harmonious construction of his sentences. In Cicero's opinion, it was he who first gave to prose writing its due rhythm. The art of Isocrates is always apparent, a circumstance which, of itself, diminishes in some degree the effect of his writings, and is almost inconsistent with vigour and force. The address to Demonicus, for example, is an almost uninterrupted series of antitheses. Though he falls far below the great orator of Athens, Isocrates is still a perfect master in the style which he has adopted, and has well merited the high encomiums of Dionysius of Halicarnassus for the noble spirit and the rectitude of purpose which pervade all his writings. The composition, revision, and repeated polishing of his speeches occupied so much time that he published little. His celebrated "Panegyrical Oration," for example, is said to have occupied him ten whole years.—The politics of Isocrates were conciliatory. He was a friend of peace: he repeatedly exhorted the Greeks to concur among themselves, and to turn their arms against their common enemies, the Persians. He addressed Philip of Macedon in a similar strain, after his peace with Athens (B.C. 346), exhorting him to reconcile the states of Greece, and to unite their forces against Persia. He kept up a correspondence with Philip, and two of his epistles to that prince are still extant, as well as one which he wrote to the then youthful Alexander, congratulating him on his proficiency in his studies. Though no violent partisan, he proved, however, a warm-hearted patriot; for, on receiving the news of the battle of Charonea, he refused to take food for several days, and thus closed his long and honourable career at the age of ninety-eight, B.C. 338.—In Plutarch's time sixty orations went under his name, not half of which were, however, deemed genuine. Twenty-one now remain. Of these, the most remarkable

is the discourse entitled *Πανηγυρικός*, *Panegyricus*, or "Panegyric Oration," i. e., a discourse pronounced before the assembled people. The *Panegyric* of Isocrates was delivered at the Olympic games, and was written in the time of the Lacedæmonian ascendancy. He exhorts the Lacedæmonians and Athenians to vie with each other in a noble emulation, and to unite their forces in an expedition against Asia; and he descants eloquently on the merits and glories of the Athenian commonwealth, on the services it had rendered to Greece, and on its high intellectual cultivation; while he defends it from the charges, urged by its enemies, of tyranny by sea, and of oppression towards its colonies. Among the other twenty discourses of Isocrates, there are three of the parenetic or moral kind: 1. *Πρὸς Δημόνικον*, "*Discourse addressed to Demonius*," the son of Hipponicus, who, with his brother Callias, belonged to the highest class of Athenian citizens. It consists of moral precepts for the conduct of life and the regulation of the deportment of the young. Many critics have thought that this piece, abounding with excellent morality, and resembling an epistle rather than a discourse, is not the work of the Athenian Isocrates, but of one of two other orators of the same name, of whom mention is made by the ancient writers, namely, Isocrates of Apollonia, or Heraclea in Pontus, who was a disciple of the Athenian philosopher; and Isocrates the friend of Dionysius of Halicarnassus. One thing is certain, that Harpocration cites a discourse of the Apollonian Isocrates, under the title of *Παραίνεσις πρὸς Δημόνικον*, and it is not probable that the master and his disciple would have written exhortations addressed to the same individual. As regards the third Isocrates just mentioned, it is very doubtful whether he ever existed.—2. *Πρὸς Νικόκλεα*, *Discourse addressed to Nicocles* II., son of Evagoras, and prince of Salamis in Cyprus, on the art of reigning.—3. *Νικοκλής*, *Nicocles*, a discourse composed for this prince, to be pronounced by him, and treating of the duties of subjects towards their sovereigns. Nicocles is said to have presented Isocrates, in return, with twenty talents. This piece is sometimes cited under the name of the *Cyprian Discourse*, *Κύπριος λόγος*. Five other discourses of Isocrates are of the deliberative kind. 1. The *Panegyric*, of which we have already spoken.—2. *Φίλιππος*, or *Πρὸς Φίλιππον*, "*Discourse addressed to Philip of Macedon*," to induce him to act as mediator between the Greek cities, and to make war against Persia.—3. *Ἀρχίδαμος*, *Archidamus*. Under the name of this prince, who afterward ascended the throne of Sparta, the orator endeavours to persuade the Lacedæmonians, after the battle of Mantinea, not to relinquish Messenia.—4. *Ἀρειοπαγίτικος*, *Areopagiticus*. One of the best discourses of Isocrates. In it he counsels the Athenians to re-establish the constitution of Solon, as modified by Clisthenes.—5. *Περὶ εἰρήνης, ἢ συμμαχικός*, "*Of Peace*," or, "*Respecting the Allies*." In this discourse, pronounced after the commencement of the social war, Isocrates advises the Athenians to make peace with the inhabitants of Chios, Rhodes, and Byzantium. We have also four discourses by this writer that fall under the head of *eloges* (*ἐγκωμιαστικοί*): viz., 1. *Εὐαγόρας*, *Evagoras*. A funeral oration on Evagoras, king of Cyprus, and father of Nicocles, who had been assassinated, Ol. 101, 3.—2. *Ἑλένης ἐγκώμιον*, *Eloge on Helen*, a piece full of pleasing digressions.—3. *Βούσιρις*, *Busiris*. The Grecian mythology speaks of this son of Neptune and Lysianassa, who reigned in Egypt, and introduced into that country human sacrifices. Hercules delivered the earth from this monster. The sophist Polycrates had written on Busiris; Isocrates, who hated him because he had published an accusation of Socrates, wished, in treating of the same sub-

ject, to mortify the sophist and make his work a failure.—4. *Παναθηναϊκός*, *Panathenæus*. An elege on the Athenians; one of the best pieces of Isocrates, but which has reached us in a defective state.—We have likewise from the pen of Isocrates eight discourses of a legal nature, or *λόγοι δικάνικοι*.—1. *Πλαταϊκός*, *Complaint of the inhabitants of Plataea* against the Thebans.—2. *Περὶ τῆς ἀντιδόσεως*, "*Of the exchanging of property with another*." According to the Athenian laws, the three hundred richest citizens were obliged to equip triremes, furnish the commonwealth with necessary supplies of money, &c. If any person appointed to undergo one of these duties could find another citizen of better substance than himself who was not on the list, then the informer was excused and the other put in his place. If the person named, however, denied that he was the richer of the two, then they exchanged estates. Isocrates, having acquired great riches, had twice to undergo this species of prosecution. The first time he was defended by his adopted son Alphareus, and gained his cause; the second time he was attacked by a certain Lysimachus, was unsuccessful in his defence, and compelled to equip a trireme. The present discourse was delivered by Isocrates on this latter occasion. It has reached us in an imperfect state, but has been completed in our own days by the discoveries of a modern scholar, Moustoxydes.—3. *Περὶ τοῦ ξένου*. A pleading respecting a team of horses, pronounced for the son of Alcibiades.—4. *Τραπεζιτικός*, a pleading against the banker Pasion, pronounced by the son of Sopæus, who had confided a sum of money to his care. Pasion had denied the deposit.—5. *Παραγραφικός πρὸς Καλλίμαχον*. An "*actio translative*" against Callimachus.—6. *Αἰγινήτικος*, a pleading pronounced at Ægina in a matter of succession.—7. *Κατὰ τοῦ Λοχίτου*, a pleading against Lochites for personal violence against a certain individual whose name is not given. We have only the second part of this discourse.—8. *Ἀμάρτυρος, ἢ πρὸς Εὐθύνοιν ὑπὲρ Νικίου*, "*Pleading for Nicias against Euthynnus*." The latter was a faithless depositary, who reckoned on the impossibility of proving a certain deposit through want of witnesses to the transaction.—We have finally a discourse of Isocrates against the Sophists (*κατὰ τῶν σοφιστῶν*), which must be placed in a class by itself. There was also a work on Rhetoric composed by him, more commonly called a *Τέχνη*, "*Theory*." Cicero states that he was unable to procure this work (*De Invent.*, 2, 2): it is cited, however, by Quintilian (*Inst. Or.*, 3, 1, et 14.)—The best edition of the Greek text is that of Bekker, forming part of his *Oratores Attici*. (Berol., 1822–1823, 8vo.—*Orat. Att.*, vol. 2.) The two most useful editions are, that of Lange, *Hal.*, 1803, 8vo, and that of Coray, *Paris*, 1807, 8vo, forming the second volume of the *Βιβλιοθήκη Ἑλληνική*. This last is based upon a MS. brought from Italy to France, which is the earliest one extant of our author. Coray's edition is accompanied with very learned notes, and may, upon the whole, be regarded as the *editio optima*. The editions of Battie, *Cantab.*, 1729, 2 vols. 8vo, and of Auger, *Paris*, 1782, 3 vols. 8vo, are not remarkable, especially the latter, for a very accurate text. Auger's work abounds with typographical errors, and he is also charged with a careless collating of MSS. The best edition of the *Panegyricus* is that of Morus and Spohn, with the notes and additions of Baiter, *Lips.*, 1831, 8vo. In the preface of this edition (p. xxxi), there are some very just remarks on the Greek text of Bekker.—We have already alluded to the completing of the oration *Περὶ ἀντιδόσεως*, by Moustoxydes. This scholar found a perfect MS. of the discourse in question in the Ambrosian Library at Milan, and published an edition of the entire piece in 1812 at Milan. It is, however, very inaccurately

printed. A more correct edition was published by Orellius, in 1814, 8vo, with a double commentary, critical and philological, in German; and also a smaller edition, containing merely the Greek text with various readings. These two editions are more accurate than that of Milan. (*Schöll, Hist. Lit. Gr.*, vol. 2, p. 208, *seqq.*—*Hoffmann, Lex. Bibliograph.*, vol. 2, p. 629.)

ISSA, one of the smallest of the Dalmatian islands, but the best known in history. It is mentioned by Scylax as a Greek colony (p. 8), which, according to Scymnus of Chios, was sent from Syracuse (v. 412). Issa is often alluded to by Polybius in his account of the Illyrian war. It was attacked by Teuta; but the siege was raised on the appearance of the Roman fleet, and the inhabitants immediately placed themselves under the protection of that power. (*Appian, Illyr.*, 7.—*Polyb.*, 2, 11.) It became afterward a constant station for the Roman galleys in their wars with the kings of Macedon. (*Liv.*, 43, 9.) In Cæsar's time the town appears to have been very flourishing, for it is styled "*nobilissimum eorum regionum oppidum*" (*B. Alex.*, 47), and Pliny informs us that the inhabitants were Roman citizens. (*Plin.*, 3, 21.) Athenæus states that the wine of this island was much esteemed (1, 22). Its present name is *Lissa*. (*Cramer's Anc. Greece*, vol. 1, p. 44.)

ISSÉDONES, the principal nation in Serica, whose metropolis was Sera, now *Kant-schu*, in the Chinese province of *Shen-Si*, without the great wall. This city has been erroneously confounded with Peking, the capital of China, which is 300 leagues distant. They had also two towns, both called Issedon, but distinguished by the epithets of Serica and Scythica. (*Ptol.*—*Bischoff und Müller, Wörterb. der Geogr.*, p. 649.)

ISSUS, a town of Cilicia Campestris, at the foot of the main chain of Amanus, and nearly at the centre of the head of the gulf to which it gave its name (Issicus Sinus). Xenophon describes Issus (Ἰσσοί, in the plural) as a considerable town in his time. Cyrus remained here three days, and was joined by his fleet from the Peloponnesus. These ships anchored close to the shore, where Cyrus had his quarters. (*Anab.*, 1, 4.—Compare *Arrian, Exp. Alex.*, 2, 7.—*Diod. Sic.*, 17, 32.) Issus was famous for the victory gained here by Alexander over Darius. The error on the part of the Persian monarch was in selecting so contracted a spot for a pitched battle. The breadth of the plain of Issus, between the sea and the mountains, appears from Callisthenes, quoted by Polybius, not to exceed fourteen stadia, less than two miles, a space very inadequate for the manœuvres of so large an army as that of Darius. The ground was, besides, broken, and intersected by many ravines and torrents which descended from the mountains. The principal one of these, and which is frequently mentioned in the narrative of this momentous battle, is the Pinarus. The two armies were at first drawn up on opposite banks of this stream; Darius on the side of Issus, Alexander towards Syria. A clear notion of the whole affair may be obtained from the narratives of Arrian, Curtius, and Plutarch, and from the critical remarks of Polybius on the statement of Callisthenes. The town of Issus, in Strabo's time, was only a small place with a port. (*Strab.*, 676.) Stephanus says it was called Nicopolis, in consequence of the victory gained by Alexander (s. v. Ἰσσοί). Strabo, however, speaks of Nicopolis as a distinct place from Issus. Cicero reports that, during his expedition against the mountaineers of Amanus, he occupied Issus for some days. (*Ep. ad Att.*, 5, 20.) Issus was also remarkable, at a later day, for the defeat of Niger by Severus. The modern *Aiasse* appears to correspond to the site of the ancient town. (*Cramer's Asia Minor*, vol. 2, p. 359, *seqq.*—Compare *Rennell, Geography of Western Asia*, vol. 2, p. 91.)

ISTER, I. a native of Cyrene, who flourished under Ptolemy III. of Egypt. Suidas makes him to have been a disciple of Callimachus. Besides his Ἀττικά, in sixteen books, he left a number of other works, on Egypt, Argolis, Elis, &c. A few fragments only remain, which were collected and published with those of Demon, another historian, by Siebelis and Lenz, *Lips.*, 1812, 8vo.—II. The name of the eastern part of the Danube, after its junction with the Savus or *Saave*. The term is evidently of Teutonic or German origin (*Osten*, "east").

ISTHMA, sacred games among the Greeks, which received their name from the Isthmus of Corinth, where they were observed. They were instituted in honour of Melicertes, who was changed into a sea-deity when his mother Ino had thrown herself into the sea with him in her arms. After they had been celebrated for some time with great regularity, an interruption took place, at the expiration of which they were re-established by Theseus in honour of Neptune. These games were celebrated every five years. (*Alex. ab Alex.*, *Gen. D.*, 5, 8.) When Corinth was destroyed by Mummius, the Roman general, they were still observed with the usual solemnity, and the Sicyonians were intrusted with the superintendence, which had been before one of the privileges of the ruined Corinthians. Combats of every kind were exhibited, and the victors were rewarded with garlands of pine leaves. Some time after the custom was changed, and the victor received a crown of dry and withered parsley. At a subsequent period, however, the pine again was adopted. (Consult, for the reason of these changes, the remarks of *Plutarch, Sympos.*, 5, 3.—*Op.*, ed. *Riske*, vol. 8, p. 687, *seqq.*)

ISTHMUS, a small neck of land which joins a country to another, and prevents the sea from making them separate, such as that of Corinth, called often the Isthmus by way of eminence, which joins Peloponnesus to Greece. (*Vid. Corinthi Isthmus.*)

ISTRIA or HISTRIA, a peninsula lying to the west of Liburnia, and bounded on the south and west by the Adriatic. It was anciently a part of Illyricum. Its circuit and shape are accurately described and defined by Strabo (314) and Pliny (3, 19). Little is known respecting the origin of the people: but an old geographer describes them as a nation of Thracian race (*Scymn. Ch. Perieg.*, 390), and this opinion seems at least to have probability in its favour. There is little to interest in the account of the wars waged by the Romans against this insignificant people; it is to be found in Livy (41, 1, *seqq.*): they were completely subjugated A.U.C. 575. Augustus included Istria in Cisalpine Gaul, or rather Italy, removing the limit of the latter country from the river Formio (*Risano*) to the little river Arsia. (*Plin.*, 3, 18.) The Greeks, in their fanciful mythology, derived the name of Istria from that of the Ister or Danube; they conveyed the Argonauts from the Euxine into the Ister, and then, by an unheard-of communication between this river and the Adriatic, launched their heroes into the waters of the latter. (*Scylax, Peripl.*, p. 6.—*Strabo*, 46.—*Aristot. Hist. Anim.*, 8, 13.) Not satisfied, however, with these wonders, they affirmed that a band of Colchians, sent in pursuit of Jason and Medea, followed the same course, and, wearied by a fruitless search, rested in Istria, and finally settled on its shores. (*Pomp. Mel.*, 2, 3.) This strange error no longer prevailed in the time of Strabo, when Istria had become known to the Romans, and formed part of their vast empire. (*Cramer's Ancient Italy*, vol. 1, p. 134, *seqq.*)

ISTROPŌLIS, a city of Thrace, situate on the coast of the Euxine, below the mouth of the Ister, where a lagoon or salt lake, called Halmiris, formed by an arm of the Danube, has its issue into the sea. It appears to be succeeded at the present day by a place called

Kara-Kermon, or "the black fortress." Istropolis is said to have been founded by a Milesian colony. (*Plin.*, 4, 11.)

ITABYRIUS, a mountain of Galilæa Inferior, near the southern limits of the tribe of Zebulun, and southeast from Carmel. According to Josephus (*Bell. Jud.*, 4, 6), it was 30 stadia high, and had on its summit a plain of 26 stadia in extent. Its modern name is *Thabor*. This mountain is supposed by some to have been the scene of our Saviour's transfiguration. Jerome, Cyril, and other writers, are in favour of the position, but it is opposed by Reland (*Palæstin.*, p. 247). The name *Thabor* or *Tabor*, which was also the ancient one among the natives, appears to be derived from the Hebrew *tabbor*, "a height" or "summit." (*Reland, l. c.*) The Greek writers call it *Οαβρίον* and *Ἀραβύριον* (or *Ἰταβύριον*) ὄρος. (Compare the *Jupiter Atabyrius* of Rhodes and Agrigentum, and the remarks of Ritter, *Vorhalle*, p. 339.) On the summit of this mountain was situate a fortified town called *Atabyrion*. (*Polyb.*, 5, 70.—*Vit. Atabyrion*.) Mount *Thabor* is situate two leagues southeast of Nazareth, rising out of the great plain of Esdraelon, at its eastern side. Its figure is that of a truncated cone, and its elevation, according to Buckingham, about 1000 feet; but, from the circumstance mentioned by Borchardt, of thick clouds resting on it in the morning in summer, and his being an hour in ascending it, it may perhaps be considered as higher than Buckingham supposed, though, from the same time occupied in the ascent, not more than 400 or 500 feet, or from 1400 to 1500 in all. It is represented as entirely calcareous. Dr. Richardson describes it as a dark-looking, insulated conical mountain, rising like a tower to a considerable height above those around it. On the summit is a plain about a mile in circumference, which shows the remains of the ancient fortress mentioned above. The view from this spot is said to be one of the finest in the country.

ITALIA, a celebrated country of Europe, bounded on the north by the Alps, on the south by the Ionian Sea, on the northeast by the Adriatic or Mare Superum, and on the southwest by the Mare Tyrrhenum or Inferum. It was called *Hesperia* by the Greeks, from its western situation in relation to Greece (*Virg., Æn.*, 1, 530), and received also from the Latin poets the appellation of *Ausonia* (*Virg., Æn.*, 7, 54), *Saturnia* (*Virg., Georg.*, 2, 173), and *Ænotria*. The name *Italia* some writers deduce from *Italus*, a chief of the *Ænotri* or *Siculi* (*Antioch. Syrac.*, ap. *Dion. Hal.*, 1, 2.—*Thucyd.*, 6, 2). Others sought the origin of the term in the Greek word *ἰταλός*, or the Latin *italus*, which corresponds to it (*Varro, R. R.*, 2, 5.—*Dion. Hal.*, 1, 35); and others again make the name to have belonged originally to a small canton in Calabria, and to have become gradually common to the whole country. The ancients differed from us in their application of names to countries. They regarded the name as belonging to the people, not to the land itself; and in this they were more correct than we are, who call nations after the countries they inhabit. *Asia Minor*, for example, was an appellation unknown to the earlier classic writers, and only began to come into use after the country had fallen into the hands of the Romans. Previous to this, the different nations which peopled that peninsula had their respective names, and were known by these. In the same way, a general name for what we now term *Italy* was not originally thought of. When the Greeks became first acquainted with this country, they observed it to be peopled with several distinct nations, as they thought; and hence we find it divided by them about the time of Aristotle into six countries or regions, *Ausonia* or *Opica*, *Tyrrhenia*, *Iapygia*, *Ombria*, *Liguria*, and *Heneitia*. *Thucydides*, for instance, in speaking of *Cumæ*, says that it is situate in *Opica*; and

Aristotle, cited by *Dionysius of Halicarnassus*, terms *Latium* a part of this same *Opica*. As regards the origin of the name *Italia*, the truth appears to be this: the appellation was first given by the early Greeks to what is now denominated *Calabria ulterior*, or to that southern extremity of the boot which is confined between the *Sinus Terinæus* (Gulf of *St. Euphemia*) and the *Sinus Scyllacius* (Gulf of *Squillace*). Such, at least, is the account of Aristotle (*Polit.*, 7, 10) and *Strabo* (254). This was not done because the name was in strictness confined to that section of the country, but because the Greeks knew at that early period very little, comparatively speaking, of the interior, and were as yet ignorant of the fact, that most of the numerous nations which peopled the Italian peninsula were the descendants of one common race, the *Itali*, who originally were spread over the whole land, ever to the foot of the Alps. The nations in the south of Italy, with whom the Greeks first became acquainted, were found by them to be descended from the *Itali*, or, rather, they found this name in general use among them; hence they called their section of the country by the name of *Italia*. As their knowledge of the interior became more enlarged, other branches of the same great race were successively discovered, and the name *Italia* thus gradually progressed in its application until it reached the southern limits of *Cisalpine Gaul*. To this latter country the name of *Gallia Cisalpina* was originally given, because it was peopled principally by *Gauls*, who had settled in these parts, and dislodged the ancient inhabitants. In confirmation of what has just been advanced, we find that, in the time of *Antiochus*, a son of *Xenophanes*, who lived about the 320th year of Rome, and a little anterior to *Thucydides*, the appellation *Italia* was given to a part of Italy which lay south of a line drawn from the small river *Laus* to *Metapontum*. (*Dion. Hal.*, 1, p. 59.) Towards the end of the fifth century of Rome, it designated all the countries south of the *Tiber* and *Æsis*. At length, in the pages of *Polybius*, who wrote about the 600th year of Rome, we find the name in question given to all Italy up to the foot of the Alps. The including of *Cisalpine Gaul* under this appellation was an act of policy on the part of the second triumvirate, who were afraid lest, if it remained a province, some future proconsul might imitate *Cæsar*, and overthrow with his legions the authority of the republic. At a still later period, *Augustus* divided Italy into eleven regions, and extended its limits on the northeast as far as *Pola*, thus comprehending *Istria*. It is somewhat remarkable, that the name *Italia*, after having gradually extended to the Alps, should at a subsequent epoch be limited in its application to the northern parts alone. When the Emperor *Maximian*, towards the close of the third century of the Christian era, transferred his residence to *Milan*, the usage prevailed in the West of giving the name of *Italy* exclusively to the five provinces of *Emilia*, *Liguria*, *Flaminia*, *Venetia*, and *Istria*. It was in this sense that the kings of the *Lombards* were styled monarchs of *Italy*.—As regards the other names sometimes applied to *Italy*, it may be observed, that they are, in strictness, names only of particular parts, extended by poetic usage to the whole country. Thus *Ænotria* properly applies to a part of the southeastern coast, and was given by the Greeks to this portion of the country, from the numerous vines which grew there, the name importing "wine-land." Thus, too, *Saturnia* in fact belongs to one of the hills of Rome, &c.—Italy may be divided into three parts, the northern, or *Gallia Cisalpina*; the middle, or *Italia Propria*; and the southern, or *Magna Græcia*. Its principal states were *Gallia Cisalpina*, *Etruria*, *Umbria*, *Picenum*, *Latium*, *Campania*, *Samnium* and *Hirpini*, *Apulia*, *Calabria*, *Lucania*, and *Brutium* Ager. Originally the whole of *Italy* appears to have been peopled by one common race, the *Itali*, who were

spread from the Alps to the southernmost extremity of the land. This position receives very strong support from the fact that the name Italus was in general use among the various nations of the Italian peninsula. In the language of fable it was the appellation of an ancient monarch. We find mention made of a King Italus among the Ausones and Opici, and likewise among the Morgetes, Siculi, and Sabini. We find, moreover, all these early tribes using one common dialect, the Oscan. Now, that such a being as Italus ever existed, appears extremely improbable; and still more so the assertion that Italy was named after this ancient king. Daily experience proves that countries are called after the nations who inhabit them; and few, if any, examples can be adduced of nations taking an appellation from their rulers. In the present case it appears scarcely credible. We know of no period when the different Italian tribes were under the control of a single ruler, and yet each have their Italus. Was there a monarch of this name in every district of Italy? and, still more, did each separate community form the resolution of deriving from their respective monarch a name for themselves and the region they inhabited, so that, finally, the common name for the whole land became Italia? Either supposition is absurd.—The name Italus, then, was the generic name of the whole race, and the land was called after it, each community being known at the same time by a specific and peculiar appellation, as Latini, Umbri, &c. The fact of the universal prevalence of the Osc in tongue is strongly corroborative of what has just been advanced. But, it may be contended, no proof exists that any king named Italus was acknowledged by the traditions of the Tusci or Umbri. The answer is at any one. Antiquity makes mention of these as the progenitors of the Latini, among whom a King Italus appears; and Seymnus records an old authority, which makes the Umbri to have been descended from Latinus, the son of Ulysses and Circe. That these two nations, moreover, spoke a language based on the old Italic or Oscan form of speech, was discovered by the Romans in the case of the Rheti, a branch of the former, who had retired to the Alps upon the invasion of the Gauls. The original population of Italy then was composed of the Itali. To these came various nations, which we shall now enumerate in the order of history. The earliest of these new-comers appear to have been the Illyrian tribes, and, in particular, the Liburni, who may, with truth, be regarded as the earliest of European navigators. They extended themselves along the coast of the Adriatic as far as Iapygia. Next in the order of time were the Veneti, a branch of the great Slavonic race (*vid. Veneti*), who settled between the mouths of the Po and the Illyrian Alps. Were they the earliest possessors of this part of Italy, or did they expel the Tuscan Euganei? All is uncertain. Of the origin of the great Etrurian nation, we have already spoken under the article Etruria. The Siculi, who appear to have been the original inhabitants of Latium, and who were subsequently driven out and retired to Sicily (*vid. Siculi*), are falsely considered by some to have been of Iberian origin. A fourth people, however, who actually came into Italy, were the Greeks. Before the time of the Trojan war there are no traces of any such emigration; but after the termination of that contest, accident threw many of the returning bands upon the Italian coast. We find them in Apulia, on the Sinus Tarentinus in Enotria, at Pisa, and in Latium as the chief part of the population of Alba Longa. Their language, the Æolic Greek, for they were principally Achei, operating upon the old Italic or Oscan tongue, then prevalent in Latium, and becoming blended, at the same time, with many peculiarities and forms of Pelasgic origin, gave rise to the Latin tongue. Trojan female captives were brought along with them by the Greeks,

but no Trojan men, nor any prince named Æneas ever set foot in the Italian peninsula. The last ancient people who formed settlements at any early period in Italy were the Gauls. They entered during the reign of Tarquinius Priscus, and successive hordes made their appearance under the following kings. They seized upon what was called, from them, Cisalpine Gaul, and one division of them, the Senones, even penetrated far into the centre of Italy. They were finally subdued by the Romans, more through the want of union than of valour.—On the subject, however, of the origin of the Latin tongue, a very plausible theory was started by Jäkel, which assigns it to the German. (*Der Germanische Ursprung der Lateinischen Sprache, &c., Breslau, 1831.*) He makes the Latin to be mainly and essentially the dialect of a Teutonic race, that migrated from Germany into Italy by the way of the Tyrol, at a period vastly more remote than that to which Roman history reaches. The germe of this theory, however, is found in Funceius (*De Origine et Pueritia, L. L., p. 64, c. 5. De Matre Lingue Latine Germanica*)—Ancient geographers appear to have entertained different ideas of the figure of Italy. Polybius considered it, in its general form, as being like a triangle, of which the two seas meeting at the promontory of Cocinthus (*Capo di Siro*) as the vortex, formed the sides, and the Alps the base. (*Polyb., 2, 14*.) But Strabo is more exact in his delineation, and observes, that its shape bears more resemblance to a quadrilateral than a triangular figure, with its outline rather irregular than rectilinear. (*Strabo, 5, 210.*) Pliny describes it in shape as similar to an elongated oak-leaf, and terminating in a crescent, the horns of which would be the promontories of Leucopetra (*Capo delle Armi*) and Lacinium (*Capo delle Colonne*). According to Pliny (3, 5), the length of Italy, from Augusta Prætoria (*Aosta*), at the foot of the Alps, to Rhegium, the other extremity, was 1020 miles; but this distance was to be estimated, not in a direct line, but by the great road which passed through Rome and Capua. The real geographical distance, according to the best maps, would scarcely furnish 600 modern Italian miles of 60 to the degree, which are equal to about 700 ancient Roman miles. The same writer estimates its breadth from the Varus to the Arsia at 410 miles; between the mouths of the Tiber and Aternus at 136 miles; in the narrowest part, between the Sinus Scyllacius and Sinus Terneus, at 20 miles. The little lake of Cutilæ, near Reate (*Rieti*) in the Sabine country, was considered as the umbilicus or centre of Italy. (*Plin., 3, 12*)—It might be expected that the classical authors of Rome would dwell with fondness on the peculiar advantages enjoyed by their favoured country. Accordingly, we find a variety of passages, which Cluverius has collected in his fifth chapter (*De Natura soli que Italici ac laudibus ejus*), where the happy qualities of its soil and climate, the variety and abundance of its productions, the resources of every kind which it possesses, are proudly and eloquently displayed. Those that seem principally deserving of notice are the following: *Plin., 36, 13.—Virg., Georg., 2, 136, seqq.—Dion. Hal., Ant. Rom., 1, 36.*

Climate of Ancient Italy.

It has been thought by several modern writers that the climate and temperature of Italy have undergone some change during the lapse of ages, and that it was anciently colder in winter than it is at the present day. (*Du Bos, Reflex., vol. 2, p. 298 — L'Abbé Longuerue, cited by Gibbon, Misc. Works, vol. 3, p. 245.*) In the examination of this question, it is impossible not to consider the somewhat analogous condition of America at this day. Boston is in the same latitude with Rome, but the severity of its winter far exceeds not that of Rome only, but of Paris and London. Allowing that

the peninsular form of Italy must at all times have had an effect in softening the climate, still the woods and marshes of Cisalpine Gaul, and the perpetual snows of the Alps, far more extensive than at present, owing to the then uncultivated and uncleared state of Switzerland and Germany, could not but have been felt even in the neighbourhood of Rome. Besides, even on the Apennines, and in Etruria and Latium, the forests occupied a far greater space than in modern times; this would increase the quantity of rain, and, consequently, the volume of water in the rivers; the floods would be greater and more numerous, and, before man's dominion had completely subdued the whole country, there would be large accumulations of water in the low grounds, which would still farther increase the coldness of the atmosphere. The language of ancient writers, on the whole, favours the same conclusion, that the Roman winter, in their days, was more severe than it is at present. It is by no means easy to know what weight is to be given to the language of the poets, nor how far particular descriptions or expressions may have been occasioned by peculiar local circumstances. The statement of the younger Pliny (*Epist.*, 2, 17), that the bay-tree would rarely live through the winter without shelter, either at Rome or at his own villa at Lanuvium, if taken absolutely, would prove too much; for, although the bay is less hardy than some other evergreens, yet how can it be conceived that a climate in which the olive would flourish could be too severe for the bay? There must either have been some local peculiarity of winds or soil which the tree did not like, or else the fact, as is sometimes the case, must have been too hastily assumed; and men were afraid, from long custom, to leave the bay unprotected in the winter, although, in fact, they might have done it with safety. Yet the elder Pliny (17, 2) speaks of long snows being useful to the corn, which shows that he is not speaking of the mountains; and a long snow lying in the valleys of central or southern Italy would surely be a very unheard-of phenomenon now. Again: the freezing of the rivers, as spoken of by Virgil and Horace, is an image of winter which could not, we think, naturally suggest itself to Italian poets of the present day, at any point to the south of the Apennines. Other arguments to the same effect may be seen in a paper by Daines Barrington, in the 58th volume of the Philosophical Transactions. Gibbon, too, after stating the arguments on both sides of the question, comes to the same conclusion. (*Misc. Works*, l. c.) He quotes, however, the Abbé de Longueurue as saying that the Tiber was frozen in the bitter winter of 1709.—Again: the olive, which cannot bear a continuance of severe cold, was not introduced into Italy till long after the vine: Fencstella asserted, that its cultivation was unknown as late as the reign of Tarquinius Priscus (*Plin.*, 15, 1); and such was the notion entertained of the cold of all inland countries, that Theophrastus (*Plin.*, 15, 1) held it impossible to cultivate the olive at the distance of more than 400 stadia from the sea. But the cold of winter is perfectly consistent with great heat in the summer. The vine is cultivated with success on the Rhine, in the latitude of Devonshire and Cornwall, although the winter at Coblenz and Bonn is far more severe than it is in Westmoreland; and evergreens will flourish through the winter in the Westmoreland valleys far better than on the Rhine or in the heart of France. The summer heat of Italy was probably much the same in ancient times as it is at present, except that there were a greater number of spots where shade and verdure might be found, and where its violence, therefore, was more endurable. But the difference between the temperature of summer and winter may be safely assumed to have been much greater than it is now, notwithstanding the arguments of Eustace and several other travellers. (*Arnold, History of Rome*, vol. 1, p. 499, *seqq.*)

The Malaria in Ancient and Modern Times.

It now becomes a question, whether the greater cold of the winter, and the greater extent of wood and of undrained waters which existed in the time of the Romans, may not have had a favourable influence in mitigating that malaria which is at the present day the curse of so many parts of Italy, and particularly of the immediate neighbourhood of Rome. One thing is certain, that the Campagna of Rome, which is now almost a desert, must, at a remote period, have been full of independent cities; and although the greater part of these had perished long before the fourth century of Rome, yet even then there existed Ostia, Laurentum, Ardea, and Antium on one side, and Veii and Cære on the other, in situations which are now regarded as uninhabitable during the summer months; and all the lands of the Romans on which they, like the old Athenians, for the most part resided regularly, lie within the present range of the malaria. Some have supposed, that, although the climate was the same as it is now, yet the Romans were enabled to escape from its influence, and their safety has been ascribed to their practice of wearing woollen next to the skin instead of linen or cotton. But, not to notice other objections to this notion, it is enough to say that the Romans regarded unhealthy situations with the same apprehension as their modern descendants. (*Cato, R. R.*, 2.—*Varro, R. R.*, 1, 4.—*Id.*, 5, 3, 5.—*Id.*, 5, 3, 12.)—On the other hand, Cicero (*de Repub.*, 2, 6) and Livy (7, 38) both speak of the immediate neighbourhood of Rome as unhealthy; but, at the same time, they extol the positive healthiness of the city itself; ascribing it to the hills, which are at once airy themselves, and offer a screen to the low grounds from the heat of the sun. It is true, that one of the most unhealthy parts of modern Rome, the Piazza di Spagna and the slope of the Pincian Hill above it, was not within the limits of the ancient city, yet the praise of the healthiness of Rome must be understood rather comparatively with that of the immediate neighbourhood than positively. Rome, in the summer months, cannot be called healthy, even as compared with the other great cities of Italy, much less if the standard be taken from Berlin or from London. Again: the neighbourhood of Rome is characterized by Livy as “a pestilential and parched soil.” The latter epithet is worthy of notice, because the favourite opinion has been, that the malaria is connected with marshes and moisture. But it is precisely here that we may find the explanation of the spread of the malaria in modern times. Even in spring nothing can less resemble a marsh than the present aspect of the Campagna. It is far more like the down country of Dorsetshire, and, as the summer advances, it may well be called a dry and parched district. But this is exactly the character of the plains of Estremadura, where the British forces suffered so grievously from malaria fever in the autumn of 1809. In short, abundant experience has proved, that when the surface of the ground is wet, the malaria poison is far less noxious than when all appearance of moisture on the surface is gone, and the damp makes its way into the atmosphere from a considerable depth under ground. If, then, more rain fell in the Campagna formerly than now; if the streams were fuller of water, and their course more rapid; above all, if, owing to the uncleared state of central Europe, and the greater abundance of wood in Italy itself, the summer heats set in later, and were less intense, and more often relieved by violent storms of rain, there is every reason to believe that the Campagna must have been far healthier than at present; and that precisely in proportion to the clearing and cultivation of central Europe, to the felling of the woods in Italy itself, the consequent decrease in the quantity of rain, the shrinking of the streams, and the disappearance of the wa-

ter from the surface, has been the increased unhealthiness of the country, and the more extended range of the malaria. (*Arnold's History of Rome*, vol. 1, p. 501, *seqq.*)

ITALICA, I. the capital of the Peligni in Italy. (*Vid.* Corfinium.)—II. A city of Spain, north of Hispalis, and situate on the western side of the river Batis. (*Strabo*, 141.—*Oros.*, 5, 23.) It was founded by Publius Scipio in the second Punic war, who placed here the old soldiers whom age had incapacitated from the performance of military service. (*Appian*, *B. Hisp.*, c. 38.—*Cæs.*, *B. Civ.*, 2, 20.) It was the birthplace of the Emperor Trajan, and is supposed to correspond with *Sevilla la Vieja*, about a league distant from the city of *Seville*. (*Surita*, *ad It. Ant.*, p. 413, 432.—*Florez*, *Esp. S. F.*, 12, p. 227.—*Ukert*, *Geogr.*, vol. 2, p. 372.)

ITALICUS, a poet. (*Vid.* Silius Italicus.)

ITĀLUS, a fabled monarch of early Italy. (Consult remarks under the article *Italia*, page 693, col. 1.)

ΙΤΗΛΑ, a celebrated island in the Ionian Sea, north-east of Cephalonia. It lies directly south of Leucadia, from which it is distant about six miles. The extent of this celebrated island, as given by ancient authorities, does not correspond with modern computation. Dicaearchus describes it as narrow, and measuring eighty stadia, meaning probably in length (*Græc. Stat.*, v. 51), but Strabo (435) affirms, in circumference, which is very wide of the truth, since it is not less than thirty miles in circuit, or, according to Pliny (4, 12), twenty-five. Its length is nearly seventeen miles, but its breadth not more than four. Ithaca is well known as the native island of Ulysses. Eustathius asserts (*ad Il.*, 2, 632) that it derived its name from the hero Ithacus, who is mentioned by Homer (*Od.*, 17, 207). That it was throughout rugged and mountainous we learn from more than one passage of the *Odyssey*, but especially from the fourth book, v. 605, *seqq.*—It is evident, from several passages of the same poem, that there was also a city named Ithaca, probably the capital of the island, and the residence of Ulysses (3, 80). Its ruins are generally identified with those crowning the summit of the hill of *Aito*. (*Dodwell*, vol. 1, p. 66.) "The Venetian geographers," observes Sir William Gell, "have in a great degree contributed to raise doubts concerning the identity of the modern with the ancient Ithaca, by giving in their charts the name of *Val di Compare* to this island. That name, however, is totally unknown in the country, where the isle is invariably called *Ithaca* by the upper ranks, and *Theaki* by the vulgar. It has been asserted in the north of Europe, that Ithaca is too inconsiderable a rock to have produced any contingent of ships which could entitle its king to so much consideration among the neighbouring isles; yet the unrivalled excellence of its port has in modern times created a fleet of 50 vessels of all denominations, which trade to every part of the Mediterranean, and from which four might be selected capable of transporting the whole army of Ulysses to the shores of Asia." The same writer makes the population of the island 8000. It is said to contain sixty-six square miles. (*Gell's Geography and Antiquities of Ithaca*, p. 30.)

ITHACSIÆ, I. three islands opposite Vibo, on the coast of Bruttium. They are thought to answer to the modern *Braces*, *Praca*, and *Torricella*. (*Bischoff und Möller*, *Wörterb. der Geogr.*, p. 651.)—II. Baiæ is called by Silius Italicus "*sedes Ithacsiæ Baii*," because founded by Baius, the pilot of Ulysses, according to the poetic legends of antiquity. (*Sil. Ital.*, 8, 539.—Compare *Lycephron*, *Cassand.*, 694.—*Tzetzes*, *ad loc.*)

ΙΤΗΘΝΕ, I. a town of Thessaly, in the vicinity of Metropolis. It is conceived by some modern travellers to have been situated on one of the summits now occupied by the singular convents of *Meteora*. (*Hol-*

land's Travels, vol. 1, 349.—*Pouqueville*, vol. 3, p. 334.) Cramer, however, thinks it ought to be looked for to the north of the Peneus, near *Ardam* and *Petchouri*.—II. A fortress of Messenia, on a mountain of the same name. It was celebrated for the long and obstinate defence (ten years) which the Messenians there made against the Spartans in their last revolt. The mountain was said to have derived its name from Ithome, one of the nymphs that nourished Jupiter. On the summit was the temple of Jupiter Ithomatas, to whom the mountain was especially dedicated. Strabo compares the Messenian Acropolis to *Aerocornithus*, being situated, like that citadel, on a lofty and steep mountain, enclosed by fortified lines which connected it with the town. Hence they were justly deemed the two strongest places in the Peloponnesus. When Philip, the son of Demetrius, was planning the conquest of the peninsula with Demetrius of Pharos, the latter advised him to seize first the horns of the heifer, which would secure to him possession of the animal. By these enigmatical expressions he designated the Peloponnesus, and the two bulwarks above mentioned. (*Strab.*, 361.—*Polyb.*, 7, 11.) Scylax says Ithome was eighty stadia from the sea. (*Periplus*, p. 16.)

ITIVS PORTUS, a harbour of Gaul, whence Cæsar set sail for Britain. Cæsar describes it no farther than by saying, that from it there was the most convenient passage to Britain, the distance being about 30 miles. (*B. G.*, 5, 2.) *Calais*, *Boulogne*, and *Etaples* have each their respective advocates for the honour of being the Itius Portus of antiquity. The weight of authority, however, is in favour of *Witsand* or *Vissan*; and with this opinion D'Anville coincides. Cæsar landed at Portus Lemanis or *Lymne*, a little below Dover. For a long time this was the principal crossing-place. In a later age, however, the preference was given to *Gessoriacum* or *Boulogne* in Gaul, and *Rutupiæ* or *Rieborough* in Britain. Lemaire, however, is in favour of making the Itius Portus identical with *Gessoriacum*, as others had been before him. (*Ind. Geogr. ad Cæs.*, *B. G.*, p. 291.)

ITVNE, *Æstuarium*, now *Solway Firth*, in Scotland.

ITURÆA, a country of Palestine, so called from Itur or Jetur, one of the sons of Ishmael, who settled in it; but whose posterity were either driven out or subdued by the Amorites, when it is supposed to have formed part of the kingdom of Bashan, and subsequently of the half tribe of Manassah east of Jordan; but, as it was situated beyond the southern border of Mount Hermon, called the *Djebel Heish*, this is doubtful. It lay on the northeastern side of the land of Israel, between it and the territory of Damascus or Syria; and is supposed to have been the same country at present known by the name of *Djedour*, on the east of the *Djebel Heish*, between Damascus and the Lake of Tiberias. The Itureans being subdued by Aristobulus, the high-priest and governor of the Jews, B.C. 106, were forced by him to embrace the Jewish religion, and were at the same time incorporated into the state. Philip, one of the sons of Herod the Great, was tetrarch or governor of this country when John the Baptist commenced his ministry. (*Plin.*, 5, 23.—*Joseph.*, *Ant. Jud.*, 13, 19.—*Epiph.*, *Hæres.*, 19.—*Lact.*, 3, 1.)

ITVS, son of Tereus, king of Thrace, by Procne, daughter of Pandion, king of Athens. He was killed by his mother when he was about six years old, and served up before his father. He was changed, according to one account, into a pheasant, his mother into a swallow, and his father into an owl. (*Vid.* *Philomela*.—*Ovid*, *Met.*, 6, 620.—*Amor.*, 2, 14, 29.—*Horat.*, *Od.*, 4, 12.)

JUBA, I. a son of Hiempsal, king of Numidia, succeeded his father about 50 B.C. He was a warm supporter of the senatorial party and Pompey, being

moved, it is said, to this course by a gross insult which, in his youth, he had received from Cæsar. He gained, B.C. 49, a great victory over Curio, Cæsar's lieutenant in Africa. After the battle of Pharsalia and the death of Pompey, he continued steady to his cause; and when Cæsar invaded Africa, B.C. 46, he supported Scipio and Cato with all his power, and in the first instance reduced the dictator to much difficulty. The battle of Thapsus, however, turned the scale in Cæsar's favour. Juba fled, and, finding that his subjects would not receive him, put an end to his life in despair, along with Petreus. (*Vid. Petreus.*) His connexion with Cato has suggested the underplot of Addison's tragedy. (*Plut., Vit. Pomp.—Id., Vit. Cæs.—Flor., 4, 12.—Sueton., Vit. Jul., 35.—Lucan, 4, 690.—Pater., 2, 54.*)—11. The second of the name, was son of the preceding. He was carried to Rome by Cæsar, kindly treated, and well and learnedly educated. He gained the friendship, and fought in the cause, of Augustus, who gave him the kingdom of Mauritania, his paternal kingdom of Numidia having been erected into a Roman province. Juba cultivated diligently the arts of peace, was beloved by his subjects, and had a high reputation for learning. He wrote, in Greek, of Arabia, with observations on its natural history; of Assyria; of Rome; of painting and painters; of theatres; of the qualities of animals; on the source of the Nile, &c., all which are now lost. Juba married Cleopatra, the daughter of Antony and Cleopatra, queen of Egypt. Strabo, in his sixth book, speaks of Juba as living, and in his seventeenth and last book as then just dead. This would probably fix his death about A.D. 17. (*Clinton, Fast. Hellen., vol. 2, p. 551, in notis.—Phot., Cod., 161.—Athenæus, 8, p. 343, c.—Plut., Mor., p. 269, c., &c.*—Consult the dissertation of the Abbé Sevin, *Sur la Vie et les Ouvrages de Juba*, in the *Mém. de l'Acad. des Insér.*, &c., vol. 4, p. 457, seqq.)

JUDÆA, a province of Palestine, forming the southern division. It did not assume the name of Judæa until after the return of the Jews from the Babylonian captivity; though it had been denominated, long before, the kingdom of Judæa, in opposition to that of Israel. After the return, the tribe of Judah settled first at Jerusalem; but afterward, spreading gradually over the whole country, they gave it the name of Judæa. Judæa, being the seat of religion and government, claimed many privileges. It was not lawful to intercalate the year out of Judæa, while they might do it in that country. Nor was the sheaf of first-fruits of the barley to be brought from any other district than Judæa, and as near as possible to Jerusalem. The extent of this remarkable country has varied at different times, according to the nature of the government which it has enjoyed or been compelled to acknowledge. When it was first occupied by the Israelites, the land of Canaan, properly so called, was confined between the shores of the Mediterranean and the western bank of the Jordan; the breadth at no part exceeding fifty miles, while the length hardly amounted to three times that space. At a later period, the arms of David and of his immediate successor carried the boundaries of the kingdom to the Euphrates and Orontes on the one hand, and in an opposite direction to the remotest confines of Edom and Moab. The population, as might be expected, has undergone a similar variation. It is true, that no particular in ancient history is liable to a better founded suspicion, than the numerical statements which respect nations and armies; for pride and fear have in their turn contributed not a little to exaggerate in rival countries the amount of persons capable of taking a share in the field of battle. Proceeding on the usual grounds of calculation, we must infer, from the number of warriors whom Moses conducted through the desert, that the Hebrew people, when they crossed the Jordan, did not fall short of two millions; while,

from the facts recorded in the book of Samuel, we may conclude with greater confidence that the enrolment made under the direction of Joab must have returned a gross population of five millions and a half. The present aspect of Palestine, under an administration where everything decays and nothing is renewed, can afford no just criterion of the accuracy of such statements. Hasty observers have indeed pronounced, that a hilly country, destitute of great rivers, could not, even under the most skilful management, supply food for so many mouths. But this precipitate conclusion has been vigorously combated by the most competent judges, who have taken pains to estimate the produce of a soil, under the fertilizing influence of a sun which may be regarded as almost tropical, and of a well-regulated irrigation, which the Syrians knew how to practise with the greatest success. Canaan, it must be admitted, could not be compared to Egypt in respect to corn. There is no Nile to scatter the riches of an inexhaustible fecundity over its valleys and plains. Still it was not without reason that Moses described it as "a good land, a land of brooks of water, of fountains, and depths that spring out of valleys and hills; a land of wheat, and barley, and vines, and fig-trees, and pomegranates; a land of oil-olive and honey; a land wherein thou shalt eat bread without scarceness; thou shalt not lack anything in it; a land whose stones are iron, and out of whose hills thou mayest dig brass." (*Deuter., 8, 7, seqq.*) The reports of the latest travellers confirm the accuracy of the picture drawn by this divine legislator. Near Jericho the wild olives continue to bear berries of a large size, which give the finest oil. In places subjected to irrigation, the same field, after a crop of wheat in May, produces pulse in autumn. Several of the trees are continually bearing flowers and fruit at the same time, in all their stages. The mulberry, planted in straight rows in the open field, is festooned by the tendrils of the vine. If this vegetation seems to languish or become extinct during the extreme heats—if in the mountains it is at all seasons detached and interrupted—such exceptions to the general luxuriance are not to be ascribed simply to the general character of all hot climates, but also to the state of barbarism in which the great mass of the present population is immersed. Even in our day, some remains are to be found of the walls which the ancient cultivators built to support the soil on the declivities of the mountains; the form of the cisterns in which they collected the rain-water; and traces of the canals by which this water was distributed over the fields. These labours necessarily created a prodigious fertility under an ardent sun, where a little moisture was the only requisite to revive the vegetable world. The accounts given by native writers respecting the productive qualities of Judæa are not in any degree opposed even by the present aspect of the country. The case is exactly the same with some islands in the Archipelago; a tract from which a hundred individuals can hardly draw a scanty subsistence, formerly maintained thousands in affluence. Moses might justly say that Canaan abounded in milk and honey. The flocks of the Arabs still find in it a luxuriant pasture, while the bees deposit in the holes of the rocks their delicious stores, which are sometimes seen flowing down the surface. The opinions just stated in regard to the fertility of ancient Palestine, receive an ample confirmation from the Roman historians, to whom, as a part of their extensive empire, it was intimately known. Tacitus especially (*Hist., 5, 6*), in language which he appears to have formed for his own use, describes its natural qualities with the utmost precision, and, as is his manner, suggests rather than specifies a catalogue of productions, the accuracy of which is verified by the latest observations. The soil is rich, and the atmosphere dry; the country yields all the fruits

which are known in Italy, besides balm and dates. But it has never been denied that there is a remarkable difference between the two sides of the ridge which forms the central chain of Judæa. On the western acclivity, the soil rises from the sea towards the elevated ground in four distinct terraces, which are covered with an unfading verdure. The shore is lined with mastic-trees, palms, and prickly pears. Higher up, the vines, the olives, and the sycamores amply repay the labour of the cultivator; natural groves arise, consisting of evergreen oaks, cypresses, andrachnes, and turpentine. The face of the earth is embellished with the rosemary, the cytisus, and the hyacinth. In a word, the vegetation of these mountains has been compared to that of Crete. European visitors have dined under the shade of a lemon-tree as large as one of our strongest oaks, and have seen sycamores, the foliage of which was sufficient to cover thirty persons, along with their horses and camels. On the eastern side, however, the scanty coating of mould yields a less magnificent crop. From the summit of the hills a desert stretches along to the Lake Asphalites, presenting nothing but stones and ashes, and a few thorny shrubs. The sides of the mountains enlarge, and assume an aspect at once more grand and more barren. By little and little, the scanty vegetation languishes and dies; even mosses disappear, and a red, burning hue succeeds to the whiteness of the rocks. In the centre of this amphitheatre there is an arid basin, enclosed on all sides with summits scattered over with a yellow-coloured pebble, and affording a single aperture to the east, through which the surface of the Dead Sea and the distant hills of Arabia present themselves to the eye. In the midst of this country of stones, encircled by a wall, we perceive extensive ruins, stunted cypresses, bushes of the aloe and prickly pear, while some huts of the meanest order, resembling whitewashed sepulchres, are spread over the desolated mass. This spot is Jerusalem. (*Belon, Observations, &c.*, p. 140.—*Hasselquist, Travels*, p. 56.—*Shultz's Travels*, vol. 2, p. 86.)—This melancholy delineation, which was suggested by the state of the Jewish metropolis in the third century, is not quite inapplicable at the present hour. The scenery of external nature is the same, and the general aspect of the venerable city is very little changed. But as beauty is strictly a relative term, and is everywhere greatly affected by association, we must not be surprised when we read in the works of Eastern authors the high encomiums which are lavished upon the vicinity of the holy capital. Abulfeda, for example, maintains, not only that Palestine is the most fertile part of Syria, but also that the neighbourhood of Jerusalem is one of the most fertile districts of Palestine. In his eye, the vines, the fig-trees, and the olive-groves, with which the limestone cliffs of Judæa were once covered, identified themselves with the richest returns of agricultural wealth, and more than compensated for the absence of those spreading fields, waving with corn, which are necessary to convey to the mind of a European the ideas of fruitfulness, comfort, and abundance.—Following the enlightened narrative of Malte-Brun, the reader will find that southward of Damascus, the point where the modern Palestine may be said to begin, are the countries called by the Romans Auranitis and Gaulonitis, consisting of one extensive and noble plain, bounded on the north by Hermon or Djebel-el-Sheik, on the southwest by Djebel-Edjan, and on the east by Haouran. In all these countries there is not a single stream which retains its water in summer. The most of the villages have their pond or reservoir, which they fill from one of the wadi or brooks during the rainy season. Of all these districts, Haouran is the most celebrated for the culture of wheat. Nothing can exceed in grandeur the extensive undulations of their fields, moving

like the waves of the ocean in the wind. Bothin, or Batanea, on the other hand, contains nothing except calcareous mountains, where there are vast caverns, in which the Arabian shepherds live like the ancient Troglodytes. Here a modern traveller, Dr. Seetzen, discovered, in the year 1816, the magnificent ruins of Gerasa, now called Djerash, where three temples, two superb amphitheatres of marble, and hundreds of columns still remain, among other monuments of Roman power. But by far the finest thing that he saw was a long street, bordered on each side with a splendid colonnade of Corinthian architecture, and terminating in an open space of a semicircular form, surrounded with sixty Ionic pillars. In the same neighbourhood, the ancient Gilead is distinguished by a forest of stately oaks, which supply wealth and employment to the inhabitants. Peræa presents on its numerous terraces a mixture of vines, olives, and pomegranates. Karak-Moab, the capital of a district corresponding to that of the primitive Moabites, still meets the eye, but is not to be confounded with another town of a similar name in the Stony Arabia. (*Seetzen. — Annales des Voyages*, vol. 1, p. 398.—*Correspondence de M. Zach*, p. 425.)—The countries now described lie on the eastern side of the river Jordan. But the same stream, in the upper part of its course, forms the boundary between Gaulonitis and the fertile Galilee, which is identical with the modern district of Saffad. This town, which is remarkable for the beauty of its situation amid groves of myrtle, is supposed to be the ancient Bethulia, which was besieged by Holofernes. Tabaria, an insignificant place, occupies the site of Tiberias, which gave its name to the lake more generally known by that of Genesareth, or the Sea of Galilee; but industry has now deserted its borders, and the fisherman with his skiff and his nets no longer animates the surface of its waters. Nazareth still retains some portion of its former consequence. Six miles farther south stands the hill of Thabor, sometimes denominated Itabyrius, presenting a pyramid of verdure crowned with olives and sycamores. From the top of this mountain, the reputed scene of the transfiguration, we look down on the river Jordan, the Lake of Genesareth, and the Mediterranean Sea. (*Maunderell*, p. 60.)—Galilee, says Chateaubriand (*Itin.*, 2, 132), would be a paradise were it inhabited by an industrious people under an enlightened government. Vine-stocks are to be seen here a foot and a half in diameter, forming, by their twining branches, vast arches and extensive ceilings of verdure. A cluster of grapes, two or three feet in length, will give an abundant supper to a whole family. The plains of Esdraelon are occupied by Arab tribes, around whose brown tents the sheep and lambs gambol to the sound of the reed, which at nightfall calls them home.—Proceeding from Galilee towards the metropolis, we enter the land of Samaria, comprehending the modern districts of Areta and Nablous. In the former we find the remains of Cesarea; and on the Gulf of St. Jean d'Acre stands the town of Caypha, where there is a good anchorage for ships. On the southwest of this gulf extends a chain of mountains, which terminates in the promontory of Carmel, a name famous in the annals of our religion. There Elijah proved by miracles the divinity of his mission; and there, in the middle ages of the church, resided thousands of Christian devotees, who sought a refuge for their piety in the caves of the rocks. Then the mountain was wholly covered with chapels and gardens, whereas at the present day nothing is to be seen but scattered ruins amid forests of oak and olives, the bright verdure being only relieved by the whiteness of the calcareous cliffs over which they are suspended. The heights of Carmel, it has been frequently remarked, enjoy a pure and enlivening atmosphere, while the lower grounds of Samaria and Galilee are obscured

by the densest fogs.—The Shechem of the Scriptures, successively known by the names of Neapolis and *Nablous*, still contains a considerable population, although its dwellings are mean and its inhabitants poor. The ruins of Samaria itself are now covered with orchards; and the people of the district, who have forgotten their native dialect, as well, perhaps, as their angry disputes with the Jews, continue to worship the Deity on the verdant slopes of Gerizim.—Palestine, agreeably to the modern acceptance of the term, embraces the country of the ancient Philistines, the most formidable enemies of the Hebrew tribes prior to the reign of David. Besides Gaza, the chief town, we recognise the celebrated port of Jaffa or Yaffa, corresponding to the Joppa mentioned in the sacred writings. Repeatedly fortified and dismantled, this famous harbour has presented such a variety of appearances, that the description given of it in one age has hardly ever been found to apply to its condition in the very next. Betlehem, where the divine Messiah was born, is a large village inhabited promiscuously by Christians and Mussulmans, who agree in nothing but their detestation of the tyranny by which they are both unmercifully oppressed. The locality of the sacred manger is occupied by an elegant church, ornamented by the pious offerings of all the nations of Europe. It is not our intention to enter into a more minute discussion of those old traditions, by which the particular places rendered sacred by the Redeemer's presence are still marked out for the veneration of the faithful. They present much vagueness, mingled with no small portion of unquestionable truth. At all events, we must not regard them in the same light in which we are compelled to view the story that claims for Hebron the possession of Abraham's tomb, and attracts on this account the veneration both of Nazarenes and Moslems.—To the northeast of Jerusalem, in the large and fertile valley called El-Gaur, and watered by the Jordan, we find the village of *Richa*, near the ancient Jericho, denominated by Moses the City of Palms. This is a name to which it is still entitled; but the groves of opobalsamum, or balm of Mecca, have long disappeared; nor is the neighbourhood any longer adorned with those singular flowers known among the Crusaders by the familiar appellation of Jericho roses. A little farther south two rough and barren chains of hills encompass with their dark steeps a long basin formed in a clay soil mixed with bitumen and rock-salt. The water contained in this hollow is impregnated with a solution of different saline substances, having lime, magnesia, and soda for their base, partially neutralized with muriatic and sulphuric acid. The salt which it yields by evaporation is about one fourth of its weight. The bituminous matter rises from time to time from the bottom of the lake, floats on the surface, and is thrown out on the shores, where it is gathered for various purposes. (*Vid.* *Mare Mortuum*.)—This brief outline of the geographical limits and physical character of the Holy Land must suffice here. Details much more ample are to be found in numerous works, whose authors, fascinated by the interesting recollections which almost every object in Palestine is fitted to suggest, have endeavoured to transfer to the minds of their readers the profound impressions which they themselves experienced from a personal review of ancient scenes and monuments. But we purposely refrain from the minute description to which the subject so naturally invites us, because, by pursuing such a course as this, we would be unavoidably led into a train of local particularities, while setting forth the actual condition of the country and of its venerable remains. However, we supply, in the following table, the means of comparing the division or distribution of Canaan among the twelve tribes, with that which was afterward adopted by the Romans.

| | Ancient Canaanitish Division. | Israelitish Division. | Roman Division. |
|--------------------|-------------------------------|--|-----------------|
| Sidonians, | | Tribe of Asher (in Libanus) | Upper Galilee. |
| Unknown, | | Naphtali (northwest of the Lake of Genesareth) | |
| Perizzites, | | Zebulun (west of that lake) | |
| The same, | | Issachar (Valley of Esdraelon, Mount Tabor) | Lower Galilee. |
| Hivites, | | Half tribe of Manasseh (Dora and Cesarea) | |
| The same, | | Ephraim (Shechem, Samaria) | Samaria. |
| Jebusites, | | Benjamin (Jericho, Jerusalem) | |
| Amorites, | | Judah (Hebron, Judæa proper) | Judæa. |
| Hittites, | | Simeon (southwest of Judah) Dan (Joppa) | |
| Philistines, | | | |
| Moabites, | | Reuben (Heshbon, Peræa) | Peræa. |
| Ammonites, | | Gad (Decapolis, Ammonitis) | |
| Kingdom of Bashan, | | Half tribe of Manasseh (Gaulonitis, Batanea) | |

In a pastoral country, such as that beyond the river Jordan especially, where the desert in most parts bordered upon the cultivated soil, the limits of the several possessions could not at all times be distinctly marked. It is well known, besides, that the native inhabitants were never entirely expelled by the victorious Hebrews, but that they retained, in some instances by force, and in others by treaty, a considerable portion of land within the borders of all the tribes: a fact which is connected with many of the defections and troubles into which the Israelites subsequently fell. (*Russell's Palestine*, p. 26, *seqq.*)

JUGURTHA, the illegitimate son of Manastabal, by a concubine, and grandson of Masinissa. He was brought up under the care of his uncle Micipsa, king of Numidia, who educated him along with his two sons. As, however, Jugurtha was of an ambitious and aspiring disposition, Micipsa sent him, when grown up, with a body of troops, to join Scipio Æmilianus in his war against Numantia in Spain, hoping to lose, by the chances of war, a youth who might otherwise, at some subsequent period, threaten the tranquillity of his children. His hopes, however, were frustrated. Jugurtha so distinguished himself as to become a great favourite with Scipio, who, at the conclusion of the war, sent him back to Africa with strong recommendations to Micipsa. Micipsa then adopted him, and declared him joint heir with his own two sons Adherbal and Hiempsal. After Micipsa's death (B.C. 118), Jugurtha, aspiring to the undivided possession of the kingdom, effected the murder of Hiempsal, and obliged Adherbal to escape to Rome, where he appealed to the senate. Jugurtha, however, found means to bribe many of the senators, and a commission was sent to Africa, in order to divide Numidia between the two princes. The commission gave the best portion to Jugurtha, who, not long after their departure, invaded the territory of his cousin, defeated him, besieged him in Cirta, and, having obliged him to surrender, put him to a cruel death; and this almost under the eyes of Scaurus and others, whom the Roman senate had sent as umpires between the two rivals (B.C. 112). This news caused great irritation at Rome, and war was declared against Jugurtha. After some fighting,

however, he obtained from the consul Calpurnius, under the most favourable conditions, the quiet possession of the usurped kingdom. But this treaty was not ratified at Rome; Calpurnius was recalled, and the new consul Posthumus Albinus was appointed to the command in Africa. Meanwhile Jugurtha, being summoned, appeared at Rome; but as he then succeeded in bribing several of the senators, and also Bæbius, a tribune of the people, no judgment was given. Inboldened by this success, he thereupon caused Massiva, son of his uncle Gulussa, whom he suspected of aiming at the kingdom, to be assassinated in the Roman capital. The crime was fixed upon him; but as he was under the public guarantee, the senate, instead of bringing him to trial, ordered him to leave Rome immediately. It was while departing from the city on this occasion that he is said to have uttered those memorable words against the corruption of the Roman capital which are recorded in the pages of Sallust: "*Ah, renal city, and destined quickly to perish, if it could but find a purchaser!*" Posthumus was now sent to his province in Africa, to prosecute the war; but he soon returned to Rome without having effected anything, leaving the army under the command of his brother Aulus Posthumus, who allowed himself to be surprised in his camp by Jugurtha, to whom he surrendered; and his troops, having passed under the yoke, evacuated Numidia. The new consul Metellus, arriving soon after with fresh troops, carried on the war with great vigour, and, being himself above temptation, reduced Jugurtha to the last extremity. Caius Marius was serving as lieutenant to Metellus, and in the year B.C. 107, supplanted him in the command. Jugurtha, meantime, having allied himself with Bocchus, king of Mauritania, gave full employment to the Romans. Marius took the town of Capsa, and in a hard-contested battle defeated the two kings. Bocchus now made offers of peace, and Marius sent to him his quaestor Sylla, who, after much negotiation, induced the Mauritanian king to give up Jugurtha into the hands of the Romans, as the price of his own peace and security. Jugurtha followed in chains with his two sons, the triumph of Marius, after which he was thrown into a subterranean dungeon, where he was starved to death, or, according to others, was strangled. His sons were sent to Venusia, where they lived in obscurity. The war against Jugurtha lasted five years; it ended B.C. 106, and has been immortalized by the pen of Sallust. (*Sall., Bell. Jug.—Plut., Vit. Mar.*) "It is said," observes Plutarch, "that when Jugurtha was led before the car of the conqueror, he lost his senses. After the triumph he was thrown into prison, where, in their haste to strip him, some tore his robe off his back, and others, catching eagerly at his pendants, pulled off the tips of his ears along with them. When he was thrust down naked into the dungeon, all confused, he said, with a frantic smile, 'Heavens! how cold is this bath of yours!' There, having struggled for six days with extreme hunger, and to the last hour labouring for the preservation of life, he came to such an end as his crimes deserved." (*Plut., Vit. Mar.*)

JULIA LEX, I. *Agriaria*, proposed by Julius Cæsar in his first consulship, A.U.C. 694. Its object was to distribute the lands of Campania and Stella to 20,000 poor citizens, who had three children or more. (*Cic., Ep. ad Att.*, 2, 16.—*Vell. Patere.*, 2, 44.)—II. Another by the same, entitled *de Publicanis*, about permitting to the farmers-general a third part of what they had stipulated to pay. (*Cic., pro Planc.*, 16.—*Suet., Vit. Jul.*, 20.)—III. Another by the same, for the ratification of all Pompey's acts in Asia. (*Suet., l. c.*)—IV. Another by the same, *de Provinciis ordinandis*. This was an improvement on the Cornelian law about the provinces, and ordained that those who had been prætors should not command a province

above one year, and those who had been consuls not above two years. It also ordained that Achaia, Thessaly, Athens, and, in fact, all Greece, should be free, and should use their own laws. (*Cic., Phil.*, 1, 8.—*Id. in Pis.*, 16.—*Dio Cass.*, 43, 25.)—V. Another by the same, *de Judicibus*, ordering the *Judices* to be chosen from the senators and equites, and not from the *tribuni æarii*. (*Sueton., Vit. Jul.*, 41.—*Cic., Phil.*, 1, 9.)—VI. Another by the same, *de Reptundis*, very severe against extortion. It is said to have contained above 100 heads. (*Cic., Ep. ad Fam.*, 8, 7.—*Suet., Vit. Jul.*, 43.)—VII. Another by the same, *de liberis proscriptorum*, that the children of those proscribed by Sylla should be admitted to enjoy preferments. (*Sueton., Vit. Jul.*, 41.)—VIII. Another by the same. This was a sumptuary law. It allowed an expenditure of 200 sesterces on the *dies profesti*, 300 on the Calends, nones, ides, and some other festivals; 1000 at marriage feasts, and similar extraordinary entertainments. Gellius ascribes this law to Augustus, but it seems to have been enacted in succession by both Cæsar and him. By an edict of Augustus or Tiberius, the allowance for an entertainment was raised, in proportion to its solemnity, from 300 to 2000 sesterces. (*Aulus Gellius*, 2, 24.—*Dio Cass.*, 54, 2.)—IX. Another by Augustus, concerning marriage, entitled *de Maritandis Ordinibus*. (*Vid. Papia-Poppæa Lex.*)—X. Another by the same, *de adulteris*, punishing adultery.—XI. Another, *de tutoribus*, by the same. It enacted that guardians should be appointed for orphans in the provinces, as at Rome, by the Atilian Law. (*Just., Inst. Atil. Tut.*)

JULIA, I. a daughter of Julius Cæsar by Cornelia, celebrated for her beauty and the virtues of her character. She had been affianced to Servilius Cæpio, and was on the point of being given to him in marriage, when her father bestowed her upon Pompey. (*Plut., Vit. Pomp.*, 47.—*Appian., Bel. Civ.*, 1, 14.) Julia possessed great influence both over her father and husband, and, as long as she lived, prevented any cut-break between them. Her sudden death, however, in childbed, severed the tie that had in some degree bound Pompey to his father-in-law, and no private considerations any longer existed to allay the jealousies and animosities which political disputes might enkindle between them. The amiable character of Julia, and her constant affection for her husband, gained for her the general regard of the people; and this they testified by insisting on celebrating her funeral in the Campus Martius, a compliment scarcely ever paid to any woman before. It is said that Pompey had always loved her tenderly, and the purity and happiness of his domestic life is one of the most delightful points in his character. (*Sueton., Vit. Jul.*, 21.—*Id. ib.*, 26.—*Id. ib.*, 84.)—II. The sister of Julius Cæsar. She married M. Attius Balbus, and became by him the mother of Octavia Minor and Augustus. (*Sueton., Vit. Jul.*, 74.—*Id., Vit. Aug.*, 4.—*Id. ib.*, 8.)—III. The aunt of Julius Cæsar. At her decease, her nephew pronounced an eulogy over her remains from the rostra. (*Sueton., Vit. Jul.*, 6.)—IV. The daughter of Augustus by his first wife Scribonia. As he had no children by Livia, whom he had subsequently espoused, Julia remained sole heiress of the emperor, and the choice of her husband became a matter of great importance. She was first married to her cousin Claudius Marcellus, the nephew of Augustus by his sister Octavia (*Tacit., Ann.*, 1, 3.—*Sueton., Vit. Aug.*, 63), and the individual celebrated by Virgil in those famous lines of the sixth Æneid, for which Octavia so largely rewarded him. But Marcellus dying young and without children, Augustus selected for the second husband of his daughter his oldest friend and most useful adherent, M. Vipsanius Agrippa. This marriage seemed to answer all the wishes of Augustus, for Julia became the mother of five children. Caius, Lu-

cius, Julia, Agrippina, and Agrippa Postumus. Agrippa died A.U.C. 741, and Julia was married, for the third time, to Tiberius Claudius Nero, the son of Livia, and afterward emperor. Tiberius subsequently, for whatever reasons, thought proper to withdraw from Rome to the island of Rhodes, where he lived in the greatest retirement. During his absence, his wife Julia was guilty of such gross infidelities towards him, that Augustus himself divorced her in the name of his son-in-law, and banished her to the island of Pandataria, off the Campanian coast, where she was closely confined for some time, and treated with the greatest rigour; nor would Augustus ever forgive her, or receive her again into his presence, although he afterward removed her from Pandataria to Rhegium, and somewhat softened the severity of her treatment. When her husband Tiberius ascended the throne, she was again severely dealt with, and finally died of ill-treatment and starvation (*ὁπὸ κακονόμίας καὶ λιμοῦ*.—*Zonaras*, p. 548.—*Sueton.*, *Vit. Aug.*, 63.—*Id.*, *Vit. Aug.*, 65.—*Id.*, *Vit. Tib.*, 7.—*Id. ib.*, 50.—*Tacit.*, *Ann.*, 1, 53.)—V. The grand-daughter of Augustus, and daughter of Agrippa and Julia (IV). She was married to L. Paulus, but, imitating the licentious conduct of her mother, she was banished by Augustus for her adulterous practices to the island of Tremnus, off the coast of Apulia, where she continued to live for the space of 20 years, and where at last she terminated her existence. (*Tacit.*, *Ann.*, 4, 71.)—VI. A daughter of Drusus Cæsar, the son of Tiberius, by Livia or Livilla, the daughter of Nero Claudius Drusus. She was married first to Nero Cæsar, son of Germanicus and Agrippina, and afterward to Rubellius Blandus. She was cut off by the intrigues of Messalina, A.U.C. 796. (*Tacit.*, *Ann.*, 3, 29.—*Id. ib.*, 6, 27.—*Id. ib.*, 13, 19.)—VII. Daughter of Caligula and Milonia Cæsonia. Her frantic father carried her to the temples of all the goddesses, and dedicated her to Minerva, as to the patroness of her education. She discovered in her infancy strong indications of the cruelty that branded both her parents. She suffered death with her mother after the assassination of Caligula. (*Sueton.*, *Vit. Calig.*, 25.—*Id. ib.*, 59.)—VIII. A Syrian female, daughter of Bassianus, priest of the Sun. She became the wife of Severus before his advancement to the throne, and after the death of his first consort. The superstitious Roman was determined, it seems, in his choice, by hearing that Julia had been born with a royal nativity; in other words, that she was destined to be the wife of a sovereign prince. (*Spartian.*, *Vit. Sev.*, 3, *seqq.*) Her full name was Julia Domna (*Salmas.*, *ad Spart.*, *Vit. Sev.*, 20), the latter part of it not being contracted, as some suppose, from Domina, but being the actual surname of a family. (*Tristan*, *Comment. Hist.*, vol. 2, p. 119, *seqq.*—*Menag.*, *Amæn. Jur.*, c. 25.) Julia is said to have been a female of cultivated mind and considerable literary attainments. She applied herself also to the study of philosophy, and employed a large portion of her time in listening to, and taking part in, the disputations of philosophers and sophists. Hence Philostratus calls her *φιλοσοφὸς Ἰουλῖα*. (*Vit. Sophist.*—*Philise.*—*Op.*, ed. Morcell, p. 617.) She disgraced herself, however, by her adulterous practices, and is even said to have conspired on one occasion against the life of her own husband. (*Spart.*, *Vit. Sev.*, 18.) Julia became by Severus the mother of Caracalla and Geta, the latter of whom was slain in her arms by the orders of his brother, in which struggle she herself was wounded. To increase, if possible, the anguish she must naturally have felt on this occasion, the brutal Caracalla ordered her to suppress every token of grief. (*Spart.*, *Vit. Gel.*, 5.) After the death of Caracalla and the accession of Macrinus, she put an end to her existence by starvation, her death being hastened by a cancer on the

bosom, which she had purposely irritated by a blow. (*Dio Cass.*, 78, 23.) On the nature of her death, as well as on the question of her incestuous union with Caracalla, consult the remarks of *Bayle*, *Hist. Dict.*, vol. 6, p. 448, *seqq.*, in *notis*.

JULIANUS, FLAVIUS CLAUDIUS, son of Julius Constantius, brother of Constantine the Great, was born A.D. 331. After Constantine's death, the soldiers massacred the brothers, nephews, and other relatives of that prince, in order that the empire should pass undisputed to his sons. (*Vid.* Constantius.) Two only escaped from this butchery, Julian, then six years old, and his half-brother Gallus, then thirteen years of age. Marcus, bishop of Arethusa, is said to have concealed them in a church. After a time, Constantius exiled Gallus into Ionia, and intrusted Julian to the care of Eusebius, bishop of Nicomedia. Julian was instructed in Greek literature by Mardonius, a learned eunuch, who had been teacher to his mother Basilina. At the age of fourteen or fifteen he was sent to join his brother Gallus at Macellum, a castle in Cappadocia, where they were treated as princes, but closely watched. The youths were taught the Scriptures, and were even ordained lecturers, and in that capacity publicly read the Bible in the church of Nicomedia. It appears that Constantius had the intention of making a priest of Julian, who had no inclination for that profession, and who is supposed to have already secretly abandoned the belief in the Christian doctrines. The death of Constantius and Constantine having left Constantius the sole master of the Roman world, that emperor, who was childless, sent for Gallus in March, A.D. 351, and created him Cæsar, and he allowed Julian to return to Constantinople to finish his studies. There Julian met with the sophist Libanius, who afterward became his friend and favourite. Constantius soon after again banished Julian to Nicomedia, where he became acquainted with some Platonic philosophers, who initiated him into their doctrines. He afterward obtained leave to proceed to Athens, where he devoted himself entirely to study. After the tragical death of Gallus in 355, Julian, who had again, for a time, awakened the jealous suspicions of his cousin, was recalled to court by the influence of the Empress Eusebia, his constant patroness, when Constantius named him Cæsar, and gave him the government of Gaul (which was then devastated by the German tribes), together with his sister Helena to wife. Julian made four campaigns against the Germans, in which he displayed great skill and valour, and freed Gaul from the barbarians, whom he pursued across the Rhine. He spent the winters at Lutetia (*Paris*), and became as much esteemed for his equitable and wise administration as for his military success. Constantius, always suspicious, ordered Julian to send him back some of the best legions in Gaul, to be employed against the Persians. When the time for marching came (A.D. 360), Julian assembled the legions at Lutetia, and there bade them an affectionate farewell, when an insurrection broke out among the soldiers, who saluted him as Augustus. Julian immediately sent messengers to Constantius to deprecate his wrath, but the death of the emperor happening at the time, left the throne open for him, A.D. 361. He proceeded to Constantinople, where, being proclaimed emperor in December of the same year, he reformed the pomp and prodigality of the household, issued several wise edicts, corrected many abuses, and established a court at Chalcedon, to investigate the conduct of those who had abused their influence under the preceding reign. Unfortunately, some innocent men were confounded with the guilty, among others Ursulus, whose condemnation Ammianus deploras (22, 3). On assuming the purple, Julian had openly professed the old religion of Rome, and had sacrificed as high-priest to the gods; and though, at the same time, he had issued

an edict of universal toleration, he soon showed a marked hostility to the Christians: he took the revenues from the churches, and ordered that those who had assisted in pulling down the heathen temples should rebuild them. This was the signal for a fearful reaction and persecution against the Christians in the provinces, where many were imprisoned, tormented, and even put to death. Julian restrained or punished some of these disorders, but with no very zealous hand. There was evidently a determined struggle throughout the empire between the old and the new religion, and Julian wished for the triumph of the former. He forbade the Christians to read, or teach others, the works of the ancient classic writers, saying that, as they rejected the gods, they ought not to avail themselves of the learning and genius of those who believed in them. (*Julian Op., Epist.*, 42, *ed. Spanh.*) He also forbade their filling any office, civil or military, and subjected them to other disabilities and humiliations. Julian has been called "*the Apostate*;" but it seems very doubtful whether, at any period of his life after his boyhood, he had been a Christian in heart. The bad example of the court of Constantius, and the schisms and persecutions that broke out in the bosom of the church, may have turned him against religion itself, while his vanity, of which he had a considerable share, and which was stimulated by the praises of the sophists, made him probably consider himself as destined to revive both the old religion and the glories of the empire. That he was no believer in the vulgar mythological fables is evident from his writings, especially the piece called "*the Cæsars*;" and yet he possessed great zeal for the heathen divinities, and he wrote orations in praise of the mother of the gods and the sun. Making every allowance for the difficulties of his position and the effect of early impressions, he may be fairly charged with a want of candour and of justice, and with much affectation bordering upon hypocrisy. If we choose to discard the invectives of Gregory of Nazianzus, of Cyril, and of Jerome, we may be allowed, at least, to judge him by the narrative of Ammianus, and by his own works, and the result is not favourable to his moral rectitude or his sobriety of judgment. A very learned and very temperate modern writer, Cardinal Gerdy, in his "*Considerations sur Julien*," in the 10th volume of his works, has so judged him; he has founded his opinion, not on the fathers, but on the accounts of Julian's panegyrists, Libanius and other heathen writers.—Julian, having resolved on carrying on the war against the Persians, repaired to Antioch, where he resided for several months. His neglected attire, his uncombed beard, and the philosophical austerity of his habits, drew upon him the sarcasms of the corrupt population of that city. The emperor revenged himself by writing a satire against them, called *Μισοπάγων* (*Misopogon*), and, what was worse, by giving them a rapacious governor.—It was during his residence at Antioch that Julian undertook to annul what he thought would prove a deadly blow to Christianity. An order was issued for rebuilding the temple of Jerusalem; the Jews were invited from all the provinces of the empire, to assemble on the holy mountain of their fathers, and a bold attempt was thus made to falsify the language of ancient prophecy, and annul, if we may venture so to speak, the decree which had been pronounced by the Almighty against his once chosen, but now rejected, people. The accomplishment of this daring and impious scheme was intrusted to Alypius, who had been governor of Britain, and every effort was made to ensure its success, as well on the part of the "imperial sophist" as on that of the Jews themselves. But the attempt was an unavailing one, and was signally and miraculously interrupted. Few historical facts, indeed, rest on graver and more abundant testimony. The narratives of Gregory of Nazianzus and

of Rufinus are confirmed in the fullest manner by Ammianus Marcellinus, himself a heathen writer: "When Alypius," observes Ammianus, "was plying the work vigorously, and the governor of the province was lending his aid, fearful globes of fire, bursting forth repeatedly from the earth close to the foundations, scorched the workmen, and rendered the place, after frequent trials on their part, quite inaccessible." (*Amm. Marcellinus*, 23, 1.—Compare *Rufin.*, 10, 37.—*Cassiod.*, 6, 43.—*Greg. Nazianz.*, *Orat.*, 4.—*Chrysostom.*, *Homil.*, 3, *adv. Jud.*—*Socrates*, 3, 20.—*Sozomen.*, 5, 22.—*Theodoretus*, 3, 15.) The Jewish rabbis, in their annals, attest the same fact; and even Basnage, though a determined enemy to such miracles, is nevertheless compelled, when speaking of this Jewish testimony, to remark, "*Cet aveu des Rabbins est d'autant plus considérable qu'il est injurieux à la nation, et que ces messieurs ne sont pas accoutumés à copier les ouvrages des Chrétiens.*" (*Hist. des Juifs*, liv. 6.) "This specious and splendid miracle," as Gibbon sneeringly terms it, has given rise to much diversity of opinion in modern times. Warburton strenuously advocates its authenticity, and most of the sounder theologians agree with him in this opinion. Lardner, however, doubts its truth. (*Jewish and Heathen Testimonies*, vol. 4, p. 47, *seqq.*) More sceptical writers speak of inflammable air, which had long been pent up in the vault under the temple-mountain, igniting and bursting forth on a sudden. (Consult *Michælis*, *Götting. Mag.*, 1783, page 772.) Salvete promptly settles the whole affair by supposing that it was merely the explosion of a mine, which had been prepared by the Christians! (*Des Sciences Occultes*, vol. 2, p. 224.)—Let us now return to Julian. Having set off at length from Antioch on his Persian expedition, with a brilliant army reckoned at sixty-five thousand men, he crossed the Euphrates, took several fortified towns of Mesopotamia, then crossed the Tigris, and made himself master of Ctesphion. Here his progress ended. The close Roman legions were harassed on all sides by the light cavalry of the Persians, and reduced to great distress for want of provisions. Still they presented a formidable front to the enemy, and Sapor, the Persian king, was inclined to come to terms, when, in the course of an attack made upon the Roman army while on its march Julian, whom the heat of the weather had induced to lay aside his cuirass, received a mortal wound in his side from a javelin. Being carried to his tent, he expired the following night (June 26th, A.D. 363). He died with perfect calmness and composure, surrounded by his friends, conversing on philosophical subjects, and expressing his satisfaction at his own past conduct since he had been at the head of the empire. His remains were carried to Tarsus in Cilicia, according to his directions, and his successor Jovian erected a monument to his memory. Such was the end of Julian, in the 32d year of his age, after a reign of one year and about eight months from the death of Constantius. (*Encycl. Us. Knowl.*, vol. 13, p. 144, *seq.*—*Gibbon, Decline and Fall*, c. 21, *seqq.*)—It is still a very common tradition, that when Julian felt himself wounded, he caught in the hollow of his hand some of the blood that issued from his side, and, flinging it in the air, exclaimed, "*Take thy fill, Gabbai; thou hast conquered me, but still do I renounce thee!*" and that, after having thus blasphemed against our Saviour, he indulged in a thousand imprecations against his own gods, by whom he saw himself abandoned. (Compare *Sozomen.*, 6, 2.) The whole is a mere fable. Equally undeserving of credit is another account, that Julian, having been placed, after receiving his wound, on the banks of a river, wished to precipitate himself into its waters, that he might pass away from the eyes of men, and be regarded as an immortal.—Julian had many brilliant, and some amiable qualities; his morals were pure, and even austere; his faults were chiefly

those of judgment, probably influenced by the impressions of early youth, an ardent and somewhat mystic imagination, and the flattery of those around him. Of all the writers of antiquity who have depicted the character of Julian, Ammianus Marcellinus appears to be the one who has done it with the most truth. This historian renders justice to the eminent qualities of Julian, without, at the same time, concealing his defects. The perfect impartiality, the candour and frankness of this soldier, merit equal confidence both when he praises and condemns. As a writer, Julian deserves praise for the purity and eloquence of his style. It is apparent from his works that he had read all the classical authors, for they are filled with allusions to passages of these authors, to their opinions, and to images and expressions employed by them. These allusions give sometimes to the writings of Julian a certain obscurity, because many of the productions to which he refers no longer exist. To most extensive reading he united much talent and much vigour of imagination. Morals, metaphysics, and theology, the last of which is with him nothing more than a species of allegorical metaphysics, were the subjects of which he treated in preference.—The works left by Julian are of three classes. 1. *Harangues*. 2. *Satires*. 3. *Letters*.—With the exception merely of the fragments preserved by St. Cyrill and Socrates, we have lost the work *Against the Christians and against their creed*. The Emperor Julian adopted every means by which, without openly persecuting Christianity, he might degrade it, and cause its followers to fall into contempt. A philosopher himself, he believed that there existed no surer mode of restoring paganism, at the expense of the new religion, than by attacking the latter through the means of a work full of strong arguments, and in which satire also should not be spared. A man of letters, he wanted not a large portion of self-complacency and conceit; and it appeared to him, that no one was more proper to be the author of such a work, than he who had studied the spirit of the two contending systems of religion, and who had publicly declared himself the patron of a form of worship fast sinking into oblivion, and the enemy of a religion, to the triumph of which he should have reflected that the safety of his own family was intimately attached. Such, no doubt, were the reasons which induced Julian to enter the lists against Christianity. He wrote his work during the winter evenings which he spent at Antioch, in the last year of his life. Surrounded by pagan philosophers, who expected from this prince the complete re-establishment of the religion of their fathers, with which, in their blindness, they connected the renovation of the splendour and power of the Roman empire, the imperial author was encouraged by their suffrages, and no doubt aided by their abilities. Apollinarius of Laodicea repelled the attack of Julian by the arms of reason alone; exposing, in a treatise which he wrote “on Truth,” the dogmas of the heathen philosophers respecting Deity, and that, too, without at all calling in the Holy Scriptures to the aid of his argument. This work of Apollinarius must have been composed in a very short time after the appearance of the emperor’s treatise, since Julian appears to have read it before he quitted Antioch, March 5th, A.D. 363. Julian pretended to contemn his opponent, and wrote to certain bishops of the church this paltry *jeu de mots*: ‘Ἀνέγνω, ἔγνω, κατέγνω,’ “I have read, comprehended, condemned it.” To this one of them, probably St. Basil, replied, ‘Ἀνέγνως, ἀλλ’ οὐκ ἔγνως· εἰ γὰρ ἔγνως, οὐκ ἂν κατέγνως,’ “Thou hast read, but not comprehended it; for if thou hadst comprehended it thou wouldst not have condemned it.” Fifty years, however, elapsed before the work of Julian was completely refuted by productions carefully composed, and which entered into a detail of the sophisms which had been advanced against Christianity and the character of its

Divine founder. Either the subject was considered, in the interval, as completely exhausted, or else the dreadful catastrophe which terminated the life of Julian, and which was viewed as a punishment inflicted by Divine vengeance, had caused his writings to fall into neglect. After the period of time above alluded to, Philip of Side, St. Cyrill of Alexandria, and Theodoret, undertook the task of completely prostrating the arguments of the “apostate emperor,” and it is to the work of St. Cyrill that we owe our knowledge of a part of that of Julian. From this refutation, which bears the following title, “ὑπὲρ τῆς τοῦ Χριστιανῶν ἐναγοῦς ὁρσικείας, πρὸς τὰ τοῦ ἐν ἀθέοις Ἰουλιανοῦ,” “*Of the holy religion of the Christians, in reply to the writings of the impious Julian*,” we learn that it was divided into seven books, each of small extent; and that the first three bore this title: ‘Ἀναστροφὴ τῶν Εὐαγγελίων,’ “*The Overthrow of the Gospels*.” These are the only ones which St. Cyrill has taken the trouble to refute. It is not difficult to perceive that an adroit sophist, such as Julian was, could easily give to his work a specious appearance, calculated to impose on weak and shallow minds, especially when the author himself was surrounded by all the adventitious circumstances of rank and power. The mode adopted by Julian, of appearing to draw his arguments against Christianity from the Scriptures themselves, gives an air of candour and credibility to a work; but it requires no great acumen to show, that Julian either did not understand, or else affected to misunderstand, the doctrines which he combated; and that he has perverted facts and denied indubitable truths. The success which his work would no doubt have had if his life had been prolonged, would only have been due to the talent which he possessed in wielding the arms of ridicule; arms the more dangerous, because the wounds which they inflict never cicatrize, and because malevolence, taking pleasure in believing what is false, closes its eyes against the truth when the latter undertakes to destroy that falsity. It was by the aid of the refutation of St. Cyrill, mentioned above, that the Marquis d’Argens undertook in the 18th century to restore the lost work of Julian. It was published in Greek and French, at Berlin, 1764, in 8vo, and reprinted in the same city in 1767. Had the object of this individual been to manifest to the world the errors of the Roman infidel, and to teach the pretended philosophers of the day how little philosophy has to advance that is worthy of reliance when religion is the theme, his undertaking would have been a laudable one. But such was not the end which the Marquis d’Argens had in view. If he did not dare to declare openly for Julian, he yet could find a thousand reasons for excusing his conduct. The consequence has been, that the production of D’Argens has been attacked by two German scholars, and the latter of the two has combated with so much success the sophisms and falsities in question, that, after having read the two works, every unprejudiced mind will acknowledge that the production of the French philosopher has been completely refuted. The first of the German writers just alluded to, G. F. Meier, published his work in 1764, at Halle, in 8vo, under the following title: “*Beurtheilung der Betrachtungen des herrn Marquis v. Argens, über den Kaiser Julian*,” the other, W. Crichton, who was subsequently a clergyman at Königsberg, entitled his production, “*Betrachtungen über des Kaiser Julian Abfall von der Christlichen Religion, und Vertheidigung des Hidenthums*,” Halle, 1765, 8vo.—We will now pass to an enumeration of the works of Julian that have come down to our own times. 1. ‘Εγκώμιον πρὸς τὸν Αὐτοκράτορα Κωνσταντῖνον,’ “*Eloge on the Emperor Constantius*.” 2. Περὶ τῶν αὐτοκράτορος πράξεων, ἢ περὶ βασιλείας,’ “*Of the actions of an emperor, or of government*.” 3. ‘Εγκώμιον Εὐσεβίας τῆς Βασιλίδος,’ “*Eloge on the Empress Eusebia*.”

These three productions were composed by Julian in his youth, when he was striving to conciliate the favour of Constantius, on whom his fortunes depended. They contain some fine thoughts, and are written with more simplicity than one would expect in compositions at this period. In the *first* of these harangues, Julian had to pronounce a eulogy on one who had been the murderer of his father, of his brother, in a word, as he himself says on another occasion, the executioner of his family, and his personal enemy. It was a theme worthy the pliant and fertile genius of the artful Julian, but just decorated with the title of Cæsar by that very Constantius who had on other occasions sought for pretexts to destroy him. To dissemble, then, the faults of this prince, and to exaggerate his good qualities, in such a panegyric, would be the aim proposed to himself by the writer; and yet, it must in justice be remarked, that, with some exceptions, the character of Constantius, as drawn by Julian, coincides in its general features with that delineated by the historians of the time. In the *second* harangue, written probably after he had resided some years in Gaul, Julian but ill conceals his inclination towards paganism. He openly professes in this piece the doctrine of Plato and the heathen philosophers, and constantly affects to substitute the plural form "gods" for the singular "God." The *third* of these discourses, addressed to the princess to whom Julian owed his life and his dignity of Cæsar, is too profusely adorned, and burdened, as it were, with erudition.—4. *Εἰς τὸν βασιλέα Ἡλίου*, "In honour of the Sun, the monarch." A discourse addressed to the prefect Sallustius.—5. *Εἰς τὴν μητέρα θεῶν*, "In Honour of the Mother of the Gods." These two productions are full of enthusiasm, and are written in a species of poetical prose. They contain many allegorical allusions, which to us can only appear frigid and ridiculous. In the system of Julian, the world existed from all eternity; but there existed at the same time a succession of causes, the principal one of which was the Being who subsisted of himself, the Being supremely good, the primary sun: the other causes or principles, namely, the intelligent world without any sun, and the visible sun, were produced from the primary cause, but necessarily and from all eternity: Cybele, or the mother of the gods, belongs to the third generative principle, and appears to identify herself with it; Attus or Gallus is an attribute of this principle, and consequently of Cybele; and seems, moreover, to make part of the fifth body, which is the soul of the sun and the soul of the universe. Such was the ridiculous jargon which the "wise" and "philosophic" Julian preferred to the revelations of Christianity! According to the account of Libanius, Julian employed only a single night in the composition of each of these two discourses: both were written A.D. 362; the second at Pessinus in Phrygia, whither Julian had gone to re-establish the worship of Cybele.—6. *Εἰς τοὺς ἀπαιδέτους Κύνas*, "Against the ignorant cynics."—7. *Πρὸς Ἡράκλειον κυνικόν, περὶ τοῦ πῶς κυνιστέον, καὶ εἰ πρέπει τῷ κυνὶ μῦθος πλάττειν*, "Unto the Cynic Heraclius; how one ought to be a Cynic, and whether it is becoming in a Cynic to compose fables." In these two discourses or memoirs Julian defines the idea which, according to him, ought to be entertained of the philosophy of Diogenes. He blames the false cynics of his time for openly divulging things of a sacred nature. The second discourse contains some very curious materials for history. Under pretence of showing to Heraclius how one may introduce a fable into a discourse of a serious nature, the writer has inserted an allegorical narrative, which is, in fact, the history of Constantine, of his sons, and his nephew.—8. *Ἐπὶ τῇ ἐξόδῳ τοῦ ἀγαθοτάτου Σαλλουστίου παραμυθητικός*, "Consolation on the departure of the excellent Sallustius." This prefect of Gaul, the friend and adviser of

Julian, had been recalled by Constantius, who wished to deprive his cousin of the aid that was to be derived from his great information and experience, and to which the jealousy of the emperor attributed the successes of the young prince. The farewell which Julian takes of his friend is interesting and affecting, and does honour to his feelings: he puts it in the mouth of Pericles compelled to part from Anaxagoras.—9. "*Memoir addressed to the philosopher Themistius.*" This moreau, to which the philosopher has given the form of a letter, has no title: the editors of Julian, however, have separated it, on account of its length, from the other letters of this prince. Themistius had felicitated Julian on his nomination as Cæsar; and foreseeing, no doubt, that the young prince would succeed to the empire, had traced for him the line of his duty, and laid before him what the world expected at his hands. Julian replies to this letter with the greatest ability and moderation.—10. Manifesto against the Emperor Constantius, in the form of a letter to the senate and people of Athens. Julian addresses, as he says, his justification for taking up arms against Constantius, to the people of Athens, on account of the love of justice exhibited by them in ancient times. It is a piece extremely important in an historical point of view, since Julian, no longer caring for his cousin, exposes the crimes and weaknesses of this emperor. The letter appears to have been written a short time previous to the death of Constantius.—11. A long fragment of a letter to a pagan pontiff, containing instructions relative to the duties to be performed towards the ministers of paganism, of whom Julian, by virtue of his imperial station, was sovereign pontiff. This letter appears to have been written during his stay at Antioch. Setting aside the slanders which this piece contains against the Christians, it may be regarded as well deserving a perusal.—12. *Καίσαρες, ἢ Συμπόσιον*, "*The Cæsars, or the Banquet.*" This is one of the most talented productions of Julian, and, if we throw out of consideration the impious allusions which it contains, one of the most agreeable effusions of antiquity. It is a faithful and true picture of the virtues and vices of the predecessors of Julian. The plan of the work is as follows. He relates to a friend a story in the form of a dialogue, after the manner of Lucian. Romulus, named Quirinus after his apotheosis, gives a feast at the Saturnalia, and invites all the gods to it. Wishing, at the same time, to regale the Cæsars, he causes a separate table to be set for them below the moon, in the upper region of the air. The tyrants, who would have disgraced the society of gods and men, are thrown headlong, by the inexorable Nemesis, into the Tartarean abyss. The rest of the Cæsars advance to their seats, and, as they pass, they undergo the scrutiny and remarks of Silenus. A controversy arises about the first place, which all the gods adjudge to Marcus Aurelius. This recital affords Julian an opportunity of painting the character of his uncle, the Emperor Constantine, whom he represents as an effeminate man and a debauchee.—13. *Ἀντιοχικός, ἢ Μισοπύγων*, "*The inhabitant of Antioch, or the Beard-hater.*" In this satire, filled with pleasantries of a forced character, Julian avenges himself on the people of Antioch, who had amused themselves with the philosophic costume which he affected. He draws, in a pleasant manner, his own portrait, describing his own figure, his beard, and his unpolished manners; and while he makes an ironical confession of his own faults, he indulges in a severe satire on the licentious and effeminate manners of Antioch. The work betrays marks of the precipitation with which it was composed; for it is full of repetitions.—We have also ninety letters of Julian: these are not treatises of a philosophical or moral nature, to which the epistolary form has been given; they are genuine letters, written in the course of correspondence with others; though occasionally

a rescript or decision given by Julian as sovereign is found among them. These letters are interesting from the light which they shed on the character of the prince, and on some of the events of the day. The 43d is an ordinance by which public instruction is forbidden to the Christians. Among the correspondents of Julian, they to whom the greater number of letters is addressed are the sophist Libanius, and the New-Platonist Iamblichus, for whom Julian professed a great veneration.—The best edition of the *Cæsars* of Julian is that of Heusinger, *Gothæ*, 1736, 8vo. It contains the text corrected by MSS., a Latin and a French translation, and a selection of notes from previous commentators. The edition of Harless, *Erlang.*, 1785, 8vo, is also held in estimation. The best edition of the entire works is that of Spanheim, *Lips.*, 1696, fol. None of the editions of the works of Julian contain, however, all his letters. To those in the edition of Spanheim, we must add the letters given by Muratori, in his *Anecdota Græca*, *Patavii*, 1709, 4to. Fabricius inserted these in his *Bibliotheca Græca*, vol. 7, p. 81 (vol. 6, p. 734 of the new edition). This scholar also made known eleven other letters, in his *Lux salutaris Evangelii*, *Hamb.*, 1731. These form altogether a collection of seventeen epistles, which may be found in the third volume of the works of Julian, translated by Tourlet, Paris, 1821, 8vo. (*Schöll, Hist. Lit. Gr.*, vol. 6, p. 188, *seqq.*)

JULII or JULIA GENS, a celebrated Roman family, which pretended to trace its origin to the mythic Iulus, son of Æneas. Its principal branch was that of the Libos, which, about the close of the fifth century of Rome, took the name of Cæsar. (*Vid. Cæsar.*)

JULIŌNĒUS, a city of Gaul, the capital of the Andecavi, situate on a tributary of the Liger or Loire, near its junction with that river, and to the northeast of Nannetes or Nantz. It was afterward called Andecavi, from the name of the people, and is now *Angers*. (*Vid. Andecavi.*)

JULIOPOLIS, a city of Galatia. (*Vid. Gordium.*)

IŪLUS, the chief town of the island of Ceos, situate on a hill about 25 stadia from the sea, and which is probably represented by the modern *Zea*, which gives its name to the island. (Note to the French Strabo, vol. 4, p. 164, from a MS. tour of Villosion.) It was the birthplace of two of the greatest lyric poets of Greece, Simonides and his nephew Bacchylides; also of Erasistratus the physician, and Aristotle the Peripatetic philosopher. (*Strabo*, 436.) It is said that the laws of this town decreed that every man, on reaching his sixtieth year, should destroy himself by poison, in order to leave to others a sufficient maintenance. This ordinance is said to have been first promulgated when the town was besieged by the Athenians. (*Strabo*, l. c.—*Heract, Pont. Polit. fragm.*, 9.—*Ælian*, V. 8., 3, 37.—*Cramer's Anc. Greece*, vol. 3, p. 402.)

JULIUS, I. Cæsar. (*Vid. Cæsar.*)—II. Agricola, a governor of Britain. (*Vid. Agricola.*)—III. Obsequens. (*Vid. Obsequens.*)—IV. Solinus, a writer. (*Vid. Solinus.*)—V. Titianus, a writer. (*Vid. Titianus.*)—VI. Africanus, a chronologer. (*Vid. Africanus I.*)—VII. Pollux, a grammarian of Naucratis, in Egypt. (*Vid. Pollux.*)

IULUS, I. the name of Ascanius, the son of Æneas. (*Vid. Ascanius.*)—II. A son of Ascanius, born in Lavinium. In the succession to the kingdom of Alba, Æneas Sylvius, the son of Æneas and Lavinia, was preferred to him. He was, however, made chief priest. (*Dion. Hal.*, 1, 70.)—III. A son of Antony the triumvir, and Fulvia. (*Vid. Antonius VII.*)

JUNIA LEX, I. a law proposed by M. Junius Pennus, a tribune, and passed A.U.C. 627, about expelling foreigners from the city.—II. Another, by M. Junius Silanus, the consul, A.U.C. 614, about diminishing the number of campaigns which soldiers should serve.—III. *Licinia*, or *Junia et Licinia*, enforcing

the Didian law about expenditure by severer penalties.—IV. *Norbana*, by L. Junius Norbanus, the consul, A.U.C. 771, that slaves who had been manumitted in any of the less solemn ways should not obtain the full rights of Roman citizens, but only those of the Latins who were transplanted into colonies. (*Plin., Ep.*, 10, 105.)

JUNO, a Roman divinity, identical with the Grecian Hera, and to be considered, therefore, in one and the same article with the latter. In Homer, this goddess is one of the children of Saturn and Rhea, and the sister and wife of Jupiter. When the latter placed his sire in Tartarus, Rhea committed Juno to the care of Oceanus and Tethys, by whom she was nurtured in their grotto-palace. (*Il.*, 14, 202, *seqq.*) Hesiod, who gives her the same parents, says that she was the last spouse of Jove. (*Theog.*, 921.) According to the Argive legend, Jupiter effected his union with Juno by assuming first the form of a cuckoo. (*Schol. ad Theocr.*, 15, 64.—*Pausan.*, 2, 17.) In the Iliad (for she does not appear in the Odyssey), Juno, as the queen of Jupiter, shares in his honours. The god is represented as a little in awe of her tongue, yet daunting her by his menaces. On one occasion he reminds her, how once, when she had raised a storm, which drove his son Hercules out of his course at sea, he tied her hands together, and suspended her with anvils at her feet between heaven and earth (*Il.*, 15, 18, *seqq.*); and when her son Vulcan would aid her, he flung him down from Olympus. (*Il.*, 1, 590, *seqq.*—Compare *Il.*, 15, 22.) In this poem the goddess appears dwelling in peace and harmony with Latona, Dione, Themis, and their children: later poets speak much, however, of the persecution which Latona underwent from the enmity of Juno, who also visited with severe inflictions Io, Semele, Alcmena, and other favourites of Jove. The children of Jupiter and Juno were Mars, Hebe, and the Ilthiyæ, to whom some add the Graces. (*Coluth.*, *Rapt. Hel.*, 88, 173.) Vulcan was the progeny of Juno without a sire; she was also said by some to have given origin to the monster Typhon. (*Horn., Hymn.*, 2, 127, *seqq.*) In the mythic cycles of Bacchus and Hercules, Juno acts a prominent part as the persecutor of those heroes, on account of their being the offspring of Jupiter by mortal mothers. In like manner, as the goddess of Argos, she is active in the cause of the Achæi in the war of Troy. In the Argonautic cycle she is the protecting deity of the adventurous Jason. There is, in fact, no one of the Olympian deities more decidedly Grecian in feeling and character than Juno.—The chief seats of her worship were Argos, Samos, and Platea. She was also honoured at Sparta, Corinth, Corcyra, and other places. The victims offered to her were kine, ewe-lambs, and sows. The willow, the pomegranate, the dittany, the lily, were her sacred plants. Among birds, the cuckoo, and afterward the peacock, were appropriated to the Olympian queen. (*Vid. Argus*, and consult remarks under the article Io.) The peacock is an Indian bird, and, according to Theophrastus, was introduced into Greece from the East. Its Persian name at the present day is *Taous*. (Compare the Greek ταῦς.) Peafowl were first introduced into Samos; and being birds that gave indications, by their cry, of a change of weather, they were consecrated to Juno, and the legend was gradually spread, that Samos was their native place.—The marriage of Jupiter and Juno was viewed as the pattern of those of mankind, and the goddess was held to preside over the nuptial league. Hence she was surnamed the *Yoker* (*Zwyaia*), the *Consecrator* (*Tezeia*), the *Marriage-Goddess* (*Taμyλια*—*Pronuba*).—Juno was represented by Polyctetus as seated on a throne, holding in one hand a pomegranate, the emblem of fecundity, in the other a sceptre, with a cuckoo on its top. Her air is dignified and matronly, her forehead broad, her eyes large, and

her arms finely formed. She is attired in a tunic and mantle.—The term *Hpa* is evidently the feminine of *Hpos*, anciently *Hpos*, and thus they answer to each other as the Latin *Heraus* and *Hera*, and the German *Herr* and *Herrin*, and therefore signified *master* and *mistress*.—The name JUNO, on the other hand, is evidently derived from the Greek ΔΙΩΝΗ, the female ΔΙΣ or ΖΕΥΣ.—The quarrels of Jupiter and Juno in the Homeric mythology are evidently mere physical allegories, Jupiter denoting the æther or upper regions of air, and Juno the lower strata, or our atmosphere. Hence the discord and strife that so often prevail between the king and queen of Olympus, the master and mistress of the universe, are merely so many types of the storms that disturb our atmosphere, and the ever-varying changes that characterize the latter are plainly indicated by the capricious and quick-changing temper of the spouse of Jove. At a later period, however, a new element appears to have entered into the mythology of Juno. The Earth, as the recipient of fertilizing showers from the atmosphere, became in a manner identified with the spouse of Father Æther; and we find Juno, now resembling in many of her attributes both Cybele and Ceres, appearing at one time as Earth, at another as the passive productive principle. Hence the consecration of the cow to Juno, just as, in the religion of the ancient Germans, the cow was assigned to the service of the goddess Hertha or Earth. At Argos, the chariot in which the priestess of Juno rode was drawn by oxen. (*Herod.*, 1, 31.) Cows were also sacred to the Egyptian Isis, the goddess of fertility, and who resembles in some of her attributes the Grecian Ceres (*Knight, Enquiry into the Symb. Lang.*, &c., § 36.—*Classical Journ.*, vol. 23, p. 227.—*Keightley's Mythology*, p. 96, *seqq.*—*Constant, de la Religion*, vol. 1, p. 198.)

JUNONIA, one of the Canary islands, or Insula Fortunata. It is now *Palma*. (*Plin.*, 6, 32.)

JUNONIS PROMONTORIUM, a promontory of Spain, on the Atlantic side of the Straits of Gibraltar. It is now *Cape Trafalgar*. (*Mela*, 2, 6.)

JUPITER, the supreme Roman deity, identical with the Grecian Ζεύς (*Zeus*).—Jupiter was the eldest son of Saturn and Rhea. He and his brothers, Neptune and Pluto, divided the world by lot between them, and the portion which fell to him was the "extensive heaven in air and clouds." (*Il.*, 13, 355.) All the aerial phenomena, such as thunder and lightning, wind, clouds, snow, and rainbows, are therefore ascribed to him, and he sends them either as signs and warnings, or to punish the transgressions of man, especially the perversions of law and justice, of which he is the fountain. (*Il.*, 1, 238, *seqq.*) Jupiter is called the "father of men and gods;" his power over both is represented as supreme, and his will is fate. Earthly monarchs obtain their authority from him (*Il.*, 2, 197, 205); they are but his viceregents, and are distinguished by epithets derived from his name; such as *Jove-sprung* (Διογενής), *Jove-reared* (Διοτρεφής), *Jove-beloved* (Διοφιλος). In his palace on Olympus, Jove lives like a Grecian prince in the midst of his family: altercations and quarrels occur between him and his queen, Juno; and though, in general, kind and affectionate to his children, he occasionally menaces or treats them with rigour.—In the *Odyssey*, the character of this god is, agreeably to the more moral tone of that poem, of a higher and more dignified order. No indecent altercations occur; both gods and men submit to his power without a murmur, yet he is anxious to show the equity of his decrees and to "justify his ways." (*Od.*, 1, 32.)—The Theogony of Hesiod represents Jupiter as the last-born child of Saturn and Rhea, and, according to it, the supreme power was freely conferred on him by his brothers, and he thus became the acknowledged head of the Olympian gods, the objects of Grecian wor-

ship. (For his warfare with the Titans and Giants, *vid.* *Titanes and Gigantes*).—Though Homer names the parents of nearly all the gods who appear in his poems, and it follows thence that they must have been born in some definite places, he never indicates any spot of earth as the natal place of any of his deities. A very ancient tradition, however (for it occurs in Hesiod), made the isle of Crete the birthplace of the monarch of Olympus. According to this tradition, Rhea, when about to be delivered of Jupiter, retired to a cavern near Lycus or Cnosus in Crete. She there brought forth her babe, whom the Melian nymphs received in their arms. Adrastea rocked him in a golden cradle; he was fed with honey and the milk of the goat Amalthea, while the Curetes danced about him, clashing their arms, to prevent his cries from reaching the ears of Saturn. (*Callim.*, *Hymn. in Jov.*—*Vid.* *Rhea*, and *Saturnus*.) According to another account, the infant deity was fed on ambrosia, brought by pigeons from the streams of Ocean, and on nectar, which an eagle drew each day with his beak from a rock. (*Athenæus*, 11, p. 490.) This legend was gradually pragmatized; Jupiter became a mortal king of Crete; and not merely the cave in which he was reared, but the tomb which contains his remains, was shown by the "lying Cretans." (Κρήτες δειψέσσαι. *Callim.*, *H. in Jov.*, v. 8.—Compare *St. Paul*, *Ep. ad Tit.*, 1, 12.)—The Arcadians, on the other hand, asserted that Jupiter first saw the light among their mountains, and made Rhea to have brought him forth amid the thickets of Parrhasion.—All, therefore, that we can collect with safety from these accounts is, that the worship of the Dictæan Jupiter in Crete, and of the Lycæan Jupiter in Arcadia (for he was reared, said the Arcadians, in a cavern of Mount Lycæus), was of the most remote antiquity, and that thence, when the Euhemeristic principle began to creep in among the Greeks, each people supposed the deity to have been born among themselves. The Cretan legend must, however, be regarded as the most ancient, for the Arcadians evidently attempted to transfer the names of places in it to their own country.—In the Theogony, the celestial progeny of Jove are enumerated in the following order. (*Theog.*, 886, *seq.*) Jupiter first espoused Metis (*Prudence*), who exceeded gods and men in knowledge. But Heaven and Earth having told him that her first child, a maid, would equal him in strength and counsel, and her second, a son, would be king of gods and men, he cajoled her when she was pregnant, and swallowed her; and, after a time, the goddess Minerva sprang from his head. He then married Themis, who bore him the Seasons and Fates. The ocean-nymph Eurynome next produced him the Graces. Ceres then became by him the mother of Proserpina; Mnemosyne of the Muses; and Latona of Apollo and Diana. His last spouse was Juno, who bore him Mars, Hebe, and Ilithyia.—According to Homer (*Il.*, 5, 370, *seq.*), Venus was the daughter of Jupiter and Dione. The Theogony farther says, that Maia, the daughter of Atlas, bore him Hermes (*Theog.*, 938). A later fable stated that Asteria, the sister of Latona, flying the love of Jupiter, flung herself from heaven down to the sea, and became the island afterward known by the name of Delos.—Mortal women also bore a numerous progeny to the monarch of the sky, and every species of transmutation and disguise was employed by him to further his views. (*Vid.* *Alcmena*, *Antiope*, *Callisto*, *Danaë*, *Europa*, *Leda*, &c.) The various fables of which the monarch of the gods thus became the subject, and which, while they derogate from his character of sovereign deity, have little, if anything, to recommend them on the score of moral purity, lose all their grossness if we regard them merely as so many allegories, which typify the great generative power of the universe displaying itself in a variety of ways, and un-

der the greatest diversity of forms.—It was the habit of the Greeks to appropriate particular plants and animals to the service of their deities. There was generally some reason for this, founded on physical or moral grounds, or on both. Nothing could be more natural than to assign the oak (*φηγος*, *quercus asculus*), the monarch of trees, to the celestial king, whose ancient oracle, moreover, was in the oak-woods of Dodona. In like manner, the eagle was evidently the bird best suited to his service. The celebrated *Ægis*, the shield which sent forth thunder, lightning, and darkness, and struck terror into mortal hearts, was formed for Jupiter by Vulcan. In Homer we see it sometimes borne by Apollo (*Il.*, 15, 508) and sometimes by Minerva (*Il.*, 5, 738.—*Od.*, 22, 297).—The most famous temple of Jupiter was at Olympia in Elis, where, every fourth year, the Olympic Games were celebrated in his honour; he had also a splendid fane in the island of *Ægina*. But, though there were few deities less honoured with temples and statues, all the inhabitants of Hellas conspired in the duty of doing homage to the sovereign of the gods. His great oracle was at Dodona, where, even in the Pelasgian period, the Selli announced his will and the secrets of futurity. (*Il.*, 16, 233).—Jupiter was represented by artists as the model of dignity and majesty of mien; his countenance grave but mild. He is seated on a throne, and grasping his sceptre and thunder. The eagle is standing beside the throne.—An inquiry, of which the object should be to select and unite all the parts of the Greek mythology that have reference to natural phenomena and the changes of the seasons, although it has never been regularly undertaken, would doubtless show, that the earliest religion of the Greeks was founded on the same notions as the chief part of the religions of the East, particularly of that part of the East which was nearest to Greece, namely, Asia Minor. The Greek mind, however, even in this the earliest of its productions, appears richer and more various in its forms, and, at the same time, to take a loftier and wider range, than is the case in the religion of the Oriental neighbours of the Greeks, the Phrygians, Lydians, and Syrians. In the religion of these nations, the combination and contrast of two beings (Baal and Astarte), the one male, representing the productive, and the other female, representing the passive and nutritive powers of Nature; and the alternation of two states, namely, the strength and vigour, and the weakness and death, of the male personification of Nature, the first of which was celebrated with vehement joy, the latter with excessive lamentation, recur in a perpetual cycle, that must have wearied and stupefied the mind. The Grecian worship of Nature, on the other hand, in all the various forms which it assumed in different quarters, places one Deity, as the highest of all, at the head of the entire system, the God of *heaven and light*, the Father *Æther* of the Latin poets. That this is the true meaning of the name *Zeus* (Jupiter) is shown by the occurrence of the same root (DIU), with the same signification, even in the Sanscrit, and by the preservation of several of its derivatives, which remained in common use both in Greek and Latin, all containing the notion of *Heaven and Day*. The root DIU is most clearly seen in the oblique cases of *Zeus*, *Διός*, *Διός*, in which the U has passed into the consonant form F (Digamma); whereas in *Ζεύς*, as in other Greek words, the sound DI has passed into Z, and the vowel has been lengthened. In the Latin *Jovis* (*Jure* in Umbrian) the D has been lost before I, which, however, is preserved in many other derivatives of the same root, as, *dies*, *dium*.—With this god of the heavens, who dwells in the pure expanse of ether, is associated, though not as a being of the same rank, a goddess worshipped under the name of Hera or Juno. The marriage of Zeus with this divinity was regarded as a sacred solemnity, and typified this union of heaven and earth in the fer-

tilizing rains. Besides this goddess, other beings are associated on one side with the Supreme God, who are personifications of certain of his energies; powerful deities, who carry the influence of light over the earth, and destroy the opposing powers of darkness and confusion: such as Minerva, born from the head of her father, in the height of the heavens; and Apollo, the pure and shining god of a worship belonging to other races, but who, even in his original form, was a god of light. On the other side are deities allied with the earth, and dwelling in her dark recesses; and as all life appears not only to spring from the earth, but to return to that whence it sprung, these deities are, for the most part, also connected with death; as Hermes or Mercury, who brings up the treasures of fruitfulness from the depth of the earth, and the child, now lost and now recovered by her mother Ceres, Proserpina (Cora) the goddess both of flourishing and of decaying nature. It was natural to expect that the element of water (Neptune or Poseidon) should also be introduced into this assemblage of the personified powers of Nature, and should be peculiarly combined with the goddess of the Earth: and that fire (Vulcan or Hephæstus) should be represented as a powerful principle, derived from heaven and having dominion on the earth, and be closely allied with the goddess who sprang from the head of the god of the heavens. Other deities are less important and necessary parts of this same system, as Venus (Aphrodite), whose worship was evidently, for the most part, propagated over Greece from Cyprus and Cythera, by the influence of Syrophenician tribes. As a singular being, however, in the assembly of the Greek divinities, stands the changeable god of flourishing, decaying, and renovated Nature, Bacchus or Dionysus, whose alternate joys and sufferings, and marvellous adventures, show a strong resemblance to the form which religious notions assumed in Asia Minor. Introduced by the Thracians (a tribe which spread from the north of Greece into the interior of the country), and not, like the gods of Olympus, recognised by all the races of the Greeks, Bacchus always remained to a certain degree estranged from the rest of the gods, although his attributes had evidently most affinity with those of Ceres and Proserpina. But in this isolated position Bacchus exercises an important influence on the spirit of the Greek nation, and both in sculpture and poetry gave rise to a class of feelings, which agree in displaying more powerful emotions of the mind, a holder flight of the imagination, and more acute sensations of pain and pleasure, than were exhibited on occasions where this influence did not operate. In like manner, the Homeric Poems (which instruct us not merely by their direct statements, but also by their indirect allusions; not only by what they *say*, but also by what they do *not say*), when attentively considered, clearly show how this ancient religion of nature sank into the shade as compared with the salient and conspicuous forms of the deities of the heroic age. The gods who dwell on Olympus scarcely appear at all in connexion with natural phenomena. Zeus chiefly exercises his power as a ruler and king; although he is still designated (by epithets doubtless of high antiquity) as the god of the ether and the storms; as in much later times the old picturesque expression was used, “What is Zeus doing?” for “What kind of weather is it?” In the Homeric conception of Minerva and Apollo, there is no trace of any reference of these deities to their earlier attributes. Vulcan also has passed, from the powerful god of fire in heaven and on earth, into a laborious smith and worker of metals, who performs his duty by making armour and weapons for the other gods and their favourite heroes. As to Mercury, there are some stories in which he is represented as giving fruitfulness to cattle, in his capacity of the rural god of Arcadia; from which, by means of various meta-

morphoses, he is transmuted into the messenger of Zeus and the servant of the gods. (*Müller, Hist. Gr. Lit.*, p. 13, *seqq.*)

JURA, a chain of mountains, which, extending from the Rhodanus or Rhone to the Rhenus or Rhine, separated Helvetia from the territory of the Sequani. The name is said to be in Celtic, *Jou-rag*, and to signify the domain of God or Jupiter. The most elevated parts of the chain are the *Dole*, 5082 feet above the level of the sea; the *Mont Tendre*, 5170; and the *Reculet* (the summit of the *Thoiry*), 5196. (*Plin.*, 3, 4.—*Cæs.*, B. C., 1, 2.—*Ptol.*, 2, 9.)

JUSTINIUS, FLAVIUS, born near Sardica in Mœsia, A.D. 482 or 483, of obscure parents, was nephew by his mother's side to Justinus, afterward emperor. The elevation of his uncle to the imperial throne, A.D. 518, decided the fortune of Justinian, who, having been educated at Constantinople, had given proofs of considerable capacity and application. Justinus was ignorant and old, and the advice and exertions of his nephews were of great service to him during the nine years of his reign. He adopted Justinian as his colleague, and at length, a few months before his death, feeling that his end was approaching, he crowned him in presence of the patriarch and senators, and made over the imperial authority to him, in April, 527. Justinian was then in his 45th year, and he reigned above 38 years, till November, 565, when he died. His long reign forms a remarkable epoch in the history of the world. Although himself unwarlike, yet, by means of his able generals, Belisarius and Narses, he completely defeated the Vandals and the Goths, and reunited Italy and Africa to the empire. Justinian was the last emperor of Constantinople, who, by his dominion over the whole of Italy, reunited in some measure the two principal portions of the ancient empire of the Cæsars. On the side of the East, his arms repelled the inroads of Chosroes, and conquered Colchis; and the Negus, or king of Abyssinia, entered into an alliance with him. On the Danubian frontier, the Gepidæ, Langobardi, Bulgarians, and other hordes, were either kept in check or repulsed. The wars of his reign are related by Procopius and Agathias.—Justinian must be viewed also as an administrator and legislator of his vast empire. In the first capacity he did some good and much harm. He was both profuse and penurious; personally inclined to justice, he often overlooked, through weakness, the injustice of subalterns; he established monopolies of certain branches of industry and commerce, and increased the taxes. But he introduced the rearing of silkworms into Europe, and the numerous edifices which he raised (*vid.* Isidorus IV.), and the towns which he repaired or fortified, attest his love for the arts, and his anxiety for the security and welfare of his dominions. Procopius (*"De ædificiis Domini Justiniani"*) gives a notice of the towns, churches (St. Sophia among the rest), convents, bridges, roads, walls, and fortifications constructed or repaired during his reign. The same Procopius, however, wrote a secret history (*Ἀνεκδότα*) of the court and reign of Justinian, and his wife Theodora, both of whom he paints in the darkest colours. Theodora, indeed, was an unprincipled woman, with some abilities, who exercised, till her death in 548, a great influence over the mind of Justinian, and many acts of oppression and cruelty were committed by her orders. But yet the *Anecdota* of Procopius cannot be implicitly trusted, as many of his charges are evidently misrepresentations or malignant exaggerations.—Justinian was easy of access, patient of hearing, courteous and affable in discourse, and perfect master of his temper. In the conspiracies against his authority and person, he often showed both justice and clemency. He excelled in the private virtues of chastity and temperance; his meals were short and frugal; on solemn fast he contented himself with water and vege-

tables, and he frequently passed two days and as many nights without tasting any food. He allowed himself little time for sleep, and was always up before the morning light. His restless application to business and to study, as well as the extent of his learning, have been attested even by his enemies (*Ἀνεκδότα*, c. 8, 13). He was, or professed to be, a poet and philosopher, a lawyer and theologian, a musician and architect; but the brightest ornament of his reign is the compilation of Roman law, which has immortalized his name, and an account of which will be found under the article *Tribonianus*. Unfortunately, his love of theological controversy led him to interfere with the consciences of his subjects, and his penal enactments against Jews and heretics display a spirit of mischievous intolerance which has ever since afforded a dangerous authority for religious persecution.—Justinian died at 83 years of age, on the 14th of November, 565, leaving no children. He was succeeded by his nephew Justinus IV. (*Ludewig, Vita Justiniani Magni*,—*Gibbon, Decline and Fall*, c. 40, *seqq.*)—II. The second of the name, was son of Constantino III., and lineal descendant of the Emperor Heraclius. He succeeded his father on the throne of Constantinople, A.D. 685, but his reign, which lasted ten years, was marked chiefly by wars with the Saracens, and by the exactions and oppressions of his ministers. At last, his general Leontius drove him from the throne, and, having caused his nose to be cut off, banished him to the Crimea, A.D. 695. Leontius, however, was soon after deposed himself, and banished by Tiberius Apsemus, who reigned for seven years. Meantime Justinian had escaped from the Crimea and married the daughter of the Kakan, or King of the Gazari, a tribe of Turks; and he afterward, with the assistance of the Bulgarians, entered Constantinople, and put to a cruel death both Leontius and Tiberius, along with many others. He ordered, also, many of the principal people of Ravenna to be put to death. At last Justinian was dethroned and killed by Philippus Bardanes, A.D. 711. (*Encycl. Us. Knoch.*, vol. 13, p. 166.)

JUSTINUS, I. M. JUNIANUS, or, as he is named in some manuscripts, M. Justinus Frontinus, a Latin historian, generally supposed to have flourished in the age of the Antonines. The chief reason for assigning him to this period is the dedication of his work, addressed to Marcus Aurelius. Many critics, however, regard the line in the manuscripts which expresses this dedication as an addition by some ignorant copyist, who had confounded this writer with Justinus the Martyr. Nothing is known of the particulars of Justin's life. He made an epitome of, or, rather, a selection of extracts from, the historical work of Trogus Pompeius. This epitome is entitled, *"Historiarum Philippicarum et totius mundi originum, et terra situs, et Trogo Pompeio excerptarum libri XLIV. a Nino ad Cæsarem Augustum."* In making his extracts, Justin gave the preference to those facts and those passages which he considered peculiarly interesting. (Compare his own words: *"Omissis his quæ nec cognoscendi voluptate jucunda, nec exemplo erant necessaria."*) Other events are only mentioned briefly, and by way of transition. Chronology is entirely neglected in the work of Justin, as in the greater part of the ancient writers. Justin is deficient in judgment and sagacity. His style is correct, simple, and elegant, but unequal; it is far preferable, however, to that of Florus. The best editions are, that of Gronovius, *L. Bat.*, 1719, 8vo; of Hearn, *Oxon.*, 1705, 8vo; of Fischer, *Lips.*, 1757, 8vo; and of Wetzel, *Leign.*, 1817, 8vo.—The value of Justin's history chiefly depends on the circumstance of Trogus's work having been compiled from some of the best of the ancient historical writers, such as Theopompus, Herodotus, Ctesias, Hieronymus of Cardia, Timæus, Phylarchus, Polybius, Posidonius, &c. (Compare Gatterer, *rom Plan des Tro-*

gus, &c.—*Hist. Bibl.*, vol. 3, p. 118.—*Borhek, Magazin für Erklärung, d. Gr. u. R.*, vol. 1, p. 180.—*Koch, Proleg. ad Theopomp. Chium.*, Lips., 1804, p. 13.—*Heyne, de Trogi Pompeii ejusque epitomatoris Justinii fontibus, &c.*, *Comment. Soc. Reg. Gotting.*, vol. 15, p. 183, *seqq.*) In order that the student may be better enabled to appreciate the extent of Trogus's labours, we will now proceed to sketch an outline of his work, as far as it has been determined by the researches of modern scholars. *Book 1.* History of the Assyrian, Median, and Persian empires, down to the reign of Darius, son of Hystaspes. *Book 2.* Digression respecting the Scythians, Amazons, and Athenians; the kings of Athens, the legislation of Solon, the tyranny of the Pisistratidæ, the expulsion of this family, and the war with Persia which ensued, the battle of Marathon, the history of Xerxes and of his contests with the Greeks. *Book 3.* The accession of Artaxerxes. Digression respecting the Lacedæmonians, the legislation of Lycurgus, and the first Messenian war. Commencement of the Peloponnesian war. *Book 4.* Continuation of the Peloponnesian war, expedition to Sicily. Digression respecting Sicily. *Book 5.* Close of the Peloponnesian war. The thirty tyrants, and their expulsion by Thrasybulus. The expedition of the younger Cyrus, and the retreat of the Ten Thousand. *Book 6.* The expeditions of Dercyllidas and Agesilaus into Asia. The Theban war. The peace of Antalcidas. The exploits of Epaminondas. Philip of Macedon begins to interfere in the affairs of Greece.—In these first six books, which are to be regarded as a kind of introduction to the history of the Macedonian Empire, the true object of Trogus, his principal guide was Theopompus. He has also occasionally availed himself of the aid of Herodotus and Ctesias, and even of that of the mythographers.—*Book 7.* Digression respecting the condition of Macedonia anterior to the reign of Philip. *Book 8.* History of Philip and of the Sacred War. *Book 9.* End of the history of Philip. *Book 10.* Continuation and end of the Persian history, under Artaxerxes Mucnon, Ochus, and Darius Codomanus.—In these four books Trogus appears to have merely translated Theopompus.—*Book 11.* History of Alexander the Great, from his accession to the throne until the death of Darius. *Book 12.* Occurrences in Greece during the absence of Alexander: expeditions of this prince into Illyrcania and India. His death.—In these two books, no fact would appear to have been stated that is not also contained in other works which have reached us.—*Books 13, 14, 15.* History of the wars between the generals of Alexander the Great, down to the death of Cassander. *Book 16.* Continuation of the history of Macedonia to the accession of Lysimachus.—This part of Justin's history is so imperfect, that we find it impossible to divine the sources whence Trogus derived his materials. It has been supposed, however, that the digressions on Cyrene (13, 7) and Heraclea (16, 4) are obtained from Theopompus, and that the episode on India (15, 4) is from Megasthenes. *Book 17.* History of Lysimachus. Digression respecting Epirus before the time of Pyrrhus.—As Justin shows himself, in this book, very partial towards Scleucus, and the reverse towards Lysimachus, it has been conjectured that Hieronymus of Cardia was the guide of Trogus in this part of the original work.—*Book 18.* Wars of Pyrrhus in Italy and Sicily. Digression respecting the ancient history of Carthage. *Book 19.* Wars of the Carthaginians in Sicily. *Book 20.* Dionysius of Syracuse transfers the theatre of the war to Magna Græcia. Digression respecting Metapontum. *Book 21.* History of Dionysius the younger. *Books 22 and 23.* History of Agathocles.—These six books of Justin are very important; they embrace nearly all that we know respecting the Carthaginians before their collision with the Romans. The parts that relate to

Syracuse and Magna Græcia, Trogus appears to have taken from Theopompus, and, by way of supplement, from Timæus: this latter, for example, seems to have furnished the materials for the history of Agathocles.—*Book 24.* Continuation of the history of Macedonia. Invasion of the Gauls under Brennus. *Book 25.* Antigonus Gonatas, king of Macedonia. Establishment of the Gauls in Bithynia. *Book 26.* Continuation of the history of Macedonia. *Book 27.* Seleucus, king of Syria. *Book 28.* Continuation of the history of Macedonia to the accession of Philip. *Book 29.* War of Philip with the Romans.—In these six books Phylarchus has been the principal authority of Trogus.—*Book 30.* Continuation of the Macedonian war. Alliance of the Ætolians with Antiochus the Great. *Book 31.* Hannibal prevails on Antiochus to make war against the Romans. War in Syria. *Book 32.* Death of Philopemen. War of the Romans with Perseus. Death of Hannibal. *Book 33.* Fall of the Macedonian empire. *Book 34.* Achaean war. Continuation of the history of Syria. *Book 35.* Demetrius I. and II., kings of Syria.—These six books are taken from Polybius. *Book 36.* Continuation of the history of the kings of Syria. Digression respecting the Jews. The kingdom of Pergamus becomes a Roman province. *Book 37.* History of Mithradates the Great. *Book 38.* Continuation of the history of Mithradates. Ptolemy Physcon, king of Egypt. Continuation of the history of Demetrius, king of Syria. *Book 39.* Continuation of the history of Syria and Egypt. *Book 40.* End of the kingdom of Syria. *Book 41.* History of the Parthians. *Book 42.* Continuation of the history of the Parthians. History of Armenia.—On comparing the contents of these six books with the fragments of Posidonius of Rhodes that have been preserved by Athenæus, it would appear that this historian has here been the guide of Trogus. Posidonius, who was a friend of Trogus's, had published a history of the period that had intervened between the destruction of Corinth and the fall of the kingdom of Syria. It was a large work in fifty-two books. The digression respecting the Jews is full of confusion: it is well known what erroneous ideas were prevalent concerning this people in the time of Augustus, and even at the period when Tacitus wrote; but one is surprised to find that Justin was not able to rectify the mistakes of his original.—*Book 43.* Earlier history of Rome and Massilia. In the latter part of this book Dioctes the Peparethian furnished the materials. *Book 44.* History of Spain, derived most probably from Posidonius.—Such appear to have been, in general, the authorities followed by Trogus, and, consequently, by his abreviator Justin. (*Schöll, Hist. Lit. Rom.*, vol. 3, p. 139, *seqq.*—*Bähr, Gesch. der Röm. Lit.*, p. 299, *seqq.*)—II. Surnamed the Martyr, one of the earliest and most learned writers of the Christian church. He was the son of Priscus, a Greek by nation, and was born at Flavia Neapolis, anciently called Sichem, a city of Samaria in Palestine, towards the close of the first century. He was educated in the pagan religion, and, after studying in Egypt, became a Platonist, until, in the year 132, he was led, by the instructions of a zealous and able Christian, to embrace the religion of the Gospel. He subsequently went to Rome in the beginning of the reign of Antoninus Pius, and drew up his first apology for Christianity at a time when the Christians were suffering rather from popular fury than from the bearing upon them of the regular authority of the state, and it prevailed so far as to obtain for them some favourable concessions from the emperor. He was also equally zealous in opposing alleged heretics, and particularly Marcion, against whom he wrote and published a book. He not long after visited the East, and at Ephesus had a conference with Tryphon, a learned Jew, to prove that Jesus was the Messiah, an account of which conference he gives us in

his "Dialogue with Tryphon." On his return to Rome he had frequent disputes with Crescens, a Cynic philosopher, in consequence of whose calumnies he published his second apology, which seems to have been presented to the Emperor Marcus Aurelius, A.D. 162. It produced so little effect, that when Crescens preferred against him a formal charge of impiety for neglecting the pagan rites, he was condemned to be scourged and then beheaded, which sentence was put into execution A.D. 164, in the seventy-fourth or seventy-fifth year of his age. It was eminently as a martyr or witness that Justin suffered; for he might have saved his life had he consented to join in a sacrifice to the heathen deities. Hence with his name has descended the addition of "The Martyr," a distinction which, in a later age, was given to Peter, one of the Protestant sufferers for the truth. Justin Martyr is spoken of in high terms of praise by the ancient Christian writers, and was certainly a zealous and able advocate of Christianity, but mixed up its doctrines with too much of his early Platonism. He was the first father of the church who, regarding philosophy and revealed religion as having emanated from the same source, wished to establish between them an intimate union. Justin was of opinion that Plato had derived his doctrine, if not from the Sacred Writings of the Jews, at least from the works of others who were acquainted with these writings, and hence he concluded that the system and the tenets of Plato could be easily brought back to, and united with, the principles of Christianity. All other systems of philosophy, however, except the Platonic, he utterly rejected, and more particularly that of the Cynics. Even in the Platonic scheme he combated one point, which is in direct opposition to revelation, the doctrine of the eternal duration of the world. There are several valuable editions of his works, the best of which are, that of Maran, *Paris*, 1742, fol., and that of Oberthür, *Wurtzburgh*, 1777, 3 vols. 8vo. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 212.)—III. The first, also called the "Elder," an emperor of the East, born A.D. 450, of Thracian origin. He abandoned the employment of a shepherd for the profession of arms, and, passing through the several military gradations, attained eventually to the highest dignities of the empire. On the death of Anastasius (A.D. 516) he held the command of the imperial guards, and was commissioned by Amantius to distribute a sum of money among the soldiers, in order to secure the elevation of one of the creatures of the former. Justin did this, but in his own name, and was in consequence himself proclaimed emperor. Justin was sixty-eight years of age when he ascended the throne. Being himself uninformed in civil affairs, he relied for the despatch of the business of the state on the quæstor Proclus, a faithful servant, and on his own nephew Justinian, who had acquired a great ascendancy over his uncle. By Justinian's advice, a reconciliation was effected between the Greek and the Roman churches, A.D. 520. The murder of Vitalianus, who had been raised to the consulship, but was stabbed at a banquet, casts a dark shade upon the character of both Justin and Justinian. In other respects Justin is represented by historians as honest and equitable, though rude and distrustful. After a reign of nine years, being afflicted by an incurable wound, and having become weak in mind and body, Justin abdicated in favour of his nephew, and died soon after, in A.D. 527.—IV. The second, surnamed the "Younger," an emperor of the East, succeeded his uncle Justinian, A.D. 565. His reign was an unfortunate one. The Langobardi, under their king Alboin, who is supposed to have been invited by Narses, invaded Italy by the Julian Alps, A.D. 568, and in a few years all Northern Italy was lost to the Byzantine emperor. The provinces of Asia were likewise overrun by the Persians. Internal

discontent, moreover, prevailed in the capital and provinces, owing to the malversations of the governors and magistrates, and Justin himself, deprived by infirmity of the use of his feet, and confined to the palace, was not able to repress abuses and infuse vigour into the administration. Feeling at last his impotence, he chose Tiberius, the captain of the guards, as his successor, A.D. 578. The choice was a good one, and the conduct of Tiberius fully justified Justin's discernment. Justin lived four years after his abdication, in quiet retirement, and died in the year 578. (*Encycl. Us. Knowl.*, vol. 13, p. 166.)

JUTES, an old Teutonic or Scandinavian tribe, which, in the fifth century of our era, appear to have been settled in the northern part of the Chersonesus Cimbrica, which is still called, after their name, *Jutland*. Mannert thinks that they were a colony from the opposite coast of Scandinavia, of the same race as the Guthi or Gutæ mentioned by Ptolemy. The first Germanic invaders of Britain, after the departure of the Romans, were Jutes, who, under their leaders Hengist and Horsa (A.D. 445), landed in the isle of Thanet, and settled in Kent. The Saxons, under Ella, came A.D. 477, and the Angles did not come until the following century. (*Mannert, Geogr.*, vol. 3, p. 288.)

JUTERNA, a water-nymph in the Italian mythology. Her fountain was near the Numicius, and its waters, owing to her name (from *juvo*, "to assist"), were held to be very salubrious: the sick drank them (*Varro, L. L.*, 4, p. 21), and the Romans used them in their sacrifices. A temple was built to Juturna in the Campus Martius, and there was a festival named the Juturnalia. (*Serv. ad Virg.*, 12, 139.—*Ovid, Fast.*, 1, 464.) Virgil, as usual, Euhemerizing the old Italian deities, makes Juturna the sister of Turnus. She was, he says, violated by Jupiter, and made by him, in recompense, a goddess of the lakes and streams. (*Æn.*, 12, 139.—*Keightley's Mythology*, p. 512.)

JUVENĀLIS, DECIUS JUNIUS (or, according to some, DECIUS JUNIUS), was a celebrated Roman satirist. His birthplace, on no very sure grounds, is said to have been Aquinum, and he is supposed to have been born somewhere about A.D. 40, under Caligula, and to have died turned of 80, under the Emperor Hadrian. But few particulars of his life are known, and for these we are indebted to a short biographical sketch ascribed to Suetonius. This notice, however, is found in so corrupt a state in the MSS. as to have given rise to interpretations directly at variance with each other. Without stopping to inquire into the discussions which have thus been excited, we will proceed to lay before the student the results at which the best and most recent critics have arrived. Juvenal's birth was far from elevated. The author of his life doubts whether he was the son or merely the foster-son of a rich freedman. From the period of his birth till he had attained the age of forty, nothing more is known of him than that he continued to perfect himself in the study of eloquence by declaiming, according to the practice of those days: yet more for his own amusement than from any intention to prepare himself either for the schools or the courts of law. About this time he seems to have discovered his true bent, and betaken himself to poetry. Domitian was now at the head of the government, and showed symptoms of reviving that system of favouritism which had nearly ruined the empire under Claudius, by his unbounded partiality for a young pantomime dancer of the name of Paris. Against this minion Juvenal seems to have directed the first shafts of that satire which was destined to make the most powerful vices tremble, and shake the masters of the world on their thrones. He composed a satire on the influence of Paris with considerable success, but dared not publish it, though it was secretly handed about among his friends. Hence Quintilian, who wrote A.D. 92, makes no mention of Ju-

venal among the Latin satirists; although it has been supposed that he had him in view in the passage where he remarks, "we possess at the present day some distinguished ones, whom we will name hereafter." (*Inst. Or.*, 10, 1.) It was under Trajan that Juvenal wrote the greater part of his satires: the thirteenth and fifteenth were composed under Hadrian, when the author was in his 79th year. Then for the first time he recited his works in public, and met with the most unbounded admiration. The seventh satire, however, involved him in trouble. It was the one he had first composed, and in it the poet had lashed the pantomime Paris, the favourite of Domitian. Hadrian, who had suffered a comedian of the day to acquire a great ascendancy over him, believed that the poet meant to reflect upon this weakness of his, and resolved to have revenge. Under pretext, therefore, of honouring the old man, he named him prefect of a legion stationed at Syene, in Egypt; according to others, at Pentapolis, in Libya; or, according to others again, he was sent to one of the Oases, an ordinary abode of exiles. He died a few years after, in this honourable exile.—We have sixteen satires from the pen of Juvenal. In some editions they are divided into five books, of which the first contains five satires; the second one; the third three; the fourth three; and the fifth four. If we may judge of the character of a writer from his works, Juvenal was a man of rigid probity, and worthy of living in a better and purer age. His satires everywhere breathe a love of virtue and abhorrence of vice. Differing widely in this respect from Persius, he does not give himself up to the principles of one particular school of philosophy; he paints, on the contrary, in strong and glowing colours, the hypocrisy and the vices of the pretended philosophers of his time, and especially of the Stoic sect, to whose failings Persius had shut his eyes. He differs, moreover, from this last-mentioned satirist in not borrowing from the schools of philosophy the arms with which he attacked their failings: he found these abundantly supplied by the resources of his own genius, by the experience which a long acquaintance with the world had gained for him, and by the indignation which warned his bosom on contemplating the gross corruption of the times. His genius in some respect resembled that of Horace, but a long-established habit of familiarity with rhetorical subjects produced an influence on his general manner, which is infinitely graver than that of the friend of Mæcenas. Horace laughs at the follies of his age; Juvenal glows with indignation at the vices of his own. The former passes rapidly from one topic to another, and seems, as it were, led onward by his subject; Juvenal, on the contrary, follows a regular and methodical plan; he treats his subject according to the rules of the oratorical art, and is careful never to lose the thread of his discourse. The distinctive character of Juvenal's satire is a passionate hatred of, and an inexorable severity towards vice, and on this theme he never indulges in pleasantry; neither does any digression ever lead him off from the object which he has in view. It is this manner that gives to the satires of Juvenal a certain appearance of dryness, which form a direct contrast to the agreeable variety that pervades the satires of Horace. A circumstance extremely favourable to the literary reputation of Juvenal is to be found in the fact, of his not having dared to publish his satires until an advanced period of life. Hence he was enabled to revise and retouch them, to purify his taste, and to calm the fiery spirit which animated his earlier efforts by the sober judgment of maturer years. Juvenal is said to have spent much time in attendance on the schools of the rhetoricians, and the effect of this, in an age not remarkable for purity of taste, may be observed, perhaps, in a tendency to hyperbolic inflation of both thought and style, which would soon betray a writer of less power into the ridiculous. From

this his wit, command of language, and force and fullness of thought, completely preserve him: still, perhaps, he would produce more effect if the effort to do his utmost were less apparent.—The writings of Juvenal are addressed to the encouragement of virtue no less than to the chastisement of vice; and parts of them have been recommended by Christian divines as admirable storehouses of moral precepts. Still they lie open to the objection of descending so minutely into the details of vice, as to minister food as well as physic to the depraved mind. To the scholar they are invaluable for the information which they supply concerning private life among the Romans. The best editions of Juvenal are, that of Ruperti, *Lips.*, 1819, 2 vols. 8vo. and that of Lemaire, *Paris*, 1823, 3 vols. 8vo. The latter, indeed, may be regarded as the *Editio Optima*. An enumeration of the previous editions will be found in the Prolegomena appended to the last volume of Lemaire's work.

JUVENTAS, a goddess at Rome, who presided over youth and vigour. She is the same as the Hebe of the Greeks. The altar of Juventas stood in the vestibule of the temple of Minerva. (*Dion. Hal.*, 3, 69.) There was a temple of this goddess in which a registry was kept of the names of the young men who were of the military age. (*Dion. Hal.*, 4, 15.)

JUVERNIA (*Iovepvia*), a name for Ireland, found among the Greek writers. (*Agathem.*, 2, 4.—*Ptol.*, 2, 2.) In the various names of Ireland, as known to the classic writers, namely, Iris, Iernis, Juvernus, Juvernica, Hibernia, &c., the radical *Ir* or *Eri*, by which it is still known to its own natives, is plainly traceable. It is customary among the Irish to indicate a country by the prefix *Hy* or *Hua*, sometimes written *O*, as in the case of proper names, signifying, literally, "the (dwelling of) the sons or family of," such as *Hy-Mania*, *Hy-Tuirtre*, *Hy-Brazil*, &c. In adding this prefix to names beginning with a vowel, it is optional to insert a consonant to prevent the concurrence of open sounds; thus, *Hy-r-Each* means the country of the descendants of Each or Eacus. Again, this prefix requires the genitive, which in *Eri* is *Erin*, and thus all variations of the name, from the *Iris* of Diodorus Siculus, and the *Ir-land* or *Ire-land* of modern times, to the *Iernis* (*Hy-Iernis*) of the Orphic poems, and the *Hibernia* (*Hy-b-Ernia*) of the Latin writers, would seem to be accounted for. (*Vid.* Hibernia.)

IXION, the son of Antion or Peision, or, according to some, of Phlegyas. Others, again, gave him the god Mars for a sire. He obtained the hand of Dia, the daughter of Deioneus, having, according to the usage of the heroic ages, promised his father-in-law large nuptial gifts; but he did not keep his engagement, and Deioneus seized his horses and detained them as a pledge. Ixion then sent to say that the gifts were ready if he would come to fetch them. Deioneus accordingly came, but his treacherous son-in-law had prepared in his house a pit filled with fire, and covered over with bits of wood and with dust, into which the unsuspecting prince fell and perished. After this deed Ixion became deranged, and the atrocity of the crime was such that neither gods nor men would absolve him, till at length Jupiter took pity on him and purified him, and admitted him to his residence and table on Olympus. But, incapable of good, Ixion cast an eye of desire on the wife of his benefactor. Juno thereupon, in concert with her lord, formed a cloud in the likeness of herself, which Ixion embraced. He boasted of his good fortune, and Jupiter precipitated him into Erebus, where Mercury fixed him with brazen bands to an ever-revolving fiery wheel. (*Pind. Pyth.*, 2, 39, *scqq.*—*Schol. ad Pind.*, *Pyth.*, 2, 39.—*Hygin. fab.*, 62.)—This myth is probably of great antiquity, as the customs on which it is founded only prevailed in the heroic age. Its chief object seems to have been to inspire horror for the violation of the duties of hos-

pitatity on the part of those who, having committed homicide, were admitted to the house and table of the prince, who consented to perform the rites by which the guilt of the offender was supposed to be removed. The extremest case is given, by making Ixion, that is, the *Suppliant*, and the first shedder of kindred blood, as he is expressly called (the Cain of Greece), act with such base ingratitude towards the king of the gods himself, who, according to the simple earnestness of early mythology, is represented, like an earthly prince, receiving his suppliant into his house or at his board. The punishment inflicted was suited to the offence, and calculated to strike with awe the minds of the hearers.—(*Keightley's Mythology*, p. 314, *seq.*)

L.

LABĀRUM, the sacred banner or standard, borne before the Roman emperors in war from the time of Constantine. It is described as a long pike intersected by a transverse beam. A silken veil, of a purple colour, hung down from the beam, and was adorned with precious stones, and curiously inwrought with the images of the reigning monarch and his children. The summit of the pike supported a crown of gold, which enclosed the mysterious monogram at once expressive of the figure of the cross, and the two initial letters (X and P) of the name of Christ. (*Lipsius, de Cruce*, lib. 3, c. 15.) The safety of the Labarum was intrusted to fifty guards of approved valour and fidelity. Their station was marked by honours and emoluments; and some fortunate accidents soon introduced an opinion, that, as long as the guard of the Labarum were engaged in the execution of the office, they were secure and invulnerable among the darts of the enemy. In the second civil war Licinius felt and dreaded the power of this consecrated banner, the sight of which, in the distress of battle, animated the soldiers of Constantine with an invincible enthusiasm, and scattered terror and dismay through the adverse legions. Eusebius (*Vit. Const.*, l. 2, c. 7, *seqq.*) introduces the Labarum before the Italian expedition of Constantine; but his narrative seems to indicate that it was never shown at the head of an army till Constantine, above ten years afterward, declared himself the enemy of Licinius and the deliverer of the church. The Christian emperors, who respected the example of Constantine, displayed in all their military expeditions the standard of the cross; but when the degenerate successors of Theodosius had ceased to appear in person at the head of their armies, the Labarum was deposited as a venerable but useless relic in the palace of Constantinople. Its honours are still preserved on the medals of the Flavian family. Their grateful devotion has placed the monogram of Christ in the midst of the ensigns of Rome. The solemn epithets of "safety of the republic," "glory of the army," "restoration of public happiness," are equally applicable to the religious and military trophies; and there is still extant a medal of the Emperor Constantius, where the standard of the Labarum is accompanied with these memorable words, "*By this sign thou shalt conquer.*"—The history of this standard is a remarkable one. A contemporary writer (Cæcilius) affirms, that in the night which preceded the last battle against Maxentius, Constantine was admonished in a dream to inscribe the shields of his soldiers with the *celestial sign of God*, the sacred monogram of the name of Christ; that he executed the commands of Heaven, and that his valour and obedience were rewarded by a decisive victory at the Milvian bridge. The dream of Constantine may be naturally explained either by the enthusiasm or the policy of the emperor. While his anxiety for the approaching day, which must decide the fate of the empire, was suspended by a short and interrupted slumber,

the revered form of our Saviour and the well-known symbol of his religion might forcibly offer themselves to the active fancy of a prince who revered the name, and had, perhaps, secretly implored the power, of the God of the Christians. As readily, on the other hand, might a consummate statesman indulge himself in the use of one of those military stratagems, one of those pious frauds, which Philip and Scortorius had employed with such art and effect. The account given by Eusebius, however, is different from this. According to his statement, Constantine is reported to have seen with his own eyes the luminous trophy of the cross placed above the meridian sun, and inscribed with the following words in Greek, "*By this, conquer.*" This appearance in the sky astonished the whole army, as well as the emperor himself, who was yet undetermined in the choice of a religion; but his astonishment was converted into faith by the vision of the ensuing night. Our Saviour appeared before his eyes, and displayed the same celestial sign of the cross, directing Constantine to frame a similar standard, and to march, with an assurance of victory, against Maxentius and all his enemies. (*Gibbon, Decline and Fall*, ch. 20, vol. 3, p. 256, *seqq.*)—The form of the Labarum and monogram may be seen, as we have already said, on the medals of the Flavian family. The etymology of the term itself has given rise to many conflicting opinions. Some derive the name from *labor*; others, from *εὐλαβεία*, "reverence;" others, from *λαμβάνειν*, "to take;" and others, again, from *λάφυρα*, "spoils." A writer in the Classical Journal assigns the following derivation; he makes *Labarum* to be, like S. P. Q. R., only a *notatio*, or combination of initials to represent an equal number of terms; and thus, L. A. B. A. R. V. M. will stand for "*Legionum aquila Byzantium antiquā Romā urbe mutavit.*" (*Class. Journ.*, vol. 4, p. 233.)

LABDACIDES, a name given to Œdipus as descended from Labdacus.

LABDĀCUS, a son of Polydorus by Necteis, the daughter of Necteus, king of Thebes. His father and mother died during his childhood, and he was left to the care of Necteus, who, at his death, left his kingdom in the hands of Lycus, with orders to restore it to Labdacus as soon as of age. On succeeding to the throne, Labdacus, like Pentheus, opposed himself to the religion of Bacchus, and underwent a similar fate. He was father to Laius, and his descendants were called Labdacidæ. (*Vid. Laius.*)

LABDĀLON, a hill near Syracuse, forming part of Epipolæ. It was fortified by the Athenians in their contest with Syracuse. (*Thucyd.*, 6, 97.—Compare *Goller, de Situ et Origine Syracusarum*, p. 53, *seqq.*)

LABEĀTES, a people of Dalmatia, in the lower part, whose territory constituted the principal portion of the dominions of Gentius. His capital was Scodra. In the country of the Labeates was the Labeatus Palus, now the *Lake of Scutari*. (*Liv.*, 43, 19.—*Id.*, 44, 31.—*Plin.*, 3, 22.)

LABĒO, a surname common to several distinguished Roman families, such as the Asconii, Antistii, Atinii, Cethegi, &c. It is derived from *labium*, and denotes literally one who is thick-lipped. (*Charis.*, l. 1, p. 79.—*Putsch., ex Verr. Flacc.*) Among the individuals who bore this name, the following were the most noted. 1. Antistius. (*Vid. Antistius Labeo*).—II. Q. Fabius, was distinguished as a commander, but was regarded as devoid of generosity and good faith towards the vanquished. He obtained a naval victory over the Cretans, and enjoyed the honours of a triumph. In the year 183 B.C. he was created consul along with Cl. Marcellus, and commanded the army stationed in Liguria. Cicero relates a curious anecdote of his want of principle, when chosen umpire between the inhabitants of Neapolis and Nola, on the subject of their respective boundaries. (*Off.*, 1, 10.) It is

said also that Labeo, having gained a victory over Antiochus, compelled him to consent to cede unto the Romans the one half of his fleet, and that, taking advantage of the equivocal meaning of the words in the treaty, he caused all the vessels to be sawed in two. (*Val. Max.*, 7, 3.) Labeo is said to have been of a literary turn, and to have aided Terence in the composition of his comedies. (*Vid. Terentius.*)—III. ATTUS, a wretched poet in the time of Perseus. He is ridiculed by the latter on account of a wretched version which he had made of the Iliad, but which, nevertheless, had found favour with Nero and his courtiers. (*Pers.*, Sat., 1, 50.—*Schol.*, ad loc.)

LABERIUS, DECIMUS, a Roman knight of respectable character and family, who was famed for his talent in writing mimes, in the composition of which fanciful productions he occasionally amused himself. He was at length requested by Julius Cæsar to appear on the stage, and act the mimes which he had sketched or written. (*Macrob.*, Sat., 2, 7.) Laberius was sixty years of age when this occurrence took place. Aware that the entreaties of a perpetual dictator are nearly equivalent to commands, he reluctantly complied; but, in the prologue to the first piece which he acted, he complained bitterly to the audience of the degradation to which he had been subjected. The whole prologue, consisting of twenty-nine lines, which have been preserved by Macrobius, is written in a fine vein of poetry, and with all the high spirit of a Roman citizen. It breathes in every verse the most bitter and indignant feelings of wounded pride, and highly exalts our opinion of the man, who, yielding to an irresistible power, preserves his dignity while performing a part which he despised. It is difficult to conceive how, in this frame of mind, he could assume the jocund and unrestrained gayety of a mime, or how the Roman people could relish so painful a spectacle. He is said, however, to have represented the feigned character with inimitable grace and spirit. But in the course of his performance he could not refrain from expressing strong sentiments of freedom and detestation of tyranny. In one of the scenes he personated a Syrian slave; and, while escaping from the lash of his master, he exclaimed,

"Porro, Quirites, libertatem perdidimus;"

and shortly after he added,

"Necesse est multos timeat quem multi timent,"

on which the whole audience turned their eyes towards Cæsar, who was present in the theatre. (*Macrob.*, l. c.) It was not merely to entertain the people, who would have been as well amused with the representation of any other actor, nor to wound the private feeling of Laberius, that Cæsar forced him on the stage. His sole object was to degrade the Roman knighthood, to subdue their spirit of independence and honour, and to strike the people with a sense of his unaltered sway. This policy formed part of the same system which afterward led him to persuade a senator to combat among the ranks of gladiators. Though Laberius complied with the wishes of Cæsar in exhibiting himself on the stage, and acquitted himself with ability as a mimetic actor, it would appear that the dictator had been hurt and offended by the freedoms which he used in the course of the representation, and, either on this or some subsequent occasion, bestowed the dramatic crown on Publius Syrus in preference to the Roman knight. Laberius submitted with good grace to this fresh humiliation; he pretended to regard it merely as the ordinary chance of theatric competition. He did not long survive, however, this double mortification, but retired from Rome, and died at Puteoli about ten months after the assassination of Cæsar. (*Chron. Euseb.*, ad *Olymp.* 184.) The titles and a few fragments of forty-three of the Mimes of Laberius are still extant; but, excepting the prologue already

referred to, these remains are too inconsiderable and detached to enable us to judge of their subject or merits. It would appear that he occasionally dramatized the passing follies or absurd occurrences of the day; for Cicero, writing to the lawyer Trebonius, who expected to accompany Cæsar from Gaul to Britain, tells him he had better return to Rome quickly, as a longer pursuit to no purpose would be so ridiculous a circumstance, that it would hardly escape the drollery of that arch fellow Laberius. (*Ep. ad Fam.*, 7, 11.) According to Aulus Gellius (16, 7), Laberius had taken too much license in inventing words; and that author also gives various examples of his use of obsolete expressions, or such as are only employed by the lowest dregs of the people. (*Dunlop's Roman Literature*, vol. 1, p. 552, seqq.)

LABICUM, a town of Italy, about fifteen miles from Rome, between the Via Prænestina and the Via Latina. (*Strabo*, 237.) A great difference of opinion, however, exists as to its actual site. Cluverius erroneously supposes it to coincide with the modern Zagarolo. Holstenius, after a careful examination of the subject, decides in favour of the height on which the modern town of Colonna stands (*ad Steph. Byz.*, p. 194), and his opinion is strengthened by the discovery of several inscriptions near Colonna, in which mention is made of Labicum. (*Cramer, Anc. It.*, vol. 2, p. 75.)

LABIENUS, L. one of Cæsar's lieutenants in the Gallic war. In the beginning of the civil war he left Cæsar for Pompey (*B. Cæ.*, 3, 13), escaped from the battle of Pharsalia, and was killed in that at Munda. (*B. Hisp.*, c. 31.) Labienus appears to have parted with almost all his former success on abandoning the side of his old commander. A detailed biography of this officer is given in the *Biographie Universelle* (vol. 23, p. 22, seqq.)—II. A son of the preceding, who inherited all his father's hatred to the party of Cæsar. After the defeat of Brutus and Cassius, he refused to submit to the triumvirs, and retired to Parthia, where he was invested with a military command, and proved very serviceable to his new allies in their contests with the Romans. He was made prisoner in Cilicia, and probably put to death. Labienus caused medals to be struck, having on the obverse his head, with this legend, *Q. Labienus Parthicus Imper.*, and, on the reverse, a horse caparisoned after the Parthian manner. (*Rasche, Lex. Rei Numism.*, vol. 4, col. 1402.)

LABRÆDEUS, a surname of Jupiter in Caria. The name was derived, according to Plutarch, from *λάβρυξ*, the Lydian term for a hatchet, which the statue of Jove held in its hand, and which had been offered up by Arselsis of Mylassa from the spoils of Candaules, king of Lydia. (*Plut.*, *Quest. Gr.*, p. 301.—*Op.*, ed. *Reiske*, vol. 7, p. 205.)

LABRŌNIS PORTUS, or Portus Herculis Liburni, a harbour of Etruria, below the mouth of the Arnus. It is now *Livorno*, or, as we pronounce the name, *Leghorn*. Cicero calls it Portus Labronis (*ad Q. frat.*, 2, 6.—Compare *Zos.*, *Ann.*, 5), but the other is the more usual appellation.

LABYNĒTUS, a king of Babylon, mentioned by Herodotus (1, 74). He is supposed to have been the same with Nebuchodonosor. (*Wesseling et Bähr, ad Herod.*, l. c.)

LABYRINTHUS, a name given to a species of structure, full of intricate passages and windings, so that, when once entered, it is next to impossible for an individual to extricate himself without the assistance of a guide. The origin of the term will be considered at the close of the article. There were four very famous labyrinths among the ancients, one in Egypt, near the Lake Mæris, another in Crete, a third at Lemnos, and a fourth near Clusium in Italy.—I. *The Egyptian*. This was situated in Lower Egypt, near Lake Mæris, and in the vicinity of Arsinoë or Crocodiopolis. The accounts which the ancient writers

gave of it are very different from each other. Herodotus, who saw the structure itself, assigns to it twelve courts. (*Herod.*, 2, 148.) Pliny, whose description is much more highly coloured and marvellous than the former's, makes the number sixteen (*Plin.*, 36, 19); while Strabo, who, like Herodotus, beheld the very structure, gives the number of courts as twenty-seven. (*Strab.*, 810.) The following imperfect sketch, drawn from these different sources, may give some idea of the magnitude and nature of this singular structure. A large edifice, divided, most probably, into twelve separate palaces, stretched along with a succession of splendid apartments, spacious halls, &c., the whole adorned with columns, gigantic statues, richly carved hieroglyphics, and every other appendage of Egyptian art. With the north side of the structure were connected six courts, and the same number with the southern. These were open places surrounded by lofty walls, and paved with large slabs of stone. Around these courts ran a vast number of the most intricate passages, lower than the corresponding parts of the main building; and around all these again was thrown a large wall, affording only one entrance into the labyrinth; while at the other end, where the labyrinth terminated, was a pyramid forty fathoms high, with large figures carved on it, and a subterranean way leading within. According to Herodotus, the whole structure contained 3000 chambers, 1500 above ground, and as many below. The historian informs us, that he went through all the rooms above the surface of the earth, but that he was not allowed by the Egyptians who kept the place to examine the subterranean apartments, because in these were the bodies of the sacred crocodiles, and of the kings who had built the labyrinth. "The upper part, however," remarks the historian, "which I carefully viewed, seems to surpass the art of men; for the passages through the buildings, and the variety of windings, afforded me a thousand occasions of wonder, as I passed from a hall to a chamber, and from the chamber to other buildings, and from chambers into halls. All the roofs and walls within are of stone, but the walls are farther adorned with figures of sculpture. The halls are surrounded with pillars of white stone, very closely fitted."—According to Herodotus, the labyrinth was built by twelve kings, who at one time reigned over Egypt, and it was intended as a public monument of their common reign. (*Herod.*, 2, 148.) Others make it to have been constructed by Psammetichus alone, who was one of the twelve; others, again, by Ismandes or Petosuchis. Mannert assigns it to Memnon. Opinions are also divided as to the object of this singular structure. Some regard it as a burial-place for the kings and sacred crocodiles, an opinion very prevalent among the ancients. Others view it as a kind of Egyptian Pantheon. Others, again, make it to have been a place of assembly for the deputies sent by each of the twelve nomes of Egypt (consult article Egyptus, p. 37, col. 1); while another class think that the Egyptian mysteries were celebrated here. All these opinions, however, yield in ingenuity and acumen to that of Gatterer. (*Weltgesch.*, vol. 1, p. 50, *seqq.*) According to this writer, the labyrinth was an architectural-symbolical representation of the zodiac, and the course of the sun through the same. The twelve palaces are the twelve zodiacal signs; the one half of the building above ground, and the other below, is a symbol of the course of the sun above and below the horizon; while the 3000 chambers in the whole structure have a symbolical reference to the precession of the equinoxes. The Egyptians reckoned, not by tropical or solar, but by sidereal, years. The difference between the two, which depends on the precession of the equinoxes, the Egyptian astronomers made too small; since they reckoned the precession at one degree in every 100 years, which is at the rate of only

46" per year. Hence in 3000 years it amounts to 30 degrees, or exactly one celestial sign; so that the 3000 chambers of the labyrinth indicated symbolically the precession of the equinoxes for each sign of the zodiac, or, in astrological phraseology, the change of dwelling on the part of the gods, and their advance to a new palace or abode. Still farther, as the full period of the wandering of the soul from the body amounted to exactly 3000 years, the 3000 chambers of the labyrinth had also a symbolical reference to this particular article of Egyptian faith.—(For other views on this interesting subject, consult *Zoega*, de *Obelisc.*, p. 418, *not.* 10.—*Beck*, *Anleit. zu Weltgesch.*, vol. 1, p. 721.—*Larcher*, ad *Herod.*, l. c.—*Bähr*, ad *Herod.*, l. c.—*Id.*, *Excurs.* X., ad *Herod.*, vol. 1, p. 918, *seqq.*—*Descript.* de l'*Egypte Anc.*, vol. 2, ch. 17, sect. 3, p. 32, *seqq.*—*Mannert*, *Geogr.*, vol. 10, pt. 1, p. 430.—*Le-tronne*, in *Nouv. Ann. des Voyages*, par *Eyrié et Malte-Brun*, vol. 6, p. 133, *seqq.*)—As regards the name *Labyrinth* itself, much diversity of opinion exists. They who make it a term of Grecian origin, derive it ἀπὸ τοῦ μῆ λαβεῖν θύραν, from its difficulty of egress; or from λάβω, "to seize" or "con-*fine*," with reference to the Cretan labyrinth. Others, finding in Manetho that an Egyptian king, named Iachares or Labaris, had erected the structure in question, make the term labyrinth equivalent to "the abode of Labaris." (*Beck*, l. c.—*Jablonsk.*, *Voc. Egypt.*, p. 123.—*Te Water*, ad *loc.*, p. 125, *not.* r.) Jablonski himself, adopting the opinion that the labyrinth was the work of many kings in succession, makes the name signify "the work of many," or "of a great multitude," and thinks that the labourers employed on it were Israelites. The latest etymology is that of Sickler, who makes the name labyrinth equivalent to the Hebrew *Lavah-Biranith*, i. e., "cohesit arx," for coherens arx, "the connected fortress or palace!" (*Handbuch, der Alt. Geogr.*, p. 797.)—The position of the Egyptian labyrinth is clearly indicated by the words of Herodotus, ὀλίγον ὑπὲρ τῆς λίμνης τῆς Μοῖρας, "a little above the Lake Mæris," so that D'Anville is evidently in error when he speaks of two labyrinths in Egypt. Zoega thinks that Paul Lucas discovered in 1714 the remains of the ancient labyrinth at Kess-Caron (*de Obelisc.*, p. 418, *not.* 10.—*Paul. Luc.*, *Voyage en 1714*, vol. 2, p. 262). This, however, is erroneous. The ruins at Kess-Caron are merely those of some temples. (*Descrip. de l'Egypte An.*, l. c.) It is more probable that the remains of the labyrinth must be sought for near the village of Haouârah, where a canal joins the Lake Mæris, and where a pyramid is still to be seen. Vast piles of rubbish are here to be seen, and the destruction is supposed to be owing to the Arabs, who may have thought that treasures were concealed under ground here. (*Ritter*, *Erdkunde*, vol. 1, p. 810, *seqq.*—*Revue Française*, 1829, *Janv.*, p. 70.—*Von Hammer*, *Wien. Jahrb.*, vol. 45 (1829), p. 31.)—II. For an account of the Cretan, Etrurian, and Lemnian labyrinths, consult the articles *Minotaurus*, *Porsenna*, and *Lemnos* respectively.

LACEDÆMON, I. a son of Jupiter and Taygeta the daughter of Atlas, who married Sparta, the daughter of Eurotas, by whom he had Amyclas and Eurydice, the wife of Acrisius. He was the first who introduced the worship of the Graces into Laconia, and who built them a temple. From Lacedæmon and his wife the capital of Laconia was called Lacedæmon and Sparta. (*Apollod.*, 3, 10.—*Hygin.*, *fab.*, 155.)—II. A city of Pcloponnesus, the capital of Laconia, called also Sparta. (*Vid.* Sparta.)

LACEDÆMONII and LACEDÆMONES, the inhabitants of Lacedæmon. (*Vid.* Lacedæmon and Sparta.)

LACHESIS, one of the Parcæ. (*Vid.* Parcæ.)

LACINIĀ, a surname of Juno, from her temple at Lacinium in Italy.

LACINIUM PROMONTORIUM, a celebrated promontory

of Magna Græcia, in the territory of the Brutii, a few miles to the south of Crotona, which runs out for some distance into the sea, and with the opposite Iapygian promontory encloses the Gulf of Tarentum. (*Strabo*, 261.—*Scylax, Periplus*, p. 4.) Its modern names are *Capo delle Colonne* (Cape of the Columns), and *Capo Nao* (Cape of the Temple), from the remains of the temple of Juno Lacinia, which are still visible on its summit. (*Romanelli*, vol. 1, p. 195.)—This celebrated edifice, remarkable for its great antiquity, the magnificence of its decorations, and the veneration with which it was regarded, was surrounded by a thick grove of trees, in the midst of which were spacious meadows, where numerous herds and flocks were pastured in perfect security, as they were accounted sacred. From the profits accruing out of the sale of these cattle, which were destined for sacrifices, it was said that a column of solid gold was erected and consecrated to the goddess. (*Liv.*, 24, 3.—*Cic. de Div.*, 1, 24.) On the festival of Juno, which was celebrated annually, an immense concourse of the inhabitants of all the Italian Greek cities assembled here, and a grand display of the most rare and precious productions of art and nature was exhibited. (*Aristot.*, *de Mirab.*—*Athenæus*, 12, 10.) Among other splendid pictures with which this temple was adorned, the famous Helen of Zeuxis was more particularly admired.—History has not acquainted us with the founders of this consecrated pile. According to Diodorus Siculus (4, 24), some ascribed its origin to Hercules. This sanctuary was respected by Pyrrhus, as well as by Hannibal; the latter caused an inscription in Greek and Punic characters to be deposited there, recording the number of his troops, and their several victories and achievements. (*Polyb.*, 3, 33 and 36.) But several years afterward it sustained great injury from Fulvius Flaccus, a censor, who caused a great portion of the roof, which was covered with marble, to be removed, for the purpose of adorning a temple of Fortune constructed by him at Rome. Such an outcry was raised against this act of impiety, that orders were issued by the senate that everything should be restored to its former state; but this could not be effected, no architect being found of sufficient skill to replace the marble tiles according to their original position. (*Liv.*, 42, 3.—*Val Max.*, 1, 1.)—From the ruins of this celebrated edifice, it is evident that it was of the early Doric style, with fluted pillars, broader at the base than at the capital. It measured about 132 yards in length and 66 in breadth; and, as it faced the east, its principal entrance opened to the west. (*Steuernbe's Travels*, vol. 1, p. 32.—*Voyage de Reidesel*, p. 151.) It is to be regretted that no excavations have been hitherto made on this spot, as it is very probable they might be attended with satisfactory results. (*Cramer's Anc. Italy*, vol. 2, p. 395, *seqq.*)

LACOBRIÇA, I. a town of Spain, near the Sacrum Promontorium, now *Lagoa*. (*Mela*, 3, 1.—*Ukert, Geogr.*, vol. 2, p. 387.)—II. A town of Spain, among the Vaccæi, now *Lobera*. (*Plin.*, 3, 4.)

LACONICA, called by the Roman writers LACONIA, a country of Peloponnesus, situate at its southern extremity, having Messenia on the west, and Arcadia and Argolis on the north. The extent of Laconia from east to west, where it reached farthest, was 1° 45', but it became narrower towards the north, and its extent from north to south was about 50 miles. As the southern parts were encompassed by the sea, and the east and northeast parts by the Sinus Argolicus, it had a great number of promontories, the chief of which were those of Malea and Tænarus, now Capes *Malio* and *Matapan*. The seacoast of Laconia was furnished with a considerable number of seaports, towns, and commodious harbours, the chief of which were Trinassus, Acra, Gythium, and Epidaurus. The Laconian coasts were famous for yielding a shellfish,

whence was obtained a beautiful purple dye, inferior only to that which was brought from the Red Sea and Phœnicia. The mountains of Laconia were numerous: the most famous was Taygetus. Its principal river was the Eurotas, on which stood the capital, Sparta or Lacedæmon. The soil was very rich, especially in the low grounds, and, being well watered, was excellent for pasture; but the number of its mountains and hills prevented its being tilled so well as it might otherwise have been. Among the animals of the country may be enumerated wild and tame goats, wild boars, deer, and excellent hounds. A blackish green marble (probably basalt) was obtained at Tænarus.—(For an outline of Spartan history, consult remarks under the article Sparta.)

LACTANTIUS, I. Lucius Cœlius (or Cæcilius Firmianus), an eminent father of the church, according to some a native of Africa, while others make him to have been born at Firmium in Italy. The former is most likely, as he studied rhetoric at Sicca, a city of Africa, under Arnobius, and attained so high a reputation by a production called *Symposium*, or "the Banquet," that, when Dioclesian entertained a design to render Nicomedia a rival to Rome, he appointed Lactantius to teach rhetoric in that city. It is by some supposed that he was originally a pagan, and converted, when young, to the Christian faith; but Lardner thinks otherwise; and that he was a Christian during the persecution of Dioclesian is unquestionable. It appears that, owing to the unprofitableness of his profession, or other causes, he lived in very narrow circumstances, which it is, however, reasonable to conclude were amended when appointed by the Emperor Constantine Latin preceptor to his son Crispus, after whose untimely death he appears to have been again neglected. Little more is known of his personal history, except that he lived to an advanced age, but the exact time of his death is not recorded. As a Christian writer, Lactantius is thought to treat divinity too philosophically; but, at the same time, he is deemed the most eloquent of all the early ecclesiastical authors, and his Latinity has acquired him the title of the Christian Cicero. His principal object was to expose the errors and contradictions of pagan writers on the subjects of theology and morals, and thereby to establish the credit and authority of the Christian religion, and his works are written with much purity and elegance of style, and discover great erudition. The testimony, indeed, to his learning, eloquence, and piety, is most abundant. Le Clerc calls him the most eloquent of the Latin fathers; and Du Pin places his style almost on a level with Cicero's. Many writers, however, value his rhetoric more than his theology. He has been charged, among other errors, with Manichæism, from which Lardner takes great pains to defend him. Middleton has shown, in his "Free Enquiry," that Lactantius was not free from the credulity with which many of the early Christian writers are chargeable. Several material defects, moreover, must be remarked in this writer. He frequently quotes and commends spurious writings as if they were genuine, and makes use of sophistical and puerile reasonings. Examples of this may be seen in what he has advanced concerning the pre-existence of souls, the millennium, the coming of Elias, and many other topics in theology. Upon the subject of morals Lactantius has occasionally said excellent things; but they are mixed with others, injudicious, trifling, or extravagant. He maintains that war is in all cases unlawful, because it is a violation of the commandment, "Thou shalt not kill." He censures navigation and foreign merchandise, condemns all kinds of usury, and falls into other absurdities on moral topics. We must not, however, omit to remark, to the credit of Lactantius, his acknowledgment, that when Pythagoras and Plato visited barbarous nations in order to inform themselves concern-

ing their sacred doctrines and rites, they did not become acquainted with the Hebrews; an observation which, had it been earlier admitted, might have prevented many mistakes in the history of philosophy. As a proof, moreover, that Lactantius, notwithstanding all his defects, was capable of thinking justly and liberally, we may refer to an excellent passage in which he strenuously asserts the right of private judgment in religion, and calls upon all men to employ their understandings in a free inquiry after the truth. (*Instit. Div.*, 2, 7.) We have five prose works remaining of this father of the church: 1. *De Officio Dei*, an apology for Divine Providence against the Epicureans, drawn principally from the miraculous construction of the human frame.—2. *De morte Persecutorum*, a history of the persecutors of Christianity from Nero to Dioclesian. The object of the writer is to show, by the violent deaths which all the persecutors of Christianity experienced, that God punished their crimes. This work has been preserved to us in a single manuscript, from which it was published by Baluze. Nourry has maintained that it is not a work of Lactantius, but of a certain Lucius Cæcilius, an imaginary being, who owes his existence merely to the mutilated title of a manuscript.—3. The principal work of Lactantius is entitled *Divine Institutiones*, and is divided into seven books. It was written in reply to two heathens, who wrote against Christianity at the beginning of Dioclesian's persecution. The date of the composition of the work cannot be exactly fixed. Basnage, Du Pin, and others, place it about A.D. 320; Cave and Lardner about A.D. 306. Lardner states the arguments on both sides; and, on the whole, the latter opinion seems the more probable. Of this treatise he published an abridgment.—4. entitled *Epitome Institutionum*. A great portion of this was already lost in the days of St. Jerome; Pfoff, a professor of Tübingen, discovered the entire abridgment in a very ancient manuscript of the Turin library.—5. *De ira Dei*. In this work Lactantius examines the question, whether we can attribute anger to the Deity, and decides in the affirmative. The "Banquet" of Lactantius has not reached us. Some ancient manuscripts assign to this father the authorship of a poem, entitled, "*De Phœnice*," but many of the ablest modern critics regard it as a spurious production. It consists of 170 verses, and turns upon the well-known fable of the Phœnix, which the early Christians regarded as an emblem of the resurrection. The editors of Lactantius have also joined to his works two other poems, one on the passover, "*De Pascha*," and the other on our Saviour's passion, "*De Passione Domini*." These poems, however, were written by Verantius Fortunatus, a poet of the sixteenth century. A collection also of enigmas, in verse, has been assigned by some to Lactantius, but incorrectly. Complete editions of the works of Lactantius were published by Heumann, at Göttingen, in 1736 (the preface to this contains a catalogue of former editions), and by the Abbé Langlet, Paris, 2 vols. 4to, 1748. (Schöll, *Hist. Lit. Rom.*, vol. 4, p. 26, seqq.—*Id.*, vol. 3, p. 54.—Bähr, *Gesch. Röm. Lit.*, p. 124, 128, 248, 416, 484.)—II. Placidus, a grammarian, who flourished about 550 A.D. (*Sax. Onomast.*, vol. 2, p. 45.) He was the author of *Argumenta Metamorphoseon Ovidii*, in prose. (Müller, *V. S.*, p. 139.—Muncker, *Præf. ad Fulgent. in Mythogr. Lat.*)

LACRÆS, a philosopher of Cyrene, who filled the chair of the Platonic school at Athens after the death of Arcesilaus. He assumed this office in the 4th year of the 134th Olympiad. He is said to have been the founder of a new school, not because he introduced any new doctrines, but because he changed the place of instruction, and held his school in the garden of Attalus, still, however, within the limits of the Academic grove. He died of a palsy, occasioned by ex-

cessive drinking, in the second year of the 141st Olympiad. (*Diog. Laert.*, 4, 59, seqq.—*Ælian*, V. H., 2, 41.—*Athenæus*, 10, 50.)

LADON, I. a small stream of Elis, flowing into the Peneus, and passing by Pylos. (*Pausan.*, 6, 22.) In modern maps it is called the *Derviche* or *Tchelibier*.—II. A river of Arcadia, rising near the village of Lyeuria, between the Peneus and Clitor. It was accounted the most beautiful stream in Greece. It is now called, according to Dodwell (vol. 2, p. 442), *Kephalo-Brusi*, a general name in Rome for any abundant source of water. He describes it as gurgling in continual eruptions from the ground, and immediately forming a fine, rapid river. (*Pausan.*, 8, 20.—*Dionys. Periegr.*, v. 417.—*Ovid, Met.*, 1, 702.—*Id.*, *Fast.*, 5, 89.—*Cramer's Ancient Greece*, vol. 3, p. 317, seqq.)

LÆLIUS, I. C., surnamed *Nrpos*, an eminent Roman commander, accompanied the elder Africanus into Spain, and had the command of the fleet assigned him, which was to co-operate with the land forces. He contributed to the reduction of Carthago Nova, and was highly honoured by Scipio, both for his services on this occasion, and also for his judicious conduct in appeasing a commotion produced by the rivalry that prevailed between the land and naval forces of the Romans. (*Liv.*, 25, 48.) He was afterward sent to Rome to give an account of the successes which had attended the arms of the republic. After the close of the Spanish war, Lælius was despatched by Scipio to the court of Syphax, to sound that prince, and engage him to form an alliance with the Romans. The following year (A.U.C. 548, B.C. 206), Asdrubal, the son of Giscon, having renewed the war in Spain, Lælius was despatched to oppose him, and nearly succeeded in making himself master of Gades. In A.U.C. 549, B.C. 205, he was directed by Scipio to make a descent on the coast of Africa, which he effected, and obtained an immense booty. In the course of this war he surprised the camp of Syphax during the night, in conjunction with Masinissa, set fire to it, pursued and overtook the prince himself, and made him prisoner. He conducted Syphax to Rome, and then hastened to rejoin Scipio, and share his glory and his dangers. Lælius was elected prætor A.U.C. 557, B.C. 197, and obtained the government of Sicily. He afterward stood candidate for the consulship, but was defeated by private intrigues, and did not attain to that office until A.U.C. 564, B.C. 190. After his election to the consulship, Lælius had some difficulties with his colleague, L. Cornelius Scipio, respecting the division of the provinces. They both desired the government of Greece; but the senate, to whom the question was left, decided in favour of Scipio, and Lælius was obliged to be satisfied with a government in Italy. In discharging the duties of this, he re-peopled Cremona and Placentia, which had been ruined by wars and contagious disorders. History, after this, makes no farther mention of him. It was from the narratives of Lælius that Polybius wrote his account of the campaigns of Scipio in Spain and Africa. (*Polyb.*, 10, 11.—*Liv.*, 26, 42, seqq.—*Id.*, 27, 7, seqq.—*Id.*, 29, 1, seqq.)—II. Surnamed *Sapiens*, was son of the preceding. He studied philosophy in early life under Diogenes the Stoic and Panætius, and learned, from these two eminent philosophers, to contemn the allurements of pleasure, and to cherish an ardent love for wisdom and virtue. Turning his attention after this to the profession of the bar, he took a high rank among the orators of his time. His eloquence is described by Cicero as mild and persuasive, although he was negligent in point of style, and too fond of employing antiquated terms. (*Cic.*, *Brut.*, 21, seqq.) Lælius accompanied his friend, the younger Africanus, to the siege of Carthage, where he signalized his valour. After the destruction of this celebrated city, he was sent as prætor into Spain, and there broke the power

of the chieftain Viriathus. (*Cic., Off.*, 2, 11.) He was afterward elected into the college of augurs, B.C. 118, and defeated before the comitia the proposition of L. Crassus, to deprive the senate of the power of electing the members of the augural college, and to transfer this right to the people. Cicero (*N. D.*, 3, 43) calls the speech which he delivered on this occasion "*oratiuncula aureola*." Bribery and intrigue frustrated for some time his applications for the consulship, notwithstanding the efforts of Scipio in his behalf, until B.C. 140, when his merit triumphed over every obstacle. He was consul with C. Servilius Cæpio, and conducted himself in this high office with a moderation well calculated to conciliate all minds. Still, however, he could not obtain a re-election, a circumstance to which Cicero alludes, who blames the people for depriving themselves of the services of so wise a magistrate. (*Cic., Tusc.*, 5, 19.) Lælius lived a country life, and, when there, divided his time between study and agriculture. He appears to have been of a cheerful and equable temper, and to have looked with philosophic calmness on both the favours and the frowns of fortune. Hence Horace (*Serm.*, 2, 1, 72) alludes to the "*mitis sapientia Lælii*." He numbered among his friends Pæcuvius and Terence, and it was thought that, in conjunction with Scipio, he aided Terence in the composition of his dramas. (But consult the article Terentius.) The friendship that subsisted between Lælius and Scipio was celebrated throughout Rome, and it was this which induced Cicero to place the name of the former at the head of his beautiful dialogue "*De Amicitia*," the interlocutors in which are Lælius and his two sons-in-law, C. Fannius and Q. Mutius Scævola. Quintilian mentions a daughter of Lælius who was celebrated for her eloquence. (*Quint.*, 1, 1, 6.)

LAERTES, I. king of Ithaca and father of Ulysses. He was one of the Argonauts. He ceded the crown to his son and retired to the country, where he spent his time in the cultivation of the earth. Ulysses found him thus employed on his return, enfeebled by age and sorrow. (*Vid.* Ulysses.)—II. A town and harbour of Cilicia, on the confines of Pamphylia, and west of Selinus. Strabo makes it to have been a fortified post on a hill, with a harbour below (669). It was the birth-place of Diogenes Laërtius. (*Vid.* Diogenes III.)

LAERTIUS, Diogenes, a Greek writer. (*Vid.* Diogenes III.)

LÆSTRYGONES, a gigantic and androphagous race, mentioned by Homer in his description of the wanderings of Ulysses. The country of the Læstrygonians, according to the poet, lay very far to the west, since Ulysses, when driven from the island of Æolus, sailed on farther for six days and nights, at the end of which time he reached the land of the Læstrygonians. Many expounders of mythology, therefore, place the Læstrygonians in Sicily. But for this there is no good reason whatever, since Homer makes this race and that of the Cyclopes to dwell at a wide distance from each other. Equally fabulous is the account given by some of the ancient writers, that a colony of Læstrygonians passed over into Italy with Æolus at their head, and built the city of Formiæ. When once the respective situations of Circe's island and that of Æolus were thought to have been ascertained, it became no very difficult matter to advance a step farther, and, as the Læstrygonians lay, according to Homer, between these two islands, to make Formiæ on the Italian coast a city of that people. Formiæ was, however, in truth, of Pelagic origin, and seems to have owed a large portion of its prosperity to a Spartan colony. The name appears to come from the Greek Ὀψαλί, and to have denoted a good harbour. (*Mannert, Geogr.*, vol. 4, p. 11, *seqq.*)—Unlike the Cyclopes, the Læstrygonians lived in the social state. Their king was named Antiphates, their town was called Læstrygonia or Te-

lepylus (it is uncertain which), and a fountain near it Artakia. Such was the state of things, according to Homer, when Ulysses came to this quarter in the course of his wanderings. There was a port at a little distance from the city, which all the ships of Ulysses, but the one in which he himself was, entered. A herald, with two other persons, was then sent to the city. They met the daughter of Antiphates at the fountain Artakia, and were by her directed to her father's house. On entering it they were terrified at the sight of his wife, who was "as large as the top of a mountain." She instantly called her husband from the market-place, who seized one of them, and killed and dressed him for dinner. The other two made their escape, pursued by the Læstrygonians, who with huge rocks destroyed all the ships and their crews which were within the harbour, the vessel of Ulysses, which had not entered, alone escaping. (*Hom., Od.*, 10, 81, *seqq.*)

LÆTORIA LEX, I. ordered that the plebeian magistrates should be elected at the Comitia Tributa: passed A.U.C. 292.—II. Another, passed A.U.C. 497, against the defrauding of minors. By this law the years of minority were limited to twenty-five, and no one below that age could make a legal bargain. (*Heinecc., Ant. Rom., ed. Haubold*, p. 197, *seq.*)

LÆVINUS, I. P. Valerius, was consul A.U.C. 472, B.C. 280, and was charged with the conduct of the war against Pyrrhus and the Tarentines. The rapidity of his advance into Southern Italy induced Pyrrhus to offer him terms of accommodation, and to propose himself as an umpire between the Tarentines and Romans. Lævinus made answer to the monarch's envoy, that the Romans neither wished his master for an arbitrator, nor feared him as an enemy. A bloody battle ensued near Heraclea, which Pyrrhus eventually gained by means of his elephants, these monstrous animals having never before been encountered by the Romans. This was the action after which Pyrrhus exclaimed, that another such victory would prove his ruin. Lævinus, not disheartened by his ill success, sent to Rome for fresh levies, and, having received two legions, set out in pursuit of Pyrrhus, who was advancing against Rome, and by a forced march saved Capua from falling into his hands. (*Vid.* Pyrrhus.)—II. M. Valerius, of a consular family, obtained the prætorship A.U.C. 540, B.C. 214, and commanded a fleet stationed near Brundisium, in the Ionian Sea. Having heard of some warlike movement on the part of Philip, king of Macedonia, he advanced against that prince, gained various successes over him, and, detaching the Ætolians from his side, concluded a treaty with them, which gave the Romans their first firm foothold in Greece. In A.U.C. 544, B.C. 210, he was elected consul, though absent, and obtained the government of Italy, which he exchanged with his colleague M. Marcellus, at the instance of the senate, for that of Sicily. Before setting out for his government, he distinguished himself at Rome by his patriotic conduct. There being a scarcity of money in the public treasury, and a supply of rowers being required for the fleet, it was proposed that private persons should, as on former occasions, in proportion to their fortunes and stations, supply rowers with pay and subsistence for thirty days. This measure exciting much murmuring and ill will among the people, and a sedition being apprehended, Lævinus recommended to the senate that the rich should first set an example, and contribute to the common fund all their superfluous wealth. The scheme was received with the warmest approbation; and so great was the ardour on the part of the rich to bring in their gold and silver to the treasury, that the commissioners were not able to receive, nor the clerks to enter, the contributions. (*Livy*, 26, 36.) As soon as Lævinus reached Sicily he began the siege of Agrigentum, the only important city which

still held out for the Carthaginians. Its reduction brought with it the submission of the whole of Sicily to the Roman arms. Having been continued in command for another year, he collected all his naval forces, made a descent on the coast of Africa, and, encountering on his return the Carthaginian fleet, gained a splendid naval victory. He was afterward deputed to visit the court of Attalus, king of Pergamus, and obtain the statue of Cybele. (*Vid.* Cybele.) In A.U.C. 553, B.C. 201, Lævinus was sent as proprætor to Macedonia, against King Philip; but he died the following year. His sons Publius and Marcus celebrated funeral games in honour of their father, which were continued for the space of four days. (*Liv.*, 24, 10, *seqq.*—*Id.*, 24, 40, *seqq.*—*Id.*, 26, 40, *seqq.*—*Id.*, 29, 11.—*Id.*, 31, 3.—*Id.*, 31, 50.)—III. P. Valerius, a descendant of the preceding, despised at Rome for his vices. (*Horat.*, *Serm.*, 1, 6, 12.—*Schol.*, *ad loc.*)

LAGUS, a Macedonian, father of Ptolemy I., of Egypt (Consult remarks at the beginning of the article Ptolemæus I.)

LAGŪSA, I. an island in the Sinus Glaucus, near the northern coast of Lycia, now *Panagia di Cordialissa*, or, according to some, *Christiana*.—II. or Lagussæ, an island, or, more properly, a cluster of islands off the coast of Troas, to the north of Tenedos, now *Taochan Adasi*. (*Plin.*, 5, 31.—*Bischoff und Möller*, *Wörterb. der Geogr.*, p. 676.)

LAIĀDES, a patronymic of Œdipus, son of Laius. (*Ovid.*, *Met.*, 6, fab. 18.)

LAIŌS, I. the most celebrated hetærist of Greece. She was born at Hyccara in Sicily, and was made captive when her native city was taken by the Athenians, in the course of the expedition against Syracuse, and was conveyed to Athens. She was at this time seven years of age, and the property of a common soldier. Having been subsequently sold by her first owner, she was conveyed by her purchaser to Corinth, at that period the most dissolute city of Greece, where, after the lapse of a few years, she became one of those females who consecrated themselves in that city to the service of Venus. (*Vid.* Corinthus, towards the close of the article.) The fame of her extraordinary beauty drew together strangers from every part of Greece, while the extravagance of her demands gave rise to the well-known proverb, that "it was not for every one to go to Corinth." (*Ὁ παντὶς ἀνδρὶς ἐς Κόρινθον ἰσθ' ὁ πλοῦτος.* *Erasm.*, *Chil.*, col. 131.—"Non cuivis homini contingit adire Corinthum."

Horat., *Epist.*, 1, 17, 36.) Pausanias speaks of a tomb of LaiŌs at Corinth, near the temple of Venus Melanis, on which was placed a stone lioness, holding a ram with her front paws, an evident allusion to the unprincipled rapacity of the hetærist. The same writer makes mention also of a tomb of LaiŌs in Thessaly, whither, according to one account, she had gone, through attachment for a youth named Hippostratus; and the females of which country, dreading her evil influence, had assassinated her in the temple of Venus.—Numismatical writers refer to certain coins of ancient Corinth, which have on one side a lioness holding down a ram, and on the other a female head; and they think that these were struck in honour of LaiŌs, the female head being intended as her portrait. (Consult *Visconti*, *Iconogr. Gr.*, vol. 1, p. 411.) A full account of LaiŌs is given by Bayle (*Dict. Hist.*, s. v.).—II. Another hetærist, often confounded with the former, but who lived fifty or sixty years later. She was the daughter of a Corinthian hetærist attached to Alcibiades. It is to this latter LaiŌs that we must refer the anecdote related of Demosthenes. (Consult *l'Histoire de Laïs*, par B. Le Gonze de Gerland, Paris, 1756, 12mo. Some writers, refuted by Bayle, make this LaiŌs to have been a daughter of Alcibiades. Others, misled by an equivocal expression of Fauquier de Grantemesnil (Palmerius—*Exercitât.*, p. 268), have

taken her for the daughter of the first LaiŌs; an error into which Brunck has also fallen (*ad Aristoph. Plut.*, 179).

LAIŪS, a son of Labdacus, who succeeded to the throne of Thebes, which his grandfather Nycteus had left to the care of his brother Lycus, till his grandson came of age. He was driven from his kingdom by Amphion and Zethus, who were incensed against Lycus for the cruelties which Antiope had suffered. (*Vid.* Antiope.) On the death of Amphion, Laius succeeded to the throne of Thebes, and married the daughter of Menæceus, called by Homer Epicasta, by others Jocasta. An oracle, however, warned him against having children, declaring that he would meet his death from the hands of a son, and Laius, in consequence, long refrained from becoming a father. At length, having indulged too freely in wine on a festal occasion, he forgot his previous resolution, and Jocasta brought forth a son. The child, as soon as born, was delivered by the father to his herdsman, to expose on Mount Cithæron. The herdsman, moved by compassion, gave the babe, according to one account (*Soph.*, *Œd. T.*, 1038), to a neatherd belonging to Polybus, king of Corinth; or, as others say (*Eurip.*, *Phan.*, 28), the groins of Polybus found the infant after it had been exposed, and brought it to the wife of Polybus, who, being childless, reared it as her own, and named it Œdipus, on account of its *swollen feet* (from *οἰδῶ*, *to swell*, and *ποῦς*, *a foot*), for Laius, previous to the exposure of the child, had pierced its ancles with a thong. Many years afterward, Laius, being on his way to Delphi, to learn tidings respecting the child which he had caused to be exposed, whether it had perished or not, and being accompanied only by his herald Polyphontes, met in a narrow road in Phocis a young man also travelling in the direction of the oracle. This was Œdipus, who was anxious to ascertain his true parentage from the god. When the chariot of Laius overtook Œdipus, who was on foot, the driver ordered the young man to retire from the path, and make way for one of royal blood. On his refusal a contest ensued, in which Œdipus slew the herald and his own father, both the latter and his son being ignorant of each other. The body of Laius was found and honourably buried by Damasistratus, king of Plataea; and Creon, the son of Menæceus, ascended the throne of Thebes. The account here given, which is from Euripides, differs in some respects from other versions of the legend. Sophocles makes Œdipus to have met his father after having consulted the oracle. (*Soph.*, *Œd. T.*, 780, *seqq.*—Compare *Apollod.*, 3, 5, 7.—*Diod. Sic.*, 4, 64.—*Eudoc.*, 3, 12.)

LALĀGE, I. a young female beloved by Horace. (*Od.*, 1, 22, 23.)—II. A slave of Cynthia's. (*Propert.*, 4, 7, 45.)

LAMĀCHUS, a son of Xenophanes, sent into Sicily with Nicias. He was killed B.C. 414, before Syracuse. Lamachus is alluded to by Aristophanes in his play of the Acharnenses, and with some degree of ridicule. That he was a man of high courage, the compliments directly and indirectly paid to him by the same poet (*Thesm.*, 841.—*Acharn.*, 1073, *et Voss*, *ad loc.*), sufficiently indicate. From an important trust, also, that was reposed in him by Pericles (*Plut.*, *Vit. Pericl.*, c. 20), it should seem, that he was considered by that great statesman a man of talent as well as of courage. If the outward merits of Lamachus had imposed upon the penetration of Pericles, they had not on that of Aristophanes: he saw more froth than substance, more of show than solid worth, in the young soldier; a disposition for the distinctions and emoluments which are to be derived from soldiership, but no evidence of those high talents which constitute a really great captain. That the dramatist had formed a more correct estimate of the powers of Lamachus than the contemporary statesman, the comparatively

small figure which he afterward made in history sufficiently proves. (*Mitchell, ad Aristoph., Acharn.*, 510.)

LAMBRUS or LAMBER, a river of Cisalpine Gaul, issuing from the Eupilis Lacus, and falling into the Olona, one of the tributaries of the Po. It is now the *Lambro* or *Lambrone*. (*Plin.*, 3, 19.)

LAMIA, a city of Thessaly situate inland from the head waters of the Sinus Maliacus, and, according to Strabo (433), about thirty stadia from the Sperchius. It is celebrated in history as the principal scene of the war which was carried on between the Macedonians under Antipater, and the Athenians, with other confederate Greeks, commanded by Leosthenes; from which circumstance it is generally known by the name of the Lamiac war. Antipater, having been defeated in the first instance, retired to Lamia, where he was besieged by the allies; but he afterward contrived to escape from this place, and retire to the north of Thessaly. Soon after, with the assistance of the army of Craterus, brought for that purpose from Asia, he gave battle to and defeated his opponents at Cranon, and compelled them to sue for peace. This was granted them on severe terms. The Athenians were required to pay the same tribute as before, to receive a Macedonian garrison, defray the expenses of the war, and deliver up their orators, whose appeals to the feelings of the Athenian people had always occasioned so much difficulty for the Macedonians. Demosthenes and Hyperides were particularly aimed at. (*Vid.* Demosthenes and Hyperides.)—Livy reports (27, 30) that Philip, the son of Demetrius, twice defeated the Ætolians, supported by Attalus and some Roman troops, near this place. Antiochus was afterward received there with acclamations. (*Livy*, 35, 43.) The place was subsequently retaken by the Romans. (*Liv.*, 37, 5—*Polyb., Excerpt.*, 20, 11, *seqq.*—*Pliny*, 4, 7.) According to Dr. Holland (vol. 2, p. 107), there is very little doubt that the site of *Zeitoun* corresponds with that of the ancient Lamia.—II. ÆLIUS, a Roman of distinguished family, claiming descent from Lamus, the most ancient monarch of the Læstrygones. He signalized himself in the war with the Cantabrigi as one of the lieutenants of Augustus. (*Horat., Od.*, 3, 17.)—III. The mistress of Demetrius Poliorettes, who rendered herself celebrated by her extravagances, her intrigues, and her ascendancy over that prince. (*Plut., Vit. Demetr.*—*Ælian*, V, H., 1, 13.)

LAMIÆ, fabulous monsters, commonly represented with the head and breast of a female, and the body of a serpent. According to some, they changed their forms at pleasure, and, when about to ensnare their prey, assumed such appearances as were most seductive and calculated to please. The blood of young persons was believed to possess peculiar attractions for them, and for the purpose of quaffing this they were wont to take the form of a beautiful female. The Lamie possessed also another means of accomplishing their object. This was a species of hissing sound emitted by them, so soothing and attractive in its nature, that persons found themselves irresistibly allured by it. When not in disguise, and when they had sated their horrid appetites, their form was hideous, their visages glowed like fire, their bodies were besmeared with blood, and their feet appeared of iron or of lead. Sometimes they showed themselves completely blind, at other times they had a single eye, either in the forehead or on one side of the visage. The popular belief made them frequent Africa and Thessaly, in both of which countries they watched along the main roads, and seized upon unwary travellers.—The fable of Queen Lamia has some analogy to this fiction, and both, in all probability, owe their origin to one and the same source. Lamia, according to Diogenes Siculus and other ancient authorities, was a queen of Africa, remarkable for beauty, who, on ac-

count of her cruel disposition, was eventually transformed into a wild beast. Having lost, it seems, her own children by the hand of death, she sought to console her sorrow by seizing the children of her subjects from their mothers' arms, and causing them to be slain. Hence the transformation inflicted upon her by the gods. (*Diod. Sic.*, 20, 41.—Compare *Schol. ad Aristoph., Pac.*, 757.—*Casaub.*, *ad Strab.*, 36.—*Wesseling.*, *ad Diod.*, l. c.) The Lamie figured extensively in the nursery-legends of antiquity, and their names and attributes were standing objects of terror to the young. (*Diod.*, l. c.—Compare *Horat., Ep. ad Pis.*, 340.—*Vid.* Lemures.)

LAMPÊDO, I. a Lacedæmonian female, wife of Archidamus II., king of Sparta, and mother of Agis. She was celebrated as being the daughter, wife, sister, and mother of a king.—II. A queen of the Amazons. (*Justin.*, 2, 4.)

LAMPÊTIA, I. a daughter of Helios (the Sun-god) and Neära. She, with her sister Phaëtusa, took care of the flocks and herds of her father, in the island of Thrinakia. There were seven flocks of sheep and as many herds of oxen, fifty animals in each flock and herd. They neither bred nor died. Ulysses, in the course of his wanderings, came to this island, which both Tiresias and Circe had strictly charged him to shun. On discovering that it was Thrinakia, the hero was desirous of obeying the injunctions he had received; but as it was evening when he arrived, his companions forced him to consent to their landing, and passing the night there. They promised to depart in the morning, and took an oath to abstain from the cattle of the sun. During the night a violent storm came on, and for an entire month afterward a strong southeast wind blew, which confined them to the island. When their provisions were exhausted, they lived on such birds and fish as they could catch. At length, while Ulysses was sleeping, Eurylochus prevailed on the rest to slaughter some of the sacred oxen in sacrifice to the gods, and to vow, by way of amends, a temple to Helios. Ulysses, on awakening, was filled with horror at what they had done; and the displeasure of the gods was soon manifested by prodigies; for the hides crept along the ground, and the flesh lolled on the spits. Still they fed for six days on the sacred cattle; on the seventh the storm lulled, and they left the island; but, as soon as they had lost sight of land, a terrible west wind, accompanied by thunder, lightning, and pitchy darkness, came on. Jupiter struck the ship with a thunderbolt: it went to pieces, and all were drowned except Ulysses. (*Od.*, 12, 260, *seqq.*)—II. or Lampetie, one of the Heliades, or sisters of Phaëthon. (*Ovid, Met.*, 2, 349.)

LAMPRIÐIUS, ÆLIUS, a Latin historian, who flourished in the early part of the fourth century, under Dioclesian and Constantine the Great. Of his works there are extant the lives of the emperors Antoninus, Marcus Aurelius, Lucius Verus, Pertinax, Albinus, Macrinus, &c. The life of Alexander Severus, which, according to the Palatine manuscript, is the work of Spartianus, has been by some authorities ascribed to him. The lives are to be found in the collection of the "*Historia Augustæ Scriptores*," 2 vols. 8vo, 1671. Some critics consider Lampri dius as identical with Spartianus. (Consult *Voss*, *de Hist. Lat.*, 2, 7.—*Fabric.*, *Bibl. Lat.*, 3, p. 93, *note a.*—*Saxii Onomast.*, vol. 1, p. 38.) The style and management of Lampri dius will not allow him a place among historians of a superior class, yet he is valuable for his facts. (*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 341.)

LAMPŒSACUS, a city of Mysia in Asia Minor, situate on the Hellespont, where it begins to open into the Propontis, and northeast of Abydos. The early name of the spot where Lampæus stood was Pityusa, from the number of *pine-trees* which grew there (*πίτυς*, a *pine-tree*). A Phocæan colony is said to have found-

ed this city and given it its name, being directed by the oracle to settle wherever they saw lightning first. This took place in the district Pityusa, and hence the name of the city, from *λαμπω*, to shine forth. (*Mela*, 1, 19.—*Etym. Mag.*—*Holsten.*, ad *Steph. Byz.*, p. 508.) Strabo calls Lampsaecus a Milesian colony: very probably it was only enlarged by a colony from Miletus. (*Strab.*, 588.—*Mannert*, *Geogr.*, vol. 6, pt. 3, p. 518.) Another account, however, makes the city to have existed prior to the arrival of the Phœceans, and merely the name to have been changed by them. They aided, according to this version of the story, a king of the Bebrycæ, named Mandro, against the neighbouring barbarians, and were persuaded by him to occupy a part of his territory. Their successes in war, however, and the spoils they had obtained, excited the envy of the Bebrycians, and the Phœceans would have been secretly destroyed, had not Lampsaecæ, the king's daughter, apprized them of the plot. Out of gratitude to her, they called the city Lampsaecus, having destroyed the former inhabitants. (*Pol-yan.*, 8, 37.—*Steph. Byz.*, s. v.) The neighbouring country was termed *Abarnis* or *Abarnus*, because Venus, who here was delivered of Priapus, was so disgusted with his appearance, that she disowned him (*ἀπαρ-ρῆναι*) for her offspring. (*Steph. Byz.*, s. v. *Ἀβάρης*.—*Holstenius*, ad *Steph. Byz.*, l. c.) Priapus was the chief deity of the place. His temple there was the asylum of lewdness and debauchery; and hence the epithet *Lampsacæus* is used to express immodesty and wantonness. Alexander resolved to destroy the city on account of the vices of its inhabitants, or more probably for its firm adherence to the interest of Persia. It was, however, saved from ruin by the artifice of Anaximenes. (*Vid.* *Anaximenes*.) The name of *Lamsaki* is still attached to a small town, near which Lampsaecus probably stood, as *Lamsaki* itself contains no remains or vestiges of antiquity. A modern traveller assures us besides, that "its wine, once so celebrated, is now among the worst that is made in this part of Anatolia." (*Sibthorpe*, in *Walpole's Collection*, vol. 1, p. 91.)

LAMUS, I. a fabled king of the Læstrygonæ, said to have founded Formiæ. (*Vid.* *Læstrygonæ*.) The Læmian family at Rome pretended to claim descent from him. (*Horat.*, *Od.*, 3, 17.)—II. A son of Hercules and Omphale, fabled to have succeeded his mother on the throne of Lydia.—III. A river in the western part of Cilicia Campestris, now the *Lamus*. It gave to the adjacent district the name of Lamotis. (*Cramer's Asia Minor*, vol. 2, p. 338.)

LANCIA, the name of two towns in Lusitania, distinguished by the appellations of Oppidana and Transcudana. The first was on the frontiers of the Lusitani, near the sources of the river Munda or *Mondego*. It is now *La Guarda*. The latter lay to the east of the former, and is now *Ciudad Rodrigo*. It was called Transcudana, because it lay beyond the Cuda. (*Bischoff* and *Müller*, *Wörterb. der Geogr.*, p. 679.)

LANGOBARDI, a people of Germany, located by most writers on the Albis or *Elbe*, and the Viadrus or *Oder*, in part of what is now called *Brandenburg*. According to the account, however, of Paulus Diaconus, himself one of this nation, they originally came from Scandinavia, under the name of Wiini, and were called by the German nations *Long Beards*, from their appearance. (*Paul. Diac.*, sive *Warnefrid*, *de Gest. Longob.*, 1, 9.) The German term *Lang Baerdt*, Latinized, became *Langobardi*. They seem to have settled on the Elbe, probably in the eastern part of the duchy of *Lunenbourg*. They are the same with the Lombards who overran Italy in a later age. (*Mannert*, *Anc. Geogr.*, vol. 3, p. 179.—*Leo*, *Entwicklung der Verf. der Lombardischen Städte*, Hamburg, 1824, 8vo.)

LANUVIUM, a town of Latium, about sixteen miles from Rome, situate, according to Strabo, to the right

of the Appian Way, and on a hill commanding an extensive prospect towards Antium and the sea. There is no very early mention of Lanuvium in Roman history; but the title of "*urbis fidelissima*," given to it by Livy (6, 21), indicates that it very soon sought the protection of the rising city. It is noticed, however, previous to this period, as the place to which M. Volscius Fictor, whose false testimony had caused the banishment of Cæso Quinctius, retired into exile. (*Liv.*, 3, 29.) Lanuvium did not always remain attached to Rome, but took part in the Latin wars with the neighbouring cities against that power. The confederates were, however, routed near the river Astura, not far from Antium (*Liv.*, 8, 13); and this defeat was soon followed by the subjugation of the whole of Latium. Lanuvium seems to have been treated with more moderation than the other Latin towns; for, instead of being punished, the inhabitants were made Roman citizens, and their privileges and sacred rights were preserved, on condition that the temple and worship of Juno Sospita, which were held in great veneration in their city, should be common to the Romans also. (*Liv.*, 8, 14.) It then became a municipium; and it remained ever after faithful to the Romans, particularly in the second Punic war, as we learn from Livy (26, 8) and Silius Italicus (8, 361; 13, 364).—Lanuvium and its district had the honour of giving birth to several distinguished characters in the annals of Rome. Milo, the antagonist of Clodius, was a native of this place, and was on his way thither to create a priest, probably of Juno, in virtue of his office of dictator of the city, when he met Clodius on the Appian Way, and the rencounter took place which ended in the death of the latter. (*Cic.*, *pro Mil.*, c. 10.) The famous comedian Roscius was likewise born near Lanuvium. (*Cic.*, *de Dio*, 1, 36.—*Id.*, *N. D.*, 1, 28.) We learn also from Jul. Capitolinus and Æl. Lampri-dius, that the three Antonines were born here.—The ruins of Lanuvium still bear the name of *Civita Lavinia*, or *Città della Vigna*. (*Cramer's Anc. Italy*, vol 2, p. 27, *seqq.*)

LAOCOON, a son of Priam and Hecuba, or, according to others, of Antenor, and a priest of Apollo during the Trojan war. While offering, in the exercise of his sacerdotal functions, a bullock to render Neptune propitious to the Trojans, two enormous serpents issued from the sea, and, having first destroyed his two sons, whom he vainly endeavoured to save, attacked Laocoon himself, and, winding themselves round his body, crushed him to death in their folds. This dreadful punishment was inflicted by the goddess Minerva, for the part Laocoon had taken in endeavouring to dissuade the Trojans from admitting into Troy the famous, and, as it afterward proved to them, fatal wooden horse, which the crafty Greeks had consecrated to Minerva. (*Virgil*, *Æneid*, 2, 40, *seqq.*) Virgil, in speaking of Laocoon, employs the words "*ductus Neptune sorte sacerdos*" (*Æn.*, 2, 201). This merely means, as above stated, that, although a priest of Apollo, he had been chosen by lot to propitiate Neptune with a sacrifice. (*Heyne*, ad *loc.*)—An enduring celebrity has been gained for the story of Laocoon, from its forming the subject of one of the most remarkable groups in sculpture which time has spared to us. It represents the agonized father and his youthful sons, one on each side of him, writhing and expiring in the complicated folds of the serpents. The figures are naked, the drapery that is introduced being only used to support and fill up the composition. This superb work of art, which Pliny describes inaccurately as consisting of only a single block of marble (for, in spite of this mistake, there seems to be no doubt, in the opinion of the learned, that this is the identical group alluded to by that writer), originally decorated the baths of Titus, among the ruins of which it was found in the year 1506. The names of the

sculptors who executed it are also recorded. They are Agesander, Polydorus, and Athenodorus, natives of Rhodes. Pliny (36, 5) says, "Laocoon, which is in the palace (*domo*) of the Emperor Titus, is a work to be preferred to all others either in painting or sculpture. Those great artists, Agesander, and Polydorus, and Athenodorus, Rhodians, executed the principal figure (*cum*), and the sons, and the wonderful folds of the serpents, out of one block of marble."—"There has been much difference of opinion among antiquaries on several points connected with this group: first, as to the date of the artists; Winckelmann contending that they are of a good period of Grecian art, and as early as Lysippus. A considerably later date, however, is now attributed to them. The next question discussed has been, whether the sculptor was indebted for the subject to Virgil's fine description (*Æn.*, 2, 200, *seqq.*), or whether the poet was indebted to the artist. With respect to date, the most careful consideration seems to fix these sculptors as late as the early emperors; and Lessing, whose work on the Laocoon deserves the attention of all who take an interest in the philosophy and capabilities of art, believes they lived in the reign of Titus. With regard to the subject, it is most probable that the story, being well known, offered advantages for illustration to the sculptor, as it did for description to the poet. As Virgil's priest was habited in his robes during the exercise of his priestly functions, and the group under consideration is entirely naked, the argument is additionally strengthened against the assumption that the artist borrowed from the poet. It is more natural to believe that each drew from a common source, and treated the subject in the way best adapted to the different arts they exercised; the sculptor's object being concentration of effect, the poet's amplification and brilliant description.—This group is justly considered, by all competent judges, to be a master-piece of art. It combines, in its class, all that sculpture requires, and, we may say, admits of, and may truly be studied as a canon. The subject is of the most affecting and interesting kind; and the expression in every part of the figures reaches, but does not exceed, the limits of propriety. Intense mental suffering is portrayed in the countenances, while the physical strength of all the three figures is evidently sinking under the irresistible power of the huge reptiles wreathed around their exhausted limbs. One son, in whose side a serpent has fixed his deadly fangs, seems to be fainting; the other, not yet bitten, tries (and the futility of the attempt is faithfully shown) to disengage one foot from the serpent's embrace. The father, Laocoon, himself, is mighty in his sufferings: every muscle is in extreme action, and his hands and feet are convulsed with painful energy. Yet there is nothing frightful, disgusting, or contrary to beauty in the countenance. Suffering is faithfully and strongly depicted there, but it is rather the exhibition of mental anguish than of the repulsive and undignified contortions of mere physical pain. The whole of this figure displays the most intimate knowledge of anatomy and of outward form; the latter selected with care, and freed from any vulgarity of common individual nature: indeed, the single figure of Laocoon may be fairly referred to, as one of the finest specimens existing of that combination of truth and beauty, which is so essential to the production of perfect sculpture, and which can alone ensure for it lasting admiration. The youths are of a smaller standard than the proportion of the father; a liberty hardly justifiable, but taken, probably, with the view of heightening the effect of the principal figure. The right arm of Laocoon is a restoration, but so ably done, though only in plaster, that the deficiency is said to be scarcely a blemish. It is not certain what modern artist has the merit of this restoration, though it is thought that the arm it now bears was the plas-

ter-model of Michael Angelo, who was charged with the task of adding a marble arm, but left the one which he had destined for this object unfinished, in a fit of despair. Some antiquarians have thought that the original action of the arm was not extended, but that this limb was bent back towards the head; and they have supported their hypothesis by the fact of there being a rough and broken surface where they think the hand, or perhaps a fold of the serpent, may have come in contact with the hair. (*Encycl. Us. Knowl.*, vol. 13, p. 323, *seq.*—*Heyne, Antiq. Auff.*, vol. 2, p. 34, *seqq.*—*Winckelmann, Werke.*, vol. 6, p. 101, *seqq.*—*Id.*, vol. 5, p. 105.—*Id.*, vol. 7, p. 189.—*Id.*, vol. 5, p. 250.—*Lessing, Laocoon*, § 5, p. 76, &c.)

LAODAMIA, I. a daughter of Acastus and Astydamia, and wife of Proteusilaus. (*Vid.* Proteusilaus.) When she received intelligence of the death of her husband in the Trojan war, she caused an image of him to be formed, which she would never allow to be out of her sight. Her father ordered the image to be burned, that her thoughts might be diverted from her loss; but Laodamia threw herself into the flames, and perished along with it. Thence probably the tradition adopted by some poets, that the gods restored life to Proteusilaus for three hours, and that this hero, finding the decree irreversible, by which he was to return to the shades below, prevailed on Laodamia to accompany him thither. She was also called Phylacæa. (*Virg., Æn.*, 6, 447.—*Ovid, Her.*, 13.—*Hygin., Fab.*, 104.)—II. A daughter of Bellerophon by Achemone, the daughter of King Iobates. She had a son by Jupiter, called Sarpedon. (*Vid.* Sarpedon.)

LAODICE, I. a daughter of Priam and Hecuba, became enamoured of Acamas, son of Theseus, when he came with Diomedes from the Greeks to Troy with an embassy to demand the restoration of Helen, and had by him a son named Munitus. She afterward married Telephus, and, on his desertion of her at the time he abandoned the Trojan cause, she became the wife of Helicaon, the son of Antenor. The rest of her story is variously related. Some make her, after the capture of Troy, to have thrown herself from the summit of a rocky ravine when pursued by the Greeks; others, to have been swallowed up by the earth in accordance with her own prayer; and others again, to have been recognised by Acamas, when Troy was taken, and to have returned with him to Greece. (*Tzet., ad Lycophor.*, 314, 495.)—II. One of the three daughters of Agamemnon, called also Electra. (*Vid.* Electra.)—III. The wife of Antiochus, one of Philip's officers, and mother of Seleucus Nicator. (*Consult Justin*, 15, 4.)—IV. The sister and wife of Antiochus Theos, by whom she became the mother of Seleucus Callinicus and Antiochus Hierax. (*Justin*, 27, 9.)—V. A daughter of Mithradates, king of Pontus. She married Antiochus the Great, king of Syria.—VI. The sister and wife of Mithradates Eupator. (*Consult Justin*, 37, 8.)—VII. Wife of Ariarathes V., king of Cappadocia. (*Vid.* Ariarathes V.)

LAODICÆA, I. a city of Phrygia, in the southwestern angle of the country. It was situate on the river Lycus (hence called *Λαοδικεία ἐπὶ Λύκῳ*, *Laodicea ad Lycum*), and stood on the borders of Phrygia, Caria, and Lydia. Its situation coincides exactly with that of Cydrara mentioned by Herodotus (7, 30.—*Vid.* Cydrara). Pliny, however (5, 29), makes its early name to have been Diopolis, changed subsequently to Rhoas. It contained three boundary stones, as being on the borders of three provinces, and hence is commonly called by the ecclesiastical writers Trime-taria. Its name of Laodicea was given to it by Antiochus Theos, in honour of his wife Laodice. He re-established it. (*Steph. Byz., s. v.*) Under the Romans it became a very flourishing commercial city. It is supposed to have been destroyed during the invasion of Timur Leng, A.D. 1402. (*Ducas*, p. 42,

**seqq.*—*Chalcond.*, p. 85.) The ruins of Laodicea are now called by the Turks *Eski Hissar*. (*Mannert, Geogr.*, vol. 6, pt. 3, p. 131.—*Leake's Journal*, p. 154, *seqq.*)—II. Scabiosa, a city of Syria, southwest of Emesa and of the Orontes. It is sometimes, though erroneously, styled Cabiosa. The epithet Scabiosa must have reference to the leprosy, or some cutaneous complaint, very prevalent here in the time of the Roman power. Its previous name under the Greeks was *Λαοδίκεια ἡ πρὸς Λιβάνῳ*, *Laodicea ad Libanum* (*Strabo*, 753.—*Plin.*, 5, 23), and it must have been situated, therefore, near the northeastern part of the chain of Libanus, in the plain Marsyas, which Pococke (2, p. 204) mentions, though he is silent respecting its ancient name. Its site must be looked for to the west of the modern *Hassiah*, a day's journey to the southwest of the modern *Hems*, the ancient Emesa. (*Mannert, Geogr.*, vol. 6, pt. 1, p. 428.)—III. A maritime city of Syria, on an eminence near the coast, called, for distinction' sake, *Λαοδίκεια ἐν τῇ θαλάττῃ*, *Laodicea ad Mare*. (*Strab.*, 751.—*Plin.*, 21, 5.) It was built by Seleucus Nicator, and named in honour of his mother; and Strabo ranks it among the four principal cities of the country. (Compare *Appian, B. Syr.*, c. 27.) The fruitfulness of the adjacent country, and the quantity of good wine made in this quarter, which furnished a great article of trade with Alexandria, were the chief reasons that induced Seleucus to found this city. Laodicea may, in fact, be regarded as the harbour of Antiochia. The ancient writers praise its excellent port, and it would seem, even at the present day, to show traces of the works constructed to give security and convenience to the harbour. (*Pococke*, 2, p. 287.—*Walpole's Memoirs*, vol. 2, p. 138.) In the civil war after Cæsar's death, Dolabella stood a long siege in this place; it was finally taken, and suffered severely. (*Dio Cass.*, 47, 30.—*Appian, B. Civ.*, 4, 62.) Hence Antony declared it independent, and freed it from all tribute. (*Appian, B. Civ.*, 5, 7.) It again suffered from Pescennius Niger (*Malala, Chron.*, 11, p. 125), and therefore his more successful competitor Severus did all in his power to restore it to its former condition. Among other favours shown it, he made the place a colony with the *Jus Italicum*. (*Ulpian*, l. 50, *Digest. Tit.*, 15, *de censibus*.) The modern name is *Ladikië*. The modern city suffered severely from an earthquake in 1797, the greater part of the buildings having been thrown down. These have been rebuilt, though less substantially than before. Scarcely any wine is now made here, and few vines are planted. (*Walpole's Memoirs*, vol. 2, p. 138.—*Mannert, Geogr.*, vol. 6, pt. 1, p. 450.)—IV. Combusta (ἡ Κατακαυμένη), a city of Asia Minor or Lycaonia, northwest of Iconium. Its name is supposed to be owing to the frequent breaking forth of subterranean fires in the vicinity. Strabo mentions this as peculiarly the case in the parts of Phrygia to the west of Laodicea, which were hence termed Catacecaumene (Κατακαυμένη.—*Strabo*, 579). The place itself was unimportant, and would only seem to have been mentioned by Strabo and Pliny from the circumstance of its having been situated on the great road from the western coast through Melitene to the Euphrates. Leake (*Journal*, p. 25) gives the modern name as *Yorgân Ladik*, and speaks of numerous fragments of ancient architecture found there.—V. A city of Media, on the confines of Persia. (*Pliny*, 6, 26.)—VI. A city of Mesopotamia, near Seleucia. (*Pliny*, 4, 26.)

ΛΑΟΜΕΔΩΝ, son of Ilus, king of Troy, married Strymo, the daughter of the Scamander, by whom he had Tithonus, Lampus, Clitius, Hicetaon, Podarees (afterward called Priam), and Hesione, together with two other daughters. He had also, by the nymph Calybe, a son named Bucolion. (*Il.*, 6, 23.) The two deities Apollo and Neptune, having been condemned by

Jupiter to be subservient for one year to the will of Laomedon, contracted to build a wall around Troy for a stipulated sum. When, however, this labour was accomplished, Laomedon refused to pay the amount agreed on, and dismissed the two deities, threatening to cut off their ears. He even menaced to tie Apollo hand and foot, and transport him to the distant islands. (*Il.*, 21, 441.) To punish him, Apollo sent a pestilence, and Neptune a flood bearing a huge sea-monster, which carried off all the people to be found in the plain.—For the rest of his story, consult the article Hesione.

ΛΑΟΜΕΔΟΝΤΕΥΣ, an epithet applied to the Trojans from their king Laomedon. (*Virg., Æn.*, 4, 542; 7, 105; 8, 18.)

ΛΑΟΜΕΔΟΝΤΙΔÆ, a patronymic given to the Trojans, from Laomedon their king. (*Virg., Æn.*, 3, 248.)

ΛΑΦΥΣΤΙΥΜ, a mountain in Bœotia, about twenty stadia to the north of Coronea, on which Jupiter had a temple, whence he was called *Laphystius*. It was here that Athanas prepared to immolate Phrixus and Helle, whom Jupiter saved by sending them a golden ram. (*Pausan.*, 9, 34.)

ΛΑΠΙΤΛÆ, a tribe or people of Thessaly, whose contest with the Centaurs forms a conspicuous legend in classical mythology. (*Vid.* Centauri, where a full account is given.)

ΛΑΡΑ or ΛΑΡΥΝΔΑ, one of the Naiads, daughter of the river Almon in Latium, famous for her beauty and her loquacity, which her parents long endeavoured to correct, but in vain. She revealed to Juno the amours of her husband Jupiter with Juturna, for which the god cut off her tongue, and ordered Mercury to conduct her to the infernal regions. The god violated her by the way, and she became the mother of the Lares. (*Vid.* Lares.—*Ovid, Fast.*, 2, 585, *seqq.*)

Λἱἄρες, gods of inferior power at Rome, of human origin, who presided over houses and families. There were various classes of them. such as Lares *Urbani*, to preside over the cities; *Familiares*, over houses; *Rustici*, over the country; *Compitales*, over crossways; *Marini*, over the sea; *Viales*, over the roads, &c. If we closely examine into the nature of the Penates and that of the Lares, we will readily perceive why the former have a higher rank assigned them in the hierarchy of the Genii than the latter. In fact, the Penates were originally gods; they were the powers of nature personified; powers, the wonderful and mysterious action of which produces and upholds whatever is necessary to life, to the common good, to the prosperity of individuals and families; whatever, in fine, the human species cannot bestow upon itself. The case is quite different with the Lares. These were originally human beings themselves; men like unto us in every respect, who lived upon the earth, and who, becoming pure spirits after death, loved still to hover round the dwelling which they once inhabited, to watch over its safety, and to guard it with as much care as the faithful dog does the possessions of its master. Having once partaken of our mortal condition, they know the better from what quarter danger is wont to menace, and what assistance to render to those whose situation was once in every respect their own. They keep off, therefore, danger from without, while the Penates, residing in the interior of the dwelling, pour forth benefits upon its inmates with bountiful hands. The fundamental idea on which rests the doctrine of the Lares, is intimately connected with all the psychology and pneumatology of the ancient Italians. According to Apuleius (*De Genio Socrat.*, vol. 2, p. 237, *ed. Bip.*), the demons which once had inhabited, as souls, human bodies, were called *Lemures*: this name therefore designated, in general, the spirit separated from the body. Such a spirit, if it adopted its posterity; if it took possession, with favourable power, of the abode of its children, was called *Lar familiaris*. If,

on the contrary, by reason of the faults committed in life, it found in the grave no resting-place, it appeared to men as a phantom; inoffensive to the good, but terrible to the wicked. Its name was in that case *Larva*. (*Festus*, p. 200, ed. *Dacier*.—*Bulenger*, de *Prodig.*, 4, 20.—*Græv.*, *Thes. Antiq. Rom.*, 5, p. 480, *seqq.*) As, however, there was no way of precisely ascertaining what had been the lot of a deceased person, whether he had become, for example, a *Lar* or a *Larva*, it was customary to give to the dead the general appellation of *Manes*. (*Deus Manis*.) Varro, in a more extended sense, if we credit Arnobius, regarded the Lares, at one time, as identical with the Manes, the tutelary genii of the living and the dead; at another time, as gods and heroes roaming in the air; and at another, again, as spirits or souls separated from bodies, as Lemures or Larvæ. The mother of the Lares was called *Lara* or *Larunda*. (*Arnobius*, *adv. Gent.*, 3, 41.—*Macrob.*, *Sat.*, 1, 7.—*Marini*, *gli Atti*, 2, p. 373.) This conception of the Lares, as the souls of fathers and of forefathers, protectors of their children, and watching over the safety of their descendants, necessarily gave rise to the custom of burying the dead within the dwelling. (*Serv.*, *ad Virg.*, *Æn.*, 5, 64.—*Id.*, *ad Æn.*, 6, 152.—*Isidor.*, *Orig.*, 15, 11.—*Zoega*, de *Obelisc.*, p. 269.) Men wished to have near them these tutelary genii, in order to be certain of their assistance and support. In process of time, however, this custom was prohibited at Rome by the laws of the Twelve Tables. (*Cic.*, de *Leg.*, 2, 23.) It was general in early Greece, and among the primitive population of Italy. (*Plat.*, *Min.*, p. 254, ed. *Bekker*.)—The meaning attached to the word *Lar* being of itself extremely general, had among the ancients different acceptations. (Compare *Müller*, de *Diis Romanorum Laribus et Penatibus*, p. 60.) Analogous to the demons (or genii) and heroes of the Greeks, the Lares, pure spirits, invisible masters and protectors, and everywhere present, limited, as little as the Penates, their domain to the domestic hearth. The Etrurians, and the Romans after them, had their *Lares publici* and *Lares privati*. (*Hempel*, de *Diis Laribus*, p. xxiv., *seqq.*) The Lares were supposed to assist at all gatherings together of men, at all public assemblies or reunions, in all transactions of men, in all the most important affairs of the state as well as of individuals. Born in the house, in the bosom of the family, the notion of Lares went forth by little and little; extended itself to the streets, to the public ways; above all, to the cross-roads, where the peril was greater for passengers, and where assistance was more immediately necessary. From this it extended itself to communities, to entire cities, and even to whole countries. Hence the numerous classes of the Lares and their various denominations, such as *viales*, *ruales*, *compitales*, *grundiles*, *hostiles*, &c. If each individual had his *Lar*, his genius, his guardian spirit, even the infant at the breast; so entire families, and whole races and nations, were equally under the protection of one of these tutelar deities. Here the Lares became in some degree confounded with the Heroes, that is, with the spirits of those who, having deserved well of their country while on earth, continued to watch over and protect it from that mansion in the skies to which their merits had exalted them. It would seem, too, that at times, the worship of these public Lares, like that of the public Penates, was not without some striking resemblance to that rendered to the great national divinities. The proof that the Lares were not always clearly distinguished from the gods, or, at least, were closely assimilated to the demons and heroes, is found in an ancient inscription: "The Lares, powerful in heaven" (*Lares Coelo potentes*), that is, most probably, inhabiting the region of the air, where they exercised their power. (*Græv.*, *Thes.*, 5, p. 686, *seqq.*—*Spanheim*, de *Vesta*, &c.)—

All that the house contained was confided to the superintending care of these vigilant genii: they were set as a watch over all things large and small, and hence the name of *Præstitæ*, which is sometimes given them. (*Ovid*, *Fast.*, 5, 128, 133.) Hence the dog was the natural symbol of the Lares; an image of this animal was placed by the side of their statues, or else these were covered with the skin of a dog. (*Cruzer*, *Comment. Herod.*, 1, p. 239.)—The ordinary altar on which sacrifices were offered to the Lares was the domestic hearth. The victims consisted of a hog (*Horat.*, *Od.*, 3, 23) or a fowl; sometimes, with the rich, of a young steer; to them were also presented the first of all the fruits of the season, and libations of wine were poured out. In all the family repasts, the first thing done was to cast a portion of all the viands into the fire that burned on the hearth, in honour of the Lares. In the form of marriage, called *cœnatio*, the bride always threw a piece of money on the hearth to the Lares of her family, and deposited another in the neighbouring cross-road, in order to obtain admission, as it were, into the dwelling of her husband. (*Non. Marc. de propr. Serm.*, c. 12, p. 784, ed. *Gothofred.*) Young persons, after their fifteenth year, consecrated to the Lares the bulla which they had worn from infancy. (*Pers.*, *Sat.*, 5, 31.) Soldiers, when their time of service was once ended, dedicated to these powerful genii the arms with which they had fought the battles of their country. (*Ovid*, *Trist.*, 4, 8, 21.) Captives and slaves restored to freedom consecrated to the Lares the fetters from which they had just been freed. (*Horat.*, *Sat.*, 1, 5.) Before undertaking a journey, or after a successful return, homage was paid to these deities, their protection was implored, or thanks were rendered for their guardian care. (*Ovid*, *Trist.*, 1, 3, 33.—*Müller*, de *Diis Rom. Lar. et Penat.*, p. 70.—*Ev. Otto*, de *Diis vialibus*, c. 9.) The new master of a house crowned the Lares, in order to render them propitious; a custom which was of the most universal nature, and which was perpetuated to the latest times. (*Plaut.*, *Trinumm.*, 1, 2, 1.—*Cruzer*, *Comment. Herod.*, 1, p. 235.) The proper place for worshipping the Lares, and where their images stood, was called *Lararium*, a sort of domestic chapel in the Atrium, where were also to be seen the images and busts of the family ancestors. The rich had often two *Lararia*, one large and the other small; they had also "Masters of the Lares," and "Decurios of the Lares," namely, slaves specially charged with the care of these domestic chapels and the images of their divinities. As to the poor, their Lares had to be content with the simple hearth, where honours not less simple were paid to them. (For farther details respecting the *Lararia*, consult *Guther*, de *Veteri jure Pontificio*, 3, 10.—*Græv.*, *Thes.*, 5, p. 139.)—Certain public festivals were also celebrated in honour of the Lares, called *Lararia* and *Compitalia*. The period for their celebration fell in the month of December, a little after that of the Saturnalia. On this occasion the Lares were worshipped as propitious deities; hence these festivals were marked by a gay and joyful character, and thus formed a direct contrast to the gloomy *Lemuria*. The *Compitalia*, dedicated to the *Lares Compitales*, were celebrated in the open air, in the cross-roads (*ubi viæ competunt, in compitis*.—*Dro. Hal.*, 4, 14.—*Aul. Gell.*, *N. A.*, 10, 24.—*Sicæma* in *Fastos Calend. Rom.*—*Græv.*, *Thes.*, 8, p. 69, &c.); the day of their celebration was not fixed. They were introduced at Rome by Servius Tullius, who left to the senate the care of determining the period when they should be held. In early times, children were immolated to the goddess Mania, the mother, according to some, of the Lares, to propitiate her favour for the protection of the family. This barbarous rite was subsequently abolished, and little balls of wool were hung up in the stead of human offerings at the gates

of dwellings. Macrobius (*Sat.*, 1, 7) informs us, that it was Junius Brutus who, after the expulsion of the Tarquins, introduced a new form of sacrifice, by virtue of which, heads of garlic and poppies were offered up in place of human heads, *ut, pro capitibus, capitibus supplicaretur*, in accordance with the oracle of Apollo. Every family, during these festivals, brought a cake for an offering; slaves enjoyed a perfect equality with their masters, as on the Saturnalia; and it was slaves, not free men, that assisted the priests in the sacrifices offered up on this occasion to the tutelary genii of the ways. (*Dion. Hal.*, 4—*Cic.*, *ad Att.*, 7, 7.—*Horat.*, *Od.*, 3, 17, 14, and *Mitscherlich*, *ad Horat.*, *l. c.*) In case of death in a family, a sacrifice of sheep was offered up to the family Lares. (*Cic.*, *de Leg.*, 2, 22, 55, where we must read, with Gorenz, *veroeibus*.—*Marini, Atti, &c.*, 1, p. 373.)—As regards the forms under which the Lares were represented, it may be observed, that it differed often but little from that of the Penates. Thus, on the coins of the Cæsian family, they are represented as two young men, seated, their heads covered with helmets, and holding spears in their hands, while a dog watches at their feet. Sometimes, as we have already remarked, the heads of the Lares are represented as covered with, or their mantle as formed of, the skin of a dog. At other times we find the Lares resembling naked children, with the bulla hanging from the neck, and always accompanied by the attribute of the dog. (*Creuzer, Symbolik, par Guigniaut*, vol. 2, pt. 1, p. 416, *seqq.*)

LARINUM, a town of Apulia, which appears to have belonged once to the Frentani, from the name of Larinates Frentani attached to its inhabitants by Pliny (3, 12). It was situate on the road which led from Picenum into Apulia. (*Liv.*, 22, 18.) Its ruins, which are said to be considerable, occupy the site called *Larina Vecchio*. (*Romanelli*, vol. 3, p. 20.)

LARISSA, I. a town of Syria, on the western side of the Orontes, southeast of Apamea. It was either founded or else re-established by Seleucus Nicator. (*Appian*, *B. Syr.*, c. 57.) Pliny calls the inhabitants Larissæi (5, 23). The city appears to have made no figure in history. Its true Oriental name would seem to have been *Sizara*, or something closely resembling it. Stephanus Byzantinus (*s. v.*) gives *Sizara* (*Σίζαρα*) as the Syriac name of the place, and Abulfeda (*Tab. Syr.*, p. 110) and other Arabian writers speak of a fortress in this quarter named *Schaizar* or *Sjaizar*. (Compare *Schultens, Index ad Vitam Saladin*, *s. v. Sjaizarum*.)—II. A town of Lydia, in the Caystrian field, and territory of Ephesus. It had a famous temple of Apollo. Larissa was situate near Mount Tmolus, 180 stadia from Ephesus, and 30 stadia from Tralles, on the northern side of the Messogis. The adjacent country produced very good wine. (*Strabo*, 620.)—III. A town on the coast of Troas, north of Colonnæ and Alexandria Troas. Whether it is the same with the place assigned by Homer to the Pelasgi (*Il.*, 2, 841) is uncertain. Strabo, however, decides in favour of the Larissa below Cunnæ. (*Mannert, Geogr.*, vol. 6, pt. 3, p. 465.)—IV. A town of Æolis, in Asia Minor, to the southeast of Cyme, and on the northern bank of the Hermus. (*Mannert, Geogr.*, vol. 6, pt. 3, p. 394.) It is supposed by Strabo to have been the same with the Larissa mentioned by Homer (*Il.*, 2, 841), and was called by the Æolians, after it was taken by them from the Pelasgi, Phriconis, for distinction sake from the other Larissas. Cyme was also named Phriconis. (*Strabo*, 621.) Another appellation given to the place was *Larissa Ægyptiaca*, because it was said to have been one of the towns which Cyrus the elder gave to the Egyptians who had come over to him from the army of Cræsus. (*Xen.*, *Cyrop.*, 7, 1, 45.—Compare *Hist. Gr.*, 3, 1, 7.) In Strabo's time the place was uninhabited.—V. A city of Assy-

ria, on the banks of the Tigris. The ten thousand found it deserted and in ruins. Xenophon states that it had been once inhabited by the Medes. (*Anab.*, 3, 4, 7.) Bochart (*Geogr. Sacr.*, 4, 23) considers it identical with the city mentioned in Genesis (10, 12) under the name of Resen; but Michaelis opposes this. (*Spicileg. Geogr. Hebr.*, vol. 1, p. 247.)—VI. An ancient and flourishing city of Thessaly, on the river Peneus, to the northeast of Pharsalus. It is not mentioned by Homer, unless, indeed, the Argos Pelasgicum of the poet is to be identified with it (*Il.*, 2, 681), and this notion would not be entirely groundless if, as Strabo (440) informs us, there was once a city named Argos close to Larissa. The same geographer has enumerated all the ancient towns of the latter name, and we may collect from his researches that it was peculiar to the Pelasgi, since all the countries in which it was found had at different periods been occupied by that people. (Compare *Dion. Hal.*, 1, 21.) This city was placed in that most fertile part of the province which had been occupied by the Perrhæbi, who were partly expelled by Larissæans, while the rest were kept in close subjection, and rendered tributary. According to Aristotle, the constitution of this city was democratical. Its magistrates were elected by the people, and considered themselves as dependant on their favour. (*Aristot.*, *de Rep.*, 5, 6.) This fact will account for the support which the Athenians derived from the republic of Larissa during the Peloponnesian war. (*Thucyd.*, 2, 32.) The Aleuada, mentioned by Herodotus as princes of Thessaly at the time of the Persian invasion, were natives of this city. (*Herod.*, 9, 58.) Diodorus Siculus (16, 61) informs us, that the citadel of Larissa was a place of great strength. Though the territory of this city was rich and fertile, it was subject to great losses, caused by the inundations of the Peneus. (*Strabo*, 440.—*Plin.*, 4, 8.—*Hierocl.*, *Synecdem.*, p. 642.) Dr. Clarke states that he could discover no ruins at Larissa, which still retains the ancient name; but that the inhabitants gave the name of Old Larissa to a Palæo Castro, which is situated upon some very high rocks, at four hours' distance towards the east (vol. 7, p. 339). Dr. Holland and Mr. Dodwell are, however, of opinion, that the modern Larissa stands upon the remains of the ancient city. (*Holland's Travels*, p. 390.—*Dodwell's Tour*, vol. 2, p. 100.—*Cramer's Anc. Greece*, vol. 1, p. 385, *seqq.*)—VII. Cremaste, so called from the steepness of its situation, a city of Thessaly in the district Phthiotis, and south of Phthiotic Thebe. It lay in the domains of Achilles, and it is probably from that circumstance that Virgil gives him the title of *Larissæans*, unless this epithet is a general one for *Thessaliens*. Dodwell thought he discovered the ruins of this place at about three quarters of an hour's distance from the village of *Gradista* (vol. 2, p. 81.—Compare *Gell's Itinerary of Greece*, p. 252.)—VIII. An old town of the Pelasgi in Attica, near Mount Hymettus. Some ruins, indicative of the site of an ancient town near the monastery of *Syriani*, at the foot of Mount *Trelo Vouzi*, have been thought to correspond with this ancient Pelasgic settlement. (*Strabo*, 440.)—IX. A town on the confines of Elis and Achaia. (*Xen.*, *Hist. Gr.*, 3, 2, 17.)—X. The acropolis of Argos, deriving its name, as was said, from Larissa, daughter of Pelasgus. It was also called Aspis. (*Plut.*, *Vit. Cleom.*—*Cramer's Anc. Greece*, vol. 3, p. 244.)

LARISSÆUS, an epithet applied by Virgil (*Æn.*, 2, 197; 11, 404) to Achilles, either with reference to the town of Larissa Cremaste, which lay within his dominions (*vid.* Larissa VII.), or as equivalent generally to *Thessaliens*. Heyne prefers the latter interpretation (*ad Æn.*, 2, 197).

LARISSUS, a river of Achaia, forming the line of separation between that country and Elis. (*Pausan.*, 7, 17.—*Plin.*, 4, 5.) Strabo informs us that it flowed

from Mount Scollis, which Homer (*Il.*, 11, 757) designates by the name of "Olenian rock." (*Strabo*, 387.) The modern name of this river is *Risso* or *Mana*. (*Cramer's Anc. Greece*, vol. 3, p. 73.)

LARIUS, **LACUS**, a lake of Cisalpine Gaul, north of the Padus, and east of the Lacus Verbanus. The name Larius is supposed to have been of Etrurian origin. Whatever truth, however, there may have been in this conjecture, there is no mention of the name prior to the time of Polybius, who, as Strabo (209) reports, estimated its length at 300 stadia and its breadth at 30, or 38 miles by 4. Servius says that Cato reckoned 60 miles from one extremity to the other, and the real distance, including the Lake of *Chiavenna*, is not short of that measurement; so that Virgil (*Georg.*, 2, 159) seems justified in saying, "*Anne lacus tantos? te Lari maxime*—" The younger Pliny had two villas on this lake, which he describes (*Epist.*, 9, 7). The one which he calls his Tragedy stood probably at *Bellagio*, as from thence the view extends over both arms of the lake. The intermitting fountain, of which he gives an account (4, 20), still exists under the name of *Pliniana*. This lake receives the *Addua* or *Adda*, which again emerges from it, and pursues its course to the Po. The modern name is *Lago di Como*, from the modern *Como*, the ancient *Comum*. The surrounding country is highly picturesque, being covered with vineyards, interspersed with beautiful villas, and skirted by lofty mountains. A headland, running boldly into the lake at its southern end, causes it to branch off into two arms, at the extremity of the western one of which the town of *Como* is situate.

LARS or **LARTES** **TOLUINIUS**, a king of the Veientes, slain in battle by Cornelius Cossus. (*Vid. Spolia Opina*.—*Liv.*, 4, 17.—*Id.*, 4, 19.)

LARTIUS FLORUS, I. T., a consul, who appeared a sedition raised by the poorer citizens, and was the first dictator ever chosen at Rome, B.C. 493. (*Liv.*, 2, 18.)—II. Spurius, one of the three Romans who withstood the fury of Porcenna's army at the head of a bridge while the communication was cutting down behind them. His companions were Coeles and Herminius. (*Vid. Coeles*.—*Liv.*, 2, 10, 18.—*Dionys. H.*—*Val. Max.*, 3, 2.)

LARVÆ, a name given to the wicked spirits and apparitions which, according to the notions of the Romans, issued from their graves in the night, and came to terrify the world. (Consult remarks under the article *Lares*.)

LASUS, a celebrated dithyrambic poet, born at Hermione in Argolis, and, according to some authorities, the instructor of Pindar. (*Thom. Mag.*, *Vit. Pind.*) He was contemporary with Simonides (*Aristoph.*, *Vesp.*, 1401.—*Schol.*, *Vesp.*, 1402), and flourished in the reign of Hipparchus at Athens (*Herod.*, 7, 6), and in the reign of Darius. (*Schol.*, *Vesp.*, 1401.) He was the first that introduced the dithyrambic measure into the celebrations at the Olympic games. The poet Archilochus, however, who was much older than Lasus, uses the word Dithyrambus in two verses cited by Athenæus (p. 628), so that Lasus could not have been the inventor of this species of measure. (*Bentley, Diss. on Phalaris*, p. 254, ed. 1816.)

LATINÆ FERIÆ, or Latin Holydays, a festival among the Romans. It was originally the solemn meeting of the cantons of Latium, and afterward, on the overthrow of the Latin republic, was converted into a Roman celebration. At first the Romans took part in it, as members of the Latin confederacy, into which they had entered by virtue of an old treaty, made A.U.C. 261, which placed the thirty cities of Latium on a perfect equality with the Romans. The place for holding the festival was the Alban Mount; and, so long as Latium had a dictator, none but he could offer a sacrifice there, and preside at the holydays. He sacrificed on behalf of the Romans likewise, as they did

in the temple of Diana on the Aventine, for themselves and the Latins. Tarquinius Priscus assumed the presidency on the Alban Mount, as it was subsequently exercised by the chief magistrates of Rome, after the dissolution of the Latin state; but the opinion that Tarquinius instituted the festival is quite erroneous, as its antiquity is proved to have been far higher. Like the Greek festivals, this Latin one ensured a sacred truce. It lasted four days. The consuls always celebrated the Latin Holydays before they set out to their provinces; and if they had not been rightly performed, or if anything had been omitted, it was necessary that they should be repeated. (Consult on this whole subject Niebuhr, *Rom. Hist.*, vol. 2, p. 16, *seqq.*, *Eng. transl.*)

LATINI, the inhabitants of Latium. (*Vid. Latium*.)

LATINUS, I. a son of Faunus by Marica, king of the Aborigines in Italy, who from him were called Latini. He married Amata, by whom he had a son and a daughter. The son died in his infancy, and the daughter, called Lavinia, was secretly promised in marriage by her mother to Turnus, king of the Rutuli, one of her most powerful admirers. The gods opposed this union, and the oracles declared that Lavinia must become the wife of a foreign prince. The arrival of Æneas in Italy seemed favourable to the realization of this prediction, and Latinus was prompted to become the friend and ally of the Trojan prince, and to offer him his daughter in marriage. Turnus, upon this, declared war against the king and Æneas, but lost his life in battle by the hand of the latter, who thereupon received Lavinia as his spouse. Latinus died soon after, and Æneas succeeded him on the throne of Latium. So says the fabulous legend. (*Vid. Æneas*.—*Virg.*, *Æn.*, 9, &c.—*Ovid, Met.*, 13, &c.; *Fast.*, 2, &c.—*Dion. Hal.*, 1, 13.—*Læ.*, 1, 1, &c.—*Justin*, 43, 1.)—II. A son of Sylvius Æneas, surnamed also Sylvius. He was the fifth king of the Latins, and succeeded his father. (*Dion. Hal.*, 1, 15.)

LATIUM, a country of Italy, lying south of Etruria, from which it was separated by the Tiber.—The earliest records of Italian history, as we are assured by Dionysius of Halicarnassus (1, 9), represented the plains of Latium as first inhabited by the Siculi, a people of obscure origin, but who would be entitled to our notice from the circumstance above mentioned, even had they not acquired additional historical importance from their subsequent migration to the celebrated island from them named Sicily. (*Vid. Siculi*.) Ancient writers do not seem agreed as to the name of the people who compelled the Siculi to abandon Latium. Dionysius informs us, that Philistus ascribed their expulsion to the Umbri and Pelasgi. Thucydides refers the same event to the Opici; while Antiochus of Syracuse, a still more ancient writer, represents the Siculi as flying from the Cenotri. Notwithstanding this apparent discrepancy, it is pretty evident, that under these different names of Umbri, Opici, and Cenotri, the same people are designated whom Dionysius and the Roman historians usually term Aborigines. (*Ant. Rom.*, 1, 10.) The Aborigines, intermixing with several Pelasgic colonies, occupied Latium, and soon formed themselves into the several communities of Latini, Rutuli, Hernici, and Volsci, even prior to the Trojan war and the supposed arrival of Æneas.—The name of Prisci Latini was first given to certain cities of Latium, supposed to have been colonized by Latinus Sylvius, one of the kings of Alba, but most of which were afterward conquered and destroyed by Ancus Marcius and Tarquinius Priscus. (*Liv.*, 1, 3.) In the reign of Tarquinius Superbus we find the Latin nation united under the form of a confederate republic, and acknowledging that ambitious prince as the protector of their league. (*Liv.*, 1, 50.) After the expulsion of the tyrant from Rome, we are told that the Latins, who favoured his cause,

experienced a total defeat near the Lake Regillus, and were obliged to sue for peace. (*Dion. Hal.*, 6, 18.) According to this historian, the Latins received the thanks of the Roman senate, some years afterward, for having taken no advantage of the disturbances at Rome, which finally led to the secession of the people to Mons Sacer, and for having, on the contrary, offered every assistance in their power on that occasion; he adds also that a perpetual league was formed at that time between the Romans and the Latins. However, about 143 years afterward, we find the latter openly rebelling, and refusing to supply the usual quota of troops which they had agreed to furnish as allies of Rome. Their bold demand, which was urged through L. Annius Setinus, in the Roman senate, that one of the consuls at least should be chosen out of their nation, led to an open rupture. A war followed, which was rendered remarkable from the circumstances of the execution of the young Manlius by order of his father, and the devotion of Decius. After having been defeated in several encounters, the Latins were reduced to subjection, with the exception of a few towns, which experienced greater lenity, and Latium thenceforth ceased to be an independent state. (*Liv.*, 8, 14.—*Plin.*, 34, 5.) At that time the rights of Roman citizens had been granted to a few only of the Latin cities; but at a later period the Gracchi sought to level all such distinctions between the Latins and the Romans. This measure, however, was not carried. The Social war followed; and though the confederates were finally conquered, after a long and desperate contest, the senate thought it advisable to decree, that all the Latin cities which had not taken part with the allies should enjoy the rights of Roman citizens. Many of these towns were, however, deprived of their privileges by Sylla; and it was not till the close of the republic that the Latins were admitted generally to participate in all the rights and immunities enjoyed by the Quirites. (*Suet.*, *Vit. Jul.*, 8.—*Acon.*, *Ped. in Pis.*, p. 490.—On the *Jus Latii* and *Jus Italicum*, consult *Lipsius*, *ad Tacit.*, *Ann.*, 11, 24.—*Parvin.*, *Comm. Reip. Rom.*, 3, p. 329.—*Spanheim*, *Orb. Rom.*, 1, 16.)—The name of Latium was at first given to that portion of Italy only which extends from the mouth of the Tiber to the Circæan promontory, a distance of about 50 miles along the coast; but subsequently this latter boundary was removed to the river Liris, whence arose the distinction of *Latium Antiquum* and *Novum*. (*Strabo*, 231.—*Plin.*, 3, 5.) At a still later period, the southern boundary of Latium was extended from the Liris to the mouth of the river Volturnus and the Massic hills. (*Cramer's Anc. Italy*, vol. 2, p. 1, *seqq.*)

LATMUS, a mountain of Caria, near Miletus. It was famous as having been the scene of the fable of Endymion. (*Vid.* Endymion.) In the vicinity of this mountain stood the city of Heraclea, commonly termed *Ἡράκλεια ἡ ὑπὸ Λατμοῦ*, "Heraclea below, or at the foot of, Latmus." The mountain gave to the adjacent bay the name of Latmicus Sinus. (*Mela*, 1, 17.—*Plin.*, 5, 29.)

LATORICI, a people of Belgic Gaul, in the vicinity of the Tulingi, Rauraci, and Helvetii, whose country lay on the banks of the Rhine, about 90 miles to the west of the Lacus Brigantinus, or Lake of Constance. If they are the nation called by Ptolemy Latobici, they must have changed their settlements before that geographer wrote, as he includes their territories in Pannonia near Noricum. (*Cæs.*, *B. G.*, 1, 2.—*Id. ib.*, 3, 1.)

LATOMIÆ. *Vid.* Lautumiæ.

LATONA (in Greek Λέτο), was the daughter of the Titans Cœus and Phœbe. In Homer she appears as one of the wives of Jupiter, and there occur no traces of enmity between her and Juno. (*Il.*, 21, 499.) Later poets, however, fable much about the persecution she underwent from that goddess, an account of

which will be found near the commencement of the article Apollo. Her children by Jupiter were Apollo and Diana.—While wandering from place to place with her offspring, Latona, says a legend most prettily told by Ovid (*Metamorph.*, 6, 313, *seqq.*), arrived in Lycia. The sun was shining fiercely, and the goddess was parched with thirst. She saw a pool and knelt down at it to drink. Some clowns, who were there cutting sedge and rushes, refused to allow her to slake her thirst. In vain the goddess entreated, representing that water was common to all, and appealing to their compassion for her babes. The brutes were insensible: they not only mocked at her distress, but jumped into and muddied the water. The goddess, though the most gentle of her race, was roused to indignation: she raised her hand to heaven, and cried, "May you live for ever in that pool!" Her wish was instantly accomplished, and the clowns were turned into frogs.—Niobe, the daughter of Tantalus and wife of Amphion, proud of her numerous offspring, ventured to set herself before Latona; the offended goddess called upon her children, Apollo and Diana, and soon Niobe was, by the arrows of those deities, made a childless mother, and became stiffened into stone with grief. (*Vid.* Niobe.)—Tityus, the son of Earth, or of Jupiter and Elara, happened to see Latona one time as she was going to Delphi (Pytho). Inflamed with love, he attempted to offer her violence. The goddess called her children to her aid, and he soon lay slain by their arrows. His punishment did not cease with life, but vultures preyed upon his liver in Erebus. (*Vid.* Tityus.)—The Greeks personified night under the title of *Νῆιτος* or Latona, and *ΒΑΥΒΩ*; the one signifying *oblivion*, and the other *sleep* or *quiescence* (*Phalarch.*, *ap. Euseb.*, *Præp. Evang.*, 3, 1.—*Hesych.*, s. v. *Βαυβώ*); both of which were meant to express the unmoved tranquillity prevailing through the infinite variety of unknown darkness that preceded the creation or first emanation of light. Hence she was said to have been the first wife of Jupiter (*Odys.*, 11, 579), the mother of Apollo and Diana, or the sun and moon, and the nurse of the earth and the stars. The Egyptians differed a little from the Greeks, and supposed her to be the nurse and grandmother of Horus and Bubastis, their Apollo and Diana (*Herod.*, 2, 156), in which they agree more exactly with the ancient naturalists, who held that heat was nourished by the humidity of night. (*Macrob.*, *Sat.*, 1, 23.) Her symbol was the Mygale or Mus Araneus, anciently supposed to be blind (*Plut.*, *Sympos.*, 4, p. 670.—*Anton.*, *Liberal. Fab.*, 28); but she is usually represented upon the monuments of ancient art under the form of a large and comely woman, with a veil upon her head. This veil, in painting, was always black; and in gems the artists generally availed themselves of a dark coloured vein in the stone to express it; it being the same as that which was usually thrown over the symbol of the generative attribute to signify the nutritive power of night fostering the productive power of the pervading spirit; whence Priapus is called in the poets *black-cloaked*. (*Mosch.*, *Epitaph. Bion.*, 27.) The veil is often stellated. (*Knight, Inquiry into the Symb. Lang.*, &c., § 87.—*Class. Journ.*, vol. 24, p. 214.)

LATORŌLIS, a city of Egypt in the Thebaid, between Thebes and Apollinopolis Magna. It derived its Greek name from the fish Latos worshipped there, which was regarded as the largest of all the fishes of the Nile. (*Athenæus*, 7, 17.—*Strabo*, 816.) The later writers drop the term *πόλις* (polis), and call the place merely Laton (Λάτων, Hierocles), and therefore, in the *Itin. Anton.* and *Notitia Imperii*, the ablative form *Lato* occurs. The modern *Enne* occupies the site of Latopolis, and is an important place in the caravan trade from Darfur and the more southern regions. (*Mannert, Geogr.*, vol. 10, pt. 1, p. 331.)

LAVERNA, a Roman divinity, the patron-goddess of thieves, who were anciently called *Laverniones* (*Festus*, s. v.), and of all, in general, who practised artifice and fraud. (*Horat., Epist.*, 1, 16, 60.) At Rome she had an altar by the temple of Tellus, near the gate which was called from her the gate of Laverna. (*Varro, L. L.*, 4, p. 45.) There was also a temple of this goddess near Famiæ. (*Cic. Ep. ad Att.*, 7, 8.) Her name is probably derived from *latco*, significant of darkness or obscurity. (Compare the change of *l* and *v* in *τίλλω* and *τέλλω*; *θέλλω* and *τέλλω*; *κλέω* and *κλέω*, &c.—*Keightley's Mythology*, p. 529.—*Consult Mem. Acad. des Inscriptions*, &c., vol. 7, p. 77, “*De la Déesse Laverne*.”)

LAVERNUM, a temple of Laverna, near Formiæ. (*Cic. Att.*, 7, 8.)

LAVINIA, a daughter of King Latinus and Amata, promised by her mother in marriage to Turnus, but given eventually to Æneas. (*Vid. Latinus*.) At her husband's death she was left pregnant, and being fearful of Ascanius, her step-son, she fled into the woods, where she brought forth a son called Æneas Sylvius. (*Virg., Æn.*, 6, 7.—*Ovid, Met.*, 14, 507.—*Liv.*, 1, 1.)

LAVINIUM, a city of Latium, situate on the river Numicus, near the coast, and to the west of Ardea. It was said to have been founded by Æneas, on his marriage with the daughter of Latinus (*Dion. Hal.*, 1, 45.—*Liv.*, 1, 1); this story, however, would go but little towards proving the existence of such a town, if it were not actually enumerated among the cities of Latium by Strabo and other authors, as well as by the Itineraries. Plutarch notices it as the place in which Tatius, the colleague of Romulus, was assassinated. (*Vit. Rom.*) Strabo mentions that Lavinium had a temple consecrated to Venus, which was common to all the Latins. (*Strabo*, 232.) The inhabitants are styled by Pliny (3, 5) *Lavinenses*. Lavinium and Laurentum were latterly united under the name of Lauro-Lavinium. (*Front. de Col.*—*Symmachus*, 1, 65.—*Vulp., Vet. Lat.*, 10, 6.) Various opinions have been entertained by antiquaries relative to the site which ought to be assigned to Lavinium. Cluverius placed it near the church of *St. Petronella* (*Ital. Ant.*, 2, p. 894); Holstenius on the hill called *Monte di Livano* (*ad Steph. Byz.*, p. 175); but more recent topographers concur in fixing it at a place called *Prætica*, about three miles from the coast. (*Vulp., Vet. Lat.*, 10, 1.—*Nibby, Viaggio Antiquario*, vol. 2, p. 265.—*Cramer's Anc. Italy*, vol. 2, p. 19.)

LAUREACUM, a fortified town of Noricum Ripense, the station of a Roman fleet on the Danube, and the headquarters of the second legion. (*Notit., Imp. Occident.*) It lay to the east of the junction of the Ænus and Danube. The modern village of *Lohr* stands near the site of this place, a short distance to the north of the present city of *Ens*. (*Mannert, Geogr.*, vol. 3, p. 637.)

LAURENTES AGRI, the country in the neighbourhood of Laurentum. (*Tibull.*, 2, 5, 41.)

LAURENTIA. *Vid. Acca*.

LAURENTUM, the capital of Latium, about sixteen miles below Ostia, following the coast, and near the spot now called *Paterno*. (*Vulp., Vet. Lat.*, 10, 1.—*Nibby, Viaggio Antiq.*, vol. 2, p. 313.) Cluverius and Holstenius are both wrong in assigning to Laurentum the position of *San Lorenzo*. Of the existence of this city, whatever may be thought of Æneas and the Trojan colony, there can be no doubt: without going so far back as to Saturn and Picus, it may be asserted, that the origin of Laurentum was most ancient, since it is mentioned among the maritime cities of Latium, in the first treaties between Rome and Carthage, recorded by Polybius (3, 22). Though Laurentum joined the Latin league in behalf of Tarquin, and shared in the defeat at the Lake Regillus (*Dion. Hal.*, 5, 61), it seems afterward to have

been firmly attached to the Roman interests. (*Livy*, 8, 9.) Of its subsequent history we know but little; Lucan represents it as having fallen into ruins and become deserted, in consequence of the civil wars (7, 394). At a later period, however, Laurentum appears to have been restored under the name of Lauro-Lavinium: a new city having been formed, as it is supposed, by the union of Laurentum and Lavinium. (*Front., de Col.*—*Symmachus*, 1, 65.—*Vulp., Vet. Lat.*, 10, 6.) The district of Laurentum must have been of a very woody and marshy nature. The *Silva Laurentina* is noticed by Julius Obsequens (*de Prod.*), and by Herodian (1, 12), the latter of whom reports, that the Emperor Commodus was ordered to this part of the country by his physicians, on account of the laurel-groves which grew there, the shade of which was considered as particularly salutary. It is from this tree that Laurentum is supposed to have derived its name. The marshes of Laurentum were famous for the number and size of the wild boars which they bred in their reedy pastures. (*Virg., Æn.*, 7, 59.—*Id. ibid.*, 10, 707.—*Hor., Sat.*, 2, 4.—*Martial*, 9, 49.) However unfavourable, as a place of residence, Laurentum may be thought at the present day, on account of the *malaria* which prevails there, it appears to have been considered as far from unhealthy by the Romans. We are told that Scipio and Lælius, when released from the cares of business, often resorted to this neighbourhood, and amused themselves by gathering shells on the shore. (*Val. Mar.*, 8, 8.—*Cic., de Orat.*, 2, 22.) Pliny the Younger says Laurentum was much frequented by the Roman nobles in winter; and so numerous were their villas, that they presented more the appearance of a city than detached dwellings. Every lover of antiquity is acquainted with the elegant and minute description he gives of his own retreat. (*Ep.*, 2, 17.) Hortensius, the celebrated orator, and the rival of Cicero, had also a villa in this neighbourhood. (*Varro, R. R.*, 3, 13.—*Cramer's Anc. Italy*, vol. 2, p. 16, seqq.)

LAURIUM, a range of hills, extending from that part of the Attic coast which lay near Azenia, below the Astypalæa Promontorium, to the promontory of Sunium, and from thence to the neighbourhood of Prasîæ on the eastern coast. This tract was celebrated for its silver mines. Herodotus informs us, that the produce of these mines was shared among the Athenians, each of whom received ten drachmæ; but we are not informed whether this division took place annually. Themistocles, however, during the war with Ægina, advised them to apply this money to the construction of 200 galleys; a measure which contributed, in a great degree, to the naval ascendancy of the Athenians. (*Herod.*, 7, 144.) Thucydides reports, that the Lacedæmonian army, in their second invasion of Attica, advanced in this direction as far as Laurium (2, 55). The produce of the mines had already much diminished in the time of Xenophon. (*Mem.*, 3, 6, 5.) We collect from his account that they then were farmed by private persons, who paid a certain sum to the republic in proportion to the quantity of ore they extracted; but he strongly urged the government to take the works into their own hands, conceiving that they would bring a great accession of revenue to the state. (*De Prov.*, p. 293, *ed. Steph.*) These private establishments were called *ἐργαστήρια ἐν τοῖς ἀργυρεῖσι*. (*Æschin. in Timarch.*, p. 14.) Nicias is said to have employed at one time 1000 slaves in the mines. (*Xen., l. c.*—*Plut., Vit. Nic.*—*Andocid., de Myst.*—*Diod. Sic.*, 5, 37.) Strabo informs us, that the metallic veins were nearly exhausted when he wrote: a considerable quantity of silver, however, was extracted from the old scoria, as the ancient miners were not much skilled in the art of smelting the ore. (*Strabo*, 399.)—The mines themselves were called *Laureia* or *Lauria*; and the district *Lauriotice*. *Ἰλα-*

house (*Travels*, vol. 1, p. 417, *Lond. ed.*) describes Laurium as a high and abrupt hill, covered with pine-trees and abounding with marble. Stewart also recognised in *Legrina* and *Lagrona*, near Sunium, the name Laurion, which has also evidently been preserved in the names Lauronoris, Mauronoris, Mauronoris (Λαύριον ὄρος). According to his statement, it is an uneven range of hills full of exhausted mines and scoriae. (*Antiq. of Attica*, vol. 3, p. 13.) Mr. Hawkins, in his survey of this part of the Attic coast, discovered many veins of the argentiferous lead ore, with which the country seems to abound; he observed traces of the silver-mines not far beyond *Keratia*. The site of the smelting furnaces may be traced to the southward of *Thorico* for some miles, immense quantities of scoriae occurring there. These were probably placed near the seacoast for the convenience of fuel, which it soon became necessary to import. (*Walpole's Memoirs*, vol. 1, p. 430. — *Gell's Itinerary*, p. 79. — *Dodwell's Tour*, vol. 1, p. 358.) — The mines at Laurium were worked either by shafts (ὀρεῖα, *putei*) or adits (ὕδρωμα, *cunei*); and by neither of these two modes of working did they, in the time of Xenophon, arrive at the termination of the ore (*Xen., de Vectig.*, 24, 6). For the chambering of the mines timber was probably imported by sea (*Demosth. in Mid.*, p. 568, 17), which, according to Pliny (33, 21), was the case also in Spain. Hobhouse mentions (*l. c.*) that one or two shafts have been discovered in a small shrubby plain not far from the sea, on the eastern coast; and he states also that a specimen of ore, lately found, was shown to him at Athens. If the hole which Chandler (*Travels*, c. 30) saw upon Mount Hymettus was really, as he conjectures, a shaft, it follows that some, at least, had a considerable width, for the circular opening was of more than forty feet in diameter; at the bottom of the hole two narrow passages led into the hill in opposite directions. It was also the practice, according to Vitruvius, to make large hollows in the silver mines (7, 7). The pillars which were left standing for the support of the overlying mountain were called ὅρτοι, and more commonly μεσοκρινεῖς (*Plut., Vit. X., Orat.* — *Op.*, vol. 6, p. 256, *ed. Hult.* — *Pollux*, 3, 87. — *Id.*, 7, 98), as they, at the same time, served for the divisions between the different compartments, or, as they were called, workshops. As these pillars contained ore, the proprietors were tempted by their avarice to remove them, although by law they were strictly prohibited from doing so; in the time of the orator Lycurgus, the wealthy Diphilus was condemned to death for this offence. (*Vit. X., Orat.*, *l. c.*) The opening of new mines was called *καυτοροῖα*, and on account of the great risk and expense, no one would willingly undertake it. If the speculator was successful, he was amply remunerated for his undertaking; if unsuccessful, he lost all his trouble and expense; on which account Xenophon proposed to form companies for this purpose. The ancients speak in general terms of the unwholesome evaporations from silver-mines (*Cassaub., ad Strab.*, 101), and the noxious atmosphere of those in Attica is particularly mentioned (*Xen. Mem.*, 3, 6, 12. — *Plut., Comp. Nic. et Crass. init.*), although the Greeks as well as the Romans were acquainted with the use of shafts for ventilation, which the former called ψυχάγωγια. (*Lex. Seg.*, p. 317.) In what manner the water was withdrawn from the mines we are not informed; it is, however, probable that the Greeks made use of the same artificial means as the Romans. (Consult *Reitemeier, Art of Mining*, &c., among the *Ancients*, p. 114, of the German work.) The removal of the ore appears to have been performed partly by machinery and partly by men, as was the case in Egypt and Spain, in which latter country the younger slaves brought the ore through the adits to the surface of the soil; whether, however, the miners in Attica used leather bags for

this purpose, and were on that account called *bag-carriers* (ὀυλακοφόροι), is, to say the least, uncertain; for, according to the grammarians, these bags contained their food. (*Pollux*, 7, 100. — *Id.*, 10, 149. — *Hesych.*, s. v.) The stamping of the ore at the founderies, in order to facilitate its separation from the useless parts of the stone, was generally performed in stone mortars with iron pestles. In this manner the Egyptians reduced the gold ore to the size of a vetch, then ground it in handmills and washed it on separate planks, after water had been poured over it; which is the account given by a Hippocratean writer of the treatment of gold ore. (*Diod. Sic.*, 13, 12. — *Agathareh., ap. Phot.*, p. 1342. — *Hippocrates, de victus rat.*, 1, 4.) In Spain it was bruised in the same manner, and then, if Pliny does not invert the proper order, first washed, and afterward calcined and pounded. Even the quicksilver ore, from which cinnabar was prepared, was similarly treated; that is, first burned off, in which operation a part of the quicksilver flowed off, and then pounded with iron pestles, ground, and washed. (*Plin.*, 33, 21.) In Greece, the labourers in the founderies made use of a sieve for washing the comminuted ore, and it is mentioned among the implements of the miners by the appropriate name σάλαξ. (*Poll.*, 7, 97.) This method of treating ore was not only in use in ancient times, but it was the only one employed either during the middle ages or in more recent times, until the discovery of stamp works. (*Beckman's History of Inventions*, vol. 1, pt. 5, num. 3. — *Reitemeier*, p. 121, *seqq.*) Of the art of smelting in the founderies of Laurium, nothing definite is known. That the Athenians made use of the bellows and charcoal is not improbable; the latter, indeed, may be fairly inferred, from the account of the charcoal-sellers, or, rather, charcoal-burners, from which business a large portion of the Acharnians in particular derived their livelihood. The art of smelting among the ancients was so imperfect, that even in the time of Strabo, when it had received considerable improvements, there was still no profit to be gained by extracting silver from lead ore, in which it was present in small proportions; and the early Athenians had, in comparison with their successors (who were themselves not the most perfect masters of chymistry), so slight a knowledge of the management of ore, that, according to the same writer, not only was that which had been thrown away as stone subsequently used, but the old scoriae were again employed for the purpose of extracting silver. (*Strab.*, 399.) According to Pliny (33, 31), the ancients could not smelt any silver without some mixture of lead (*plumbum nigrum*) or gray lead (*galena, molybdæna*); he appears, however, only to mean ores in which the silver was combined with some metal to which it has a less powerful affinity than to lead. At Laurium it was not necessary, at least in many places, to add any lead, it being already present in the ores. Pliny states in general terms the manner in which argentiferous lead ores were treated (34, 47), and there can be no doubt that this was the method adopted in Attica. According to his account, the ore was first melted down to stannum, a composition of pure silver and lead; then this material was brought to the refining oven, where the silver was separated, and the lead appeared half glazed in the form of litharge, which, as well as gray lead, the ancients call *galena* and *molybdæna*: this last substance was afterward cooled, and the lead (*plumbum nigrum, μολυβδόν*), to distinguish it from tin, *plumbum album, or candidum, κασσίτερος*) was produced. (*Boeckh's Dissertation on the Mines of Laurium, Comment. Acad. Berol.*, an. 1814 et 1815, p. 89. — *Boeckh's Public Economy of Athens*, vol. 2, p. 415, *seqq.*)

LAURON, a town of Spain, towards the eastern limits of Bætica, and not far from the sea, probably among the Bastitani. It has been supposed by some to be

the modern *Liria*, five leagues from Valencia. It was this city of which Sertorius made himself master in the face of Pompey's army; and in its vicinity, at a subsequent period, Cneius Pompeius, son of Pompey the Great, was slain after the battle of Munda. (*Plut., Vit. Sert.—Oros., 5, 23.—Florus, 4, 2.—Cæs., Bell. Hisp., c. 37.*)

LAÏS, I. a river of Lucania, now *Lao*, running into the Sinus Laüs, or Gulf of *Policastro*, at the southern extremity of the province. At its mouth stood the city of Laüs.—II. A city at the southern extremity of Lucania, at the mouth of the river Laüs, and on the gulf of the same name. It was a colony of Sybarites (*Herod., 6, 20.—Strab., 253*), but beyond this fact we are very little acquainted with its history. Strabo reports, that the allied Greeks met with a signal defeat in the neighbourhood of this place from the Lucanians. These were probably the Posidoniatae, and the other colonists on this coast, and we may conjecture that this disaster led to the downfall of their several towns. In Pliny's time Laüs no longer existed. (*Plin., 3, 5.—Ptol., p. 67.*) Cluverius identified its site with the present *Laino* (*Ital. Ant., 2, p. 1262*); but later topographers have justly observed, that this town is fourteen miles from the sea, whereas the Table Itinerary evidently marks the position of Laüs near the coast. It is more probable, therefore, that *Scalca* represents this ancient city. (*Romanelli, vol. 1, p. 383.*)

LAUS POMPEIA, a town of Cisalpine Gaul, next in importance to Mediolanum, and situate to the southeast of that place, near the river Lambrus. It was founded, as Pliny reports, by the Boii (3, 17), and afterward probably colonized by Pompeius Strabo, father of the great Pompey. In a letter of Cicero to his brother, it is simply called Laus (2, 15). Its position answers to that of *Lodi Vecchio*, which, having been destroyed by the Milanese, the Emperor Barbarossa caused the new town of *Lodi* to be built at the distance of three miles from the ancient site. (*Cramer's Anc. Italy, vol. 1, p. 53.*)

LAUTUMIÆ or LATOMIÆ, a name properly denoting a quarry, and derived from the Greek *λαῖας*, "a stone," and *τῆρυμα*, "to cut" or "quarry." This appellation was particularly applied to certain quarries near Syracuse, one of which still bears the name of "The Ear of Dionysius," because it is said to have been used by that tyrant for a prison, and to have been so constructed that all the sounds uttered in it converged to and united in one particular point, termed, in consequence, the tympanum. This point communicated with an apartment, where Dionysius placed himself, and thus overheard all that was said by his unsuspecting captives. Such is the popular opinion respecting this place, an opinion which has no other support save the narratives of travellers and the accounts of some modern historians, who have been equally misled by vulgar tradition. There is no doubt, however, but that these quarries actually served as places of imprisonment, and Cicero reproaches Verres with having employed them for this purpose in the case of Roman citizens. (*Cic. in Verr., 5, 27.*) Ælian informs us, that some of the workmen in the quarries near Syracuse remained so long there as to marry and rear families in them, and that some of their children, having never before seen a city, were terrified on their coming to Syracuse, and beholding for the first time horses and oxen. (*Ælian, V. H., 12, 44.*)

LEANDER, a youth of Abydos, beloved by Hero. The story of his fate will be found under the latter article. (*Vid. Hero.*)—The following remarks relate to his alleged feat of swimming across the Hellespont and returning the same night. "It was the custom," observes Hobhouse, "for those who would cross from Abydos to Sestos to incline a mile out of the direct line, and those making the contrary voyage were obli-

ged to have recourse to a similar plan, in order to take advantage of the current. Leander, therefore, had a perilous adventure to perform, who swam at least four miles to meet Hero, and returned the same distance the same night. It is very possible, however, to swim across the Hellespont without being the rival or having the motive of Leander. My fellow-traveller (Lord Byron) was determined to attempt it." (*Hobhouse's Journey, vol. 2, p. 218, Am. ed.*) It appears, from what follows, that Lord Byron failed in his first attempt, owing to the strength of the current, after he and the friend who accompanied him had been in the water an hour, and found themselves in the middle of the strait, about a mile and a half below the castles. A second attempt was more successful; Lord Byron was in the water one hour and ten minutes, his companion, Mr. Ekenhead, five minutes less. Lord Byron represents the current as very strong and the water cold; he states, however, that they were not fatigued, though a little chilled, and performed the feat with little difficulty. The strait between the castles Mr. Hobhouse makes a mile and a quarter, and yet it took four boatmen five minutes to pull them from point to point. All this tends to throw a great deal of doubt upon the feat of Leander, who could hardly have been a more expert swimmer than Lord Byron, and who, besides, had a longer course to pursue. Consult Lord Byron's own account (*Moore's Life of Byron, vol. 2, p. 308, seqq.*), and Mr. Turner's remarks appended to the volume just cited, p. 560.

LEBADAËA, a city of Bœotia, west of Coronea, built on a plain adjacent to the small river Hercyne. It derived its name from Lebadus, an Athenian, having previously been called Midea. This city was celebrated in antiquity for the oracle of Trophonius, situated in a cave above the town, into which those who consulted the Fates were obliged to descend, after performing various ceremonies, which are accurately detailed by Pausanias, who also gives a minute description of the sacred cavern (9, 39). The oracle was already in considerable repute in the time of Cæsar, who consulted it (*Herod., 1, 46*), as did also Mardonius. (*Id., 8, 134.*) The victory of Leuctra was said to have been predicted by Trophonius, and a solemn assembly was in consequence held at Lebadea, after the action, to return thanks. This was known, however, to have been an artifice of Epaminondas. (*Diod. Sic., 15, 53.*) Strabo calls the presiding deity Jupiter Trophonius (*Strab., 413*), and so does Livy (45, 28), who says the shrine was visited by Paulus Æmilius after his victory over Perseus. The geographer Dicæarchus, as we are informed by Athenæus (13, p. 594, c), wrote a full account of the oracle. The modern town of *Libadea* stands near the site of the ancient city: the castle occupies the site of the Acropolis. (*Dodwell, vol. 1, p. 217.—Gell's Itin., p. 178.—Clarke's Travels, vol. 7, p. 168, Lond. ed.—Cramer's Anc. Greece, vol. 2, p. 240.*)

LEBÆDUS (*Λιβεδός*), one of the twelve cities of Ionia, northwest of Colophon, on the coast. It was at first a flourishing city, but upon the removal of a large portion of its inhabitants to Ephesus by Lysimachus, it sank greatly in importance. (*Pausan., 1, 9.—Strabo, 632.*) In the time of Horace it was deserted and in ruins. It would seem to have been subsequently restored, as Hierocles, in the seventh century, speaks of it as a place then in existence. (*Mannert, Geogr., vol. 6, pt. 3, p. 316.*)

LECHÆUM, that part of Corinth which was situated on the Sinus Corinthiacus, being distant from the city about 12 stadia, and connected with it by means of two long walls. (*Strabo, 380.—Xen., Hist. Græc., 4, 5, 11.*) It was the great emporium of Corinthian traffic with the western parts of Greece, as well as with Italy and Sicily. (*Strab., l. c.—Polyb., 5, 24.—Id., 5, 24, 12.—Liv., 32, 23.*) According to Sir W. Gell,

"Lechæum is thirty-five minutes distant from Corinth, and consists of about six houses, magazines, and a custom-house. East of it, the remains of the port are yet visible at a place where the sea runs up a channel into the fields. Near it are the remains of a modern Venetian fort." (*Itin. of the Morea*, p. 205.)

LECTONIA. Ancient traditions, as well as physical observations, point out the former existence of the land of Lectonia, which would seem to have occupied a part of the space now filled by the Grecian Sea. An earthquake probably broke down its foundations, and the whole was finally submerged under the waves. Perhaps this event happened when the sea, which was formerly extended over the Scythian plains, forced its way through the Bosphorus, and precipitated itself into the basin of the Mediterranean. (Compare remarks under the articles *Cyanea* and *Mediterraneum Mare*.) The numerous islands of the Archipelago appear to be the remains of Lectonia, and this tract of land probably facilitated the passage of the first colonists out of Asia into our part of the world. It was the opinion of Pallas that the Euxine and Caspian Seas, as well as the Lake Aral and several others, are the remains of an extensive sea, which covered a great part of the north of Asia. This conjecture of Pallas, which was drawn from his observations in Siberia, has been confirmed by Klaproth's survey of the country northward of Mount Caucasus. Lastly, M. de Choiseul Gouffier adds, that a great part of Moldavia, Wallachia, and Besarabia bears evident traces of having been formed by the sea. It has often been conjectured that the opening of the Bosphorus was the occasion of the draining of this ocean in the midst of Europe and Asia. The memory of this disruption of the two continents was preserved in the traditions of Greece. Strabo (49), Pliny (2, 90), and Diodorus Siculus (5, 47), have collected the ancient memorials which existed of so striking a catastrophe. The truth of the story, however, has been placed on more secure grounds by physical observations on the districts in the vicinity of the Bosphorus. (Consult Dr. Clarke's *Travels*, and particularly a *Mémoire* by M. de Choiseul Gouffier in the *Mém. de l'Institut. Royal de France*, 1815, in which the author has collected much curious information on this subject.) It appears that the catastrophe was produced by the operation of volcanoes, the fires of which were still burning in the era of the Argonautic voyage, and enter into the poetical descriptions of Apollonius and Valerius Flaccus. According to the false Orpheus, Neptune, being angry with Jupiter, struck the land of Lectonia with his golden trident, and submerged it in the sea, forming islands of many of its scattered fragments. There seems to be some resemblance between the name Lectonia and Lycæonia, but then we must refer the latter term, not to a portion of Asia Minor, but to the northern regions of the globe. Thus we have in Ovid (*Fast.*, 3, 793) the expression "*Lycæonia Arctos*," in the same poet (*Trist.*, 32, 2) "*Lycæonia sub ææ*," and in Claudian (*Cons. Mall. Theod.*, 299) "*Lycæonia astræ*." By the northern regions of the globe, however, Italy and Greece can easily be meant, since they were both referred by the ancients to the countries of the North. (*Müller's Univ. History*, vol. 1, p. 32, *in notis*.—*Ukert, Geographic der Griechen und Römer*, vol. 1, p. 346.—*Hermann in Orph.*, Arg., 1274.)

LECTUM, a promontory of Troas, below the island of Tenedos, now Cape *Baba*. It formed the northern limit, in the time of the eastern empire, of the province of Asia, as it was termed, which commenced near the Mæander, and extended along the coast upward to Lectum. Dr. Clarke speaks of this promontory as follows: "Thence we sailed to the promontory of Lectum, now Cape *Baba*, at the mouth of the Adramyttian Gulf: the southwestern extremity of that chain of mountains of which Gargarus is the summit. This

cape presents a high and bold cliff, on whose steep acclivity the little town of *Baba* appears, as though stuck within a nook. It is famous for the manufacture of knives and poniards: their blades are distinguished in Turkey by the name of *Baba Leeks*." (*Travels*, vol. 3, p. 224, *seqq.*, *Lond. ed.*) A very accurate view of the promontory is given in *Gell's Topography of Troy*, p. 21. The place was called *Baba* from a dervish (*Baba*) buried there, who always gave the Turks intelligence when any rovers were in the neighbouring seas. (*Clarke, l. c.*, *in notis*.—*Egmont and Heyman's Travels*, vol. 1, p. 162.)

LEDA, a daughter of King Thestius and Eurythemis, who married Tyndarus, king of Sparta. According to the common account, she became, by Jupiter (who assumed for that purpose the form of a swan), the mother of Pollux and Helen, and by her own husband, the parent of Castor and Clytemnestra. Two eggs, it seems, were brought forth by her, from which, respectively, came the children just named, Pollux and Helen being in one, and Castor and Clytemnestra in the other. Other versions, however, are given of the legend, for which consult the articles Castor and Helena.

LEDÆA, an epithet given to Hermione, &c., as related to Leda. (*Virg.*, *Æn.*, 3, 328.)

LEDUS, now *Lez*, a river of Gaul, near the modern Montpelier. (*Mela*, 2, 5.)

LEGIO septima gemina, a Roman military colony in Spain among the Astures, northeast of Asturica. It is now *Leon*. (*Itin. Ant.*, p. 395.—*Ptolemy*, 2, 6.) Ptolemy calls it *Legio Septima Germanorum*. (*Ukert, Geogr.*, vol. 2, p. 441.)

LELAPS or **LÆLAPS**, I. a dog that never failed to seize and conquer whatever animal it was ordered to pursue. It was given to Procris by Diana, and Procris reconciled herself to her husband by presenting him with this valuable animal. According to some, Procris had received it from Minos, as a reward for the dangerous wounds of which she had cured him. (*Hygin., fab.*, 28.—*Ovid, Met.*, 7, 771.)—II. One of Actæon's dogs.

LELEGEIS, a name applied to Miletus, because once possessed by the Leleges. (*Plin.*, 5, 29.)

LELÈGES, an ancient race, whose history is involved in great obscurity, in consequence of the various and almost contradictory traditions which exist concerning them; according to which, they are on the one hand represented as among the earliest inhabitants of Greece, while on the other they are said to be the same people as the Carians. Herodotus states (1, 171) that the Carians, who originally inhabited the islands of the Ægean Sea, were known by the name of Leleges before they emigrated to Asia Minor; and according to Pausanias (7, 2, 4), the Leleges formed only a part of the Carian nation. The Leleges appear, from numerous traditions, to have inhabited the islands of the Ægean Sea and the western coasts of Asia Minor from a very early period. In Homer they are represented as the allies of the Trojans; and their king Altes is said to have been the father-in-law of Priam. (*Il.*, 20, 96.—*Ih.*, 21, 86.) They are said to have founded the temple of Juno in Samos (*Athenæus*, 15, p. 672), and Strabo informs us that they once inhabited, together with the Carians, the whole of Ionia. (*Strab.*, 331.)—On the other hand, in the numerous traditions respecting them in the north of Greece, we find no connexion between them and the Carians. According to Aristotle (quoted by Strabo, 332), they inhabited parts of Acarnania, Ætolia, Opuntian Locris, Leucas, and Bœotia. In the south of Greece we again meet with the same confusion in the traditions of Megara respecting the Leleges and the Carians. Car is said to have been one of the most ancient kings of Megara, and to have been succeeded in the royal power, after the lapse of twelve generations, by Lelex, a foreigner from Egypt. (*Pausan.*, 1, 39, 4, *seq.*)

Pylus, the grandson of this Lelex, is said to have led a colony of Megarian Leleges into Messenia, where he founded the city of Pylus. (*Pausan.*, 4, 36, 1.) The Lacedæmonian traditions, on the contrary, represent the Leleges as the original inhabitants of Laconia. (*Pausan.*, 3, 1, 1.)—It can scarcely be doubted, from the numerous traditions on the subject, that the Leleges were in some manner closely connected with the Carians. (*Vid.* Caria.) The most probable supposition is, that the Leleges were a people of Pelasgian race, a portion of whom emigrated at a very early period from the continent of Greece to the islands of the Ægean Sea, where they became connected with the Carians (who were a portion, probably, of the same great family), and subsequently joined them in their descent upon Asia Minor. (*Thirlwall's History of Greece*, vol. 1, p. 44.—*Philological Museum*, No. 1, s. v. AUCÆUS.—*Encycl. Us. Knowl.*, vol. 13, p. 417.)

LELEX, an Egyptian, said to have come with a colony to Megara, and to have attained to kingly power there. (*Pausan.*, 1, 39, 4.—*Vid.* Leleges.)

LEMÂNIS PORTUS, or *Lymne*, a harbour of Britain, a little below Dover, where Cæsar is thought to have landed on his first expedition to that island, having set out from the Portus Itius in Gaul, a little south of *Calvis*. (*Vid.* Itius Portus.)

LEMANNUS LACUS, a lake of Gaul, in the southwest angle of the territory of the Helvetii, and separating them in this quarter from the Allobroges. It is now the *Lake of Geneva*. This is a most beautiful expanse of water in the form of a crescent, the concave side of which is upward of 45 miles long. Its greatest breadth is about 12 miles. It never wholly freezes over in the severest winters, and it rises about ten feet in summer, by the melting of the snows on the Alps. Besides the Rhone, which traverses its whole length, it receives the waters of forty other streams. (*Lucan*, 1, 396.—*Mela*, 2, 5.—*Cæs.*, *B. G.*, 1, 2.—*Id. ib.*, 1, 8.—*Id. ib.*, 3, 1.)

LEMNOS, an island in the Ægean Sea, between Tenedos, Imbros, and Samothrace. According to Pliny (4, 12) it was 87 miles from Mount Athos; but there must be an error in the MSS. of that author, for the distance is not forty miles from the extreme point of the Acrothoan Cape to the nearest headland of Lemnos. (Compare remarks under the article Athos.) Lemnos is known in ancient mythology as the spot on which Vulcan fell, after being hurled down from heaven, and where he established his forges. A volcano, which once was burning on the island, may have afforded ground for the fable. A story is also recorded by Herodotus and other ancient writers of the women of Lemnos having murdered all the men. (*Vid.* Hypsipyle.) Homer states that the earliest inhabitants of this island were the Sintians, a Thracian tribe (*Il.*, 1, 593.—*Strabo*, *Exc.*, 7, p. 331), whence Apollonius Rhodius terms it *Συντίσιδα Αἴηλον* (1, 608.—Compare *Schol. Thucyd.*, 2, 98.—*Steph. Byz.*, s. v. Αἴηλος.) To these succeeded the Tyrrenian Pelasgi, who had been driven out of Attica. They are said to have afterward stolen some Athenian women from Brauron, and carried them to Lemnos; and it is also said, that the children of these women having despised their half-brethren, born of Pelasgian women, the Pelasgi took the resolution of murdering both the Athenian women and their offspring. In consequence of these atrocities, Lemnos had a bad name among the ancient Greeks. (Consult *Erasm.*, *Chil. col.*, 297, s. v. Αἴημιον κακόν.) Lemnos was still in the possession of these Pelasgi when it was invaded and conquered by Otanes, a Persian general. (*Herod.*, 5, 26.) But on his death it is probable that the island again recovered its independence; for we know that, subsequent to this event, Miltiades conquered it for Athens, and expelled those Pelasgi who refused to submit to his authority. (*Herod.*, 6, 140.) During

the Peloponnesian war Lemnos remained in the possession of Athens, and furnished that state with its best light-armed troops. (*Thucyd.*, 4, 28.—*Id.*, 7, 57.) Pliny speaks of a remarkable labyrinth which existed in this island, and of which some vestiges were still to be seen in his time. He says it had massive gates, so well poised that a child could throw them open, and one hundred and fifty columns, and was adorned with numerous statues, being even more extensive and splendid than those of Crete or Egypt (36, 13). Modern travellers have in vain attempted to discover any trace of this great work. Dr. Hunt says (1, p. 61), "we could only hear a confused account of a subterranean staircase in an uninhabited part of the island called Pouniah." This spot the Dr. visited; but he was of opinion that those ruins have no relation to the labyrinth mentioned by Pliny. He conceives them rather to belong to Hephæstia.—Lemnos contained a remarkable volcano, called Mosychlus, from which fire was seen to blaze forth, according to a fragment of the poet Antimachus, preserved by the scholiast on Nicander (*ad. Ther.*, 472). This volcanic appearance will account for the ancient name of Æthalia, which Lemnos is said to have borne in distant ages. (*Polyb.*, ap. *Steph. Byz.*, s. v. Αἰθάλη.) "The whole island," says Dr. Hunt, "bears the strongest marks of the appearance of volcanic fire; the rocks in many parts are like burned and vitrified scoræ of furnaces." (*Walpole's Memoirs*, vol. 1, p. 59.—*Cramer's Anc. Greece*, vol. 1, p. 338.) Sonnini, also, before this, remarked respecting this island, that internal fires were very probably still burning there, for he met with a spring of hot water which had been brought to supply baths, and with another of aluminous water. The priests of Lemnos were reckoned famous for the cure of wounds, and the efficacy of their skill depended, it is said, upon the quality of a species of red earth found in the island, called *Lemnian earth*. This the ancients thought a sovereign remedy against poisons and the bites of serpents, but it is now held in little or no esteem in Europe, although the Greeks and Turks still believe it to possess wonderful medicinal properties. It is dug out of a hill in the island with great ceremony and at particular times, in presence of the Turkish sandjark or governor, and of the Greek clergy, and is shaped into little balls and stamped with the governor's seal, whence it has derived the name of *terra sigillata* ("sealed earth"). The governor makes a traffic of it, and sends it to Constantinople and other places. It is also used for tanning leather. The modern name of Lemnos is *Stalimenc*. (*Cramer's Anc. Greece*, vol. 1, p. 338.)

LEMOVICES. I. a people of Celtic Gaul, subsequently incorporated into Aquitania. They were situated to the south of the Bituriges Cubi and to the west of the Arverni. Their capital was Augustoritum, afterward called Lemovices, now *Limoges*, in the department of *la Haute-Vienne*. (*Cæs.*, *B. G.*, 7, 4.)—II. A people of Gaul, forming part of the Armorican nations, and lying to the east and northeast of the Osismii. (*Cæs.*, *B. G.*, 7, 75.) Some scholars, however, with great probability, suppose that the text of Cæsar, where mention is made of them, requires correction, and that for *Lemovices* we ought to read *Leonices*. (Consult *Lemaire*, *Ind. Geogr.*, *ad Cæs.*, p. 295.)

LEMÛRES, a name given by the Romans to the spirits of the departed, also called *Manes*. If beneficent, they were termed *Lares*; if hurtful, *Larvæ*. (*Vid.* Lares, p. 721, col. 2, near the end.)—Solemn rites were celebrated in honour of the Lemures, called *Lemuria*. They began on the night of the 9th May, and were continued for three nights, not successively, but alternately during six days. Mid-night was the time for their celebration. The master

of the house then arose, and went barefoot, through the darkness, to a fountain, where he washed his hands. He proceeded to it in silence, making merely a slight noise with his fingers, to drive away the shades that might be gathering around. After he had washed his hands three times, he returned, casting behind him at the same time some black figs which he carried in his mouth, and uttering in a low tone the following words: "With these figs do I ransom myself and my family." He repeated these same words nine times, with the same formalities, and without looking behind. Then, after a short interval of silence, he exclaimed with a loud voice, striking at the same time on a brazen vessel, "Paternal Manes, Lemures, deities of the lower world, depart from this abode." Fires were immediately kindled in every part of the mansion, and the ceremony ended. During the time for celebrating these rites the temples were closed, and no one could be united in marriage. (*Orid, Fast.*, 5, 421, *seqq.*—*Pers.*, *Sat.*, 5, 185.—*Horat.*, *Epist.*, 2, 2, 209.)

LENÆUS, a surname of Bacchus, from *ληνός*, a wine-press. (*Vid.* Bacchus, and also *Theatrum*, § 2, *Dramatic Contests.*)

LENTULUS, a family name of one of the most ancient and distinguished branches of the *Gens Cornelia*. The appellation is said to have been derived from the circumstance of one of the line having been born with a wart on his visage, shaped like a lentil (*lens*, gen. *lentis*). It is more probable, however, that the appellation arose from some peculiar skill displayed by the founder of the family in the culture of the lentil.—The most eminent or best known of the Lentuli were the following: I. L. Cornelius, was consul A.U.C. 427, B.C. 327, and cleared Umbria of the brigands that infested it. He was present, six years afterward, at the disastrous affair of the Furcæ Caudinæ, and was one of those who exhorted the Roman consuls to submit to the humiliating conditions offered by the Samnites, in order to save the whole army. (*Liv.*, 8, 22, *seqq.*—*Id.*, 9, 4.)—II. P. Cornelius, surnamed *Sura*, a Roman nobleman, grandson of P. Cornelius Lentulus, who had been *Princeps Senatus*. He married Julia, sister of L. Julius Cæsar, after the death of her first husband, M. Antonius Creticus, to whom she had borne M. Antonius the triumvir. Lentulus was a man of talents, but extremely corrupt in his private character. The interest of his family and the affability of his manners, proceeding from a love of popularity, raised him through the usual gradations of public honours to the office of consul, which he obtained B.C. 73, in conjunction with Cn. Aufidius Orestis. Expelled subsequently from the senate on account of his immoral conduct, he had procured the prætorship, the usual step for being restored to that body, when Catiline formed his design of subverting the government. Poverty, the natural consequence of excessive dissipation, added to immoderate vanity and extravagant ambition, induced him to join in the conspiracy. The soothsayers easily persuaded him that he was the third member of the Cornelian house, destined by the Fates to enjoy the supreme power at Rome, Cinna and Sylla having both attained to that elevation. His schemes, however, all proved abortive: he was arrested, along with others of the conspirators, by the orders of Cicero, who was then in the consulship, and having been brought before a full senate, was condemned to death, and strangled in prison. Plutarch informs us that he received the name of *Sura* from the following circumstance. He had wasted a large sum of money in his questorship under Sylla, and the latter, enraged at his conduct, demanded a statement of his accounts in the senate. Lentulus thereupon, with the utmost indifference, declared he had no accounts to produce, and contemptuously presented the calf (*sura*) of his leg. Among the Romans, and particularly among

the boys, the player at tennis who missed his stroke presented the calf of his leg, to receive as a punishment a certain number of blows upon it. Lentulus, in allusion to that game, acted in this manner, which accounts for the surname, or, rather, nickname of *Sura*. (*Sall.*, *Bell. Cat.*—*Plut.*, *Vit. Cic.*)—III. P. Cornelius, surnamed Spinther, held the office of curule ædile B.C. 65, when Cicero and Antonius were consuls. His great wealth enabled him to display a magnificence in the celebration of the games which surpassed what had ever before been seen at Rome. In the year 59 B.C. he was prætor of Hispania Citerior. He was elected consul with Q. Cæcilius Metellus Nepos, and procured, with others, the recall of Cicero from banishment. In the civil war he attached himself to the side of Pompey, and, having been taken prisoner, was brought before Cæsar at Corfinium, and set at liberty. He fought in the battle of Pharsalia, and fled to Rhodes; but the Rhodians refused him protection. Nothing farther is known respecting him. According to Valerius Maximus, he received the surname of Spinther from his resemblance to a comedian of that name. (*Val. Max.*, 9, 14, 4.—*Cic.*, *Off.*, 2, 16.—*Id.*, *ad Quir. post. Red.*, 5.—*Id.*, *Ep. ad Fam.*, 13, 48, &c.)—IV. Cn. Gæthulicus, was consul A.D. 26, and was put to death by Caligula on a charge of conspiracy. (*Dio Cass.*, 59, 22.—*Sueton.*, *Vit. Claud.*, 9.) He was distinguished as an historical and a poetical writer. (*Voss.*, *Hist. Lat.*, 1, 25.—*Crus. ad Sueton.*, *Vit. Calig.*, 8.)

LEO, I. a philosopher or astronomer of Constantinople, in the first half of the ninth century. He is spoken of in high terms by the Byzantine writers. One of his numerous pupils having been taken prisoner by the Arabians and conducted to Bagdad, astonished, it is said, the Caliph Al-Mamoun by the extent of his astronomical knowledge. The surprise of the Mussulman prince was, however, greatly increased when he learned that his captive was merely a scholar; but it reached its height when he was informed that the preceptor from whom he imbibed his learning was living in obscurity at Constantinople. The caliph immediately invited Leo to leave a country where his merits found no reward, and come to a court where the sciences were honoured. Leo dared not, however, leave the capital of the East for such a purpose, without first obtaining the permission of the reigning emperor. The monarch, who was Theophilus, refused to give his assent, but bestowed many appointments on the hitherto neglected astronomer, and gave him the use of a church for his public lectures, which had before been delivered in a mere hut. The caliph then addressed a remarkable letter to Theophilus, requesting him to allow Leo to spend only a short time with him, and promising him, in return, a large sum of money, and a lasting peace and alliance. Theophilus persisted in his refusal, but opened, at the same time, a public school for Leo in one of the imperial palaces, assigned to him the instruction of the youth of the capital, and loaded him with honours and privileges. He was subsequently appointed to the archbishopric of Thessalonica; but, being a decided enemy to images, was compelled to abandon his see when the heresy of the Iconoclasts was condemned, A.D. 849. He returned upon this to Constantinople, and resumed his former station of professor of astronomy. As he has left no work behind him, we can form no opinion of his scientific merits; for the reputation which his pupil gained at the court of Bagdad, and the eulogiums bestowed on Leo himself by the Byzantine writers, ought not to carry any very great weight with them. It should be remarked, however, that Cæsar Bardas, wishing to revive the sciences at Constantinople, allowed himself to be directed in this enterprise by the advice of Leo. (*Le Beau, Histoire du Bas-Empire*, vol. 7, p. 69, *seqq.*—*Vol.* 7, p. 136.—*Scholl, Hist.*

Lit. Gr., vol. 7, p. 58.)—II. An historical writer, surnamed the Carian, who published a continuation of Theophanes. His work, which extends from A.D. 813 to 949, is entitled *Χρονολογία τῶν τῶν νέων βασιλέων περτέχουσα*, "*Chronicle of the late emperors*." We have an edition of this work by Combefis, *Paris*, 1655, fol.—III. Surnamed the Deacon (*Διάκονος*), born about A.D. 950, at Cœlæ, a village of Ionia at the foot of Mount Tmolus. He was attached, by virtue of his office of *Διάκονος*, to the court of the Greek emperors, which is nearly all that we know of his personal history. He wrote, in ten books, a history of the emperors Romanus II. the younger, Nicephorus Phocas, and John Zimisces, that is, of the years included between 959 and 975. His object in composing this work was to give a *histoire raisonnée* of the events which took place under his own eyes. Such an undertaking, however, was beyond his strength. His style is neither elegant nor clear, and we are often startled at the introduction of Latin words in a Greek garb. His work abounds with specimens of false eloquence and had taste: occasionally, however, we meet with agreeable and pleasing details. The best edition at present is that of Hase, *Paris*, 1819, folio. The work will form a part, however, of the new edition of Byzantine writers now in a course of publication.—IV. Magentenus or Magentinus, a metropolitan of Mytilene, flourished about 1340 A.D. He wrote commentaries on the works of Aristotle "On Interpretation," and the "first Analytics." The first of these commentaries is given in the Aldine collection of the Peripatetic writers, 1503; the second at the end of the Venice edition (1536) of John Philoponus.—V. The First, surnamed the Great, an emperor of the East, born in Thrace of an obscure family, and who owed his advancement through the various gradations of the Roman army to the powerful favour of Aspar, a Gothic chief who commanded the auxiliaries, and his son Ardaburius. Leo was in command of a body of troops encamped at Selymbria, when his ambitious protectors made him ascend the throne left vacant by the death of the virtuous Marcian. The senate confirmed this choice; and Leo was acknowledged as emperor at the head of the forces, Feb. 7, A.D. 457, and crowned by Anatolius, patriarch of Constantinople. It is believed to have been the first example given of this sacred sanction in the elevation of a monarch to the throne. Aspar soon perceived that Leo would not long support the yoke imposed upon him. A quarrel arose between them relative to the party of the Eutyhians who had massacred their bishop and appointed another in his stead. Aspar espoused the cause of the latter, but Leo drove him from his see, and nominated an orthodox prelate to the vacant place. Leo had already before this obtained some signal successes over the barbarians, and had restored peace to the empire of the East. He wished also to put an end to the troubles of the Western Empire, torn by the ambition and fury of Ricimer, desolated by Genseric, and governed by mere phantoms of emperors. Genseric braved the menaces of Leo. The latter, whose armies had just repelled the Huns, and slain one of the sons of Attila, united all his forces, and sent them into Africa against the Vandal prince; but the inexperience, or, according to Procopius, the treachery of Basiliscus saved Genseric, and the Roman army returned ingloriously home. Aspar and his son were suspected of having contributed by their intrigues to bring about these reverses, and Leo, wearied out with their audacity, determined to put an end to it. Afraid, however, of their power, he spread a snare for them unworthy of a monarch; he flattered Aspar with the hope of a union between Patricola, a son of the latter, and Ariadne, daughter of the emperor. A report of this intended match, purposely circulated abroad, excited the indignation of the

populace, who hated the family of Aspar on account of their Arian principles. A sedition ensued. Aspar and his sons were compelled to fly for refuge to the church of St. Euphemia, and were only induced to quit this asylum on the urgent invitations of Leo, confirmed by oaths, for them to come to the royal palace. The moment they arrived there, Aspar and Ardaburius were beheaded. The Arians, enraged at the loss of their protector, incited Ricimer to trouble anew the repose of the West, and prevailed upon the Goths to attack Constantinople. The environs of the capital were in consequence laid waste for the space of two years by these barbarian invaders, until Leo succeeded in driving them off and concluding a peace. He died A.D. 474, leaving the empire to the young Leo, the son of his daughter Ariadne and of Zeno, an Isaurian, whom he had made a patrician and captain of his guards, in order to balance the power of Aspar. He had first vainly endeavoured to fix the succession upon Zeno himself. Leo has preserved the reputation of an active, enlightened, and vigilant monarch, who neglected nothing that had a tendency to promote the welfare of his subjects. He promulgated wise laws, and gave the example of moderation and economy which had been so long needed in the state. He is not exempt, however, from the charge of avarice, and of weakness also, in allowing the ambition of Aspar to go so long unpunished. (*Biogr. Univ.*, vol. 24, p. 135.)—VI. The second, called also the Younger, grandson of Leo I., and son of Ariadne and Zeno. He was declared Augustus at the moment of his grandfather's death. Although scarcely four years old at the period of his elevation, this choice was, notwithstanding, very agreeable to the people, who detested Zeno on account of his Arian tenets and his Isaurian origin. Verina, however, the widow of the deceased emperor, and Ariadne, the wife of Zeno, neglected neither intrigues nor seductive arts to conciliate for Zeno the favour of the populace. When all difficulties were believed to be removed, Ariadne conducted the young Leo to the hippodrome, and placed him on an elevated throne. There the child, a feeble tool in the hands of two ambitious females, called Zeno to him, and, placing the crown on the head of the latter, named him his colleague in the empire. Leo died soon after, having been poisoned, as was supposed, by Zeno, his own father, after a reign of about ten months. (*Biogr. Univ.*, vol. 24, p. 136.)—VII. The third, surnamed the Isaurian, born in Isauria of a mean family, and originally a dealer in cattle. His true name was Conon. A prediction made to him by some Jews, who declared that his fortune would be a brilliant one if he changed his name and took up the profession of arms, induced him to enter on a new career. He served at first as a private soldier in the army of Justinian II. Here his zeal, and some services which he had rendered, attracted the notice of the emperor, who received him into his guards, and raised him rapidly to the highest stations. Justinian having at length begun to entertain fears of his ambition, sent him on a dangerous expedition against the tribes of Caucasus. After having signalized his valour and military skill in the execution of this order, Leo returned to Constantinople, and Anastasius, who was now on the throne, appointed him to the command of the troops in Asia. On receiving intelligence of the deposition of Anastasius, Leo refused to acknowledge Theodosius III., whom the revolted fleet had proclaimed emperor. The Saracens, who were then ravaging the empire, excited Leo to seize upon the sceptre, having promised to aid him with all their forces. He had great need of prudence and address for managing these dangerous allies. Obligated alternately to deceive and to intimidate them, he found at last a fit moment for marching on Constantinople, where Theodosius yielded up the throne to him

with scarcely any resistance. Leo was crowned emperor March 25, A.D. 717. The Saracens, whom he had amused by false pretences, now advanced to the capital, and besieged it by sea and land. In this extremity Leo redoubled his exertions and courage, and, after long and obstinate conflicts, he succeeded in repelling his dangerous assailants. In 719, an attempt on the part of Anastasius to regain the throne failed through the activity of Leo, and the unsuccessful aspirant lost his head. He sustained also, with varied success, the repeated attacks of the Saracens in Sicily, Italy, and Sardinia. So many services rendered to the empire would have placed Leo in the rank of great monarchs, had not his fondness for theological quarrels, too common in those ages of ignorance, involved him in long and dangerous collisions. He espoused the cause of the Iconoclasts, and his severity drove many of the inhabitants into open rebellion. After a stormy conflict, marked by the most cruel persecutions, Leo died, A.D. 741, leaving the throne to his son Constantine Copronymus. (*Biogr. Univ.*, vol. 24, p. 136, *seqq.*)—VIII. The fourth, an emperor of the east, the son of Constantine Copronymus. He ascended the throne A.D. 775, and died A.D. 780, after an unimportant reign.—IX. The fifth, surnamed the Armenian, an emperor of the East, who rose from an obscure station to the throne. He succeeded the emperor Michael Rhangabe, whom the soldiers rejected in a mutiny secretly fomented by the ambitious Leo. His reign continued for seven years and a half, and was remarkable for the rigid military discipline introduced by him into the civil government. He was an Iconoclast, but his religious inconstancy obtained for him, in fact, the name of Chameleon. He was slain by a band of conspirators at the very foot of the altar, during the morning celebration of the festival of Christmas. (*Gibbon, Decline and Fall*, c. 48.)—X. The sixth, surnamed the Philosopher, an emperor of the East. He was the son of Eudoxia, wife of Basil I. The irregularities of his mother have left some doubt relative to his legitimacy; he was acknowledged, however, by Basil, as his son and successor. Already at the age of 19 years, the young prince had made himself beloved by all the empire. Santabaren, however, the favourite of Basil, an artful and dangerous man, irritated at the contempt and hatred which Leo testified for him, sought every means to destroy him, and at last succeeded in having him cast into prison on suspicion of plotting against his father's life. A cruel punishment at first threatened him; but the parent relented, and his son, being allowed to justify his conduct, was restored to all his former honours. A little while after, the death of Basil left Leo master of the Eastern empire. He ascended the throne with his brother Alexander in 886; but the latter, given up to his pleasures, abandoned to Leo the whole care of the government. Perhaps the effeminacy and licentiousness of Alexander obtained for Leo, by the mere force of flattering comparison, the title of Philosopher, which his life in no degree justified. Scarcely had he ascended the throne when he deposed Photius, the celebrated patriarch, who was secretly connected with Santabaren in the plot for his destruction. Santabaren himself underwent a cruel punishment, and was then driven into exile. Leo reigned weakly, and the ill success of his generals against the Bulgarians obliged him to submit to such terms of peace as those barbarians pleased to propose. A total defeat of his fleet by the Saracens also took place a short time before his death, which happened A.D. 911, after a reign of 25 years. "The name of Leo VI. has been dignified," observes Gibbon, "with the title of *Philosopher*, and the union of the prince and the sage, of the active and the speculative virtues, would indeed constitute the perfection of human nature. But the claims of Leo are far short

of this ideal excellence. Did he reduce his passions and appetites under the dominion of reason? His life was spent in the pomp of the palace, in the society of his wives and concubines; and even the clemency which he showed, and the peace which he strove to preserve, must be imputed to the softness and indolence of his character. Did he subdue his prejudices and those of his subjects? His mind was tinged with the most puerile superstition; the influence of the clergy, and the errors of the people, were consecrated by his laws, and the oracles of Leo, which reveal, in prophetic style, the fates of the empire, are founded on the arts of astrology and divination. If we still inquire the reason of his sage appellation, it can only be replied, that the son of Basil was less ignorant than the greater part of his contemporaries in church and state; that his education had been directed by the learned Photius; and that several books of profane and ecclesiastical science were composed by the pen or in the name of the imperial philosopher. But the reputation of his philosophy and religion was overthrown by a domestic vice, the repetition of his nuptials." (*Decline and Fall*, c. 48.) He was four times married, and had a son by each of these unions, but he lost three of his children successively at an early age. He left the empire to Constantine, his son by Zoe, his fourth wife.—We have remaining seventeen predictions or oracles of this pretended prophet, written in iambic verse. Rutgersius published the first sixteen, to which Leunclavius added the seventeenth, up to that time unedited. Leo also retouched and reduced to a better form the body of law commenced by Basil, and which took the name of *Βασιλικαὶ διατάξεις*, "*Imperial Constitutions*" or "*Basiliæ*." He also promulgated various new ordinances, *Ἐπαγορευτικαὶ καθήσεις*, in which he corrected and modified the Justinian code. Of these 113 remain. We owe to his orders, likewise, the composition of an *Ἐκλογὴ*, or abridgment of Roman law, promulgated in his name and that of Constantine his son, who was then associated with him in the empire. Leo's principal work is that on *Military Tactics*, containing the elements of this branch of the military art: *Τῶν ἐν πολέμοις τακτικῶν σύντομος παράδοσις*, or *Πολεμικὴν παρασκευὴν διδάσκει*. It is a compilation from the works of Arrian, Ælian, and especially Onesander, and contains some curious illustrations of the state of military knowledge in his day. The best edition is that of Meursius, *Lugd. Bat.*, 1612, 4to. It was translated into French by Maizeroi, *Paris*, 1771, 2 vols. 8vo. The libraries of Florence and of the Vatican are thought to contain many other military, and likewise some religious works, of this same emperor. (*Biographie Universelle*, vol. 24, p. 141, *seqq.*)

LEOCHÆRES, an Athenian statuary and sculptor, mentioned by Pliny (34, 8, 19) as having flourished in the 102d Olympiad. He built the Mausoleum, in connexion with Scopas, Bryaxes, and Timotheus, to whom some add Praxiteles. (*Plin.* 36, 5, 4.—*Vitr.*, VII., *Præf.*, s. 13.) A list of his works is given by Sillig, from ancient authorities. (*Dict. Art.*, s. v.)

ΛΕΟΝΑΤΟΣ, one of the generals of Alexander. On the death of that monarch he was appointed to the charge of Phrygia Minor, which lay along the Hellespont. Not long after, on being directed by Perdiccas to establish Eumenes in the kingdom of Cappadocia, he communicated to the latter a plan which he had in view of seizing upon Macedonia. Eumenes immediately divulged this to Perdiccas. The plan thus formed by Leonatus was based upon his assisting Antipater in the Lamian war. Accordingly, though both Eumenes and Perdiccas knew his real instructions, he crossed over with a body of forces into Europe, and brought succour to Antipater against the confederate Greeks; but his ambitious designs were

frustrated by his being slain in battle. (*Plut., Vit. Alex.—Id., Vit. Phoc.—Id., Vit. Eum.*)

LEONIDAS, I. a celebrated king of Lacedæmon, of the family of the Eurysthenidæ, sent by his countrymen to maintain the pass of Thermopylæ against the invading army of Xerxes, B.C. 480. A full narrative of the whole affair, together with an examination of the ancient statements on this subject, will be found under the article Thermopylæ.—II. Son of Cleonymus, of the line of the Agidæ, succeeded Areus II. on the throne of Sparta, B.C. 257. Agis, his colleague in the sovereignty, having resolved to restore the institutions of Lycurgus to their former vigour, Leonidas opposed his views, and became the main support of those who were inclined to a relaxation of ancient strictness. He was convicted, however, of having transgressed the laws, and was obliged to yield the supreme power to Cleombrotus, his son-in-law. Not long after he was re-established on the Spartan throne, and avenged the affront which he had received at the hands of Agis, by impeaching him and effecting his condemnation. (*Pausan., 2, 9.—Id., 3, 6.*)—III. A native of Alexandria, who flourished at Rome as a grammarian towards the close of the first century of the Christian era. He wrote, among other things, epigrams denominated *ῥαβδονόμα*, arranged in such a manner, that the numerical value of all the letters composing any one distich is equal to that of the letters of any other. He was very probably the inventor of this learned species of trifling. (*Schöll, Hist. Lit., vol. 4, p. 50.—Compare Jacobs, Catal. Poet. Epigramm., s. v.*)—IV. A native of Tarentum, who flourished about 275 B.C. He has left behind a hundred epigrams in the Doric dialect, and which belong to the best of those that have been preserved for us. (*Jacobs, Catal. Poet. Epigramm., s. v.*)

LEONTINI, a town of Sicily, situate about five miles from the seashore, on the south of Catana, between two small streams, the Lissus and Terias. The place is sometimes called by modern writers Leontium; this, however, is not only a deviation from Thucydides, who always uses the form *Λεοντίνοι*, but, in fact, is employed by no ancient author except Ptolemy; and Cluverius there suspects the reading to be a corruption for *Λεοντίριον*. (*Bloomfield, ad Thucyd., 6, 3.*) It was founded by a colony of Chalcidians from Eubœa, who had come to the island but six years before, and had then settled Naxos, near Mount Taurus, where Tauromenium was afterward founded. That they should have settled Leontini only six years after their own colonization may indeed seem strange; but it may be accounted for from the superior fertility of the plain of Leontini, which has ever been accounted the richest tract in Sicily; for the very same reason they soon afterward settled Catana. (*Thucyd., l. c.—Bloomf., ad loc.*) The Siculi were in possession of the territory where Leontini was founded prior to the arrival of the colony, and were driven out by force of arms. Leontini for a time continued flourishing and powerful, but eventually sank under the superior power and prosperity of Syracuse. Its quarrel with this last-mentioned city led to the unfortunate expedition of the Athenians, whose aid Leontini had solicited. The city ultimately fell under the Syracusan power. The celebrated Gorgias was a native of this place. (*Mannert, Geogr., vol. 9, pt. 2, p. 301, seqq.*)

LEONTIUM, an Athenian female, originally an hetærist, although afterward, as Gassendi maintains, the wife of Metrodorus, the most eminent friend and disciple of Epicurus. Many slanders were circulated respecting her intercourse with the philosopher and his followers. She herself composed works on philosophy. (*Diog. Laert., 10, 7.—Plut., non posse suav. v. Sec. Epic., 4, 16.—Cic., N. D., 1, 33.*) A detailed biography of Leontium may be found in the *Biographie Universelle* (vol. 24, p. 170.—Compare Ritter, *Hist.*

Philos., vol. 3, p. 402). Of the other hetærists who frequented the garden of Epicurus, it may be supposed that they were only brought to the common meals in accordance with the custom of the day. (*Ritter, l. c.*)

LEOSTHENES, I. one of the last successful generals of Athens. He was of the party of Demosthenes, and the violence of his harangues in favour of democracy drew the well-known reproof from Phocion: "Young man, thy words are like the cypress, tall and large, but they bear no fruit." He had, however, gained reputation enough to be chosen leader of a large body of mercenary soldiers, returned from Asia shortly before the death of Alexander, who, on that event being known, were taken openly into the pay of the republic. His first exploit was the defeat of the Bœotians near Platæa. After this he took post at Pylæ, to prevent the entrance of Antipater into Greece, defeated him, and shut him up in Lamia, a town of Thessaly, to which he laid siege; and from that siege the Lamian war has its name. Leosthenes, however, was killed in the course of it; and after his death success deserted the Athenian arms. He left a high reputation; and his picture, painted by Arcefilaus, is mentioned by Pausanias (1, 1) as one of the objects in the Piræus worthy of notice. (*Diog. Sic., 18, 9.—Id., 18, 11, seqq.*)—II. An Athenian commander, condemned to death, B.C. 361, for being defeated by Alexander of Phæræ. (*Diog. Sic., 15, 95.*)

LEOTYCHIDES, I. a king of Sparta, son of Menares, of the line of the Proclidæ. He ascended the throne B.C. 491, a few years before the invasion of Greece by the Persians, and succeeded to Demaratus. Having been appointed, along with Xanthippus the Athenian, to the command of the Grecian fleet, he gained, in conjunction with his colleague, the celebrated victory of Mycale. He afterward sailed along the coast of Asia Minor, causing the inhabitants to revolt, and received into alliance with the Greeks the Ionians and Samians, who, in the battle of Mycale, had been the first to declare in favour of their ancient allies. Some years after this, Leotychides having been sent into Thessaly against the Aleuadæ, suffered himself to be influenced by their presents, and retired without having gained any advantage. He was accused on his return, and, not deeming himself safe at Lacedæmon, he took refuge at Tegea, in the temple of Minerva Alea (499 B.C.). Zexidamus, his son, being dead, Archidamus, his grandson, was placed on the throne. Leotychides died at Tegea 467 B.C. (*Herod., 6, 65.—Id., 8, 131.—Id., 9, 197.*)—II. Son of Agis, king of Sparta. He passed, however, most commonly for the son of Alcibiades, whom Agis had received into his abode when exiled from Athens. Although Agis had formally recognised his legitimacy, it was nevertheless disputed, and Lysander eventually succeeded in having Agesilaus his brother appointed king in his place. (*Corn. Nep., Vit. Ages.—Pausan., 3, 8.*)

LEPIDA, I. Æmilia, daughter of Manius Lepidus, and wife of Drusus Cæsar. She was engaged in an adulterous intercourse with Sejanus, and was suborned by that ambitious and profligate minister to become the accuser of her own husband to Tiberius. Notwithstanding her crimes, she was protected during her father's life, but, being afterward made a subject of attack by the informers of the day, she put an end to her own existence. (*Tacit., Ann., 4, 20.—Id., 6, 40.*)—II. A Roman female, who reckoned among her ancestors Pompey and Sylla. She was accused by her husband Sulpicius of adultery, poisoning, and treasonable conduct, and was condemned to exile, notwithstanding the interest which the people testified in her behalf. (*Tacit., Ann., 3, 22.*)—III. Domitia, daughter of Drusus and Antonia. She was grand-niece of Augustus, and aunt of Nero, who destroyed her by poison. (*Tacit., Ann., 13, 19.*)—IV. Domitia, daugh

ter of Antonia the younger, by Lucius Domitius Ænobarbus. She was the wife of Valerius Messala, and mother of Messalina, and is described as having been a woman of debauched and profligate manners, and of a violent and impetuous spirit. In point of beauty and vice, she was the rival of Agrippina, Nero's mother. She was condemned to death through the influence of the same Agrippina. (*Tacit., Ann.*, 11, 37.—*Id., Ann.*, 12, 64.—*Sueton., Vit. Claud.*, 26.—*Id., Vit. Ner.*, 7.)

LEPIDUS, the name of one of the most distinguished families of the patrician gens, or house, of the Æmilii. The individuals most worthy of notice in this family are the following: I. M. ÆMILIUS LEPIDUS, was sent as an ambassador to Ptolemy, king of Ægypt, at the close of the second Punic war, B.C. 201. (*Polyb.*, 16, 34.—*Liv.*, 31, 2.—Compare *Tacitus, Ann.*, 2, 67.) He obtained the consulship B.C. 187 (*Liv.*, 39, 5.—*Polyb.*, 23, 1), and again in B.C. 175. In B.C. 179 he was elected Pontifex Maximus and Censor. (*Liv.*, 40, 42.—*Aul. Gell.*, 12, 8.) He was also Princeps Senatus six times. (*Liv., Epit.*, 48.) He died B.C. 150.—II. M. ÆMILIUS LEPIDUS, was prætor B.C. 81; after which he obtained the province of Sicily. (*Cic. in Verr.*, 3, 91.) In his consulship, B.C. 78, he endeavoured to rescind the measures of Sylla, but was driven out of Italy by his colleague Quintus Catulus and by Pompey, and retired to Sardinia, where he died the following year, while making preparations for a renewal of the war. (*Appian, Bell. Civ.*, 1, 105.—*Liv., Epit.*, 90.—*Plut., Vit. Pomp.*, 16.)—III. M. ÆMILIUS LEPIDUS, the triumvir, son of the preceding, was ædile B.C. 52, and prætor B.C. 49, in which year Cæsar came to an open rupture with the senatorial party. Lepidus, from his first entrance into public life, opposed the party of the senate; and though he does not appear to have possessed any of the talent and energy of character by which Antony was distinguished, yet his great riches and extensive family connexions made him an important accession to the popular cause. On the first expedition of Cæsar into Spain, Lepidus was left in charge of the city, though the military command of Italy was intrusted to Antony. During Cæsar's absence, Lepidus proposed the law by which the former was created dictator. In the following year, B.C. 48, he obtained the province of Hispania Citerior, with the title of proconsul; and in B.C. 46 was made consul along with Cæsar, and at the same time his master of the horse, an appointment which again gave him the chief power in Rome during the absence of the dictator in the African war. In B.C. 44 he was again made master of the horse, and appointed to the provinces of Gallia Narbonensis and Hispania Citerior; but he did not immediately leave Rome, and was probably in the senate house when Cæsar was assassinated. After the death of Cæsar, Lepidus was courted by both parties; and the senate, on the motion of Cicero, decreed that an equestrian statue should be erected to him, in any part of the city he might fix upon. Lepidus promised to assist the senate; but, at the same time, carried on a secret negotiation with Antony. On his arrival in his province, being ordered by the senate to join Decimus Brutus, he at length found it necessary to throw off the mask; and, instead of obeying their commands, united his forces with those of Antony. In the autumn of this year, B.C. 43, the celebrated triumvirate was established between Antony, Lepidus, and Octavius (Augustus); and in the division of the provinces, Lepidus received the whole of Spain and Gallia Narbonensis. The conduct of the war against Brutus and Cassius was assigned to Antony and Augustus; while the charge of the city was intrusted to Lepidus, who was again elected consul (B.C. 43). After the defeat of Brutus and Cassius, Antony and Augustus found themselves suf-

ficiently powerful to act contrary to the advice and wishes of Lepidus; and, in the new division of the provinces which was made after the battle of Philippi, Spain and Gallia Narbonensis were taken from Lepidus, and Africa was given to him in their stead. Lepidus had now lost all real authority in the management of public affairs; but he was again included in the triumvirate, when it was renewed B.C. 37. In the following year he was summoned from Africa to assist Augustus in Sicily against Sextus Pompeius; and he landed with a large army, by means of which he endeavoured to regain his lost power, and make himself independent of Augustus. But in this attempt he completely failed. Being deserted by his own troops, he was obliged to implore the mercy of Augustus, who spared his life, and allowed him to retain his private property and the dignity of Pontifex Maximus, which he had obtained on the death of Julius Cæsar, but deprived him of his province and triumvirate, and banished him, according to Suetonius, to Circeii. (*Sueton., Vit. Aug.*, 16.) After the battle of Actium, his son formed a conspiracy for the assassination of Augustus on his return from the East, which was discovered by Mæcenas; and Lepidus, having incurred the suspicion of his former colleague, repaired to Rome, where he was treated, according to Dio Cassius, with studied insult and contempt. (*Encycl. Us. Knowl.*, vol. 13, p. 438.)—IV. A companion of Caligula in his career of debauchery. The prince made him marry his sister Drusilla, and gave him hopes of being named as successor to the empire. Lepidus, however, who would seem to have reckoned but little, after all, on the promises of the emperor, conspired against him. The conspiracy was detected, and cost its author his life. He is supposed by some to have been the son of Julia, grand-daughter of Augustus, and consequently cousin-german to Caligula. (*Tacit., Ann.*, 14, 2.)—V. A poet of an uncertain period, a poem of whose, entitled *Philodexios*, was published by Aldus Manutius at Lucca, 1588.

LEPONTI, a people of the Alps, near the source of the Rhone, on the south of that river. The Lepontine Alps separated Italy from the Helvetii. The Lepontii are known to have inhabited that part of the Alps which lies between the *Great St. Bernard* and *St. Gothard*. (*Cæs., B. Gall.*, 4, 10.—*Plin.*, 3, 20.—*Strabo*, 204.)

LEPTINES, I. a son of Hermocrates, and brother of Dionysius the Elder. He was sent against Mago, general of the Carthaginians, with the whole fleet of the tyrant, B.C. 396. At first he gained some advantages, but having separated himself too much from the main body of the fleet, he was surrounded by the enemy, and lost a large number of his vessels. After having remained for some time in a state of disgrace, he recovered the favour of the tyrant, and married his daughter. He commanded the left wing at the battle of Cronium (B.C. 383), where he fell fighting valiantly. His fall occasioned the defeat of the army. (*Diod. Sic.*, 14, 48.—*Id.*, 14, 60.—*Id.*, 15, 17.)—II. A Syracusan, who, in conjunction with Callippus, took the city of Rhegium, occupied by the troops of Dionysius the Younger (351 B.C.). He was subsequently in the number of those who massacred this same Callippus, to avenge the death of Dion. (*Diod. Sic.*, 16, 45.)—III. A tyrant of Apollonia and other cities of Sicily, taken by Timoleon (B.C. 342), and exiled to Corinth. (*Diod. Sic.*, 16, 72.)—IV. An Athenian orator, who proposed that certain immunities from the burdensome offices of choragus, gymnasiarch, and hestiator, which used to be allowed to meritorious citizens, should be taken away. A law was passed in accordance with this. Demosthenes attacked it and procured its abrogation.—V. A Syrian, general of Demetrius, who put to death at Laodicea, Octavius, a commissioner whom the Romans had sent into the

East to arrange the affairs of Syria. He was sent to Rome, to be delivered up along with Isocrates, who was also a party to the murder, but the senate refused to receive him. (*Diod. Sic., fragm.*, lib. 31.—*Op.*, ed. *Bip.*, vol. 10, p. 29, *seqq.*)

LEPTIS, the name of two cities in Africa, distinguished by the epithets of *Μεγάλη (Magna)* and *Μικρά (Parva or Minor)*.—I. The first was situate towards the great Syrtis, at the southeast extremity of the district of Tripolis. Leptis Magna was founded by the Phœnicians, and ranked next to Carthage and Utica among their maritime cities. Under the Romans it was signalized, as Sallust informs us, by its fidelity and obedience. On the occupation of Africa by the Vandals, its fortifications appear to have been destroyed; but they were probably restored under Justinian, when the city became the residence of the prefect Sergius. It was finally demolished by the Saracens; after which it appears to have been wholly abandoned, and its remains, according to Leo Africanus, were employed in the construction of the modern Tripoli. The modern name is *Lebida*. An account of the remains of the ancient city will be found in *Beechey's Travels*, p. 74, *seqq.*, and in the *Modern Traveller*, pt. 49, p. 61. Capt. Beechey describes the country around *Lebida* as beautiful and highly productive. (*Mela*, 1, 7.—*Plin.*, 5, 4.—*Strab.*, 574.)—II. The latter was in the district of Byzacium or Emporia; about 18 miles below Hadrumetum, on the coast. It is now *Leptima*. It paid a talent a day to the Carthaginians as tribute. (*Vid.* Emporia.) The Phœnicians, according to Sallust, were its founders. (*Lucan.*, 2, 251.—*Plin.*, 5, 19.—*Sallust*, *Jug.*, 77.—*Mela*, 1, 8.)

LERNÆA or PLANASIA, a small island in the Mediterranean, on the coast of Gallia Narbonensis, south of Nicæa. It is now *St. Marguerite*. Strabo gives it the name of Planasia, from its shape. (*Tacit.*, *Ann.*, 1, 3.)

LERNÆA, a small lake in Argolis, near the western coast of the Sinus Argolicus, rendered celebrated by the fable of the many-headed hydra slain by Hercules, and connected also with the legend of the Danaïdes, who flung into its waters the heads of their murdered husbands. (*Vid.* Hercules, Hydra, and Danaïdes.) The LERNÆAN Lake was formed by several sources, which discharged themselves into its basin. Minerva is said to have purified the daughters of Danaus by means of its waters; which circumstance subsequently gave rise to certain mystic rites called LERNÆA, instituted, as Pausanias affirms, by Philammon, son of Apollo and father of Thamyris, in honour of Ceres. (*Pausan.*, 2, 37.—*Strab.*, 371.—*Cramer's Ancient Greece*, vol. 3, p. 237.)

LEROS, a small island off the coast of Caria, and forming one of the cluster called Sporades. (*Plin.*, 5, 31.) It was peopled from Miletus, and very probably belonged to that city. Strabo gives its inhabitants a character for dishonesty. (*Strab.*, 635.)

LESBOS, now *Metelin*, an island of the Ægean, lying off the coast of Mysia, at the entrance of the Gulf of Adramyttium. It was first settled by a body of Pelasgi, who, under the conduct of Xanthus their king, having been driven from Argos, passed from Lycia into this island, then called Issa, and named by them Pelasgia. Seven generations after this, and a short time subsequent to the deluge of Deucalion, Macareus passed from Attica, then denominated Ionia, with a colony to this island. From him it received the name of Macarea. Lesbus, an Æolian, joined himself to this colony, married the daughter of Macareus, who was called Methymne, and gave his own name to the island after the death of his father-in-law. The elder daughter of Macareus was named Mytilene; her name was given to the capital of the whole island. This is said to have taken place two generations before the

Trojan war. Homer speaks of the island under the name of Lesbos, as being well inhabited. Other, and perhaps more accurate accounts, make the Æolians to have led colonies into the island for the first time, 130 years after the Trojan war. Herodotus makes five Æolian cities in Lesbos. Pliny mentions other names besides those already given, which seem, however, to have been merely general appellations, denoting some circumstance or feature in the island, as *Himerte*, the wished-for, *Lasia*, the woody, &c. The island contained forests of beech, cypress, and fir trees. It yielded marble of a common quality, and the plains abounded in grain. Warm springs were also found; agates and precious stones. (*Pococke*, vol. 2, pt. 2, p. 20.) The most profitable production was wine, which was preferred in many countries to all the other Greek wines. To the present day, the oil and figs of Lesbos are accounted the best in the Archipelago. The island anciently contained nine cities, for the most part in a flourishing condition; among them Mytilene, Pyrrha, Methymna, Arisba, Erressus, and Antissa; at present 120 villages are enumerated. From an insignificant monarchy, Lesbos first became a powerful democracy. The Lesbians then made great conquests on the Continent, and in the former territory of Troy, and even resisted the Athenians themselves. Lesbos was next disturbed by the Samians, and afterward by the Persians, to whom it was finally obliged to submit. After the battle of Mycale, it shook off the Persian yoke, and became the ally of Athens. During the Peloponnesian war, it separated more than once from Athens, but was always reduced to obedience. A distinguished citizen of Mytilene, exasperated that several rich inhabitants had refused his sons their daughters in marriage, publicly accused the city of an intention to conclude a league with the Lacedæmonians, by which false accusation he induced the Athenians to send a fleet against Lesbos. (*Aristot.*, *de Rep.*, 5, 4.) The nearest cities, Methymna excepted, armed in defence of their capital, but were overpowered, the walls of Mytilene were demolished, and a thousand of the richest inhabitants put to death. The territory of Methymna alone was spared. The island itself was divided into 3000 parts, of which 300 were devoted to the service of the gods, and the rest divided among the Athenians, by whom they were rented to the ancient proprietors. (*Thucyd.*, 3, 50.) The cities of Lesbos, nevertheless, soon rebelled again.—The Lesbians were notorious for their dissolute manners, and the whole island was regarded as the abode of pleasure and licentiousness. At the same time they had the reputation of the highest refinement, and of the most distinguished intellectual cultivation. Poetry and music made great progress here. The Lesbian school of music was highly celebrated, and is fabled to have had the following origin: When Orpheus was torn to pieces by the Bæchantes, his head and lyre were thrown into the Thracian river Hebrus, and both were cast by the waves on the shores of Lesbos, near Methymna. Meanwhile harmonious sounds were emitted by the mouth of Orpheus, accompanied by the lyre, the strings of the latter being moved by the breath of the wind. The Methymneans, therefore, buried the head, and suspended the lyre in the temple of Apollo; and, as a recompense for this, the god bestowed upon them a talent for music, and the successful culture of this and the sister art of poetry. (*Hygin.*, *Poet. Astron.*, 2, 7.) In reality, Lesbos produced musicians superior to all the other musicians of Greece. Among these the most distinguished were Arion and Terpander. Alcæus and Sappho, moreover, were esteemed among the first in lyric poetry. Pittacus, Theophrastus, Theophanes, Hellanicus, Myrtillus, &c., were also natives of this island.—A variety of hills, clad with vines and olive-trees, rise round the numer-

ous bays of this island. The mountains of the interior are covered with mastic, turpentine-trees, pines of Aleppo, and the cistus. Rivelets flow under the shades of the plane-tree. The island contains at present about 25,000 inhabitants. (*Mannert, Geogr.*, vol. 6, pt. 3, p. 433.—*Barthelemy, Voyage d'Anaharsis*, vol. 2, p. 59, *scqq.*, 12mo ed.—*Encyclop. Americ.*, vol. 7, p. 516.—*Malte-Bran*, vol. 2, p. 85, *scqq.*.)

LESBUS or LESBOS, a son of Lapithus, grandson of Æolus, who married Methymna, daughter of Macareus. He succeeded his father-in-law, and gave his name to the island over which he reigned. (*Vid. Lesbos.*)

LESCHES, a Cyclic bard, a native of Mytilene, or Pyrrha, in the island of Lesbos, and considerably later than Arctinus. The best authorities concur in placing him in the time of Archilochus, or about the 18th Olympiad (B.C. 708-704). Hence the account which we find in ancient authors, of a contest between Arctinus and Lesches, can only mean that the latter competed with the earlier poet in treating the same subjects. His poem, which was attributed by many to Homer, and, besides, to very different authors, was called the *Little Iliad* (*Ἰλιάς Μικρά*), and was clearly intended as a supplement to the great Iliad. We learn from Aristotle (*Poet.*, c. 23, *ad fin.*, *ed. Bekk.*—c. 38, *ed. Tyrwh.*) that it comprised the events before the fall of Troy, the fate of Ajax, the exploits of Philoctetes, Neoptolemus, and Ulysses, which led to the taking of the city, as well as the account of the destruction of Troy itself; which statement is confirmed by numerous fragments. The last part of this (like the first part of the poem of Arctinus) was called the *Destruction of Troy*: from which Pausanias makes several quotations, with reference to the sacking of Troy, and the partition and carrying away of the prisoners. It is evident, from his citations, that Lesches, in many important events (for example, the death of Priam, the end of Astyanax, and the fate of Æneas, whom he represents Neoptolemus as taking to Pharsalus), followed quite different traditions from those of Arctinus. The connexion of the several events was necessarily loose and superficial, and without any unity of subject. Hence, according to Aristotle, while the Iliad and Odyssey only furnished materials for *one* tragedy each, more than *eight* might be formed out of the Little Iliad. (*K. O. Müller, Hist. Gr. Lit.*, p. 66.—*C. G. Müller, de Lesche Poëta.*)

LËTHE, I. one of the rivers of the lower world, the waters of which possessed the property of causing a total forgetfulness of the past. Hence the name, from the Greek λήθη (*lêthê*), signifying "*forgetfulness*" or "*oblivion*." The shades of the dead drank a draught of the waters of Lethe, when entering on the joys of Elysium, and ceased to remember the troubles and sorrows of life.—II. A river of Spain. Its true name, however, was the Limius, according to Ptolemy, or, according to Pliny (4, 34), the Limia. Strabo styles it the Belion. It was in the territory of the Calliaci, a little below the Minus. Its name, Lethe (or, as it should be rather termed, ὁ τῆς λήθης, the river of forgetfulness), was given to it from the circumstance of the Celtæ and Turduli, who had gone on an expedition with united forces, losing here their common commander, becoming disunited, forgetting the object of their expedition, and returning to their respective homes. There was so much superstitious dread attached to this stream, that Brutus, in his expedition against the Calliaci, could with great difficulty induce his soldiers to cross. (*Ukert, Geogr.*, vol. 2, p. 297.)

LEUCA, a town of Italy, in Messapia, near the Iapygian promontory. It was in the country of the Salentini. The ancient name remains in the modern appel-

lation of the Iapygian promontory, and also in the name of a church dedicated to the Virgin, under the title of *S. Maria di Leuca*. (*D'Anville, Anal. Geogr., de l'Italie*, p. 233.)

LEUCÆ, a town of Ionia, west of the mouth of the Hermus, at the entrance of the Smyrnaus Sinus. It was situate on a promontory, which, according to Pliny (5, 29), was anciently an island. Near this place, Andronicus, the pretender to the crown of Pergamus, was defeated by the Roman consul Crassus. (*Mela*, 1, 17.—*Mannert, Geogr.*, vol. 6, pt. 3, p. 338.)

LEUCAS or LEUCADIA, an island in the Ionian Sea, off the coast of Acarnania. It once formed part of the continent, but was afterward separated from the mainland by a narrow cut, and became an island. The modern name is *Santa Maura*. In Homer's time it was still joined to the mainland, since he calls it Ἀκτὴν Ἠπειρώτου, in opposition to Ithaca and Cephallenia. (*Od.*, 24, 377.—Compare *Strabo*, 451.)—Scylax also affirms "that it had been connected formerly with the continent of Acarnania." It was first called Epileucadii, and extends towards the Leucadian promontory. The Acarnanians being in a state of faction, received a thousand colonists from Corinth. These occupied the country which is now an island, the isthmus having been dug through. (*Periplus*, p. 13.—Compare *Scymnus, Ch.*, v. 464.—*Plut., Vit. Themist.*) Strabo informs us, that this Corinthian colony came from the settlements of Ambracia and Anactorium; and he ascribes to it the cutting of the channel of Dioryctus, as it is commonly called (*l. c.*). This work, however, must have been posterior to the time of Thucydides, for he describes the Peloponnesian fleet as having been conveyed across the isthmus on more than one occasion (3, 80; 4, 8).

Livy, speaking of Leucas, says, that in his time it was an island, but in the Macedonian war it had been a peninsula (33, 17). Pliny reports, that it was once a peninsula called Neritos; and, after it had been divided from the mainland, was reunited to it by means of the sand which accumulated in the passage. The cut itself, three stadia in length, was, as we have already said, called Dioryctus (4, 2.—*Polyb.*, 5, 5). Strabo says that in his time it was crossed by a bridge. (*Strab.*, 452.) Dodwell states (vol. 1, p. 50), that the canal of Santa Maura is fordable at the present day in still weather. The remains of a bridge are seen, which joined it to the continent, and which was built by the Turks when they had possession of the island.—The capital of the island was Leucas. Livy (33, 17) describes it as situated on the strait itself. It rested, according to him, on a hill looking towards Acarnania and the east. Thucydides (3, 94) likewise states, that the town was situate within the isthmus, as also Strabo (*l. c.*), who adds, that the Corinthians removed it to its situation on the strait from Nericum. Dr. Holland (vol. 2, p. 91) speaks of the ruins of an ancient city about two miles to the south of the modern town.—The island was famous for a promontory at its southwestern extremity, called Leucate. It was celebrated in antiquity for being the lover's leap, and is said by Strabo to have derived its name from the white colour of the rock. Sappho is said to have been the first to try the remedy of the leap, when enamoured of Phaon. (*Menand., ap. Strab., l. c.*—*Ovid, Her.*, 15, 165.) Artemisia, queen of Caria, so celebrated by Herodotus, perished, according to some accounts, in this fatal trial. (*Ptol., Hephest., ap. Phot.*, p. 491.—Consult *Harduin, Diss. sur le saut de Leucade. Mém. de l'Acad. des Insér.*, vol. 7, p. 251.) Virgil represents this cape as dangerous to mariners. (*Æn.*, 3, 274; 8, 676.) Sir W. Gell describes it as a white and perpendicular cliff of considerable elevation, and has given a beautiful representation of it in one of the plates appended to his work

on the *Geography and Antiquities of Ithaca*. On the summit of the promontory was a temple of Apollo. Strabo states a curious custom which prevailed, of casting down a criminal from this precipice every year, on the festival of the god; and adds, that, in order to break his fall, they attached to him birds of all kinds. If he reached the water alive, he was picked up by boats stationed there, and allowed to depart from the territories of Leucadia. (*Strab.*, 452.—*Cic.*, *Tusc. Q.*, 4, 18.—*Cramer's Anc. Greece*, vol. 2, p. 13, *seqq.*)

LEUCÆTE, a promontory at the southwestern extremity of Leucas. (*Vid.* Leucas.)

LEUCE, an island in the Euxine Sea, near the mouth of the Borysthenes. It is probable that it was the same with the westernmost extremity of the Dromos Achilles, which was formed into an island by a small arm of the sea, and lay facing the mouth of the Borysthenes; now named *Tentra*. It derived its name from its white sandy shores. (*Mannert, Geogr.*, vol. 4, p. 235.) According to the poets, the souls of the ancient heroes were placed here as in the Elysian fields, and enjoyed perpetual felicity. Here, too, the shade of Achilles is fabled to have been united to that of Helen. (*Vid.* Helena I.)

LEUCI, I. a people in the southeastern quarter of Gallia Belgica, and to the south of the Mediomatrici. Lucan speaks of them, in conjunction with the Remi, as very expert with the sling (1, 424). Their territory extended from the Matrona to the Mosella, and corresponds to the northeastern part of the department of the Upper *Marne*, and to the southern part of the department of the *Meuse* and *Meurthe*, or, in other words, to the country around *Toul*. (*Cass.*, *B. G.*, 2, 14.—*Tacit.*, *Hist.*, 1, 64.—*Plin.*, 4, 17.)—II. Montes (*Λευκὸν ὄρη*), mountains in the western part of the island of Crete, to the south of Cydonia; now *Alprova-ana*. (*Strabo*, 475.)

LEUCIPPUS, I. a celebrated philosopher, of whose native country and preceptor little is known with certainty. Diogenes Laertius (9, 30) makes him to have been a native of Elea, and a disciple of Zeno, the Eleatic philosopher: he refers, however, at the same time, to other opinions, which assigned, respectively, Abdera and Miletus as his birthplace. (Compare *Tennemann, Gesch. der Phil.*, vol. 1, p. 257.) He wrote a treatise concerning nature, now lost (*Pseud. Orig. Phil.*, c. 12, p. 88.—*Fabr.*, *Bibl. Gr.*, vol. 1, p. 778), from which the ancients probably collected what they relate concerning his tenets. Dissatisfied with the metaphysical subtleties by which the former philosophers of the Eleatic school had confounded all evidence from the senses, Leucippus and his follower Democritus determined, if possible, to discover a system more consonant to nature and reason. Leaving behind them the whole train of fanciful conceptions, numbers, ideas, proportions, qualities, and elementary forms, in which philosophers had hitherto taken refuge, as the asylum of ignorance, they resolved to examine the real constitutions of the material world, and to inquire into the mechanical properties of bodies, that from these they might, if possible, deduce some certain knowledge of natural causes, and hence be able to account for natural appearances. Their great object was, to restore the alliance between reason and the senses, which metaphysical subtleties had dissolved. For this purpose they introduced the doctrine of indivisible atoms, possessing within themselves a principle of motion. Several other philosophers before this time had indeed considered matter as divisible into indefinitely small particles, particularly Anaxagoras, Empedocles, and Heraclitus; but Leucippus and Democritus were the first who taught, that these particles were originally destitute of all qualities except figure and motion, and therefore may justly be reckoned the authors of the atomic philosophy. The following summary of the doc-

trine of Leucippus will exhibit the entire state of this system, and, at the same time, sufficiently expose its absurdities. The universe, which is infinite, is in part a *plenum* and in part a *vacuum*. The *plenum* contains innumerable corpuseles or atoms, of various figures, which, falling into the vacuum, struck against each other; and hence arose a variety of curvilinear motions, which continued till at length atoms of similar forms met together, and bodies were produced. The primary atoms being specifically of equal weight, and not being able, on account of their multitude, to move in circles, the smaller rose to the exterior parts of the vacuum, while the larger, entangling themselves, formed a spherical shell, which revolved about its centre, and which included within itself all kinds of bodies. This central mass was gradually increased by a perpetual accession of particles from the surrounding shell, till at last the earth was formed. (*Diog. Laert.*, l. c.—*Theodoret, Serm.*, 4.—*Cic.*, *N. D.*, 1, 42.—*Plut.*, *de Plac. Phil.*, 2, 7.—*Id. ibid.*, 3, 12.) In the mean time, the spherical shell was continually supplied with new bodies, which, in its revolution, it gathered up from without. Of the particles thus collected in the spherical shell, some in their combination formed humid masses, which, by their circular motion, gradually became dry, and were at length ignited and became stars. The sun was formed in the same manner, in the exterior surface of the shell; and the moon in its interior surface. In this manner the world was formed, and, by an inversion of the process, it will at length be dissolved. (*Diog. Laert.*, l. c.—*Pseud. Orig. Phil.*, l. c.—*Engel's History of Philosophy*, vol. 1, p. 421, *seqq.*—*Tennemann, Gesch. der Phil.*, vol. 1, p. 258, *seqq.*)—II. A brother of Tyndarus, king of Sparta, who married Philodice, daughter of Inachus, by whom he had two daughters, Hilaira and Phœbe, known by the patronymic of Leucippides. They were carried away by their cousins, Castor and Pollux, as they were going to celebrate their nuptials with Lynceus and Idas. (*Ovid, Fast.*, 5, 701.—*Apollod.*, 3, 10, &c.—*Pausan.*, 3, 17.)

LEUCOPETRA, a cape of Italy, in the territory of the Brutii, and regarded by all ancient writers on the geography of that country as the termination of the Appennines. Strabo (259) asserts that it was distant fifty stadia from Rhegium; but this computation ill accords with that of Pliny (3, 10), who removes it twelve miles thence. (Compare *Cic.*, *Phil.*, 1, 3.—*Mela*, 2, 4.) The error probably lies in the text of the Greek geographer, as there is no cape which corresponds with the distance he specifies. Topographers are not agreed as to the modern point of land which answers to Leucopetra; some fixing it at *Capo Pittaro* (*D'Anville, Anal. Geogr. de l'Ital.*, p. 261), others at the *Punta della Sacetta* (*Grimaldi, Annal. del. Regn. di Nap.*, vol. 1, *Introd.*, c. 28.—*Romanelli*, vol. 1, p. 97), and others at the *Capo dell' Armi*. The latter opinion seems more compatible with the statement of Pliny, and is also the most generally credited. (*Cluverius, Ital. Antiq.*, vol. 2, p. 1299.—*Holsten.*, *ad Steph. Byz.*, p. 302.—*Cellar.*, *Geogr. Ant.*, l. 2, c. 9.—*Notes to the French Strabo*, l. c.—*Cramer's Ancient Italy*, vol. 2, p. 433.)

LEUCOPHREYS, an ancient name of Tenedos, given to it probably from the appearance made by the summits of its chalk-hills. (*Pausan.*, 10, 14.—*Mannert, Geogr.*, vol. 6, pl. 3, p. 510.)

LEUCOSIA, a small island in the Sinus Pæstanus. It was said to have derived its name from one of the Sirens. (*Lycophron*, v. 722, *seqq.*—*Strabo*, 252.) Dionysius (i, 53) calls it Leucasia. It is now known by the name of *Lirosa* (*Chor. Ital. Antiq.*, vol. 2, p. 1259), and sometimes by that of *Isola piana*. (*Vid. Zannoni's Map of the Kingdom of Naples*.) It was once probably inhabited, as several vestiges of buildings were discovered there in 1696. (*Antonin.*, *della*

Lucan., p. 2, disc. 8. — *Cramer's Anc. Italy*, vol. 2, p. 369.)

LEUCOSYRII, the Greek form of a name applied by the Persians to the Cappadocians, and signifying *White Syrians*. (*Herod.*, 1, 72.—*Id.*, 5, 45.—*Id.*, 7, 72.—*Strabo*, 543.) The Persians called the Cappadocians by this appellation, because they considered them to be a branch of the great Syrian nation, from the resemblance of their language, customs, and religion, and because they found that they possessed a fairer complexion than their swarthy brethren of the south. The Greek colonies on the coast of Pontus received this name from the Persians, and expressed it by the forms of their own language, but, in its application, restricted it to the inhabitants of the mountainous country lying along the coast, from the Promontorium Jasonium in the east, to the mouth of the Halys in the west, while they called the people in the interior of the country by the name of Cappadocians. The Leucosyrii became in time blended into one people with the Paphlagonians. (*Mannert, Geogr.*, vol. 2, pt. 2, p. 329, *seqq.*)

LEUCOTHEA, I. the name given to Ino after she had been transformed into a sea-goddess. Both she and her son Palæmon were held powerful to save from shipwreck, and were invoked by mariners. The name Leucothea is supposed to be derived from the *white waves running* rapidly on (λευκός, *white*, and θέω, *to run*).—II. A daughter of Orchamus, dishonoured by Apollo, and buried alive by her incensed father. The god caused the frankincense shrub to spring up from her grave. (*Ovid, Met.*, 4, 196, *seqq.*)

LEUCTRA, a small town of Bœotia, southeast of Thespiæ, and west of Platæa, famous for the victory which Epaminondas, the Theban general, obtained over the superior force of Cleombrotus, king of Sparta, on the 8th of July, B.C. 371. (*Pausan.*, 9, 13.) In this famous battle 4000 Spartans were killed, with their king Cleombrotus, and no more than 300 Thebans. From that time the Spartans lost the empire of Greece, which they had held for so many years. The Theban army consisted at most of 6000 men, whereas that of the enemy was at least thrice that number, including the allies. But Epaminondas trusted most to his cavalry, in which he had much advantage both as to quality and good management; the wealthy Lacedæmonians alone keeping horses at that time, which made their cavalry most wretched, both as to ill-fed, undisciplined steeds and unskilful riders. Other deficiencies he endeavoured to supply by the disposition of his men, who were drawn up fifty deep, while the Spartans were but twelve. When the Thebans had gained the victory and killed Cleombrotus, the Spartans renewed the fight to recover their king's body, and in this object the Theban general wisely chose to gratify them rather than hazard the success of another onset.—According to Strabo (414), Leuctra was situate on the road from Thespiæ to Platæa, and, according to Xenophon (*Hist. Gr.*, 6, 4), in the territory of the former. An oracle had predicted that the Spartans would sustain a severe loss in this place, because some of their youths had violated two maidens of Leuctra, who afterward destroyed themselves. (*Pausan.*, 9, 13, *seqq.*—*Plutarch, Vit. Epam.*—*Xen., Hist. Gr.*, l. c.) The spot still retains in some degree its ancient name, *Leuca*, pronounced *Lefka*. Dr. Clarke noticed here several tombs and the remains of an ancient fortress upon a lofty conical hill. The ground in the plain is for a considerable space covered with immense fragments of marble and stone. (*Clarke's Travels*, vol. 7, p. 110, *Lond. ed.*—Compare *Dodwell*, vol. 1, p. 261.—*Cramer's Anc. Greece*, vol. 2, p. 212.)

LEUCTRUM, I. a town of Messenia, on the coast, sixty stadia from Cardamyle. (*Pausan.*, 4, 26.) In consequence of its frontier situation, it became a source

of dispute between the Messenians and Laconians. Philip, the son of Amyntas, who acted as umpire, awarded the place to the Messenians. (*Strab.*, 361.) It is called Leuctra by Thucydides (5, 54) and Xenophon. The latter informs us it was situated above the promontory of Malæa. (*Hist. Gr.*, 6, 5.) It was said to have been founded by Pelops. (*Strab.*, 360.) The ancient site is still distinguished by the name of *Leutro*.—II. A small town of Achaia, on the Sinus Corinthiacus, above Ægium, and in the vicinity of Rhypæ, on which latter place it was dependant. (*Pausan.*, 7, 24.)—III. A town of Arcadia, below Megalopolis. (*Pausan.*, 8, 27.) It is perhaps *Leonturi*, near which Sir W. Gell remarked the site of a small ancient city. (*Itin. of the Morea*, p. 138.)

LEXOVII, a people of Gaul in Lugdunensis Secunda, near the mouth of the Sequana, and on its left banks. Their capital was Noviomagus, now *Lisieux*. (*Cæs. B. G.*, 3, 9.—*Itin. Ant.*, 385.)

LIBANIUS, a celebrated sophist of Antioch, in the age of the Emperor Julian, born A.D. 314, of a good family. At the age of fifteen he frequented a school of certain sophists, of whom he speaks with great contempt in his Biography, calling them εἰδωλα σοφιστῶν. Brought back to the true path of learning by a more intelligent preceptor, he studied with ardour the finest models of antiquity. He continued his studies during four months at Athens, and afterward at Constantinople, where the grammarian Nicocles, one of the instructors of Julian, and the sophist Bemarchius, were his teachers. Having failed in his expectation of obtaining a chair at Athens, he began to profess eloquence, or the sophistic art, at Constantinople. His success was brilliant, but excited the envy of his contemporaries. Bemarchius, in particular, having been worsted by him in an oratorical contest, to which he had challenged his former pupil, had recourse to a vile calumny for the purpose of effecting his destruction. He charged him with sorcery, and represented him as a man covered with vices. The prefect of the city lent a favourable ear to the charge, and Libanius was in consequence compelled to leave Constantinople (A.D. 346). He retired to Nicæa, and from this place he went to Nicomedia, where he obtained great celebrity as an instructor. He calls the five years which he spent there in the society of his friend Aristænetus, the spring time of his life. Recalled at length to Constantinople, he found a new prefect there, who became the protector of his enemies and the persecutor of himself. Disgusted at this state of things, and not daring to accept a chair at Athens, which had been offered him, he obtained permission from Cæsar Gallus to return for four months to his native city. This prince having been slain in 354, Libanius passed the rest of his days at Antioch, where he had numerous disciples. The Emperor Julian, who, before his expedition into Persia, knew him only by his writings, was his constant admirer. He named him questor, and addressed many letters to him, the last of which, written during his expedition against the Persians, has come down to us. The death of Julian was a double loss for Libanius; it took away a protector, who had shielded him from the attacks of calumny; and it caused to vanish the hopes which he had entertained of witnessing the re-establishment of paganism. Under the reign of Valens, Libanius was exposed anew to the persecution of his enemies, and was charged with being engaged in a plot against the tranquillity of the state. He succeeded, however, in establishing his innocence. He would even appear to have gained the good-will of the monarch, for he composed a panegyric upon him, and addressed to him an harangue, in which he requested a confirmation of the law that awarded to natural children a share of the father's property at his death. This law interested him personally, from the circumstance

of his having natural children of his own. If it be true that he lived to the time of Arcadius, he must have attained to more than 90 years of age.—Besides his *Progyrnasmata*, Libanius has left harangues, declamations, *Meletai* (discourses on imaginary subjects), stories, and letters on various points of morality, politics, and literature. All these pieces are well written, and though the style of Libanius is open to the charge of too much study and elaborate care, we may notwithstanding pronounce him the greatest orator that Constantinople ever produced. Gibbon, therefore, would seem to have judged him altogether too harshly, when he characterizes his writings as, for the most part, “the vain and idle compositions of an orator who cultivated the science of words; and the productions of a reclus student, whose mind, regardless of his contemporaries, was incessantly fixed on the Trojan war and the Athenian commonwealth.” (*Decline and Fall*, c. 24.) It is no little glory for this sophist to have been the preceptor of St. Basil and St. Chrysostom, and of having been connected in intimate friendship, notwithstanding the opposition of their religious sentiments, with these two pillars of the church.—Libanius, as we have already remarked, was a pagan, and attached to the religion of his fathers. His tolerance forms a singular contrast with the persecuting zeal of the Christians of his time; and a remarkable proof of this may be seen in one of his epistles. (*Ep.*, 730, p. 349. *ed. Wolf*).—Among the writings of Libanius may be mentioned his *Progyrnasmata* (*Præexercitationes*), or Examples of Rhetorical Exercises (*Προγυρνασμάτων παραδείγματα*), divided into thirteen sections, and each one containing a model of one particular kind. Among the *Discourses* or *Harangues* of Libanius are many which were never pronounced, and which were not even intended to be delivered in public: they partake less of the nature of discourses than of memoirs, or, rather, moral dissertations. One of them is a biographical sketch of Libanius, written by himself, at the age of 60 years, unless there be some mistake in the number, and retouched by him when about 70 years. It forms the most interesting production of his pen. Another of these pieces is entitled *Μορῳδία*, and is a Lament on the death of Julian. Libanius does not pretend to conceal, in this discourse, that one ground of his deploring the death of the monarch, is the triumph of Christianity which would result therefrom. A third is a discourse addressed to Theodosius on the preservation of the temples and idols of paganism. A fragment of this discourse was discovered by Mai, in 1823, in some of the Vatican MSS. A fourth is entitled *Τῶν Ἱερῶν*, “*Respecting the Temples*.” In this discourse, pronounced or written about A.D. 390, Libanius entreats the Emperor Theodosius to set bounds to the fanaticism of the monks, who were destroying the temples of paganism, especially those in the country, and to order the bishops not to connive at these excesses.—The *Declamations*, or exercises on imaginary subjects, exceed forty in number. Some idea may be formed of their nature by the titles of a few: “Discourse of Menelaus, addressed to the Trojans, and demanding back his spouse.” “Discourse of Achilles, in answer to Ulysses, when the latter was sent by Agamemnon to propose a reconciliation.” “Discourse of a parasite who deplores the loss of a dinner,” &c.—A very interesting part of the works of Libanius is his epistolary correspondence. There are more than 2000 letters written by him, and the number of persons to whom they are addressed exceeds 550. There are among these some illustrious names, such as the Emperor Julian, and his uncle, who bore the same name, governors of provinces, generals, literary men, &c. There are also among his correspondents some fathers of the church, such as St. Athanasius, St. Basil, St. Gregory of Nyssa, St. John

Chrysostom, &c. As to the subjects of these letters, there are many, it must be confessed, of a very uninteresting nature, containing, for example, mere compliments, recommendations, or the recital of domestic affairs. A large number, however, have claims on our attention by the beauty of the ideas and sentences, the importance of the subject matter, and the historical illustrations which they have preserved for us.—We have also from his pen *Arguments to the Speeches of Demosthenes*.—There is no complete edition of the works of Libanius. The best edition of the *Discourses and Declamations* is that of Reiske, published by his widow (“*præfata est Ernestina Christina Reiske*”), Lips., 1791–1797, 4 vols. 8vo. A quarto edition, put forth by Reiske himself in 1784, was interrupted by his death, after only the first volume had appeared. Still, however, a good edition is much wanted, as Reiske’s has neither historical introductions, commentary, nor even tables, and is, moreover, burdened with the inaccurate version of Morell. The most numerous collection of the Letters will be found in the edition of J. C. Wolf, *Amst.*, 1738, fol. (*Schöll, Hist. Lat. Gr.*, vol. 6, p. 159, *seqq.*)

LIBANUS, a chain of mountains in Syria, deriving their name from their white colour (*Reland, Palestina*, p. 311), the eastern part in particular being covered with continual snow. (*Jer.*, 18, 14.) Some make the range commence from Mons Amanus, on the confines of Cilicia, and give the general name of Libanus to the entire chain of mountains running thence to the south; it is more accurate, however, to make it begin near Aradus in Phœnicia, and, after forming the northern boundary of that country, run to the south, and end near Sidon. There are, however, several parallel chains, four of which, towards the west, have the general name of Libanus applied to them, while another parallel chain to the east was called by the Greeks Antilibanus. Between Libanus and Antilibanus is a long valley called Cœle Syria, or the hollow Syria. Libanus, then, is composed of four chains or enclosures of mountains, which rise one upon the other; the first is very rich in grain and fruits; the second is barren; the third, though higher than this, enjoys perpetual spring, the trees being always green, and the orchards full of fruit. It is so beautiful that some have called it a terrestrial paradise. The fourth is very high, so that it is almost always covered with snow, and is uninhabitable by reason of the great cold. Volney states that the snow remains on Libanus all the year round towards the northeast, where it is sheltered from the sea-winds and the rays of the sun. Maundrell found that part of the mountain-range which he crossed, and which, in all probability, was by no means the highest, covered with deep snow in the month of May. Dr. Clarke, in the month of July, saw some of the eastern summits of Lebanon, or Antilibanus, near Damascus, covered with snow, not lying in patches, as is common in the summer season with mountains which border on the line of perpetual congelation, but do not quite reach it, but with “that perfect, white, smooth, and velvet-like appearance which snow only exhibits when it is very deep; a striking spectacle in such a climate, where the beholder, seeking protection from a burning sun, almost considers the firmament to be on fire.” At the time this observation was made, the thermometer, in an elevated situation near the Sea of Tiberias, stood at 102½ in the shade. Sir Frederic Henniker passed over snow in July; and Ali Bey describes the same eastern ridge as covered with snow in September. We know little of the absolute height, and less of the mineralogy, of these mountains. Burckhardt describes Lebanon as composed of primitive limestone; but, as he found fossil-shells on the summit, it more probably consists either of transition or mountain limestone. If so, it must be considered as one of the highest points at which either of these sub-

stances is found.—Of the noble cedars which once adorned the upper part of this mountain, but few now remain, and those much decayed. Burckhardt, who crossed Mount Libanus in 1810, counted about 36 large ones, 50 of middle size, and about 300 smaller and young ones; but more might exist in other parts of the mountain. The wine, especially that made about the convent of Canobin, still preserves its ancient celebrity; and is reported by travellers, more particularly by Rouwloff, Le Bruyn, and De la Roque, to be of the most exquisite kind for flavour and fragrance.—The rains which fall in the lower regions of Lebanon, and the melting of the snows in the upper ones, furnish an abundance of perennial streams, which are alluded to by Solomon. (*Song*, 4, 15.) On the declivities of the mountain grew the vines that furnished the rich and fragrant wines which Hosea (14, 7) celebrated, and which may still be obtained by proper culture. The snow of Lebanon was probably transported to a distance, for the purpose of cooling wine and other liquors. Solomon speaks of the cold of snow in the time of harvest (*Prov.*, 25, 13), which could be obtained nowhere in Judæa nearer than Lebanon. (*Mannert, Geogr.*, vol. 6, pt. 1, p. 341.—*Mansford's Scripture Gazetteer*, p. 314, *seqq.*)

LIBER, the name of an ancient Italian deity, identified with the Grecian Dionysus or Bacchus. His festival, named Liberalia, was celebrated on the 17th March, when the young men assumed the *toga virilis* or *libera*. (*Varro, L. L.*, 5, p. 55.—*Ovid, Fast.*, 3, 713, *seqq.*) When the worship of Ceres and Proserpina was introduced at Rome, Proserpina was named Libera, and the conjoined deities were honoured as Ceres, Liber, and Libera. The name Liber is commonly derived from *liber*, "free," and is referred to the influence of wine in freeing from care. Others, however, prefer deducing it from *libo*, "to pour forth," and make Liber to be the god of productiveness effected by moisture. (*Keightley's Mythology*, p. 517.)

LIBERA, a name given to Proserpina among the Romans. (*Vid.* Liber.)

LIBERALIA, a festival celebrated annually in honour of Liber, the Roman Bacchus. It took place on the 17th of March. (*Vid.* Liber.)

LIBERTAS, the Goddess of Freedom, the same with the Eleutheria of the Greeks. Hyginus makes her the daughter of Jupiter and Juno. (*Praf.*, p. 10, *ed. Munch.*) Tiberius Gracchus is said to have erected the first temple to her at Rome, on the Aventine Hill, and it was here that the archives of the state were deposited. The goddess was represented as a Roman matron, arrayed in white, holding in one hand a broken sceptre, and in the other a pike surmounted by a *pileus* or cap; at her feet lay a cat, an animal that is an enemy to all restraint. The cap alluded to the Roman custom of putting one on the heads of slaves when manumitted. (*Lic.*, 24, 16.—*Id.*, 25, 7.—*Ovid, Trist.*, 3, 1, 72.—*Plut., Vit. Gracch.*)

LIBETHRA, I. a city of Macedonia, situate, according to Pausanias (9, 30), on the declivity of Olympus, and not far from the tomb of Orpheus. An oracle declared, that when the sun beheld the bones of the poet, the city should be destroyed by a boar (*ὄρε σῶας*). The inhabitants of Libethra ridiculed the prophecy as a thing impossible; but the column of Orpheus's monument having been accidentally broken, a gap was made by which light broke in upon the tomb, when the same night the torrent named Sus, being prodigiously swollen, rushed down with violence from Mount Olympus upon Libethra, overthrowing the walls and all the public and private edifices, and every living creature in its furious course. Whether Libethra recovered from the devastation occasioned by this inundation is not stated in any writer, but its name occurs in Livy as a town in the vicinity of Diium before the battle of Pydna (44, 5). Strabo also alludes to Libethra when speaking of

Mount Helicon, and remarks, that several places around that mountain attested the former existence of the Thracians of Pieria in the Bœotian districts. (*Strab.*, 409.—*Id.*, 471.) From these passages it would seem that the name of Libethrius was given to the summit of Olympus which stood above the town. Hence the muses were surnamed Libethrides as well as Pierides. (*Virg., Eclog.*, 7, 21.—*Cramer's Anc. Greece*, vol. 1, p. 210.)—II. A fountain of Thessaly, on Mount Homole, in the district of Magnesia, at the northern extremity. (*Plin.*, 4, 9.—*Mela*, 2, 3)

LIBETHRIDES, a name given to the Muses. (Consult remarks under Libethra, I, towards the end of the article. *Vid.* also Libethrius.)

LIBETHRIUS, I. a mountain of Bœotia, forty stadia to the south of Coronea, and forming one of the summits of Helicon. It was dedicated to the Muses, and the nymphs called Libethrides. (*Pausan.*, 9, 34.—*Strabo*, 409.)—II. A fountain on Mount Libethrius.

LIBITINA, a goddess at Rome presiding over funerals. In her temple were sold all things requisite for them. By an institution ascribed to Servius Tullius, a piece of money was paid her for every one who died, and the name of the deceased entered in a book called *Libitinae ratio*. (*Dion. Hal.*, 4, 15.—*Sueton., Vit. Ner.*, 39.) The object of this custom was to ascertain the number of deaths annually. Libitina and Venus were regarded as one and the same deity, because, says Plutarch, the same goddess superintends birth and death. It would be more correct, however, to say that we have here a union of the power which creates with that which destroys. (*Plut., Quæst. Rom.*, 23.)

LIBON, an architect of Elis, who built the temple of Olympian Jove, in the sacred grove Altis, out of the proceeds of the spoil taken from the Pisæans and some other people (*Pausan.*, 5, 10, 2.) This temple was built in the Doric style; and it must have been erected about Olymp. 84 (B.C. 444–440), since in Olymp. 85, 4, Phidias commenced his statue of the Olympian Jupiter, and it can scarcely be maintained that the temple was built long before the statue was undertaken. (*Sillig, Dict. Art.*, s. v.)

LIBOPHŒNICES, the inhabitants of the district Byzacium, in Africa Propria. Their name indicates that they were a mixture of Libyans and Phœnicians. The Libophœnices are a proof of the policy pursued by the Phœnician and Carthaginian settlers, in admitting the natives to a participation in some of the rights of citizenship. Carthage itself was in this sense a Libophœnician city. Polybius often speaks of the Libophœnices. Diodorus Siculus, however, gives a more particular account of them, as well as the information that the cities on the coast were alone strictly included in this denomination. (*Diod. Sic.*, 20, 55.) Pliny limits the appellation to the cities on the coast of Byzacium (5, 4). It ought to be extended, however, to other parts also of the African coast.

LIBURNIA, a province of Illyricum, along the Adriatic, over against Italy, having Dalmatia on the south, and Istria on the north. Zara, anciently Iadera, and afterward Diodora, was once its capital. The ruins of Burnum, the Liburnia of Strabo, are to be seen on the right hand of the Titus or *Kerka*, in the desert of *Bukowica*. The Liburnians were an Illyrian tribe, and their country now answers to part of Croatia. They appear to have been a maritime people from the earliest times; and the Greeks, who colonized Coreyra, are said, on their arrival in that island, to have found it in their possession. (*Strabo*, 270.) Scylax seems to distinguish the Liburni from the Illyrians, restricting probably the latter appellation to that part of the nation which was situate more to the south, and was better known to the Greeks. The same writer alludes to the sovereignty of the Liburni as not excluding females; a fact which appears to have reference to the

history of Tenta, and might serve to prove that this geographical compilation is not so ancient as many have supposed (*Scylar*, p. 7.) Strabo asserts, that the Liburni extended along the coast for upward of 1500 stadia. (*Strab.*, 315.) According to Pliny (3, 13), they once occupied a considerable extent of territory on the coast of Picenum, and he speaks of Truentum as the only remaining establishment of theirs, in his day, in this quarter of Italy. It is chiefly on this information of Pliny that Freret has grounded his system of the Illyrian colonies in Italy. He conceives that these Liburni, as well as all the others, came by land. But it would be more natural to suppose that the Liburni, as a maritime people, had crossed over from the opposite coast of Dalmatia. (*Mém. de l'Acad. des Insér.*, &c., vol. 18, p. 75.—*Cramer's Anc. Italy*, vol. 1, p. 285.) The galleys of the Liburnians were remarkable for their light construction and swiftness, and it was to ships of this kind that Augustus was in a great measure indebted for his victory over Antony at Actium. (*Dio Cass.*, 29, 32.) Hence, after that time, the name of *nares Liburnæ* was given to all quick-sailing vessels, and few ships were built but of that construction. (*Vegct.*, 4, 33.) The Liburnians were a stout, able-bodied race, and were much employed at Rome as porters, and sedan or litter-carriers. Hence Martial, in describing the pleasures of a country-life (1, 50), exclaims, "*procul horridus Liburnus*." Compare *Juvenal*, 3, 240.—*Boettiger, Sabina, oder Morgensenen*, &c., *Sc.* 8, p. 193.

LIBURNIDES, islands off the coast of Liburnia, said to amount to the number of forty. The name originated with the Greek geographers. (*Strab.*, 315.)

LIBURNUS, a chain of mountains near Apulia, crossed by Hannibal in his march from Samnium and the Peligni into Apulia. It is stated that, before he arrived in the latter province, he crossed this chain; which probably answers to the branch of the Apennines bordering on the valley of the Tifernus to the north, and known by the name of *Monte della Serra*. (*Polyb.*, 3, 101.—*Romanelli*, vol. 3, p. 20.—*Cramer's Anc. Italy*, vol. 2, p. 270.)

LIBYA, I. a daughter of Epaphus and Cassiopeia, who became mother of Agenor and Belus by Neptune. (*Apollod.*, 2, 1; 3, 1.—*Pausan.*, 1, 44.)—II. The name given by the Greek and Roman poets to what was otherwise called Africa. In a more restricted sense, the name has been applied to that part of Africa which contained the two countries of Cyrenæica and Marmarica, together with a very extensive region in the interior, of which little, if anything, was known, and which was generally styled Libya Interior. (*Vid.* Africa.)

LIBYCEUM MARE, that part of the Mediterranean which lies along the coast of Libya, extending eastward as far as the island of Crete. (*Mela*, 1, 4.—*Strab.*, 247.)

LIBYSSA, a small village of Bithynia, west of Nicomedia, and near the shores of the Sinus Astacenus. It is rendered memorable for containing the tomb of Hannibal, whence, no doubt, its name. (*Plut.*, *Vit. Flamin.*—*Amnian. Marcell.*, 22, 9.—*Entrop.*, 4, 11.—*Plin.*, 5, 32.) It is thought to answer to the modern *Gebisse* or *Deschibze*. It, however, Pococke be correct (vol. 3, l. 2, c. 18) in making *Gebisse* 24 English miles from Pontichum or *Pantik*, we ought rather to decide in favour of the *Diache* or *Diarrhiza* of the middle ages (*Sozom.*, *Hist. Eccles.*, 6, 14), which lies on the same coast, nearer Pontichum. (*Mannert, Geogr.*, vol. 6, pt. 3, p. 585, *seqq.*)

LICATES, a people of Vindelicia, on the eastern bank of the Licus, in the modern *Oberdonaukreis*, to the northeast of *Füssen*. (*Plin.*, 3, 20.—*Bischoff und Möller, Wörterb. der Geogr.*, p. 698.)

LICHÆDES, small islands near Caneum, a promon-

tory of Eubœa, called so from Lichas. (*Vid.* Lichas.) They were three in number, Careas, Phocaria, and Scaphia. They are thought to answer to the modern *Ponticonesi*. (*Ovid, Met.*, 9, 165, 217.)

LICHAS, the ill-fated bearer of the poisoned tunic from Deianira to Hercules. In the paroxysm of fury occasioned by the venom of the hydra, the hero caught Lichas by the foot and hurled him into the sea from the summit of Œta. (*Ovid, Met.*, 9, 165, 217.—Compare *Milton, P. L.*, 2, 545.) He was changed by the compassion of the gods into one of a group of small islands, which hence derived their name. (*Vid.* Lichades.)

LICINIA LEX. (Consult remarks under the article Licinius I.)

LICINIA, I. daughter of P. Licinius Crassus, and wife of Caius Gracchus. (*Plut., Vit. Gracch.*)—II. The wife of Mæcenas. She was sister to Proculeius, and bore also the name of Terentia. She is thought to be alluded to by Horace (*Od.*, 2, 12, 13) under the name of Licymnia. (*Bentley, ad Horat.*, l. c.—Compare remarks under the article Mæcenas.)

LICINIUS, I. C. Licinius Stolo, of a distinguished plebeian family at Rome, was made tribune of the commons, together with his friend L. Sextius Lateranus, in the year 375 B.C. These tribunes brought forward three "rogations," that is to say, bills or projects of laws, for the comitia or assembly of the tribes to decide upon: 1. That in future no more military tribunes should be appointed, but two annual consuls, as formerly, and that one of the two should always be a plebeian. The occasional appointment of military tribunes, part of whom might be chosen from the plebeians, was a device of the senate to prevent the plebeians from obtaining access to the consulship.—2. To deduct from the capital of all existing debts, from one citizen to another, the sums which had been paid by the debtor as interest, and the remaining principal to be discharged in three years by three equal payments. This seems, according to our modern notions of money-transactions, a very summary, and not very honest, way of settling standing engagements; but if we carry ourselves back to that remote period of Roman society, and take into consideration the enormous rate of interest demanded, the necessities of the poorer citizens, who were called from their homes and fields to fight the battles of their country, and had no means of supporting their families during the interval except the ruinous one of borrowing money from the wealthy, who were mostly patricians, and also the fearful power which the law gave to the creditor over the debtor, and the atrocious manner in which that power was used, or abused, in many instances, such as those reported by Livy (2, 23; 6, 14; 8, 28), we shall judge more dispassionately of the proposition of Licinius.—3. The third rogation has been a subject of much perplexity to modern inquirers. Its object, as briefly expressed by Livy, was, that no one should possess (*possideret*) more than 500 *jugera* (about 333 acres) of land; and until lately it has been literally understood, by most readers of Roman history, as fixing a maximum to private property. But Beaufort, and more lately Heyne, Niebuhr, and Savigny, have shown, that the limitation referred to the holding of land belonging to the *ager publicus*, or public domain of the state. It appears that most of the large estates possessed by the patricians must have been portions of this public domain, which consisted of lands conquered at various times from the surrounding nations. This land the patricians had occupied, cultivated, and held as tenants at will, they and their descendants paying to the state a tenth of all grain, a fifth on the produce of plantations and vineyards, and a certain tax per head of cattle grazing on the public pasture. This was the kind of *possession* which the Licinian rogation proposed to limit and regulate. Licinius proposed, that all who had more than

560 *jugera* should be made to give up the surplus, which was to be distributed among those who had no property, and that in future every citizen was to be entitled to a share of newly-conquered land, with the same restriction, and subject to the same duties. This might be considered as a bill for the better distribution of plunder among those engaged in a plundering expedition, for the land thus acquired and distributed cannot be compared to real property as held throughout Europe in our own day; and this reflection may perhaps serve to moderate somewhat the warmth of our sympathy in reading of the complaints of the Roman plebeians concerning the unequal distribution of land, which had been, in fact, taken by violence from a third party, the other nations of Italy, who were the real sufferers.

—The patricians, who had, till then, the best share of the common plunder, opposed to the utmost the passage of these three laws. The contest lasted during ten whole years, during which the republic at one time fell into a kind of anarchy. Camillus also, at one period, was appointed dictator, as a last expedient on the part of the nobility, and in that capacity stopped the voting at the Comitia Tributa, by threatening to summon the people to the Campus Martius, and to enlist and march them into the field. At last, however, the three rogations passed into law. Sextius Lateranus, the colleague of Licinius, the first plebeian consul, was chosen for the next year, 365 B.C., together with a patrician, L. Æmilius Mamercinus. The senate, however, refused to confirm the election of Sextius, and the plebeians were preparing for a new secession and other fearful threatenings of a civil war, when Camillus interposed, and an arrangement was made, that, while the patricians conceded the consulship to the plebeians, the latter should leave to the patricians the prætorship, which was then for the first time separated from the consulship. Thus was peace restored. Licinius, the great mover of this change in the Roman constitution, was raised to the consulship 363 B.C., but nothing remarkable is recorded of him while in that office. In the year 356 B.C., under the consulship of C. Marcius Rutilius and C. Manlius Imperiosus, we find Licinius charged and convicted before the prætor of a breach of his own agrarian law, and fined 10,000 asses. It seems that he possessed 1000 *jugera*, one half of which he held in the name of his son, whom he had emancipated for the purpose. After this we hear no more of C. Licinius Stolo. (*Encycl. Us. Knowl.*, vol. 13, p. 464, *seq.*—*Liv.*, lib. 6 et 7.—*Niebuhr, Röm. Gesch.*, vol. 3, p. 1, *seqq.*—*Val. Max.*, 8, 6.—*Savigny, Das Recht des Besitzes*, p. 175.)—II. Muræna. (*Vid.* Muræna.)—III. Varro Muræna, a brother of Proculus, who conspired against Augustus with Fannius Cæpio, and suffered for his crime. Horace addressed to him his 10th ode, book 2.—IV. C. Flavius Valerius, a Roman emperor. A sketch of his history will be found incorporated with that of Constantine. (*Vid.* Constantinus.)

LICIUS, a Roman barber, made a senator by Julius Cæsar merely because he bitterly hated Pompey. Compare the language of the scholiast (*ad Horat., Ep. ad Pis.*, 301): “*Quod odisset Pompeium, a Cæsare senator factus dicitur.*”

LIGARIUS, Q., was at first a lieutenant of C. Considius, proconsul of Africa, and afterward succeeded him in that province. He sided with the republican party against Cæsar, and was condemned to exile. His brothers at Rome solicited his recall, but their application was opposed by Tubero, who openly accused Ligarius before the dictator. Cicero appeared as the advocate for Ligarius, and his speech on the occasion has come down to us. This oration was pronounced after Cæsar, having vanquished Pompey in Thessaly, and destroyed the remains of the republican party in Africa, assumed the supreme administration of affairs at Rome. Merciful as the conqueror appeared, he

was understood to be much exasperated against those who, after the rout at Pharsalia, had renewed the war in Africa. Ligarius, when on the point of obtaining his pardon, was formally accused by his old enemy Tubero of having borne arms in that contest. The dictator himself presided at the trial of this cause, much prejudiced against Ligarius, as was known from his having previously declared that his resolution was fixed, and was not to be altered by the charms of eloquence. Cicero, however, overcame his prepossessions, and extorted from him a pardon. The countenance of Cæsar, it is said, changed as Cicero proceeded in his speech; but when he touched on the battle of Pharsalia, and described Tubero as seeking his life amid the ranks of the army, he was so agitated that his body trembled, and the papers which he held dropped from his hand. The oration of Tubero against Ligarius was extant in Quintilian's time, and probably explained the circumstances which induced a man who had fought so keenly against Cæsar at Pharsalia to undertake the prosecution of Ligarius. (*Plut., Vit. Cic.*—*Dunlop's Roman Lit.*, vol. 2, p. 317, *Lond. ed.*)

LIGER or LIGÉRIS, now the *Loire*, the largest river of Gaul; it rises in Mons Cebenna or *Cevennes*, and for the first half of its course runs directly north, then turns to the west, and falls into the Atlantic between the territories of the Pictones and Namnetes. (*Cæs., B. G.*, 3, 9.—*Id. ibid.*, 7, 5.—*Auson., Mosell.*, v. 461.—*Lucan.*, 1, 439.)

LIGURES, the inhabitants of Liguria. (*Vid.* Liguria.)

LIGURIA, a country of Cisalpine Gaul, lying along the shores of the Sinus Ligusticus or Gulf of *Genoa*, having the Varus on the west, and the Macra on the southeast, and bounded on the north by the Alps. The Ligures, termed *Λίγυρες* and *Λιγυρίωνι* by the Greeks (*Strabo*, 203.—*Polyb.*, 2, 16), appear to have been a numerous and powerful people, extending, in the days of their greatest strength, along the shores of the Mediterranean, from the mouth of the Rhodanus to the river Arnus, reaching also into the interior of Gaul and the valleys of the Maritime Alps. According to some accounts, they had penetrated to the west as far as the borders of Spain. (*Thucyd.*, 6, 2.—*Scyl., Peripl.*, p. 4.) Of the origin of this people we have no positive information; but there is good reason for supposing that they were Celts, though Strabo (128) distinguishes them from the Gauls. The story which is told by Plutarch of the Ligurians in the army of Marius, acknowledging the Ambrones as belonging to the same stock with themselves; the affinity of the term Ligor to the Celtic Lly-gour or Lly-gor, together with other words, evidently belonging to the same root, which Cluverius has collected (*Ital. Ant.*, vol. 1, p. 50), may be considered as plausible grounds at least for the support of such an opinion. Though the period of their settlement in Italy cannot be determined, we may safely affirm that it was very remote, since the Tyrrheni, themselves a very ancient people, on their arrival in Italy, found them occupying a portion of what was afterward called Etruria, and, after a long struggle, succeeded in expelling them. (*Lycophr.*, v. 1354.) The Greeks, who were unacquainted with the real situation of Liguria, made that country the scene of some of their earliest and most poetical fictions. The passage of Hercules (*Æsch., Prom., Sol. ap. Strab.*, 183) and the story of Cyrenus were identified with it. (*Virg., Æn.*, 10, 185.) And it is not improbable, that the fable of Phæthion's sisters shedding tears of amber, a substance which the Greeks called *Ingurium* (*Strabo*, 202), had its origin in the country which produced that substance, and gave it its name. (*Millin, Voyage en Italie*, vol. 2, p. 326.) Herodotus was better acquainted with the Ligurians (5, 9), and mentions them as forming part of the mercenary forces of Carthage, in its wars against the Greeks of Sicily (7, 165). The conquest of Liguria by the Romans was not effected

till long after the second Punic war. The Ligurians had joined Hannibal with a considerable force soon after his arrival (*Polyb.*, 3, 60), a circumstance of itself sufficient to provoke hostilities on the part of the conquerors; but there was another reason which rendered the subjugation of Liguria extremely desirable. It afforded the easiest communication with Gaul and Spain over the Maritime Alps, an object in itself of the greatest importance. The Ligurians long and obstinately resisted their invaders, when the rest of Italy had been subjugated for many years. The Romans could only obtain a free passage along their shore of twelve stadia from the coast (*Strabo*, 180); nor was it till the Ligurians, after a war of eighty years' duration, had been driven from every hold in their mountains, and whole tribes had even been carried out of the country, that they could be said to be finally conquered. (*Lin.*, 40, 38.—*Id.*, 41, 12.)—The Ligurian character does not appear to have been held in much esteem by antiquity; while it allows them all the hardihood and courage usual with mountaineers (*Cic.*, *Agg.*, 2, 35.—*Virg.*, *Georg.*, 2, 168), qualities which were even shared in an uncommon degree by the weaker sex (*Diod. Sic.*, 5, 39), it taxes them too plainly with craft and deceit to be misunderstood. (*Virg.*, *Æn.*, 11, 700.—*Servius*, *ad loc.*—*Claudian*, *Ingl.*, 12.) According to the statement of Polybius (2, 16), the boundaries of the Ligurians in Italy seem to have been the Maritime Alps to the northwest, to the south the river Arnus; but in the time of Augustus this latter boundary was removed northward to the river Macra. (*Plin.*, 3, 5.) To the north and northeast, the Ligurians ranged along the Alps as far as the river Orus (*Orea*), which separated the Taurini, the last of their nation on that side, from the Cisalpine Gauls: south of the Po they bordered on the Anamanni and Boii, also belonging to this last-mentioned people. (*Cramer's Ancient Italy*, vol. 1, p. 19, *seqq.*)

LIGUSTICUS SINUS, a gulf forming the upper part of the Mare Tyrrenum. It is now the *Gulf of Genoa*. (*Flor.*, 3, 6.) It is also called *Ligusticum Mare*. (*Colum.*, 8, 2.—*Plin.*, 3, 6, 20.)

LIGYÆS, a people of Asia, mentioned by Herodotus (7, 72). The historian informs us, that the Ligyes, the Matiæni, the Mariandyni, and the Cappadocians had the same kind of arms, and that the Ligyes, Mariandyni, and Cappadocians, as forming part of the army of Xerxes, were under the same commander. Larcher infers from all this, that the nations here mentioned were contiguous to each other, and that the Ligyes were to the east of the Mariandyni and Cappadocians, and to the northeast of the Matiæni. The Ligyes were reduced in point of numbers in the time of Herodotus, but had been at an earlier period a powerful tribe; and we are even informed by Eustathius (*ad Dionys. Perieg.*, 76), that, according to Lycophron, a portion of the Ligyes had once inhabited a part of Colchis, and that Cytæa was a Ligyan city. (*Larcher, Hist. d'Herod.*, vol. 8, p. 301, *seqq.*, *Table Geogr.*) On the subject of the Ligyes generally, as a very early people, consult the remarks of Bernhardt (*ad Dion. Perieg.*, l. c.—*Geogr. Gr. Min.*, vol. 1, p. 543.)

LILYBÆUM, I. a city of Sicily on the western coast, south of Drepanum, and near a famous cape called also Lilybæum, now *Cape Boco*. (*Diod. Sic.*, 13, 54.) It was the principal fortress of the Carthaginians in Sicily, and was founded by them about the 106th Olympiad (*Diod. Sic.*, 22, 14), as a stronghold in this quarter against Dionysius of Syracuse. It received as a part of its population the remaining inhabitants of Motya, which place had been taken by Dionysius. The strength of its fortifications was evinced in the war with Pyrrhus. All the other Carthaginian cities in Sicily had yielded to his arms; Lilybæum alone made a successful resistance, and, after three months

of close investment, he was compelled to raise the siege. (*Diod.*, l. c.) In the course of the first Punic war, Carthage felt more than once that the preservation of her power in Sicily depended upon Lilybæum, since she could always send with the greatest ease to this quarter the necessary supplies by sea, and could always find in it an easy entrance into the very heart of the island. If the Romans, too, became masters of Lilybæum, they would have, what they wanted throughout the whole war, a safe harbour on the western and southern coasts of the island, whence they could easily threaten Carthage herself. (*Polyb.*, 1, 41.) The moment, therefore, the Carthaginians perceived that the Romans were about to attack this place, they made every possible exertion to render it secure. The number of the inhabitants was increased by accessions from Selinus, and a strong body of troops was added to the garrison. (*Polyb.*, 1, 42, *seqq.*) The resistance made by the place was effectual, and the Romans only obtained possession of Lilybæum by the conditions of the peace which brought the whole of Sicily under their power. From this time the Romans watched with the greatest care so important a city, repelled all the subsequent attacks of the Carthaginians, who made the greatest exertions to repossess themselves of the place, and used it as the harbour whence their fleets sailed for the reduction of Carthage. In a later age, Cicero calls it "*splendidissima ciuitas*" (*in Verr.*, 5). The modern town of *Marsala* occupies the southern half of the ancient city. (*Mannert, Geogr.*, vol. 9, pt. 2, p. 376, *seqq.*)—II. The western one of the three famous capes of Sicily, now *Cape Boco*. The earlier Greeks were not acquainted with this headland, as they rarely navigated along this part of the Sicilian coast; neither did they make any settlements near it. The name first occurs in the false Orpheus (*Argon.*, v. 1243). In a later age it was mentioned by every geographer, not so much from anything remarkable in its appearance, as from its forming the westernmost extremity of Sicily. It is not a mountain-promontory, but a low, flat point of land, rendered dangerous to vessels by its sandbanks and concealed rocks. Lilybæum was the nearest point to Carthage, and the ancient writers inform us, that vessels could be seen from it sailing out of the harbour of that city. (*Strabo*, 267.—*Plin.*, 7, 21.—*Ælian*, *Var. Hist.*, 11, 13.) The distance, 30 geographical miles, shows the story to be false. Polybius gives the cape a northwest direction: this is true, however, only as regards the harbour of Lilybæum. The cape itself stretches directly to the west. (*Mannert, Geogr.*, vol. 9, pt. 2, p. 375, *seqq.*)

LIMONUM, a town of Gallia Aquitania, in the territory of the Pictones. It was subsequently called *Pictavi*, and is now *Poitiers*. (*Cæs.*, *B. G.*, 8, 26.)

LINUM, a town of Britain, the capital of the Coritani, and on the main road from Loudinium to Eboracum. (*Cellar.*, *Geogr. Ant.*, vol. 2, p. 341.) It is now *Lincoln*. Mannert supposes it to have been a Roman colony, and deduces the modern name from *Lindi Colonia*. (*Geography*, vol. 2, pt. 2, p. 149.) Bede writes the name *Lindi-collina*. (*Hist. Eccles.*, 2, 16.)

LINDUS, a city in the island of Rhodes, near the middle of the eastern coast. It was the old capital of the island before Rhodes was built, and is said to have been founded by the Heliades. Others made Tegeopolemus its first settler (*Strabo*, 654), and others, again, assigned its foundation to Danaus. (*Strab.*, l. c.—*Diod. Sic.*, 5, 58.) Lindus is one of the three cities alluded to by Homer (*Il.*, 2, 668). Notice of it also occurs in the Parian Chronicle. It contained a very ancient and famous temple of Minerva, hence called the *Lindian*, built, according to a tradition, by the Danaïdes. (*Strab.*, l. c.) The statue of the goddess was a shapeless stone. (*Callim.*, *ap. Euseb.*, *Præp. Ev.*, 3, 8.)

Pindar's Seventh Olympic Ode, in honour of Diagoras the Rhodian, was consecrated in this temple, being inscribed in letters of gold. (*Schol. ad Pind., Ol., 7, init.*) Here also was a temple of Hercules, the worship connected with which consisted, according to Lactantius (1, 31), in revivings and exorcism ("mal-*dictis et exsecratione celebrantur, eaque pro violentis habent, si quando inter sollemnes ritus vel imprudenti aliquid exciderit bonum verbum*"). This temple contained a painting of the god by Parrhasius. (*Athenæus*, 12, p. 543.) There were several other pictures by the same celebrated master at Lindus, inscribed with his name. (*Athenæus*, 15, p. 687.) This place was also famous for having produced Cleobulus, one of the Seven Sages of Greece; and also Chares (or Cares) and Laches, the artists who designed and completed the Colossus. A mistake, highly characteristic of his ignorance in classical matters, was committed by Voltaire, respecting this famous statue: it is mentioned by Mentelle, in a note to the article Lindus, *Encyclopædie Methodique*. Voltaire, having read *Indian for Lindian*, relates that the Colossus was cast by an *Indian*!—Lindus was the port resorted to by the fleets of Egypt and Tyre before the founding of Rhodes.—A small town, with a citadel, retaining the name of *Lindo*, still occupies the site of the ancient city. Savary says (*Letters on Greece*, p. 96, *Eng. transl.*) that the ruins of the temple of Minerva are still visible on an eminence near the sea. The ruins at Lindo are said to be very numerous. (*Clarke's Travels*, vol. 3, p. 281, *Lond. ed.*—*Tavernier, Voyage*, vol. 1, c. 74.)

LINGONES, I. a people of Gaul, whose territories included *Vogesus*, *Vosges*, and, consequently, the sources of the rivers *Mosa* or *Meuse* and *Matrona* or *Marne*. Their chief city was *Andomadunum*, afterward *Lingones*, now *Langres*, and their territory corresponded to the modern département de la *Haute-Marne*. (*Cæs., B. G.*, 1, 26)—II. A Gallic tribe in *Gallia Cisalpina*, occupying the extreme northeastern portion of *Gallia Cispadana*. They were a branch of the *Transalpine Lingones*. Polybius is the only author who has pointed out the district occupied by this people in Italy (2, 17). Appian characterizes the *Lingones* generally as the fiercest and wildest of the Gauls. (*Bell. Gall., fragm.*)

LINUS, said to have been a native of Chalcis, a son of Apollo and Terpsichore; according to others, the offspring of Amphimarus and Urania; and according to others, again, of Mercury and Urania. (*Suid., s. v. Αἰνός*.—*Hes., fragm. ap. Eustath.*, p. 1163.—*Coron.*, c. 19.—*Heyne, ad Apollod.*, 1, 3, 1.) Apollodorus makes him a brother of Orpheus (1, 3, 2; 2, 4, 9). He was fabled to have been the instructor of Hercules in music, and to have been killed by the latter in a fit of passion, being struck on the head with a lyre. His tragical death was the subject of a solemn festival at Thebes. (Consult *Hauptmann, Prolus. de Lino, Geræ*, 1760, and the notes of *Burette on Plutarch's Dialogue on Music, Mem. de l'Acad. des Inscriptions*, &c., vol. 10, p. 195.) Stobæus has preserved twelve pretended verses of this poet: they have reference to the famous proposition of the Eleatic school, adopted subsequently by the New-Platonists and New-Pythagoreans: "Ἐκ παντὸς δὲ τὰ πάντα, καὶ ἐκ πάντων πᾶν ἐστὶ"—"The whole has been engendered by the whole." These verses, however, were fabricated in a later age. In the *Discourses* of Stobæus (*Eclæg.*, 1, 11) there are two other verses on the divine power. According to Archbishop Usher, Linus flourished about 1280 B.C., and he is mentioned by Eusebius among the poets who wrote before the time of Moses. Diodorus Siculus tells us, from Dionysius of Mytilene, the historian, who was contemporary with Cicero, that Linus was the first among the Greeks that invented verse and music, as Cadmus first taught them the use of letters (3, 66). The same writer likewise attributes

to him an account of the exploits of the first Bacchus, and a treatise upon the Greek mythology, written in Pelasgian characters, which were also those used by Orpheus, and by Pronapides, the preceptor of Homer. Diodorus says likewise, that he added the string *lichanos* to the Mercurian lyre, and assigns to him the invention of rhythm and melody, which Suidas, who regards him as the most ancient of poets, confirms. He is said by many ancient writers to have had several disciples of great renown, among whom were Hercules, Thamyris, and Orpheus.—Thus much for the ordinary learning connected with the name of Linus. The following remarks, however, will be found, we think, to contain a far more correct view of the subject. Among the plaintive songs of the early Greek husbandmen is to be numbered the one called *Linus*, mentioned by Homer (*Il.*, 18, 569), the melancholy character of which is shown by its fuller names, *Αἰλινός* and *Οἰτόλινος* (literally, "*Alas, Linus!*" and "*Death of Linus*"). It was frequently sung in Greece, according to Homer, at the grape-picking. According to a fragment of Hesiod (*ap. Eustath.*, p. 1163—*fragm.* 1, *ed. Gaisf.*), all singers and players on the cithara lament at feasts and dances *Linus*, the beloved son of Urania, and call on Linus at the beginning and the end, which probably means that the song of lamentation began and ended with the exclamation *Αἶ Λινε*. Linus was originally the subject of the song, the person whose fate was bewailed in it; and there were many districts in Greece (for example, Thebes, Chalcis, and Argos) in which tombs of Linus were shown. This Linus evidently belongs to a class of deities or demigods, of which many instances occur in the religions of Greece and Asia Minor; boys of extraordinary beauty, and in the flower of youth, who are supposed to have been drowned, or devoured by raging dogs, or destroyed by wild beasts, and whose death is lamented in the harvest or other periods of the hot season. It is obvious that these cannot have been the real persons whose death excited so general a sympathy, although the fables which were offered in explanation of these customs often speak of youths of royal blood, who were carried off in the prime of their life. The real object of lamentation was the tender beauty of spring destroyed by the summer heat, and other phenomena of the same kind, which the imagination of these early times invested with a personal form, and represented as gods, or beings of a divine nature. According to the very remarkable and explicit tradition of the Argives, Linus was a youth, who, having sprung from a divine origin, grew up with the shepherds among the lambs, and was torn in pieces by wild dogs; whence arose the festival of the lambs, at which many dogs were slain. Doubtless this festival was celebrated during the greatest heat, at the time of the constellation Sirius, the emblem of which, among the Greeks, was, from the earliest times, a raging dog. It was a natural confusion of the tradition, that Linus should afterward become a minstrel, one of the earliest bards of Greece, who begins a contest with Apollo himself, and overcomes Hercules in playing on the cithara; even, however, in this character Linus meets his death, and we must probably assume that his fate was mentioned in the ancient song. In Homer the Linus is represented as sung by a boy, who plays at the same time on the harp, an accompaniment usually mentioned with this song; the young men and women who bear the grapes from the vineyard follow him, moving onward with a measured step, and uttering a shrill cry, in which probably the chief stress was laid on the exclamation *αἶ λινε*. That this shrill cry (called by Homer *ἰνυμός*) was not necessarily a joyful strain, will be admitted by any one who has heard the *ἰνυμός* of the Swiss peasants, with its sad and plaintive notes resounding from hill to hill. (*Müller, Gr. Lit.*, p. 17, *seqq.*)

LIPĀRA, the largest and most important island in the group of the *Æolia Insula*, or *Lipari Islands*. Its original name was Meligunis (Μελιγουνίς.—*Callim.*, *H. in Dian.*, 49), and it was uninhabited until Liparus, son of King Auson, having been driven out by his brethren, came hither with a body of followers, colonized the island, and founded a city. Both the island and city then took the name of Lipara. He colonized also some other islands of the group. (*Strabo*, 275.—*Diod. Sic.*, 5, 7.) The original inhabitants, therefore, according to this tradition, were natives of Italy. The Greeks, however, contributed their part also to the ancient legend, and made Æolus come to this same quarter with a body of companions, and receive in marriage Cyane, the daughter of Liparus. Æolus now assumed the government, and established his aged father-in-law once more on the soil of Italy, in the territory of Surentum, where the latter continued to reign until his death.—Leaving mythic, we now come to real history. In the 50th Olympiad (B.C. 577–574), a colony of Cnidians, along with many Rhodians and Carians, settled in Lipara. They had previously established themselves on the western coast of Sicily, but had been driven out by the Elymæi and Phœnicians. From this period Lipara was regarded as a Doric colony (*Seymn.*, *Ch.*, 261.) The inhabitants began to be powerful at sea, having been compelled to defend their commerce against the Tyrrhenian pirates, whom they worsted in several encounters. Eventually, however, they followed the bad example set them by their maritime neighbours, and became pirates themselves. (*Liv.*, 5, 28.) When the Carthaginians were striving for the possession of Sicily, they perceived the importance of Lipara as a naval station, and accordingly made it their own. During the first Punic war it fell into the hands of the Romans.—The *Lipari* isles obtain their modern name from the ancient Lipara. They were anciently called *Æolia Insula*, from having been fabled to be ruled over by Æolus, god of the winds; and they were also styled *Vulcanæ Insula*, from their volcanic nature, on which was based the fable of Vulcan's having forges in Strongyle, one of the group, besides his smithy in Ætna. The ancients knew them to be volcanic, but did not narrowly examine them; this has been reserved for modern philosophers. The *Lipari* isles are commonly reckoned seven in number, and Lipari is the largest of these, being 19½ Italian miles in circuit. This island is peculiarly valuable to the naturalist, from the number and beauty of its volcanic products. According to Diodorus, all the Æolian isles were subject to great irruptions of fire, and their craters were visible in his time. (*Vid.* Strongyle.—*Plin.*, 3, 9.—*Mela*, 2, 7.—*Jornand.*, *de Regn. Succ.*, p. 29.—*Mannert*, *Geogr.*, vol. 9, pt. 2, p. 459. *seqq.*)

LIRIS, now *Garigliano*, a river of Campania, which it separated from Latium, after the southern boundary of the latter had been removed from the Circean promontory. (*Vid.* Latium.) It falls into the sea near Minturnæ. According to Strabo, its more ancient name was Κλῆρις: according to Pliny, Glanis. (*Strabo*, 233.—*Pliny*, 3, 5.) Its source is in the country of the Marsi, west of the Lacus Fucinus. This river is particularly noticed by the poets for the sluggishness of its stream. (*Horat.*, *Od.*, 1, 31.—*Sil. Ital.*, 4, 348.) In the vicinity of Minturnæ the Pontine marshes ended, in which Marius hid himself, and whence he was dragged with a rope round his neck to the prison of Minturnæ. (*Vid.* Marius.)

LISSUS, a city of Illyria, near the mouth of the Drilo. According to Diodorus Siculus (15, 13), it was colonized by some Syracusans in the time of Dionysius the Elder. It fell subsequently, however, into the hands of the Illyrians, who retained it with the consent of the Romans, after they had concluded a peace with Teuta. (*Polyb.*, 2, 12.) Not many years

intervened before Philip of Macedon, having surprised the Acrolissus, its citadel, compelled the town to surrender. An interesting account of this expedition is to be found in the Fragments of Polybius (8, 15). We are not informed by what means the Illyrians recovered possession of Lissus, but Livy speaks of it as belonging to Gentius (44, 30). Cæsar, who has frequent occasion to mention this city during the progress of the civil war carried on by him in Illyria, informs us, that he had previously stationed there a considerable body of Roman citizens, who readily delivered up the town on the appearance of his forces. (*B. Civ.*, 3, 29.) The situation of the ancient Lissus can hardly be identified with the modern *Alessio*, which is more inland, and may rather answer to Acrolissus. (*Cramer's Anc. Greece*, vol. 1, p. 43.)

LISTA, the old capital of the Aborigines, in the country afterward settled by the Sabines. It was 24 stadia from Tiora, that is, three miles lower down in the valley of the *Salto*. The town was surprised by the Sabines in an expedition by night, and the inhabitants were driven out. (*Dion. Hal.*, 1, 14.)

LITERNUM, a town of Italy, in Campania, west of Atella, and north of Cumæ. Its situation has been disputed; but antiquaries seem now agreed in fixing the site of the town at a place called *Torre di Patria*. The difficulty arose chiefly from the mention of a river of the same name by some of the ancient writers. (*Strabo*, 243.—*Lin.*, 32, 29.) This river can be no other than that which rises in the Apennines above Nola, and, flowing at no great distance from Acerræ, discharges its waters into the sea near Iternum. This stream is apt to stagnate near its entrance into the sea, and to form marshes anciently known as the Palus Litrana, now *Lago di Patria*. Iternum became a Roman colony in the same year with Vulturum. (*Liv.*, 34, 45.) It was recolonized by Augustus, and ranked among the præfecturæ. (*Front.*, *de Col.*—*Festus*.) That Scipio Africanus retired here in disgust at the injustice of his countrymen, seems a fact too well attested to be called into question; but whether he really closed his existence here, as far as we can collect from Livy's account, may be deemed uncertain: his tomb and statue were to be seen both at Iternum, and in the family vault of the Scipios, which was discovered some years ago outside the Porta Capena. (*Liv.*, 38, 51.) Strabo (243) certainly seems to imply that he spent the remainder of his life at Iternum, and also makes mention of his tomb there. According to Valerius Maximus (5, 3, 2), Scipio himself had caused to be engraved on it this inscription,

INGRATA. PATRIA. NE. OSSA. QUIDEM.
MEA. HABES.,

which would be decisive of the question. It is not improbable that the little hamlet of *Patria*, which is supposed to stand on the site of Scipio's villa, is indebted for its name to this circumstance. Seneca gives an interesting description of a visit he made to the remains of the villa, and of the reflections to which it gave rise, in a letter to one of his friends. (*Ep.*, 86.) Pliny asserts that there were to be seen in his day, near Iternum, some olive-trees and myrtles said to have been planted by the illustrious exile. (*Plin.*, 16, 44.—*Cramer's Anc. Italy*, vol. 2, p. 145. *seqq.*)

LIVĪA, I. Drusilla (Livia Drusilla Augusta, or Livia Augusta), a celebrated Roman female of the Claudian line, and daughter of Livius Drusillus Claudianus, was born B.C. 59. She married Tiberius Claudius Nero, and when her husband was compelled to flee from Italy in consequence of the troubles connected with the civil war (*vid.* Claudius II.), she accompanied him, first to Sicily, and afterward to Greece. In this latter country they were kindly received by the

Lacedæmonians, whom she subsequently recompensed for the asylum they had afforded her. To rare personal attractions Livia added the charms of a cultivated intellect; and when it was again safe for her husband and herself to return to Rome, she soon drew upon her the notice of Augustus, who demanded her from her husband. Tiberius dared not refuse; and Augustus, having repudiated his own wife Scribonia, made Livia his spouse. She had already borne two sons to her first husband, namely, Tiberius, who was afterward emperor, and Drusus Germanicus; but what rendered the affair most disreputable, was the circumstance of her being six months gone in pregnancy at the time of her union with Augustus. This child, the only one she had after her marriage with the emperor, died almost at the moment of its birth. Livia was twenty years of age when she was thus called to share the empire of the world; and, availing herself skillfully of the influence which she soon acquired over the mind of Augustus, she began to concert her plans for securing the succession to her own son Tiberius. With this view, she was suspected of having caused the death of the young Marcellus, who might have proved an obstacle to her ambitious views, though it must be confessed that there is no positive testimony which would seem to justify the suspicion. She soon lost her own son Drusus Germanicus; but she did not imitate Octavia, who had actually wearied out Augustus by the excess of her sorrow: on the contrary, she lent an ear to the consolations of the philosopher Areus, and testified her gratitude to Augustus for the honours he had decreed to the memory of her son. In all this, no doubt, there was much of dissimulation, even if we make the fullest allowance for the feelings of a parent. After the premature death of the two sons of Julia, Livia hastened to call her own son Tiberius from his retirement in the island of Rhodes, and prevailed upon Augustus to adopt him, along with Agrippa Posthumus, the last of the family of the Cæsars. Her next care was to exclude this same Agrippa from the succession, an object which she easily effected by means of secret calumnies; and when now the path to the throne stood open for Tiberius, she is said by some to have hastened the end of Augustus himself, by means of poisoned figs which she had given him to eat, and which brought on an attack of dysentery. Be this, however, as it may, it is at least certain that she had the entire control of his last moments. Everything that passed within the walls of the dwelling where he lay was concealed by her with the utmost care. Hasty messengers were sent after Tiberius to recall him instantly to the death-bed of the emperor; and with so much secrecy was the whole affair shrouded, that, although it was given out that Tiberius found his adopted father still alive (*Sueton., Vit. Aug., 97, seqq.*), and had a long and affectionate interview with him, yet Tacitus informs us, that it was never clearly ascertained whether these stories were not mere fabrications; and whether Augustus was not, in reality, already dead when Tiberius arrived at Nola. By a singular clause in his will, Augustus adopted Livia herself, directing her to take the name of Julia Augusta, and made her joint sharer in the inheritance with her son. The latter, however, showed but little gratitude to his parent, to whom he was in every sense indebted for his elevation. When the senate wished to decree new honours to her, he opposed the step; he never consulted her about public affairs, a thing which Augustus was always accustomed to do; and yet, at the same time, he took care to conceal his ingratitude under the most studied respect. At length, however, an open rupture ensued, which continued until the period of her death. Livia died at Rome, at the age of 86 years. Her funeral was celebrated without any kind of display, and her great-grandson Caligula pronounced her funeral eulogium, which was

almost the only honour then rendered to her memory. Her will was never executed; and it was not until Claudius, whom she had never liked, ascended the throne, that divine honours were caused by him to be decreed unto her. Livia appears to have been a woman of strong mind, and she is said to have been always consulted by Augustus on public affairs, and often to have given him the most judicious advice. That she was an ambitious woman is most evident; and possibly, in the furtherance of her views, she may have been a guilty one. The conduct of Tiberius, indeed, towards her, might be explained in this way, since, by one of those strange contradictions that sometimes present themselves even in the character of the most vicious, he may have been aware of all her secret arts for his own advancement, and, though so largely benefited thereby, may have cherished a secret detestation for the very individual to whom he owed his elevation. (*Sueton., Vit. Aug.—Id., Vit. Tib.—Tacit., Ann., 5, 1.—Vell. Patere., 2, 75*)—II. or Livilla, daughter of Nero Claudius Drusus, by his wife Antonia the Younger, was sister to Germanicus, and grand-daughter of the Empress Livia. Her first husband was Caius, the son of Agrippa; after his death, when still quite young, she married Drusus the son of Tiberius. Sejanus seduced her affections from the latter. Engaged in a career of adultery with that flagitious minister, she hoped to rise with her paramour to the imperial dignity, and with this view conspired against her husband. Her guilt being afterward fully detected, she was put to death by order of Tiberius. (*Sueton., Vit. Tib., 62.—Tacit., Ann., 4, 3, et 40.—Id. ib., 6, 2*)—III. Orestilla, called by Dio Cassius (59, 8) Cornelia Orestina. She was on the point of marrying C. Calpurnius Piso, when Caligula, enamoured of her beauty, carried her off from the very midst of the nuptial ceremonies, and in a few days after repudiated her. She was subsequently condemned by him to exile. (*Sueton., Vit. Calig., 25.—Dio Cass., l. c.*)

LIVIE LEGES, proposed by M. Livius Drusus, a tribune, A.U.C. 662, about transplanting colonies to different parts of Italy and Sicily, and granting corn to poor citizens at a low price; also, that the *judices* should be chosen indiscriminately from the senators and equites, and that the allied states of Italy should be admitted to the freedom of the city. Drusus was a man of great eloquence and of the most upright intentions; but, endeavouring to reconcile those whose interests were diametrically opposite, he was crushed in the attempt, being murdered by an unknown assassin in his own house, upon his return from the forum, amid a number of clients and friends. No inquiry was made about his death. The states of Italy considered this event as the signal of a revolt, and endeavoured to extort by force what they could not obtain voluntarily. Above 300,000 men fell in the contest in the space of two years. At last the Romans, although upon the whole they had the advantage, were obliged to grant the freedom of the city, first to the allies, and afterward to all the states of Italy. (*Vell. Patere., 2, 13, seqq.—Flor., 3, 18*.)

LIVIS, I. Andronicus, a dramatic poet who flourished at Rome about 240 years before the Christian era. He was a native of Magna Græcia, and, when his country was finally subdued by the Romans, was made captive and brought to Rome (B.C. 267). It is generally believed that he there became the slave, and afterward the freedman, of Livius Salinator, from whom he derived one of his names; but these facts do not seem to rest on any authority more ancient than the Eusebian Chronicle. (*Hieron. in Euseb., Chron., p. 37.—Scaliger, Thes. Temp., ed. Amstel., 1658*.) The precise period of his death is uncertain; but in Cicero's dialogue *de Senectute*, Cato is introduced, saying that he had seen old Livius while he was him-

selt a youth (c. 14). Now Cato was born B.C. 235, and since the period of youth among the Romans was considered as commencing at fifteen, it may be presumed that the existence of Livius was at least protracted till B.C. 220. It has been frequently said that he lived till the year B.C. 208, A.U.C. 546, because Livy (27, 37) mentions, that a hymn composed by this ancient poet was publicly sung in that year, to avert the disasters threatened by an alarming prodigy; but the historian does not declare that it was written for the occasion, or even recently before. Festus, however, informs us (*s. v. Scribas*), that the Romans paid distinguished honour to Livius, in consequence of the success which attended their arms in the second Punic war, after the public recitation of a hymn which he had composed.—Livy wrote both tragedies and comedies. The earliest play of his was represented B.C. 240, A.U.C. 514, about a year after the termination of the first Punic war. Like Thespis, and most other dramatists in the commencement of the theatrical art, Livius was an actor, and for a considerable time the sole performer of his own pieces. Afterward, however, his voice failing, in consequence of the audience insisting on a repetition of favourite passages, he introduced a boy, who relieved him by declaiming the recitative part in concert with the flute, while he himself executed the corresponding gesticulations in the monologues, and, in parts where high exertion was required, only employing his own voice in the conversational and less elevated scenes.—“Hence,” observes Livy (7, 2), “the practice arose of dividing the representation between two actors, and of reciting, as it were, to the gesture and action of the comedian. Thenceforth the custom so far prevailed, that the comedians never uttered anything except the verses of the dialogue.” And this system, apparently so well calculated to destroy all theatrical illusion, continued, under certain modifications, to subsist on the Roman stage during the most refined periods of taste and literature. The popularity of Livius increasing from these performances, as well as from a propitiatory hymn he had composed, and which had been followed by great public success, a building was assigned to him on the Aventine Hill. This edifice was partly converted into a theatre, and was also inhabited by a troop of players, for whom Livius wrote his pieces, and frequently acted along with them. (*Festus, s. v. Scribas*.) It has been disputed whether the first drama represented by Livius Andronicus at Rome was a tragedy or comedy. (*Osann., Analect. Crit.*, c. 13.) However this may be, it appears from the names which have been preserved of his plays, that he wrote, as we have already said, both tragedies and comedies. These titles, which have been collected by Fabricius and other writers, are *Achilles*, *Adonis*, *Ægisthus*, *Ajax*, *Andromeda*, *Antiope*, *Centauri*, *Equus Trojanus*, *Helena*, *Hermione*, *Ino*, *Lydius*, *Protesilaodamia*, *Serenus*, *Tereus*, *Teucer*, *Virgo*. (*Bibl. Lat.*, vol. 3, l. 4, c. 1.) Such names also evince, that most of his dramas were translated or imitated from the works of his countrymen of Magna Græcia, or from the great tragedians of Greece. Thus, Æschylus wrote a tragedy on the subject of Ægisthus: there is still a play of Sophocles extant by the name of Ajax, and he is known to have written an *Andromeda*: Stobæus mentions the *Antiope* of Euripides: four Greek dramatists, Sophocles, Euripides, Anaxandrides, and Philæus, composed tragedies on the subject of Tereus; and Epicharmus, as well as others, chose for their comedies the story of the Sirens.—Little, however except the titles, remain to us of the dramas of Livius. The longest passage we possess, in connexion, is four lines from the tragedy of Ino, forming part of a hymn to Diana, recited by the chorus, and containing a poetical and animated exhortation to a person about to proceed to the chase.

This passage testifies the vast improvement effected by Livius on the Latin tongue; and, indeed, the polish of the language, and metrical correctness of these hexameter lines, have led to a suspicion that they are not the production of a period so ancient as the age of Livius, or, at least, that they have been modernized by some later hand. (*Jos. Scaliger, Lect. Auson.*—*Osann., Analect. Crit.*, p. 36.) Some verses in the *Carmen de Arte Metrica* of Terentianus Maurus are the chief authority for these hexameters being by Livius. As the verses in the chorus of the Ino are the only passage among the fragments of Livius from which a connected meaning can be elicited, we must take our opinion of his poetical merits from those who judged of them while his writings were yet wholly extant. Cicero has pronounced an unfavourable decision, declaring that they were scarcely worthy a second perusal. (*Brutus*, c. 18.) They long, however, continued popular in Rome, and were read by the youth in schools even during the Augustan age of poetry. It is evident, indeed, that at that period of Roman literature there was a good deal of what corresponds with modern black-letter taste, and which led to the inordinate admiration of the works of Livius, and the bitter complaints of Horace, that they should be extolled as perfect, or held up by old pedants to the imitation of youth, in an age when so much better models existed. (*Hor., Epist.*, 2, l.) But, although Livius may have been too much read in the schools, and too much admired in an age which could boast of models so greatly superior, he is at least entitled to praise as the first inventor among the Romans of a species of poetry which was afterward carried by them to much higher perfection. By translating the *Odyssey*, too, into Latin verse, he adopted the means, which, of all others, was most likely to foster the infant literature of his country, as he thus presented it with an image of the most pure and perfect taste, and, at the same time, with those wild and romantic adventures, which are best suited to attract the sympathy and interest of a half-civilized nation. This happy influence could not be prevented even by the use of the rugged Saturnian verses, which led Cicero to compare the translation of Livius to the ancient statues that might be attributed to Dædalus. (*Brutus*, c. 18.—*Dunlop's Rom. Lit.*, vol. 1, p. 66, *seqq.*, *Lond. ed.*)—H. M. Salinator, obtained the consulship B.C. 219, and again in 207. During his first term of office he carried on a successful war in Illyricum; during the second he had for his colleague Claudius Nero. Livius and Nero were personal enemies, but the interests of their common country reunited them for a time in the bonds of friendship. They marched together against Hasdrubal, and gained the victory at the Metaurus in Umbria. Livius received the honours of a triumph for this exploit, and his colleague only an ovation, although the former insisted that his colleague was entitled to the same distinctions with himself. Three years after he was censor with the same Nero, and caused an unpopular tax to be levied on salt, whence he obtained the soubriquet of *Salinator* (from *salina*, “salt-works”). The old enmity between Livius and Nero broke out afresh in their censorship, as Livy (29, 37) informs us. (*Liv.*, 27, 31.—*Id.*, 28, 9, *seqq.*—*Id.*, 29, 5, &c.)—III. Drusus, a tribune. (*Vid. Livie Leges*.)—IV. Titus, a celebrated historian. He was born at Patavium, the modern *Padua*, of a consular family, in the year of Rome 695, B.C. 59. Titus Livius Optimus was the first of the Livian family that came to Rome; and from him was descended Caius Livius, the father of the historian. (*Zarabell, Storia della gente Livia*.) Livy seems to have received his early instruction in his native city. But, though his education was provincial, he was taught all the useful learning of his age; and it has been conjectured, from several passages of his history, and the general colour

of his style, that he had acquired some superfluous accomplishments in a school of declamation. (*Monboddo, Origin and Progress of Language*, vol. 5, b. 1, c. 1.) It would appear, that he remained at Patavium during the whole period of the civil dissensions, proscriptions, and violations of property which followed the assassination of Cæsar. It has been even maintained by some writers, that he commenced his great work at Patavium ere he visited the capital. (*Kruse, de Fule Lirii*, Lips., 1811.) But through the whole of the first Decade, which is the part they suppose he had written before coming to Rome, he speaks concerning the localities of the city, its customs, judicial forms, and religious ceremonies, as one who was actually on the spot, and had ocular proof of all he relates. At whatever time he came to Rome, it is evident that he commenced his history between the years 725 and 730 A.U.C., or B.C. 29 and 24; for in the first book (c. 19) he mentions, that, at the period when he wrote, the temple of Janus had been twice shut since the reign of Numa, once after the first Punic war, and again in his own time by Augustus. Now this temple never had been closed by Augustus till 725, so that the passage could not have been written prior to that year; and it could not have been written subsequently to 730, because in that year Augustus again shut the temple, and Livy, of course, must have then said that it had been three times, and not twice, closed since the age of Numa. Soon after his arrival at Rome, he composed some dialogues on philosophical and political questions (*Seneca, Epist.*, 100), which he addressed to Augustus. These dialogues, which are now lost, procured for him the favour of the emperor, who gave him free access to all those archives and records of the state which might be serviceable in the prosecution of the historical researches in which he was employed. He allotted him apartments in his own palace, and sometimes even condescended to afford explanations, that facilitated the right understanding of documents which were important to his investigations. Livy appears, indeed, to have been on intimate terms with Augustus, who used, according to Tacitus (*Ann.*, 4, 34), to call him a "Pompeian," on account of the praises which he bestowed on Pompey's party. It appears that Livy availed himself of the good graces of the emperor only for the purpose of facilitating the historical researches in which he was engaged. We do not hear that he accepted any pecuniary favours, or even held any public employment. It has been conjectured by some writers, from a passage in Suetonius (*Vit. Claud.*, 41), that he had for a short time superintended the education of Claudius, who afterward succeeded to the empire. (*Gibbon's Misc. Works*, vol. 4, p. 425.) But, though the expressions scarcely authorize this inference, they prove that, at Livy's suggestion, Claudius undertook in his youth to write a history of Rome from the death of Julius Cæsar, and thus acquired the habits of historical composition, which he continued after his accession; being better qualified, as Gibbon remarks, to record great actions than to perform them.—Livy continued for nearly 20 years to be closely occupied in the composition of his history. During this long period his chief residence was at Rome, or in its immediate vicinity; but he occasionally retired to Naples, that he might there arrange with leisure and tranquillity the materials he had amassed in the capital. (*Frontinus, de Virili Etate Ling. Lat.*, pars 2, c. 4.) He also paid frequent visits to his native city, where he was invariably received with distinguished honours. Though Livy's great work was not finished till the year 745 A.U.C., B.C. 9, he had previously published parts of it, from time to time, by which means he early acquired a high reputation with his countrymen, who considered him as holding the same rank among their historians that Virgil occu-

pied among their poets, and Cicero among their orators. His fame reached even the remotest extremities of the Roman empire. An inhabitant of Gades was so struck with his illustrious character, that he travelled all the way from that city to Rome on purpose to see him, and, having gratified his curiosity, straightway returned home. (*Plin., Ep.*, 2, 3.) Livy continued to reside at Rome till the death of Augustus. On the accession of Tiberius he returned to Patavium, where he survived five years longer, and at length died at the place of his birth, in A.U.C. 770, A.D. 17, and in the 76th year of his age.—Livy is supposed to have been twice married. By one of his wives he left several daughters and a son, to whom he addressed an epistle or short treatise on the subject of rhetoric, in which, while delivering his opinion concerning the authors most proper to be read by youth, he says, that they ought first to study Demosthenes and Cicero, and next such writers as most closely resembled these excellent orators. (*Quint., Inst. Or.*, 10, 1.) After his death, statues were erected to Livy at Rome; for we learn from Suetonius that the mad Caligula had nearly ordered that all his images, as well as those of Virgil, should be removed from the public libraries. His more rational subjects, nevertheless, regarded Livy as the only historian that had yet appeared, whose dignity of sentiment and majesty of expression rendered him worthy to record the story of the Roman republic.—The work of Livy comprehended the whole history of Rome, from its foundation to the death of Drusus, the brother of Tiberius, which happened in the year B.C. 9. It consisted of 142 books; but of these, as is well known, only 35, with some fragments of others, are now extant. The first ten books, which are still remaining, and which have been termed the first *Decade*, bring down the history from the arrival of Æneas in Italy to B.C. 293, or to within a few years of the commencement of the war with Pyrrhus. An *hiatus* of the following ten books, or second *Decade*, deprives us of the interesting expedition of Pyrrhus, who landed in Italy in order to succour the Tarentines, the discomfiture at length sustained by that enterprising monarch, the final subjugation of Magna Græcia, and the first Punic war. The narrative recommences at the twenty-first book, with the second Carthaginian contest, B.C. 218, in which Hannibal invaded Italy, and it continues with little interruption till the end of the forty-fifth book, or the period when the Romans resolved on the destruction of Carthage, and began the third war which they waged against that ill-fated city; thus comprehending in one unbroken narration the complete history of the great struggle in which Hannibal and Scipio were the chief antagonists, the campaigns in Macedonia against Philip, those against his successor Perseus, and the contest with Antiochus, king of Syria. Still, however, it must be admitted, that the most valuable portion of Livy's history has perished. The commencement of those dissensions which ended in the subversion of the liberties of Rome, and the motives by which the actors on the great political stage were influenced, would have given scope for more interesting reflection and more philosophic deduction than details of the wars with the Sabines and Samnites, or even of those with the Carthaginians and Greeks. Stronger reliance might also have been placed on this portion of the history than on that by which it was preceded. The author's account of the civil wars of Marius and Sylla, of Pompey and Cæsar, may have been derived from those who were eye-witnesses of these destructive contests, and he himself was living an impartial and intelligent observer of all the subsequent events which history recorded. Both Lord Bolingbroke and Gibbon have declared that they would willingly give up what we now possess of Livy on the terms of recovering what we have lost. (*Gibbon's*

Misc. Works, vol. 4, p. 427.)—In addition, then, to the first ten books of Livy's history, we have from the 21st to the 45th books, both inclusive; though from the 40th to the 45th they are full of lacunæ. We possess also some fragments, and among them one of the 91st book, discovered in 1772, in a palimpsest manuscript in the Vatican library. This last-mentioned fragment was first published by Bruns (*Hamburg*, 1773), and afterward by Kreyssig (*Chemnitz*, 1807). There also exist brief epitomes of the lost books, as well as of those which have come down to us. They have been frequently supposed, though without sufficient reason, to have been compiled by Florus. We have, however, only epitomes of 140 books; but it has been satisfactorily shown by Sigonius and Drakenborch (*ad Liv.*, *Epit.*, 136), that the epitomes of the 136th and 137th books have been lost, and that the epitome of the 136th book, as it is called, is in reality the epitome of the 138th.—With the aid of this collection of epitomes, and that of other ancient writers, both Greek and Latin, Freinshemius, a learned German scholar of the 17th century, composed a collection of supplements to replace the books that are lost. He has imitated admirably the style and general manner of Livy, and has displayed great care and accuracy in citing his authorities.—Many hopes have been entertained, at various periods, of recovering the lost books of Livy's work, but they appear at last to have been put to rest. Erpenius and others stated once that there was a translation of them in Arabic, but none such has ever been discovered.—Tacitus (*Ann.*, 4, 34) and Seneca (*Suasor.*, 7), among the later Roman writers, speak in the highest terms of the beauty of Livy's style, and of the fidelity of his history; praises which have been constantly repeated by modern writers. But, while most will be ready to admit that his style is eloquent, his narrative clear, and his powers of description great and striking, it can scarcely be denied that he was deficient in the first and most important requisites of a faithful historian, a love of truth, diligence and care in consulting authorities, and a patient and pains-taking examination of conflicting testimonies. Livy made very little use even of such inscriptions and public documents as were within his reach. He appeals, indeed, to the treaty of Spurius Cassius with the Latins, engraven on a column of brass (2, 33); but in the notable instance of the inscription on the Spolia Opima of Cornelius Cossus, preserved in the temple of Jupiter Feretrius, which was at variance with the received Fasti (or register of magistrates) and the common accounts of historians, he does not appear to have had the curiosity to examine the monument itself, but is content with repeating the report of Augustus Cæsar (4, 20). This is one of the few passages in which he descends to a critical comparison of evidence and authorities; and it will serve as a proof how little expert he was in that art of an historian, and how little he valued its results: for, though in his digression he professes to believe in the superior authority of the inscription, in the main course of his narrative he follows the beaten track of writers who had gone before him. He makes no mention of other monuments which we know to have existed; the brazen column in the temple of the Aventine Diana, on which was engraven the treaty of Servius Tullius with the Latins, with the names of the tribes who were members of the league (*Dion. Hal.*, 4, 26); the treaty of Tarquinius Superbus with Gabii, written on a bull's hide, and preserved in the temple of Dius Fidius (*Dion. Hal.*, 4, 59); a treaty with the Sabines, in the time of the kings (*Hor.*, *Epist.*, 2, 1, 25); the treaty with Carthage in the first year of the republic (*Polyb.*, 3, 22) (and here his negligence is without excuse; for, even though the document itself might have perished before his time, he could have

found the translation of it in Polybius, if he had consulted him before he began to narrate the Punic wars); and, finally, the treaty with Porsenna, which was known to Pliny (34, 14). He does not, therefore, found his narrative upon contemporary records, but avowedly draws his materials from the works of earlier annalists, such as Fabius Pictor, Calpurnius Piso, Valerius Antias, Licinius Macer, Ælius Tubero, and reposes upon their authority. As long as his guides agree in the main points of their story, he follows them without fear or doubt. When they openly contradict each other, especially on questions of names or dates, then he sometimes honestly confesses the difficulty, and acknowledges in general terms the uncertainty of the history of the first centuries of the city. But very many discrepancies less flagrant, and even some as important as those which he has specified, he passes over without notice; and yet we know with certainty that they existed, because they appear in the narrative of Dionysius, who drew from the same authorities as Livy. But, though the course of his narrative is sometimes checked by the conflict of external testimony, he is never induced to pause, or doubt, by any internal difficulty, any inconsistency or contradiction, or perplexity in the received story. Nothing less than a miracle is too strange for his acquiescence. It is evident that he has bestowed no labour upon examining the probability of the events which he relates, or investigating their connexion as causes and effects.—There are also sufficient proofs that he wrote hastily and even carelessly. He sometimes mentions incidentally, in a subsequent part of his history, circumstances which he has omitted in their proper place. Thus it is only by his remarks on the proposal for communicating the dignities of pontiff and augur to the plebeians (10, 6) that we learn from him that Ramnes, Tatienses, and Luceres were names of the ancient tribes. He sometimes repeats (35, 21 and 39), sometimes contradicts himself (30, 22, and 34, 44). It is an instance and proof of both his carelessness and his want of familiarity with the antiquities of his country, that, though he expressly informs us that till a very short time before the capture of the city, the Roman way of fighting was in close phalanx, with long spears, yet in no description of a battle does he allude to such tactics, but commonly uses of the older times the terms which relate to the more modern structure of the Roman army. We cannot, therefore, feel assured that he always represented accurately the statements of the older annalists from whom he takes his materials.—Any errors, however, which might arise from these causes, would be single and detached, could bear but a very small ratio to the bulk of the history, and would not affect its general spirit. But the very tone and manner of Livy's work, however great may be his powers of description, however lucid his style of narrative, however much he may dazzle the imagination or interest the feelings of his readers, are a warning against implicit belief. He excelled in narration and in the eloquent expression of excited feelings, and he obviously delighted in the exercise of his genius. In reporting the traditions of the early ages of Rome, he seems less desirous to ascertain the truth than to array the popular story in the most attractive garb. He is not so much an historian as a poet. As the history advances and the truth of facts is better ascertained, he is of course compelled to record them with greater fidelity; but still his whole work is a triumphal celebration of the heroic spirit and military glory of Rome. Here, then, is a disturbing force which has borne him away from the strict line of historical truth. To this desire of exalting the glory of his country (and, no doubt, to a similar impulse actuating those from whom he copied) we must ascribe the singular phenomena which appear on the face of the history, that,

in perpetual wars with the surrounding states, the Romans were never defeated in the open field (9, 19); that when they were distressed, it was always by pestilence, or famine, or sedition; and that, at such seasons, their enemies abstained from attacking them; that they gained victory after victory without subduing their opponents; that taken cities reappear in the power of their original possessors; that consuls and dictators triumph in succession over nations that are still able to supply subjects for new triumphs to new consuls and new dictators; that slaughters, which must have exhausted any state of ancient Italy, diminished not the number of their perpetually-renovated adversaries. To this passion for extolling the military reputation of Rome we owe the comparative neglect of the less popular and less ostentatious subjects of domestic history. Every war and triumph of which any memorial, true or false, existed, is scrupulously registered; but the original constitution of the state, the division of its citizens, the several rights, the contests between the orders, the constitution of the general or partial assemblies of the people, the powers of the magistrates; the laws, the jurisprudence, their progressive melioration; these are subjects on which our information is vague, scanty, and ill-connected. It is evident, that to the mind of Livy they possessed comparatively little interest; and that on these matters, to say the least, he did not exert himself to correct the errors or supply the defects of the writers who preceded him. He was satisfied if from a popular commotion he could extract the materials of an eloquent speech. It is a sufficient proof that on this most important portion of Roman history he was really ignorant, that, with all his powers of language, he does not convey clear and vivid ideas to the minds of his readers. Who has risen from the perusal of the early books of Livy with the distinct notion of a client or of an agrarian law? (*Malden, History of Rome*, p. 39, *seqq.*)—Inexperienced, too, in military affairs, numerous blunders have been attributed to him in relation to encampments, circumvallations, sieges, and warlike operations of all kinds. (*Casaubon, Pref. ad Polyb.*—*Folard, Comment.*—*Niebuhr, Röm. Gesch.*, vol. 2, p. 499, 514.) He did not, like Polybius, visit the regions which had been the theatre of the great events which he commemorates, and hence arise many mistakes in geography, and much confusion with regard to the situation of cities and the boundaries of districts. (*Lachmann, de Fontibus Hist. Liv.*, p. 106.) “Considered in this point of view,” says Gibbon, “Livy appears merely as a man of letters, little acquainted with the art of war, and careless in point of geography.” (*Misc. Works*, vol. 5, p. 371.)—We have already spoken of the style of Livy. One point, however, connected with this part of the subject remains to be noticed. That fastidious critic and envious detractor of his literary contemporaries, Asinius Pollio, had said that there was a certain *Patavinitas* in the style of Livy; by which he meant to convey an idea that there was something in his expressions which bespoke a citizen of Patavium, and which would not have appeared in the style of a native of Rome. (*Quint., Inst. Or.*, 8, 1.) It is evident, from the passage of Quintilian just referred to, where this criticism of Pollio is recorded, that it applied entirely to provincial words or phrases, not altogether consonant to the refined urbanity of Rome, which could not so easily be communicated to strangers as the freedom of the city. The opinion of Bem, who supposed that, because the Patavians were all staunch republicans, the *Patavinitas* of Livy must have consisted in his political partiality to the faction of Pompey, appears to be entirely erroneous; for such principles would not have been blamed by Pollio, who rather affected old republican sentiments, and extolled the Pompeians. (*Lact., Annal.*, 4, 31.) The notion adopted by Lu-

dæus (*De Philosophia*, fol. 22), who thinks that Livy's *Patavinitas* lay in his enmity to the Gauls, who were the natural foes of the Patavians, and often ravaged their territories, is equally without foundation. Nor is the conjecture of Barthius and Le Vayer, that it consisted in an undue partiality for his native district, much more successful. Morhof, which was no difficult task, has refuted all these theories (*De Patavinitate Liviana liber*); and, justly believing that the *Patavinitas* of which Livy was accused was solely exhibited in style, he has entered into an elaborate discussion concerning what defect or blemish was implied in the word *Patavinitas*. Some, as he informs us, have thought, with Laurentius Pignorius (*Origine Paduane*, c. 17), that it appeared in a certain orthography peculiar to the Patavians, as *sibe* for *sibi*, *quasc* for *quasi*. Ptolæmus Flavius thinks that it lay in the diffuseness of style to which, this author says, the Patavians, both ancient and modern, have been addicted in all their compositions. (*Centuria Conjectaneorum*, c. 45.) This is the opinion which seems, on the whole, to be adopted by Morhof himself, and by Funccius; and it is founded on Pollio's having affected an admiration of that succinct and jejune mode of composition, which was erroneously considered as approaching the Attic taste, and which Brutus and Calvus employed in oratory, in opposition to the more copious style of eloquence exercised by Cicero and Hortensius. Pollio himself would probably have been puzzled to define his precise notion of *Patavinitas*: but it is most probable that it applied to some peculiarities of expression which were the remains of the ancient dialect of Italy. It appears, though this is a subject of controversy, that there was a refined and vulgar idiom at Rome, and the difference would be still wider between the urban and provincial tongues. The boast of the former was to be free from everything rustic or foreign, and to possess a certain undefinable purity, simplicity, and grace. It was either in a want of this charm, or in some provincial expressions, that *Patavinitas* must have consisted, if, indeed, its existence in the work of Livy was not altogether imaginary on the part of Pollio. But neither Erasmus, who has repeated the censure, nor any other writer, has pointed out an example of *Patavinitas*. Few of the great Latin authors were Romans by birth. The only names of which the capital can boast are those of Lucretius, Cæsar, and Varro. Were all the other poets, orators, and historians free from provincial idioms; and did Livy alone retain *Patavinitas*? He was older, indeed, when he first visited the capital, than Horace or Ovid, but he was not so far advanced in life as Virgil or Catullus when they first found their way to Rome from Mantua and Verona. (*Dunlop's Roman Literature*, vol. 3, p. 469, *seqq.*)—The best editions of Livy are, that of Crevier, *Paris*, 1735–41, 4to, 6 vols.; Drakenborch, *Amst.*, 1738–46, 4to, 7 vols.; Ruddimann, *Edin.*, 1751, 12mo, 4 vols.; Ernesti, *Lips.*, 1769–1804, 8vo, 4 vols.; Stroth, improved by Doering, *Gotha*, 1796–1813, 12mo, 7 vols.; Ruperti, *Götting.*, 1807–1809, 6 vols. 8vo; and that of Lemaire, *Paris*, 1822–1825, 12 vols. 8vo.

Locri, I. a people of Greece. The Greeks comprehended under the name of Locri three tribes of the same people, which, though distinct from each other in territory as well as in nominal designation, were doubtless derived from a common stock. These were the Locri Ozolæ, the Epicnemidii, and Opuntii. A colony of the last named tribe, who at an early period had settled on the shores of Magna Græcia, were distinguished by the name of Epizephyrii, or Western Locri. The Epicnemidian and Opuntian Locri alone appear to have been known to Homer, as he makes no mention of the Ozolæ; whence we might conclude that they were not so ancient as the rest of the nation. The earliest and most authentic accounts concur in ascribing the origin of this people to the Leleges. (*Aristot., ap.*

Strab., 321.—*Hesiod.*, *ap. eund.*—*Scym.*, *Ch.*, 590.—*Dicaearch.*, v. 71.) The Locri Ozolæ occupied a narrow tract of country, situated on the northern shore of the Corinthian Gulf, commencing at the Ætolian Rhium, and terminating near Crissa. To the west and north they adjoined the Ætolians, and partly also, in the latter direction, the Dorians, while to the east they bordered on the district of Delphi, belonging to Phocis. They are said to have been a colony from the more celebrated Locrians of the east (*Strabo*, 427.—*Eustath.*, *ad Il.*, 2, 531), and their name, according to fabulous accounts, was derived from some fetid springs (*ὄζω, oleo*) near the hill of Taphius or Taphiassus, situated on their coast, and beneath which it was reported that the centaur Nessus had been entombed. (*Strab.*, 426.—*Plut.*, *Quest. Græc.*, 15.—*Myrsil.*, *Lesb.*, *ap. Antigon. Paradox.*, 129.) Other explanations of the name are given under the article Ozolæ.—Thucydides represents them as a wild, uncivilized race, and addicted from the earliest period to theft and rapine (1, 5). In the Peloponnesian war they appear to have sided with the Athenians, as the latter held possession of Naupactus, their principal town and harbour, probably from enmity to the Ætolians, who had espoused the cause of the Peloponnesians. (*Thueyd.*, 3, 95.)—The *Epicnemidian Locri*, whom we must next describe, occupied a small district immediately adjoining Thermopylæ, and confined between Mount Cnemis, a branch of Cæta, whence they derived their name, and the sea of Eubœa. (*Strabo*, 416, 425.—*Eustath.*, *ad Dionys. Perieg.*, v. 426.) Homer classes them with the Opuntii, under the general name of Locri. (*Il.*, 2, 535) They derived their name of Epicnemidii from their situation in the vicinity of Mount Cnemis.—The *Opuntian Locri* follow after the Epicnemidii: they occupied a line of coast of about fifteen miles, beginning a little south of Cnemides, and extending to the town of Halæ, on the frontiers of Bœotia. Inland their territory reached to the Phocian towns of Hyampolis and Abæ. This people derived their name from the city of Opus, their metropolis. (*Strabo*, 425.—*Cramer's Anc. Greece*, vol. 2, p. 104.)—H. A people of Magna Græcia, originally a colony of the Locri Opuntii from Greece. They first settled near the promontory of Zephyrium, at the lower extremity of Bruttium, on the Ionian Sea, and hence obtained the appellation of Epizephyrii, by which they were distinguished from the Locri of Greece. Here they built the city of Locri. They removed, however, from this position three or four years afterward, and built another city on a height named Mount Esopis. Strabo, however, makes the Locri who settled in Bruttium to have been a division of the Ozolæ from the Crissæan Gulf, and remarks, that Ephorus was incorrect in ascribing the settlement to the Locri Opuntii; but it is certain that this opinion of Ephorus seems to be supported by the testimony of many other writers, and therefore is generally preferred by modern critics. (*Maceoch. in Tab. Heracl. diatr.*, 1, c. 5.—*Heyne. Opusc. Acad.*, vol. 2, p. 46.—*Id.*, *ad Virg.*, *Æn.* 3, 399.) We derive some curious information relative to the origin of the Epizephyrian Locri from Polybius, who acquaints us, that, from his having been the means of obtaining for this city a remission of heavy contributions on more than one occasion, he had contracted a feeling of kindness and partiality towards its inhabitants, which they, on the other hand, repaid by every mark of gratitude and attention. His frequent residence among them enabled him, as he states, to inquire minutely into their laws and institutions, so much admired by antiquity as the work of the celebrated lawgiver Zaleucus; and also into the early history, as well as origin, of their city. To the latter point he had paid the greater attention, from the obloquy and calumny which Timeus, the Sicilian historian, had heaped upon Aristotle, in his endeavour to

refute what he deemed his false representation of that event. The great philosopher, in his work on the Italian republics, stated, that the colony which founded the Epizephyrian city was formed principally by slaves, who, during the absence of their masters, had carried off their wives. This assertion, which called forth the invective of Timeus, was, however, supported by Polybius on the authority of the Locri themselves; from whom he learned, that all their nobility was to be referred to the female part of their community, who had accompanied their ancestors from Greece, and were descended from the most illustrious families of their metropolis; and that, so far from having derived their polity and customs from that quarter, as the Sicilian historian pretended, they had borrowed many of the rites and usages of the Siculi, who were in possession of the country at the time of their arrival, and whom they afterward expelled. (*Polyb.*, *fragm.*, 12, 5.)—But it was to the institutions of their great legislator Zaleucus that this city was mainly indebted for its prosperity and fame. His laws, which, according to the assertion of Demosthenes, continued in full force for the space of 200 years (*Orat. in Timocr.*), are said to have been a judicious selection from the Cretan, Lacedæmonian, and Areopagitic codes, to which were, however, added several original enactments; among these, that is noticed as particularly deserving of commendation by which every offence had its peculiar penalty attached to it; whereas, in other systems of legislation, punishment was awarded according to the arbitrary decision of the judge. The Thurians, who afterward adopted the code of Zaleucus, injured its simplicity by their additions, in which too much attention was paid to minute points and matters of detail. (*Ephor.*, *ap. Strab.*, 260.—Compare *Plat.*, *de Leg.*, 1, p. 638.—*Diod. Sic.*, 12, 20.—*Athen.*, 10, 7.—*Cic.*, *de Leg.*, 2, 6.) The situation of the ancient city of Locri has not been hitherto determined with accuracy, though the most judicious antiquarians and travellers agree in fixing it in the vicinity of *Gerace*. (*Barr.*, l. 3, 9.—*Cluver.*, *It. Ant.*, vol. 2, p. 1301.—*Romanelli*, vol. 1, p. 151.) This modern town stands on a hill, which is probably the Mons Esopis of Strabo, and where the citadel was doubtless placed. But the name of *Paghiapoli*, which is attached to some considerable ruins below *Gerace*, naturally leads to the supposition that this was the site of the Epizephyrian Locri. (*Reidesel. Voyage dans la Grande Grèce*, p. 140.—*Scinburne's Travels*, p. 310.) D'Anville removed it too far to the south when he supposed it to accord with the *Motta di Brurano*. (*Cramer, l. c.*) Niebuhr states the curious fact, that there is still remaining at the present day, in the district of ancient Locri, a population that speaks Greek, and he cites in support of this assertion the testimony of Count Zullo, an Italian noble. (*Roman History*, vol. 1, p. 51, *in notis*.—*Cramer's Ancient Italy*, vol. 2, p. 404, *seqq.*)

LOCUSTIA, a notorious female poisoner at Rome during the first century of our era. She poisoned Claudius by order of Agrippina, and Britannicus by order of Nero. The latter loaded her with presents after the perpetration of the deed, and actually placed learners under her, in order that her art might be perpetuated. She was put to death by Galba. (*Tacit.*, *Ann.* 12, 66.—*Id. ib.*, 13, 15.—*Sueton.*, *Vit. Ner.*, 33.—*Juv.*, *Sat.*, 1, 71.)

LOCUTRIUS. *Vid.* Aius.

LOLLIA PAULLINA, grand-daughter of Lollius Paulinus, who made himself so infamous by his rapacity in the provinces. She married C. Memmius, a man of consular rank, but was taken from him by Caligula, who made her his own wife, but soon after repudiated her. (*Sueton.*, *Vit. Calig.*, 25.—*Dio Cass.*, 59, 12.) She afterward, on the death of Messalina, aspired to a union with Claudius, but was put to death through

the influence of Agrippina. (*Sueton., Vit. Claud., 26. — Tacit., Ann., 12, 22*)

L^{OLL}IVS, I. M. Lollius Palicanus, a Roman nobleman in the time of Augustus, who gave him (A.U.C. 728, B.C. 26) the government of Galatia, with the title of proprætor. He acquitted himself so well in this office, that the emperor, in order to recompense his services, named him consul, in 732, with L. Aurelius Lepidus. Being sent in 737 to engage the Germans, who had made an irruption into Gaul, he had the misfortune, after some successes, to experience a defeat, known in history by the appellation of *clades Lolliana*, and in which he lost the eagle of the fifth legion. It appears, however, that he was able to repair the disaster, and regain the confidence of Augustus, for this monarch chose him, about A.U.C. 751, B.C. 3, to accompany his grandson Caius Cæsar (afterward the Emperor Caligula) into the East, as a kind of director of his youth ("veluti moderator juventutem." *Vell. Patere., 2, 102*). In the course of this mission, he became guilty of the greatest depredations, and formed secret plots, which were disclosed to Caius Cæsar by the king of the Parthians. Lollius died suddenly a few days after this, leaving behind him immense riches, but a most odious memory. (*Pliny, 9, 35, 57*.) Whether his end was voluntary or otherwise, Velleius Patereulus (*l. c.*) declares himself unable to decide. Horace addressed to him one of his odes (the ninth of the fourth book) in the year of his consulship with Lepidus, but died seven or eight years before Lollius had disgraced himself by his conduct in the East. (Compare *Sanadon, ad Horat., l. c.*)—II. A son of the preceding, to whom Horace addressed two of his epistles (the second and eighteenth of the first book). He was the eldest son of M. Lollius Palicanus, and is therefore styled by Horace *Maxime* (*seil. natu*). Several modern scholars, such as Torrentius, Baxter, Dacier, Glandorp (*Onomast., p. 547*), and Moreri (*Diet. Hist., vol. 4, p. 192*), make Horace, in the epistle just referred to, address Lollius the father, not the son. This, however, violates chronology, since it appears from *Epist. 2*, that the person to whom it is inscribed was quite a young man. The other side of the question is advocated by Noris (*ad Cenotaph. Pis., 2, 14, p. 255*), Bayle (*Diet. Hist., s. v.*), Masson (*Vit. Hor., p. 265*), and among the editors of Horace by Sanadon, Gesner, Döring, &c. The epithet *maxime*, as employed by Horace, has also given rise to considerable discussion. Torrentius, Dacier, and many other commentators, refer it to the mental qualities of the individual; while Scaliger, Marcilius, Meibomius, Vanderbourg, and others, consider *Maxime* a family or proper name. The authority, however, which has been cited from Gruter (638, 2), to substantiate this last opinion, is fully opposed by chronological arguments. (Consult *Obbarrus, ad Horat., l. c.*) Besides, the distinctive family name of the Lollii was *Palicanus*, or, as it is written on coins, *Palikanus*. (Compare *Burmman, ad Quintil., 4, 2.—Ernesti, Clav. Cic., s. v. Palikanus.—Val. Max., 3, 8, 3.—Ellendt, ad Cic., Brut., p. 162.—Rasche, Lex. Rei Num., vol. 4, col. 1815.*)

L^{ONDINIUM} (*Plot. Aorôðivov*).—Less correctly L^{ONDINIUM}, a city of the Trinobantes, in Britain, now London. The place appears to have had a very remote antiquity, and already existed in the time of Cæsar, though, in consequence of his march being in a different direction, it remained unknown to him. Tacitus (*Ann., 14, 33*) speaks of it as a place of great commerce, and, indeed, its favourable situation for trade must have given the place a very early origin. Its later name was Augusta Trinobantun, in honour, probably, of some Roman emperor. (Compare Ammianus Marcellinus, 27, 8. "*Lundinium, vetus oppidum, quod Augustam posteritas appellavit.*") Bede styles it *Londonia*, and also *Ciritas Lundonia* (2, 4, 7; 2, 3). Ancient Londinium is generally thought to have

occupied that part of the modern city which lies on the north of the Thames, near the tower of London. As, however, Ptolemy assigns Londinium to the Cantii, many have been led to decide in favour of the borough of *Southwark*, on the south side of the river, or, rather, to the part immediately west of this, especially as here many remains of antiquity have been found. It is most probable, however, that the ancient city lay on both sides of the stream, so that Ptolemy might assign it as well to the Trinobantes and Atrebatii as to the Cantii. (*Mannert, Geogr., vol. 2, pt. 2, p. 146.*)

L^{ONGIMANUS}, a surname of Artaxerxes I., in Greek Μακρόχειρ. Plutarch states that this appellation was given him because his right hand was longer than his left; but Strabo says that he was so called from the extraordinary length of his arms, which, on his standing upright, could reach his knees. (*Strab., 735.*) He makes him to have been, in other respects, one of the handsomest of men (*καλλίστον ἀνθρώπων.—Vid. Artaxerxes I.*)
